Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1863 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

**4.66.3.60 `find_last_of()`** [2/4]

```
template<typename _CharT, typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find_last_of (
 const _CharT * __s,
 size_type __pos,
 size_type __n) const
```

Find last position of a character of C substring.

**Parameters**

|                    |                                            |
|--------------------|--------------------------------------------|
| <code>__s</code>   | C string containing characters to locate.  |
| <code>__pos</code> | Index of character to search back from.    |
| <code>__n</code>   | Number of characters from s to search for. |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 370 of file `vstring.tcc`.

**4.66.3.61 `find_last_of()`** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
 const _CharT * __s,
 size_type __pos = npos) const [inline]
```

Find last position of a character of C string.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__s</code>   | C string containing characters to locate.             |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1893 of file `vstring.h`.

**4.66.3.62 `find_last_of()`** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
 _CharT __c,
 size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__c</code>   | Character to locate.                                  |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(c, pos)`.

Definition at line 1912 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rfind()`.

4.66.3.63 `front()` [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::front () [inline], [noexcept]
```

Returns a read/write reference to the data at the first element of the string.

Definition at line 617 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator[]()`.

4.66.3.64 `front()` [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::front () const
[inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 625 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator[]()`.

#### 4.66.3.65 get\_allocator()

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
allocator_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::get_allocator ()
const [inline], [noexcept]
```

Return copy of allocator used to construct this string.

Definition at line 1665 of file vstring.h.

#### 4.66.3.66 insert() [1/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
 const_iterator __p,
 size_type __n,
 _CharT __c) [inline]
```

Insert multiple characters.

##### Parameters

|                  |                                                             |
|------------------|-------------------------------------------------------------|
| <code>__p</code> | Const_iterator referencing location in string to insert at. |
| <code>__n</code> | Number of characters to insert                              |
| <code>__c</code> | The character to insert.                                    |

##### Returns

Iterator referencing the first inserted char.

##### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 941 of file vstring.h.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert()`.

4.66.3.67 `insert()` [2/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
template<class _InputIterator, typename = std::RequireInputIter<_InputIterator>>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
 const_iterator __p,
 _InputIterator __beg,
 _InputIterator __end) [inline]
```

Insert a range of characters.

## Parameters

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__p</code>   | Const_iterator referencing location in string to insert at. |
| <code>__beg</code> | Start of range.                                             |
| <code>__end</code> | End of range.                                               |

## Returns

Iterator referencing the first inserted char.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts characters in range `[beg,end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 985 of file `vstring.h`.

4.66.3.68 `insert()` [3/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
 const_iterator __p,
 std::initializer_list< _CharT > __l) [inline]
```

Insert an `initializer_list` of characters.

## Parameters

|                  |                                                             |
|------------------|-------------------------------------------------------------|
| <code>__p</code> | Const_iterator referencing location in string to insert at. |
| <code>__l</code> | The <code>initializer_list</code> of characters to insert.  |

**Returns**

Iterator referencing the first inserted char.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Definition at line 1021 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert()`.

**4.66.3.69 insert()** [4/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
 size_type __pos1,
 const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
```

Insert value of a string.

**Parameters**

|                     |                                                       |
|---------------------|-------------------------------------------------------|
| <code>__pos1</code> | Iterator referencing location in string to insert at. |
| <code>__str</code>  | The string to insert.                                 |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1038 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

4.66.3.70 `insert()` [5/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
 size_type __pos1,
 const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
 size_type __pos2,
 size_type __n) [inline]
```

Insert a substring.

## Parameters

|                     |                                                       |
|---------------------|-------------------------------------------------------|
| <code>__pos1</code> | Iterator referencing location in string to insert at. |
| <code>__str</code>  | The string to insert.                                 |
| <code>__pos2</code> | Start of characters in <code>str</code> to insert.    |
| <code>__n</code>    | Number of characters to insert.                       |

## Returns

Reference to this string.

## Exceptions

|                                |                                                                               |
|--------------------------------|-------------------------------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                               |
| <code>std::out_of_range</code> | If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> . |

Starting at `__pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1061 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

4.66.3.71 `insert()` [6/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
 size_type __pos,
 const _CharT * __s,
 size_type __n) [inline]
```

Insert a C substring.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__pos</code> | Iterator referencing location in string to insert at. |
| <code>__s</code>   | The C string to insert.                               |
| <code>__n</code>   | The number of characters to insert.                   |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1084 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

**4.66.3.72 insert()** [7/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
 size_type __pos,
 const _CharT * __s) [inline]
```

Insert a C string.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__pos</code> | Iterator referencing location in string to insert at. |
| <code>__s</code>   | The C string to insert.                               |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1103 of file `vstring.h`.

#### 4.66.3.73 `insert()` [8/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert (
 size_type __pos,
 size_type __n,
 _CharT __c) [inline]
```

Insert multiple characters.

##### Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__pos</code> | Index in string to insert at.  |
| <code>__n</code>   | Number of characters to insert |
| <code>__c</code>   | The character to insert.       |

##### Returns

Reference to this string.

##### Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1127 of file `vstring.h`.

#### 4.66.3.74 `insert()` [9/9]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert (
 const_iterator __p,
 _CharT __c) [inline]
```

Insert one character.

**Parameters**

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing position in string to insert at. |
| <code>__c</code> | The character to insert.                              |

**Returns**

Iterator referencing newly inserted char.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1146 of file `vstring.h`.

**4.66.3.75 `length()`**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::length () const [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Definition at line 432 of file `vstring.h`.

**4.66.3.76 `max_size()`**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::max_size () const [inline],
[noexcept]
```

Returns the `size()` of the largest possible string.

Definition at line 437 of file `vstring.h`.

Referenced by `std::getline()`.

4.66.3.77 `operator+=()` [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator+= (
 const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str) [inline]
```

Append a string to this string.

**Parameters**

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

**Returns**

Reference to this string.

Definition at line 652 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`.

**4.66.3.78 operator+=()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (
 const _CharT * __s) [inline]
```

Append a C string.

**Parameters**

|                  |                         |
|------------------|-------------------------|
| <code>__s</code> | The C string to append. |
|------------------|-------------------------|

**Returns**

Reference to this string.

Definition at line 661 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`.

**4.66.3.79 operator+=()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (
 _CharT __c) [inline]
```

Append a character.

## Parameters

|                  |                          |
|------------------|--------------------------|
| <code>__c</code> | The character to append. |
|------------------|--------------------------|

## Returns

Reference to this string.

Definition at line 670 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back()`.

4.66.3.80 `operator+=()` [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (
 std::initializer_list< _CharT > __l) [inline]
```

Append an `initializer_list` of characters.

## Parameters

|                  |                                                                 |
|------------------|-----------------------------------------------------------------|
| <code>__l</code> | The <code>initializer_list</code> of characters to be appended. |
|------------------|-----------------------------------------------------------------|

## Returns

Reference to this string.

Definition at line 683 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append()`.

4.66.3.81 `operator=()` [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
 const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
```

Assign the value of `str` to this string.

**Parameters**

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

Definition at line 257 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`.

**4.66.3.82 operator=()** [2/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
 __versa_string< _CharT, _Traits, _Alloc, _Base > && __str) [inline], [noexcept]
```

String move assignment operator.

**Parameters**

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

The contents of `__str` are moved into this string (without copying). `__str` is a valid, but unspecified string.

Definition at line 269 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::swap()`.

**4.66.3.83 operator=()** [3/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
 std::initializer_list< _CharT > __l) [inline]
```

Set value to string constructed from initializer list.

**Parameters**

|                |                                     |
|----------------|-------------------------------------|
| <code>↩</code> | <code>std::initializer_list.</code> |
| <code>↩</code> |                                     |
| <code>↩</code> |                                     |
| <code>↩</code> |                                     |
| <code>/</code> |                                     |

Definition at line 281 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign()`.

#### 4.66.3.84 `operator=()` [ 4/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
 const _CharT * __s) [inline]
```

Copy contents of `__s` into this string.

##### Parameters

|                  |                                |
|------------------|--------------------------------|
| <code>__s</code> | Source null-terminated string. |
|------------------|--------------------------------|

Definition at line 293 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign()`.

#### 4.66.3.85 `operator=()` [ 5/5]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
 _CharT __c) [inline]
```

Set value to string of length 1.

##### Parameters

|                  |                   |
|------------------|-------------------|
| <code>__c</code> | Source character. |
|------------------|-------------------|

Assigning to a character makes this string length 1 and `(*this)[0] == __c`.

Definition at line 304 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign()`.

**4.66.3.86** `operator[]()` [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[] (
 size_type __pos) const [inline], [noexcept]
```

Subscript access to the data contained in the string.

**Parameters**

|                    |                                       |
|--------------------|---------------------------------------|
| <code>__pos</code> | The index of the character to access. |
|--------------------|---------------------------------------|

**Returns**

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Definition at line 538 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front()`.

**4.66.3.87** `operator[]()` [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[] (
 size_type __pos) [inline], [noexcept]
```

Subscript access to the data contained in the string.

**Parameters**

|                    |                                       |
|--------------------|---------------------------------------|
| <code>__pos</code> | The index of the character to access. |
|--------------------|---------------------------------------|

**Returns**

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.) Unshares the string.

Definition at line 555 of file `vstring.h`.

**4.66.3.88** `pop_back()`

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::pop_back () [inline]
```

Remove the last character.

The string must be non-empty.

Definition at line 1236 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

**4.66.3.89** `push_back()`

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back (
 _CharT __c) [inline]
```

Append a single character.

**Parameters**

|                  |                      |
|------------------|----------------------|
| <code>__c</code> | Character to append. |
|------------------|----------------------|

Definition at line 789 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::capacity()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

Referenced by `__gnu_cxx::operator+()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+=()`.

**4.66.3.90** `rbegin()` [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rbegin () [inline],
[noexcept]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 355 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end()`.

**4.66.3.91** `rbegin()` [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rbegin ()
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 364 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end()`.

**4.66.3.92** `rend()` [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rend () [inline],
[noexcept]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 373 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin()`.

**4.66.3.93** `rend()` [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rend ()
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 382 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin()`.

**4.66.3.94** `replace()` [1/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
 size_type __pos,
 size_type __n,
 const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
```

Replace characters with value from another string.

## Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n</code>   | Number of characters to be replaced. |
| <code>__str</code> | String to insert.                    |

## Returns

Reference to this string.

## Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |

Removes the characters in the range `[pos,pos+n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1258 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace()`.

4.66.3.95 `replace()` [2/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
 size_type __pos1,
 size_type __n1,
 const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
 size_type __pos2,
 size_type __n2) [inline]
```

Replace characters with value from another string.

## Parameters

|                     |                                         |
|---------------------|-----------------------------------------|
| <code>__pos1</code> | Index of first character to replace.    |
| <code>__n1</code>   | Number of characters to be replaced.    |
| <code>__str</code>  | String to insert.                       |
| <code>__pos2</code> | Index of first character of str to use. |
| <code>__n2</code>   | Number of characters from str to use.   |

**Returns**

Reference to this string.

**Exceptions**

|                          |                                                          |
|--------------------------|----------------------------------------------------------|
| <i>std::out_of_range</i> | If <i>__pos1</i> > size() or <i>__pos2</i> > str.size(). |
| <i>std::length_error</i> | If new length exceeds max_size().                        |

Removes the characters in the range [pos1,pos1 + n) from this string. In place, the value of *\_\_str* is inserted. If *\_\_pos* is beyond end of string, out\_of\_range is thrown. If the length of the result exceeds max\_size(), length\_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1281 of file vstring.h.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

**4.66.3.96 replace()** [3/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
 size_type __pos,
 size_type __n1,
 const _CharT * __s,
 size_type __n2) [inline]
```

Replace characters with value of a C substring.

**Parameters**

|              |                                              |
|--------------|----------------------------------------------|
| <i>__pos</i> | Index of first character to replace.         |
| <i>__n1</i>  | Number of characters to be replaced.         |
| <i>__s</i>   | C string to insert.                          |
| <i>__n2</i>  | Number of characters from <i>__s</i> to use. |

**Returns**

Reference to this string.

**Exceptions**

|                          |                                   |
|--------------------------|-----------------------------------|
| <i>std::out_of_range</i> | If <i>__pos1</i> > size().        |
| <i>std::length_error</i> | If new length exceeds max_size(). |

Removes the characters in the range `[pos,pos + n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1309 of file `vstring.h`.

#### 4.66.3.97 `replace()` [4/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
 size_type __pos,
 size_type __n1,
 const _CharT * __s) [inline]
```

Replace characters with value of a C string.

##### Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n1</code>  | Number of characters to be replaced. |
| <code>__s</code>   | C string to insert.                  |

##### Returns

Reference to this string.

##### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> .             |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |

Removes the characters in the range `[pos,pos + n1)` from this string. In place, the characters of `__s` are inserted. If `pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown.

The value of the string doesn't change if an error is thrown.

Definition at line 1333 of file `vstring.h`.

#### 4.66.3.98 `replace()` [5/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
```

```

size_type __pos,
size_type __n1,
size_type __n2,
_CharT __c) [inline]

```

Replace characters with multiple characters.

#### Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n1</code>  | Number of characters to be replaced. |
| <code>__n2</code>  | Number of characters to insert.      |
| <code>__c</code>   | Character to insert.                 |

#### Returns

Reference to this string.

#### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> .             |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1357 of file `vstring.h`.

#### 4.66.3.99 `replace()` [6/11]

```

template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
 const_iterator __i1,
 const_iterator __i2,
 const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]

```

Replace range of characters with string.

#### Parameters

|                    |                                                 |
|--------------------|-------------------------------------------------|
| <code>__i1</code>  | Iterator referencing start of range to replace. |
| <code>__i2</code>  | Iterator referencing end of range to replace.   |
| <code>__str</code> | String value to insert.                         |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1376 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

**4.66.3.100 `replace()`** [7/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace (
 const_iterator __i1,
 const_iterator __i2,
 const _CharT * __s,
 size_type __n) [inline]
```

Replace range of characters with C substring.

**Parameters**

|                   |                                                     |
|-------------------|-----------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace.     |
| <code>__i2</code> | Iterator referencing end of range to replace.       |
| <code>__s</code>  | C string value to insert.                           |
| <code>__n</code>  | Number of characters from <code>s</code> to insert. |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range [i1,i2). In place, the first *n* characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1399 of file `vstring.h`.

#### 4.66.3.101 `replace()` [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
 const_iterator __i1,
 const_iterator __i2,
 const _CharT * __s) [inline]
```

Replace range of characters with C string.

##### Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__s</code>  | C string value to insert.                       |

##### Returns

Reference to this string.

##### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range [i1,i2). In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1425 of file `vstring.h`.

#### 4.66.3.102 `replace()` [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
 const_iterator __i1,
```

```
const_iterator __i2,
size_type __n,
_CharT __c) [inline]
```

Replace range of characters with multiple characters.

#### Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__n</code>  | Number of characters to insert.                 |
| <code>__c</code>  | Character to insert.                            |

#### Returns

Reference to this string.

#### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1450 of file `vstring.h`.

#### 4.66.3.103 `replace()` [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
__versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace (
 const_iterator __i1,
 const_iterator __i2,
 _InputIterator __k1,
 _InputIterator __k2) [inline]
```

Replace range of characters with range.

#### Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__k1</code> | Iterator referencing start of range to insert.  |
| <code>__k2</code> | Iterator referencing end of range to insert.    |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1479 of file `vstring.h`.

**4.66.3.104 replace()** [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
 const_iterator __i1,
 const_iterator __i2,
 std::initializer_list< _CharT > __l) [inline]
```

Replace range of characters with `initializer_list`.

**Parameters**

|                   |                                                            |
|-------------------|------------------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace.            |
| <code>__i2</code> | Iterator referencing end of range to replace.              |
| <code>__l</code>  | The <code>initializer_list</code> of characters to insert. |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1583 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

#### 4.66.3.105 `reserve()`

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::reserve (
 size_type __res_arg = 0) [inline]
```

Attempt to preallocate enough memory for specified number of characters.

##### Parameters

|                        |                                |
|------------------------|--------------------------------|
| <code>__res_arg</code> | Number of characters required. |
|------------------------|--------------------------------|

##### Exceptions

|                                |                                                             |
|--------------------------------|-------------------------------------------------------------|
| <code>std::length_error</code> | If <code>__res_arg</code> exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------------------|

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 508 of file `vstring.h`.

Referenced by `__gnu_cxx::operator+()`.

#### 4.66.3.106 `resize()` [1/2]

```
template<typename _CharT, typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize (
 size_type __n,
 _CharT __c)
```

Resizes the string to the specified number of characters.

##### Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__n</code> | Number of characters the string should contain. |
| <code>__c</code> | Character to fill any new elements.             |

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

Definition at line 50 of file `vstring.tcc`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::resize()`.

#### 4.66.3.107 `resize()` [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize (
 size_type __n) [inline]
```

Resizes the string to the specified number of characters.

##### Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__n</code> | Number of characters the string should contain. |
|------------------|-------------------------------------------------|

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

Definition at line 464 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::resize()`.

#### 4.66.3.108 `rfind()` [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
 const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
 size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a string.

##### Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String to locate.                                     |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1739 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_of()`.

**4.66.3.109 `rfind()`** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename,
typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::rfind (
 const _CharT * __s,
 size_type __pos,
 size_type __n) const
```

Find last position of a C substring.

**Parameters**

|                    |                                                         |
|--------------------|---------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                     |
| <code>__pos</code> | Index of character to search back from.                 |
| <code>__n</code>   | Number of characters from <code>s</code> to search for. |

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 313 of file `vstring.tcc`.

**4.66.3.110 `rfind()`** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
 const _CharT * __s,
 size_type __pos = npos) const [inline]
```

Find last position of a C string.

**Parameters**

|                    |                                                      |
|--------------------|------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                  |
| <code>__pos</code> | Index of character to start search at (default end). |

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1769 of file `vstring.h`.

**4.66.3.111 `rfind()`** [ 4 / 4 ]

```
template<typename _CharT, typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::rfind (
 _CharT __c,
 size_type __pos = npos) const [noexcept]
```

Find last position of a character.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__c</code>   | Character to locate.                                  |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 335 of file `vstring.tcc`.

**4.66.3.112 `shrink_to_fit()`**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
```

```
void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::shrink_to_fit () [inline],
[noexcept]
```

A non-binding request to reduce capacity() to size().

Definition at line 470 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::capacity()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

#### 4.66.3.113 `size()`

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size () const [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Definition at line 426 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::at()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::begin()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::cend()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::empty()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::end()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_not_of()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_of()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_last_of()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert()`, `__gnu_cxx::operator+()`, `std::operator<<()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::pop_back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::push_back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::shrink_to_fit()`.

#### 4.66.3.114 `substr()`

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
__versa_string __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::substr (
 size_type __pos = 0,
 size_type __n = npos) const [inline]
```

Get a substring.

##### Parameters

|                    |                                                        |
|--------------------|--------------------------------------------------------|
| <code>__pos</code> | Index of first character (default 0).                  |
| <code>__n</code>   | Number of characters in substring (default remainder). |

**Returns**

The new string.

**Exceptions**

|                                |                                   |
|--------------------------------|-----------------------------------|
| <code>std::out_of_range</code> | If <code>pos &gt; size()</code> . |
|--------------------------------|-----------------------------------|

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

Definition at line 2053 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string()`.

**4.66.3.115 swap()**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap (
 __versa_string< _CharT, _Traits, _Alloc, _Base > & __s) [inline], [noexcept]
```

Swap contents with another string.

**Parameters**

|                  |                      |
|------------------|----------------------|
| <code>__↔</code> | String to swap with. |
| <code>__s</code> |                      |

Exchanges the contents of this string with that of `__s` in constant time.

Definition at line 1637 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=()`, and `__gnu_cxx::swap()`.

**4.66.4 Member Data Documentation****4.66.4.1 npos**

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base>
const __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< __↔
CharT, _Traits, _Alloc, _Base >::npos [static]
```

Value returned by various member functions when they fail.

Definition at line 82 of file `vstring.h`.

The documentation for this class was generated from the following files:

## 4.75.1 Detailed Description

```
template<typename _TraitsT, bool __icase, bool __collate>
struct std::__detail::_BracketMatcher<_TraitsT, __icase, __collate >
```

Matches a character range (bracket expression)

Definition at line 49 of file `regex_compiler.h`.

The documentation for this struct was generated from the following files:

- [regex\\_compiler.h](#)
- [regex\\_compiler.tcc](#)

## 4.76 `__gnu_cxx::_Caster<_ToType>` Struct Template Reference

### Public Types

- `typedef _ToType::element_type * type`

#### 4.76.1 Detailed Description

```
template<typename _ToType>
struct __gnu_cxx::_Caster<_ToType>
```

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the appropriate cast to/from the custom pointer class so long as that class meets the following conditions: 1) has a typedef `element_type` which names the type it points to. 2) has a `get()` const method which returns `element_type*`. 3) has a constructor which can take one `element_type*` argument. This type supports the semantics of the pointer cast operators (below.)

Definition at line 52 of file `cast.h`.

The documentation for this struct was generated from the following file:

- [cast.h](#)

## 4.77 `__gnu_cxx::_Char_types<_CharT>` Struct Template Reference

### Public Types

- `typedef unsigned long int_type`
- `typedef std::streamoff off_type`
- `typedef std::streampos pos_type`
- `typedef std::mbstate\_t state_type`

#### 4.77.1 Detailed Description

```
template<typename _CharT>
struct __gnu_cxx::_Char_types<_CharT>
```

Mapping from character type to associated types.

### Note

This is an implementation class for the generic version of `char_traits`. It defines `int_type`, `off_type`, `pos_type`, and `state_type`. By default these are unsigned long, `streamoff`, `streampos`, and `mbstate_t`. Users who need a different set of types, but who don't need to change the definitions of any function defined in `char_traits`, can specialize `__gnu_cxx::_Char_types` while leaving `__gnu_cxx::char_traits` alone.

Definition at line 65 of file `char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

#### 4.78 `__gnu_pbds::detail::pat_trie_base::_Clter< Node, Leaf, Head, Inode, Is_Forward_Iterator >` Class Template Reference

- [shared\\_ptr](#)< const \_RegexT > **\_M\_get\_nfa** ()

## 4.79.1 Detailed Description

```
template<typename _TraitsT>
class std::__detail::_Compiler<_TraitsT >
```

Builds an NFA from an input iterator range.

The `_TraitsT` type should fulfill requirements [28.3].

Definition at line 57 of file `regex_compiler.h`.

The documentation for this class was generated from the following files:

- [regex\\_compiler.h](#)
- [regex\\_compiler.tcc](#)

4.80 `std::__parallel::_CRandNumber<_MustBeInt >` Struct Template Reference

## Public Member Functions

- `int operator() (int __limit)`

## 4.80.1 Detailed Description

```
template<typename _MustBeInt = int>
struct std::__parallel::_CRandNumber<_MustBeInt >
```

Functor wrapper for `std::rand()`.

Definition at line 1529 of file `algo.h`.

The documentation for this struct was generated from the following file:

- [algo.h](#)

4.81 `std::__detail::_Default_ranged_hash` Struct Reference

## 4.81.1 Detailed Description

Default ranged hash function `H`. In principle it should be a function object composed from objects of type `H1` and `H2` such that  $h(k, N) = h2(h1(k), N)$ , but that would mean making extra copies of `h1` and `h2`. So instead we'll just use a tag to tell class template `hashtable` to do that composition.

Definition at line 441 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

## 4.82 std::Deque\_base< \_Tp, \_Alloc > Class Template Reference

- void **\_M\_initialize\_map** (size\_t)
- [allocator\\_type](#) **get\_allocator** () const noexcept

### Protected Attributes

- `_Deque_impl _M_impl`

#### 4.82.1 Detailed Description

```
template<typename _Tp, typename _Alloc>
class std::_Deque_base<_Tp, _Alloc>
```

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.

Nothing in this class ever constructs or destroys an actual `Tp` element. (Deque handles that itself.) Only/All memory management is performed here.

Definition at line 406 of file `stl_deque.h`.

#### 4.82.2 Member Function Documentation

##### 4.82.2.1 `_M_initialize_map()`

```
template<typename _Tp , typename _Alloc >
void std::_Deque_base<_Tp, _Alloc>::_M_initialize_map (
 size_t __num_elements) [protected]
```

Layout storage.

### Parameters

|                             |                                                        |
|-----------------------------|--------------------------------------------------------|
| <code>__num_elements</code> | The count of T's for which to allocate space at first. |
|-----------------------------|--------------------------------------------------------|

### Returns

Nothing.

The initial underlying memory layout is a bit complicated...

Definition at line 615 of file `stl_deque.h`.

The documentation for this class was generated from the following file:

- [stl\\_deque.h](#)

## 4.83.1 Detailed Description

```
template<typename _Tp, typename _Ref, typename _Ptr>
struct std::Deque_iterator< _Tp, _Ref, _Ptr >
```

A deque::iterator.

Quite a bit of intelligence here. Much of the functionality of deque is actually passed off to this class. A deque holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.

All the functions are op overloads except for `_M_set_node`.

Definition at line 478 of file `stl_algobase.h`.

## 4.83.2 Member Function Documentation

#### 4.83.2.1 `_M_set_node()`

```
template<typename _Tp, typename _Ref, typename _Ptr>
void std::_Deque_iterator< _Tp, _Ref, _Ptr >::_M_set_node (
 _Map_pointer __new_node) [inline], [noexcept]
```

Prepares to traverse `new_node`. Sets everything except `_M_cur`, which should therefore be set by the caller immediately afterwards, based on `_M_first` and `_M_last`.

Definition at line 260 of file `stl_deque.h`.

The documentation for this struct was generated from the following files:

- [stl\\_algobase.h](#)
- [stl\\_deque.h](#)

#### 4.84.1 Detailed Description

```
template<typename _RAIter>
struct __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>
```

Data known to every thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

Definition at line 52 of file `random_shuffle.h`.

## 4.84.2 Constructor &amp; Destructor Documentation

## 4.84.2.1 \_DRandomShufflingGlobalData()

```
template<typename _RAIter>
__gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_DRandomShufflingGlobalData (
 _RAIter & __source) [inline]
```

Constructor.

Definition at line 83 of file random\_shuffle.h.

## 4.84.3 Member Data Documentation

## 4.84.3.1 \_M\_bin\_proc

```
template<typename _RAIter>
_ThreadIndex* __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_bin_proc
```

Number of the thread that will further process the corresponding bin.

Definition at line 74 of file random\_shuffle.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs().

## 4.84.3.2 \_M\_dist

```
template<typename _RAIter>
_DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_dist
```

Two-dimensional array to hold the thread-bin distribution.

Dimensions (\_M\_num\_threads + 1) \_\_x (\_M\_num\_bins + 1).

Definition at line 67 of file random\_shuffle.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs(), and \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs↔\_pu().

#### 4.84.3.3 `_M_num_bins`

```
template<typename _RAIter>
int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bins
```

Number of bins to distribute to.

Definition at line 77 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs↵_pu()`.

#### 4.84.3.4 `_M_num_bits`

```
template<typename _RAIter>
int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bits
```

Number of bits needed to address the bins.

Definition at line 80 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs↵_pu()`.

#### 4.84.3.5 `_M_source`

```
template<typename _RAIter>
_RAIter& __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_source
```

Begin iterator of the `__source`.

Definition at line 59 of file `random_shuffle.h`.

#### 4.84.3.6 `_M_starts`

```
template<typename _RAIter>
_DifferenceType* __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_starts
```

Start indexes of the threads' `__chunks`.

Definition at line 70 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs↵_pu()`.

## 4.85 \_\_gnu\_parallel::\_DRSSorterPU<\_RAIter, \_RandomNumberGenerator > Struct Template Reference 1063

### 4.84.3.7 \_M\_temporaries

```
template<typename _RAIter>
_ValueType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_temporaries
```

Temporary arrays for each thread.

Definition at line 62 of file random\_shuffle.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs().

The documentation for this struct was generated from the following file:

- [random\\_shuffle.h](#)

## 4.85 \_\_gnu\_parallel::\_DRSSorterPU<\_RAIter, \_RandomNumberGenerator > Struct Template Reference

### Public Attributes

- [\\_BinIndex \\_\\_bins\\_end](#)
- [\\_BinIndex \\_M\\_bins\\_begin](#)
- [int \\_M\\_num\\_threads](#)
- [\\_DRandomShufflingGlobalData< \\_RAIter > \\* \\_M\\_sd](#)
- [uint32\\_t \\_M\\_seed](#)

### 4.85.1 Detailed Description

```
template<typename _RAIter, typename _RandomNumberGenerator>
struct __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >
```

Local data for a thread participating in \_\_gnu\_parallel::\_\_parallel\_random\_shuffle().

Definition at line 91 of file random\_shuffle.h.

### 4.85.2 Member Data Documentation

#### 4.85.2.1 \_\_bins\_end

```
template<typename _RAIter, typename _RandomNumberGenerator>
_BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::__bins_end
```

End index for bins taken care of by this thread.

Definition at line 100 of file random\_shuffle.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs().

#### 4.85.2.2 `_M_bins_begin`

```
template<typename _RAIter, typename _RandomNumberGenerator>
__BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_bins_begin
```

Begin index for bins taken care of by this thread.

Definition at line 97 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

#### 4.85.2.3 `_M_num_threads`

```
template<typename _RAIter, typename _RandomNumberGenerator>
int __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_num_threads
```

Number of threads participating in total.

Definition at line 94 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs↵_pu()`.

#### 4.85.2.4 `_M_sd`

```
template<typename _RAIter, typename _RandomNumberGenerator>
__DRandomShufflingGlobalData<_RAIter>* __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumber↵Generator >::_M_sd
```

Pointer to global data.

Definition at line 106 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs↵_pu()`.

#### 4.85.2.5 `_M_seed`

```
template<typename _RAIter, typename _RandomNumberGenerator>
uint32_t __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_seed
```

Random `_M_seed` for this thread.

Definition at line 103 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs↵_pu()`.

The documentation for this struct was generated from the following file:

- [random\\_shuffle.h](#)

## 4.86 \_\_gnu\_parallel::\_DummyReduct Struct Reference

## Public Member Functions

- `bool operator() (bool, bool) const`

## 4.86.1 Detailed Description

Reduction function doing nothing.

Definition at line 298 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 4.87 std::\_Enable\_copy\_move&lt; \_Copy, \_CopyAssignment, \_Move, \_MoveAssignment, \_Tag &gt; Struct Template Reference

Inheritance diagram for `std::_Enable_copy_move< _Copy, _CopyAssignment, _Move, _MoveAssignment, _Tag >`:

## 4.87.1 Detailed Description

```
template<bool _Copy, bool _CopyAssignment, bool _Move, bool _MoveAssignment, typename _Tag = void>
struct std::_Enable_copy_move< _Copy, _CopyAssignment, _Move, _MoveAssignment, _Tag >
```

A mixin helper to conditionally enable or disable the copy/move special members.

## See also

[\\_Enable\\_special\\_members](#)

Definition at line 84 of file `enable_special_members.h`.

The documentation for this struct was generated from the following file:

- [enable\\_special\\_members.h](#)

## 4.88 `std::_Enable_default_constructor<_Switch, _Tag>` Struct Template Reference

### Public Member Functions

- `constexpr \_Enable\_default\_constructor (\_Enable\_default\_constructor const &) noexcept=default`
- `constexpr \_Enable\_default\_constructor (\_Enable\_default\_constructor &&) noexcept=default`
- `constexpr \_Enable\_default\_constructor (\_Enable\_default\_constructor\_tag)`
- `\_Enable\_default\_constructor & operator= (\_Enable\_default\_constructor const &) noexcept=default`
- `\_Enable\_default\_constructor & operator= (\_Enable\_default\_constructor &&) noexcept=default`

### 4.88.1 Detailed Description

```
template<bool _Switch, typename _Tag = void>
struct std::_Enable_default_constructor<_Switch, _Tag>
```

A mixin helper to conditionally enable or disable the default constructor.

See also

[\\_Enable\\_special\\_members](#)

Definition at line 50 of file `enable_special_members.h`.

The documentation for this struct was generated from the following file:

- [enable\\_special\\_members.h](#)

## 4.89 `std::_Enable_destructor<_Switch, _Tag>` Struct Template Reference

### 4.89.1 Detailed Description

```
template<bool _Switch, typename _Tag = void>
struct std::_Enable_destructor<_Switch, _Tag>
```

A mixin helper to conditionally enable or disable the default destructor.

See also

[\\_Enable\\_special\\_members](#)

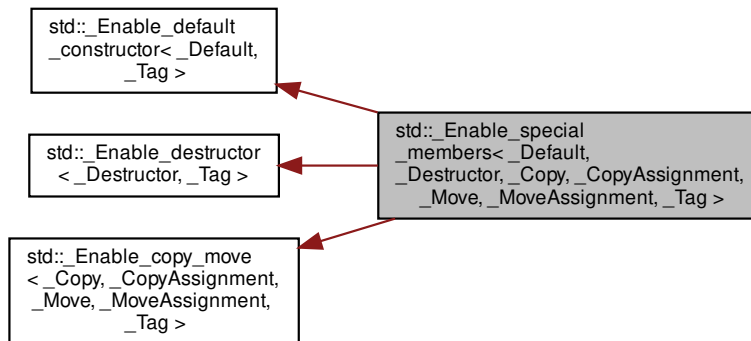

Definition at line 74 of file `enable_special_members.h`.

The documentation for this struct was generated from the following file:

- [enable\\_special\\_members.h](#)

#### 4.90 `std::Enable_special_members< _Default, _Destructor, _Copy, _CopyAssignment, _Move, _MoveAssignment, _Tag >` Struct Template Reference

Inheritance diagram for `std::Enable_special_members< _Default, _Destructor, _Copy, _CopyAssignment, _Move, _MoveAssignment, _Tag >`:

##### 4.90.1 Detailed Description

```
template<bool _Default, bool _Destructor, bool _Copy, bool _CopyAssignment, bool _Move, bool _MoveAssignment, typename _Tag = void>
struct std::Enable_special_members< _Default, _Destructor, _Copy, _CopyAssignment, _Move, _MoveAssignment, _Tag >
```

A mixin helper to conditionally enable or disable the special members.

The `_Tag` type parameter is to make mixin bases unique and thus avoid ambiguities.

Definition at line 97 of file `enable_special_members.h`.

The documentation for this struct was generated from the following file:

- [enable\\_special\\_members.h](#)

#### 4.91 `__gnu_debug::Equal_to< _Type >` Class Template Reference

##### Public Member Functions

- `_Equal_to` (const `_Type` &\_\_v)
- `bool operator()` (const `_Type` &\_\_x) const

#### 4.91.1 Detailed Description

```
template<typename _Type>
class __gnu_debug::_Equal_to< _Type >
```

A simple function object that returns true if the passed-in value is equal to the stored value.

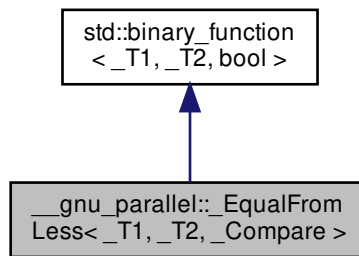

Definition at line 59 of file `safe_sequence.h`.

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

#### 4.92 \_\_gnu\_parallel::\_EqualFromLess< \_T1, \_T2, \_Compare > Class Template Reference

Inheritance diagram for `__gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >`:

##### Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

##### Public Member Functions

- **\_EqualFromLess** (`_Compare &__comp`)
- `bool` **operator()** (`const _T1 &__a, const _T2 &__b`)

#### 4.92.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_EqualFromLess<_T1, _T2, _Compare>
```

Constructs predicate for equality from strict weak ordering predicate.

Definition at line 157 of file `base.h`.

#### 4.92.2 Member Typedef Documentation

##### 4.92.2.1 `first_argument_type`

```
typedef _T1 std::binary_function<_T1, _T2, bool>::first_argument_type [inherited]
```

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

##### 4.92.2.2 `result_type`

```
typedef bool std::binary_function<_T1, _T2, bool>::result_type [inherited]
```

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

##### 4.92.2.3 `second_argument_type`

```
typedef _T2 std::binary_function<_T1, _T2, bool>::second_argument_type [inherited]
```

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [base.h](#)

#### 4.93 `std::__detail::Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >` Struct Template Reference

Inheritance diagram for `std::__detail::Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >`:

##### 4.93.1 Detailed Description

```

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2,
typename _Hash, typename _RehashPolicy, typename _Traits, bool _Unique_keys = _Traits::__unique_keys::value>
struct std::__detail::Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >

```

Primary class template `_Equality`.

This is for implementing equality comparison for unordered containers, per N3068, by John Lakos and Pablo Halpern. Algorithmically, we follow closely the reference implementations therein.

Definition at line 1831 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.94 `std::__detail::Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >` Struct Template Reference

##### Public Types

- using `__hashtable` = `_Hashtable< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >`

#### Public Member Functions

- `bool _M_equal (const \_\_hashtable &) const`

##### 4.94.1 Detailed Description

```
template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2,
typename _Hash, typename _RehashPolicy, typename _Traits>
struct std::__detail::Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >
```

`unordered_multiset` and `unordered_multimap` specializations.

Definition at line 1890 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.95 `std::__detail::Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true >` Struct Template Reference

#### Public Types

- using `__hashtable` = `\_Hashtable< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >`

#### Public Member Functions

- `bool _M_equal (const \_\_hashtable &) const`

##### 4.95.1 Detailed Description

```
template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2,
typename _Hash, typename _RehashPolicy, typename _Traits>
struct std::__detail::Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true >
```

`unordered_map` and `unordered_set` specializations.

Definition at line 1838 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.96 \_\_gnu\_parallel::\_EqualTo<\_T1, \_T2> Struct Template Reference

Inheritance diagram for \_\_gnu\_parallel::\_EqualTo<\_T1, \_T2>:

##### Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

##### Public Member Functions

- `bool` **operator()** (const `_T1` &\_\_t1, const `_T2` &\_\_t2) const

##### 4.96.1 Detailed Description

```
template<typename _T1, typename _T2>
struct __gnu_parallel::_EqualTo<_T1, _T2>
```

Similar to `std::equal_to`, but allows two different types.

Definition at line 244 of file `base.h`.

##### 4.96.2 Member Typedef Documentation

#### 4.96.2.1 `first_argument_type`

```
typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]
```

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

#### 4.96.2.2 `result_type`

```
typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]
```

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

#### 4.96.2.3 `second_argument_type`

```
typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]
```

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [base.h](#)

## 4.97 `std::__detail::_Executor<_Bilter, _Alloc, _TraitsT, __dfs_mode>` Class Template Reference

### Public Types

- typedef [iterator\\_traits](#)< \_Bilter >::value\_type `_CharT`
- typedef `_TraitsT::char_class_type` `_ClassT`
- typedef [regex\\_constants::match\\_flag\\_type](#) `_FlagT`
- typedef `_NFA<_TraitsT>` `_NFAT`
- typedef [basic\\_regex](#)< \_CharT, \_TraitsT > `_RegexT`
- typedef `std::vector< sub\_match< _Bilter >, _Alloc >` `_ResultsVec`

### Public Member Functions

- `_Executor` (`_Bilter` \_\_begin, `_Bilter` \_\_end, [\\_ResultsVec](#) &\_\_results, const [\\_RegexT](#) &\_\_re, `_FlagT` \_\_flags)
- `bool` `_M_match` ()
- `bool` `_M_search` ()
- `bool` `_M_search_from_first` ()

## Public Attributes

- `_ResultsVec & _M_results`
- `_State_info< __search_mode, _ResultsVec > _M_states`

### 4.97.1 Detailed Description

```
template<typename _Bilter, typename _Alloc, typename _TraitsT, bool __dfs_mode>
class std::__detail::__Executor< _Bilter, _Alloc, _TraitsT, __dfs_mode >
```

Takes a regex and an input string and does the matching.

The `_Executor` class has two modes: DFS mode and BFS mode, controlled by the template parameter `__dfs_mode`.

Definition at line 59 of file `regex.h`.

The documentation for this class was generated from the following files:

- [regex.h](#)
- [regex\\_executor.h](#)
- [regex\\_executor.tcc](#)

## 4.98 `__gnu_cxx::__ExtPtr_allocator< _Tp >` Class Template Reference

### Public Types

## Friends

- `template<typename _Up >`  
`void swap` (`_ExtPtr_allocator<_Up>` &, `_ExtPtr_allocator<_Up>` &)

## 4.98.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::_ExtPtr_allocator<_Tp>
```

An example allocator which uses a non-standard pointer type.

This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See `ext/pointer.h`) Memory allocation in this example is still performed using `std::allocator`.

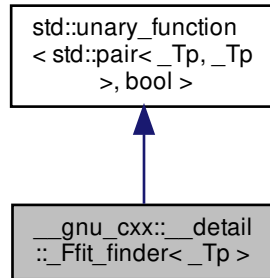

Definition at line 56 of file `extptr_allocator.h`.

The documentation for this class was generated from the following file:

- [extptr\\_allocator.h](#)

#### 4.99 `__gnu_cxx::__detail::_Ffit_finder<_Tp>` Class Template Reference

Inheritance diagram for `__gnu_cxx::__detail::_Ffit_finder<_Tp>`:

##### Public Types

- typedef `std::pair<_Tp, _Tp>` `argument_type`
- typedef `bool` `result_type`

##### Public Member Functions

- `std::size_t * _M_get ()` const throw ()
- `_Counter_type _M_offset ()` const throw ()
- `bool operator() (_Block_pair __bp)` throw ()

##### 4.99.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::__detail::_Ffit_finder<_Tp>
```

The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.

Definition at line 329 of file `bitmap_allocator.h`.

##### 4.99.2 Member Typedef Documentation

## 4.99.2.1 argument\_type

```
typedef std::pair< _Tp, _Tp > std::unary_function< std::pair< _Tp, _Tp > , bool >::argument_type
[inherited]
```

argument\_type is the type of the argument

Definition at line 108 of file stl\_function.h.

## 4.99.2.2 result\_type

```
typedef bool std::unary_function< std::pair< _Tp, _Tp > , bool >::result_type [inherited]
```

result\_type is the return type

Definition at line 111 of file stl\_function.h.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 4.100 std::\_Function\_base Class Reference

Inheritance diagram for std::\_Function\_base:

## Public Types

- typedef bool(\* **Manager\_type**) (\_Any\_data &, const \_Any\_data &, \_Manager\_operation)

## Public Member Functions

#### 4.102.1 Detailed Description

```
template<typename _Tp>
struct std::_Fwd_list_const_iterator<_Tp>
```

A `forward_list::const_iterator`.

All the functions are op overloads.

Definition at line 210 of file `forward_list.h`.

#### 4.102.2 Friends And Related Function Documentation

## 4.102.2.1 operator!=

```
template<typename _Tp >
bool operator!= (
 const _Self & __x,
 const _Self & __y) [friend]
```

Forward list const\_iterator inequality comparison.

Definition at line 267 of file forward\_list.h.

## 4.102.2.2 operator==

```
template<typename _Tp >
bool operator== (
 const _Self & __x,
 const _Self & __y) [friend]
```

Forward list const\_iterator equality comparison.

Definition at line 259 of file forward\_list.h.

The documentation for this struct was generated from the following file:

- `bool operator!= (const \_Self &__x, const \_Self &__y) noexcept`
- `bool operator== (const \_Self &__x, const \_Self &__y) noexcept`

#### 4.103.1 Detailed Description

```
template<typename _Tp>
struct std::_Fwd_list_iterator< _Tp >
```

A forward\_list::iterator.

All the functions are op overloads.

Definition at line 135 of file forward\_list.h.

#### 4.103.2 Friends And Related Function Documentation

##### 4.103.2.1 operator"!=

```
template<typename _Tp >
bool operator!= (
 const _Self & __x,
 const _Self & __y) [friend]
```

Forward list iterator inequality comparison.

Definition at line 188 of file forward\_list.h.

##### 4.103.2.2 operator==

```
template<typename _Tp >
bool operator== (
 const _Self & __x,
 const _Self & __y) [friend]
```

Forward list iterator equality comparison.

Definition at line 180 of file forward\_list.h.

The documentation for this struct was generated from the following file:

## 4.104.1 Detailed Description

```
template<typename _Tp>
struct std::_Fwd_list_node< _Tp >
```

A helper node class for forward\_list. This is just a linked list with uninitialized storage for a data value in each node. There is a sorting utility method.

Definition at line 113 of file forward\_list.h.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

#### 4.105 std::\_Fwd\_list\_node\_base Struct Reference

##### 4.105.1 Detailed Description

A helper basic node class for `forward_list`. This is just a linked list with nothing inside it. There are purely list shuffling utility methods here.

Definition at line 54 of file `forward_list.h`.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

4.106 `__gnu_parallel::_GuardedIterator<_RAIter, _Compare>` Class Template Reference

## Public Member Functions

- `_GuardedIterator` (`_RAIter __begin`, `_RAIter __end`, `_Compare &__comp`)
- `operator _RAIter` ()
- `std::iterator_traits<_RAIter>::value_type & operator*` ()
- `_GuardedIterator<_RAIter, _Compare> & operator++` ()

## Friends

- `bool operator<` (`_GuardedIterator<_RAIter, _Compare> &__bi1`, `_GuardedIterator<_RAIter, _Compare> &__bi2`)
- `bool operator<=` (`_GuardedIterator<_RAIter, _Compare> &__bi1`, `_GuardedIterator<_RAIter, _Compare> &__bi2`)

## 4.106.1 Detailed Description

```
template<typename _RAIter, typename _Compare>
class __gnu_parallel::_GuardedIterator<_RAIter, _Compare>
```

`_Iterator` wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.

The implicit supremum comes with a performance cost.

Deriving from `_RAIter` is not possible since `_RAIter` need not be a class.

Definition at line 73 of file `multiway_merge.h`.

## 4.106.2 Constructor &amp; Destructor Documentation

4.106.2.1 `_GuardedIterator()`

```
template<typename _RAIter, typename _Compare>
__gnu_parallel::_GuardedIterator<_RAIter, _Compare>::_GuardedIterator (
 _RAIter __begin,
 _RAIter __end,
 _Compare & __comp) [inline]
```

Constructor. Sets iterator to beginning of sequence.

## Parameters

|                      |                                                                  |
|----------------------|------------------------------------------------------------------|
| <code>__begin</code> | Begin iterator of sequence.                                      |
| <code>__end</code>   | End iterator of sequence.                                        |
| <code>__comp</code>  | Comparator provided for associated overloaded compare operators. |

Definition at line 91 of file multiway\_merge.h.

#### 4.106.3 Member Function Documentation

##### 4.106.3.1 operator\_RAIter()

```
template<typename _RAIter, typename _Compare>
__gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator _RAIter () [inline]
```

Convert to wrapped iterator.

##### Returns

Wrapped iterator.

Definition at line 112 of file multiway\_merge.h.

##### 4.106.3.2 operator\*()

```
template<typename _RAIter, typename _Compare>
std::iterator_traits<_RAIter>::value_type& __gnu_parallel::_GuardedIterator< _RAIter, _Compare
>::operator* () [inline]
```

Dereference operator.

##### Returns

Referenced element.

Definition at line 107 of file multiway\_merge.h.

##### 4.106.3.3 operator++()

```
template<typename _RAIter, typename _Compare>
__GuardedIterator<_RAIter, _Compare>& __gnu_parallel::_GuardedIterator< _RAIter, _Compare >↵
::operator++ () [inline]
```

Pre-increment operator.

##### Returns

This.

Definition at line 98 of file multiway\_merge.h.

## 4.106.4 Friends And Related Function Documentation

## 4.106.4.1 operator&lt;

```
template<typename _RAIter, typename _Compare>
bool operator< (
 _GuardedIterator< _RAIter, _Compare > & __bi1,
 _GuardedIterator< _RAIter, _Compare > & __bi2) [friend]
```

Compare two elements referenced by guarded iterators.

## Parameters

|                    |                  |
|--------------------|------------------|
| <code>__bi1</code> | First iterator.  |
| <code>__bi2</code> | Second iterator. |

## Returns

true if less.

Definition at line 120 of file multiway\_merge.h.

## 4.106.4.2 operator&lt;=

```
template<typename _RAIter, typename _Compare>
bool operator<= (
 _GuardedIterator< _RAIter, _Compare > & __bi1,
 _GuardedIterator< _RAIter, _Compare > & __bi2) [friend]
```

Compare two elements referenced by guarded iterators.

## Parameters

|                    |                  |
|--------------------|------------------|
| <code>__bi1</code> | First iterator.  |
| <code>__bi2</code> | Second iterator. |

## Returns

True if less equal.

Definition at line 135 of file multiway\_merge.h.

The documentation for this class was generated from the following file:

- [multiway\\_merge.h](#)

#### 4.107 `std::__detail::_Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >` Struct Template Reference

##### 4.107.1 Detailed Description

```
template<typename _Key, typename _Value, typename _ExtractKey, typename _H1, typename _H2, typename _Hash, bool __cache_hash_code <←
hash_code>
struct std::__detail::_Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >
```

Primary class template `_Hash_code_base`.

Encapsulates two policy issues that aren't quite orthogonal. (1) the difference between using a ranged hash function and using the combination of a hash function and a range-hashing function. In the former case we don't have such things as hash codes, so we have a dummy type as placeholder. (2) Whether or not we cache hash codes. Caching hash codes is meaningless if we have a ranged hash function.

We also put the key extraction objects here, for convenience. Each specialization derives from one or more of the template parameters to benefit from Ebo. This is important as this type is inherited in some cases by the `_Local_iterator_base` type used to implement `local_iterator` and `const_local_iterator`. As with any iterator type we prefer to make it as small as possible.

Primary template is unused except as a hook for specializations.

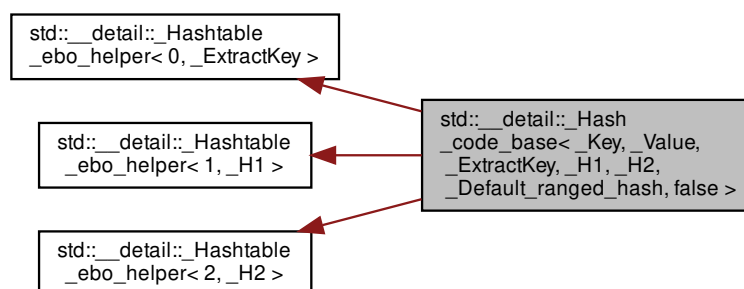

Definition at line 1175 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.108 `std::__detail::_Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Default_ranged_hash, false >` Struct Template Reference

Inheritance diagram for `std::__detail::_Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Default_ranged_hash, false >`  
`hash, false >`:

#### Public Types

### 4.116.1 Detailed Description

```
template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2,
typename _Hash, typename _RehashPolicy, typename _Traits>
class std::_Hashtable<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >
```

Primary class template `_Hashtable`.

#### Template Parameters

|                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>_Value</code>        | CopyConstructible type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <code>_Key</code>          | CopyConstructible type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <code>_Alloc</code>        | An allocator type ([lib.allocator.requirements]) whose <code>_Alloc::value_type</code> is <code>_Value</code> . As a conforming extension, we allow for <code>_Alloc::value_type != _Value</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <code>_ExtractKey</code>   | Function object that takes an object of type <code>_Value</code> and returns a value of type <code>_Key</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <code>_Equal</code>        | Function object that takes two objects of type <code>k</code> and returns a bool-like value that is true if the two objects are considered equal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <code>_H1</code>           | The hash function. A unary function object with argument type <code>_Key</code> and result type <code>size_t</code> . Return values should be distributed over the entire range <code>[0, numeric_limits&lt;size_t&gt;::max())</code> .                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <code>_H2</code>           | The range-hashing function (in the terminology of Tavori and Dreizin). A binary function object whose argument types and result type are all <code>size_t</code> . Given arguments <code>r</code> and <code>N</code> , the return value is in the range <code>[0, N)</code> .                                                                                                                                                                                                                                                                                                                                                                                |
| <code>_Hash</code>         | The ranged hash function (Tavori and Dreizin). A binary function whose argument types are <code>_Key</code> and <code>size_t</code> and whose result type is <code>size_t</code> . Given arguments <code>k</code> and <code>N</code> , the return value is in the range <code>[0, N)</code> . Default: <code>hash(k, N) = h2(h1(k), N)</code> . If <code>_Hash</code> is anything other than the default, <code>_H1</code> and <code>_H2</code> are ignored.                                                                                                                                                                                                 |
| <code>_RehashPolicy</code> | Policy class with three members, all of which govern the bucket count. <code>_M_next_bkt(n)</code> returns a bucket count no smaller than <code>n</code> . <code>_M_bkt_for_elements(n)</code> returns a bucket count appropriate for an element count of <code>n</code> . <code>_M_need_rehash(n_bkt, n_elt, n_ins)</code> determines whether, if the current bucket count is <code>n_bkt</code> and the current element count is <code>n_elt</code> , we need to increase the bucket count. If so, returns <code>make_pair(true, n)</code> , where <code>n</code> is the new bucket count. If not, returns <code>make_pair(false, &lt;anything&gt;)</code> |
| <code>_Traits</code>       | Compile-time class with three boolean <code>std::integral_constant</code> members: <code>__cache_hash_code</code> , <code>__constant_iterators</code> , <code>__unique_keys</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

Each `_Hashtable` data structure has:

- `_Bucket[] _M_buckets`
- `_Hash_node_base _M_before_begin`
- `size_type _M_bucket_count`
- `size_type _M_element_count`

with `_Bucket` being `_Hash_node*` and `_Hash_node` containing:

- `_Hash_node* _M_next`
- `Tp _M_value`
- `size_t _M_hash_code` if `cache_hash_code` is true

In terms of Standard containers the hashtable is like the aggregation of:

- `std::forward_list<_Node>` containing the elements
- `std::vector<std::forward_list<_Node>::iterator>` representing the buckets

The non-empty buckets contain the node before the first node in the bucket. This design makes it possible to implement something like a `std::forward_list::insert_after` on container insertion and `std::forward_list::erase_after` on container erase calls. `_M_before_begin` is equivalent to `std::forward_list::before_begin`. Empty buckets contain `nullptr`. Note that one of the non-empty buckets contains `&_M_before_begin` which is not a dereferenceable node so the node pointer in a bucket shall never be dereferenced, only its next node can be.

Walking through a bucket's nodes requires a check on the hash code to see if each node is still in the bucket. Such a design assumes a quite efficient hash functor and is one of the reasons it is highly advisable to set `__cache_hash_code` to true.

The container iterators are simply built from nodes. This way incrementing the iterator is perfectly efficient independent of how many empty buckets there are in the container.

On insert we compute the element's hash code and use it to find the bucket index. If the element must be inserted in an empty bucket we add it at the beginning of the singly linked list and make the bucket point to `_M_before_begin`. The bucket that used to point to `_M_before_begin`, if any, is updated to point to its new before begin node.

On erase, the simple iterator design requires using the hash functor to get the index of the bucket to update. For this reason, when `__cache_hash_code` is set to false the hash functor must not throw and this is enforced by a static assertion.

Functionality is implemented by decomposition into base classes, where the derived `_Hashtable` class is used in `↵` `Map_base`, `_Insert`, `_Rehash_base`, and `_Equality` base classes to access the "this" pointer. `_Hashtable_base` is used in the base classes as a non-recursive, fully-completed-type so that detailed nested type information, such as iterator type and node type, can be used. This is similar to the "Curiously Recurring Template Pattern" (CRTP) technique, but uses a reconstructed, not explicitly passed, template pattern.

Base class templates are:

- `__detail::_Hashtable_base`
- `__detail::_Map_base`
- `__detail::_Insert`
- `__detail::_Rehash_base`
- `__detail::_Equality`

## 4.117.1 Detailed Description

```
template<typename _NodeAlloc>
struct std::__detail::_Hashtable_alloc< _NodeAlloc >
```

This type deals with all allocation and keeps an allocator instance through inheritance to benefit from EBO when possible.

Definition at line 98 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

### 4.118.1 Detailed Description

template<typename \_Key, typename \_Value, typename \_ExtractKey, typename \_Equal, typename \_H1, typename \_H2, typename \_Hash, typename \_Traits>

struct `std::__detail::__Hashtable_base`<\_Key, \_Value, \_ExtractKey, \_Equal, \_H1, \_H2, \_Hash, \_Traits>

Primary class template `_Hashtable_base`.

Helper class adding management of `_Equal` functor to `_Hash_code_base` type.

Base class templates are:

- `__detail::__Hash_code_base`
- `__detail::__Hashtable_ebo_helper`

Definition at line 58 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.119 `std::__detail::_Hashtable_ebo_helper<_Nm, _Tp, __use_ebo >` Struct Template Reference

##### 4.119.1 Detailed Description

```
template<int _Nm, typename _Tp, bool __use_ebo = !_is_final(_Tp) && __is_empty(_Tp)>
struct std::__detail::_Hashtable_ebo_helper<_Nm, _Tp, __use_ebo >
```

Primary class template `_Hashtable_ebo_helper`.

Helper class using EBO when it is not forbidden (the type is not final) and when it is worth it (the type is empty.)

Definition at line 1105 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.120 `std::__detail::_Hashtable_ebo_helper<_Nm, _Tp, false >` Struct Template Reference

##### Public Member Functions

- `template<typename _OtherTp >`  
`_Hashtable_ebo_helper (_OtherTp &&__tp)`
- `const _Tp & _M_cget () const`
- `_Tp & _M_get ()`

##### 4.120.1 Detailed Description

```
template<int _Nm, typename _Tp>
struct std::__detail::_Hashtable_ebo_helper<_Nm, _Tp, false >
```

Specialization not using EBO.

Definition at line 1125 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.121 `std::__detail::_Hashtable_ebo_helper<_Nm, _Tp, true >` Struct Template Reference

Inherits `_Tp`.

## Public Member Functions

_Hashtable_ebo_helper (_OtherTp &&__tp)`
- `const _Tp & _M_cget () const`
- `_Tp & _M_get ()`

### 4.121.1 Detailed Description

```
template<int _Nm, typename _Tp>
struct std::__detail::__Hashtable_ebo_helper< _Nm, _Tp, true >
```

Specialization using EBO.

Definition at line 1109 of file hashtable\_policy.h.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

## 4.122 std::\_\_detail::\_\_Hashtable\_traits< \_Cache\_hash\_code, \_Constant\_iterators, \_Unique\_keys > Struct Template Reference

### Public Types

- using `__constant_iterators` = `__bool_constant< _Constant_iterators >`
- using `__hash_cached` = `__bool_constant< _Cache_hash_code >`
- using `__unique_keys` = `__bool_constant< _Unique_keys >`

### 4.122.1 Detailed Description

```
template<bool _Cache_hash_code, bool _Constant_iterators, bool _Unique_keys>
struct std::__detail::__Hashtable_traits< _Cache_hash_code, _Constant_iterators, _Unique_keys >
```

struct \_Hashtable\_traits

Important traits for hash tables.

### Template Parameters

|                                  |                                                                                                                                                                                                                                                                                                          |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>_Cache_hash_code</code>    | Boolean value. True if the value of the hash function is stored along with the value. This is a time-space tradeoff. Storing it may improve lookup speed by reducing the number of times we need to call the <code>_Hash</code> or <code>_Equal</code> functors.                                         |
| <code>_Constant_iterators</code> | Boolean value. True if iterator and <code>const_iterator</code> are both constant iterator types. This is true for <code>unordered_set</code> and <code>unordered_multiset</code> , false for <code>unordered_map</code> and <code>unordered_multimap</code> .                                           |
| <code>_Unique_keys</code>        | Boolean value. True if the return value of <code>_Hashtable::count(k)</code> is always at most one, false if it may be an arbitrary number. This is true for <code>unordered_set</code> and <code>unordered_map</code> , false for <code>unordered_multiset</code> and <code>unordered_multimap</code> . |
| Generated by Doxygen             |                                                                                                                                                                                                                                                                                                          |

- constexpr bool `operator>=` (const pair<\_Iterator1, \_Iterator2> &\_\_x, const pair<\_Iterator1, \_Iterator2> &\_\_y)

## 4.131.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _IteratorCategory>
class __gnu_parallel::_IteratorPair<_Iterator1, _Iterator2, _IteratorCategory>
```

A pair of iterators. The usual iterator operations are applied to both child iterators.

Definition at line 45 of file iterator.h.

#### 4.131.2 Member Typedef Documentation

##### 4.131.2.1 first\_type

```
typedef _Iterator1 std::pair< _Iterator1 , _Iterator2 >::first_type [inherited]
```

The type of the `first` member.

Definition at line 214 of file `stl_pair.h`.

##### 4.131.2.2 second\_type

```
typedef _Iterator2 std::pair< _Iterator1 , _Iterator2 >::second_type [inherited]
```

The type of the `second` member.

Definition at line 215 of file `stl_pair.h`.

#### 4.131.3 Member Function Documentation

##### 4.131.3.1 swap()

```
constexpr void std::pair< _Iterator1 , _Iterator2 >::swap (
 pair< _Iterator1, _Iterator2 > & __p) [inline], [noexcept], [inherited]
```

Swap the first members and then the second members.

Definition at line 439 of file `stl_pair.h`.

#### 4.131.4 Friends And Related Function Documentation

##### 4.131.4.1 make\_pair()

```
constexpr pair< typename __decay_and_strip< _Iterator1 >::__type, typename __decay_and_strip< ↵
 _Iterator2 >::__type > make_pair (
 _Iterator1 && __x,
 _Iterator2 && __y) [related]
```

A convenience wrapper for creating a pair from two objects.

#### Parameters

|                  |                    |
|------------------|--------------------|
| <code>__x</code> | The first object.  |
| <code>__y</code> | The second object. |

#### Returns

A newly-constructed `pair<>` object of the appropriate type.

The C++98 standard says the objects are passed by reference-to-const, but C++03 says they are passed by value (this was LWG issue #181).

Since C++11 they have been passed by forwarding reference and then forwarded to the new members of the pair. To create a pair with a member of reference type, pass a `reference_wrapper` to this function.

Definition at line 567 of file `stl_pair.h`.

#### 4.131.4.2 `operator!=(())`

```
constexpr bool operator!=(
 const pair<_Iterator1 , _Iterator2 > & __x,
 const pair<_Iterator1 , _Iterator2 > & __y) [related]
```

Uses `operator==` to find the result.

Definition at line 496 of file `stl_pair.h`.

#### 4.131.4.3 `operator<()`

```
constexpr bool operator<(
 const pair<_Iterator1 , _Iterator2 > & __x,
 const pair<_Iterator1 , _Iterator2 > & __y) [related]
```

Defines a lexicographical order for pairs.

For two pairs of the same type, `P` is ordered before `Q` if `P.first` is less than `Q.first`, or if `P.first` and `Q.first` are equivalent (neither is less than the other) and `P.second` is less than `Q.second`.

Definition at line 489 of file `stl_pair.h`.

#### 4.131.4.4 operator<=()

```
constexpr bool operator<= (
 const pair< _Iterator1 , _Iterator2 > & __x,
 const pair< _Iterator1 , _Iterator2 > & __y) [related]
```

Uses operator< to find the result.

Definition at line 508 of file stl\_pair.h.

#### 4.131.4.5 operator==()

```
constexpr bool operator== (
 const pair< _Iterator1 , _Iterator2 > & __x,
 const pair< _Iterator1 , _Iterator2 > & __y) [related]
```

Two pairs of the same type are equal iff their members are equal.

Definition at line 466 of file stl\_pair.h.

#### 4.131.4.6 operator>()

```
constexpr bool operator> (
 const pair< _Iterator1 , _Iterator2 > & __x,
 const pair< _Iterator1 , _Iterator2 > & __y) [related]
```

Uses operator< to find the result.

Definition at line 502 of file stl\_pair.h.

#### 4.131.4.7 operator>=()

```
constexpr bool operator>= (
 const pair< _Iterator1 , _Iterator2 > & __x,
 const pair< _Iterator1 , _Iterator2 > & __y) [related]
```

Uses operator< to find the result.

Definition at line 514 of file stl\_pair.h.

#### 4.131.4.8 `swap()`

```
constexpr enable_if< __and< __is_swappable< _Iterator1 >, __is_swappable< _Iterator2 > > &
::value >::type swap (
 pair< _Iterator1 , _Iterator2 > & __x,
 pair< _Iterator1 , _Iterator2 > & __y) [related]
```

Swap overload for pairs. Calls `std::pair::swap()`.

#### Note

This `std::swap` overload is not declared in C++03 mode, which has performance implications, e.g. see <https://gcc.gnu.org/PR38466>

Definition at line 533 of file `stl_pair.h`.

### 4.131.5 Member Data Documentation

#### 4.131.5.1 `first`

```
_Iterator1 std::pair< _Iterator1 , _Iterator2 >::first [inherited]
```

The first member.

Definition at line 217 of file `stl_pair.h`.

#### 4.131.5.2 `second`

```
_Iterator2 std::pair< _Iterator1 , _Iterator2 >::second [inherited]
```

The second member.

Definition at line 218 of file `stl_pair.h`.

The documentation for this class was generated from the following file:

- [iterator.h](#)

### 4.132 `__gnu_parallel::_IteratorTriple<_Iterator1, _Iterator2, _Iterator3, _IteratorCategory>` Class Template Reference

#### Public Types

- typedef `std::iterator_traits<_Iterator1>::difference_type` **difference\_type**
- typedef `_IteratorCategory` **iterator\_category**
- typedef `_IteratorTriple` \* **pointer**
- typedef `_IteratorTriple` & **reference**
- typedef void **value\_type**

#### Public Member Functions

- **\_IteratorTriple** (const \_Iterator1 &\_\_first, const \_Iterator2 &\_\_second, const \_Iterator3 &\_\_third)
- **operator \_Iterator3** () const
- **\_IteratorTriple operator+** (difference\_type \_\_delta) const
- **\_IteratorTriple & operator++** ()
- const **\_IteratorTriple operator++** (int)
- difference\_type **operator-** (const **\_IteratorTriple** &\_\_other) const
- **\_IteratorTriple & operator--** ()
- const **\_IteratorTriple operator--** (int)
- **\_IteratorTriple & operator=** (const **\_IteratorTriple** &\_\_other)

#### Public Attributes

- \_Iterator1 **\_M\_first**
- \_Iterator2 **\_M\_second**
- \_Iterator3 **\_M\_third**

#### 4.132.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _Iterator3, typename _IteratorCategory>
class __gnu_parallel::_IteratorTriple< _Iterator1, _Iterator2, _Iterator3, _IteratorCategory >
```

A triple of iterators. The usual iterator operations are applied to all three child iterators.

Definition at line 120 of file iterator.h.

The documentation for this class was generated from the following file:

- [iterator.h](#)

#### 4.133 \_\_gnu\_parallel::\_Job<\_DifferenceTp> Struct Template Reference

##### Public Types

- typedef \_DifferenceTp **\_DifferenceType**

##### Public Attributes

- volatile \_DifferenceType **\_M\_first**
- volatile \_DifferenceType **\_M\_last**
- volatile \_DifferenceType **\_M\_load**

#### 4.133.1 Detailed Description

```
template<typename _DifferenceTp>
struct __gnu_parallel::__Job<_DifferenceTp>
```

One \_\_job for a certain thread.

Definition at line 54 of file workstealing.h.

#### 4.133.2 Member Data Documentation

##### 4.133.2.1 \_\_M\_first

```
template<typename _DifferenceTp>
volatile _DifferenceType __gnu_parallel::__Job<_DifferenceTp>::__M_first
```

First element.

Changed by owning and stealing thread. By stealing thread, always incremented.

Definition at line 62 of file workstealing.h.

Referenced by \_\_gnu\_parallel::\_\_for\_each\_template\_random\_access\_workstealing().

##### 4.133.2.2 \_\_M\_last

```
template<typename _DifferenceTp>
volatile _DifferenceType __gnu_parallel::__Job<_DifferenceTp>::__M_last
```

Last element.

Changed by owning thread only.

Definition at line 67 of file workstealing.h.

Referenced by \_\_gnu\_parallel::\_\_for\_each\_template\_random\_access\_workstealing().

#### 4.133.2.3 `_M_load`

```
template<typename _DifferenceTp>
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_load
```

Number of elements, i.e. `_M_last - _M_first + 1`.

Changed by owning thread only.

Definition at line 72 of file `workstealing.h`.

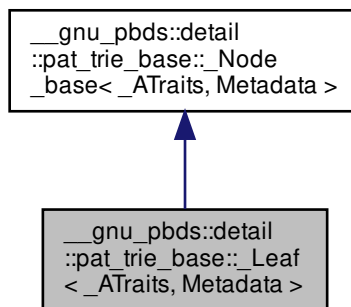

Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`.

The documentation for this struct was generated from the following file:

- [workstealing.h](#)

#### 4.134 `__gnu_pbds::detail::pat_trie_base::_Leaf<_ATraits, Metadata>` Struct Template Reference

Inheritance diagram for `__gnu_pbds::detail::pat_trie_base::_Leaf<_ATraits, Metadata>`:

#### Public Types

- typedef `_ATraits::const_iterator` **a\_const\_iterator**
- typedef `detail::rebind_traits<_Alloc, _ATraits>::const_pointer` **a\_const\_pointer**
- typedef `_ATraits` **access\_traits**
- typedef `_Alloc` **allocator\_type**
- typedef `_Node_base<_ATraits, Metadata>` **base\_type**
- typedef `type_traits::const_reference` **const\_reference**
- typedef `detail::rebind_traits<_Alloc, _Node_base>::pointer` **node\_pointer**
- typedef `type_traits::reference` **reference**
- typedef `base_type::type_traits` **type\_traits**
- typedef `type_traits::value_type` **value\_type**

## Public Member Functions

- **\_Leaf** (const\_reference other)
- reference **value** ()
- const\_reference **value** () const

## Public Attributes

- node\_pointer **m\_p\_parent**
- const [node\\_type](#) **m\_type**

## 4.134.1 Detailed Description

```
template<typename ATraits, typename Metadata>
struct __gnu_pbds::detail::pat_trie_base::_Leaf< ATraits, Metadata >
```

Leaf node for PATRICIA tree.

Definition at line 162 of file pat\_trie\_base.hpp.

The documentation for this struct was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 4.135 \_\_gnu\_parallel::\_Less&lt;\_T1,\_T2&gt; Struct Template Reference

Inheritance diagram for \_\_gnu\_parallel::\_Less<\_T1,\_T2>:

### Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

### Public Member Functions

- `bool` **operator()** (`const _T1 &__t1`, `const _T2 &__t2`) `const`
- `bool` **operator()** (`const _T2 &__t2`, `const _T1 &__t1`) `const`

#### 4.135.1 Detailed Description

```
template<typename _T1, typename _T2>
struct __gnu_parallel::_Less< _T1, _T2 >
```

Similar to `std::less`, but allows two different types.

Definition at line 252 of file `base.h`.

#### 4.135.2 Member Typedef Documentation

##### 4.135.2.1 `first_argument_type`

```
typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]
```

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

##### 4.135.2.2 `result_type`

```
typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]
```

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

4.135.2.3 `second_argument_type`

```
typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]
```

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [base.h](#)

4.136 `__gnu_parallel::_Lexicographic< _T1, _T2, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_Lexicographic< _T1, _T2, _Compare >`:

## Public Types

- typedef `std::pair< _T1, _T2 >` `first_argument_type`
- typedef `bool` `result_type`
- typedef `std::pair< _T1, _T2 >` `second_argument_type`

## Public Member Functions

- `_Lexicographic` (`_Compare &__comp`)
- `bool operator()` (`const std::pair< _T1, _T2 > &__p1, const std::pair< _T1, _T2 > &__p2`) `const`

#### 4.136.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_Lexicographic< _T1, _T2, _Compare >
```

Compare \_\_a pair of types lexicographically, ascending.

Definition at line 53 of file multiseq\_selection.h.

#### 4.136.2 Member Typedef Documentation

##### 4.136.2.1 first\_argument\_type

```
typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 > , std::pair< _T1, _T2
> , bool >::first_argument_type [inherited]
```

first\_argument\_type is the type of the first argument

Definition at line 121 of file stl\_function.h.

##### 4.136.2.2 result\_type

```
typedef bool std::binary_function< std::pair< _T1, _T2 > , std::pair< _T1, _T2 > , bool >↔
::result_type [inherited]
```

result\_type is the return type

Definition at line 127 of file stl\_function.h.

##### 4.136.2.3 second\_argument\_type

```
typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 > , std::pair< _T1, _T2
> , bool >::second_argument_type [inherited]
```

second\_argument\_type is the type of the second argument

Definition at line 124 of file stl\_function.h.

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

4.137 `__gnu_parallel::_LexicographicReverse<_T1,_T2,_Compare>` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LexicographicReverse<_T1,_T2,_Compare>`:

## Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

## Public Member Functions

- `_LexicographicReverse` (`_Compare &__comp`)
- `bool operator()` (`const std::pair<_T1,_T2> &__p1, const std::pair<_T1,_T2> &__p2`) `const`

## 4.137.1 Detailed Description

```

template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_LexicographicReverse<_T1,_T2,_Compare>

```

Compare `__a` pair of types lexicographically, descending.

Definition at line 80 of file `multiseq_selection.h`.

## 4.137.2 Member Typedef Documentation

#### 4.137.2.1 first\_argument\_type

```
typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]
```

first\_argument\_type is the type of the first argument

Definition at line 121 of file stl\_function.h.

#### 4.137.2.2 result\_type

```
typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]
```

result\_type is the return type

Definition at line 127 of file stl\_function.h.

#### 4.137.2.3 second\_argument\_type

```
typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]
```

second\_argument\_type is the type of the second argument

Definition at line 124 of file stl\_function.h.

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

### 4.138 std::\_List\_base< \_Tp, \_Alloc > Class Template Reference

Inheritance diagram for std::\_List\_base< \_Tp, \_Alloc >:

## Public Types

#### 4.140.1 Detailed Description

```
template<typename _Tp>
struct std::_List_iterator< _Tp >
```

A list::iterator.

All the functions are op overloads.

Definition at line 73 of file stl\_iterator\_base\_funcs.h.

The documentation for this struct was generated from the following files:

- [stl\\_iterator\\_base\\_funcs.h](#)
- [stl\\_list.h](#)

#### 4.141 std::\_List\_node< \_Tp > Struct Template Reference

Inheritance diagram for std::\_List\_node< \_Tp >:

##### Public Member Functions

- void **\_M\_hook** (`_List_node_base *const __position`) noexcept
- void **\_M\_reverse** () noexcept
- void **\_M\_transfer** (`_List_node_base *const __first`, `_List_node_base *const __last`) noexcept
- void **\_M\_unhook** () noexcept
- `_Tp * _M_valptr` ()
- `_Tp const * _M_valptr` () const

##### Static Public Member Functions

- static void **swap** (`_List_node_base & __x`, `_List_node_base & __y`) noexcept

## Public Attributes

- `_List_node_base * _M_next`
- `_List_node_base * _M_prev`
- `__gnu_cxx::__aligned_membuf<_Tp> _M_storage`

## 4.141.1 Detailed Description

```
template<typename _Tp>
struct std::_List_node<_Tp>
```

An actual node in the list.

Definition at line 166 of file `stl_list.h`.

The documentation for this struct was generated from the following file:

- [stl\\_list.h](#)

## 4.142 std::\_\_detail::\_List\_node\_base Struct Reference

Inheritance diagram for `std::__detail::_List_node_base`:

## Public Member Functions

- `void _M_hook (\_List\_node\_base *const __position) noexcept`
- `void _M_reverse () noexcept`
- `void _M_transfer (\_List\_node\_base *const __first, \_List\_node\_base *const __last) noexcept`
- `void _M_unhook () noexcept`

#### Static Public Member Functions

##### 4.145.1 Detailed Description

```
template<typename _Key, typename _Value, typename _ExtractKey, typename _H1, typename _H2, typename _Hash, bool __↵
constant_iterators, bool __cache>
struct std::__detail::__Local_iterator< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __constant_iterators, __cache >
```

local iterators

Definition at line 1602 of file hashtable\_policy.h.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.146 `std::__detail::__Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >` Strut Template Reference

##### 4.146.1 Detailed Description

```
template<typename _Key, typename _Value, typename _ExtractKey, typename _H1, typename _H2, typename _Hash, bool __cache_↵
hash_code>
struct std::__detail::__Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >
```

Primary class template `_Local_iterator_base`.

Base class for local iterators, used to iterate within a bucket but not between buckets.

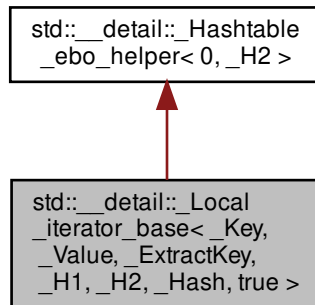

Definition at line 1150 of file hashtable\_policy.h.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.147 `std::__detail::_Local_iterator_base<_Key, _Value, _ExtractKey, _H1, _H2, _Hash, true >` Struct Template Reference

Inheritance diagram for `std::__detail::_Local_iterator_base<_Key, _Value, _ExtractKey, _H1, _H2, _Hash, true >`:

##### Public Member Functions

- `const void * _M_curr () const`
- `std::size_t _M_get_bucket () const`

##### Protected Types

- using `__base_type` = `_Hashtable_ebo_helper<0, _H2>`
- using `__hash_code_base` = `_Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Hash, true>`

##### Protected Member Functions

- `_Local_iterator_base` (`const __hash_code_base &__base, _Hash_node<_Value, true> *__p, std::size_t __bkt, std::size_t __bkt_count`)
- `void _M_incr ()`

##### Protected Attributes

- `std::size_t _M_bucket`
- `std::size_t _M_bucket_count`
- `_Hash_node<_Value, true> * _M_cur`

## 4.147.1 Detailed Description

```
template<typename _Key, typename _Value, typename _ExtractKey, typename _H1, typename _H2, typename _Hash>
struct std::__detail::__Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, true >
```

Partial specialization used when nodes contain a cached hash code.

Definition at line 1423 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

4.148 `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser` Struct Reference

## Public Attributes

- [\\_Tp \\_M\\_key](#)
- [int \\_M\\_source](#)
- [bool \\_M\\_sup](#)

## 4.148.1 Detailed Description

```
template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser
```

Internal representation of a `_LoserTree` element.

Definition at line 59 of file `losertree.h`.

## 4.148.2 Member Data Documentation

4.148.2.1 `_M_key`

```
template<typename _Tp , typename _Compare >
_Tp __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key
```

`_M_key` of the element in the `_LoserTree`.

Definition at line 66 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_insert_start()`.

#### 4.148.2.2 `_M_source`

```
template<typename _Tp , typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source
```

\_\_index of the \_\_source \_\_sequence.

Definition at line 64 of file losertree.h.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`.

#### 4.148.2.3 `_M_sup`

```
template<typename _Tp , typename _Compare >
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup
```

flag, true iff this is a "maximum" \_\_sentinel.

Definition at line 62 of file losertree.h.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`.

The documentation for this struct was generated from the following file:

- [losertree.h](#)

### 4.149 `__gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser` Struct Reference

#### Public Attributes

- `const _Tp * _M_keyp`
- `int _M_source`
- `bool _M_sup`

#### 4.149.1 Detailed Description

```
template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser
```

Internal representation of `_LoserTree` \_\_elements.

Definition at line 361 of file losertree.h.

The documentation for this struct was generated from the following file:

- [losertree.h](#)

4.150 `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >`:

## Public Member Functions

- **`_LoserTree`** (unsigned int `__k`, `_Compare` `__comp`)
- void `__delete_min_insert` (`_Tp` `__key`, bool `__sup`)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` &`__key`, int `__source`, bool `__sup`)

## Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_log_k`
- unsigned int `_M_offset`

## 4.150.1 Detailed Description

```

template<bool __stable, typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >

```

Stable `_LoserTree` variant.

Provides the stable implementations of `insert_start`, `__init_winner`, `__init` and `__delete_min_insert`.

Unstable variant is done using partial specialisation below.

Definition at line 169 of file `losertree.h`.

## 4.150.2 Member Function Documentation

### 4.150.2.1 `__delete_min_insert()`

```
template<bool __stable, typename _Tp , typename _Compare >
void __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >::__delete_min_insert (
 _Tp __key,
 bool __sup) [inline]
```

Delete the smallest element and insert a new element from the previously smallest element's sequence.

This implementation is stable.

Definition at line 222 of file losertree.h.

### 4.150.2.2 `__get_min_source()`

```
template<typename _Tp , typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source () [inline], [inherited]
```

#### Returns

the index of the sequence with the smallest element.

Definition at line 155 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`.

### 4.150.2.3 `__insert_start()`

```
template<typename _Tp , typename _Compare >
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
 const _Tp & __key,
 int __source,
 bool __sup) [inline], [inherited]
```

Initializes the sequence "`_M_source`" with the element "`__key`".

#### Parameters

|                       |                                                                                           |
|-----------------------|-------------------------------------------------------------------------------------------|
| <code>__key</code>    | the element to insert                                                                     |
| <code>__source</code> | <code>__index</code> of the <code>__source</code> sequence                                |
| <code>__sup</code>    | flag that determines whether the value to insert is an explicit <code>__supremum</code> . |

Definition at line 134 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup`.

#### 4.150.3 Member Data Documentation

##### 4.150.3.1 `_M_log_k`

```
template<typename _Tp , typename _Compare >
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected], [inherited]
```

`log_2{_M_k}`

Definition at line 72 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

#### 4.151 `__gnu_parallel::_LoserTree< false, _Tp, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LoserTree< false, _Tp, _Compare >`:

## Public Member Functions

- **\_LoserTree** (unsigned int \_\_k, \_Compare \_\_comp)
- void **\_\_delete\_min\_insert** (\_Tp \_\_key, bool \_\_sup)
- int **\_\_get\_min\_source** ()
- void **\_\_init** ()
- unsigned int **\_\_init\_winner** (unsigned int \_\_root)
- void **\_\_insert\_start** (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

## Protected Attributes

- unsigned int **\_M\_ik**
- unsigned int **\_M\_offset**

### 4.151.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTree< false, _Tp, _Compare >
```

Unstable \_LoserTree variant.

Stability (non-stable here) is selected with partial specialization.

Definition at line 261 of file losertree.h.

### 4.151.2 Member Function Documentation

#### 4.151.2.1 \_\_delete\_min\_insert()

```
template<typename _Tp , typename _Compare >
void __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__delete_min_insert (
 _Tp __key,
 bool __sup) [inline]
```

Delete the \_M\_key smallest element and insert the element \_\_key instead.

#### Parameters

|              |                                                 |
|--------------|-------------------------------------------------|
| <b>__key</b> | the _M_key to insert                            |
| <b>__sup</b> | true iff __key is an explicitly marked supremum |

Definition at line 324 of file losertree.h.

## 4.151.2.2 \_\_get\_min\_source()

```
template<typename _Tp , typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source () [inline], [inherited]
```

## Returns

the index of the sequence with the smallest element.

Definition at line 155 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`.

## 4.151.2.3 \_\_init\_winner()

```
template<typename _Tp , typename _Compare >
unsigned int __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__init_winner (
 unsigned int __root) [inline]
```

Computes the winner of the competition at position "`__root`".

Called recursively (starting at 0) to build the initial tree.

## Parameters

|                     |                                 |
|---------------------|---------------------------------|
| <code>__root</code> | __index of the "game" to start. |
|---------------------|---------------------------------|

Definition at line 284 of file losertree.h.

## 4.151.2.4 \_\_insert\_start()

```
template<typename _Tp , typename _Compare >
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
 const _Tp & __key,
 int __source,
 bool __sup) [inline], [inherited]
```

Initializes the sequence "`_M_source`" with the element "`__key`".

## Parameters

|                       |                                                                                           |
|-----------------------|-------------------------------------------------------------------------------------------|
| <code>__key</code>    | the element to insert                                                                     |
| <code>__source</code> | __index of the <code>__source</code> __sequence                                           |
| <code>__sup</code>    | flag that determines whether the value to insert is an explicit <code>__supremum</code> . |

Definition at line 134 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

#### 4.152 `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >`:

#### Classes

#### Public Member Functions

- [\\_LoserTreeBase](#) (unsigned int \_\_k, \_Compare \_\_comp)
- [~\\_LoserTreeBase](#) ()
- [int \\_\\_get\\_min\\_source](#) ()
- [void \\_\\_insert\\_start](#) (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

#### Protected Attributes

- [\\_Compare `\_M\_comp`](#)
- [bool `\_M\_first\_insert`](#)
- [unsigned int `\_M\_ik`](#)
- [unsigned int `\_M\_k`](#)
- [unsigned int `\_M\_log\_k`](#)
- [\\_Loser \\* `\_M\_losers`](#)
- [unsigned int `\_M\_offset`](#)

## 4.152.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeBase< _Tp, _Compare >
```

Guarded loser/tournament tree.

The smallest element is at the top.

Guarding is done explicitly through one flag `_M_sup` per element, `inf` is not needed due to a better initialization routine. This is a well-performing variant.

## Parameters

|                       |                                                                      |
|-----------------------|----------------------------------------------------------------------|
| <code>_Tp</code>      | the element type                                                     |
| <code>_Compare</code> | the comparator to use, defaults to <code>std::less&lt;_Tp&gt;</code> |

Definition at line 55 of file `losertree.h`.

## 4.152.2 Constructor &amp; Destructor Documentation

## 4.152.2.1 \_LoserTreeBase()

```
template<typename _Tp , typename _Compare >
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase (
 unsigned int __k,
 _Compare __comp) [inline]
```

The constructor.

## Parameters

|                     |                                   |
|---------------------|-----------------------------------|
| <code>__k</code>    | The number of sequences to merge. |
| <code>__comp</code> | The comparator to use.            |

Definition at line 94 of file `losertree.h`.

References `__gnu_parallel::_rd_log2()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`.

#### 4.152.2.2 ~\_LoserTreeBase()

```
template<typename _Tp , typename _Compare >
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~~_LoserTreeBase () [inline]
```

The destructor.

Definition at line 118 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`.

### 4.152.3 Member Function Documentation

#### 4.152.3.1 \_\_get\_min\_source()

```
template<typename _Tp , typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source () [inline]
```

##### Returns

the index of the sequence with the smallest element.

Definition at line 155 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`.

#### 4.152.3.2 \_\_insert\_start()

```
template<typename _Tp , typename _Compare >
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
 const _Tp & __key,
 int __source,
 bool __sup) [inline]
```

Initializes the sequence "`_M_source`" with the element "`__key`".

##### Parameters

|                       |                                                                                           |
|-----------------------|-------------------------------------------------------------------------------------------|
| <code>__key</code>    | the element to insert                                                                     |

#### 4.152.4 Member Data Documentation

##### 4.152.4.1 \_M\_comp

```
template<typename _Tp , typename _Compare >
_Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp [protected]
```

`_Compare` to use.

Definition at line 78 of file losertree.h.

##### 4.152.4.2 \_M\_first\_insert

```
template<typename _Tp , typename _Compare >
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert [protected]
```

State flag that determines whether the `_LoserTree` is empty.

Only used for building the `_LoserTree`.

Definition at line 85 of file losertree.h.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

##### 4.152.4.3 \_M\_log\_k

```
template<typename _Tp , typename _Compare >
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected]
```

`log_2(_M_k)`

Definition at line 72 of file losertree.h.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

4.152.4.4 `_M_losers`

```
template<typename _Tp , typename _Compare >
_Loser* __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers [protected]
```

`_LoserTree` `__elements`.

Definition at line 75 of file `losertree.h`.

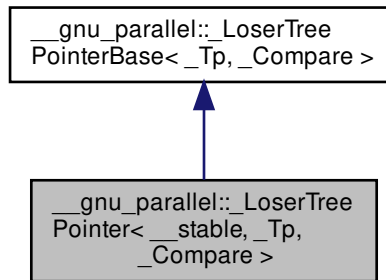

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~~LoserTreeBase()`.

- unsigned int `_M_offset`

#### 4.158.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >
```

Unguarded loser tree, keeping only pointers to the elements in the tree structure.

No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.

Definition at line 828 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

#### 4.159 `__gnu_parallel::_LoserTreeTraits< _Tp >` Struct Template Reference

##### Static Public Attributes

- static const bool `_M_use_pointer`

#### 4.159.1 Detailed Description

```
template<typename _Tp>
struct __gnu_parallel::_LoserTreeTraits< _Tp >
```

Traits for determining whether the loser tree should use pointers or copies.

The field "`_M_use_pointer`" is used to determine whether to use pointers in the loser trees or whether to copy the values into the loser tree.

The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.

Specialize for your data type to customize the behavior.

Example:

```
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false; };

template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_use_pointer = true; };
```

## Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>_Tp</code> | type to give the loser tree traits for. |
|------------------|-----------------------------------------|

Definition at line 731 of file `multiway_merge.h`.

## 4.159.2 Member Data Documentation

4.159.2.1 `_M_use_pointer`

```
template<typename _Tp >
const bool __gnu_parallel::_LoserTreeTraits< _Tp >::_M_use_pointer [static]
```

True iff to use pointers instead of values in loser trees.

The default behavior is to use pointers if the data type is four times as big as the pointer to it.

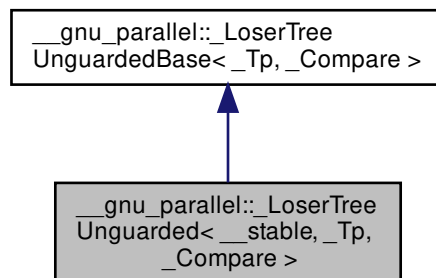

Definition at line 739 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

4.160 `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >` Class Template Reference

## Protected Attributes

- \_Compare **\_M\_comp**
- unsigned int **\_M\_ik**
- unsigned int **\_M\_k**
- \_Loser \* **\_M\_losers**
- unsigned int **\_M\_offset**

## 4.162.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >
```

Base class for unguarded \_LoserTree implementation.

The whole element is copied into the tree structure.

No guarding is done, therefore not a single input sequence must run empty. Unused \_\_sequence heads are marked with a sentinel which is > all elements that are to be merged.

This is a very fast variant.

Definition at line 574 of file losertree.h.

The documentation for this class was generated from the following file:

- [losertree.h](#)

#### 4.163 std::\_\_detail::\_Map\_base< \_Key, \_Value, \_Alloc, \_ExtractKey, \_Equal, \_H1, \_H2, \_Hash, \_RehashPolicy, \_Traits, \_Unique\_keys > Struct Template Reference

Inheritance diagram for std::\_\_detail::\_Map\_base< \_Key, \_Value, \_Alloc, \_ExtractKey, \_Equal, \_H1, \_H2, \_Hash, \_↵  
RehashPolicy, \_Traits, \_Unique\_keys >:

#### 4.163.1 Detailed Description

```
template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2,
typename _Hash, typename _RehashPolicy, typename _Traits, bool _Unique_keys = _Traits::__unique_keys::value>
struct std::__detail::_Map_base<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >
```

Primary class template `_Map_base`.

If the hashtable has a value type of the form `pair<T1, T2>` and a key extraction policy (`_ExtractKey`) that returns the first part of the pair, the hashtable gets a `mapped_type` typedef. If it satisfies those criteria and also has unique keys, then it also gets an `operator[]`.

Definition at line 645 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.164 `std::__detail::_Map_base<_Key, _Pair, _Alloc, _Select1st, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >` Struct Template Reference

#### 4.169.1 Detailed Description

Default range hashing function: use division to fold a large number into the range [0, N).

Definition at line 424 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

## 4.170 `std::_Mu<_Arg, _IsBindExp, _IsPlaceholder >` Class Template Reference

#### 4.170.1 Detailed Description

```
template<typename _Arg, bool _IsBindExp = is_bind_expression<_Arg>::value, bool _IsPlaceholder = (is_placeholder<_Arg>↵
::value > 0)>
class std::_Mu<_Arg, _IsBindExp, _IsPlaceholder >
```

Maps an argument to `bind()` into an actual argument to the bound function object `[func.bind.bind]/10`. Only the first parameter should be specified: the rest are used to determine among the various implementations. Note that, although this class is a function object, it isn't entirely normal because it takes only two parameters regardless of the number of parameters passed to the bind expression. The first parameter is the bound argument and the second parameter is a tuple containing references to the rest of the arguments.

Definition at line 288 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

## 4.171 `std::_Mu<_Arg, false, false >` Class Template Reference

### Public Member Functions

- `template<typename _CVarArg, typename _Tuple >  
constexpr _CVarArg && operator() (_CVarArg &&__arg, _Tuple &) const volatile`

#### 4.171.1 Detailed Description

```
template<typename _Arg>
class std::_Mu<_Arg, false, false >
```

If the argument is just a value, returns a reference to that value. The cv-qualifiers on the reference are determined by the caller. C++11 [func.bind.bind] p10 bullet 4.

Definition at line 372 of file functional.

The documentation for this class was generated from the following file:

## 4.177.1 Detailed Description

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename Iterator, typename _↔
Alloc>
class __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >
```

Node const iterator.

Definition at line 810 of file pat\_trie\_base.hpp.

#### 4.177.2 Member Typedef Documentation

##### 4.177.2.1 `metadata_const_reference`

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
typedef rebind_traits<_Alloc, metadata_type>::const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_const_reference
```

Const metadata reference type.

Definition at line 862 of file `pat_trie_base.hpp`.

##### 4.177.2.2 `metadata_type`

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
typedef Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head,
Inode, _CIterator, Iterator, _Alloc >::metadata_type
```

Metadata type.

Definition at line 859 of file `pat_trie_base.hpp`.

#### 4.177.3 Member Function Documentation

##### 4.177.3.1 `get_child()`

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
_Node_citer __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::get_child (
 size_type i) const [inline]
```

Returns a `__const node __iterator` to the corresponding node's `i`-th child.

Definition at line 902 of file `pat_trie_base.hpp`.

#### 4.177.3.2 get\_metadata()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,
_CIterator, Iterator, _Alloc >::get_metadata () const [inline]
```

Metadata access.

Definition at line 885 of file pat\_trie\_base.hpp.

#### 4.177.3.3 num\_children()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::num_children () const [inline]
```

Returns the number of children in the corresponding node.

Definition at line 890 of file pat\_trie\_base.hpp.

#### 4.177.3.4 operator"!="()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator!= (
 const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const [inline]
```

Compares content (negatively) to a different iterator object.

Definition at line 918 of file pat\_trie\_base.hpp.

#### 4.177.3.5 operator\*()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _C↔
Iterator, Iterator, _Alloc >::operator* () const [inline]
```

Const access; returns the \_\_const iterator\* associated with the current leaf.

Definition at line 877 of file pat\_trie\_base.hpp.

4.177.3.6 `operator==()`

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator== (
 const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const [inline]
```

Compares content to a different iterator object.

Definition at line 913 of file `pat_trie_base.hpp`.

4.177.3.7 `valid_prefix()`

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
std::pair<a_const_iterator, a_const_iterator> __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix () const [inline]
```

Subtree valid prefix.

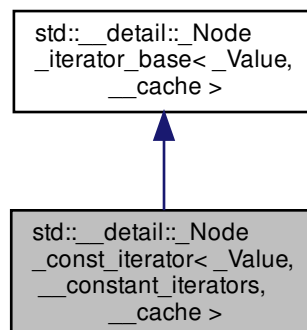

Definition at line 871 of file `pat_trie_base.hpp`.

The documentation for this class was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

4.178 `std::__detail::_Node_const_iterator<_Value, __constant_iterators, __cache>` Struct Template Reference

Inheritance diagram for `std::__detail::_Node_const_iterator<_Value, __constant_iterators, __cache>`:

### 4.179.1 Detailed Description

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename Iterator, typename _↵
Alloc>
class __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >
```

Node iterator.

Definition at line 934 of file `pat_trie_base.hpp`.

## 4.179.2 Member Typedef Documentation

### 4.179.2.1 metadata\_const\_reference

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
typedef rebind_traits<_Alloc, metadata_type>::const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_const_reference [inherited]
```

Const metadata reference type.

Definition at line 862 of file `pat_trie_base.hpp`.

### 4.179.2.2 metadata\_type

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
typedef Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head,
Inode, _CIterator, Iterator, _Alloc >::metadata_type [inherited]
```

Metadata type.

Definition at line 859 of file `pat_trie_base.hpp`.

## 4.179.3 Member Function Documentation

### 4.179.3.1 get\_child()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
_Node_iter __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::get_child (
 size_type i) const [inline]
```

Returns a node `__iterator` to the corresponding node's i-th child.

Definition at line 966 of file `pat_trie_base.hpp`.

#### 4.179.3.2 get\_metadata()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,
_CIterator, Iterator, _Alloc >::get_metadata () const [inline], [inherited]
```

Metadata access.

Definition at line 885 of file pat\_trie\_base.hpp.

#### 4.179.3.3 num\_children()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::num_children () const [inline], [inherited]
```

Returns the number of children in the corresponding node.

Definition at line 890 of file pat\_trie\_base.hpp.

#### 4.179.3.4 operator!=(())

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator!=((
 const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const [inline], [inherited]
```

Compares content (negatively) to a different iterator object.

Definition at line 918 of file pat\_trie\_base.hpp.

#### 4.179.3.5 operator\*()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
reference __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::operator* () const [inline]
```

Access; returns the iterator\* associated with the current leaf.

Definition at line 958 of file pat\_trie\_base.hpp.

#### 4.179.3.6 operator==()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator== (
 const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other)
const [inline], [inherited]
```

Compares content to a different iterator object.

Definition at line 913 of file pat\_trie\_base.hpp.

#### 4.179.3.7 valid\_prefix()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
std::pair<a_const_iterator, a_const_iterator> __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix () const [inline], [inherited]
```

Subtree valid prefix.

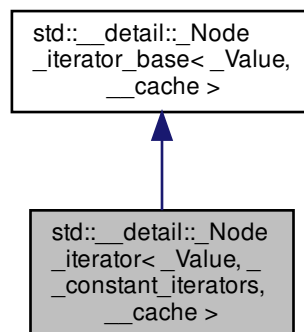

Definition at line 871 of file pat\_trie\_base.hpp.

The documentation for this class was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

### 4.180 std::\_\_detail::\_Node\_iterator< \_Value, \_\_constant\_iterators, \_\_cache > Struct Template Reference

Inheritance diagram for std::\_\_detail::\_Node\_iterator< \_Value, \_\_constant\_iterators, \_\_cache >:

**Public Types**

- `typedef _DifferenceTp DifferenceType`

**Public Attributes**

- `_DifferenceType \_M\_begin`
- `_DifferenceType \_M\_end`

##### 4.185.1 Detailed Description

```
template<typename _DifferenceTp>
struct __gnu_parallel::_Piece<_DifferenceTp >
```

Subsequence description.

Definition at line 46 of file `multiway_mergesort.h`.

##### 4.185.2 Member Data Documentation

###### 4.185.2.1 `_M_begin`

```
template<typename _DifferenceTp >
_DifferenceType __gnu_parallel::_Piece<_DifferenceTp >::_M_begin
```

Begin of subsequence.

Definition at line 51 of file `multiway_mergesort.h`.

## 4.185.2.2 \_M\_end

```
template<typename _DifferenceTp >
_DifferenceType __gnu_parallel::_Piece< _DifferenceTp >::_M_end
```

End of subsequence.

Definition at line 54 of file multiway\_mergesort.h.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 4.186 std::\_Placeholder&lt;\_Num&gt; Struct Template Reference

## 4.186.1 Detailed Description

```
template<int _Num>
struct std::_Placeholder<_Num>
```

The type of placeholder objects defined by libstdc++.

Definition at line 209 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

## 4.187 \_\_gnu\_parallel::\_Plus&lt;\_Tp1, \_Tp2, \_Result&gt; Struct Template Reference

Inheritance diagram for \_\_gnu\_parallel::\_Plus<\_Tp1, \_Tp2, \_Result>:

## Public Types

- typedef `_Tp1` [first\\_argument\\_type](#)
- typedef `_Result` [result\\_type](#)
- typedef `_Tp2` [second\\_argument\\_type](#)

## Public Member Functions

- `_Result` **operator()** (const `_Tp1` &\_\_x, const `_Tp2` &\_\_y) const

### 4.187.1 Detailed Description

```
template<typename _Tp1, typename _Tp2, typename _Result = __typeof__ (*static_cast<_Tp1*>(0) + *static_cast<_Tp2*>(0))>
struct __gnu_parallel::Plus<_Tp1, _Tp2, _Result >
```

Similar to `std::plus`, but allows two different types.

Definition at line 272 of file `base.h`.

### 4.187.2 Member Typedef Documentation

#### 4.187.2.1 first\_argument\_type

```
typedef _Tp1 std::binary_function<_Tp1 , _Tp2 , _Result >::first_argument_type [inherited]
```

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

#### 4.187.2.2 result\_type

```
typedef _Result std::binary_function<_Tp1 , _Tp2 , _Result >::result_type [inherited]
```

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

4.187.2.3 `second_argument_type`

```
typedef _Tp2 std::binary_function< _Tp1 , _Tp2 , _Result >::second_argument_type [inherited]
```

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

## 4.188.1 Detailed Description

```
template<typename _RAIter>
struct __gnu_parallel::_PMWSSortingData<_RAIter>
```

Data accessed by all threads.

PMWMS = parallel multiway mergesort

Definition at line 61 of file `multiway_mergesort.h`.

## 4.188.2 Member Data Documentation

#### 4.188.2.1 `_M_num_threads`

```
template<typename _RAIter>
__ThreadIndex __gnu_parallel::_PMWMSortingData< _RAIter >::_M_num_threads
```

Number of threads involved.

Definition at line 68 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

#### 4.188.2.2 `_M_offsets`

```
template<typename _RAIter>
_DifferenceType* __gnu_parallel::_PMWMSortingData< _RAIter >::_M_offsets
```

Offsets to add to the found positions.

Definition at line 83 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`.

#### 4.188.2.3 `_M_pieces`

```
template<typename _RAIter>
std::vector<_Piece<_DifferenceType> >* __gnu_parallel::_PMWMSortingData< _RAIter >::_M_pieces
```

Pieces of data to merge [thread][\_\_sequence].

Definition at line 86 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`.

#### 4.188.2.4 `_M_samples`

```
template<typename _RAIter>
_ValueType* __gnu_parallel::_PMWMSortingData< _RAIter >::_M_samples
```

Samples.

Definition at line 80 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::__determine_samples()`, and `__gnu_parallel::parallel_sort_mwms()`.

4.188.2.5 `_M_source`

```
template<typename _RAIter>
_RAIter __gnu_parallel::_PMWSSortingData<_RAIter>::_M_source
```

Input `__begin`.

Definition at line 71 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::_determine_samples()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

4.188.2.6 `_M_starts`

```
template<typename _RAIter>
_DifferenceType* __gnu_parallel::_PMWSSortingData<_RAIter>::_M_starts
```

Start indices, per thread.

Definition at line 74 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::_determine_samples()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

4.188.2.7 `_M_temporary`

```
template<typename _RAIter>
_ValueType** __gnu_parallel::_PMWSSortingData<_RAIter>::_M_temporary
```

Storage in which to sort.

Definition at line 77 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 4.189.1 Detailed Description

```
template<typename _Storage_policy>
class __gnu_cxx::Pointer_adapter<_Storage_policy>
```

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.

The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.

A key point of this class is also that it allows container writers to 'assume' `Allocator::pointer` is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to const and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use

the Allocator::pointer typedef appropriately for pointer types. 2) if you need pointer casting, use the `__pointer_cast<>` functions from `ext/cast.h`. This allows pointer cast operations to be overloaded as necessary by custom pointers.

Note: The const qualifier works with this pointer adapter as follows:

```
_Tp* == _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* == _Pointer_adapter<_Std_pointer_impl<const
_Tp> >; _Tp* const == const _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* const == const _Pointer_↵
adapter<_Std_pointer_impl<const _Tp> >;
```

Definition at line 284 of file `pointer.h`.

The documentation for this class was generated from the following file:

#### 4.191.1 Detailed Description

Default value for rehash policy. Bucket size is (usually) the smallest prime that keeps the load factor small enough.

Definition at line 445 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

## 4.192 `__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>` Class Template Reference

### Public Types

- typedef `_DifferenceTp` **`DifferenceType`**
- typedef `_PseudoSequenceIterator<_Tp, uint64_t>` **`iterator`**

### Public Member Functions

- `_PseudoSequence` (const `_Tp` & `__val`, `_DifferenceType` `__count`)
- `iterator begin` () const
- `iterator end` () const

#### 4.192.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>
```

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

#### Parameters

|                            |                                      |
|----------------------------|--------------------------------------|
| <code>_Tp</code>           | Sequence <code>_M_value</code> type. |
| <code>_DifferenceTp</code> | Sequence difference type.            |

Definition at line 359 of file `base.h`.

#### 4.192.2 Constructor & Destructor Documentation

##### 4.192.2.1 `_PseudoSequence()`

```
template<typename _Tp, typename _DifferenceTp>
__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>::_PseudoSequence (
 const _Tp & __val,
 _DifferenceType __count) [inline]
```

Constructor.

#### Parameters

|                      |                             |
|----------------------|-----------------------------|
| <code>__val</code>   | Element of the sequence.    |
| <code>__count</code> | Number of (virtual) copies. |

Definition at line 371 of file base.h.

#### 4.192.3 Member Function Documentation

##### 4.192.3.1 `begin()`

```
template<typename _Tp, typename _DifferenceTp>
iterator __gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>::begin () const [inline]
```

Begin iterator.

Definition at line 376 of file base.h.

##### 4.192.3.2 `end()`

```
template<typename _Tp, typename _DifferenceTp>
iterator __gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>::end () const [inline]
```

End iterator.

Definition at line 381 of file base.h.

The documentation for this class was generated from the following file:

##### 4.193.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequenceliterator<_Tp, _DifferenceTp>
```

`_Iterator` associated with `__gnu_parallel::_PseudoSequence`. It features the usual random-access iterator functionality.

**Parameters**

|                            |                                      |
|----------------------------|--------------------------------------|
| <code>_Tp</code>           | Sequence <code>_M_value</code> type. |
| <code>_DifferenceTp</code> | Sequence difference type.            |

Definition at line 306 of file `base.h`.

The documentation for this class was generated from the following file:

- [base.h](#)

**4.194.1 Detailed Description**

```
template<typename _RAIter>
struct __gnu_parallel::__QSBThreadLocal<_RAIter>
```

Information local to one thread in the parallel quicksort run.

Definition at line 65 of file `balanced_quicksort.h`.

**4.194.2 Member Typedef Documentation**

#### 4.194.2.1 \_Piece

```
template<typename _RAIter>
typedef std::pair<_RAIter, _RAIter> __gnu_parallel::_QSBThreadLocal<_RAIter>::_Piece
```

Continuous part of the sequence, described by an iterator pair.

Definition at line 72 of file balanced\_quicksort.h.

### 4.194.3 Constructor & Destructor Documentation

#### 4.194.3.1 \_QSBThreadLocal()

```
template<typename _RAIter>
__gnu_parallel::_QSBThreadLocal<_RAIter>::_QSBThreadLocal (
 int __queue_size) [inline]
```

Constructor.

##### Parameters

|                           |                                  |
|---------------------------|----------------------------------|
| <code>__queue_size</code> | size of the work-stealing queue. |
|---------------------------|----------------------------------|

Definition at line 91 of file balanced\_quicksort.h.

### 4.194.4 Member Data Documentation

#### 4.194.4.1 \_M\_elements\_leftover

```
template<typename _RAIter>
volatile _DifferenceType* __gnu_parallel::_QSBThreadLocal<_RAIter>::_M_elements_leftover
```

Pointer to a counter of elements left over to sort.

Definition at line 84 of file balanced\_quicksort.h.

Referenced by `__gnu_parallel::__parallel_sort_qsb()`.

#### 4.194.4.2 `_M_global`

```
template<typename _RAIter>
_Piece __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_global
```

The complete sequence to sort.

Definition at line 87 of file `balanced_quicksort.h`.

#### 4.194.4.3 `_M_initial`

```
template<typename _RAIter>
_Piece __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_initial
```

Initial piece to work on.

Definition at line 75 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::_qsb_conquer()`, and `__gnu_parallel::_qsb_local_sort_with_helping()`.

#### 4.194.4.4 `_M_leftover_parts`

```
template<typename _RAIter>
_RestrictedBoundedConcurrentQueue<_Piece> __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_↵
leftover_parts
```

Work-stealing queue.

Definition at line 78 of file `balanced_quicksort.h`.

#### 4.194.4.5 `_M_num_threads`

```
template<typename _RAIter>
_ThreadIndex __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_num_threads
```

Number of threads involved in this algorithm.

Definition at line 81 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::_qsb_local_sort_with_helping()`.

The documentation for this struct was generated from the following file:

- [balanced\\_quicksort.h](#)

## 4.195 `std::__detail::_Quoted_string<_String, _CharT>` Struct Template Reference

### Public Member Functions

- **`_Quoted_string`** (`_String __str, _CharT __del, _CharT __esc`)
- `_Quoted_string` & **`operator=`** (`_Quoted_string` &)=delete

### Public Attributes

- `_CharT` **`_M_delim`**
- `_CharT` **`_M_escape`**
- `_String` **`_M_string`**

#### 4.195.1 Detailed Description

```
template<typename _String, typename _CharT>
struct std::__detail::_Quoted_string<_String, _CharT>
```

Struct for delimited strings.

Definition at line 49 of file `quoted_string.h`.

The documentation for this struct was generated from the following file:

- [quoted\\_string.h](#)

## 4.196 `__gnu_parallel::_RandomNumber` Class Reference

### Public Member Functions

- `_RandomNumber` ()
- `_RandomNumber` (`uint32_t __seed, uint64_t _M_supremum=0x100000000ULL`)
- unsigned long `__genrand_bits` (`int __bits`)
- `uint32_t` `operator()` ()
- `uint32_t` `operator()` (`uint64_t local_supremum`)

#### 4.196.1 Detailed Description

Random number generator, based on the Mersenne twister.

Definition at line 42 of file `random_number.h`.

#### 4.196.2 Constructor & Destructor Documentation

**4.196.2.1** `_RandomNumber()` [1/2]

```
__gnu_parallel::_RandomNumber::_RandomNumber () [inline]
```

Default constructor. Seed with 0.

Definition at line 74 of file random\_number.h.

**4.196.2.2** `_RandomNumber()` [2/2]

```
__gnu_parallel::_RandomNumber::_RandomNumber (
 uint32_t __seed,
 uint64_t _M_supremum = 0x100000000ULL) [inline]
```

Constructor.

**Parameters**

|                          |                                                                                 |
|--------------------------|---------------------------------------------------------------------------------|
| <code>__seed</code>      | Random <code>__seed</code> .                                                    |
| <code>_M_supremum</code> | Generate integer random numbers in the interval <code>[0, _M_supremum)</code> . |

Definition at line 85 of file random\_number.h.

**4.196.3** **Member Function Documentation****4.196.3.1** `__genrand_bits()`

```
unsigned long __gnu_parallel::_RandomNumber::__genrand_bits (
 int __bits) [inline]
```

Generate a number of random bits, run-time parameter.

**Parameters**

|                     |                             |
|---------------------|-----------------------------|
| <code>__bits</code> | Number of bits to generate. |
|---------------------|-----------------------------|

Definition at line 109 of file random\_number.h.

**4.196.3.2** `operator()()` [1/2]

```
uint32_t __gnu_parallel::_RandomNumber::operator() () [inline]
```

Generate unsigned random 32-bit integer.

Definition at line 94 of file `random_number.h`.

#### 4.196.3.3 `operator()` [2/2]

```
uint32_t __gnu_parallel::_RandomNumber::operator() (
 uint64_t local_supremum) [inline]
```

Generate unsigned random 32-bit integer in the interval [0,local\_supremum).

Definition at line 100 of file `random_number.h`.

The documentation for this class was generated from the following file:

- [random\\_number.h](#)

#### 4.197 `std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, typename >` Struct Template Reference

Inheritance diagram for `std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, typename >`:

#### 4.197.1 Detailed Description

```
template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2,
typename _Hash, typename _RehashPolicy, typename _Traits, typename = __detected_or_t<false_type, __has_load_factor, _RehashPolicy>>
```

```
struct std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, typename >
```

Primary class template `_Rehash_base`.

Give hashtable the `max_load_factor` functions and reserve iff the rehash policy supports it.

Definition at line 1049 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.198 `std::__detail::_Rehash_base<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false_type >` Struct Template Reference

##### 4.198.1 Detailed Description

```
template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2,
typename _Hash, typename _RehashPolicy, typename _Traits>
struct std::__detail::_Rehash_base<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false_type >
```

Specialization when rehash policy doesn't provide load factor management.

Definition at line 1056 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 4.199 `std::__detail::_Rehash_base<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true_type >` Struct Template Reference

##### Public Types

- using `__hashtable` = `_Hashtable`<\_Key, \_Value, \_Alloc, \_ExtractKey, \_Equal, \_H1, \_H2, \_Hash, \_RehashPolicy, \_Traits >

##### Public Member Functions

- float `max_load_factor` () const noexcept
- void `max_load_factor` (float \_\_z)
- void `reserve` (std::size\_t \_\_n)

##### 4.199.1 Detailed Description

```
template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2,
typename _Hash, typename _RehashPolicy, typename _Traits>
struct std::__detail::_Rehash_base<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true_type >
```

Specialization when rehash policy provide load factor management.

Definition at line 1067 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

## 4.200 `__gnu_cxx::_Relative_pointer_impl<_Tp>` Class Template Reference

### Public Types

- typedef `_Tp` **element\_type**

### Public Member Functions

- `_Tp * get () const`
- bool **operator**< (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- bool **operator**== (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- void **set** (`_Tp *__arg`)

#### 4.200.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::_Relative_pointer_impl<_Tp>
```

A storage policy for use with `_Pointer_adapter<>` which stores the pointer's address as an offset value which is relative to its own address.

This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null, As there is no reason why any normal pointer would point 1 byte into its own pointer address.

Definition at line 112 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 4.201 `__gnu_cxx::_Relative_pointer_impl<const _Tp>` Class Template Reference

### Public Types

- typedef const `_Tp` **element\_type**

### Public Member Functions

- const `_Tp * get () const`
- bool **operator**< (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- bool **operator**== (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- void **set** (const `_Tp *__arg`)

#### 4.201.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::_Relative_pointer_impl< const _Tp >
```

`Relative_pointer_impl` needs a specialization for `const T` because of the casting done during pointer arithmetic.

Definition at line 164 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

#### 4.202 \_\_gnu\_parallel::\_RestrictedBoundedConcurrentQueue< \_Tp > Class Template Reference

##### Public Member Functions

- [\\_RestrictedBoundedConcurrentQueue](#) ([\\_SequenceIndex](#) \_\_max\_size)
- [~\\_RestrictedBoundedConcurrentQueue](#) ()
- [bool pop\\_back](#) ([\\_Tp](#) &\_\_t)
- [bool pop\\_front](#) ([\\_Tp](#) &\_\_t)
- [void push\\_front](#) ([const \\_Tp](#) &\_\_t)

#### 4.202.1 Detailed Description

```
template<typename _Tp>
class __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >
```

Double-ended queue of bounded size, allowing lock-free atomic access. `push_front()` and `pop_front()` must not be called concurrently to each other, while `pop_back()` can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

##### Parameters

|                  |                         |
|------------------|-------------------------|
| <code>_Tp</code> | Contained element type. |
|------------------|-------------------------|

Definition at line 52 of file `queue.h`.

#### 4.202.2 Constructor & Destructor Documentation

## 4.202.2.1 \_RestrictedBoundedConcurrentQueue()

```
template<typename _Tp>
__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::_RestrictedBoundedConcurrentQueue (
 __SequenceIndex __max_size) [inline]
```

Constructor. Not to be called concurrent, of course.

## Parameters

|                         |                                             |
|-------------------------|---------------------------------------------|
| <code>__max_size</code> | Maximal number of elements to be contained. |
|-------------------------|---------------------------------------------|

Definition at line 68 of file queue.h.

## 4.202.2.2 ~\_RestrictedBoundedConcurrentQueue()

```
template<typename _Tp>
__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::~~_RestrictedBoundedConcurrentQueue ()
[inline]
```

Destructor. Not to be called concurrent, of course.

Definition at line 77 of file queue.h.

## 4.202.3 Member Function Documentation

## 4.202.3.1 pop\_back()

```
template<typename _Tp>
bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back (
 _Tp & __t) [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with pop\_front().

Definition at line 127 of file queue.h.

## 4.202.3.2 pop\_front()

```
template<typename _Tp>
bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front (
 _Tp & __t) [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with pop\_front().

Definition at line 100 of file queue.h.

#### 4.202.3.3 push\_front()

```
template<typename _Tp>
void __gnu_parallel::__RestrictedBoundedConcurrentQueue< _Tp >::push_front (
 const _Tp & __t) [inline]
```

Pushes one element into the queue at the front end. Must not be called concurrently with pop\_front().

Definition at line 83 of file queue.h.

- `_Safe_iterator_base * _M_iterators`
- `unsigned int _M_version`

##### Protected Member Functions

- `void _M_detach_all ()`
- `void _M_detach_singular ()`
- `__gnu_cxx::__mutex & _M_get_mutex () throw ()`
- `void _M_invalidate_all ()`
- `void _M_invalidate_all () const`
- `void _M_revalidate_singular ()`
- `void _M_swap (_Safe_sequence_base &) noexcept`

## 4.209.1 Detailed Description

```
template<typename _SafeSequence>
class __gnu_debug::_Safe_forward_list<_SafeSequence>
```

Special iterators swap and invalidation for forward\_list because of the before\_begin iterator.

Definition at line 56 of file debug/forward\_list.

## 4.209.2 Member Function Documentation

## 4.209.2.1 \_M\_detach\_all()

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all () [protected], [inherited]
```

Detach all iterators, leaving them singular.

Referenced by \_\_gnu\_debug::\_Safe\_sequence\_base::~~\_Safe\_sequence\_base().

## 4.209.2.2 \_M\_detach\_singular()

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () [protected], [inherited]
```

Detach all singular iterators.

**Postcondition**

for all iterators i attached to this sequence, i->\_M\_version == \_M\_version.

## 4.209.2.3 \_M\_get\_mutex()

```
__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex () throw () [protected],
[inherited]
```

For use in \_Safe\_sequence.

Referenced by \_\_gnu\_debug::\_Safe\_sequence<map<\_Key, \_Tp, \_Compare, \_Allocator>>::\_M\_transfer\_from\_if().

#### 4.209.2.4 `_M_invalidate_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_invalidate_all () const [inline], [protected], [inherited]
```

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

#### 4.209.2.5 `_M_invalidate_if()`

```
void __gnu_debug::_Safe_sequence< _SafeSequence >::_M_invalidate_if (
 _Predicate __pred) [inherited]
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 38 of file `safe_sequence.tcc`.

#### 4.209.2.6 `_M_revalidate_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

#### 4.209.2.7 `_M_transfer_from_if()`

```
void __gnu_debug::_Safe_sequence< _SafeSequence >::_M_transfer_from_if (
 _Safe_sequence< _SafeSequence > & __from,
 _Predicate __pred) [inherited]
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 69 of file `safe_sequence.tcc`.

### 4.209.3 Member Data Documentation

4.209.3.1 `_M_const_iterators`

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]
```

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<map<_Key, _Tp, _Compare, _Allocator>>::_M_transfer_from_if()`.

4.209.3.2 `_M_iterators`

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]
```

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<map<_Key, _Tp, _Compare, _Allocator>>::_M_transfer_from_if()`.

4.209.3.3 `_M_version`

```
unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]
```

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

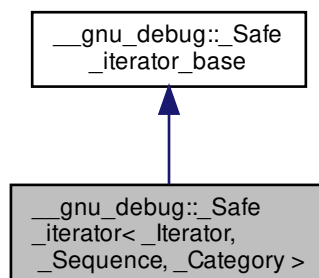

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`.

The documentation for this class was generated from the following file:

## 4.210.1 Detailed Description

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
class __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>
```

Safe iterator wrapper.

The class template `_Safe_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Note that `_Iterator` must be the first base class so that it gets initialized before the iterator is being attached to the container's list of iterators and it is being detached before `_Iterator` get destroyed. Otherwise it would result in a data race.

Definition at line 61 of file `debug.h`.

#### 4.210.2 Constructor & Destructor Documentation

##### 4.210.2.1 `_Safe_iterator()` [1/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator () [inline],
[noexcept]
```

###### Postcondition

the iterator is singular and unattached

Definition at line 151 of file `safe_iterator.h`.

##### 4.210.2.2 `_Safe_iterator()` [2/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
 _Iterator __i,
 const _Safe_sequence_base * __seq) [inline], [noexcept]
```

Safe iterator construction from an unsafe iterator and its sequence.

###### Precondition

`seq` is not NULL

###### Postcondition

this is not singular

Definition at line 160 of file `safe_iterator.h`.

##### 4.210.2.3 `_Safe_iterator()` [3/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
 const _Safe_iterator< _Iterator, _Sequence, _Category > & __x) [inline], [noexcept]
```

Copy construction.

Definition at line 172 of file `safe_iterator.h`.

## 4.210.2.4 \_Safe\_iterator() [4/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
 _Safe_iterator< _Iterator, _Sequence, _Category > && __x) [inline], [noexcept]
```

Move construction.

## Postcondition

\_\_x is singular and unattached

Definition at line 190 of file safe\_iterator.h.

## 4.210.2.5 \_Safe\_iterator() [5/5]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
template<typename _MutableIterator >
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
 const _Safe_iterator< _MutableIterator, _Sequence, typename __gnu_cxx::__enable_if<
_IsConstant::__value &&std::__are_same< _MutableIterator, _OtherIterator >::__value, _Category
>::__type > & __x) [inline], [noexcept]
```

Converting constructor from a mutable iterator to a constant iterator.

Definition at line 210 of file safe\_iterator.h.

## 4.210.3 Member Function Documentation

## 4.210.3.1 \_M\_attach() [1/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
 _Safe_sequence_base * __seq,
 bool __constant) [protected], [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, std::forward\_iterator\_tag >::\_M\_attach(), and \_↵\_\_gnu\_debug::\_Safe\_iterator\_base::\_Safe\_iterator\_base().

#### 4.210.3.2 `_M_attach()` [2/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
void __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach (
 _Safe_sequence_base * __seq) [inline]
```

Attach iterator to the given sequence.

Definition at line 374 of file `safe_iterator.h`.

#### 4.210.3.3 `_M_attach_single()` [1/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
 _Safe_sequence_base * __seq,
 bool __constant) throw () [protected], [inherited]
```

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_attach_single()`.

#### 4.210.3.4 `_M_attach_single()` [2/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
void __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach_single (
 _Safe_sequence_base * __seq) [inline]
```

Likewise, but not thread-safe.

Definition at line 379 of file `safe_iterator.h`.

#### 4.210.3.5 `_M_attached_to()`

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
 const _Safe_sequence_base * __seq) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

Definition at line 131 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_sequence`.

#### 4.210.3.6 \_M\_before\_dereferenceable()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_before_dereferenceable (
) const [inline]
```

Is the iterator before a dereferenceable one?

Definition at line 389 of file safe\_iterator.h.

#### 4.210.3.7 \_M\_can\_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
 const __Safe_iterator_base & __x) const throw () [inherited]
```

Can we compare this iterator to the given iterator \_\_x? Returns true if both iterators are nonsingular and reference the same sequence.

#### 4.210.3.8 \_M\_dereferenceable()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable () const
[inline]
```

Is the iterator dereferenceable?

Definition at line 384 of file safe\_iterator.h.

#### 4.210.3.9 \_M\_detach()

```
void __gnu_debug::_Safe_iterator_base::_M_detach () [protected], [inherited]
```

Detach the iterator for whatever sequence it is attached to, if any.

#### 4.210.3.10 \_M\_detach\_single()

```
void __gnu_debug::_Safe_iterator_base::_M_detach_single () throw () [inherited]
```

Likewise, but not thread-safe.

#### 4.210.3.11 \_M\_get\_mutex()

```
__gnu_cxx::mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex () throw () [protected],
[inherited]
```

For use in \_\_Safe\_iterator.

#### 4.210.3.12 `_M_incrementable()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable () const
[inline]
```

Is the iterator incrementable?

Definition at line 401 of file `safe_iterator.h`.

Referenced by `__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_before_dereferenceable()`.

#### 4.210.3.13 `_M_invalidate()`

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate () [inline], [inherited]
```

Invalidate the iterator, making it singular.

Definition at line 146 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_version`.

#### 4.210.3.14 `_M_is_before_begin()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_before_begin () const
[inline]
```

Is this iterator equal to the sequence's `before_begin()` iterator if any?

Definition at line 445 of file `safe_iterator.h`.

Referenced by `__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_dereferenceable()`.

#### 4.210.3.15 `_M_is_begin()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_begin () const [inline]
```

Is this iterator equal to the sequence's `begin()` iterator?

Definition at line 434 of file `safe_iterator.h`.

#### 4.210.3.16 \_M\_is\_beginnest()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_beginnest () const
[inline]
```

Is this iterator equal to the sequence's before\_begin() iterator if any or begin() otherwise?

Definition at line 451 of file safe\_iterator.h.

#### 4.210.3.17 \_M\_is\_end()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_end () const [inline]
```

Is this iterator equal to the sequence's end() iterator?

Definition at line 439 of file safe\_iterator.h.

Referenced by \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, std::forward\_iterator\_tag >::\_M\_dereferenceable(), and \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, std::forward\_iterator\_tag >::\_M\_incrementable().

#### 4.210.3.18 \_M\_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset () throw () [inherited]
```

Reset all member variables

#### 4.210.3.19 \_M\_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular () const throw () [inherited]
```

Is this iterator singular?

Referenced by \_\_gnu\_debug::\_check\_singular\_aux(), \_\_gnu\_debug::\_Safe\_local\_iterator< \_Iterator, \_Sequence >::\_M\_dereferenceable(), \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, std::forward\_iterator\_tag >::\_M\_dereferenceable(), \_\_gnu\_debug::\_Safe\_local\_iterator< \_Iterator, \_Sequence >::\_M\_incrementable(), and \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, std::forward\_iterator\_tag >::\_M\_incrementable().

#### 4.210.3.20 `_M_unlink()`

```
void __gnu_debug::_Safe_iterator_base::_M_unlink () throw () [inline], [inherited]
```

Unlink itself

Definition at line 155 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_next`, and `__gnu_debug::_Safe_iterator_base::_M_prior`.

#### 4.210.3.21 `_S_constant()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
static constexpr bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_S_constant
() [inline], [static]
```

Determine if this is a constant iterator.

Definition at line 354 of file `safe_iterator.h`.

Referenced by `__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_attach()`, and `↵  
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_attach_single()`.

#### 4.210.3.22 `base()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
_Iterator& __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::base () [inline],
[noexcept]
```

Return the underlying iterator.

Definition at line 361 of file `safe_iterator.h`.

Referenced by `__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_before_↵  
dereferenceable()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_is_begin()`,  
and `__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_is_end()`.

#### 4.210.3.23 `operator _Iterator()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::operator _Iterator () const
[inline], [noexcept]
```

Conversion to underlying non-debug iterator to allow better interaction with non-debug containers.

Definition at line 370 of file `safe_iterator.h`.

#### 4.210.3.24 `operator*()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
reference __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator* () const
[inline], [noexcept]
```

Iterator dereference.

##### Precondition

iterator is dereferenceable

Definition at line 299 of file `safe_iterator.h`.

#### 4.210.3.25 `operator++()` [1/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
_Safe_iterator& __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator++ ()
[inline], [noexcept]
```

Iterator preincrement.

##### Precondition

iterator is incrementable

Definition at line 326 of file `safe_iterator.h`.

#### 4.210.3.26 `operator++()` [2/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
_Safe_iterator __gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator++ (↵
int) [inline], [noexcept]
```

Iterator postincrement.

##### Precondition

iterator is incrementable

Definition at line 341 of file `safe_iterator.h`.

#### 4.210.3.27 operator->()

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
pointer __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::operator-> () const
[inline], [noexcept]
```

Iterator dereference.

##### Precondition

iterator is dereferenceable

Definition at line 312 of file safe\_iterator.h.

#### 4.210.3.28 operator=() [1/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
_Safe_iterator& __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::operator= (
 const _Safe_iterator< _Iterator, _Sequence, _Category > & __x) [inline], [noexcept]
```

Copy assignment.

Definition at line 232 of file safe\_iterator.h.

#### 4.210.3.29 operator=() [2/2]

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
_Safe_iterator& __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::operator= (
 _Safe_iterator< _Iterator, _Sequence, _Category > && __x) [inline], [noexcept]
```

Move assignment.

##### Postcondition

\_\_x is singular and unattached

Definition at line 264 of file safe\_iterator.h.

#### 4.210.4 Member Data Documentation

4.210.4.1 `_M_next`

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next [inherited]
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 74 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<map<_Key, _Tp, _Compare, _Allocator>>::_M_transfer_from_if()`, and `__gnu_debug::_Safe_iterator_base::_M_unlink()`.

4.210.4.2 `_M_prior`

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior [inherited]
```

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 70 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<map<_Key, _Tp, _Compare, _Allocator>>::_M_transfer_from_if()`, and `__gnu_debug::_Safe_iterator_base::_M_unlink()`.

4.210.4.3 `_M_sequence`

```
_Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence [inherited]
```

The sequence this iterator references; may be `NULL` to indicate a singular iterator.

Definition at line 57 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_iterator_base::_M_attached_to()`, `__gnu_debug::Safe_sequence<map<_Key, _Tp, _Compare, _Allocator>>::_M_transfer_from_if()`, `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base()`, and `__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base()`.

4.210.4.4 `_M_version`

```
unsigned int __gnu_debug::_Safe_iterator_base::_M_version [inherited]
```

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Definition at line 66 of file `safe_base.h`.

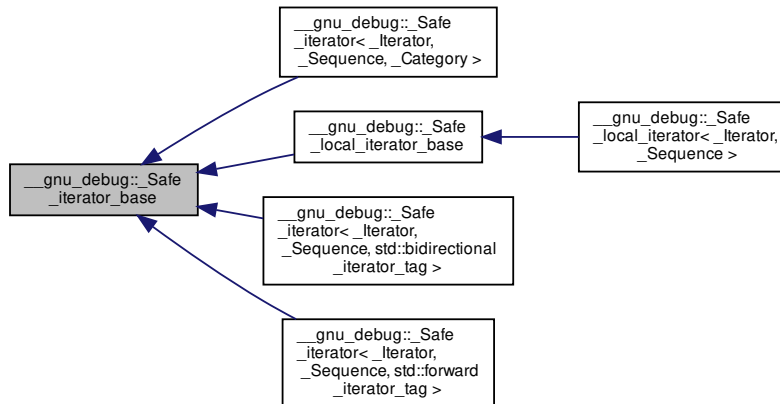

Referenced by `__gnu_debug::_Safe_iterator_base::_M_invalidate()`, and `__gnu_debug::Safe_sequence<map<_Key, _Tp, _Compare, _Allocator>>::_M_transfer_from_if()`.

The documentation for this class was generated from the following files:

- `debug.h`
- `safe_iterator.h`
- `safe_iterator.tcc`

## 4.211 \_\_gnu\_debug::\_Safe\_iterator\_base Class Reference

## Friends

- class **\_Safe\_sequence\_base**

### 4.211.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_iterator_base` base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

Definition at line 50 of file `safe_base.h`.

### 4.211.2 Constructor & Destructor Documentation

#### 4.211.2.1 `_Safe_iterator_base()` [1/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base () [inline], [protected]
```

Initializes the iterator and makes it singular.

Definition at line 78 of file `safe_base.h`.

#### 4.211.2.2 `_Safe_iterator_base()` [2/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (
 const _Safe_sequence_base * __seq,
 bool __constant) [inline], [protected]
```

Initialize the iterator to reference the sequence pointed to by `__seq`. `__constant` is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

Definition at line 89 of file `safe_base.h`.

References `_M_attach()`.

#### 4.211.2.3 `_Safe_iterator_base()` [3/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (
 const _Safe_iterator_base & __x,
 bool __constant) [inline], [protected]
```

Initializes the iterator to reference the same sequence that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

Definition at line 96 of file `safe_base.h`.

References `_M_attach()`, and `_M_sequence`.

### 4.211.3 Member Function Documentation

#### 4.211.3.1 `_M_attach()`

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
 _Safe_sequence_base * __seq,
 bool __constant) [protected]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::_Safe_iterator<_Iterator, _Sequence, std::forward_iterator_tag >::_M_attach()`, and `↔_Safe_iterator_base()`.

#### 4.211.3.2 `_M_attach_single()`

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
 _Safe_sequence_base * __seq,
 bool __constant) throw () [protected]
```

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_iterator<_Iterator, _Sequence, std::forward_iterator_tag >::_M_attach_single()`.

#### 4.211.3.3 `_M_attached_to()`

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
 const _Safe_sequence_base * __seq) const [inline]
```

Determines if we are attached to the given sequence.

Definition at line 131 of file `safe_base.h`.

References `_M_sequence`.

#### 4.211.3.4 \_M\_can\_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
 const __Safe_iterator_base & __x) const throw ()
```

Can we compare this iterator to the given iterator \_\_x? Returns true if both iterators are nonsingular and reference the same sequence.

#### 4.211.3.5 \_M\_detach()

```
void __gnu_debug::_Safe_iterator_base::_M_detach () [protected]
```

Detach the iterator for whatever sequence it is attached to, if any.

#### 4.211.3.6 \_M\_detach\_single()

```
void __gnu_debug::_Safe_iterator_base::_M_detach_single () throw ()
```

Likewise, but not thread-safe.

#### 4.211.3.7 \_M\_get\_mutex()

```
__gnu_cxx::__mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex () throw () [protected]
```

For use in \_Safe\_iterator.

#### 4.211.3.8 \_M\_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate () [inline]
```

Invalidate the iterator, making it singular.

Definition at line 146 of file safe\_base.h.

References \_M\_version.

#### 4.211.3.9 \_M\_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset () throw ()
```

Reset all member variables

#### 4.211.3.10 `_M_singular()`

```
bool __gnu_debug::_Safe_iterator_base::_M_singular () const throw ()
```

Is this iterator singular?

Referenced by `__gnu_debug::_check_singular_aux()`, `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_dereferenceable()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_dereferenceable()`, `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_incrementable()`, and `__gnu_debug::_Safe_iterator< _Iterator, _Sequence, std::forward_iterator_tag >::_M_incrementable()`.

#### 4.211.3.11 `_M_unlink()`

```
void __gnu_debug::_Safe_iterator_base::_M_unlink () throw () [inline]
```

Unlink itself

Definition at line 155 of file `safe_base.h`.

References `_M_next`, and `_M_prior`.

### 4.211.4 Member Data Documentation

#### 4.211.4.1 `_M_next`

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 74 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`, and `_M_unlink()`.

#### 4.211.4.2 `_M_prior`

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior
```

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 70 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`, and `_M_unlink()`.

4.211.4.3 `_M_sequence`

```
_Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence
```

The sequence this iterator references; may be NULL to indicate a singular iterator.

Definition at line 57 of file `safe_base.h`.

Referenced by `_M_attached_to()`, `__gnu_debug::Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`, `_Safe_iterator_base()`, and `__gnu_debug::Safe_local_iterator_base::_Safe_local_iterator_base()`.

4.211.4.4 `_M_version`

```
unsigned int __gnu_debug::_Safe_iterator_base::_M_version
```

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Definition at line 66 of file `safe_base.h`.

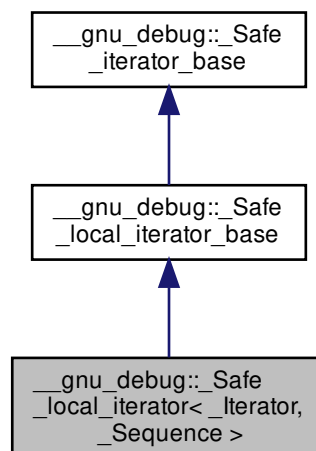

Referenced by `_M_invalidate()`, and `__gnu_debug::Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

## 4.212.1 Detailed Description

```
template<typename _Iterator, typename _Sequence>
class __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>
```

Safe iterator wrapper.

The class template `_Safe_local_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_local_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Definition at line 83 of file `formatter.h`.

## 4.212.2 Constructor &amp; Destructor Documentation

**4.212.2.1** `_Safe_local_iterator()` [1/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator () [inline],
[noexcept]
```

**Postcondition**

the iterator is singular and unattached

Definition at line 102 of file `safe_local_iterator.h`.

**4.212.2.2** `_Safe_local_iterator()` [2/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (
 _Iterator __i,
 const _Safe_sequence_base * __cont) [inline]
```

Safe iterator construction from an unsafe iterator and its sequence.

**Precondition**

`seq` is not NULL

**Postcondition**

this is not singular

Definition at line 111 of file `safe_local_iterator.h`.

**4.212.2.3** `_Safe_local_iterator()` [3/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (
 const _Safe_local_iterator< _Iterator, _Sequence > & __x) [inline], [noexcept]
```

Copy construction.

Definition at line 122 of file `safe_local_iterator.h`.

4.212.2.4 `_Safe_local_iterator()` [4/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (
 _Safe_local_iterator< _Iterator, _Sequence > && __x) [inline], [noexcept]
```

Move construction.

**Postcondition**

`__x` is singular and unattached

Definition at line 139 of file `safe_local_iterator.h`.

4.212.2.5 `_Safe_local_iterator()` [5/5]

```
template<typename _Iterator , typename _Sequence >
template<typename _MutableIterator >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (
 const _Safe_local_iterator< _MutableIterator, typename __gnu_cxx::__enable_if< _Is↵
Constant::__value &&std::__are_same< _MutableIterator, _OtherIterator >::__value, _Sequence >::__↵
__type > & __x) [inline], [noexcept]
```

Converting constructor from a mutable iterator to a constant iterator.

Definition at line 158 of file `safe_local_iterator.h`.

**4.212.3 Member Function Documentation**4.212.3.1 `_M_attach()` [1/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
 _Safe_sequence_base * __seq,
 bool __constant) [protected], [inherited]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_attach()`, and `__gnu_debug::_Safe↵_local_iterator_base::_Safe_local_iterator_base()`.

#### 4.212.3.2 `_M_attach()` [2/2]

```
template<typename _Iterator , typename _Sequence >
void __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach (
 _Safe_sequence_base * __seq) [inline]
```

Attach iterator to the given sequence.

Definition at line 326 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator_base::_M_attach()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_S_constant()`.

#### 4.212.3.3 `_M_attach_single()` [1/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
 _Safe_sequence_base * __seq,
 bool __constant) throw () [protected], [inherited]
```

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach_single()`.

#### 4.212.3.4 `_M_attach_single()` [2/2]

```
template<typename _Iterator , typename _Sequence >
void __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach_single (
 _Safe_sequence_base * __seq) [inline]
```

Likewise, but not thread-safe.

Definition at line 331 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator_base::_M_attach_single()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_S_constant()`.

#### 4.212.3.5 `_M_attached_to()`

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
 const _Safe_sequence_base * __seq) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

Definition at line 131 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_sequence`.

## 4.212.3.6 \_M\_can\_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
 const _Safe_iterator_base & __x) const throw () [inherited]
```

Can we compare this iterator to the given iterator \_\_x? Returns true if both iterators are nonsingular and reference the same sequence.

## 4.212.3.7 \_M\_dereferenceable()

```
template<typename _Iterator , typename _Sequence >
bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_dereferenceable () const
[inline]
```

Is the iterator dereferenceable?

Definition at line 336 of file safe\_local\_iterator.h.

References \_\_gnu\_debug::\_Safe\_local\_iterator<\_Iterator, \_Sequence>::\_M\_is\_end(), and \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_singular().

## 4.212.3.8 \_M\_detach()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach () [protected], [inherited]
```

Detach the iterator for whatever container it is attached to, if any.

## 4.212.3.9 \_M\_detach\_single()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach_single () throw () [protected], [inherited]
```

Likewise, but not thread-safe.

## 4.212.3.10 \_M\_get\_mutex()

```
__gnu_cxx::__mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex () throw () [protected],
[inherited]
```

For use in \_Safe\_iterator.

## 4.212.3.11 \_M\_in\_same\_bucket()

```
template<typename _Iterator , typename _Sequence >
template<typename _Other >
bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_in_same_bucket (
 const _Safe_local_iterator<_Other, _Sequence> & __other) const [inline]
```

Is this iterator part of the same bucket as the other one?

Definition at line 371 of file safe\_local\_iterator.h.

References \_\_gnu\_debug::\_Safe\_local\_iterator<\_Iterator, \_Sequence>::bucket().

#### 4.212.3.12 `_M_incrementable()`

```
template<typename _Iterator , typename _Sequence >
bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_incrementable () const [inline]
```

Is the iterator incrementable?

Definition at line 341 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_is_end()`, and `__gnu_debug::_Safe_iterator_base::_M_singular()`.

#### 4.212.3.13 `_M_invalidate()`

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate () [inline], [inherited]
```

Invalidate the iterator, making it singular.

Definition at line 146 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_version`.

#### 4.212.3.14 `_M_is_begin()`

```
template<typename _Iterator , typename _Sequence >
bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_is_begin () const [inline]
```

Is this iterator equal to the sequence's `begin(bucket)` iterator?

Definition at line 361 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::base()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::bucket()`.

#### 4.212.3.15 `_M_is_end()`

```
template<typename _Iterator , typename _Sequence >
bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_is_end () const [inline]
```

Is this iterator equal to the sequence's `end(bucket)` iterator?

Definition at line 365 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::base()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::bucket()`.

Referenced by `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_dereferenceable()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_incrementable()`.

## 4.212.3.16 \_M\_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset () throw () [inherited]
```

Reset all member variables

## 4.212.3.17 \_M\_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular () const throw () [inherited]
```

Is this iterator singular?

Referenced by \_\_gnu\_debug::\_check\_singular\_aux(), \_\_gnu\_debug::\_Safe\_local\_iterator<\_Iterator, \_Sequence>::\_M\_dereferenceable(), \_\_gnu\_debug::\_Safe\_iterator<\_Iterator, \_Sequence, std::forward\_iterator\_tag>::\_M\_dereferenceable(), \_\_gnu\_debug::\_Safe\_local\_iterator<\_Iterator, \_Sequence>::\_M\_incrementable(), and \_\_gnu\_debug::\_Safe\_iterator<\_Iterator, \_Sequence, std::forward\_iterator\_tag>::\_M\_incrementable().

## 4.212.3.18 \_M\_unlink()

```
void __gnu_debug::_Safe_iterator_base::_M_unlink () throw () [inline], [inherited]
```

Unlink itself

Definition at line 155 of file safe\_base.h.

References \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_next, and \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_prior.

## 4.212.3.19 \_S\_constant()

```
template<typename _Iterator , typename _Sequence >
static constexpr bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_S_constant ()
[inline], [static]
```

Determine if this is a constant iterator.

Definition at line 300 of file safe\_local\_iterator.h.

Referenced by \_\_gnu\_debug::\_Safe\_local\_iterator<\_Iterator, \_Sequence>::\_M\_attach(), and \_\_gnu\_debug::\_Safe\_local\_iterator<\_Iterator, \_Sequence>::\_M\_attach\_single().

#### 4.212.3.20 base()

```
template<typename _Iterator , typename _Sequence >
_iterator& __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::base () [inline], [noexcept]
```

Return the underlying iterator.

Definition at line 307 of file `safe_local_iterator.h`.

Referenced by `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::M_is_begin()`, `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::M_is_end()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::bucket()`.

#### 4.212.3.21 bucket()

```
template<typename _Iterator , typename _Sequence >
size_type __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::bucket () const [inline]
```

Return the bucket.

Definition at line 316 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::base()`.

Referenced by `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::M_in_same_bucket()`, `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::M_is_begin()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::M_is_end()`.

#### 4.212.3.22 operator\_iterator()

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator_iterator () const [inline]
```

Conversion to underlying non-debug iterator to allow better interaction with non-debug containers.

Definition at line 322 of file `safe_local_iterator.h`.

#### 4.212.3.23 operator\*()

```
template<typename _Iterator , typename _Sequence >
reference __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator* () const [inline]
```

Iterator dereference.

##### Precondition

iterator is dereferenceable

Definition at line 244 of file `safe_local_iterator.h`.

#### 4.212.3.24 `operator++()` [1/2]

```
template<typename _Iterator , typename _Sequence >
__Safe_local_iterator& __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator++ ()
[inline]
```

Iterator preincrement.

##### Precondition

iterator is incrementable

Definition at line 271 of file `safe_local_iterator.h`.

#### 4.212.3.25 `operator++()` [2/2]

```
template<typename _Iterator , typename _Sequence >
__Safe_local_iterator __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator++ (
 int) [inline]
```

Iterator postincrement.

##### Precondition

iterator is incrementable

Definition at line 286 of file `safe_local_iterator.h`.

#### 4.212.3.26 `operator->()`

```
template<typename _Iterator , typename _Sequence >
pointer __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator-> () const [inline]
```

Iterator dereference.

##### Precondition

iterator is dereferenceable

Definition at line 257 of file `safe_local_iterator.h`.

**4.212.3.27 operator=()** [1/2]

```
template<typename _Iterator , typename _Sequence >
_Safe_local_iterator& __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator= (
 const _Safe_local_iterator< _Iterator, _Sequence > & __x) [inline]
```

Copy assignment.

Definition at line 179 of file `safe_local_iterator.h`.

**4.212.3.28 operator=()** [2/2]

```
template<typename _Iterator , typename _Sequence >
_Safe_local_iterator& __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator= (
 _Safe_local_iterator< _Iterator, _Sequence > && __x) [inline], [noexcept]
```

Move assignment.

**Postcondition**

\_\_x is singular and unattached

Definition at line 210 of file `safe_local_iterator.h`.

**4.212.4 Member Data Documentation****4.212.4.1 \_M\_next**

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next [inherited]
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 74 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`, and `__gnu_debug::_Safe_iterator_base::_M_unlink()`.

**4.212.4.2 \_M\_prior**

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior [inherited]
```

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 70 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`, and `__gnu_debug::_Safe_iterator_base::_M_unlink()`.

## 4.212.4.3 \_M\_sequence

```
_Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence [inherited]
```

The sequence this iterator references; may be NULL to indicate a singular iterator.

Definition at line 57 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_iterator_base::_M_attached_to()`, `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`, `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base()`, and `__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base()`.

## 4.212.4.4 \_M\_version

```
unsigned int __gnu_debug::_Safe_iterator_base::_M_version [inherited]
```

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Definition at line 66 of file `safe_base.h`.

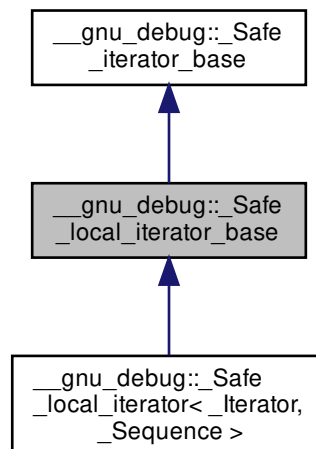

Referenced by `__gnu_debug::_Safe_iterator_base::_M_invalidate()`, and `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

The documentation for this class was generated from the following files:

- `__gnu_cxx::__mutex & _M_get_mutex () throw ()`

#### 4.213.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_local_iterator_base` base class implements the functionality of a safe local iterator that is not specific to a particular iterator type. It contains a pointer back to the container it references along with iterator version information and pointers to form a doubly-linked list of local iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

Definition at line 50 of file `safe_unordered_base.h`.

#### 4.213.2 Constructor & Destructor Documentation

## 4.213.2.1 \_Safe\_local\_iterator\_base() [1/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base () [inline], [protected]
```

Initializes the iterator and makes it singular.

Definition at line 54 of file safe\_unordered\_base.h.

## 4.213.2.2 \_Safe\_local\_iterator\_base() [2/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
 const _Safe_sequence_base * __seq,
 bool __constant) [inline], [protected]
```

Initialize the iterator to reference the container pointed to by `__seq`. `__constant` is true when we are initializing a constant local iterator, and false if it is a mutable local iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

Definition at line 64 of file safe\_unordered\_base.h.

References `_M_attach()`.

## 4.213.2.3 \_Safe\_local\_iterator\_base() [3/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
 const _Safe_local_iterator_base & __x,
 bool __constant) [inline], [protected]
```

Initializes the iterator to reference the same container that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

Definition at line 70 of file safe\_unordered\_base.h.

References `_M_attach()`, and `__gnu_debug::_Safe_iterator_base::_M_sequence`.

## 4.213.3 Member Function Documentation

## 4.213.3.1 \_M\_attach()

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
 _Safe_sequence_base * __seq,
 bool __constant) [protected]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_attach()`, and `_Safe_local_iterator_↔base()`.

#### 4.213.3.2 `_M_attach_single()`

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
 _Safe_sequence_base * __seq,
 bool __constant) throw () [protected]
```

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_attach_single()`.

#### 4.213.3.3 `_M_attached_to()`

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
 const _Safe_sequence_base * __seq) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

Definition at line 131 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_sequence`.

#### 4.213.3.4 `_M_can_compare()`

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
 const _Safe_iterator_base & __x) const throw () [inherited]
```

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

#### 4.213.3.5 `_M_detach()`

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach () [protected]
```

Detach the iterator for whatever container it is attached to, if any.

#### 4.213.3.6 `_M_detach_single()`

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach_single () throw () [protected]
```

Likewise, but not thread-safe.

#### 4.213.3.7 `_M_get_mutex()`

```
__gnu_cxx::__mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex () throw () [protected],
[inherited]
```

For use in `_Safe_iterator`.

#### 4.213.3.8 \_M\_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate () [inline], [inherited]
```

Invalidate the iterator, making it singular.

Definition at line 146 of file safe\_base.h.

References \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_version.

#### 4.213.3.9 \_M\_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset () throw () [inherited]
```

Reset all member variables

#### 4.213.3.10 \_M\_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular () const throw () [inherited]
```

Is this iterator singular?

Referenced by \_\_gnu\_debug::\_check\_singular\_aux(), \_\_gnu\_debug::\_Safe\_local\_iterator< \_Iterator, \_Sequence >::\_M\_dereferenceable(), \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, std::forward\_iterator\_tag >::\_M\_dereferenceable(), \_\_gnu\_debug::\_Safe\_local\_iterator< \_Iterator, \_Sequence >::\_M\_incrementable(), and \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, std::forward\_iterator\_tag >::\_M\_incrementable().

#### 4.213.3.11 \_M\_unlink()

```
void __gnu_debug::_Safe_iterator_base::_M_unlink () throw () [inline], [inherited]
```

Unlink itself

Definition at line 155 of file safe\_base.h.

References \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_next, and \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_prior.

### 4.213.4 Member Data Documentation

#### 4.213.4.1 `_M_next`

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next [inherited]
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence` != NULL.

Definition at line 74 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`, and `__gnu_debug::_Safe_iterator_base::_M_unlink()`.

#### 4.213.4.2 `_M_prior`

```
_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior [inherited]
```

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence` != NULL.

Definition at line 70 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`, and `__gnu_debug::_Safe_iterator_base::_M_unlink()`.

#### 4.213.4.3 `_M_sequence`

```
_Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence [inherited]
```

The sequence this iterator references; may be NULL to indicate a singular iterator.

Definition at line 57 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_iterator_base::_M_attached_to()`, `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`, `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base()`, and `_Safe_local_iterator_base()`.

#### 4.213.4.4 `_M_version`

```
unsigned int __gnu_debug::_Safe_iterator_base::_M_version [inherited]
```

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Definition at line 66 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_iterator_base::_M_invalidate()`, and `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

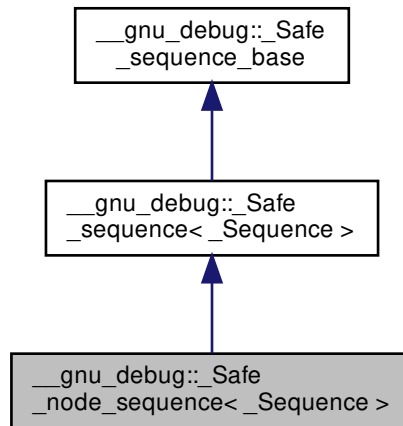

The documentation for this class was generated from the following file:

- [safe\\_unordered\\_base.h](#)

4.214 `__gnu_debug::_Safe_node_sequence<_Sequence>` Class Template Reference

Inheritance diagram for `__gnu_debug::_Safe_node_sequence<_Sequence>`:

## Public Member Functions

- `template<typename _Predicate>`  
`void _M_invalidate_if (_Predicate __pred)`
- `template<typename _Predicate>`  
`void _M_transfer_from_if (_Safe_sequence &__from, _Predicate __pred)`

## Public Attributes

#### 4.214.1 Detailed Description

```
template<typename _Sequence>
class __gnu_debug::_Safe_node_sequence< _Sequence >
```

Like `_Safe_sequence` but with a special `_M_invalidate_all` implementation not invalidating past-the-end iterators. Used by node based sequence.

Definition at line 131 of file `safe_sequence.h`.

#### 4.214.2 Member Function Documentation

##### 4.214.2.1 `_M_detach_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all () [protected], [inherited]
```

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~Safe_sequence_base()`.

##### 4.214.2.2 `_M_detach_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () [protected], [inherited]
```

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

##### 4.214.2.3 `_M_get_mutex()`

```
__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex () throw () [protected],
[inherited]
```

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

## 4.214.2.4 \_M\_invalidate\_all()

```
void __gnu_debug::_Safe_sequence_base::_M_invalidate_all () const [inline], [protected], [inherited]
```

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

## 4.214.2.5 \_M\_invalidate\_if()

```
template<typename _Sequence >
template<typename _Predicate >
void __gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if (
 _Predicate __pred) [inherited]
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 38 of file `safe_sequence.tcc`.

## 4.214.2.6 \_M\_revalidate\_singular()

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

## 4.214.2.7 \_M\_swap()

```
void __gnu_debug::_Safe_sequence_base::_M_swap (
 _Safe_sequence_base & __x) [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

## 4.214.2.8 \_M\_transfer\_from\_if()

```
template<typename _Sequence >
template<typename _Predicate >
void __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if (
 _Safe_sequence< _Sequence > & __from,
 _Predicate __pred) [inherited]
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 69 of file `safe_sequence.tcc`.

#### 4.214.3 Member Data Documentation

##### 4.214.3.1 `_M_const_iterators`

`_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

##### 4.214.3.2 `_M_iterators`

`_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

##### 4.214.3.3 `_M_version`

`unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

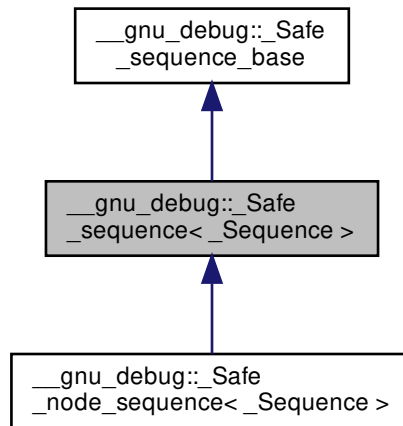

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`.

#### 4.215.1 Detailed Description

```
template<typename _Sequence>
class __gnu_debug::_Safe_sequence< _Sequence >
```

Base class for constructing a *safe* sequence type that tracks iterators that reference it.

The class template `_Safe_sequence` simplifies the construction of *safe* sequences that track the iterators that reference the sequence, so that the iterators are notified of changes in the sequence that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template `_Safe_iterator` for this sequence. Iterators will then be tracked automatically.

Definition at line 86 of file `formatter.h`.

#### 4.215.2 Member Function Documentation

##### 4.215.2.1 `_M_detach_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all () [protected], [inherited]
```

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base()`.

##### 4.215.2.2 `_M_detach_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () [protected], [inherited]
```

Detach all singular iterators.

##### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

##### 4.215.2.3 `_M_get_mutex()`

[inherited]
```

For use in \_Safe\_sequence.

Referenced by \_\_gnu\_debug::\_Safe\_sequence< map< \_Key, \_Tp, \_Compare, \_Allocator > >::\_M\_transfer\_from\_if().

#### 4.218.3.4 \_M\_invalidate\_all()

```
void __gnu_debug::_Safe_sequence_base::_M_invalidate_all () const [inline], [protected], [inherited]
```

Invalidates all iterators.

Definition at line 256 of file safe\_base.h.

References \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_version.

#### 4.218.3.5 \_M\_revalidate\_singular()

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

#### 4.218.3.6 `_M_swap()` [1/2]

```
void __gnu_debug::_Safe_unordered_container_base::_M_swap (
 _Safe_unordered_container_base & __x) [protected], [noexcept]
```

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

#### 4.218.3.7 `_M_swap()` [2/2]

```
void __gnu_debug::_Safe_sequence_base::_M_swap (
 _Safe_sequence_base & __x) [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### 4.218.4 Member Data Documentation

#### 4.218.4.1 `_M_const_iterators`

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]
```

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

#### 4.218.4.2 `_M_const_local_iterators`

```
_Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators
```

The list of constant local iterators that reference this container.

Definition at line 130 of file `safe_unordered_base.h`.

#### 4.218.4.3 `_M_iterators`

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]
```

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

4.218.4.4 `_M_local_iterators`

```
_Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators
```

The list of mutable local iterators that reference this container.

Definition at line 127 of file `safe_unordered_base.h`.

4.218.4.5 `_M_version`

```
unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]
```

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`.

The documentation for this class was generated from the following file:

- [safe\\_unordered\\_base.h](#)

4.219 `__gnu_debug::_Safe_vector<_SafeSequence, _BaseSequence>` Class Template Reference

## Protected Member Functions

- `_Safe_vector` (const [\\_Safe\\_vector](#) &) noexcept
- `_Safe_vector` (size\_type \_\_n) noexcept
- `_Safe_vector` ([\\_Safe\\_vector](#) &&\_\_x) noexcept
- `bool _M_requires_reallocation` (size\_type \_\_elements) const noexcept

- `_Safe_vector & operator=` (const [\\_Safe\\_vector](#) &) noexcept
- `_Safe_vector & operator=` ([\\_Safe\\_vector](#) &&\_\_x) noexcept

## Protected Attributes

- size\_type `_M_guaranteed_capacity`

## 4.219.1 Detailed Description

```
template<typename _SafeSequence, typename _BaseSequence>
class __gnu_debug::_Safe_vector<_SafeSequence, _BaseSequence>
```

Base class for Debug Mode vector.

Adds information about the guaranteed capacity, which is useful for detecting code which relies on non-portable implementation details of the libstdc++ reallocation policy.

Definition at line 55 of file `debug/vector`.

The documentation for this class was generated from the following file:

- [debug/vector](#)

#### 4.220 `__gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >` Struct Template Reference

##### Public Member Functions

- void **operator()** ( \_RAIter \_\_first, \_RAIter \_\_last, \_StrictWeakOrdering \_\_comp)

##### 4.220.1 Detailed Description

```
template<bool __stable, class _RAIter, class _StrictWeakOrdering>
struct __gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >
```

Stable sorting functor.

Used to reduce code instantiation in `multiway_merge_sampling_splitting`.

Definition at line 1007 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

#### 4.221 `__gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering >` Struct Template Reference

##### Public Member Functions

#### 4.222.1 Detailed Description

```
template<typename _CharT>
class std::__detail::_Scanner< _CharT >
```

Scans an input range for regex tokens.

The `_Scanner` class interprets the regular expression pattern in the input range passed to its constructor as a sequence of parse tokens passed to the regular expression compiler. The sequence of tokens provided depends on the flag settings passed to the constructor: different regular expression grammars will interpret the same input pattern in syntactically different ways.

Definition at line 210 of file `regex_scanner.h`.

#### 4.222.2 Member Enumeration Documentation

##### 4.222.2.1 `_TokenT`

```
enum std::__detail::_ScannerBase::_TokenT : unsigned [inherited]
```

Token types returned from the scanner.

Definition at line 46 of file `regex_scanner.h`.

The documentation for this class was generated from the following files:

_parallel::_parallel_sort_mwms_pu()`.

#### 4.224.2.2 set()

```
static void __gnu_parallel::_Settings::set (
 _Settings &) throw () [static]
```

Set the global settings.

#### 4.224.3 Member Data Documentation

##### 4.224.3.1 accumulate\_minimal\_n

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::accumulate\_minimal\_n

Minimal input size for accumulate.

Definition at line 138 of file settings.h.

##### 4.224.3.2 adjacent\_difference\_minimal\_n

unsigned int \_\_gnu\_parallel::\_Settings::adjacent\_difference\_minimal\_n

Minimal input size for adjacent\_difference.

Definition at line 141 of file settings.h.

##### 4.224.3.3 cache\_line\_size

unsigned int \_\_gnu\_parallel::\_Settings::cache\_line\_size

Overestimation of cache line size. Used to avoid false sharing, i.e. elements of different threads are at least this amount apart.

Definition at line 264 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_for\_each\_template\_random\_access\_workstealing().

##### 4.224.3.4 count\_minimal\_n

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::count\_minimal\_n

Minimal input size for count and count\_if.

Definition at line 144 of file settings.h.

#### 4.224.3.5 fill\_minimal\_n

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::fill\_minimal\_n

Minimal input size for fill.

Definition at line 147 of file settings.h.

#### 4.224.3.6 find\_increasing\_factor

double \_\_gnu\_parallel::\_Settings::find\_increasing\_factor

Block size increase factor for find.

Definition at line 150 of file settings.h.

#### 4.224.3.7 find\_initial\_block\_size

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::find\_initial\_block\_size

Initial block size for find.

Definition at line 153 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_find\_template().

#### 4.224.3.8 find\_maximum\_block\_size

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::find\_maximum\_block\_size

Maximal block size for find.

Definition at line 156 of file settings.h.

#### 4.224.3.9 find\_scale\_factor

float \_\_gnu\_parallel::\_Settings::find\_scale\_factor

Block size scale-down factor with respect to current position.

Definition at line 275 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_find\_template().

#### 4.224.3.10 find\_sequential\_search\_size

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::find\_sequential\_search\_size

Start with looking for this many elements sequentially, for find.

Definition at line 159 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_find\_template().

#### 4.224.3.11 for\_each\_minimal\_n

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::for\_each\_minimal\_n

Minimal input size for for\_each.

Definition at line 162 of file settings.h.

#### 4.224.3.12 generate\_minimal\_n

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::generate\_minimal\_n

Minimal input size for generate.

Definition at line 165 of file settings.h.

#### 4.224.3.13 L1\_cache\_size

unsigned long long \_\_gnu\_parallel::\_Settings::L1\_cache\_size

size of the L1 cache in bytes (underestimation).

Definition at line 253 of file settings.h.

#### 4.224.3.14 L2\_cache\_size

unsigned long long \_\_gnu\_parallel::\_Settings::L2\_cache\_size

size of the L2 cache in bytes (underestimation).

Definition at line 256 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_random\_shuffle\_drs(), and \_\_gnu\_parallel::\_\_sequential\_random\_shuffle().

**4.224.3.15 max\_element\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::max_element_minimal_n`

Minimal input size for max\_element.

Definition at line 168 of file settings.h.

**4.224.3.16 merge\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::merge_minimal_n`

Minimal input size for merge.

Definition at line 171 of file settings.h.

**4.224.3.17 merge\_oversampling**

`unsigned int __gnu_parallel::_Settings::merge_oversampling`

Oversampling factor for merge.

Definition at line 174 of file settings.h.

Referenced by `__gnu_parallel::multiway_merge_sampling_splitting()`.

**4.224.3.18 min\_element\_minimal\_n**

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::min_element_minimal_n`

Minimal input size for min\_element.

Definition at line 177 of file settings.h.

**4.224.3.19 multiway\_merge\_minimal\_k**

`int __gnu_parallel::_Settings::multiway_merge_minimal_k`

Oversampling factor for multiway\_merge.

Definition at line 183 of file settings.h.

#### 4.224.3.20 multiway\_merge\_minimal\_n

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::multiway\_merge\_minimal\_n

Minimal input size for multiway\_merge.

Definition at line 180 of file settings.h.

#### 4.224.3.21 multiway\_merge\_oversampling

unsigned int \_\_gnu\_parallel::\_Settings::multiway\_merge\_oversampling

Oversampling factor for multiway\_merge.

Definition at line 186 of file settings.h.

#### 4.224.3.22 nth\_element\_minimal\_n

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::nth\_element\_minimal\_n

Minimal input size for nth\_element.

Definition at line 189 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_nth\_element().

#### 4.224.3.23 partial\_sort\_minimal\_n

[\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::partial\_sort\_minimal\_n

Minimal input size for partial\_sort.

Definition at line 202 of file settings.h.

#### 4.224.3.24 partial\_sum\_dilation

float \_\_gnu\_parallel::\_Settings::partial\_sum\_dilation

Ratio for partial\_sum. Assume "sum and write result" to be this factor slower than just "sum".

Definition at line 206 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_partial\_sum\_linear().

**4.224.3.25 partial\_sum\_minimal\_n**

```
unsigned int __gnu_parallel::_Settings::partial_sum_minimal_n
```

Minimal input size for partial\_sum.

Definition at line 209 of file settings.h.

**4.224.3.26 partition\_chunk\_share**

```
double __gnu_parallel::_Settings::partition_chunk_share
```

Chunk size for partition, relative to input size. If > 0.0, this value overrides partition\_chunk\_size.

Definition at line 196 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_partition().

**4.224.3.27 partition\_chunk\_size**

```
_SequenceIndex __gnu_parallel::_Settings::partition_chunk_size
```

Chunk size for partition.

Definition at line 192 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_partition().

**4.224.3.28 partition\_minimal\_n**

```
_SequenceIndex __gnu_parallel::_Settings::partition_minimal_n
```

Minimal input size for partition.

Definition at line 199 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_nth\_element().

**4.224.3.29 qsb\_steals**

```
_SequenceIndex __gnu_parallel::_Settings::qsb_steals
```

The number of stolen ranges in load-balanced quicksort.

Definition at line 269 of file settings.h.

#### 4.224.3.30 random\_shuffle\_minimal\_n

`unsigned int __gnu_parallel::_Settings::random_shuffle_minimal_n`

Minimal input size for random\_shuffle.

Definition at line 212 of file settings.h.

#### 4.224.3.31 replace\_minimal\_n

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::replace_minimal_n`

Minimal input size for replace and replace\_if.

Definition at line 215 of file settings.h.

#### 4.224.3.32 search\_minimal\_n

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::search_minimal_n`

Minimal input size for search and search\_n.

Definition at line 272 of file settings.h.

#### 4.224.3.33 set\_difference\_minimal\_n

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::set_difference_minimal_n`

Minimal input size for set\_difference.

Definition at line 218 of file settings.h.

#### 4.224.3.34 set\_intersection\_minimal\_n

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::set_intersection_minimal_n`

Minimal input size for set\_intersection.

Definition at line 221 of file settings.h.

**4.224.3.35 set\_symmetric\_difference\_minimal\_n**

`_SequenceIndex __gnu_parallel::_Settings::set_symmetric_difference_minimal_n`

Minimal input size for set\_symmetric\_difference.

Definition at line 224 of file settings.h.

**4.224.3.36 set\_union\_minimal\_n**

`_SequenceIndex __gnu_parallel::_Settings::set_union_minimal_n`

Minimal input size for set\_union.

Definition at line 227 of file settings.h.

**4.224.3.37 sort\_minimal\_n**

`_SequenceIndex __gnu_parallel::_Settings::sort_minimal_n`

Minimal input size for parallel sorting.

Definition at line 230 of file settings.h.

**4.224.3.38 sort\_mwms\_oversampling**

`unsigned int __gnu_parallel::_Settings::sort_mwms_oversampling`

Oversampling factor for parallel std::sort (MWMS).

Definition at line 233 of file settings.h.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

**4.224.3.39 sort\_qs\_num\_samples\_preset**

`unsigned int __gnu_parallel::_Settings::sort_qs_num_samples_preset`

Such many samples to take to find a good pivot (quicksort).

Definition at line 236 of file settings.h.

4.224.3.40 `sort_qsb_base_case_maximal_n`

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::sort_qsb_base_case_maximal_n`

Maximal subsequence `__length` to switch to unbalanced `__base` case. Applies to `std::sort` with dynamically load-balanced quicksort.

Definition at line 240 of file `settings.h`.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

4.224.3.41 `TLB_size`

`unsigned int __gnu_parallel::_Settings::TLB_size`

size of the Translation Lookaside Buffer (underestimation).

Definition at line 259 of file `settings.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__sequential_random_shuffle()`.

4.224.3.42 `transform_minimal_n`

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::transform_minimal_n`

Minimal input size for parallel `std::transform`.

Definition at line 243 of file `settings.h`.

4.224.3.43 `unique_copy_minimal_n`

[\\_SequenceIndex](#) `__gnu_parallel::_Settings::unique_copy_minimal_n`

Minimal input size for `unique_copy`.

Definition at line 246 of file `settings.h`.

4.231 `__gnu_cxx::Std_pointer_impl<_Tp>` Class Template Reference

## Public Types

- typedef `_Tp` **element\_type**

## Public Member Functions

- `_Tp * get () const`
- `bool operator< (const \_Std\_pointer\_impl &__rarg) const`
- `bool operator== (const \_Std\_pointer\_impl &__rarg) const`
- `void set (element_type *__arg)`

## 4.231.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::Std_pointer_impl<_Tp>
```

A storage policy for use with `_Pointer_adapter<>` which yields a standard pointer.

A `_Storage_policy` is required to provide 4 things: 1) A `get()` API for returning the stored pointer value. 2) An `set()` API for storing a pointer value. 3) An `element_type` typedef to define the type this points to. 4) An `operator<()` to support pointer comparison. 5) An `operator==()` to support pointer comparison.

Definition at line 69 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

4.232 `std::Temporary_buffer<_ForwardIterator, _Tp>` Class Template Reference

Inheritance diagram for `std::Temporary_buffer<_ForwardIterator, _Tp>`:

### Public Types

- typedef pointer **iterator**
- typedef value\_type \* **pointer**
- typedef ptrdiff\_t **size\_type**
- typedef \_Tp **value\_type**

### Public Member Functions

- [\\_Temporary\\_buffer](#) (\_ForwardIterator \_\_seed, size\_type \_\_original\_len)
- iterator [begin](#) ()
- iterator [end](#) ()
- size\_type [requested\\_size](#) () const
- size\_type [size](#) () const

### Protected Attributes

- pointer **\_M\_buffer**
- size\_type **\_M\_len**
- size\_type **\_M\_original\_len**

#### 4.232.1 Detailed Description

```
template<typename _ForwardIterator, typename _Tp>
class std::_Temporary_buffer< _ForwardIterator, _Tp >
```

This class is used in two places: `stl_algo.h` and `ext/memory`, where it is wrapped as the `temporary_buffer` class. See [temporary\\_buffer](#) docs for more notes.

Definition at line 136 of file `stl_tempbuf.h`.

#### 4.232.2 Constructor & Destructor Documentation

##### 4.232.2.1 \_Temporary\_buffer()

```
template<typename _ForwardIterator , typename _Tp >
std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer (
 _ForwardIterator __seed,
 size_type __original_len)
```

Constructs a temporary buffer of a size somewhere between zero and the given length.

Definition at line 258 of file `stl_tempbuf.h`.

References `std::pair< _T1, _T2 >::first`.

### 4.232.3 Member Function Documentation

#### 4.232.3.1 `begin()`

```
template<typename _ForwardIterator , typename _Tp >
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::begin () [inline]
```

As per Table mumble.

Definition at line 165 of file `stl_tempbuf.h`.

#### 4.232.3.2 `end()`

```
template<typename _ForwardIterator , typename _Tp >
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::end () [inline]
```

As per Table mumble.

Definition at line 170 of file `stl_tempbuf.h`.

#### 4.232.3.3 `requested_size()`

```
template<typename _ForwardIterator , typename _Tp >
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::requested_size () const [inline]
```

Returns the size requested by the constructor; may be `>size()`.

Definition at line 160 of file `stl_tempbuf.h`.

#### 4.232.3.4 `size()`

```
template<typename _ForwardIterator , typename _Tp >
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::size () const [inline]
```

As per Table mumble.

Definition at line 155 of file `stl_tempbuf.h`.

The documentation for this class was generated from the following file:

- [stl\\_tempbuf.h](#)

#### 4.233 `std::_Tuple_impl<_Idx, _Elements>` Struct Template Reference

##### 4.233.1 Detailed Description

```
template<std::size_t _Idx, typename... _Elements>
struct std::_Tuple_impl<_Idx, _Elements>
```

Contains the actual implementation of the `tuple` template, stored as a recursive inheritance hierarchy from the first element (most derived class) to the last (least derived class). The `Idx` parameter gives the 0-based index of the element stored at this point in the hierarchy; we use it to implement a constant-time `get()` operation.

Definition at line 183 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

#### 4.234 `std::_Tuple_impl<_Idx, _Head, _Tail...>` Struct Template Reference

Inheritance diagram for `std::_Tuple_impl<_Idx, _Head, _Tail...>`:

- constexpr void **\_M\_swap** (**\_Tuple\_impl** &\_\_in)

## Friends

- template<std::size\_t, typename... >  
class **\_Tuple\_impl**

#### 4.234.1 Detailed Description

```
template<std::size_t _Idx, typename _Head, typename... _Tail>
struct std::_Tuple_impl<_Idx, _Head, _Tail... >
```

Recursive tuple implementation. Here we store the `Head` element and derive from a `Tuple_impl` containing the remaining elements (which contains the `Tail`).

Definition at line 191 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

#### 4.235 `__gnu_cxx::_Unqualified_type<_Tp>` Struct Template Reference

##### Public Types

- `typedef _Tp type`

#### 4.235.1 Detailed Description

```
template<typename _Tp>
struct __gnu_cxx::_Unqualified_type<_Tp >
```

This structure accommodates the way in which `std::iterator_traits<>` is normally specialized for `const T*`, so that `value_of_type` is still `T`.

Definition at line 244 of file `pointer.h`.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

#### 4.236 `std::_Vector_base<_Tp, _Alloc>` Struct Template Reference

#### 4.243 std::aligned\_storage< \_Len, \_Align > Struct Template Reference

##### 4.243.1 Detailed Description

```
template<std::size_t _Len, std::size_t _Align = __alignof__(typename __aligned_storage_msa<_Len>::__type)>
struct std::aligned_storage< _Len, _Align >
```

Alignment type.

The value of \_Align is a default-alignment which shall be the most stringent alignment requirement for any C++ object type whose size is no greater than \_Len (3.9). The member typedef type shall be a POD type suitable for use as uninitialized storage for any object whose size is at most \_Len and whose alignment is a divisor of \_Align.

Definition at line 2069 of file type\_traits.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 4.244 `std::aligned_union< _Len, _Types >` Struct Template Reference

### Public Types

- typedef `aligned_storage< _S_len, alignment_value >::type` `type`

### Static Public Attributes

- static const size\_t `alignment_value`

#### 4.244.1 Detailed Description

```
template<size_t _Len, typename... _Types>
struct std::aligned_union< _Len, _Types >
```

Provide aligned storage for types.

[meta.trans.other]

Provides aligned storage for any of the provided types of at least size `_Len`.

#### See also

`aligned_storage`

Definition at line 2107 of file `type_traits`.

#### 4.244.2 Member Typedef Documentation

##### 4.244.2.1 `type`

```
template<size_t _Len, typename... _Types>

### 4.249.1 Detailed Description

```
template<typename _Alloc>
struct std::allocator_traits< _Alloc >
```

Uniform interface to all allocator types.

Definition at line 86 of file `bits/alloc_traits.h`.

### 4.249.2 Member Typedef Documentation

#### 4.249.2.1 allocator\_type

```
template<typename _Alloc>
typedef _Alloc std::allocator_traits< _Alloc >::allocator_type
```

The allocator type.

Definition at line 89 of file bits/alloc\_traits.h.

#### 4.249.2.2 const\_pointer

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::const_pointer = typename _Ptr<__c_pointer, const value_type>↵
::type
```

The allocator's const pointer type.

Alloc::const\_pointer if that type exists, otherwise pointer\_traits<pointer>::rebind<const value\_type>

Definition at line 138 of file bits/alloc\_traits.h.

#### 4.249.2.3 const\_void\_pointer

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::const_void_pointer = typename _Ptr<__cv_pointer, const
void>::type
```

The allocator's const void pointer type.

Alloc::const\_void\_pointer if that type exists, otherwise pointer\_traits<pointer>::rebind<const void>

Definition at line 154 of file bits/alloc\_traits.h.

#### 4.249.2.4 difference\_type

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::difference_type = typename _Diff<_Alloc, pointer>::type
```

The allocator's difference type.

Alloc::difference\_type if that type exists, otherwise pointer\_traits<pointer>::difference↵\_type

Definition at line 162 of file bits/alloc\_traits.h.

#### 4.249.2.5 is\_always\_equal

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::is_always_equal = __detected_or_t<typename is_empty<_↵
_Alloc>::type, __equal, _Alloc>
```

Whether all instances of the allocator type compare equal.

`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`

Definition at line 206 of file `bits/alloc_traits.h`.

#### 4.249.2.6 pointer

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::pointer = __detected_or_t<value_type*, __pointer, _Alloc>
```

The allocator's pointer type.

`Alloc::pointer` if that type exists, otherwise `value_type*`

Definition at line 98 of file `bits/alloc_traits.h`.

#### 4.249.2.7 propagate\_on\_container\_copy\_assignment

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::propagate_on_container_copy_assignment = __detected_or_↵
t<false_type, __pocca, _Alloc>
```

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

Definition at line 179 of file `bits/alloc_traits.h`.

#### 4.249.2.8 propagate\_on\_container\_move\_assignment

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::propagate_on_container_move_assignment = __detected_or_↵
t<false_type, __pocma, _Alloc>
```

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

Definition at line 188 of file `bits/alloc_traits.h`.

#### 4.249.2.9 propagate\_on\_container\_swap

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::propagate_on_container_swap = __detected_or_t<false_type,
__pocs, _Alloc>
```

How the allocator is propagated on swap.

Alloc::propagate\_on\_container\_swap if that type exists, otherwise false\_type

Definition at line 197 of file bits/alloc\_traits.h.

#### 4.249.2.10 size\_type

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::size_type = typename _Size<_Alloc, difference_type>::type
```

The allocator's size type.

Alloc::size\_type if that type exists, otherwise make\_unsigned<difference\_type>::type

Definition at line 170 of file bits/alloc\_traits.h.

#### 4.249.2.11 value\_type

```
template<typename _Alloc>
typedef _Alloc::value_type std::allocator_traits< _Alloc >::value_type
```

The allocated type.

Definition at line 91 of file bits/alloc\_traits.h.

#### 4.249.2.12 void\_pointer

```
template<typename _Alloc>
using std::allocator_traits< _Alloc >::void_pointer = typename _Ptr<__v_pointer, void>::type
```

The allocator's void pointer type.

Alloc::void\_pointer if that type exists, otherwise pointer\_traits<pointer>::rebind<void>

Definition at line 146 of file bits/alloc\_traits.h.

### 4.249.3 Member Function Documentation

#### 4.249.3.1 allocate() [1/2]

```
template<typename _Alloc>
static constexpr pointer std::allocator_traits< _Alloc >::allocate (
 _Alloc & __a,
 size_type __n) [inline], [static]
```

Allocate memory.

**Parameters**

|                  |                                              |
|------------------|----------------------------------------------|
| <code>__a</code> | An allocator.                                |
| <code>__n</code> | The number of objects to allocate space for. |

Calls `a.allocate(n)`

Definition at line 313 of file `bits/alloc_traits.h`.

Referenced by `std::__allocate_guarded()`.

**4.249.3.2 allocate()** [2/2]

```
template<typename _Alloc>
static constexpr pointer std::allocator_traits< _Alloc >::allocate (
 _Alloc & __a,
 size_type __n,
 const_void_pointer __hint) [inline], [static]
```

Allocate memory.

**Parameters**

|                     |                                              |
|---------------------|----------------------------------------------|
| <code>__a</code>    | An allocator.                                |
| <code>__n</code>    | The number of objects to allocate space for. |
| <code>__hint</code> | Aid to locality.                             |

**Returns**

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

Definition at line 328 of file `bits/alloc_traits.h`.

**4.249.3.3 construct()**

```
template<typename _Alloc>
template<typename _Tp , typename... _Args>
static constexpr auto std::allocator_traits< _Alloc >::construct (
 _Alloc & __a,
 _Tp * __p,
 _Args &&... __args) -> decltype(_S_construct(__a, __p, std::forward<_Args>(__args)...))
 [inline], [static], [noexcept]
```

Construct an object of type `_Tp`.

## Parameters

|                     |                                                                      |
|---------------------|----------------------------------------------------------------------|
| <code>__a</code>    | An allocator.                                                        |
| <code>__p</code>    | Pointer to memory of suitable size and alignment for <code>Tp</code> |
| <code>__args</code> | Constructor arguments.                                               |

Calls `__a.construct(__p, std::forward<Args>(__args)...) if that expression is well-formed, otherwise uses placement-new to construct an object of type _Tp at location __p from the arguments __args...`

Definition at line 356 of file `bits/alloc_traits.h`.

## 4.249.3.4 deallocate()

```
template<typename _Alloc>
static constexpr void std::allocator_traits<_Alloc>::deallocate (
 _Alloc & __a,
 pointer __p,
 size_type __n) [inline], [static]
```

Deallocate memory.

## Parameters

|                  |                                                |
|------------------|------------------------------------------------|
| <code>__a</code> | An allocator.                                  |
| <code>__p</code> | Pointer to the memory to deallocate.           |
| <code>__n</code> | The number of objects space was allocated for. |

Calls `a.deallocate(p, n)`

Definition at line 340 of file `bits/alloc_traits.h`.

Referenced by `std::__allocated_ptr<_Alloc>::~~__allocated_ptr()`.

## 4.249.3.5 destroy()

```
template<typename _Alloc>
template<typename _Tp>
static constexpr void std::allocator_traits<_Alloc>::destroy (
 _Alloc & __a,
 _Tp * __p) [inline], [static], [noexcept]
```

Destroy an object of type `_Tp`.

**Parameters**

|       |                                  |
|-------|----------------------------------|
| $\_a$ | An allocator.                    |
| $\_p$ | Pointer to the object to destroy |

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~Tp()`

Definition at line 372 of file `bits/alloc_traits.h`.

Referenced by `std::_Destroy()`.

**4.249.3.6 max\_size()**

```
template<typename _Alloc>
static constexpr size_type std::allocator_traits< _Alloc >::max_size (
 const _Alloc & __a) [inline], [static], [noexcept]
```

The maximum supported allocation size.

**Parameters**

|       |               |
|-------|---------------|
| $\_a$ | An allocator. |
|-------|---------------|

**Returns**

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

Definition at line 385 of file `bits/alloc_traits.h`.

Referenced by `std::forward_list<_Tp, _Alloc>::max_size()`, and `std::list<__inp, __rebind_inp>::max_size()`.

**4.249.3.7 select\_on\_container\_copy\_construction()**

```
template<typename _Alloc>
static constexpr _Alloc std::allocator_traits< _Alloc >::select_on_container_copy_construction (
 const _Alloc & __rhs) [inline], [static]
```

Obtain an allocator to use when copying a container.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__rhs</code> | An allocator. |
|--------------------|---------------|

## Returns

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

Definition at line 397 of file `bits/alloc_traits.h`.

The documentation for this struct was generated from the following file:

#### 4.250.1 Detailed Description

```
template<typename _Tp>
struct std::allocator_traits< allocator< _Tp > >
```

Partial specialization for std::allocator.

Definition at line 407 of file bits/alloc\_traits.h.

#### 4.250.2 Member Typedef Documentation

##### 4.250.2.1 allocator\_type

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::allocator_type = allocator<_Tp>
```

The allocator type.

Definition at line 410 of file bits/alloc\_traits.h.

##### 4.250.2.2 const\_pointer

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::const_pointer = const _Tp*
```

The allocator's const pointer type.

Definition at line 419 of file bits/alloc\_traits.h.

##### 4.250.2.3 const\_void\_pointer

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::const_void_pointer = const void*
```

The allocator's const void pointer type.

Definition at line 425 of file bits/alloc\_traits.h.

#### 4.250.2.4 `difference_type`

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::difference_type = std::ptrdiff_t
```

The allocator's difference type.

Definition at line 428 of file `bits/alloc_traits.h`.

#### 4.250.2.5 `is_always_equal`

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::is_always_equal = true_type
```

Whether all instances of the allocator type compare equal.

Definition at line 443 of file `bits/alloc_traits.h`.

#### 4.250.2.6 `pointer`

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::pointer = _Tp*
```

The allocator's pointer type.

Definition at line 416 of file `bits/alloc_traits.h`.

#### 4.250.2.7 `propagate_on_container_copy_assignment`

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_copy_assignment = false_type
```

How the allocator is propagated on copy assignment.

Definition at line 434 of file `bits/alloc_traits.h`.

#### 4.250.2.8 `propagate_on_container_move_assignment`

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_move_assignment = true_type
```

How the allocator is propagated on move assignment.

Definition at line 437 of file `bits/alloc_traits.h`.

#### 4.250.2.9 propagate\_on\_container\_swap

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_swap = false_type
```

How the allocator is propagated on swap.

Definition at line 440 of file bits/alloc\_traits.h.

#### 4.250.2.10 size\_type

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::size_type = std::size_t
```

The allocator's size type.

Definition at line 431 of file bits/alloc\_traits.h.

#### 4.250.2.11 value\_type

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::value_type = _Tp
```

The allocated type.

Definition at line 413 of file bits/alloc\_traits.h.

#### 4.250.2.12 void\_pointer

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::void_pointer = void*
```

The allocator's void pointer type.

Definition at line 422 of file bits/alloc\_traits.h.

### 4.250.3 Member Function Documentation

#### 4.250.3.1 allocate() [1/2]

```
template<typename _Tp >
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
 allocator_type & __a,
 size_type __n) [inline], [static]
```

Allocate memory.

## Parameters

|                  |                                              |
|------------------|----------------------------------------------|
| <code>__a</code> | An allocator.                                |
| <code>__n</code> | The number of objects to allocate space for. |

Calls `a.allocate(n)`

Definition at line 459 of file `bits/alloc_traits.h`.

4.250.3.2 `allocate()` [2/2]

```
template<typename _Tp >
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
 allocator_type & __a,
 size_type __n,
 const_void_pointer __hint) [inline], [static]
```

Allocate memory.

## Parameters

|                     |                                              |
|---------------------|----------------------------------------------|
| <code>__a</code>    | An allocator.                                |
| <code>__n</code>    | The number of objects to allocate space for. |
| <code>__hint</code> | Aid to locality.                             |

## Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)`

Definition at line 473 of file `bits/alloc_traits.h`.

4.250.3.3 `construct()`

```
template<typename _Tp >
template<typename _Up , typename... _Args>
static constexpr void std::allocator_traits< allocator< _Tp > >::construct (
 allocator_type & __a,
 _Up * __p,
 _Args &&... __args) [inline], [static], [noexcept]
```

Construct an object of type `_Up`

## Parameters

|                     |                                                                                           |
|---------------------|-------------------------------------------------------------------------------------------|
| <code>__a</code>    | An allocator.                                                                             |
| <code>__p</code>    | Pointer to memory of suitable size and alignment for an object of type <code>_Up</code> . |
| <code>__args</code> | Constructor arguments.                                                                    |

Calls `__a.construct(__p, std::forward<_Args>(__args)...) in C++11, C++14 and C++17. Changed in C++20 to call std::construct_at(__p, std::forward<_Args>(__args)...) instead.`

Definition at line 507 of file `bits/alloc_traits.h`.

4.250.3.4 `deallocate()`

```
template<typename _Tp >
static constexpr void std::allocator_traits< allocator< _Tp > >::deallocate (
 allocator_type & __a,
 pointer __p,
 size_type __n) [inline], [static]
```

Deallocate memory.

## Parameters

|                          |                                                |
|--------------------------|------------------------------------------------|
| <code>__↵<br/>__a</code> | An allocator.                                  |
| <code>__↵<br/>__p</code> | Pointer to the memory to deallocate.           |
| <code>__↵<br/>__n</code> | The number of objects space was allocated for. |

Calls `a.deallocate(p, n)`

Definition at line 491 of file `bits/alloc_traits.h`.

4.250.3.5 `destroy()`

```
template<typename _Tp >
template<typename _Up >
static constexpr void std::allocator_traits< allocator< _Tp > >::destroy (
 allocator_type & __a,
 _Up * __p) [inline], [static], [noexcept]
```

Destroy an object of type `_Up`.

## Parameters

|                  |                                  |
|------------------|----------------------------------|
| <code>__a</code> | An allocator.                    |
| <code>__p</code> | Pointer to the object to destroy |

Calls `__a.destroy(__p)`.

Definition at line 527 of file `bits/alloc_traits.h`.

4.250.3.6 `max_size()`

```
template<typename _Tp >
static constexpr size_type std::allocator_traits< allocator< _Tp > >::max_size (
 const allocator_type & __a) [inline], [static], [noexcept]
```

The maximum supported allocation size.

## Parameters

|                  |               |
|------------------|---------------|
| <code>__a</code> | An allocator. |
|------------------|---------------|

## Returns

`__a.max_size()`

Definition at line 543 of file `bits/alloc_traits.h`.

4.250.3.7 `select_on_container_copy_construction()`

```
template<typename _Tp >
static constexpr allocator_type std::allocator_traits< allocator< _Tp > >::select_on_container←
_copy_construction (
 const allocator_type & __rhs) [inline], [static]
```

Obtain an allocator to use when copying a container.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__rhs</code> | An allocator. |
|--------------------|---------------|

**Returns**

`__rhs`

Definition at line 558 of file `bits/alloc_traits.h`.

The documentation for this struct was generated from the following file:

## 4.253.1 Detailed Description

Base class for checking address and label information about allocations. Create a `std::map` between the allocated address (void\*) and a datum for annotations, which are a pair of numbers corresponding to label and allocated size.

Definition at line 93 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

#### 4.254.1 Detailed Description

A type-safe container of any type.

An [any](#) object's state is either empty or it stores a contained object of CopyConstructible type.

Definition at line 90 of file experimental/any.

#### 4.254.2 Constructor & Destructor Documentation

#### 4.254.2.1 any() [1/5]

```
std::experimental::fundamentals_v1::any::any () [inline], [noexcept]
```

Default constructor, creates an empty object.

Definition at line 129 of file experimental/any.

#### 4.254.2.2 any() [2/5]

```
std::experimental::fundamentals_v1::any::any (
 const any & __other) [inline]
```

Copy constructor, copies the state of \_\_other.

Definition at line 132 of file experimental/any.

#### 4.254.2.3 any() [3/5]

```
std::experimental::fundamentals_v1::any::any (
 any && __other) [inline], [noexcept]
```

Move constructor, transfer the state from \_\_other.

#### Postcondition

\_\_other.empty() (this postcondition is a GNU extension)

Definition at line 149 of file experimental/any.

#### 4.254.2.4 any() [4/5]

```
template<typename _ValueType , typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>,
typename enable_if< is_constructible< _Tp, _ValueType && >::value, bool >::type = true>
std::experimental::fundamentals_v1::any::any (
 _ValueType && __value) [inline]
```

Construct with a copy of \_\_value as the contained object.

Definition at line 166 of file experimental/any.

#### 4.254.2.5 any() [5/5]

```
template<typename _ValueType , typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>,
typename enable_if<!is_constructible< _Tp, _ValueType && >::value, bool >::type = false>
std::experimental::fundamentals_v1::any::any (
 _ValueType && __value) [inline]
```

Construct with a copy of `__value` as the contained object.

Definition at line 179 of file `experimental/any`.

#### 4.254.2.6 ~any()

```
std::experimental::fundamentals_v1::any::~~any () [inline]
```

Destructor, calls `clear()`

Definition at line 188 of file `experimental/any`.

### 4.254.3 Member Function Documentation

#### 4.254.3.1 clear()

```
void std::experimental::fundamentals_v1::any::clear () [inline], [noexcept]
```

If not empty, destroy the contained object.

Definition at line 230 of file `experimental/any`.

#### 4.254.3.2 empty()

```
bool std::experimental::fundamentals_v1::any::empty () const [inline], [noexcept]
```

Reports whether there is a contained object or not.

Definition at line 272 of file `experimental/any`.

**4.254.3.3 operator=()** [1/3]

```
any& std::experimental::fundamentals_v1::any::operator= (
 const any & __rhs) [inline]
```

Copy the state of another object.

Definition at line 193 of file experimental/any.

**4.254.3.4 operator=()** [2/3]

```
any& std::experimental::fundamentals_v1::any::operator= (
 any && __rhs) [inline], [noexcept]
```

Move assignment operator.

**Postcondition**

`__rhs.empty()` (not guaranteed for other implementations)

Definition at line 204 of file experimental/any.

**4.254.3.5 operator=()** [3/3]

```
template<typename _ValueType >
enable_if_t<!is_same<any, decay_t<_ValueType> >::value, any&> std::experimental::fundamentals_v1::any::operator= (
 _ValueType && __rhs) [inline]
```

Store a copy of `__rhs` as the contained object.

Definition at line 221 of file experimental/any.

**4.254.3.6 swap()**

```
void std::experimental::fundamentals_v1::any::swap (
 any & __rhs) [inline], [noexcept]
```

Exchange state with another object.

Definition at line 240 of file experimental/any.

#### 4.254.3.7 type()

```
const type_info& std::experimental::fundamentals_v1::any::type () const [inline], [noexcept]
```

The typeid of the contained object, or typeid(void) if empty.

Definition at line 276 of file experimental/any.

#### 4.255.1 Detailed Description

```
template<typename _Tp, std::size_t _Nm>
struct std::array<_Tp, _Nm >
```

A standard container for storing a fixed size sequence of elements.

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#).

Sets support random access iterators.

#### Template Parameters

|                        |                                                  |
|------------------------|--------------------------------------------------|
| <i><code>Tp</code></i> | Type of element. Required to be a complete type. |
| <i><code>Nm</code></i> | Number of elements.                              |

Definition at line 94 of file `array`.

- `void reset (element\_type *__p=0) throw ()`

#### 4.275.1 Detailed Description

```
template<typename _Tp>
class std::auto_ptr< _Tp >
```

A simple smart pointer providing strict ownership semantics.

The Standard says:

An `auto_ptr` owns the object it holds a pointer to. Copying an `auto_ptr` copies the pointer and transfers ownership to the destination. If more than one `auto_ptr` owns the same object at the same time the behavior of the program is undefined.

The uses of `auto_ptr` include providing temporary exception-safety for dynamically allocated memory, passing ownership of dynamically allocated memory to a function, and returning dynamically allocated memory from a function. `auto_ptr` does not meet the CopyConstructible requirements for Standard Library `container` elements and thus instantiating a Standard Library container with an `auto_ptr` results in undefined behavior.

Quoted from [20.4.5]/3.

Good examples of what can and cannot be done with `auto_ptr` can be found in the libstdc++ testsuite.

`_GLIBCXX_RESOLVE_LIB_DEFECTS`

1. `auto_ptr<>` conversion issues These resolutions have all been incorporated.

Definition at line 89 of file `auto_ptr.h`.

#### 4.275.2 Member Typedef Documentation

##### 4.275.2.1 `element_type`

```
template<typename _Tp>
typedef _Tp std::auto_ptr< _Tp >::element_type
```

The pointed-to type.

Definition at line 96 of file `auto_ptr.h`.

#### 4.275.3 Constructor & Destructor Documentation

##### 4.275.3.1 `auto_ptr()` [1/4]

```
template<typename _Tp>
std::auto_ptr< _Tp >::auto_ptr (
 element_type * __p = 0) throw () [inline], [explicit]
```

An `auto_ptr` is usually constructed from a raw pointer.

## Parameters

|                                                                                                       |                               |
|-------------------------------------------------------------------------------------------------------|-------------------------------|
| <br><code>__p</code> | A pointer (defaults to NULL). |
|-------------------------------------------------------------------------------------------------------|-------------------------------|

This object now *owns* the object pointed to by `__p`.

Definition at line 105 of file `auto_ptr.h`.

## 4.275.3.2 auto\_ptr() [2/4]

```
template<typename _Tp>
std::auto_ptr< _Tp >::auto_ptr (
 auto_ptr< _Tp > & __a) throw () [inline]
```

An `auto_ptr` can be constructed from another `auto_ptr`.

## Parameters

|                                                                                                       |                                                 |
|-------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| <br><code>__a</code> | Another <code>auto_ptr</code> of the same type. |
|-------------------------------------------------------------------------------------------------------|-------------------------------------------------|

This object now *owns* the object previously owned by `__a`, which has given up ownership.

Definition at line 114 of file `auto_ptr.h`.

## 4.275.3.3 auto\_ptr() [3/4]

```
template<typename _Tp>
template<typename _Tp1 >
std::auto_ptr< _Tp >::auto_ptr (
 auto_ptr< _Tp1 > & __a) throw () [inline]
```

An `auto_ptr` can be constructed from another `auto_ptr`.

## Parameters

|                                                                                                         |                                                                |
|---------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|
| <br><code>__a</code> | Another <code>auto_ptr</code> of a different but related type. |
|---------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|

A pointer-to-`Tp1` must be convertible to a pointer-to-`Tp/element_type`.

This object now *owns* the object previously owned by `__a`, which has given up ownership.

Definition at line 127 of file `auto_ptr.h`.

#### 4.275.3.4 ~auto\_ptr()

```
template<typename _Tp>
std::auto_ptr< _Tp >::~~auto_ptr () [inline]
```

When the auto\_ptr goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., get () is NULL), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if \_Tp::~~\_Tp() throws, but this is prohibited. [17.4.3.6]/2

Definition at line 172 of file auto\_ptr.h.

#### 4.275.3.5 auto\_ptr() [4/4]

```
template<typename _Tp>
std::auto_ptr< _Tp >::auto_ptr (
 auto_ptr_ref< element_type > __ref) throw () [inline]
```

Automatic conversions.

These operations are supposed to convert an auto\_ptr into and from an auto\_ptr\_ref automatically as needed. This would allow constructs such as

```
auto_ptr<Derived> func_returning_auto_ptr(...);
...
auto_ptr<Base> ptr = func_returning_auto_ptr(...);
```

But it doesn't work, and won't be fixed. For further details see <http://cplusplus.github.io/LWG/G/lwg-closed.html#463>

Definition at line 266 of file auto\_ptr.h.

### 4.275.4 Member Function Documentation

#### 4.275.4.1 get()

```
template<typename _Tp>
element_type* std::auto_ptr< _Tp >::get (
 void) const throw () [inline]
```

Bypassing the smart pointer.

##### Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

##### Note

This auto\_ptr still owns the memory.

Definition at line 213 of file auto\_ptr.h.

## 4.275.4.2 operator\*()

```
template<typename _Tp>
element_type& std::auto_ptr< _Tp >::operator* () const throw () [inline]
```

Smart pointer dereferencing.

If this auto\_ptr no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

Definition at line 183 of file auto\_ptr.h.

## 4.275.4.3 operator-&gt;()

```
template<typename _Tp>
element_type* std::auto_ptr< _Tp >::operator-> () const throw () [inline]
```

Smart pointer dereferencing.

This returns the pointer itself, which the language then will automatically cause to be dereferenced.

Definition at line 196 of file auto\_ptr.h.

## 4.275.4.4 operator=( ) [1/2]

```
template<typename _Tp>
auto_ptr& std::auto_ptr< _Tp >::operator= (
 auto_ptr< _Tp > & __a) throw () [inline]
```

auto\_ptr assignment operator.

## Parameters

|                                                                                            |                                    |
|--------------------------------------------------------------------------------------------|------------------------------------|
| <br>__a | Another auto_ptr of the same type. |
|--------------------------------------------------------------------------------------------|------------------------------------|

This object now *owns* the object previously owned by \_\_a, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 138 of file auto\_ptr.h.

References std::auto\_ptr< \_Tp >::reset().

#### 4.275.4.5 operator=() [2/2]

```
template<typename _Tp>
template<typename _Tp1 >
auto_ptr& std::auto_ptr< _Tp >::operator= (
 auto_ptr< _Tp1 > & __a) throw () [inline]
```

auto\_ptr assignment operator.

##### Parameters

|                  |                                                   |
|------------------|---------------------------------------------------|
| <code>__a</code> | Another auto_ptr of a different but related type. |
|------------------|---------------------------------------------------|

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element\_type.

This object now *owns* the object previously owned by \_\_a, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 156 of file auto\_ptr.h.

References std::auto\_ptr< \_Tp >::reset().

#### 4.275.4.6 release()

```
template<typename _Tp>
element_type* std::auto_ptr< _Tp >::release () throw () [inline]
```

Bypassing the smart pointer.

##### Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

##### Note

This auto\_ptr no longer owns the memory. When this object goes out of scope, nothing will happen.

Definition at line 227 of file auto\_ptr.h.

#### 4.275.4.7 reset()

```
template<typename _Tp>
void std::auto_ptr< _Tp >::reset (
 element_type * __p = 0) throw () [inline]
```

Forcibly deletes the managed object.

## Parameters

|                  |                               |
|------------------|-------------------------------|
| <code>__p</code> | A pointer (defaults to NULL). |
|------------------|-------------------------------|

This object now *owns* the object pointed to by `__p`. The previous object has been deleted.

Definition at line 242 of file `auto_ptr.h`.

Referenced by `std::auto_ptr< _Tp >::operator=()`.

The documentation for this class was generated from the following file:

- [auto\\_ptr.h](#)

4.276 `std::auto_ptr_ref< _Tp1 >` Struct Template Reference

## Public Member Functions

- `auto_ptr_ref ( _Tp1 * __p )`

## Public Attributes

- `_Tp1 * _M_ptr`

## 4.276.1 Detailed Description

```
template<typename _Tp1>
struct std::auto_ptr_ref< _Tp1 >
```

A wrapper class to provide `auto_ptr` with reference semantics. For example, an `auto_ptr` can be assigned (or constructed from) the result of a function which returns an `auto_ptr` by value.

All the `auto_ptr_ref` stuff should happen behind the scenes.

Definition at line 48 of file `auto_ptr.h`.

The documentation for this struct was generated from the following file:

- [auto\\_ptr.h](#)

## 4.277 `std::back_insert_iterator<_Container>` Class Template Reference

Inheritance diagram for `std::back_insert_iterator<_Container>`:

### Public Types

- typedef `_Container` `container_type`
- typedef void `difference_type`
- typedef `output_iterator_tag` `iterator_category`
- typedef void `pointer`
- typedef void `reference`
- typedef void `value_type`

### Public Member Functions

- constexpr `back_insert_iterator` (`_Container` &\_\_x)
- constexpr `back_insert_iterator` & `operator*` ()
- constexpr `back_insert_iterator` & `operator++` ()
- constexpr `back_insert_iterator` `operator++` (int)
- constexpr `back_insert_iterator` & `operator=` (const typename `_Container::value_type` &\_\_value)
- constexpr `back_insert_iterator` & `operator=` (typename `_Container::value_type` &&\_\_value)

### Protected Attributes

- `_Container` \* **`container`**

#### 4.277.1 Detailed Description

```
template<typename _Container>
class std::back_insert_iterator<_Container>
```

Turns assignment into insertion.

These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using push\_back.

Tip: Using the back\_inserter function to create these iterators can save typing.

Definition at line 596 of file bits/stl\_iterator.h.

#### 4.277.2 Member Typedef Documentation

##### 4.277.2.1 container\_type

```
template<typename _Container>
typedef _Container std::back_insert_iterator<_Container>::container_type
```

A nested typedef for the type of whatever container you used.

Definition at line 604 of file bits/stl\_iterator.h.

##### 4.277.2.2 difference\_type

```
typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type
[inherited]
```

Distance between iterators is represented as this type.

Definition at line 134 of file stl\_iterator\_base\_types.h.

##### 4.277.2.3 iterator\_category

```
typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >↵
::iterator_category [inherited]
```

One of the [tag types](#).

Definition at line 130 of file stl\_iterator\_base\_types.h.

#### 4.277.2.4 pointer

```
typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]
```

This type represents a pointer-to-value\_type.

Definition at line 136 of file `stl_iterator_base_types.h`.

#### 4.277.2.5 reference

```
typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]
```

This type represents a reference-to-value\_type.

Definition at line 138 of file `stl_iterator_base_types.h`.

#### 4.277.2.6 value\_type

```
typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]
```

The type "pointed to" by the iterator.

Definition at line 132 of file `stl_iterator_base_types.h`.

### 4.277.3 Constructor & Destructor Documentation

#### 4.277.3.1 back\_insert\_iterator()

```
template<typename _Container >
constexpr std::back_insert_iterator< _Container >::back_insert_iterator (
 _Container & __x) [inline], [explicit]
```

The only way to create this iterator is with a container.

Definition at line 613 of file `bits/stl_iterator.h`.

### 4.277.4 Member Function Documentation

#### 4.277.4.1 operator\*()

```
template<typename _Container >
constexpr back_insert_iterator& std::back_insert_iterator<_Container>::operator* () [inline]
```

Simply returns \*this.

Definition at line 655 of file bits/stl\_iterator.h.

#### 4.277.4.2 operator++() [1/2]

```
template<typename _Container >
constexpr back_insert_iterator& std::back_insert_iterator<_Container>::operator++ () [inline]
```

Simply returns \*this. (This iterator does not *move*.)

Definition at line 661 of file bits/stl\_iterator.h.

#### 4.277.4.3 operator++() [2/2]

```
template<typename _Container >
constexpr back_insert_iterator std::back_insert_iterator<_Container>::operator++ (
 int) [inline]
```

Simply returns \*this. (This iterator does not *move*.)

Definition at line 667 of file bits/stl\_iterator.h.

#### 4.277.4.4 operator=()

```
template<typename _Container >
constexpr back_insert_iterator& std::back_insert_iterator<_Container>::operator= (
 const typename _Container::value_type & __value) [inline]
```

##### Parameters

|                      |                                                                                                                                                       |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__value</code> | An instance of whatever type <code>container_type::const_reference</code> is; presumably a reference-to-const T for <code>container&lt;T&gt;</code> . |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|

##### Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.

Definition at line 637 of file `bits/stl_iterator.h`.

The documentation for this class was generated from the following file:

- [bits/stl\\_iterator.h](#)

## 4.278 `std::bad_alloc` Class Reference

Inheritance diagram for `std::bad_alloc`:

### Public Member Functions

- **`bad_alloc`** (const [bad\\_alloc](#) &)=default
- [bad\\_alloc](#) & **`operator=`** (const [bad\\_alloc](#) &)=default
- virtual const char \* [what](#) () const throw ()

### 4.278.1 Detailed Description

Exception possibly thrown by `new`.

`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

Definition at line 55 of file `new`.

### 4.278.2 Member Function Documentation

4.278.2.1 `what()`

```
virtual const char* std::bad_alloc::what () const throw () [virtual]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [new](#)

4.279 `std::experimental::fundamentals_v1::bad_any_cast` Class Reference

Inheritance diagram for `std::experimental::fundamentals_v1::bad_any_cast`:

## Public Member Functions

- virtual const char \* [what](#) () const noexcept

## 4.279.1 Detailed Description

Exception class thrown by a failed `any_cast`.

Definition at line 67 of file `experimental/any`.

## 4.279.2 Member Function Documentation

### 4.279.2.1 what()

```
virtual const char* std::experimental::fundamentals_v1::bad_any_cast::what () const [inline],
[virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::bad\\_cast](#).

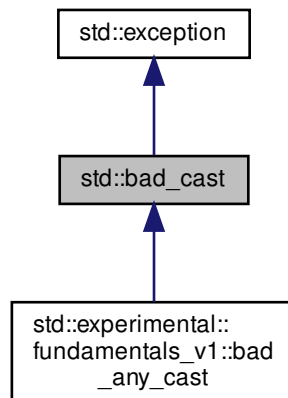

Definition at line 70 of file experimental/any.

The documentation for this class was generated from the following file:

- [experimental/any](#)

## 4.280 std::bad\_cast Class Reference

Inheritance diagram for std::bad\_cast:

### Public Member Functions

- virtual const char \* [what](#) ( ) const noexcept

## 4.280.1 Detailed Description

Thrown during incorrect typecasting.

If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.

Definition at line 190 of file `typeinfo`.

## 4.280.2 Member Function Documentation

4.280.2.1 `what()`

```
virtual const char* std::bad_cast::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

Reimplemented in [std::experimental::fundamentals\\_v1::bad\\_any\\_cast](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

4.281 `std::bad_exception` Class Reference

Inheritance diagram for `std::bad_exception`:

## Public Member Functions

- virtual const char \* [what](#) ( ) const noexcept

#### 4.281.1 Detailed Description

If an exception is thrown which is not listed in a function's exception specification, one of these may be thrown.

Definition at line 50 of file exception.

#### 4.281.2 Member Function Documentation

##### 4.281.2.1 what()

```
virtual const char* std::bad_exception::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [exception](#)

#### 4.282 std::bad\_function\_call Class Reference

Inheritance diagram for std::bad\_function\_call:

#### Public Member Functions

- const char \* [what](#) () const noexcept

#### 4.282.1 Detailed Description

Exception class thrown when class template function's operator() is called with an empty target.

Definition at line 56 of file std\_function.h.

#### 4.282.2 Member Function Documentation

##### 4.282.2.1 what()

```
const char* std::bad_function_call::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [std\\_function.h](#)

#### 4.283 std::experimental::fundamentals\_v1::bad\_optional\_access Class Reference

Inheritance diagram for std::experimental::fundamentals\_v1::bad\_optional\_access:

## Public Member Functions

- **bad\_optional\_access** (const char \*\_\_arg)
- virtual const char \* [what](#) () const noexcept

### 4.283.1 Detailed Description

Exception class thrown when a disengaged optional object is dereferenced.

Definition at line 104 of file experimental/optional.

### 4.283.2 Member Function Documentation

#### 4.283.2.1 what()

```
virtual const char* std::logic_error::what () const [virtual], [noexcept], [inherited]
```

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

The documentation for this class was generated from the following file:

- [experimental/optional](#)

## 4.284 std::bad\_typeid Class Reference

Inheritance diagram for std::bad\_typeid:

### Public Member Functions

- virtual const char \* [what](#) () const noexcept

#### 4.284.1 Detailed Description

Thrown when a NULL pointer in a typeid expression is used.

Definition at line 207 of file typeinfo.

#### 4.284.2 Member Function Documentation

##### 4.284.2.1 what()

```
virtual const char* std::bad_typeid::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 4.285 std::bad\_weak\_ptr Class Reference

Inheritance diagram for std::bad\_weak\_ptr:

### Public Member Functions

- virtual char const \* [what](#) () const noexcept

#### 4.285.1 Detailed Description

Exception possibly thrown by `shared_ptr`.

Definition at line 76 of file `shared_ptr_base.h`.

#### 4.285.2 Member Function Documentation

##### 4.285.2.1 `what()`

```
virtual char const* std::bad_weak_ptr::what () const [virtual], [noexcept]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [shared\\_ptr\\_base.h](#)

#### 4.286 `__gnu_parallel::balanced_quicksort_tag` Struct Reference

Inheritance diagram for `__gnu_parallel::balanced_quicksort_tag`:

#### Public Member Functions

- **`balanced_quicksort_tag`** ([\\_ThreadIndex](#) \_\_num\_threads)
- [\\_ThreadIndex](#) `__get_num_threads` ()
- void `set_num_threads` ([\\_ThreadIndex](#) \_\_num\_threads)

#### 4.286.1 Detailed Description

Forces parallel sorting using balanced quicksort at compile time.

Definition at line 164 of file tags.h.

#### 4.286.2 Member Function Documentation

##### 4.286.2.1 `__get_num_threads()`

```
__ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads () [inline], [inherited]
```

Find out desired number of threads.

##### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

##### 4.286.2.2 `set_num_threads()`

```
void __gnu_parallel::parallel_tag::set_num_threads (
 __ThreadIndex __num_threads) [inline], [inherited]
```

Set the desired number of threads.

##### Parameters

|                            |                            |
|----------------------------|----------------------------|
| <code>__num_threads</code> | Desired number of threads. |
|----------------------------|----------------------------|

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 4.287 \_\_gnu\_parallel::balanced\_tag Struct Reference

Inheritance diagram for \_\_gnu\_parallel::balanced\_tag:

### Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads\(\)](#)
- void [set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#)

#### 4.287.1 Detailed Description

Recommends parallel execution using dynamic load-balancing at compile time.

Definition at line 88 of file tags.h.

#### 4.287.2 Member Function Documentation

##### 4.287.2.1 \_\_get\_num\_threads()

```
_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads () [inline], [inherited]
```

Find out desired number of threads.

#### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

##### 4.287.2.2 set\_num\_threads()

```
void __gnu_parallel::parallel_tag::set_num_threads (
 _ThreadIndex __num_threads) [inline], [inherited]
```

Set the desired number of threads.

## Parameters

|                            |                            |
|----------------------------|----------------------------|
| <code>__num_threads</code> | Desired number of threads. |
|----------------------------|----------------------------|

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

**basic\_branch** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4)
- `template<typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 >`  
**basic\_branch** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5)
- `template<typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 , typename T6 >`  
**basic\_branch** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6)

### 4.289.1 Detailed Description

```
template<typename Key, typename Mapped, typename Tag, typename Node_Update, typename Policy_Tl, typename _Alloc>
class __gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc >
```

A branched, tree-like (tree, trie) container abstraction.

#### Template Parameters

|                    |                                                                     |
|--------------------|---------------------------------------------------------------------|
| <i>Key</i>         | Key type.                                                           |
| <i>Mapped</i>      | Map type.                                                           |
| <i>Tag</i>         | Instantiating data structure type, see <code>container_tag</code> . |
| <i>Node_Update</i> | Updates nodes, restores invariants.                                 |
| <i>Policy_Tl</i>   | Policy typelist.                                                    |
| <i>_Alloc</i>      | Allocator type.                                                     |

Base is dispatched at compile time via `Tag`, from the following choices: `tree_tag`, `trie_tag`, and their descendants.

Base choices are: `detail::ov_tree_map`, `detail::rb_tree_map`, `detail::splay_tree_map`, and `detail::pat_trie_map`.

Definition at line 555 of file `assoc_container.hpp`.

The documentation for this class was generated from the following file:

## Friends

- class **ios\_base**

## 4.291.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_filebuf< _CharT, _Traits >
```

The actual work of input and output (for files).

## Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Requirements on `traits_type`, specific to this class:

- `traits_type::pos_type` must be `fpos<traits_type::state_type>`
- `traits_type::off_type` must be `streamoff`
- `traits_type::state_type` must be Assignable and DefaultConstructible,
- `traits_type::state_type()` must be the initial state for `codecvt`.

Definition at line 80 of file `fstream`.

#### 4.291.2 Constructor & Destructor Documentation

##### 4.291.2.1 `basic_filebuf()`

```
template<typename _CharT, typename _Traits >
std::basic_filebuf< _CharT, _Traits >::basic_filebuf ()
```

Does not open any files.

The default constructor initializes the parent class using its own default ctor.

Definition at line 81 of file `fstream.tcc`.

##### 4.291.2.2 `~basic_filebuf()`

```
template<typename _CharT, typename _Traits>
virtual std::basic_filebuf< _CharT, _Traits >::~~basic_filebuf () [inline], [virtual]
```

The destructor closes the file first.

Definition at line 246 of file `fstream`.

#### 4.291.3 Member Function Documentation

#### 4.291.3.1 `_M_create_pback()`

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::_M_create_pback () [inline], [protected]
```

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Definition at line 199 of file `fstream`.

#### 4.291.3.2 `_M_destroy_pback()`

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback () throw () [inline], [protected]
```

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 216 of file `fstream`.

#### 4.291.3.3 `_M_set_buffer()`

```
template<typename _CharT, typename _Traits>
void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (
 streamsize __off) [inline], [protected]
```

This function sets the pointers of the internal buffer, both get and put areas. Typically:

`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `epptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 459 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::close()`.

#### 4.291.3.4 `close()`

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::close
()
```

Closes the currently associated file.

##### Returns

`this` on success, `NULL` on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 250 of file `fstream.tcc`.

#### 4.291.3.5 `eback()`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::eback () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 489 of file `streambuf`.

#### 4.291.3.6 `egptr()`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::egptr () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 495 of file `streambuf`.

#### 4.291.3.7 `epptr()`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::epptr () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 542 of file `streambuf`.

#### 4.291.3.8 `gbump()`

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::gbump (
 int __n) [inline], [protected], [inherited]
```

Moving the read position.

**Parameters**

|                 |                             |
|-----------------|-----------------------------|
| <code>_↵</code> | The delta by which to move. |
| <code>_n</code> |                             |

This just advances the read position without returning any data.

Definition at line 505 of file streambuf.

**4.291.3.9 getloc()**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::getloc () const [inline], [inherited]
```

Locale access.

**Returns**

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file streambuf.

**4.291.3.10 gptr()**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::gptr () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

**4.291.3.11 imbue()**

```
template<typename _CharT , typename _Traits >
void std::basic_filebuf< _CharT, _Traits >::imbue (
 const locale & __loc) [protected], [virtual]
```

Changes translations.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__loc</code> | A new locale. |
|--------------------|---------------|

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

## Note

Base class version does nothing.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 1030 of file fstream.tcc.

## 4.291.3.12 in\_avail()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail () [inline], [inherited]
```

Looking ahead into the stream.

## Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file streambuf.

## 4.291.3.13 is\_open()

```
template<typename _CharT, typename _Traits>
bool std::basic_filebuf< _CharT, _Traits >::is_open () const throw () [inline]
```

Returns true if the external file is open.

Definition at line 265 of file fstream.

## 4.291.3.14 open() [1/2]

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (
 const char * __s,
 ios_base::openmode __mode)
```

Opens an external file.

## Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

## Returns

`this` on success, `NULL` on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named `__s` using the flags given in `__mode`.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596)

| ios_base Flag combination |    |     |       |     | stdio equivalent |
|---------------------------|----|-----|-------|-----|------------------|
| binary                    | in | out | trunc | app |                  |
|                           |    | +   |       |     | w                |
|                           |    | +   |       | +   | a                |
|                           |    |     |       | +   | a                |
|                           |    | +   | +     |     | w                |
|                           | +  |     |       |     | r                |
|                           | +  | +   |       |     | r+               |
|                           | +  | +   | +     |     | w+               |
|                           | +  | +   |       | +   | a+               |
|                           | +  |     |       | +   | a+               |
| +                         |    | +   |       |     | wb               |
| +                         |    | +   |       | +   | ab               |
| +                         |    |     |       | +   | ab               |
| +                         |    | +   | +     |     | wb               |
| +                         | +  |     |       |     | rb               |
| +                         | +  | +   |       |     | r+b              |
| +                         | +  | +   | +     |     | w+b              |
| +                         | +  | +   |       | +   | a+b              |
| +                         | +  |     |       | +   | a+b              |

Definition at line 180 of file `fstream.tcc`.

Referenced by `std::basic_filebuf< char_type, traits_type >::open()`.

4.291.3.15 `open()` [2/2]

```
template<typename _CharT, typename _Traits>
__filebuf_type* std::basic_filebuf< _CharT, _Traits >::open (
 const std::string & __s,
 ios_base::openmode __mode) [inline]
```

Opens an external file.

## Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

## Returns

`this` on success, `NULL` on failure

Definition at line 331 of file `fstream`.

4.291.3.16 `overflow()`

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::overflow (
 int_type __c = _Traits::eof()) [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

## Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__c</code> | An additional character to consume. |
|------------------|-------------------------------------|

## Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

## Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 542 of file `fstream.tcc`.

4.291.3.17 `pbackfail()`

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::pbackfail (
 int_type __c = _Traits::eof()) [protected], [virtual]
```

Tries to back up the input sequence.

**Parameters**

|                 |                                                      |
|-----------------|------------------------------------------------------|
| <code>_c</code> | The character to be inserted back into the sequence. |
|-----------------|------------------------------------------------------|

**Returns**

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 483 of file `fstream.tcc`.

**4.291.3.18 pbase()**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf<_CharT, _Traits>::pbase () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 536 of file `streambuf`.

**4.291.3.19 pbump()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf<_CharT, _Traits>::pbump (
 int __n) [inline], [protected], [inherited]
```

Moving the write position.

## Parameters

|                 |                             |
|-----------------|-----------------------------|
| <code>_↵</code> | The delta by which to move. |
| <code>_n</code> |                             |

This just advances the write position without returning any data.

Definition at line 552 of file streambuf.

## 4.291.3.20 pptr()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::pptr () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

## 4.291.3.21 pubimbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
 const locale & __loc) [inline], [inherited]
```

Entry point for imbue().

## Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

## Returns

The previous locale.

Calls the derived imbue(\_\_loc).

Definition at line 216 of file streambuf.

#### 4.291.3.22 pubseekoff()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
 off_type __off,
 ios_base::seekdir __way,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [inherited]
```

Alters the stream position.

##### Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__off</code>  | Offset.                                     |
| <code>__way</code>  | Value for <code>ios_base::seekdir</code> .  |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual seekoff function.

Definition at line 258 of file streambuf.

#### 4.291.3.23 pubseekpos()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
 pos_type __sp,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [inherited]
```

Alters the stream position.

##### Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__sp</code>   | Position                                    |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual seekpos function.

Definition at line 270 of file streambuf.

#### 4.291.3.24 pubsetbuf()

```
template<typename _CharT, typename _Traits>
basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file `streambuf`.

#### 4.291.3.25 pubsync()

```
template<typename _CharT, typename _Traits>
int std::basic_streambuf< _CharT, _Traits >::pubsync () [inline], [inherited]
```

Calls virtual sync function.

Definition at line 278 of file `streambuf`.

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync()`.

#### 4.291.3.26 sbumpc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc () [inline], [inherited]
```

Getting the next character.

##### Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file `streambuf`.

#### 4.291.3.27 seekoff()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekoff (
 off_type ,
 ios_base::seekdir ,
 ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

##### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 833 of file `fstream.tcc`.

**4.291.3.28 seekpos()**

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekpos (
 pos_type ,
 ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 893 of file `fstream.tcc`.

**4.291.3.29 setbuf()**

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::__streambuf_type * std::basic_filebuf< _CharT, _Traits >↵
::setbuf (
 char_type * __s,
 streamsize __n) [protected], [virtual]
```

Manipulates the buffer.

**Parameters**

|                        |                            |
|------------------------|----------------------------|
| <code>↵<br/>__s</code> | Pointer to a buffer area.  |
| <code>↵<br/>__n</code> | Size of <code>__s</code> . |

**Returns**

`this`

If no file has been opened, and both `__s` and `__n` are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.↵html#io.streambuf.buffering> for more.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 804 of file `fstream.tcc`.

## 4.291.3.30 setg()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setg (
 char_type * __gbeg,
 char_type * __gnext,
 char_type * __gend) [inline], [protected], [inherited]
```

Setting the three read area pointers.

## Parameters

|                      |            |
|----------------------|------------|
| <code>__gbeg</code>  | A pointer. |
| <code>__gnext</code> | A pointer. |
| <code>__gend</code>  | A pointer. |

## Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 516 of file streambuf.

## 4.291.3.31 setp()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setp (
 char_type * __pbeg,
 char_type * __pend) [inline], [protected], [inherited]
```

Setting the three write area pointers.

## Parameters

|                     |            |
|---------------------|------------|
| <code>__pbeg</code> | A pointer. |
| <code>__pend</code> | A pointer. |

## Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 562 of file streambuf.

**4.291.3.32 sgetc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sgetc () [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file `streambuf`.

**4.291.3.33 sgetn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

Entry point for `xsgetn`.

**Parameters**

|                  |                |
|------------------|----------------|
| <code>__s</code> | A buffer area. |
| <code>__n</code> | A count.       |

Returns `xsgetn(__s,__n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 364 of file `streambuf`.

**4.291.3.34 showmanyc()**

```
template<typename _CharT , typename _Traits >
streamsize std::basic_filebuf< _CharT, _Traits >::showmanyc () [protected], [virtual]
```

Investigating the data available.

**Returns**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

**Note**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 298 of file `fstream.tcc`.

**4.291.3.35 snextc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::snextc () [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file `streambuf`.

**4.291.3.36 sputbackc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
 char_type __c) [inline], [inherited]
```

Pushing characters back into the input stream.

**Parameters**

|                  |                             |
|------------------|-----------------------------|
| <code>__c</code> | The character to push back. |
|------------------|-----------------------------|

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 379 of file `streambuf`.

**4.291.3.37 sputc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
 char_type __c) [inline], [inherited]
```

Entry point for all single-character output functions.

**Parameters**

|                  |                        |
|------------------|------------------------|
| <code>__c</code> | A character to output. |
|------------------|------------------------|

**Returns**

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↵__c)`.

Definition at line 431 of file `streambuf`.

Referenced by `std::ostreambuf_iterator< _CharT, _Traits >::operator=()`.

**4.291.3.38 sputn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
 const char_type * __s,
 streamsize __n) [inline], [inherited]
```

Entry point for all single-character output functions.

## Parameters

|                  |                     |
|------------------|---------------------|
| <code>__s</code> | A buffer read area. |
| <code>__n</code> | A count.            |

One of two public output functions.

Returns `xspn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 457 of file `streambuf`.

4.291.3.39 `sungetc()`

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sungetc () [inline], [inherited]
```

Moving backwards in the input stream.

## Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 404 of file `streambuf`.

4.291.3.40 `sync()`

```
template<typename _CharT , typename _Traits >
int std::basic_filebuf< _CharT, _Traits >::sync () [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

## Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

## Note

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 1013 of file `fstream.tcc`.

#### 4.291.3.41 uflow()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow () [inline], [protected], [virtual],
[inherited]
```

Fetches more data from the controlled sequence.

##### Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 707 of file `streambuf`.

#### 4.291.3.42 underflow()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow ()
[protected], [virtual]
```

Fetches more data from the controlled sequence.

##### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

##### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 324 of file `fstream.tcc`.

#### 4.291.3.43 xsgetn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_filebuf< _CharT, _Traits >::xsgetn (
 char_type * __s,
 streamsize __n) [protected], [virtual]
```

Multiple character extraction.

## Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | A buffer area.                          |
| <code>__n</code> | Maximum number of characters to assign. |

## Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 670 of file `fstream.tcc`.

## 4.291.3.44 xsputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_filebuf< _CharT, _Traits >::xsputn (
 const char_type * __s,
 streamsize __n) [protected], [virtual]
```

Multiple character insertion.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A buffer area.                         |
| <code>__n</code> | Maximum number of characters to write. |

## Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 756 of file `fstream.tcc`.

#### 4.291.4 Member Data Documentation

##### 4.291.4.1 `_M_buf`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf [protected]
```

Pointer to the beginning of internal buffer.

Definition at line 136 of file `fstream`.

##### 4.291.4.2 `_M_buf_locale`

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected], [inherited]
```

Current locale setting.

Definition at line 199 of file `streambuf`.

##### 4.291.4.3 `_M_buf_size`

```
template<typename _CharT, typename _Traits>
size_t std::basic_filebuf< _CharT, _Traits >::_M_buf_size [protected]
```

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 143 of file `fstream`.

##### 4.291.4.4 `_M_ext_buf`

```
template<typename _CharT, typename _Traits>
char* std::basic_filebuf< _CharT, _Traits >::_M_ext_buf [protected]
```

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

Definition at line 178 of file `fstream`.

#### 4.291.4.5 \_M\_ext\_buf\_size

```
template<typename _CharT, typename _Traits>
streamsize std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size [protected]
```

Size of buffer held by \_M\_ext\_buf.

Definition at line 183 of file fstream.

#### 4.291.4.6 \_M\_ext\_next

```
template<typename _CharT, typename _Traits>
const char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next [protected]
```

Pointers into the buffer held by \_M\_ext\_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, \_M\_ext\_next corresponds to egptr().

Definition at line 190 of file fstream.

#### 4.291.4.7 \_M\_in\_beg

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]
```

Start of get area.

Definition at line 191 of file streambuf.

#### 4.291.4.8 \_M\_in\_cur

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]
```

Current read area.

Definition at line 192 of file streambuf.

#### 4.291.4.9 \_M\_in\_end

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected], [inherited]
```

End of get area.

Definition at line 193 of file streambuf.

#### 4.291.4.10 `_M_mode`

```
template<typename _CharT, typename _Traits>
ios_base::openmode std::basic_filebuf< _CharT, _Traits >::_M_mode [protected]
```

Place to stash in || out || in | out settings for current filebuf.

Definition at line 121 of file fstream.

Referenced by `std::basic_filebuf< char_type, traits_type >::close()`.

#### 4.291.4.11 `_M_out_beg`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_beg [protected], [inherited]
```

Start of put area.

Definition at line 194 of file streambuf.

#### 4.291.4.12 `_M_out_cur`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur [protected], [inherited]
```

Current put area.

Definition at line 195 of file streambuf.

#### 4.291.4.13 `_M_out_end`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end [protected], [inherited]
```

End of put area.

Definition at line 196 of file streambuf.

#### 4.291.4.14 \_M\_pback

```
template<typename _CharT, typename _Traits>
char_type std::basic_filebuf< _CharT, _Traits >::_M_pback [protected]
```

Necessary bits for putback buffer management.

##### Note

pbacks of over one character are not currently supported.

Definition at line 164 of file fstream.

#### 4.291.4.15 \_M\_pback\_cur\_save

```
template<typename _CharT, typename _Traits>
char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save [protected]
```

Necessary bits for putback buffer management.

##### Note

pbacks of over one character are not currently supported.

Definition at line 165 of file fstream.

#### 4.291.4.16 \_M\_pback\_end\_save

```
template<typename _CharT, typename _Traits>
char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save [protected]
```

Necessary bits for putback buffer management.

##### Note

pbacks of over one character are not currently supported.

Definition at line 166 of file fstream.

#### 4.291.4.17 `_M_pback_init`

```
template<typename _CharT, typename _Traits>
bool std::basic_filebuf< _CharT, _Traits >::_M_pback_init [protected]
```

Necessary bits for putback buffer management.

##### Note

pbacks of over one character are not currently supported.

Definition at line 167 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::close()`.

#### 4.291.4.18 `_M_reading`

```
template<typename _CharT, typename _Traits>
bool std::basic_filebuf< _CharT, _Traits >::_M_reading [protected]
```

`_M_reading == false && _M_writing == false` for **uncommitted** mode; `_M_reading == true` for **read** mode; `_M_writing == true` for **write** mode;

NB: `_M_reading == true && _M_writing == true` is unused.

Definition at line 155 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::close()`.

  - `basic_streambuf< _CharT, _Traits > * rdbuf (basic_streambuf< _CharT, _Traits > *__sb)`
  - `__filebuf_type * rdbuf () const`
  - `iosstate rdstate () const`
  - `void register_callback (event_callback __fn, int __index)`
  - `__ostream_type & seekp (pos_type)`
  - `__ostream_type & seekp (off_type, ios_base::seekdir)`
  - `fmtflags setf (fmtflags __fmtfl)`
  - `fmtflags setf (fmtflags __fmtfl, fmtflags __mask)`
  - `void setstate (iosstate __state)`
  - `void swap (basic_fstream &__rhs)`
  - `pos_type tellp ()`
  - `basic_ostream< _CharT, _Traits > * tie () const`
  - `basic_ostream< _CharT, _Traits > * tie (basic_ostream< _CharT, _Traits > *__tiestr)`
  - `void unsetf (fmtflags __mask)`
  - `char_type widen (char __c) const`
  - `streamsize width () const`
  - `streamsize width (streamsize __wide)`
- 
- `__istream_type & operator>> (__istream_type &(*__pf)(__istream_type &))`
  - `__istream_type & operator>> (__ios_type &(*__pf)(__ios_type &))`

- `__istream_type & operator>> (ios_base &(*__pf)(ios_base &))`

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `false`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (bool &__n)`
  - `__istream_type & operator>> (short &__n)`
  - `__istream_type & operator>> (unsigned short &__n)`
  - `__istream_type & operator>> (int &__n)`
  - `__istream_type & operator>> (unsigned int &__n)`
  - `__istream_type & operator>> (long &__n)`
  - `__istream_type & operator>> (unsigned long &__n)`
  - `__istream_type & operator>> (long long &__n)`
  - `__istream_type & operator>> (unsigned long long &__n)`
- 
- `__istream_type & operator>> (float &__f)`
  - `__istream_type & operator>> (double &__f)`
  - `__istream_type & operator>> (long double &__f)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `true`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

  - [\\_\\_ostream\\_type](#) & [operator<<](#) ([ios\\_base](#) &(\*\_\_pf)([ios\\_base](#) &))

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [\\_\\_ostream\\_type](#) & [operator<<](#) (long \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned long \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (bool \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (short \_\_n)

  - [\\_\\_ostream\\_type](#) & [operator<<](#) (float \_\_f)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (long double \_\_f)

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

## 4.292.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_fstream< _CharT, _Traits >
```

Controlling input and output for files.

### Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |

This class supports reading from and writing to named files, using the inherited functions from `std::basic_iostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 1016 of file `fstream`.

## 4.292.2 Member Typedef Documentation

### 4.292.2.1 `__num_put_type`

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

### 4.292.2.2 `event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

### Parameters

|                  |                                                        |
|------------------|--------------------------------------------------------|
| <code>__e</code> | One of the members of the event enum.                  |
| <code>__b</code> | Reference to the <code>ios_base</code> object.         |
| <code>__i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 529 of file `ios_base.h`.

#### 4.292.2.3 fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 341 of file `ios_base.h`.

#### 4.292.2.4 iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 416 of file `ios_base.h`.

#### 4.292.2.5 openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 447 of file `ios_base.h`.

#### 4.292.2.6 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

### 4.292.3 Member Enumeration Documentation

#### 4.292.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 512 of file `ios_base.h`.

## 4.292.4 Constructor &amp; Destructor Documentation

## 4.292.4.1 basic\_fstream() [1/3]

```
template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::basic_fstream () [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 1043 of file `fstream`.

## 4.292.4.2 basic\_fstream() [2/3]

```
template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::basic_fstream (
 const char * __s,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [explicit]
```

Create an input/output file stream.

## Parameters

|                     |                                                                |
|---------------------|----------------------------------------------------------------|
| <code>__s</code>    | Null terminated string specifying the filename.                |
| <code>__mode</code> | Open file in specified mode (see <code>std::ios_base</code> ). |

Definition at line 1053 of file `fstream`.

## 4.292.4.3 basic\_fstream() [3/3]

```
template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::basic_fstream (
 const std::string & __s,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [explicit]
```

Create an input/output file stream.

## Parameters

|                     |                                                                |
|---------------------|----------------------------------------------------------------|
| <code>__s</code>    | Null terminated string specifying the filename.                |
| <code>__mode</code> | Open file in specified mode (see <code>std::ios_base</code> ). |

Definition at line 1083 of file fstream.

#### 4.292.4.4 ~basic\_fstream()

```
template<typename _CharT, typename _Traits >
std::basic_fstream< _CharT, _Traits >::~~basic_fstream () [inline]
```

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 1118 of file fstream.

### 4.292.5 Member Function Documentation

#### 4.292.5.1 \_M\_getloc()

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 804 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_Inlter >::do\_get(), std::money\_get< \_CharT, \_Inlter >::do\_get(), std::num\_get< \_CharT, \_Inlter >::do\_get(), std::time\_get< \_CharT, \_Inlter >::do\_get\_date(), std::time\_get< \_CharT, \_Inlter >::do\_get\_monthname(), std::time\_get< \_CharT, \_Inlter >::do\_get\_time(), std::time\_get< \_CharT, \_Inlter >::do\_get\_weekday(), std::time\_put< \_CharT, \_Outlter >::do\_put(), std::num\_put< \_CharT, \_Outlter >::do\_put(), std::time\_get< \_CharT, \_Inlter >::get(), and std::time\_put< \_CharT, \_Outlter >::put().

#### 4.292.5.2 \_M\_write()

```
template<typename _CharT, typename _Traits>
void std::basic_ostream< _CharT, _Traits >::_M_write (
 const char_type * __s,
 streamsize __n) [inline], [inherited]
```

Core write functionality, without sentry.

**Parameters**

|                        |                                         |
|------------------------|-----------------------------------------|
| <code>_↵<br/>_s</code> | The array to insert.                    |
| <code>_↵<br/>_n</code> | Maximum number of characters to insert. |

Definition at line 317 of file ostream.

**4.292.5.3 bad()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

**4.292.5.4 clear()**

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

**Parameters**

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See std::ios\_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::exceptions(), std::\_\_detail::operator>>(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

#### 4.292.5.5 close()

```
template<typename _CharT, typename _Traits >
void std::basic_fstream< _CharT, _Traits >::close () [inline]
```

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 1253 of file `fstream`.

#### 4.292.5.6 copyfmt()

```
template<typename _CharT, typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
 const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

##### Parameters

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

##### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

Definition at line 63 of file `basic_ios.tcc`.

#### 4.292.5.7 eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if the `eofbit` is set.

Note that other `iostate` flags may also be set.

Definition at line 190 of file `basic_ios.h`.

## 4.292.5.8 exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [inherited]
```

Throwing exceptions on errors.

## Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 222 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt().

## 4.292.5.9 exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
 iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

## Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios\_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic\_ios.h.

#### 4.292.5.10 fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::operator bool(), and std::basic\_ios< char, \_Traits >::operator!().

#### 4.292.5.11 fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [inherited]
```

Retrieves the *empty* character.

##### Returns

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 370 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt(), std::basic\_ios< char, \_Traits >::fill(), and std::operator<<().

#### 4.292.5.12 fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
 char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

##### Parameters

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file basic\_ios.h.

**4.292.5.13 flags()** [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 649 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< char >::operator<<(), std::operator<<(), std::\_\_detail::operator>>(), and std::operator>>().

**4.292.5.14 flags()** [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file ios\_base.h.

**4.292.5.15 flush()**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush () [inherited]
```

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

Definition at line 211 of file `ostream.tcc`.

**4.292.5.16 gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const [inline], [inherited]
```

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file `istream`.

**4.292.5.17 get()** [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
 void) [inherited]
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets `failbit` and returns `traits::eof()`.

Definition at line 244 of file `istream.tcc`.

**4.292.5.18 get()** [2/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type & __c) [inherited]
```

Simple extraction.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__c</code> | The character in which to store data. |
|------------------|---------------------------------------|

## Returns

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file `istream.tcc`.

## 4.292.5.19 get() [3/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Simple multiple-character extraction.

## Parameters

|                      |                                                             |
|----------------------|-------------------------------------------------------------|
| <code>__s</code>     | Pointer to an array.                                        |
| <code>__n</code>     | Maximum number of characters to store in <code>__s</code> . |
| <code>__delim</code> | A "stop" character.                                         |

## Returns

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file istream.tcc.

**4.292.5.20 get()** [4/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::get (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

**Parameters**

|                  |                                                           |
|------------------|-----------------------------------------------------------|
| <code>__s</code> | Pointer to an array.                                      |
| <code>__n</code> | Maximum number of characters to store in <code>s</code> . |

**Returns**

`*this`

Returns `get(__s,__n,widen("\n"))`.

Definition at line 354 of file istream.

**4.292.5.21 get()** [5/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb,
 char_type __delim) [inherited]
```

Extraction into another streambuf.

**Parameters**

|                      |                                     |
|----------------------|-------------------------------------|
| <code>__sb</code>    | A streambuf in which to store data. |
| <code>__delim</code> | A "stop" character.                 |

**Returns**`*this`

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 364 of file `istream.tcc`.

**4.292.5.22 `get()`** [6/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

**Parameters**

|                   |                                     |
|-------------------|-------------------------------------|
| <code>__sb</code> | A streambuf in which to store data. |
|-------------------|-------------------------------------|

**Returns**`*this`

Returns `get(__sb,widen("\n"))`.

Definition at line 387 of file `istream`.

**4.292.5.23 `getline()`** [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

String extraction.

**Parameters**

|                      |                                               |
|----------------------|-----------------------------------------------|
| <code>__s</code>     | A character array in which to store the data. |
| <code>__n</code>     | Maximum number of characters to extract.      |
| <code>__delim</code> | A "stop" character.                           |

**Returns**

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file `istream.tcc`.

**4.292.5.24 `getline()`** [2/3]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

String extraction.

**Parameters**

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__s</code> | A character array in which to store the data. |
| <code>__n</code> | Maximum number of characters to extract.      |

**Returns**

`*this`

Returns `getline(__s,__n,widen("\n"))`.

Definition at line 427 of file `istream`.

#### 4.292.5.25 `getline()` [3/3]

```
template<>
basic_istream< char > & std::basic_istream< char >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

#### 4.292.5.26 `getloc()`

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::money_put< _CharT, _Outlter >::do_put()`, and `std::ws()`.

#### 4.292.5.27 `good()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 4.292.5.28 `ignore()` [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n,
 int_type __delim) [inherited]
```

Discarding characters.

**Parameters**

|                      |                                  |
|----------------------|----------------------------------|
| <code>__n</code>     | Number of characters to discard. |
| <code>__delim</code> | A "stop" character.              |

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file `istream.tcc`.

**4.292.5.29 ignore()** [2/3]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n) [inherited]
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 501 of file `istream.tcc`.

## 4.292.5.30 ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 void) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 468 of file istream.tcc.

## 4.292.5.31 imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
 const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 114 of file basic\_ios.tcc.

## 4.292.5.32 init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
 basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< char, _Traits >::basic_ios()`.

#### 4.292.5.33 `is_open()`

```
template<typename _CharT , typename _Traits >
bool std::basic_fstream< _CharT, _Traits >::is_open () [inline]
```

Wrapper to test for an open file.

##### Returns

`rdbuf() -> is_open()`

Definition at line 1159 of file `fstream`.

#### 4.292.5.34 `yword()`

```
long& std::ios_base::yword (
 int __ix) [inline], [inherited]
```

Access to integer array.

##### Parameters

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

##### Returns

A reference to an integer associated with the index.

The `yword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file `ios_base.h`.

## 4.292.5.35 narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
 char_type __c,
 char __default) const [inline], [inherited]
```

Squeezes characters.

## Parameters

|                        |                          |
|------------------------|--------------------------|
| <code>__c</code>       | The character to narrow. |
| <code>__default</code> | The character to narrow. |

## Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 430 of file `basic_ios.h`.

## 4.292.5.36 open() [1/2]

```
template<typename _CharT , typename _Traits >
void std::basic_fstream< _CharT, _Traits >::open (
 const char * __s,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Opens an external file.

## Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

Calls `std::basic_filebuf::open(__s,__mode)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 1177 of file `fstream`.

**4.292.5.37** `open()` [2/2]

```
template<typename _CharT, typename _Traits >
void std::basic_fstream< _CharT, _Traits >::open (
 const std::string & __s,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Opens an external file.

**Parameters**

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 1218 of file `fstream`.

**4.292.5.38** `operator bool()`

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 117 of file `basic_ios.h`.

**4.292.5.39** `operator!()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 125 of file `basic_ios.h`.

## 4.292.5.40 operator&lt;&lt;() [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 __ostream_type &(*) (__ostream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 108 of file `ostream`.

## 4.292.5.41 operator&lt;&lt;() [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 __ios_type &(*) (__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 117 of file `ostream`.

## 4.292.5.42 operator&lt;&lt;() [3/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 127 of file `ostream`.

## 4.292.5.43 operator&lt;&lt;() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                   |                                      |
|-----------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                  |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file `ostream`.

**4.292.5.44 operator<<() [5/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                     |                                      |
|-------------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                    |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file `ostream`.

**4.292.5.45 operator<<() [6/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

## 4.292.5.46 operator&lt;&lt;() [7/17]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 short __n) [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

## 4.292.5.47 operator&lt;&lt;() [8/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                    |                                      |
|------------------------------------|--------------------------------------|
| <code>_↵</code><br><code>_n</code> | A variable of builtin integral type. |
|------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file `ostream`.

**4.292.5.48 operator<<() [9/17]**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 int __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                    |                                      |
|------------------------------------|--------------------------------------|
| <code>_↵</code><br><code>_n</code> | A variable of builtin integral type. |
|------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file `ostream.tcc`.

**4.292.5.49 operator<<() [10/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|       |                                      |
|-------|--------------------------------------|
| $\_↔$ | A variable of builtin integral type. |
| $\_n$ |                                      |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file ostream.

## 4.292.5.50 operator&lt;&lt;() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|       |                                      |
|-------|--------------------------------------|
| $\_↔$ | A variable of builtin integral type. |
| $\_n$ |                                      |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file ostream.

## 4.292.5.51 operator&lt;&lt;() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                       |                                      |
|-----------------------|--------------------------------------|
| $\leftarrow$<br>$\_n$ | A variable of builtin integral type. |
|-----------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file `ostream`.

**4.292.5.52 operator<<() [13/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

|                                                     |                                            |
|-----------------------------------------------------|--------------------------------------------|
| $\leftarrow$<br>$\_$<br>$\leftarrow$<br>$\_$<br>$f$ | A variable of builtin floating point type. |
|-----------------------------------------------------|--------------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file `ostream`.

**4.292.5.53 operator<<() [14/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

## 4.292.5.54 operator&lt;&lt;() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

## 4.292.5.55 operator&lt;&lt;() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

**Parameters**

|                        |                             |
|------------------------|-----------------------------|
| <code>_↵<br/>_p</code> | A variable of pointer type. |
|------------------------|-----------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file `ostream`.

**4.292.5.56 operator<<() [17/17]**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

**Parameters**

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file `ostream.tcc`.

## 4.292.5.57 operator&gt;&gt;() [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __istream_type &(*) (__istream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 120 of file `istream`.

## 4.292.5.58 operator&gt;&gt;() [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __ios_type &(*) (__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 124 of file `istream`.

## 4.292.5.59 operator&gt;&gt;() [3/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 131 of file `istream`.

## 4.292.5.60 operator&gt;&gt;() [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                      |                                      |
|--------------------------------------|--------------------------------------|
| $\leftrightarrow$<br><code>_n</code> | A variable of builtin integral type. |
|--------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file `istream`.

**4.292.5.61 `operator>>()` [5/17]**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 short & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                      |                                      |
|--------------------------------------|--------------------------------------|
| $\leftrightarrow$<br><code>_n</code> | A variable of builtin integral type. |
|--------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 122 of file `istream.tcc`.

**4.292.5.62 `operator>>()` [6/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned short & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                         |                                      |
|-------------------------|--------------------------------------|
| $\leftrightarrow$<br>_n | A variable of builtin integral type. |
|-------------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 175 of file `istream`.

## 4.292.5.63 operator&gt;&gt;() [7/17]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 int & __n) [inherited]
```

Integer arithmetic extractors.

## Parameters

|                         |                                      |
|-------------------------|--------------------------------------|
| $\leftrightarrow$<br>_n | A variable of builtin integral type. |
|-------------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file `istream.tcc`.

## 4.292.5.64 operator&gt;&gt;() [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned int & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                 |                                      |
|---------------------------------|--------------------------------------|
| $\leftarrow$<br><code>_n</code> | A variable of builtin integral type. |
|---------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 182 of file `istream`.

**4.292.5.65 `operator>>()` [9/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                 |                                      |
|---------------------------------|--------------------------------------|
| $\leftarrow$<br><code>_n</code> | A variable of builtin integral type. |
|---------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 186 of file `istream`.

**4.292.5.66 `operator>>()` [10/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                   |                                      |
|-------------------|--------------------------------------|
| $\leftrightarrow$ | A variable of builtin integral type. |
| <code>__n</code>  |                                      |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 190 of file `istream`.

## 4.292.5.67 operator&gt;&gt;() [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                   |                                      |
|-------------------|--------------------------------------|
| $\leftrightarrow$ | A variable of builtin integral type. |
| <code>__n</code>  |                                      |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file `istream`.

## 4.292.5.68 operator&gt;&gt;() [12/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                       |                                      |
|-----------------------|--------------------------------------|
| $\leftarrow$<br>$\_n$ | A variable of builtin integral type. |
|-----------------------|--------------------------------------|

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file `istream`.

**4.292.5.69 operator>>() [13/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 float & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

|                                                     |                                            |
|-----------------------------------------------------|--------------------------------------------|
| $\leftarrow$<br>$\_$<br>$\leftarrow$<br>$\_$<br>$f$ | A variable of builtin floating point type. |
|-----------------------------------------------------|--------------------------------------------|

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file `istream`.

**4.292.5.70 operator>>() [14/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file `istream`.

## 4.292.5.71 operator&gt;&gt;() [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

## 4.292.5.72 operator&gt;&gt;() [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

**Parameters**

|                        |                             |
|------------------------|-----------------------------|
| <code>_↵<br/>_p</code> | A variable of pointer type. |
|------------------------|-----------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

**4.292.5.73 operator>>()** [17/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

**Parameters**

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 212 of file `istream.tcc`.

## 4.292.5.74 peek()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
 void) [inherited]
```

Looking ahead in the stream.

## Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file `istream.tcc`.

## 4.292.5.75 precision() [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

## Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::operator<<()`.

## 4.292.5.76 precision() [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

## Parameters

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

**Returns**

The previous value of precision().

Definition at line 728 of file ios\_base.h.

**4.292.5.77 put()**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
 char_type __c) [inherited]
```

Simple insertion.

**Parameters**

|                                                                                   |                          |
|-----------------------------------------------------------------------------------|--------------------------|
|  | The character to insert. |
| <code>__c</code>                                                                  |                          |

**Returns**

\*this

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

**4.292.5.78 putback()**

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
 char_type __c) [inherited]
```

Unextracting a single character.

**Parameters**

|                                                                                     |                                                   |
|-------------------------------------------------------------------------------------|---------------------------------------------------|
|  | The character to push back into the input stream. |
| <code>__c</code>                                                                    |                                                   |

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 719 of file `istream.tcc`.

**4.292.5.79 pword()**

```
void*& std::ios_base::pword (
 int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file `ios_base.h`.

**4.292.5.80 rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
 basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file `basic_ios.tcc`.

**4.292.5.81 `rdbuf()`** [2/2]

```
template<typename _CharT, typename _Traits >
__filebuf_type* std::basic_fstream< _CharT, _Traits >::rdbuf () const [inline]
```

Accessing the underlying buffer.

**Returns**

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Definition at line 1151 of file `fstream`.

**4.292.5.82 `rdstate()`**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< char >::unget()`.

## 4.292.5.83 read()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction without delimiters.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

## Returns

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file `istream.tcc`.

## 4.292.5.84 readsome()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 687 of file `istream.tcc`.

**4.292.5.85 register\_callback()**

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**4.292.5.86 seekg()** [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
 pos_type __pos) [inherited]
```

Changing the current read position.

**Parameters**

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file istream.tcc.

**4.292.5.87 seekg()** [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

**Parameters**

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file istream.tcc.

**4.292.5.88 seekp()** [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
 pos_type __pos) [inherited]
```

Changing the current write position.

**Parameters**

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets `failbit`.

Definition at line 258 of file `ostream.tcc`.

**4.292.5.89 seekp()** [2/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

**Parameters**

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets `failbit`.

Definition at line 290 of file `ostream.tcc`.

**4.292.5.90 setf()** [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file ios\_base.h.

Referenced by std::\_\_detail::operator>>().

**4.292.5.91 setf()** [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__fmtfl</code> | Additional flags to set.          |
| <code>__mask</code>  | The flags mask for <i>fmtfl</i> . |

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file ios\_base.h.

**4.292.5.92 setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::ws()`.

#### 4.292.5.93 `sync()`

```
template<typename _CharT, typename _Traits>
int std::basic_istream<_CharT, _Traits>::sync (
 void) [inherited]
```

Synchronizing the stream buffer.

##### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

##### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file `istream.tcc`.

#### 4.292.5.94 `sync_with_stdio()`

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

##### Parameters

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**4.292.5.95 tellg()**

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
 void) [inherited]
```

Getting the current read position.

**Returns**

A file position object.

If fail() is not false, returns pos\_type(-1) to indicate failure. Otherwise returns rdbuf()->pubseekoff(0, cur, in).

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to gcount(). At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 825 of file istream.tcc.

**4.292.5.96 tellp()**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()
[inherited]
```

Getting the current write position.

**Returns**

A file position object.

If fail() is not false, returns pos\_type(-1) to indicate failure. Otherwise returns rdbuf()->pubseekoff(0, cur, out).

Definition at line 237 of file ostream.tcc.

**4.292.5.97** `tie()` [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie () const [inline], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::copyfmt()`, and `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`.

**4.292.5.98** `tie()` [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie (
 basic_ostream<_CharT, _Traits> * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

**4.292.5.99** `unget()`

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget (
 void) [inherited]
```

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 754 of file `istream.tcc`.

Referenced by `std::__detail::operator>>()`.

**4.292.5.100 unsetf()**

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file `ios_base.h`.

**4.292.5.101 widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::widen (
 char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
|------------------|-------------------------|

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**4.292.5.102 width() [1/2]**

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file `ios_base.h`.

Referenced by `std::basic_ios<char, _Traits>::copyfmt()`, and `std::num_put<_CharT, _OutIt>::do_put()`.

**4.292.5.103 width() [2/2]**

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

**Returns**

The previous value of `width()`.

Definition at line 751 of file ios\_base.h.

#### 4.292.5.104 write()

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
 const char_type * __s,
 streamsize __n) [inherited]
```

Character string insertion.

##### Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | The array to insert.                    |
| <code>__n</code> | Maximum number of characters to insert. |

##### Returns

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

##### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

#### 4.292.5.105 xalloc()

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

##### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 4.292.6 Member Data Documentation

### 4.292.6.1 `_M_gcount`

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< char >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< char >::peek()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::read()`, `std::basic_istream< char >::readsome()`, and `std::basic_istream< char >::unget()`.

### 4.292.6.2 `adjustfield`

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _Outlter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

### 4.292.6.3 `app`

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file `ios_base.h`.

### 4.292.6.4 `ate`

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file `ios_base.h`.

#### 4.292.6.5 badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< char, \_Traits >::fail(), and std::operator<<().

#### 4.292.6.6 basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 399 of file ios\_base.h.

Referenced by std::dec(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), std::oct(), and std::basic\_ostream< char >::operator<<().

#### 4.292.6.7 beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file ios\_base.h.

#### 4.292.6.8 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Definition at line 458 of file ios\_base.h.

#### 4.292.6.9 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_←put()`, and `std::noboolalpha()`.

#### 4.292.6.10 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`.

#### 4.292.6.11 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::dec()`.

#### 4.292.6.12 end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`.

#### 4.292.6.13 eofbit

```
const ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::eof()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< char >::unget()`, and `std::ws()`.

#### 4.292.6.14 failbit

```
const ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::fail()`, `std::time_get< _CharT, _InIter >::get()`, and `std::basic_ostream< _CharT, _Traits >::sentry()`.

#### 4.292.6.15 fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::hexfloat()`.

#### 4.292.6.16 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 402 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

#### 4.292.6.17 goodbit

```
const ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< char >::flush()`, `std::basic_istream< char >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< char >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_ostream< char >::operator<<()`, `std::basic_istream< char >::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::peek()`, `std::basic_ostream< char >::put()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::read()`, `std::basic_istream< char >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_ostream< char >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char >::sync()`, and `std::basic_istream< char >::unget()`.

#### 4.292.6.18 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.292.6.19 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Definition at line 461 of file `ios_base.h`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`.

#### 4.292.6.20 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 4.292.6.21 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

#### 4.292.6.22 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.292.6.23 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`.

**4.292.6.24 right**

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file ios\_base.h.

Referenced by std::right().

**4.292.6.25 scientific**

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file ios\_base.h.

Referenced by std::hexfloat(), and std::scientific().

**4.292.6.26 showbase**

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), std::noshowbase(), and std::showbase().

**4.292.6.27 showpoint**

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

#### 4.292.6.28 showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

#### 4.292.6.29 skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

#### 4.292.6.30 trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

Definition at line 467 of file ios\_base.h.

#### 4.292.6.31 unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file ios\_base.h.

Referenced by std::nunitbuf(), and std::unitbuf().

## 4.292.6.32 uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file ios\_base.h.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following file:

## 4.293.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename Resize_Policy, bool Store_Hash, type-
name Tag, typename Policy_Tl, typename _Alloc>
```

```
class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, _Alloc >
```

A hashed container abstraction.

## Template Parameters

|                      |                                                                      |
|----------------------|----------------------------------------------------------------------|
| <i>Key</i>           | Key type.                                                            |
| <i>Mapped</i>        | Map type.                                                            |
| <i>Hash_Fn</i>       | Hashing functor.                                                     |
| <i>Eq_Fn</i>         | Equal functor.                                                       |
| <i>Resize_Policy</i> | Resizes hash.                                                        |
| <i>Store_Hash</i>    | Indicates whether the hash value will be stored along with each key. |
| <i>Tag</i>           | Instantiating data structure type, see <code>container_tag</code> .  |
| <i>Policy_TL</i>     | Policy typelist.                                                     |
| <i>_Alloc</i>        | Allocator type.                                                      |

Base is dispatched at compile time via `Tag`, from the following choices: `cc_hash_tag`, `gp_hash_tag`, and descendants of `basic_hash_tag`.

Base choices are: `detail::cc_ht_map`, `detail::gp_ht_map`

## Extractors

All the *operator>>* functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (*noskipws*) set to `false`. This has several effects, concluding with the setting of a status flag; see the *sentry* documentation for more.

If the *sentry* status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (double &__f)`
- `__istream_type & operator>> (long double &__f)`

## Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (*noskipws*) set to `true`. This has several effects, concluding with the setting of a status flag; see the *sentry* documentation for more.

If the *sentry* status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

## 4.295.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ifstream< _CharT, _Traits >
```

Controlling input for files.

### Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |

This class supports reading from named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 492 of file `fstream`.

## 4.295.2 Member Typedef Documentation

### 4.295.2.1 `__num_put_type`

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

### 4.295.2.2 `event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

### Parameters

|                  |                                                        |
|------------------|--------------------------------------------------------|
| <code>__e</code> | One of the members of the event enum.                  |
| <code>__b</code> | Reference to the <code>ios_base</code> object.         |
| <code>__i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 529 of file `ios_base.h`.

#### 4.295.2.3 `fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 341 of file `ios_base.h`.

#### 4.295.2.4 `iostate`

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 416 of file `ios_base.h`.

#### 4.295.2.5 openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 447 of file `ios_base.h`.

#### 4.295.2.6 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

### 4.295.3 Member Enumeration Documentation

#### 4.295.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 512 of file `ios_base.h`.

## 4.295.4 Constructor &amp; Destructor Documentation

## 4.295.4.1 basic\_ifstream() [1/3]

```
template<typename _CharT , typename _Traits >
std::basic_ifstream< _CharT, _Traits >::basic_ifstream () [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 518 of file `fstream`.

## 4.295.4.2 basic\_ifstream() [2/3]

```
template<typename _CharT , typename _Traits >
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
 const char * __s,
 ios_base::openmode __mode = ios_base::in) [inline], [explicit]
```

Create an input file stream.

## Parameters

|                     |                                                                |
|---------------------|----------------------------------------------------------------|
| <code>__s</code>    | Null terminated string specifying the filename.                |
| <code>__mode</code> | Open file in specified mode (see <code>std::ios_base</code> ). |

`ios_base::in` is automatically included in `__mode`.

Definition at line 529 of file `fstream`.

## 4.295.4.3 basic\_ifstream() [3/3]

```
template<typename _CharT , typename _Traits >
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
 const std::string & __s,
 ios_base::openmode __mode = ios_base::in) [inline], [explicit]
```

Create an input file stream.

**Parameters**

|                     |                                                  |
|---------------------|--------------------------------------------------|
| <code>__s</code>    | std::string specifying the filename.             |
| <code>__mode</code> | Open file in specified mode (see std::ios_base). |

`ios_base::in` is automatically included in `__mode`.

Definition at line 562 of file `fstream`.

**4.295.4.4 ~basic\_ifstream()**

```
template<typename _CharT , typename _Traits >
std::basic_ifstream< _CharT, _Traits >::~~basic_ifstream () [inline]
```

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 599 of file `fstream`.

**4.295.5 Member Function Documentation****4.295.5.1 \_M\_getloc()**

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

**Returns**

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 804 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _Inlter >::do_get()`, `std::money_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_time()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_put< _CharT, _Outlter >::do_put()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_get< _CharT, _Inlter >::get()`, and `std::time_put< _CharT, _Outlter >::put()`.

## 4.295.5.2 bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [inherited]
```

Fast error checking.

## Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

## 4.295.5.3 clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

## Parameters

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See std::ios\_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::exceptions(), std::\_\_detail::operator>>(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

## 4.295.5.4 close()

```
template<typename _CharT , typename _Traits >
void std::basic_ifstream< _CharT, _Traits >::close () [inline]
```

Close the file.

Calls std::basic\_filebuf::close(). If that function fails, failbit is set in the stream's error state.

Definition at line 730 of file fstream.

#### 4.295.5.5 copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (
 const basic_ios<_CharT, _Traits> & __rhs) [inherited]
```

Copies fields of \_\_rhs into this.

##### Parameters

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

##### Returns

Reference to this object.

All fields of \_\_rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase\_event. After copying, each (new) callback is invoked with copyfmt\_event. The final step is to copy exceptions().

Definition at line 63 of file basic\_ios.tcc.

#### 4.295.5.6 eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::eof () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file basic\_ios.h.

#### 4.295.5.7 exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios<_CharT, _Traits>::exceptions () const [inline], [inherited]
```

Throwing exceptions on errors.

##### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 222 of file basic\_ios.h.

Referenced by std::basic\_ios<char, \_Traits>::copyfmt().

## 4.295.5.8 exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
 iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

## Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file `basic_ios.h`.

## 4.295.5.9 fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [inherited]
```

Fast error checking.

## Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iostate` flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator bool()`, and `std::basic_ios< char, _Traits >::operator!()`.

**4.295.5.10** `fill()` [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [inherited]
```

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::basic_ios< char, _Traits >::fill()`, and `std::operator<<()`.

**4.295.5.11** `fill()` [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
 char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file `basic_ios.h`.

**4.295.5.12** `flags()` [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 649 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< char >::operator<<(), std::operator<<(), std::\_\_detail::operator>>(), and std::operator>>().

**4.295.5.13 flags()** [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file ios\_base.h.

**4.295.5.14 gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_ifstream< _CharT, _Traits >::gcount () const [inline], [inherited]
```

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

**4.295.5.15** `get()` [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
 void) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 244 of file istream.tcc.

**4.295.5.16** `get()` [2/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type & __c) [inherited]
```

Simple extraction.

**Parameters**

|                  |                                       |
|------------------|---------------------------------------|
| <code>__c</code> | The character in which to store data. |
|------------------|---------------------------------------|

**Returns**

\*this

Tries to extract a character and store it in \_\_c. If none are available, sets failbit and returns traits::eof().

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file istream.tcc.

**4.295.5.17** `get()` [3/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Simple multiple-character extraction.

## Parameters

|                      |                                                             |
|----------------------|-------------------------------------------------------------|
| <code>__s</code>     | Pointer to an array.                                        |
| <code>__n</code>     | Maximum number of characters to store in <code>__s</code> . |
| <code>__delim</code> | A "stop" character.                                         |

## Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file `istream.tcc`.

4.295.5.18 `get()` [4/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_ifstream<_CharT, _Traits>::get (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

## Parameters

|                  |                                                           |
|------------------|-----------------------------------------------------------|
| <code>__s</code> | Pointer to an array.                                      |
| <code>__n</code> | Maximum number of characters to store in <code>s</code> . |

**Returns**

\*this

Returns `get(__s,__n,widen("\n"))`.

Definition at line 354 of file istream.

**4.295.5.19 get()** [5/6]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb,
 char_type __delim) [inherited]
```

Extraction into another streambuf.

**Parameters**

|                      |                                     |
|----------------------|-------------------------------------|
| <code>__sb</code>    | A streambuf in which to store data. |
| <code>__delim</code> | A "stop" character.                 |

**Returns**

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 364 of file istream.tcc.

**4.295.5.20 get()** [6/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

## Parameters

|                   |                                     |
|-------------------|-------------------------------------|
| <code>__sb</code> | A streambuf in which to store data. |
|-------------------|-------------------------------------|

## Returns

`*this`

Returns `get(__sb, widen("\n"))`.

Definition at line 387 of file `istream`.

4.295.5.21 `getline()` [1/3]

```
template<typename _CharT, typename _Traits>
basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

String extraction.

## Parameters

|                      |                                               |
|----------------------|-----------------------------------------------|
| <code>__s</code>     | A character array in which to store the data. |
| <code>__n</code>     | Maximum number of characters to extract.      |
| <code>__delim</code> | A "stop" character.                           |

## Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file `istream.tcc`.

**4.295.5.22** `getline()` [2/3]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

String extraction.

**Parameters**

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__s</code> | A character array in which to store the data. |
| <code>__n</code> | Maximum number of characters to extract.      |

**Returns**

`*this`

Returns `getline(__s,__n,widen("\n"))`.

Definition at line 427 of file `istream`.

**4.295.5.23** `getline()` [3/3]

```
template<>
basic_istream< char > & std::basic_istream< char >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

**4.295.5.24** `getloc()`

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::money_put< _CharT, _Outiter >::do_put()`, and `std::ws()`.

## 4.295.5.25 good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [inherited]
```

Fast error checking.

## Returns

True if no error flags are set.

A wrapper around rdbuf.

Definition at line 180 of file basic\_ios.h.

Referenced by std::\_\_detail::operator>>(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

## 4.295.5.26 ignore() [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n,
 int_type __delim) [inherited]
```

Discarding characters.

## Parameters

|                      |                                  |
|----------------------|----------------------------------|
| <code>__n</code>     | Number of characters to discard. |
| <code>__delim</code> | A "stop" character.              |

## Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file istream.tcc.

**4.295.5.27 ignore()** [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 501 of file istream.tcc.

**4.295.5.28 ignore()** [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 void) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 468 of file istream.tcc.

**4.295.5.29 imbue()**

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
 const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 114 of file `basic_ios.tcc`.

**4.295.5.30 init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
 basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< char, _Traits >::basic_ios()`.

**4.295.5.31 is\_open()**

```
template<typename _CharT , typename _Traits >
bool std::basic_ifstream< _CharT, _Traits >::is_open () [inline]
```

Wrapper to test for an open file.

**Returns**

`rdbuf()->is_open()`

Definition at line 640 of file `fstream`.

**4.295.5.32 iword()**

```
long& std::ios_base::iword (
 int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

|                        |                       |
|------------------------|-----------------------|
| <code>↵<br/>_ix</code> | Index into the array. |
|------------------------|-----------------------|

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file `ios_base.h`.

**4.295.5.33 narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
 char_type __c,
 char __default) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

|                        |                          |
|------------------------|--------------------------|
| <code>__c</code>       | The character to narrow. |
| <code>__default</code> | The character to narrow. |

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c, default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↵html>

Definition at line 430 of file `basic_ios.h`.

## 4.295.5.34 open() [1/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ifstream<_CharT, _Traits>::open (
 const char * __s,
 ios_base::openmode __mode = ios_base::in) [inline]
```

Opens an external file.

## Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

Calls `std::basic_filebuf::open(s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 658 of file `fstream`.

## 4.295.5.35 open() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ifstream<_CharT, _Traits>::open (
 const std::string & __s,
 ios_base::openmode __mode = ios_base::in) [inline]
```

Opens an external file.

## Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 697 of file `fstream`.

## 4.295.5.36 operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios<_CharT, _Traits>::operator bool () const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 117 of file `basic_ios.h`.

**4.295.5.37 operator!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 125 of file `basic_ios.h`.

**4.295.5.38 operator>>() [1/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __istream_type &(*) (__istream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 120 of file `istream`.

**4.295.5.39 operator>>() [2/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __ios_type &(*) (__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 124 of file `istream`.

**4.295.5.40 operator>>() [3/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 131 of file `istream`.

**4.295.5.41 operator>>() [4/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                         |                                      |
|-------------------------|--------------------------------------|
| $\leftrightarrow$<br>_n | A variable of builtin integral type. |
|-------------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file `istream`.

## 4.295.5.42 operator&gt;&gt;() [5/17]

```
template<typename _CharT, typename _Traits>
basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::operator>> (
 short & __n) [inherited]
```

Integer arithmetic extractors.

## Parameters

|                         |                                      |
|-------------------------|--------------------------------------|
| $\leftrightarrow$<br>_n | A variable of builtin integral type. |
|-------------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 122 of file `istream.tcc`.

## 4.295.5.43 operator&gt;&gt;() [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_ifstream<_CharT, _Traits>::operator>> (
 unsigned short & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                 |                                      |
|---------------------------------|--------------------------------------|
| $\leftarrow$<br><code>_n</code> | A variable of builtin integral type. |
|---------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 175 of file `istream`.

**4.295.5.44 `operator>>()` [7/17]**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 int & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                 |                                      |
|---------------------------------|--------------------------------------|
| $\leftarrow$<br><code>_n</code> | A variable of builtin integral type. |
|---------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file `istream.tcc`.

**4.295.5.45 `operator>>()` [8/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned int & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 182 of file `istream`.

## 4.295.5.46 operator&gt;&gt;() [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 186 of file `istream`.

## 4.295.5.47 operator&gt;&gt;() [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                     |                                      |
|-------------------------------------|--------------------------------------|
| <code>_↵</code><br><code>__n</code> | A variable of builtin integral type. |
|-------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 190 of file `istream`.

**4.295.5.48 operator>>() [11/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                     |                                      |
|-------------------------------------|--------------------------------------|
| <code>_↵</code><br><code>__n</code> | A variable of builtin integral type. |
|-------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file `istream`.

**4.295.5.49 operator>>() [12/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| $\leftarrow$<br>_n | A variable of builtin integral type. |
|--------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file `istream`.

## 4.295.5.50 operator&gt;&gt;() [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 float & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

|                                                                          |                                            |
|--------------------------------------------------------------------------|--------------------------------------------|
| $\leftarrow$<br>$\leftarrow$<br>$\leftarrow$<br>$\leftarrow$<br><i>f</i> | A variable of builtin floating point type. |
|--------------------------------------------------------------------------|--------------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file `istream`.

## 4.295.5.51 operator&gt;&gt;() [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file `istream`.

**4.295.5.52 operator>>() [15/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

**4.295.5.53 operator>>() [16/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

## Parameters

|                 |                             |
|-----------------|-----------------------------|
| <code>_p</code> | A variable of pointer type. |
|-----------------|-----------------------------|

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

4.295.5.54 `operator>>()` [17/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

## Parameters

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 212 of file `istream.tcc`.

**4.295.5.55 peek()**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
 void) [inherited]
```

Looking ahead in the stream.

**Returns**

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file `istream.tcc`.

**4.295.5.56 precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::operator<<()`.

**4.295.5.57 precision()** [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

**Returns**

The previous value of precision().

Definition at line 728 of file ios\_base.h.

**4.295.558 putback()**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
 char_type __c) [inherited]
```

Unextracting a single character.

**Parameters**

|                                                                                                              |                                                   |
|--------------------------------------------------------------------------------------------------------------|---------------------------------------------------|
| <br><b><code>__c</code></b> | The character to push back into the input stream. |
|--------------------------------------------------------------------------------------------------------------|---------------------------------------------------|

**Returns**

\*this

If rdbuf() is not null, calls rdbuf()->sputbackc(c).

If rdbuf() is null or if sputbackc() fails, sets badbit in the error state.

**Note**

This function first clears eofbit. Since no characters are extracted, the next call to gcount() will return 0, as required by DR 60.

Definition at line 719 of file istream.tcc.

**4.295.559 pword()**

```
void*& std::ios_base::pword (
 int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

|                                                                                                                 |                       |
|-----------------------------------------------------------------------------------------------------------------|-----------------------|
| <br><b><code>__ix</code></b> | Index into the array. |
|-----------------------------------------------------------------------------------------------------------------|-----------------------|

**Returns**

A reference to a `void*` associated with the index.

The `pwd` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file `ios_base.h`.

**4.295.5.60 `rdbuf()`** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
 basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file `basic_ios.tcc`.

**4.295.5.61 `rdbuf()`** [2/2]

```
template<typename _CharT , typename _Traits >
__filebuf_type* std::basic_ifstream< _CharT, _Traits >::rdbuf () const [inline]
```

Accessing the underlying buffer.

**Returns**

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Definition at line 632 of file `fstream`.

## 4.295.5.62 rdstate()

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [inherited]
```

Returns the error state of the stream buffer.

## Returns

A bit pattern (well, isn't everything?)

See std::ios\_base::iosstate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 137 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_ios< char, ↵  
\_Traits >::fail(), std::basic\_ios< char, \_Traits >::good(), std::basic\_istream< char >::putback(), std::basic\_istream< ↵  
char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

## 4.295.5.63 read()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction without delimiters.

## Parameters

|          |                                        |
|----------|----------------------------------------|
| ↵<br>__s | A character array.                     |
| ↵<br>__n | Maximum number of characters to store. |

## Returns

\*this

If the stream state is good ( ) , extracts characters and stores them into \_\_s until one of the following happens:

- \_\_n characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to failbit|eofbit.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file istream.tcc.

4.295.5.64 `readsome()`

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

## Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rddbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 687 of file `istream.tcc`.

4.295.5.65 `register_callback()`

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

## Parameters

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

#### 4.295.5.66 seekg() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::seekg (
 pos_type __pos) [inherited]
```

Changing the current read position.

##### Parameters

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

##### Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

##### Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file istream.tcc.

#### 4.295.5.67 seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::seekg (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

##### Parameters

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

##### Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

#### Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file `istream.tcc`.

#### 4.295.5.68 `setf()` [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

#### Parameters

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

#### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file `ios_base.h`.

Referenced by `std::__detail::operator>>()`.

#### 4.295.5.69 `setf()` [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

#### Parameters

|                      |                                         |
|----------------------|-----------------------------------------|
| <code>__fmtfl</code> | Additional flags to set.                |
| <code>__mask</code>  | The flags mask for <code>fmtfl</code> . |

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file `ios_base.h`.

**4.295.5.70 setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::ws()`.

**4.295.5.71 sync()**

```
template<typename _CharT , typename _Traits >
int std::basic_ifstream< _CharT, _Traits >::sync (
 void) [inherited]
```

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file `istream.tcc`.

#### 4.295.5.72 sync\_with\_stdio()

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

##### Parameters

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

##### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

#### 4.295.5.73 tellg()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
 void) [inherited]
```

Getting the current read position.

##### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

##### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

Definition at line 825 of file `istream.tcc`.

## 4.295.5.74 tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie () const [inline], [inherited]
```

Fetches the current *tied* stream.

## Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

## 4.295.5.75 tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
 basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

## Parameters

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

## Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

## 4.295.5.76 unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
 void) [inherited]
```

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 754 of file `istream.tcc`.

Referenced by `std::__detail::operator>>()`.

**4.295.5.77 unsetf()**

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file `ios_base.h`.

**4.295.5.78 widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
 char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
|------------------|-------------------------|

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**4.295.5.79 width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

**4.295.5.80 width()** [2/2]

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

**Returns**

The previous value of `width()`.

Definition at line 751 of file ios\_base.h.

#### 4.295.5.81 xalloc()

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

##### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 4.295.6 Member Data Documentation

#### 4.295.6.1 \_M\_gcount

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< char >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< char >::peek()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::read()`, `std::basic_istream< char >::readsomewhat()`, and `std::basic_istream< char >::unget()`.

#### 4.295.6.2 adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### 4.295.6.3 `app`

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file `ios_base.h`.

#### 4.295.6.4 `ate`

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file `ios_base.h`.

#### 4.295.6.5 `badbit`

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file `ios_base.h`.

Referenced by `std::basic_ios<char, _Traits>::bad()`, `std::basic_ios<char, _Traits>::fail()`, and `std::operator<<()`.

#### 4.295.6.6 `basefield`

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 399 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, `std::oct()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.295.6.7 `beg`

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file `ios_base.h`.

#### 4.295.6.8 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Definition at line 458 of file ios\_base.h.

#### 4.295.6.9 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file ios\_base.h.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

#### 4.295.6.10 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios\_base.h.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`.

#### 4.295.6.11 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios\_base.h.

Referenced by `std::dec()`.

## 4.295.6.12 end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

## 4.295.6.13 eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_istream< char >::unget(), and std::ws().

## 4.295.6.14 failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::time\_get< \_CharT, \_InIter >::get(), and std::basic\_ostream< \_CharT, \_Traits >::sentry()↵::sentry().

## 4.295.6.15 fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file ios\_base.h.

Referenced by std::fixed(), and std::hexfloat().

#### 4.295.6.16 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 402 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

#### 4.295.6.17 goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<char>::flush()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<char>::getline()`, `std::basic_istream<char>::ignore()`, `std::basic_ostream<char>::operator<<()`, `std::basic_istream<char>::operator>>()`, `std::operator>>()`, `std::basic_istream<char>::peek()`, `std::basic_ostream<char>::put()`, `std::basic_istream<char>::putback()`, `std::basic_istream<char>::read()`, `std::basic_istream<char>::readsome()`, `std::basic_istream<char>::seekg()`, `std::basic_ostream<char>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<char>::sync()`, and `std::basic_istream<char>::unget()`.

#### 4.295.6.18 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.295.6.19 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Definition at line 461 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`.

#### 4.295.6.20 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 4.295.6.21 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

#### 4.295.6.22 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.295.6.23 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`.

#### 4.295.6.24 right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file ios\_base.h.

Referenced by std::right().

#### 4.295.6.25 scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file ios\_base.h.

Referenced by std::hexfloat(), and std::scientific().

#### 4.295.6.26 showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file ios\_base.h.

Referenced by std::num\_put<\_CharT, \_OutIter >::do\_put(), std::noshowbase(), and std::showbase().

#### 4.295.6.27 showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

#### 4.295.6.28 showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

#### 4.295.6.29 skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

#### 4.295.6.30 trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

Definition at line 467 of file ios\_base.h.

#### 4.295.6.31 unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file ios\_base.h.

Referenced by std::nunitbuf(), and std::unitbuf().

#### 4.295.6.32 uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following file:

- [fstream](#)

#### 4.296 \_\_gnu\_pbds::basic\_invalidation\_guarantee Struct Reference

Inheritance diagram for `__gnu_pbds::basic_invalidation_guarantee`:

##### 4.296.1 Detailed Description

Signifies a basic invalidation guarantee that any iterator, pointer, or reference to a container object's mapped value type is valid as long as the container is not modified.

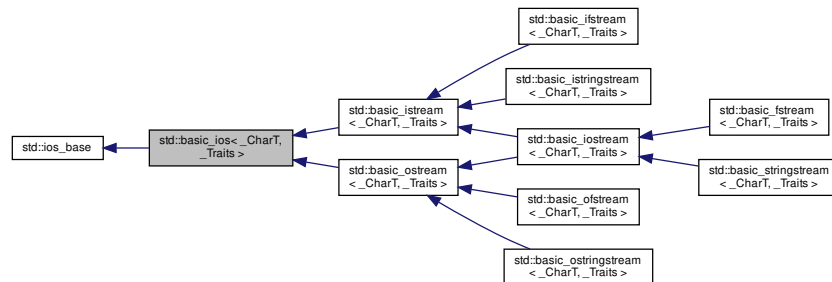

Definition at line 93 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 4.297.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ios< _CharT, _Traits >
```

Template class `basic_ios`, virtual base class for all stream classes.

## Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.

Definition at line 77 of file `iosfwd`.

## 4.297.2 Member Typedef Documentation

4.297.2.1 `__ctype_type`

```
template<typename _CharT, typename _Traits>
typedef ctype<_CharT> std::basic_ios< _CharT, _Traits >::__ctype_type
```

These are non-standard types.

Definition at line 87 of file `basic_ios.h`.

## 4.297.2.2 \_\_num\_get\_type

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_get_type
```

These are non-standard types.

Definition at line 91 of file basic\_ios.h.

## 4.297.2.3 \_\_num\_put\_type

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type
```

These are non-standard types.

Definition at line 89 of file basic\_ios.h.

## 4.297.2.4 char\_type

```
template<typename _CharT, typename _Traits>
typedef _CharT std::basic_ios<_CharT, _Traits>::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 76 of file basic\_ios.h.

## 4.297.2.5 event\_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

## Parameters

|                                                                                                      |                                                        |
|------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
|  <code>__e</code> | One of the members of the event enum.                  |
|  <code>__b</code> | Reference to the ios_base object.                      |
|  <code>__i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 529 of file `ios_base.h`.

#### 4.297.2.6 `fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 341 of file `ios_base.h`.

#### 4.297.2.7 int\_type

```
template<typename _CharT, typename _Traits>
typedef _Traits::int_type std::basic_ios< _CharT, _Traits >::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 77 of file basic\_ios.h.

#### 4.297.2.8 iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

*\_Ios\_Iostate* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios\_base.h.

#### 4.297.2.9 off\_type

```
template<typename _CharT, typename _Traits>
typedef _Traits::off_type std::basic_ios< _CharT, _Traits >::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 79 of file basic\_ios.h.

#### 4.297.2.10 openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 447 of file `ios_base.h`.

#### 4.297.2.11 pos\_type

```
template<typename _CharT, typename _Traits>
typedef _Traits::pos_type std::basic_ios< _CharT, _Traits >::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 78 of file `basic_ios.h`.

#### 4.297.2.12 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

#### 4.297.2.13 traits\_type

```
template<typename _CharT, typename _Traits>
typedef _Traits std::basic_ios< _CharT, _Traits >::traits_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 80 of file basic\_ios.h.

#### 4.297.3 Member Enumeration Documentation

##### 4.297.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

erase\_event is used during ~ios() and copyfmt(). imbue\_event is used during imbue(). copyfmt\_event is used during copyfmt().

Definition at line 512 of file ios\_base.h.

#### 4.297.4 Constructor & Destructor Documentation

##### 4.297.4.1 basic\_ios() [1/2]

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::basic_ios (
 basic_streambuf< _CharT, _Traits > * __sb) [inline], [explicit]
```

Constructor performs initialization.

The parameter is passed by derived streams.

Definition at line 270 of file basic\_ios.h.

#### 4.297.4.2 ~basic\_ios()

```
template<typename _CharT, typename _Traits>
virtual std::basic_ios< _CharT, _Traits >::~~basic_ios () [inline], [virtual]
```

Empty.

The destructor does nothing. More specifically, it does not destroy the streambuf held by rdbuf().

Definition at line 282 of file basic\_ios.h.

#### 4.297.4.3 basic\_ios() [2/2]

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::basic_ios () [inline], [protected]
```

Empty.

The default constructor does nothing and is not normally accessible to users.

Definition at line 460 of file basic\_ios.h.

### 4.297.5 Member Function Documentation

#### 4.297.5.1 \_M\_getloc()

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 804 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_Inlter >::do\_get(), std::money\_get< \_CharT, \_Inlter >::do\_get(), std::num\_get< \_CharT, \_Inlter >::do\_get(), std::time\_get< \_CharT, \_Inlter >::do\_get\_date(), std::time\_get< \_CharT, \_Inlter >::do\_get\_monthname(), std::time\_get< \_CharT, \_Inlter >::do\_get\_time(), std::time\_get< \_CharT, \_Inlter >::do\_get\_weekday(), std::time\_put< \_CharT, \_Outlter >::do\_put(), std::num\_put< \_CharT, \_Outlter >::do\_put(), std::time\_get< \_CharT, \_Inlter >::get(), and std::time\_put< \_CharT, \_Outlter >::put().

## 4.297.5.2 bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline]
```

Fast error checking.

## Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

## 4.297.5.3 clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit)
```

[Re]sets the error state.

## Parameters

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See std::ios\_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::exceptions(), std::\_\_detail::operator>>(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

## 4.297.5.4 copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
 const basic_ios< _CharT, _Traits > & __rhs)
```

Copies fields of \_\_rhs into this.

## Parameters

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

Definition at line 63 of file `basic_ios.tcc`.

**4.297.5.5 eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other `iostate` flags may also be set.

Definition at line 190 of file `basic_ios.h`.

**4.297.5.6 exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 222 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`.

**4.297.5.7 exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
 iostate __except) [inline]
```

Throwing exceptions on errors.

## Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file `basic_ios.h`.

## 4.297.5.8 fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline]
```

Fast error checking.

## Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator bool()`, and `std::basic_ios< char, _Traits >::operator!()`.

## 4.297.5.9 fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline]
```

Retrieves the *empty* character.

## Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::basic_ios< char, _Traits >::fill()`, and `std::operator<<()`.

**4.297.5.10** `fill()` [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
 char_type __ch) [inline]
```

Sets a new *empty* character.

**Parameters**

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and  $Q < P$ . It defaults to a space ( ' ' ) in the current locale.

Definition at line 390 of file `basic_ios.h`.

**4.297.5.11** `flags()` [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 649 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< char >::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, and `std::operator>>()`.

**4.297.5.12** `flags()` [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

## Parameters

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

## Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file `ios_base.h`.

## 4.297.5.13 getloc()

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

## Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios<char, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, and `std::ws()`.

## 4.297.5.14 good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::good () const [inline]
```

Fast error checking.

## Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

## 4.297.5.15 imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios<_CharT, _Traits>::imbue (
 const locale & __loc)
```

Moves to a new locale.

**Parameters**

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 114 of file `basic_ios.tcc`.

**4.297.5.16 init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
 basic_streambuf< _CharT, _Traits > * __sb) [protected]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< char, _Traits >::basic_ios()`.

**4.297.5.17 iword()**

```
long& std::ios_base::iword (
 int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file `ios_base.h`.

**4.297.5.18 narrow()**

```
template<typename _CharT, typename _Traits>
char std::basic_ios<_CharT, _Traits>::narrow (
 char_type __c,
 char __dfault) const [inline]
```

Squeezes characters.

**Parameters**

|                       |                          |
|-----------------------|--------------------------|
| <code>__c</code>      | The character to narrow. |
| <code>__dfault</code> | The character to narrow. |

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 430 of file `basic_ios.h`.

**4.297.5.19 operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios<_CharT, _Traits>::operator bool () const [inline], [explicit]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 117 of file `basic_ios.h`.

#### 4.297.5.20 `operator!()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 125 of file `basic_ios.h`.

#### 4.297.5.21 `precision()` [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

##### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::operator<<()`.

#### 4.297.5.22 `precision()` [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

##### Parameters

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

##### Returns

The previous value of `precision()`.

Definition at line 728 of file `ios_base.h`.

## 4.297.5.23 pword()

```
void*& std::ios_base::pword (
 int __ix) [inline], [inherited]
```

Access to void pointer array.

## Parameters

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

## Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file ios\_base.h.

## 4.297.5.24 rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::rdbuf () const [inline]
```

Accessing the underlying buffer.

## Returns

The current stream buffer.

This does not change the state of the stream.

Definition at line 321 of file basic\_ios.h.

Referenced by std::ws().

## 4.297.5.25 rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::rdbuf (
 basic_streambuf<_CharT, _Traits>* __sb)
```

Changing the underlying buffer.

**Parameters**

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file `basic_ios.tcc`.

**4.297.5.26 `rdstate()`**

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios< _CharT, _Traits >::rdstate () const [inline]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< char >::unget()`.

**4.297.5.27 `register_callback()`**

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

## Parameters

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

## 4.297.5.28 setf() [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

## Parameters

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

## Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file ios\_base.h.

Referenced by std::\_\_detail::operator>>().

## 4.297.5.29 setf() [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

## Parameters

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__fmtfl</code> | Additional flags to set.          |
| <code>__mask</code>  | The flags mask for <i>fmtfl</i> . |

## Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file `ios_base.h`.

#### 4.297.5.30 `setstate()`

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline]
```

Sets additional flags in the error state.

##### Parameters

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::ws()`.

#### 4.297.5.31 `sync_with_stdio()`

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

##### Parameters

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

##### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

#### 4.297.5.32 `tie()` [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie () const [inline]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**4.297.5.33 tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
 basic_ostream< _CharT, _Traits > * __tiestr) [inline]
```

Ties this stream to an output stream.

**Parameters**

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

**4.297.5.34 unsetf()**

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file `ios_base.h`.

**4.297.5.35** `widen()`

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
 char __c) const [inline]
```

Widens characters.

**Parameters**

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
|------------------|-------------------------|

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**4.297.5.36** `width()` [1/2]

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

**4.297.5.37** `width()` [2/2]

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

## Parameters

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

## Returns

The previous value of `width()`.

Definition at line 751 of file `ios_base.h`.

## 4.297.5.38 xalloc()

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

## Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 4.297.6 Member Data Documentation

## 4.297.6.1 adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### 4.297.6.2 app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file ios\_base.h.

#### 4.297.6.3 ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file ios\_base.h.

#### 4.297.6.4 badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file ios\_base.h.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::fail()`, and `std::operator<<()`.

#### 4.297.6.5 basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 399 of file ios\_base.h.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, `std::oct()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.297.6.6 beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file ios\_base.h.

#### 4.297.6.7 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↵filestreams.binary>.

Definition at line 458 of file ios\_base.h.

#### 4.297.6.8 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file ios\_base.h.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_↵put()`, and `std::noboolalpha()`.

#### 4.297.6.9 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios\_base.h.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

#### 4.297.6.10 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios\_base.h.

Referenced by `std::dec()`.

**4.297.6.11 end**

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

**4.297.6.12 eofbit**

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_istream< char >::unget(), and std::ws().

**4.297.6.13 failbit**

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::time\_get< \_CharT, \_InIter >::get(), and std::basic\_ostream< \_CharT, \_Traits >::sentry()↵::sentry().

**4.297.6.14 fixed**

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file ios\_base.h.

Referenced by std::fixed(), and std::hexfloat().

## 4.297.6.15 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 402 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

## 4.297.6.16 goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<char>::flush()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<char>::getline()`, `std::basic_istream<char>::ignore()`, `std::basic_ostream<char>::operator<<()`, `std::basic_istream<char>::operator>>()`, `std::operator>>()`, `std::basic_istream<char>::peek()`, `std::basic_ostream<char>::put()`, `std::basic_istream<char>::putback()`, `std::basic_istream<char>::read()`, `std::basic_istream<char>::readsome()`, `std::basic_istream<char>::seekg()`, `std::basic_ostream<char>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<char>::sync()`, and `std::basic_istream<char>::unget()`.

## 4.297.6.17 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::basic_ostream<char>::operator<<()`.

## 4.297.6.18 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Definition at line 461 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`.

#### 4.297.6.19 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 4.297.6.20 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, and `std::left()`.

#### 4.297.6.21 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.297.6.22 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`.

#### 4.297.6.23 right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file ios\_base.h.

Referenced by std::right().

#### 4.297.6.24 scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file ios\_base.h.

Referenced by std::hexfloat(), and std::scientific().

#### 4.297.6.25 showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file ios\_base.h.

Referenced by std::num\_put<\_CharT, \_OutIter>::do\_put(), std::noshowbase(), and std::showbase().

#### 4.297.6.26 showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

**4.297.6.27 showpos**

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

**4.297.6.28 skipws**

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

**4.297.6.29 trunc**

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

Definition at line 467 of file ios\_base.h.

**4.297.6.30 unitbuf**

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file ios\_base.h.

Referenced by std::nunitbuf(), and std::unitbuf().

## 4.297.6.31 uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file ios\_base.h.

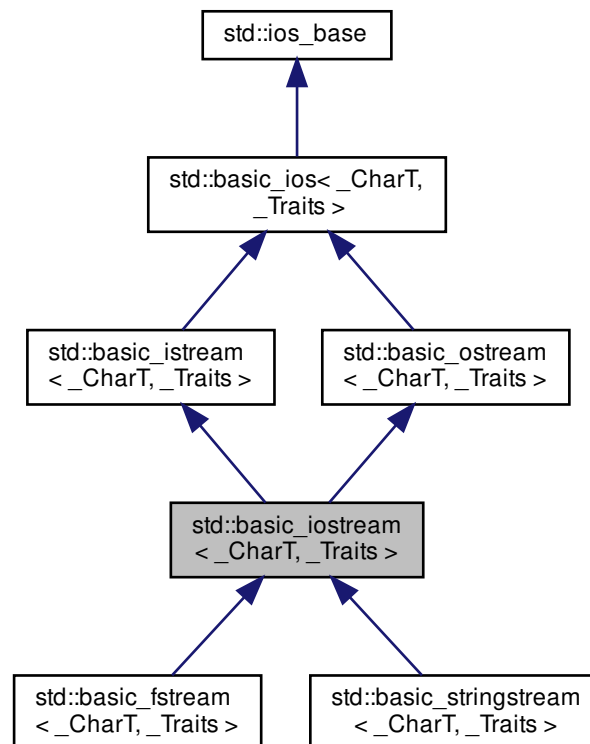

Referenced by std::num\_put< \_CharT, \_Outlter >::do\_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following files:

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `false`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

  - `__istream_type & operator>> (double &__f)`
  - `__istream_type & operator>> (long double &__f)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `true`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

  - [\\_\\_ostream\\_type](#) & [operator<<](#) ([ios\\_base](#) &(\*\_\_pf)([ios\\_base](#) &))

### Inserters

All the *operator<<* functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [\\_\\_ostream\\_type](#) & [operator<<](#) (long \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned long \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (bool \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (short \_\_n)

  - [\\_\\_ostream\\_type](#) & [operator<<](#) (float \_\_f)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (long double \_\_f)

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

## 4.298.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_istream<_CharT, _Traits>
```

Template class basic\_istream.

#### Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |

This class multiply inherits from the input and output stream classes simply to provide a single interface.

Definition at line 89 of file `iosfwd`.

### 4.298.2 Member Typedef Documentation

#### 4.298.2.1 `__num_put_type`

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

#### 4.298.2.2 `event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

#### Parameters

|                  |                                                        |
|------------------|--------------------------------------------------------|
| <code>__e</code> | One of the members of the event enum.                  |
| <code>__b</code> | Reference to the <code>ios_base</code> object.         |
| <code>__i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 529 of file `ios_base.h`.

#### 4.298.2.3 `fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 341 of file `ios_base.h`.

#### 4.298.2.4 `iostate`

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 416 of file `ios_base.h`.

#### 4.298.2.5 openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 447 of file `ios_base.h`.

#### 4.298.2.6 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

### 4.298.3 Member Enumeration Documentation

#### 4.298.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 512 of file `ios_base.h`.

## 4.298.4 Constructor &amp; Destructor Documentation

## 4.298.4.1 basic\_iostream()

```
template<typename _CharT, typename _Traits>
std::basic_iostream< _CharT, _Traits >::basic_iostream (
 basic_streambuf< _CharT, _Traits > * __sb) [inline], [explicit]
```

Constructor does nothing.

Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.

Definition at line 849 of file istream.

## 4.298.4.2 ~basic\_iostream()

```
template<typename _CharT, typename _Traits>
virtual std::basic_iostream< _CharT, _Traits >::~~basic_iostream () [inline], [virtual]
```

Destructor does nothing.

Definition at line 856 of file istream.

## 4.298.5 Member Function Documentation

## 4.298.5.1 \_M\_getloc()

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

## Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 804 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_Inlter >::do\_get(), std::money\_get< \_CharT, \_Inlter >::do\_get(), std::num\_get< \_CharT, \_Inlter >::do\_get(), std::time\_get< \_CharT, \_Inlter >::do\_get\_date(), std::time\_get< \_CharT, \_Inlter >::do\_get\_monthname(), std::time\_get< \_CharT, \_Inlter >::do\_get\_time(), std::time\_get< \_CharT, \_Inlter >::do\_get\_weekday(), std::time\_put< \_CharT, \_Outlter >::do\_put(), std::num\_put< \_CharT, \_Outlter >::do\_put(), std::time\_get< \_CharT, \_Inlter >::get(), and std::time\_put< \_CharT, \_Outlter >::put().

## 4.298.5.2 \_M\_write()

```
template<typename _CharT, typename _Traits>
void std::basic_ostream< _CharT, _Traits >::_M_write (
 const char_type * __s,
 streamsize __n) [inline], [inherited]
```

Core write functionality, without sentry.

**Parameters**

|                        |                                         |
|------------------------|-----------------------------------------|
| <code>_↵<br/>_s</code> | The array to insert.                    |
| <code>_↵<br/>_n</code> | Maximum number of characters to insert. |

Definition at line 317 of file ostream.

**4.298.5.3 bad()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

**4.298.5.4 clear()**

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

**Parameters**

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by `std::basic_ios< char, _Traits >::exceptions()`, `std::__detail::operator>>()`, `std::basic_istream< char >↵  
::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< char >::unget()`.

## 4.298.5.5 copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (
 const basic_ios<_CharT, _Traits> & __rhs) [inherited]
```

Copies fields of \_\_rhs into this.

## Parameters

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

## Returns

Reference to this object.

All fields of \_\_rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase\_event. After copying, each (new) callback is invoked with copyfmt\_event. The final step is to copy exceptions().

Definition at line 63 of file basic\_ios.tcc.

## 4.298.5.6 eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::eof () const [inline], [inherited]
```

Fast error checking.

## Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file basic\_ios.h.

## 4.298.5.7 exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios<_CharT, _Traits>::exceptions () const [inline], [inherited]
```

Throwing exceptions on errors.

## Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 222 of file basic\_ios.h.

Referenced by std::basic\_ios<char, \_Traits>::copyfmt().

#### 4.298.5.8 exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
 iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

##### Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file `basic_ios.h`.

#### 4.298.5.9 fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator bool()`, and `std::basic_ios< char, _Traits >::operator!()`.

## 4.298.5.10 fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::fill () const [inline], [inherited]
```

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 370 of file basic\_ios.h.

Referenced by std::basic\_ios<char, \_Traits>::copyfmt(), std::basic\_ios<char, \_Traits>::fill(), and std::operator<<().

## 4.298.5.11 fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::fill (
 char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file basic\_ios.h.

## 4.298.5.12 flags() [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 649 of file ios\_base.h.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< char >::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, and `std::operator>>()`.

**4.298.5.13 flags()** [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file ios\_base.h.

**4.298.5.14 flush()**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush () [inherited]
```

Synchronizing the stream buffer.

**Returns**

`*this`

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

## 4.298.5.15 gcount()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const [inline], [inherited]
```

Character counting.

## Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

## 4.298.5.16 get() [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
 void) [inherited]
```

Simple extraction.

## Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 244 of file istream.tcc.

## 4.298.5.17 get() [2/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type & __c) [inherited]
```

Simple extraction.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__c</code> | The character in which to store data. |
|------------------|---------------------------------------|

**Returns**

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file `istream.tcc`.

**4.298.5.18 `get()`** [3/6]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Simple multiple-character extraction.

**Parameters**

|                      |                                                             |
|----------------------|-------------------------------------------------------------|
| <code>__s</code>     | Pointer to an array.                                        |
| <code>__n</code>     | Maximum number of characters to store in <code>__s</code> . |
| <code>__delim</code> | A "stop" character.                                         |

**Returns**

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file `istream.tcc`.

## 4.298.5.19 get() [4/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream<_CharT, _Traits>::get (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

## Parameters

|                  |                                                           |
|------------------|-----------------------------------------------------------|
| <code>__s</code> | Pointer to an array.                                      |
| <code>__n</code> | Maximum number of characters to store in <code>s</code> . |

## Returns

\*this

Returns `get(__s, __n, widen("\n"))`.

Definition at line 354 of file istream.

## 4.298.5.20 get() [5/6]

```
template<typename _CharT , typename _Traits >
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (
 __streambuf_type & __sb,
 char_type __delim) [inherited]
```

Extraction into another streambuf.

## Parameters

|                      |                                     |
|----------------------|-------------------------------------|
| <code>__sb</code>    | A streambuf in which to store data. |
| <code>__delim</code> | A "stop" character.                 |

## Returns

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF

- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 364 of file `istream.tcc`.

#### 4.298.5.21 `get()` [6/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

##### Parameters

|                   |                                     |
|-------------------|-------------------------------------|
| <code>__sb</code> | A streambuf in which to store data. |
|-------------------|-------------------------------------|

##### Returns

`*this`

Returns `get(__sb,widen("\n"))`.

Definition at line 387 of file `istream`.

#### 4.298.5.22 `getline()` [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

String extraction.

##### Parameters

|                      |                                               |
|----------------------|-----------------------------------------------|
| <code>__s</code>     | A character array in which to store the data. |
| <code>__n</code>     | Maximum number of characters to extract.      |
| <code>__delim</code> | A "stop" character.                           |

**Returns**

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file istream.tcc.

**4.298.5.23 getline()** [2/3]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream<_CharT, _Traits>::getline (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

String extraction.

**Parameters**

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__s</code> | A character array in which to store the data. |
| <code>__n</code> | Maximum number of characters to extract.      |

**Returns**

\*this

Returns `getline(__s, __n, widen("\n"))`.

Definition at line 427 of file istream.

**4.298.5.24** `getline()` [3/3]

```
template<>
basic_istream< char > & std::basic_istream< char >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

**4.298.5.25** `getloc()`

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutIt >::do_put()`, and `std::ws()`.

**4.298.5.26** `good()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**4.298.5.27** `ignore()` [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n,
 int_type __delim) [inherited]
```

Discarding characters.

## Parameters

|                      |                                  |
|----------------------|----------------------------------|
| <code>__n</code>     | Number of characters to discard. |
| <code>__delim</code> | A "stop" character.              |

## Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file `istream.tcc`.

**4.298.5.28** `ignore()` [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
 streamsize __n) [inherited]
```

Simple extraction.

## Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 501 of file `istream.tcc`.

**4.298.5.29 ignore()** [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 void) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 468 of file istream.tcc.

**4.298.5.30 imbue()**

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
 const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 114 of file basic\_ios.tcc.

**4.298.5.31 init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
 basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::basic\_ios().

#### 4.298.5.32 iword()

```
long& std::ios_base::iword (
 int __ix) [inline], [inherited]
```

Access to integer array.

##### Parameters

|                                                                                                  |                       |
|--------------------------------------------------------------------------------------------------|-----------------------|
| <br><i>__ix</i> | Index into the array. |
|--------------------------------------------------------------------------------------------------|-----------------------|

##### Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file ios\_base.h.

#### 4.298.5.33 narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
 char_type __c,
 char __default) const [inline], [inherited]
```

Squeezes characters.

##### Parameters

|                  |                          |
|------------------|--------------------------|
| <i>__c</i>       | The character to narrow. |
| <i>__default</i> | The character to narrow. |

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,default)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 430 of file `basic_ios.h`.

**4.298.5.34 operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 117 of file `basic_ios.h`.

**4.298.5.35 operator!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 125 of file `basic_ios.h`.

**4.298.5.36 operator<<() [1/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 __ostream_type &(*) (__ostream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 108 of file `ostream`.

## 4.298.5.37 operator&lt;&lt;() [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 __ios_type &(*)(__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 117 of file `ostream`.

## 4.298.5.38 operator&lt;&lt;() [3/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 127 of file `ostream`.

## 4.298.5.39 operator&lt;&lt;() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 long __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file `ostream`.

**4.298.5.40** `operator<<()` [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file `ostream`.

**4.298.5.41** `operator<<()` [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file `ostream`.

## 4.298.5.42 operator&lt;&lt;() [7/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 short __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file `ostream.tcc`.

**4.298.5.43 operator<<() [8/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file `ostream`.

**4.298.5.44 operator<<() [9/17]**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 int __n) [inherited]
```

Integer arithmetic inserters.

## Parameters

|                                                                                                    |                                      |
|----------------------------------------------------------------------------------------------------|--------------------------------------|
|  <code>__n</code> | A variable of builtin integral type. |
|----------------------------------------------------------------------------------------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file `ostream.tcc`.

## 4.298.5.45 operator&lt;&lt;() [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                                                                                                      |                                      |
|------------------------------------------------------------------------------------------------------|--------------------------------------|
|  <code>__n</code> | A variable of builtin integral type. |
|------------------------------------------------------------------------------------------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file `ostream`.

## 4.298.5.46 operator&lt;&lt;() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file `ostream`.

**4.298.5.47 operator<<() [12/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file `ostream`.

**4.298.5.48 operator<<() [13/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file ostream.

## 4.298.5.49 operator&lt;&lt;() [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

## 4.298.5.50 operator&lt;&lt;() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

|                 |                                            |
|-----------------|--------------------------------------------|
| $\leftarrow$    | A variable of builtin floating point type. |
| $\_ \leftarrow$ |                                            |
| $\leftarrow$    |                                            |
| $\_ \leftarrow$ |                                            |
| <i>f</i>        |                                            |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

**4.298.5.51 operator<<() [16/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

**Parameters**

|                 |                             |
|-----------------|-----------------------------|
| $\_ \leftarrow$ | A variable of pointer type. |
| $\_p$           |                             |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file ostream.

**4.298.5.52 operator<<() [17/17]**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

## Parameters

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file `ostream.tcc`.

4.298.5.53 `operator>>()` [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream<_CharT, _Traits>::operator>> (
 __istream_type &(*) (__istream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 120 of file `istream`.

4.298.5.54 `operator>>()` [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream<_CharT, _Traits>::operator>> (
 __ios_type &(*) (__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 124 of file `istream`.

**4.298.5.55** `operator>>()` [3/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 131 of file `istream`.

**4.298.5.56** `operator>>()` [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file `istream`.

**4.298.5.57** `operator>>()` [5/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 short & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 122 of file `istream.tcc`.

**4.298.5.58 operator>>() [6/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (

| <i>f</i> |                                            |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

**4.298.5.68 operator>>()** [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

**Parameters**

|                  |                             |
|------------------|-----------------------------|
| <code>__p</code> | A variable of pointer type. |
|------------------|-----------------------------|

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

**4.298.5.69 operator>>()** [17/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

**Parameters**

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, `failbit` is set.

Definition at line 212 of file `istream.tcc`.

#### 4.298.5.70 peek()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
 void) [inherited]
```

Looking ahead in the stream.

##### Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file `istream.tcc`.

#### 4.298.5.71 precision() [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

##### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::operator<<()`.

#### 4.298.5.72 precision() [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

**Returns**

The previous value of `precision()`.

Definition at line 728 of file `ios_base.h`.

**4.298.5.73 put()**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
 char_type __c) [inherited]
```

Simple insertion.

**Parameters**

|                  |                          |
|------------------|--------------------------|
| <code>__c</code> | The character to insert. |
|------------------|--------------------------|

**Returns**

`*this`

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file `ostream.tcc`.

**4.298.5.74 putback()**

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
 char_type __c) [inherited]
```

Unextracting a single character.

**Parameters**

|                 |                                                   |
|-----------------|---------------------------------------------------|
| <code>_C</code> | The character to push back into the input stream. |
|-----------------|---------------------------------------------------|

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 719 of file `istream.tcc`.

**4.298.5.75 pword()**

```
void*& std::ios_base::pword (
 int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file `ios_base.h`.

**4.298.5.76** `rdbuf()` [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT, _Traits >::rdbuf () const [inline],
[inherited]
```

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Definition at line 321 of file `basic_ios.h`.

Referenced by `std::ws()`.

**4.298.5.77** `rdbuf()` [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits > * std::basic_ios<_CharT, _Traits >::rdbuf (
 basic_streambuf<_CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file `basic_ios.tcc`.

## 4.298.5.78 rdstate()

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [inherited]
```

Returns the error state of the stream buffer.

## Returns

A bit pattern (well, isn't everything?)

See std::ios\_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 137 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_ios< char, ↵  
\_Traits >::fail(), std::basic\_ios< char, \_Traits >::good(), std::basic\_istream< char >::putback(), std::basic\_istream<  
char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

## 4.298.5.79 read()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction without delimiters.

## Parameters

|          |                                        |
|----------|----------------------------------------|
| ↵<br>__s | A character array.                     |
| ↵<br>__n | Maximum number of characters to store. |

## Returns

\*this

If the stream state is good ( ) , extracts characters and stores them into \_\_s until one of the following happens:

- \_\_n characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to failbit|eofbit.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file istream.tcc.

4.298.5.80 `readsome()`

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits>::readsome (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

## Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rddbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 687 of file `istream.tcc`.

4.298.5.81 `register_callback()`

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

## Parameters

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

#### 4.298.5.82 seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
 pos_type __pos) [inherited]
```

Changing the current read position.

##### Parameters

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

##### Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets `failbit`.

##### Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file `istream.tcc`.

#### 4.298.5.83 seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

##### Parameters

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

##### Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

#### Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file `istream.tcc`.

#### 4.298.5.84 `seekp()` [1/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
 pos_type __pos) [inherited]
```

Changing the current write position.

#### Parameters

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

#### Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file `ostream.tcc`.

#### 4.298.5.85 `seekp()` [2/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

#### Parameters

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file `ostream.tcc`.

**4.298.5.86 setf()** [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file `ios_base.h`.

Referenced by `std::__detail::operator>>()`.

**4.298.5.87 setf()** [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__fmtfl</code> | Additional flags to set.          |
| <code>__mask</code>  | The flags mask for <i>fmtfl</i> . |

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file `ios_base.h`.

**4.298.5.88 setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::ws()`.

**4.298.5.89 sync()**

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
 void) [inherited]
```

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file `istream.tcc`.

## 4.298.5.90 sync\_with\_stdio()

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

## Parameters

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

## 4.298.5.91 tellg()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
 void) [inherited]
```

Getting the current read position.

## Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

## Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

Definition at line 825 of file `istream.tcc`.

## 4.298.5.92 tellp()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()
[inherited]
```

Getting the current write position.

## Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

**4.298.5.93** `tie()` [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie () const [inline], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::copyfmt()`, and `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`.

**4.298.5.94** `tie()` [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie (
 basic_ostream<_CharT, _Traits> * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

**4.298.5.95** `unget()`

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget (
 void) [inherited]
```

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 754 of file `istream.tcc`.

Referenced by `std::__detail::operator>>()`.

**4.298.5.96 unsetf()**

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file `ios_base.h`.

**4.298.5.97 widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::widen (
 char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
|------------------|-------------------------|

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

**Returns the result of**

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**4.298.5.98 width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file `ios_base.h`.

Referenced by `std::basic_ios<char, _Traits>::copyfmt()`, and `std::num_put<_CharT, _OutIter>::do_put()`.

**4.298.5.99 width()** [2/2]

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

**Returns**

The previous value of `width()`.

Definition at line 751 of file ios\_base.h.

#### 4.298.5.100 write()

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
 const char_type * __s,
 streamsize __n) [inherited]
```

Character string insertion.

##### Parameters

|                                                                                                    |                                         |
|----------------------------------------------------------------------------------------------------|-----------------------------------------|
|  <code>__s</code> | The array to insert.                    |
|  <code>__n</code> | Maximum number of characters to insert. |

##### Returns

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

##### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

#### 4.298.5.101 xalloc()

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

##### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 4.298.6 Member Data Documentation

### 4.298.6.1 `_M_gcount`

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< char >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< char >::peek()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::read()`, `std::basic_istream< char >::readsome()`, and `std::basic_istream< char >::unget()`.

### 4.298.6.2 `adjustfield`

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _Outlter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

### 4.298.6.3 `app`

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file `ios_base.h`.

### 4.298.6.4 `ate`

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file `ios_base.h`.

#### 4.298.6.5 badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< char, \_Traits >::fail(), and std::operator<<().

#### 4.298.6.6 basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 399 of file ios\_base.h.

Referenced by std::dec(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), std::oct(), and std::basic\_ostream< char >::operator<<().

#### 4.298.6.7 beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file ios\_base.h.

#### 4.298.6.8 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.binary>.

Definition at line 458 of file ios\_base.h.

#### 4.298.6.9 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_←put()`, and `std::noboolalpha()`.

#### 4.298.6.10 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

#### 4.298.6.11 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::dec()`.

#### 4.298.6.12 end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

#### 4.298.6.13 eofbit

```
const ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::eof()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< char >::unget()`, and `std::ws()`.

#### 4.298.6.14 failbit

```
const ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::fail()`, `std::time_get< _CharT, _InIter >::get()`, and `std::basic_ostream< _CharT, _Traits >::sentry()`.

#### 4.298.6.15 fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::hexfloat()`.

#### 4.298.6.16 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 402 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

#### 4.298.6.17 goodbit

```
const ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<char>::flush()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<char>::getline()`, `std::basic_istream<char>::ignore()`, `std::basic_ostream<char>::operator<<()`, `std::basic_istream<char>::operator>>()`, `std::operator>>()`, `std::basic_istream<char>::peek()`, `std::basic_ostream<char>::put()`, `std::basic_istream<char>::putback()`, `std::basic_istream<char>::read()`, `std::basic_istream<char>::readsome()`, `std::basic_istream<char>::seekg()`, `std::basic_ostream<char>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<char>::sync()`, and `std::basic_istream<char>::unget()`.

#### 4.298.6.18 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.298.6.19 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Definition at line 461 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`.

#### 4.298.6.20 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 4.298.6.21 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

#### 4.298.6.22 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.298.6.23 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`.

**4.298.6.24 right**

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file `ios_base.h`.

Referenced by `std::right()`.

**4.298.6.25 scientific**

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file `ios_base.h`.

Referenced by `std::hexfloat()`, and `std::scientific()`.

**4.298.6.26 showbase**

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::noshowbase()`, and `std::showbase()`.

**4.298.6.27 showpoint**

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

#### 4.298.6.28 showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

#### 4.298.6.29 skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

#### 4.298.6.30 trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

Definition at line 467 of file ios\_base.h.

#### 4.298.6.31 unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file ios\_base.h.

Referenced by std::nunitbuf(), and std::unitbuf().

  - `basic_ostream<_CharT, _Traits> * tie () const`
  - `basic_ostream<_CharT, _Traits> * tie (basic_ostream<_CharT, _Traits> *__tiestr)`
  - `void unsetf (fmtflags __mask)`
  - `char_type widen (char __c) const`
  - `streamsize width () const`
  - `streamsize width (streamsize __wide)`
- 
- `__istream_type & operator>> (__istream_type &(__pf)(__istream_type &))`
  - `__istream_type & operator>> (__ios_type &(__pf)(__ios_type &))`
  - `__istream_type & operator>> (ios_base &(__pf)(ios_base &))`

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (bool &__n)`
  - `__istream_type & operator>> (short &__n)`
  - `__istream_type & operator>> (unsigned short &__n)`
  - `__istream_type & operator>> (int &__n)`
  - `__istream_type & operator>> (unsigned int &__n)`
  - `__istream_type & operator>> (long &__n)`
  - `__istream_type & operator>> (unsigned long &__n)`
  - `__istream_type & operator>> (long long &__n)`
  - `__istream_type & operator>> (unsigned long long &__n)`
- 
- `__istream_type & operator>> (float &__f)`
  - `__istream_type & operator>> (double &__f)`

- [\\_\\_istream\\_type](#) & [operator>>](#) (long double &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

#### Friends

- class **sentry**

#### 4.299.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_istream< _CharT, _Traits >
```

Template class basic\_istream.

#### Template Parameters

|                      |                                                             |
|----------------------|-------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                   |
| <code>_Traits</code> | Traits for character type, defaults to char_traits<_CharT>. |

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual input.

Definition at line 83 of file `iosfwd`.

## 4.299.2 Member Typedef Documentation

### 4.299.2.1 `__num_put_type`

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

### 4.299.2.2 `event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

#### Parameters

|                  |                                                        |
|------------------|--------------------------------------------------------|
| <code>__e</code> | One of the members of the event enum.                  |
| <code>__b</code> | Reference to the <code>ios_base</code> object.         |
| <code>__i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 529 of file `ios_base.h`.

### 4.299.2.3 `fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 341 of file `ios_base.h`.

#### 4.299.2.4 `iostate`

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 416 of file `ios_base.h`.

#### 4.299.2.5 openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 447 of file `ios_base.h`.

#### 4.299.2.6 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

### 4.299.3 Member Enumeration Documentation

#### 4.299.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 512 of file `ios_base.h`.

## 4.299.4 Constructor &amp; Destructor Documentation

## 4.299.4.1 basic\_istream()

```
template<typename _CharT, typename _Traits>
std::basic_istream< _CharT, _Traits >::basic_istream (
 __streambuf_type * __sb) [inline], [explicit]
```

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 93 of file istream.

## 4.299.4.2 ~basic\_istream()

```
template<typename _CharT, typename _Traits>
virtual std::basic_istream< _CharT, _Traits >::~~basic_istream () [inline], [virtual]
```

Base destructor.

This does very little apart from providing a virtual base dtor.

Definition at line 103 of file istream.

## 4.299.5 Member Function Documentation

## 4.299.5.1 \_M\_getloc()

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 804 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_Inlter >::do\_get(), std::money\_get< \_CharT, \_Inlter >::do\_get(), std::num\_get< \_CharT, \_Inlter >::do\_get(), std::time\_get< \_CharT, \_Inlter >::do\_get\_date(), std::time\_get< \_CharT, \_Inlter >::do\_get\_monthname(), std::time\_get< \_CharT, \_Inlter >::do\_get\_time(), std::time\_get< \_CharT, \_Inlter >::do\_get\_weekday(), std::time\_put< \_CharT, \_Outlter >::do\_put(), std::num\_put< \_CharT, \_Outlter >::do\_put(), std::time\_get< \_CharT, \_Inlter >::get(), and std::time\_put< \_CharT, \_Outlter >::put().

#### 4.299.5.2 bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

#### 4.299.5.3 clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

##### Parameters

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by `std::basic_ios< char, _Traits >::exceptions()`, `std::__detail::operator>>()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< char >::unget()`.

#### 4.299.5.4 copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
 const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

##### Parameters

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

Definition at line 63 of file `basic_ios.tcc`.

**4.299.5.5 eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file `basic_ios.h`.

**4.299.5.6 exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [inherited]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 222 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`.

**4.299.5.7 exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
 iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

### Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file `basic_ios.h`.

#### 4.299.5.8 `fail()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [inherited]
```

Fast error checking.

### Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator bool()`, and `std::basic_ios< char, _Traits >::operator!()`.

#### 4.299.5.9 `fill()` [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [inherited]
```

Retrieves the *empty* character.

### Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::basic_ios< char, _Traits >::fill()`, and `std::operator<<()`.

## 4.299.5.10 fill() [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios<_CharT, _Traits>::fill (
 char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

## Parameters

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

## Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file basic\_ios.h.

## 4.299.5.11 flags() [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

## Returns

The format control flags for both input and output.

Definition at line 649 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits>::copyfmt(), std::num\_get<\_CharT, \_InIter>::do\_get(), std::num\_get<\_CharT, \_OutIter>::do\_put(), std::basic\_ostream< char>::operator<<(), std::operator<<(), std::\_\_detail::operator>>(), and std::operator>>().

## 4.299.5.12 flags() [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file `ios_base.h`.

**4.299.5.13 gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const [inline]
```

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file `istream`.

**4.299.5.14 get()** [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
 void)
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 244 of file `istream.tcc`.

**4.299.5.15 get()** [2/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type & __c)
```

Simple extraction.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__c</code> | The character in which to store data. |
|------------------|---------------------------------------|

## Returns

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file `istream.tcc`.

4.299.5.16 `get()` [3/6]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (
 char_type * __s,
 streamsize __n,
 char_type __delim)
```

Simple multiple-character extraction.

## Parameters

|                      |                                                             |
|----------------------|-------------------------------------------------------------|
| <code>__s</code>     | Pointer to an array.                                        |
| <code>__n</code>     | Maximum number of characters to store in <code>__s</code> . |
| <code>__delim</code> | A "stop" character.                                         |

## Returns

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file istream.tcc.

**4.299.5.17 get()** [4/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::get (
 char_type * __s,
 streamsize __n) [inline]
```

Simple multiple-character extraction.

**Parameters**

|                  |                                                           |
|------------------|-----------------------------------------------------------|
| <code>__s</code> | Pointer to an array.                                      |
| <code>__n</code> | Maximum number of characters to store in <code>s</code> . |

**Returns**

\*this

Returns `get(__s,__n,widen("\n"))`.

Definition at line 354 of file istream.

**4.299.5.18 get()** [5/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb,
 char_type __delim)
```

Extraction into another streambuf.

**Parameters**

|                      |                                     |
|----------------------|-------------------------------------|
| <code>__sb</code>    | A streambuf in which to store data. |
| <code>__delim</code> | A "stop" character.                 |

**Returns**

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 364 of file istream.tcc.

**4.299.5.19 get()** [6/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb) [inline]
```

Extraction into another streambuf.

**Parameters**

|                   |                                     |
|-------------------|-------------------------------------|
| <code>__sb</code> | A streambuf in which to store data. |
|-------------------|-------------------------------------|

**Returns**

\*this

Returns `get(__sb,widen("\n"))`.

Definition at line 387 of file istream.

**4.299.5.20 getline()** [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim)
```

String extraction.

**Parameters**

|                      |                                               |
|----------------------|-----------------------------------------------|
| <code>__s</code>     | A character array in which to store the data. |
| <code>__n</code>     | Maximum number of characters to extract.      |
| <code>__delim</code> | A "stop" character.                           |

**Returns**

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file `istream.tcc`.

**4.299.5.21 `getline()`** [2/3]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
 char_type * __s,
 streamsize __n) [inline]
```

String extraction.

**Parameters**

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__s</code> | A character array in which to store the data. |
| <code>__n</code> | Maximum number of characters to extract.      |

**Returns**

`*this`

Returns `getline(__s, __n, widen("\n"))`.

Definition at line 427 of file `istream`.

#### 4.299.5.22 `getline()` [3/3]

```
template<>
basic_istream< char > & std::basic_istream< char >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim)
```

Explicit specialization declarations, defined in `src/istream.cc`.

#### 4.299.5.23 `getloc()`

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::money_put< _CharT, _Outlter >::do_put()`, and `std::ws()`.

#### 4.299.5.24 `good()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 4.299.5.25 `ignore()` [1/3]

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n,
 int_type __delim)
```

Discarding characters.

**Parameters**

|                      |                                  |
|----------------------|----------------------------------|
| <code>__n</code>     | Number of characters to discard. |
| <code>__delim</code> | A "stop" character.              |

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file `istream.tcc`.

**4.299.5.26 ignore()** [2/3]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n)
```

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 501 of file `istream.tcc`.

## 4.299.5.27 ignore() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
 void)
```

Simple extraction.

## Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 468 of file istream.tcc.

## 4.299.5.28 imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios<_CharT, _Traits>::imbue (
 const locale & __loc) [inherited]
```

Moves to a new locale.

## Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

## Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 114 of file basic\_ios.tcc.

## 4.299.5.29 init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::init (
 basic_streambuf<_CharT, _Traits> * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< char, _Traits >::basic_ios()`.

#### 4.299.5.30 `iword()`

```
long& std::ios_base::iword (
 int __ix) [inline], [inherited]
```

Access to integer array.

##### Parameters

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

##### Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file `ios_base.h`.

#### 4.299.5.31 `narrow()`

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
 char_type __c,
 char __default) const [inline], [inherited]
```

Squeezes characters.

##### Parameters

|                        |                          |
|------------------------|--------------------------|
| <code>__c</code>       | The character to narrow. |
| <code>__default</code> | The character to narrow. |

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c, default)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 430 of file `basic_ios.h`.

**4.299.5.32 operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 117 of file `basic_ios.h`.

**4.299.5.33 operator!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 125 of file `basic_ios.h`.

**4.299.5.34 operator>>() [1/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __istream_type &(*) (__istream_type &) __pf) [inline]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 120 of file `istream`.

**4.299.5.35 operator>>()** [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __ios_type &(*) (__ios_type &) __pf) [inline]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 124 of file `istream`.

**4.299.5.36 operator>>()** [3/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 ios_base &(*) (ios_base &) __pf) [inline]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 131 of file `istream`.

**4.299.5.37 operator>>()** [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 bool & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file `istream`.

## 4.299.5.38 operator&gt;&gt;() [5/17]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 short & __n)
```

Integer arithmetic extractors.

## Parameters

|                     |                                      |
|---------------------|--------------------------------------|
| $\leftarrow$<br>__n | A variable of builtin integral type. |
|---------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

Definition at line 122 of file istream.tcc.

## 4.299.5.39 operator&gt;&gt;() [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned short & __n) [inline]
```

Integer arithmetic extractors.

## Parameters

|                     |                                      |
|---------------------|--------------------------------------|
| $\leftarrow$<br>__n | A variable of builtin integral type. |
|---------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

Definition at line 175 of file istream.

**4.299.5.40** `operator>>()` [7/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 int & __n)
```

Integer arithmetic extractors.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file `istream.tcc`.

## 4.299.5.41 operator&gt;&gt;() [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned int & __n) [inline]
```

Integer arithmetic extractors.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 182 of file `istream`.

## 4.299.5.42 operator&gt;&gt;() [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

|                                  |                                      |
|----------------------------------|--------------------------------------|
| $\leftarrow$<br><code>__n</code> | A variable of builtin integral type. |
|----------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 186 of file `istream`.

**4.299.5.43 `operator>>()` [10/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned long & __n) [inline]
```

Integer arithmetic extractors.

**Parameters**

|                                  |                                      |
|----------------------------------|--------------------------------------|
| $\leftarrow$<br><code>__n</code> | A variable of builtin integral type. |
|----------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 190 of file `istream`.

**4.299.5.44 `operator>>()` [11/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long long & __n) [inline]
```

Integer arithmetic extractors.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file `istream`.

## 4.299.5.45 operator&gt;&gt;() [12/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned long long & __n) [inline]
```

Integer arithmetic extractors.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file `istream`.

## 4.299.5.46 operator&gt;&gt;() [13/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 float & __f) [inline]
```

Floating point arithmetic extractors.

**Parameters**

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file `istream`.

**4.299.5.47 operator>>()** [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 double & __f) [inline]
```

Floating point arithmetic extractors.

**Parameters**

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file `istream`.

**4.299.5.48 operator>>()** [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long double & __f) [inline]
```

Floating point arithmetic extractors.

## Parameters

|                 |                                            |
|-----------------|--------------------------------------------|
| $\leftarrow$    | A variable of builtin floating point type. |
| $\_ \leftarrow$ |                                            |
| $\leftarrow$    |                                            |
| $\_ \leftarrow$ |                                            |
| <i>f</i>        |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

## 4.299.5.49 operator&gt;&gt;() [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 void *& __p) [inline]
```

Basic arithmetic extractors.

## Parameters

|                 |                             |
|-----------------|-----------------------------|
| $\_ \leftarrow$ | A variable of pointer type. |
| $\_p$           |                             |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

## 4.299.5.50 operator&gt;&gt;() [17/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 __streambuf_type * __sb)
```

Extracting into another streambuf.

**Parameters**

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 212 of file `istream.tcc`.

**4.299.5.51 peek()**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
 void)
```

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is `false`, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file `istream.tcc`.

**4.299.5.52 precision()** [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::operator<<()`.

**4.299.5.53 precision()** [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

## Parameters

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

## Returns

The previous value of `precision()`.

Definition at line 728 of file `ios_base.h`.

## 4.299.5.54 putback()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
 char_type __c)
```

Unextracting a single character.

## Parameters

|                  |                                                   |
|------------------|---------------------------------------------------|
| <code>__c</code> | The character to push back into the input stream. |
|------------------|---------------------------------------------------|

## Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

## Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 719 of file `istream.tcc`.

## 4.299.5.55 pword()

```
void*& std::ios_base::pword (
 int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

|                         |                       |
|-------------------------|-----------------------|
| <code>_↵<br/>_ix</code> | Index into the array. |
|-------------------------|-----------------------|

**Returns**

A reference to a `void*` associated with the index.

The `pwd` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file `ios_base.h`.

**4.299.5.56** `rdbuf()` [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT, _Traits >::rdbuf () const [inline],
[inherited]
```

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Definition at line 321 of file `basic_ios.h`.

Referenced by `std::ws()`.

**4.299.5.57** `rdbuf()` [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits > * std::basic_ios<_CharT, _Traits >::rdbuf (
 basic_streambuf<_CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

## Parameters

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

## Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file `basic_ios.tcc`.

## 4.299.5.58 rdbuf()

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios< _CharT, _Traits >::rdbuf () const [inline], [inherited]
```

Returns the error state of the stream buffer.

## Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< char >::unget()`.

## 4.299.5.59 read()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
 char_type * __s,
 streamsize __n)
```

Extraction without delimiters.

**Parameters**

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

**Returns**

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file `istream.tcc`.

**4.299.5.60 readsome()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
 char_type * __s,
 streamsize __n)
```

Extraction until the buffer is exhausted, but no more.

**Parameters**

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the `streambuf`'s buffer, `rdbuf()->in_avail()`, called A here:

- if  $A == -1$ , sets eofbit and extracts no characters
- if  $A == 0$ , extracts no characters
- if  $A > 0$ , extracts  $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 687 of file istream.tcc.

#### 4.299.5.61 register\_callback()

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

##### Parameters

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

#### 4.299.5.62 seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
 pos_type __pos)
```

Changing the current read position.

##### Parameters

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

##### Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file `istream.tcc`.

**4.299.5.63 seekg()** [2/2]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
 off_type __off,
 ios_base::seekdir __dir)
```

Changing the current read position.

**Parameters**

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file `istream.tcc`.

**4.299.5.64 setf()** [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file ios\_base.h.

Referenced by std::\_\_detail::operator>>().

**4.299.5.65 setf()** [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__fmtfl</code> | Additional flags to set.          |
| <code>__mask</code>  | The flags mask for <i>fmtfl</i> . |

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file ios\_base.h.

**4.299.5.66 setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::ws()`.

#### 4.299.5.67 `sync()`

```
template<typename _CharT, typename _Traits>
int std::basic_istream<_CharT, _Traits>::sync (
 void)
```

Synchronizing the stream buffer.

##### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

##### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file `istream.tcc`.

#### 4.299.5.68 `sync_with_stdio()`

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

##### Parameters

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**4.299.5.69 tellg()**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
 void)
```

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

Definition at line 825 of file `istream.tcc`.

**4.299.5.70 tie()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie () const [inline], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**4.299.5.71 tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
 basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

**4.299.5.72 `unget()`**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
 void)
```

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 754 of file `istream.tcc`.

Referenced by `std::__detail::operator>>()`.

**4.299.5.73 `unsetf()`**

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

## Parameters

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file `ios_base.h`.

4.299.5.74 `widen()`

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
 char __c) const [inline], [inherited]
```

Widens characters.

## Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
|------------------|-------------------------|

## Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

4.299.5.75 `width()` [1/2]

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

## Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

**4.299.5.76** `width()` [2/2]

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

**Returns**

The previous value of `width()`.

Definition at line 751 of file `ios_base.h`.

**4.299.5.77** `xalloc()`

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**4.299.6** Member Data Documentation**4.299.6.1** `_M_gcount`

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< char >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< char >::peek()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::read()`, `std::basic_istream< char >::readsomewhat()`, and `std::basic_istream< char >::unget()`.

#### 4.299.6.2 adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### 4.299.6.3 app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file `ios_base.h`.

#### 4.299.6.4 ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file `ios_base.h`.

#### 4.299.6.5 badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file `ios_base.h`.

Referenced by `std::basic_ios<char, _Traits>::bad()`, `std::basic_ios<char, _Traits>::fail()`, and `std::operator<<()`.

#### 4.299.6.6 basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 399 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::num_put<_CharT, _Outlter>::do_put()`, `std::hex()`, `std::oct()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.299.6.7 beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file ios\_base.h.

#### 4.299.6.8 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Definition at line 458 of file ios\_base.h.

#### 4.299.6.9 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file ios\_base.h.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

#### 4.299.6.10 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios\_base.h.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`.

#### 4.299.6.11 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios\_base.h.

Referenced by std::dec().

#### 4.299.6.12 end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

#### 4.299.6.13 eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_istream< char >::unget(), and std::ws().

#### 4.299.6.14 failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::time\_get< \_CharT, \_InIter >::get(), and std::basic\_ostream< \_CharT, \_Traits >::sentry() and std::basic\_ostream< \_CharT, \_Traits >::flush().

#### 4.299.6.15 fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file ios\_base.h.

Referenced by std::fixed(), and std::hexfloat().

#### 4.299.6.16 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 402 of file ios\_base.h.

Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

#### 4.299.6.17 goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< char >::flush(), std::basic\_istream< char >::get(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::getline(), std::basic\_istream< char >::ignore(), std::basic\_ostream< char >::operator<<(), std::basic\_istream< char >::operator>>(), std::operator>>(), std::basic\_istream< char >::peek(), std::basic\_ostream< char >::put(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::read(), std::basic\_istream< char >::readsome(), std::basic\_istream< char >::seekg(), std::basic\_ostream< char >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< char >::sync(), and std::basic\_istream< char >::unget().

#### 4.299.6.18 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), and std::basic\_ostream< char >::operator<<().

#### 4.299.6.19 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Definition at line 461 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`.

#### 4.299.6.20 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 4.299.6.21 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, and `std::left()`.

#### 4.299.6.22 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.299.6.23 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`.

#### 4.299.6.24 right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file `ios_base.h`.

Referenced by `std::right()`.

#### 4.299.6.25 scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file `ios_base.h`.

Referenced by `std::hexfloat()`, and `std::scientific()`.

#### 4.299.6.26 showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, `std::noshowbase()`, and `std::showbase()`.

#### 4.299.6.27 showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

#### 4.299.6.28 showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

#### 4.299.6.29 skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

#### 4.299.6.30 trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

Definition at line 467 of file ios\_base.h.

#### 4.299.6.31 unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file ios\_base.h.

Referenced by std::nunitbuf(), and std::unitbuf().

#### 4.299.6.32 uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file ios\_base.h.

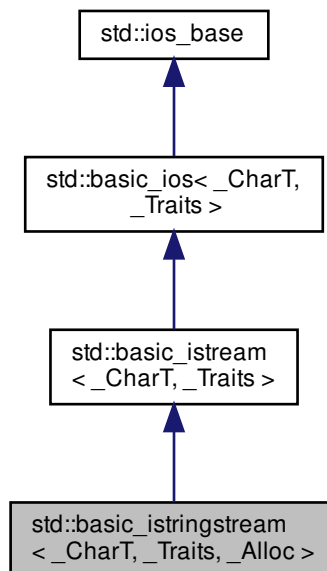

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), std::nouppercase(), and std::uppercase().

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

  - [\\_\\_istream\\_type & operator>>](#) ([double](#) &\_\_f)
  - [\\_\\_istream\\_type & operator>>](#) ([long double](#) &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

## 4.300.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_istream< _CharT, _Traits, _Alloc >
```

Controlling input for std::string.

### Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |
| <code>_Alloc</code>  | Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .              |

This class supports reading from objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 100 of file `iosfwd`.

## 4.300.2 Member Typedef Documentation

### 4.300.2.1 `__num_put_type`

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

### 4.300.2.2 `event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

### Parameters

|                       |                                                        |
|-----------------------|--------------------------------------------------------|
| <code>↔<br/>_e</code> | One of the members of the event enum.                  |
| <code>↔<br/>_b</code> | Reference to the <code>ios_base</code> object.         |
| <code>↔<br/>_i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 529 of file `ios_base.h`.

#### 4.300.2.3 fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

*\_Ios\_Fmtflags* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *fmtflags* are:

- *boolalpha*
- *dec*
- *fixed*
- *hex*
- *internal*
- *left*
- *oct*
- *right*
- *scientific*
- *showbase*
- *showpoint*
- *showpos*
- *skipws*
- *unitbuf*
- *uppercase*
- *adjustfield*
- *basefield*
- *floatfield*

Definition at line 341 of file *ios\_base.h*.

#### 4.300.2.4 iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

*\_Ios\_Iostate* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *iostate* are:

- *badbit*
- *eofbit*
- *failbit*
- *goodbit*

Definition at line 416 of file *ios\_base.h*.

#### 4.300.2.5 openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 447 of file `ios_base.h`.

#### 4.300.2.6 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

### 4.300.3 Member Enumeration Documentation

#### 4.300.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 512 of file `ios_base.h`.

## 4.300.4 Constructor &amp; Destructor Documentation

## 4.300.4.1 basic\_istream() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream () [inline]
```

Default constructor starts with an empty string buffer.

Initializes `sb` using `in`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 425 of file `sstream`.

## 4.300.4.2 basic\_istream() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream (
 ios_base::openmode __mode) [inline], [explicit]
```

Starts with an empty string buffer.

## Parameters

|                     |                                                 |
|---------------------|-------------------------------------------------|
| <code>__mode</code> | Whether the buffer can read, or write, or both. |
|---------------------|-------------------------------------------------|

`ios_base::in` is automatically included in `__mode`.

Initializes `sb` using `__mode|in`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 442 of file `sstream`.

## 4.300.4.3 basic\_istream() [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream (
 const __string_type & __str,
 ios_base::openmode __mode = ios_base::in) [inline], [explicit]
```

Starts with an existing string buffer.

#### Parameters

|                     |                                                 |
|---------------------|-------------------------------------------------|
| <code>__str</code>  | A string to copy as a starting buffer.          |
| <code>__mode</code> | Whether the buffer can read, or write, or both. |

`ios_base::in` is automatically included in `mode`.

Initializes `sb` using `str` and `mode|in`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 460 of file `sstream`.

#### 4.300.4.4 `~basic_istream()`

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_istream< _CharT, _Traits, _Alloc >::~~basic_istream () [inline]
```

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

Definition at line 471 of file `sstream`.

### 4.300.5 Member Function Documentation

#### 4.300.5.1 `_M_getloc()`

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

#### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 804 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _Inlter >::do_get()`, `std::money_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_time()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_put< _CharT, _Outlter >::do_put()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_get< _CharT, _Inlter >::get()`, and `std::time_put< _CharT, _Outlter >::put()`.

## 4.300.5.2 bad()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [inherited]
```

Fast error checking.

## Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

## 4.300.5.3 clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

## Parameters

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See std::ios\_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::exceptions(), std::\_\_detail::operator>>(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

## 4.300.5.4 copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
 const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of \_\_rhs into this.

## Parameters

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

Definition at line 63 of file `basic_ios.tcc`.

**4.300.5.5 eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other `iostate` flags may also be set.

Definition at line 190 of file `basic_ios.h`.

**4.300.5.6 exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [inherited]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 222 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`.

**4.300.5.7 exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
 iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

## Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file `basic_ios.h`.

## 4.300.5.8 fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [inherited]
```

Fast error checking.

## Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator bool()`, and `std::basic_ios< char, _Traits >::operator!()`.

## 4.300.5.9 fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [inherited]
```

Retrieves the *empty* character.

## Returns

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::basic_ios< char, _Traits >::fill()`, and `std::operator<<()`.

**4.300.5.10** `fill()` [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
 char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and  $Q < P$ . It defaults to a space (' ') in the current locale.

Definition at line 390 of file `basic_ios.h`.

**4.300.5.11** `flags()` [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 649 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< char >::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, and `std::operator>>()`.

**4.300.5.12** `flags()` [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

## Parameters

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

## Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file ios\_base.h.

## 4.300.5.13 gcount()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::gcount () const [inline], [inherited]
```

Character counting.

## Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

## 4.300.5.14 get() [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
 void) [inherited]
```

Simple extraction.

## Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 244 of file istream.tcc.

## 4.300.5.15 get() [2/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type & __c) [inherited]
```

Simple extraction.

**Parameters**

|                  |                                       |
|------------------|---------------------------------------|
| <code>__c</code> | The character in which to store data. |
|------------------|---------------------------------------|

**Returns**

`*this`

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file `istream.tcc`.

**4.300.5.16 `get()`** [3/6]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Simple multiple-character extraction.

**Parameters**

|                      |                                                             |
|----------------------|-------------------------------------------------------------|
| <code>__s</code>     | Pointer to an array.                                        |
| <code>__n</code>     | Maximum number of characters to store in <code>__s</code> . |
| <code>__delim</code> | A "stop" character.                                         |

**Returns**

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file istream.tcc.

**4.300.5.17 get()** [4/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::get (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

**Parameters**

|                  |                                                           |
|------------------|-----------------------------------------------------------|
| <code>__s</code> | Pointer to an array.                                      |
| <code>__n</code> | Maximum number of characters to store in <code>s</code> . |

**Returns**

\*this

Returns `get(__s,__n,widen("\n"))`.

Definition at line 354 of file istream.

**4.300.5.18 get()** [5/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb,
 char_type __delim) [inherited]
```

Extraction into another streambuf.

**Parameters**

|                      |                                     |
|----------------------|-------------------------------------|
| <code>__sb</code>    | A streambuf in which to store data. |
| <code>__delim</code> | A "stop" character.                 |

**Returns**

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 364 of file istream.tcc.

**4.300.5.19** `get()` [6/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

**Parameters**

|                   |                                     |
|-------------------|-------------------------------------|
| <code>__sb</code> | A streambuf in which to store data. |
|-------------------|-------------------------------------|

**Returns**

\*this

Returns `get(__sb,widen("\n"))`.

Definition at line 387 of file istream.

**4.300.5.20** `getline()` [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

String extraction.

## Parameters

|                      |                                               |
|----------------------|-----------------------------------------------|
| <code>__s</code>     | A character array in which to store the data. |
| <code>__n</code>     | Maximum number of characters to extract.      |
| <code>__delim</code> | A "stop" character.                           |

## Returns

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file istream.tcc.

4.300.5.21 `getline()` [2/3]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

String extraction.

## Parameters

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__s</code> | A character array in which to store the data. |
| <code>__n</code> | Maximum number of characters to extract.      |

## Returns

\*this

Returns `getline(__s,__n,widen("\n"))`.

Definition at line 427 of file `istream`.

#### 4.300.5.22 `getline()` [3/3]

```
template<>
basic_istream< char > & std::basic_istream< char >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

#### 4.300.5.23 `getloc()`

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::money_put< _CharT, _Outlter >::do_put()`, and `std::ws()`.

#### 4.300.5.24 `good()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 4.300.5.25 `ignore()` [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n,
 int_type __delim) [inherited]
```

Discarding characters.

## Parameters

|                      |                                  |
|----------------------|----------------------------------|
| <code>__n</code>     | Number of characters to discard. |
| <code>__delim</code> | A "stop" character.              |

## Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file istream.tcc.

## 4.300.5.26 ignore() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n) [inherited]
```

Simple extraction.

## Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 501 of file istream.tcc.

**4.300.5.27 ignore()** [3/3]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 void) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 468 of file istream.tcc.

**4.300.5.28 imbue()**

```
template<typename _CharT, typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
 const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 114 of file basic\_ios.tcc.

**4.300.5.29 init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
 basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::basic\_ios().

#### 4.300.5.30 iword()

```
long& std::ios_base::iword (
 int __ix) [inline], [inherited]
```

Access to integer array.

##### Parameters

|                                                                                           |                       |
|-------------------------------------------------------------------------------------------|-----------------------|
| <br>__ix | Index into the array. |
|-------------------------------------------------------------------------------------------|-----------------------|

##### Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file ios\_base.h.

#### 4.300.5.31 narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
 char_type __c,
 char __default) const [inline], [inherited]
```

Squeezes characters.

##### Parameters

|           |                          |
|-----------|--------------------------|
| __c       | The character to narrow. |
| __default | The character to narrow. |

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 430 of file `basic_ios.h`.

**4.300.5.32 operator bool()**

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 117 of file `basic_ios.h`.

**4.300.5.33 operator!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 125 of file `basic_ios.h`.

**4.300.5.34 operator>>() [1/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __istream_type &(*) (__istream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 120 of file `istream`.

## 4.300.5.35 operator&gt;&gt;() [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __ios_type &(*) (__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 124 of file `istream`.

## 4.300.5.36 operator&gt;&gt;() [3/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 131 of file `istream`.

## 4.300.5.37 operator&gt;&gt;() [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file `istream`.

**4.300.5.38** `operator>>()` [5/17]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 short & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 122 of file `istream.tcc`.

**4.300.5.39** `operator>>()` [6/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned short & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 175 of file `istream`.

## 4.300.5.40 operator&gt;&gt;() [7/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 int & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

|       |                                      |
|-------|--------------------------------------|
| $\_↵$ | A variable of builtin integral type. |
| $\_n$ |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file `istream.tcc`.

**4.300.5.41 `operator>>()`** [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned int & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|       |                                      |
|-------|--------------------------------------|
| $\_↵$ | A variable of builtin integral type. |
| $\_n$ |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 182 of file `istream`.

**4.300.5.42 `operator>>()`** [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>_↵</code>  | A variable of builtin integral type. |
| <code>__n</code> |                                      |

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 186 of file `istream`.

## 4.300.5.43 operator&gt;&gt;() [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>_↵</code>  | A variable of builtin integral type. |
| <code>__n</code> |                                      |

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 190 of file `istream`.

## 4.300.5.44 operator&gt;&gt;() [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|       |                                      |
|-------|--------------------------------------|
| $\_↵$ | A variable of builtin integral type. |
| $\_n$ |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file `istream`.

**4.300.5.45 `operator>>()` [12/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|       |                                      |
|-------|--------------------------------------|
| $\_↵$ | A variable of builtin integral type. |
| $\_n$ |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file `istream`.

**4.300.5.46 `operator>>()` [13/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 float & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file `istream`.

## 4.300.5.47 operator&gt;&gt;() [14/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file `istream`.

## 4.300.5.48 operator&gt;&gt;() [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

|                 |                                            |
|-----------------|--------------------------------------------|
| $\leftarrow$    | A variable of builtin floating point type. |
| $\_ \leftarrow$ |                                            |
| $\leftarrow$    |                                            |
| $\_ \leftarrow$ |                                            |
| <i>f</i>        |                                            |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

**4.300.5.49 operator>>()** [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

**Parameters**

|                 |                             |
|-----------------|-----------------------------|
| $\_ \leftarrow$ | A variable of pointer type. |
| $\_p$           |                             |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

**4.300.5.50 operator>>()** [17/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

## Parameters

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 212 of file istream.tcc.

## 4.300.5.51 peek()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
 void) [inherited]
```

Looking ahead in the stream.

## Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file istream.tcc.

## 4.300.5.52 precision() [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

## Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file ios\_base.h.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::operator<<()`.

## 4.300.5.53 precision() [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

**Returns**

The previous value of `precision()`.

Definition at line 728 of file `ios_base.h`.

**4.300.5.54 putback()**

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
 char_type __c) [inherited]
```

Unextracting a single character.

**Parameters**

|                  |                                                   |
|------------------|---------------------------------------------------|
| <code>__c</code> | The character to push back into the input stream. |
|------------------|---------------------------------------------------|

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 719 of file `istream.tcc`.

**4.300.5.55 pword()**

```
void*& std::ios_base::pword (
 int __ix) [inline], [inherited]
```

Access to void pointer array.

## Parameters

|                  |                       |
|------------------|-----------------------|
| <code>_ix</code> | Index into the array. |
|------------------|-----------------------|

## Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file ios\_base.h.

## 4.300.5.56 rdbuf() [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
 basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

## Parameters

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

## Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file basic\_ios.tcc.

**4.300.5.57 rdbuf()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__stringbuf_type* std::basic_istream< _CharT, _Traits, _Alloc >::rdbuf () const [inline]
```

Accessing the underlying buffer.

**Returns**

The current basic\_stringbuf buffer.

This hides both signatures of std::basic\_ios::rdbuf().

Definition at line 511 of file sstream.

**4.300.5.58 rdstate()**

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See std::ios\_base::iosstate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 137 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_ios< char, \_Traits >::good(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

**4.300.5.59 read()**

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction without delimiters.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

## Returns

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file `istream.tcc`.

## 4.300.5.60 readsome()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::readsome (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

## Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called A here:

- if  $A == -1$ , sets eofbit and extracts no characters
- if  $A == 0$ , extracts no characters
- if  $A > 0$ , extracts  $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 687 of file istream.tcc.

#### 4.300.5.61 register\_callback()

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

##### Parameters

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

#### 4.300.5.62 seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
 pos_type __pos) [inherited]
```

Changing the current read position.

##### Parameters

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

##### Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file `istream.tcc`.

**4.300.5.63 seekg()** [2/2]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

**Parameters**

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file `istream.tcc`.

**4.300.5.64 setf()** [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file `ios_base.h`.

Referenced by `std::__detail::operator>>()`.

**4.300.5.65 setf()** [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__fmtfl</code> | Additional flags to set.          |
| <code>__mask</code>  | The flags mask for <i>fmtfl</i> . |

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file `ios_base.h`.

**4.300.5.66 setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file basic\_ios.h.

Referenced by std::operator<<(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::ws().

#### 4.300.5.67 str() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_istream< _CharT, _Traits, _Alloc >::str () const [inline]
```

Copying out the string buffer.

##### Returns

rdbuf() -> str()

Definition at line 519 of file sstream.

#### 4.300.5.68 str() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_istream< _CharT, _Traits, _Alloc >::str (
 const __string_type & __s) [inline]
```

Setting a new buffer.

##### Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__s</code> | The string to use as a new sequence. |
|------------------|--------------------------------------|

Calls rdbuf() -> str(s).

Definition at line 529 of file sstream.

#### 4.300.5.69 sync()

```
template<typename _CharT, typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
 void) [inherited]
```

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file `istream.tcc`.

**4.300.5.70 sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

**Parameters**

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**4.300.5.71 tellg()**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
 void) [inherited]
```

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

Definition at line 825 of file `istream.tcc`.

**4.300.5.72 tie()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie () const [inline], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**4.300.5.73 tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
 basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

**4.300.5.74 `unget()`**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
 void) [inherited]
```

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 754 of file `istream.tcc`.

Referenced by `std::__detail::operator>>()`.

**4.300.5.75 `unsetf()`**

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file ios\_base.h.

#### 4.300.5.76 widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
 char __c) const [inline], [inherited]
```

Widens characters.

##### Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
|------------------|-------------------------|

##### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 449 of file basic\_ios.h.

Referenced by `std::basic_ios< char, _Traits >::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

#### 4.300.5.77 width() [1/2]

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

##### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file ios\_base.h.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::num_put< _CharT, _Outiter >::do_put()`.

#### 4.300.5.78 width() [2/2]

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

**Returns**

The previous value of `width()`.

Definition at line 751 of file `ios_base.h`.

**4.300.5.79 `xalloc()`**

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**4.300.6 Member Data Documentation****4.300.6.1 `_M_gcount`**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< char >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< char >::peek()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::read()`, `std::basic_istream< char >::readsome()`, and `std::basic_istream< char >::unget()`.

#### 4.300.6.2 adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### 4.300.6.3 app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file `ios_base.h`.

#### 4.300.6.4 ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file `ios_base.h`.

#### 4.300.6.5 badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::fail()`, and `std::operator<<()`.

#### 4.300.6.6 basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 399 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get< _CharT, _Initer >::do_get()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::hex()`, `std::oct()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.300.6.7 beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file ios\_base.h.

#### 4.300.6.8 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Definition at line 458 of file ios\_base.h.

#### 4.300.6.9 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file ios\_base.h.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

#### 4.300.6.10 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios\_base.h.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

#### 4.300.6.11 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios\_base.h.

Referenced by std::dec().

#### 4.300.6.12 end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

#### 4.300.6.13 eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_istream< char >::unget(), and std::ws().

#### 4.300.6.14 failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::time\_get< \_CharT, \_InIter >::get(), and std::basic\_ostream< \_CharT, \_Traits >::sentry() and std::basic\_ostream< \_CharT, \_Traits >::flush().

#### 4.300.6.15 fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file ios\_base.h.

Referenced by std::fixed(), and std::hexfloat().

#### 4.300.6.16 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 402 of file ios\_base.h.

Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

#### 4.300.6.17 goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< char >::flush(), std::basic\_istream< char >::get(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::getline(), std::basic\_istream< char >::ignore(), std::basic\_ostream< char >::operator<<(), std::basic\_istream< char >::operator>>(), std::operator>>(), std::basic\_istream< char >::peek(), std::basic\_ostream< char >::put(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::read(), std::basic\_istream< char >::readsome(), std::basic\_istream< char >::seekg(), std::basic\_ostream< char >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< char >::sync(), and std::basic\_istream< char >::unget().

#### 4.300.6.18 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), and std::basic\_ostream< char >::operator<<().

#### 4.300.6.19 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Definition at line 461 of file `ios_base.h`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`.

#### 4.300.6.20 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 4.300.6.21 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

#### 4.300.6.22 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.300.6.23 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`.

#### 4.300.6.24 right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file `ios_base.h`.

Referenced by `std::right()`.

#### 4.300.6.25 scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file `ios_base.h`.

Referenced by `std::hexfloat()`, and `std::scientific()`.

#### 4.300.6.26 showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::noshowbase()`, and `std::showbase()`.

#### 4.300.6.27 showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

#### 4.300.6.28 showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

#### 4.300.6.29 skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

#### 4.300.6.30 trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

Definition at line 467 of file ios\_base.h.

#### 4.300.6.31 unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file ios\_base.h.

Referenced by `std::nounitbuf()`, and `std::unitbuf()`.

#### 4.300.6.32 uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file ios\_base.h.

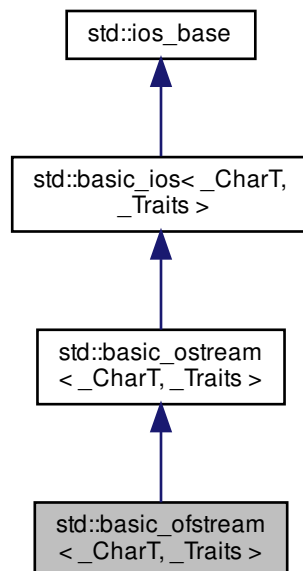

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

  - `__ostream_type & operator<< (__ios_type &(*__pf)(__ios_type &))`
  - `__ostream_type & operator<< (ios_base &(*__pf)(ios_base &))`

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`

- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

## 4.301.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ofstream< _CharT, _Traits >
```

Controlling output for files.

## Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |

This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 753 of file `fstream`.

## 4.301.2 Member Typedef Documentation

4.301.2.1 `__num_get_type`

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_get_type [inherited]
```

These are non-standard types.

Definition at line 91 of file `basic_ios.h`.

#### 4.301.2.2 `event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

##### Parameters

|                  |                                                        |
|------------------|--------------------------------------------------------|
| <code>__e</code> | One of the members of the event enum.                  |
| <code>__b</code> | Reference to the <code>ios_base</code> object.         |
| <code>__i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 529 of file `ios_base.h`.

#### 4.301.2.3 `fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`

- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file `ios_base.h`.

#### 4.301.2.4 `iostate`

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file `ios_base.h`.

#### 4.301.2.5 `openmode`

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file `ios_base.h`.

#### 4.301.2.6 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

### 4.301.3 Member Enumeration Documentation

#### 4.301.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 512 of file `ios_base.h`.

### 4.301.4 Constructor & Destructor Documentation

#### 4.301.4.1 basic\_ofstream() [1/3]

```
template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream () [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 779 of file `fstream`.

#### 4.301.4.2 basic\_ofstream() [2/3]

```
template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
 const char * __s,
 ios_base::openmode __mode = ios_base::out) [inline], [explicit]
```

Create an output file stream.

## Parameters

|                     |                                                  |
|---------------------|--------------------------------------------------|
| <code>__s</code>    | Null terminated string specifying the filename.  |
| <code>__mode</code> | Open file in specified mode (see std::ios_base). |

`ios_base::out` is automatically included in `__mode`.

Definition at line 790 of file fstream.

## 4.301.4.3 basic\_ofstream() [3/3]

```
template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
 const std::string & __s,
 ios_base::openmode __mode = ios_base::out) [inline], [explicit]
```

Create an output file stream.

## Parameters

|                     |                                                  |
|---------------------|--------------------------------------------------|
| <code>__s</code>    | std::string specifying the filename.             |
| <code>__mode</code> | Open file in specified mode (see std::ios_base). |

`ios_base::out` is automatically included in `__mode`.

Definition at line 825 of file fstream.

## 4.301.4.4 ~basic\_ofstream()

```
template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::~~basic_ofstream () [inline]
```

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 862 of file fstream.

## 4.301.5 Member Function Documentation

#### 4.301.5.1 `_M_getloc()`

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 804 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _Inlter>::do_get()`, `std::money_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_date()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_time()`, `std::time_get<_CharT, _Inlter>::do_get_weekday()`, `std::time_put<_CharT, _Outlter>::do_put()`, `std::num_put<_CharT, _Outlter>::do_put()`, `std::time_get<_CharT, _Inlter>::get()`, and `std::time_put<_CharT, _Outlter>::put()`.

#### 4.301.5.2 `_M_write()`

```
template<typename _CharT, typename _Traits>
void std::basic_ostream<_CharT, _Traits>::_M_write (
 const char_type * __s,
 streamsize __n) [inline], [inherited]
```

Core write functionality, without sentry.

##### Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | The array to insert.                    |
| <code>__n</code> | Maximum number of characters to insert. |

Definition at line 317 of file `ostream`.

#### 4.301.5.3 `bad()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::bad () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

**4.301.5.4 clear()**

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

**Parameters**

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See std::ios\_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::exceptions(), std::\_\_detail::operator>>(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

**4.301.5.5 close()**

```
template<typename _CharT , typename _Traits >
void std::basic_ofstream< _CharT, _Traits >::close () [inline]
```

Close the file.

Calls std::basic\_filebuf::close(). If that function fails, failbit is set in the stream's error state.

Definition at line 993 of file fstream.

**4.301.5.6 copyfmt()**

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
 const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of \_\_rhs into this.

**Parameters**

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 63 of file `basic_ios.tcc`.

**4.301.5.7 eof()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other `iostate` flags may also be set.

Definition at line 190 of file `basic_ios.h`.

**4.301.5.8 exceptions() [1/2]**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [inherited]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 222 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`.

**4.301.5.9 exceptions() [2/2]**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
 iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

## Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file `basic_ios.h`.

## 4.301.5.10 fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [inherited]
```

Fast error checking.

## Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator bool()`, and `std::basic_ios< char, _Traits >::operator!()`.

## 4.301.5.11 fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [inherited]
```

Retrieves the *empty* character.

## Returns

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::basic_ios< char, _Traits >::fill()`, and `std::operator<<()`.

**4.301.5.12** `fill()` [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
 char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ' ) in the current locale.

Definition at line 390 of file `basic_ios.h`.

**4.301.5.13** `flags()` [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 649 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _OutIter >::do_put()`, `std::basic_ostream< char >::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, and `std::operator>>()`.

**4.301.5.14** `flags()` [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

## Parameters

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

## Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file `ios_base.h`.

## 4.301.5.15 flush()

```
template<typename _CharT , typename _Traits >
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::flush () [inherited]
```

Synchronizing the stream buffer.

## Returns

`*this`

If `rdbuf ( )` is a null pointer, changes nothing.

Otherwise, calls `rdbuf ( )->pubsync ( )`, and if that returns -1, sets `badbit`.

Definition at line 211 of file `ostream.tcc`.

## 4.301.5.16 getloc()

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

## Returns

A copy of the current locale.

If `imbue (loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale ( )`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutIter >::do_put()`, and `std::ws()`.

#### 4.301.5.17 good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 4.301.5.18 imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
 const locale & __loc) [inherited]
```

Moves to a new locale.

##### Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

##### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 114 of file `basic_ios.tcc`.

## 4.301.5.19 init()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
 basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::basic\_ios().

## 4.301.5.20 is\_open()

```
template<typename _CharT , typename _Traits >
bool std::basic_ofstream< _CharT, _Traits >::is_open () [inline]
```

Wrapper to test for an open file.

## Returns

```
rdbuf() -> is_open()
```

Definition at line 903 of file fstream.

## 4.301.5.21 iword()

```
long& std::ios_base::iword (
 int __ix) [inline], [inherited]
```

Access to integer array.

## Parameters

|                                                                                                       |                       |
|-------------------------------------------------------------------------------------------------------|-----------------------|
|  <code>__ix</code> | Index into the array. |
|-------------------------------------------------------------------------------------------------------|-----------------------|

## Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file `ios_base.h`.

#### 4.301.5.22 `narrow()`

```
template<typename _CharT, typename _Traits>
char std::basic_ios<_CharT, _Traits>::narrow (
 char_type __c,
 char __default) const [inline], [inherited]
```

Squeezes characters.

##### Parameters

|                        |                          |
|------------------------|--------------------------|
| <code>__c</code>       | The character to narrow. |
| <code>__default</code> | The character to narrow. |

##### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,default)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 430 of file `basic_ios.h`.

#### 4.301.5.23 `open()` [1/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ofstream<_CharT, _Traits>::open (
 const char * __s,
 ios_base::openmode __mode = ios_base::out) [inline]
```

Opens an external file.

##### Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 921 of file `fstream`.

#### 4.301.5.24 open() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ofstream< _CharT, _Traits >::open (
 const std::string & __s,
 ios_base::openmode __mode = ios_base::out) [inline]
```

Opens an external file.

##### Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

Calls `std::basic_filebuf::open(s,mode|out)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 960 of file `fstream`.

#### 4.301.5.25 operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 117 of file `basic_ios.h`.

#### 4.301.5.26 operator"!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 125 of file `basic_ios.h`.

**4.301.5.27 operator<<()** [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 __ostream_type &(*) (__ostream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "`std::cout << std::endl`". For more information, see the `iomanip` header.

Definition at line 108 of file `ostream`.

**4.301.5.28 operator<<()** [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 __ios_type &(*) (__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "`std::cout << std::endl`". For more information, see the `iomanip` header.

Definition at line 117 of file `ostream`.

**4.301.5.29 operator<<()** [3/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "`std::cout << std::endl`". For more information, see the `iomanip` header.

Definition at line 127 of file `ostream`.

**4.301.5.30 operator<<()** [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file ostream.

## 4.301.5.31 operator&lt;&lt;() [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ofstream< _CharT, _Traits >::operator<< (
 unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file ostream.

## 4.301.5.32 operator&lt;&lt;() [6/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ofstream< _CharT, _Traits >::operator<< (
 bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                   |                                      |
|-----------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                  |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file `ostream`.

**4.301.5.33 operator<<() [7/17]**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 short __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                     |                                      |
|-------------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                    |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file `ostream.tcc`.

**4.301.5.34 operator<<() [8/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                                    |                                      |
|------------------------------------|--------------------------------------|
| <code>_↵</code><br><code>_n</code> | A variable of builtin integral type. |
|------------------------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file ostream.

## 4.301.5.35 operator&lt;&lt;() [9/17]

```
template<typename _CharT , typename _Traits >
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::operator<< (
 int __n) [inherited]
```

Integer arithmetic inserters.

## Parameters

|                                    |                                      |
|------------------------------------|--------------------------------------|
| <code>_↵</code><br><code>_n</code> | A variable of builtin integral type. |
|------------------------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file ostream.tcc.

## 4.301.5.36 operator&lt;&lt;() [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ofstream< _CharT, _Traits >::operator<< (
 unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                                    |                                      |
|----------------------------------------------------------------------------------------------------|--------------------------------------|
|  <code>__n</code> | A variable of builtin integral type. |
|----------------------------------------------------------------------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file `ostream`.

**4.301.5.37 operator<<() [11/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                                      |                                      |
|------------------------------------------------------------------------------------------------------|--------------------------------------|
|  <code>__n</code> | A variable of builtin integral type. |
|------------------------------------------------------------------------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file `ostream`.

**4.301.5.38 operator<<() [12/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file `ostream`.

## 4.301.5.39 operator&lt;&lt;() [13/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ofstream< _CharT, _Traits >::operator<< (
 double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

|                  |                                            |
|------------------|--------------------------------------------|
| <code>__f</code> | A variable of builtin floating point type. |
|------------------|--------------------------------------------|

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file `ostream`.

## 4.301.5.40 operator&lt;&lt;() [14/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ofstream< _CharT, _Traits >::operator<< (
 float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

|          |                                            |
|----------|--------------------------------------------|
| ↵        | A variable of builtin floating point type. |
| ↵        |                                            |
| ↵        |                                            |
| ↵        |                                            |
| <i>f</i> |                                            |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

**4.301.5.41 operator<<()** [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

|          |                                            |
|----------|--------------------------------------------|
| ↵        | A variable of builtin floating point type. |
| ↵        |                                            |
| ↵        |                                            |
| ↵        |                                            |
| <i>f</i> |                                            |

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

**4.301.5.42 operator<<()** [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

## Parameters

|                 |                             |
|-----------------|-----------------------------|
| <code>_p</code> | A variable of pointer type. |
|-----------------|-----------------------------|

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file `ostream`.

4.301.5.43 `operator<<()` [17/17]

```
template<typename _CharT , typename _Traits >
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::operator<< (
 __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

## Parameters

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set `failbit` in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets `failbit` in the error state

If the function inserts no characters, `failbit` is set.

Definition at line 120 of file `ostream.tcc`.

**4.301.5.44** `precision()` [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::operator<<()`.

**4.301.5.45** `precision()` [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

**Returns**

The previous value of `precision()`.

Definition at line 728 of file `ios_base.h`.

**4.301.5.46** `put()`

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
 char_type __c) [inherited]
```

Simple insertion.

**Parameters**

|                  |                          |
|------------------|--------------------------|
| <code>__c</code> | The character to insert. |
|------------------|--------------------------|

**Returns**

\*this

Tries to insert \_\_c.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

**4.301.5.47 pword()**

```
void*& std::ios_base::pword (
 int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

**Returns**

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file ios\_base.h.

**4.301.5.48 rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
 basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file `basic_ios.tcc`.

**4.301.5.49 `rdbuf()` [2/2]**

```
template<typename _CharT, typename _Traits >
__filebuf_type* std::basic_ofstream< _CharT, _Traits >::rdbuf () const [inline]
```

Accessing the underlying buffer.

**Returns**

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Definition at line 895 of file `fstream`.

**4.301.5.50 `rdstate()`**

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< char >::unset()`.

**4.301.5.51 `register_callback()`**

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

## Parameters

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

## 4.301.5.52 seekp() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::seekp (
 pos_type __pos) [inherited]
```

Changing the current write position.

## Parameters

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets `failbit`.

Definition at line 258 of file `ostream.tcc`.

## 4.301.5.53 seekp() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::seekp (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

## Parameters

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets `failbit`.

Definition at line 290 of file `ostream.tcc`.

#### 4.301.5.54 `setf()` [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

##### Parameters

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

##### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file `ios_base.h`.

Referenced by `std::__detail::operator>>()`.

#### 4.301.5.55 `setf()` [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

##### Parameters

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__fmtfl</code> | Additional flags to set.          |
| <code>__mask</code>  | The flags mask for <i>fmtfl</i> . |

##### Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file ios\_base.h.

#### 4.301.5.56 setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

##### Parameters

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See std::ios\_base::iostate for the possible bit values.

Definition at line 157 of file basic\_ios.h.

Referenced by std::operator<<(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::ws().

#### 4.301.5.57 sync\_with\_stdio()

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

##### Parameters

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

##### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

#### 4.301.5.58 tellp()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()
[inherited]
```

Getting the current write position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

**4.301.5.59 tie()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie () const [inline], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**4.301.5.60 tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
 basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

## 4.301.5.61 unsetf()

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

## Parameters

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file `ios_base.h`.

## 4.301.5.62 widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
 char __c) const [inline], [inherited]
```

Widens characters.

## Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
|------------------|-------------------------|

## Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**4.301.5.63** `width()` [1/2]

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

**4.301.5.64** `width()` [2/2]

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

**Returns**

The previous value of `width()`.

Definition at line 751 of file `ios_base.h`.

**4.301.5.65** `write()`

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
 const char_type * __s,
 streamsize __n) [inherited]
```

Character string insertion.

## Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | The array to insert.                    |
| <code>__n</code> | Maximum number of characters to insert. |

## Returns

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file `ostream.tcc`.

## 4.301.5.66 xalloc()

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

## Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `word` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `word` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `word` and `pword` arrays.

## 4.301.6 Member Data Documentation

#### 4.301.6.1 adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _Outlter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### 4.301.6.2 app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file `ios_base.h`.

#### 4.301.6.3 ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file `ios_base.h`.

#### 4.301.6.4 badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::fail()`, and `std::operator<<()`.

#### 4.301.6.5 basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 399 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::hex()`, `std::oct()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.301.6.6 beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file ios\_base.h.

#### 4.301.6.7 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.binary>.

Definition at line 458 of file ios\_base.h.

#### 4.301.6.8 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file ios\_base.h.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

#### 4.301.6.9 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios\_base.h.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`.

#### 4.301.6.10 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios\_base.h.

Referenced by std::dec().

#### 4.301.6.11 end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

#### 4.301.6.12 eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_istream< char >::unget(), and std::ws().

#### 4.301.6.13 failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::time\_get< \_CharT, \_InIter >::get(), and std::basic\_ostream< \_CharT, \_Traits >::sentry() and std::basic\_ostream< \_CharT, \_Traits >::flush().

## 4.301.6.14 fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file ios\_base.h.

Referenced by std::fixed(), and std::hexfloat().

## 4.301.6.15 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 402 of file ios\_base.h.

Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

## 4.301.6.16 goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< char >::flush(), std::basic\_istream< char >::get(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::getline(), std::basic\_istream< char >::ignore(), std::basic\_ostream< char >::operator<<(), std::basic\_istream< char >::operator>>(), std::operator>>(), std::basic\_istream< char >::peek(), std::basic\_ostream< char >::put(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::read(), std::basic\_istream< char >::readsome(), std::basic\_istream< char >::seekg(), std::basic\_ostream< char >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< char >::sync(), and std::basic\_istream< char >::unget().

## 4.301.6.17 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), and std::basic\_ostream< char >::operator<<().

#### 4.301.6.18 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Definition at line 461 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`.

#### 4.301.6.19 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 4.301.6.20 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, and `std::left()`.

#### 4.301.6.21 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.301.6.22 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`.

#### 4.301.6.23 right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file `ios_base.h`.

Referenced by `std::right()`.

#### 4.301.6.24 scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file `ios_base.h`.

Referenced by `std::hexfloat()`, and `std::scientific()`.

#### 4.301.6.25 showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::noshowbase()`, and `std::showbase()`.

**4.301.6.26 showpoint**

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

**4.301.6.27 showpos**

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

**4.301.6.28 skipws**

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

**4.301.6.29 trunc**

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

Definition at line 467 of file ios\_base.h.

## 4.301.6.30 unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file ios\_base.h.

Referenced by std::nunitbuf(), and std::unitbuf().

## 4.301.6.31 uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following file:

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`

- [\\_\\_ostream\\_type](#) & [operator<<](#) (float \_\_f)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (long double \_\_f)

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

## Friends

- class `sentry`

## 4.302.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ostream<_CharT, _Traits>
```

Template class `basic_ostream`.

## Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual output.

Definition at line 86 of file `iosfwd`.

## 4.302.2 Member Typedef Documentation

#### 4.302.2.1 \_\_num\_get\_type

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_get_type [inherited]
```

These are non-standard types.

Definition at line 91 of file basic\_ios.h.

#### 4.302.2.2 event\_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

##### Parameters

|                                                                                                      |                                                        |
|------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
|  <code>__e</code>   | One of the members of the event enum.                  |
|  <code>__b</code>   | Reference to the ios_base object.                      |
|  <code>__i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several ios\_base and basic\_ios functions, specifically imbue(), copyfmt(), and ~ios().

Definition at line 529 of file ios\_base.h.

#### 4.302.2.3 fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex

- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios\_base.h.

#### 4.302.2.4 iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios\_base.h.

#### 4.302.2.5 openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 447 of file `ios_base.h`.

#### 4.302.2.6 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

### 4.302.3 Member Enumeration Documentation

#### 4.302.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 512 of file `ios_base.h`.

#### 4.302.4 Constructor & Destructor Documentation

##### 4.302.4.1 `basic_ostream()`

```
template<typename _CharT, typename _Traits>
std::basic_ostream< _CharT, _Traits >::basic_ostream (
 __streambuf_type * __sb) [inline], [explicit]
```

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 84 of file ostream.

##### 4.302.4.2 `~basic_ostream()`

```
template<typename _CharT, typename _Traits>
virtual std::basic_ostream< _CharT, _Traits >::~~basic_ostream () [inline], [virtual]
```

Base destructor.

This does very little apart from providing a virtual base dtor.

Definition at line 93 of file ostream.

#### 4.302.5 Member Function Documentation

##### 4.302.5.1 `_M_getloc()`

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 804 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _Inlter >::do_get()`, `std::money_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_time()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_put< _CharT, _Outlter >::do_put()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_get< _CharT, _Inlter >::get()`, and `std::time_put< _CharT, _Outlter >::put()`.

##### 4.302.5.2 `_M_write()`

```
template<typename _CharT, typename _Traits>
void std::basic_ostream< _CharT, _Traits >::_M_write (
 const char_type * __s,
 streamsize __n) [inline]
```

Core write functionality, without sentry.

**Parameters**

|                        |                                         |
|------------------------|-----------------------------------------|
| <code>_↵<br/>_s</code> | The array to insert.                    |
| <code>_↵<br/>_n</code> | Maximum number of characters to insert. |

Definition at line 317 of file ostream.

**4.302.5.3 bad()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

**4.302.5.4 clear()**

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

**Parameters**

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See std::ios\_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::exceptions(), std::\_\_detail::operator>>(), std::basic\_istream< char >↵::putback(), std::basic\_istream< char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

#### 4.302.5.5 copyfmt()

```
template<typename _CharT, typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
 const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of \_\_rhs into this.

##### Parameters

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

##### Returns

Reference to this object.

All fields of \_\_rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase\_event. After copying, each (new) callback is invoked with copyfmt\_event. The final step is to copy exceptions().

Definition at line 63 of file basic\_ios.tcc.

#### 4.302.5.6 eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file basic\_ios.h.

#### 4.302.5.7 exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [inherited]
```

Throwing exceptions on errors.

##### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 222 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt().

## 4.302.5.8 exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
 iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

## Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file `basic_ios.h`.

## 4.302.5.9 fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [inherited]
```

Fast error checking.

## Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator bool()`, and `std::basic_ios< char, _Traits >::operator!()`.

**4.302.5.10** `fill()` [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [inherited]
```

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::basic_ios< char, _Traits >::fill()`, and `std::operator<<()`.

**4.302.5.11** `fill()` [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
 char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file `basic_ios.h`.

**4.302.5.12** `flags()` [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 649 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< char >::operator<<(), std::operator<<(), std::\_\_detail::operator>>(), and std::operator>>().

**4.302.5.13 flags()** [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file ios\_base.h.

**4.302.5.14 flush()**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush ()
```

Synchronizing the stream buffer.

**Returns**

`*this`

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

#### 4.302.5.15 getloc()

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios<char, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, and `std::ws()`.

#### 4.302.5.16 good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::good () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

#### 4.302.5.17 imbue()

```
template<typename _CharT, typename _Traits>
locale std::basic_ios<_CharT, _Traits>::imbue (
 const locale & __loc) [inherited]
```

Moves to a new locale.

##### Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 114 of file `basic_ios.tcc`.

**4.302.5.18 init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
 basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< char, _Traits >::basic_ios()`.

**4.302.5.19 iword()**

```
long& std::ios_base::iword (
 int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file ios\_base.h.

#### 4.302.5.20 narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
 char_type __c,
 char __default) const [inline], [inherited]
```

Squeezes characters.

##### Parameters

|                        |                          |
|------------------------|--------------------------|
| <code>__c</code>       | The character to narrow. |
| <code>__default</code> | The character to narrow. |

##### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>↔

Definition at line 430 of file basic\_ios.h.

#### 4.302.5.21 operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 117 of file basic\_ios.h.

## 4.302.5.22 operator!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::operator! () const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 125 of file `basic_ios.h`.

## 4.302.5.23 operator&lt;&lt;() [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 __ostream_type &(*) (__ostream_type &) __pf) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 108 of file `ostream`.

## 4.302.5.24 operator&lt;&lt;() [2/17]

```
template<typename _CharT, typename _Traits>
__ios_type &(*) (__ios_type &) __pf) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 117 of file `ostream`.

## 4.302.5.25 operator&lt;&lt;() [3/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 ios_base &(*) (ios_base &) __pf) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 127 of file `ostream`.

## 4.302.5.26 operator&lt;&lt;() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 long __n) [inline]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                   |                                      |
|-----------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                  |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file `ostream`.

**4.302.5.27 operator<<() [5/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long __n) [inline]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                     |                                      |
|-------------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                    |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file `ostream`.

**4.302.5.28 operator<<() [6/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 bool __n) [inline]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>_↵</code>  | A variable of builtin integral type. |
| <code>__n</code> |                                      |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

## 4.302.5.29 operator&lt;&lt;() [7/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 short __n)
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>_↵</code>  | A variable of builtin integral type. |
| <code>__n</code> |                                      |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

## 4.302.5.30 operator&lt;&lt;() [8/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned short __n) [inline]
```

Integer arithmetic inserters.

**Parameters**

|                                     |                                      |
|-------------------------------------|--------------------------------------|
| <code>__</code><br><code>__n</code> | A variable of builtin integral type. |
|-------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file `ostream`.

**4.302.5.31 operator<<() [9/17]**

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 int __n)
```

Integer arithmetic inserters.

**Parameters**

|                                     |                                      |
|-------------------------------------|--------------------------------------|
| <code>__</code><br><code>__n</code> | A variable of builtin integral type. |
|-------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file `ostream.tcc`.

**4.302.5.32 operator<<() [10/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned int __n) [inline]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file ostream.

## 4.302.5.33 operator&lt;&lt;() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long long __n) [inline]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file ostream.

## 4.302.5.34 operator&lt;&lt;() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long long __n) [inline]
```

Integer arithmetic inserters.

**Parameters**

|                       |                                      |
|-----------------------|--------------------------------------|
| $\leftarrow$<br>$\_n$ | A variable of builtin integral type. |
|-----------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file `ostream`.

**4.302.5.35 operator<<() [13/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 double __f) [inline]
```

Floating point arithmetic inserters.

**Parameters**

|                                                     |                                            |
|-----------------------------------------------------|--------------------------------------------|
| $\leftarrow$<br>$\_$<br>$\leftarrow$<br>$\_$<br>$f$ | A variable of builtin floating point type. |
|-----------------------------------------------------|--------------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file `ostream`.

**4.302.5.36 operator<<() [14/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 float __f) [inline]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

## 4.302.5.37 operator&lt;&lt;() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 long double __f) [inline]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

## 4.302.5.38 operator&lt;&lt;() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 const void * __p) [inline]
```

Pointer arithmetic inserters.

**Parameters**

|                        |                             |
|------------------------|-----------------------------|
| <code>_↵<br/>_p</code> | A variable of pointer type. |
|------------------------|-----------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file `ostream`.

**4.302.5.39 operator<<() [17/17]**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 __streambuf_type * __sb)
```

Extracting from another streambuf.

**Parameters**

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file `ostream.tcc`.

## 4.302.5.40 precision() [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt(), and std::operator<<().

## 4.302.5.41 precision() [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

**Returns**

The previous value of precision().

Definition at line 728 of file ios\_base.h.

## 4.302.5.42 put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
 char_type __c)
```

Simple insertion.

**Parameters**

|                  |                          |
|------------------|--------------------------|
| <code>__c</code> | The character to insert. |
|------------------|--------------------------|

**Returns**

\*this

Tries to insert \_\_c.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

**4.302.5.43 pword()**

```
void*& std::ios_base::pword (
 int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

**Returns**

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file ios\_base.h.

**4.302.5.44 rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT, _Traits >::rdbuf () const [inline],
[inherited]
```

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Definition at line 321 of file basic\_ios.h.

Referenced by std::ws().

**4.302.5.45 rdbuf()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
 basic_streambuf< _CharT, _Traits > * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file basic\_ios.tcc.

**4.302.5.46 rdstate()**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< char >::unget()`.

**4.302.5.47 register\_callback()**

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**4.302.5.48 seekp()** [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
 pos_type __pos)
```

Changing the current write position.

**Parameters**

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets `failbit`.

Definition at line 258 of file `ostream.tcc`.

## 4.302.5.49 seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
 off_type __off,
 ios_base::seekdir __dir)
```

Changing the current write position.

## Parameters

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets `failbit`.

Definition at line 290 of file `ostream.tcc`.

## 4.302.5.50 setf() [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

## Parameters

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

## Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file `ios_base.h`.

Referenced by `std::__detail::operator>>()`.

**4.302.5.51** `setf()` [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                                         |
|----------------------|-----------------------------------------|
| <code>__fmtfl</code> | Additional flags to set.                |
| <code>__mask</code>  | The flags mask for <code>fmtfl</code> . |

**Returns**

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file `ios_base.h`.

**4.302.5.52** `setstate()`

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::ws()`.

**4.302.5.53** `sync_with_stdio()`

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

## Parameters

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

## 4.302.5.54 tellp()

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()
```

Getting the current write position.

## Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

## 4.302.5.55 tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie () const [inline], [inherited]
```

Fetches the current *tied* stream.

## Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

## 4.302.5.56 tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
 basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

**4.302.5.57 unsetf()**

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file `ios_base.h`.

**4.302.5.58 widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
 char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
| <code>__C</code> |                         |

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

#### 4.302.5.59 width() [1/2]

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

#### 4.302.5.60 width() [2/2]

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

Parameters

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

Returns

The previous value of `width()`.

Definition at line 751 of file `ios_base.h`.

#### 4.302.5.61 write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
 const char_type * __s,
 streamsize __n)
```

Character string insertion.

##### Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | The array to insert.                    |
| <code>__n</code> | Maximum number of characters to insert. |

##### Returns

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

##### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file `ostream.tcc`.

#### 4.302.5.62 xalloc()

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

##### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

#### 4.302.6 Member Data Documentation

##### 4.302.6.1 adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

##### 4.302.6.2 app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file `ios_base.h`.

##### 4.302.6.3 ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file `ios_base.h`.

##### 4.302.6.4 badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::fail()`, and `std::operator<<()`.

#### 4.302.6.5 basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 399 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, `std::oct()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.302.6.6 beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file `ios_base.h`.

#### 4.302.6.7 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see [https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.↵filestreams.binary](https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary).

Definition at line 458 of file `ios_base.h`.

#### 4.302.6.8 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_↵put()`, and `std::noboolalpha()`.

#### 4.302.6.9 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

#### 4.302.6.10 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios\_base.h.

Referenced by std::dec().

#### 4.302.6.11 end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff().

#### 4.302.6.12 eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_istream< char >::unget(), and std::ws().

#### 4.302.6.13 failbit

```
const ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::fail()`, `std::time_get< _CharT, _InIter >::get()`, and `std::basic_ostream< _CharT, _Traits >::sentry()`.

#### 4.302.6.14 fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::hexfloat()`.

#### 4.302.6.15 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 402 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

#### 4.302.6.16 goodbit

```
const ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< char >::flush()`, `std::basic_istream< char >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< char >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_ostream< char >::operator<<()`, `std::basic_istream< char >::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::peek()`, `std::basic_ostream< char >::put()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::read()`, `std::basic_istream< char >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_ostream< char >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char >::sync()`, and `std::basic_istream< char >::unget()`.

#### 4.302.6.17 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_Inlter >::do\_get(), std::num\_put< \_CharT, \_Outlter >::do\_put(), std::hex(), and std::basic\_ostream< char >::operator<<().

#### 4.302.6.18 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for ifstream and fstream.

Definition at line 461 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::overflow(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekpos(), and std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::underflow().

#### 4.302.6.19 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to right if no such point is designated.

Definition at line 358 of file ios\_base.h.

Referenced by std::internal().

#### 4.302.6.20 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_Outlter >::do\_put(), and std::left().

#### 4.302.6.21 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file ios\_base.h.

Referenced by std::oct(), and std::basic\_ostream< char >::operator<<().

#### 4.302.6.22 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for ofstream and fstream.

Definition at line 464 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::overflow(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::pbackfail(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), and std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekpos().

#### 4.302.6.23 right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file ios\_base.h.

Referenced by std::right().

#### 4.302.6.24 scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file ios\_base.h.

Referenced by std::hexfloat(), and std::scientific().

#### 4.302.6.25 showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file ios\_base.h.

Referenced by std::num\_put<\_CharT, \_Outlter>::do\_put(), std::noshowbase(), and std::showbase().

#### 4.302.6.26 showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

#### 4.302.6.27 showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

#### 4.302.6.28 skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

#### 4.302.6.29 trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

Definition at line 467 of file `ios_base.h`.

#### 4.302.6.30 unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file `ios_base.h`.

Referenced by `std::nunitbuf()`, and `std::unitbuf()`.

#### 4.302.6.31 uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outlter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

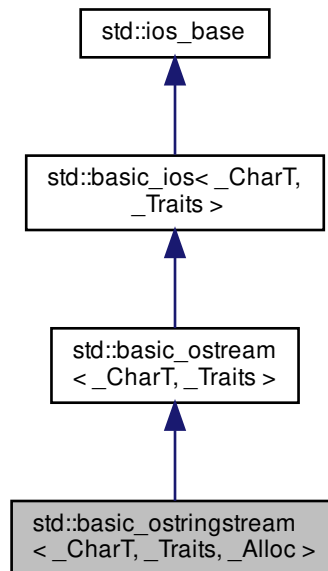

The documentation for this class was generated from the following files:

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [\\_\\_ostream\\_type](#) & [operator<<](#) (long \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned long \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (bool \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (short \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned short \_\_n)

  - [\\_\\_ostream\\_type](#) & [operator<<](#) (float \_\_f)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (long double \_\_f)

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

## 4.303.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_ostringstream< _CharT, _Traits, _Alloc >
```

Controlling output for std::string.

### Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |
| <code>_Alloc</code>  | Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .              |

This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 104 of file `iosfwd`.

### 4.303.2 Member Typedef Documentation

#### 4.303.2.1 `__num_get_type`

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_get_type [inherited]
```

These are non-standard types.

Definition at line 91 of file `basic_ios.h`.

#### 4.303.2.2 `event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

### Parameters

|                       |                                                        |
|-----------------------|--------------------------------------------------------|
| <code>↔<br/>_e</code> | One of the members of the event enum.                  |
| <code>↔<br/>_b</code> | Reference to the <code>ios_base</code> object.         |
| <code>↔<br/>_i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 529 of file `ios_base.h`.

#### 4.303.2.3 fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

*\_Ios\_Fmtflags* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *fmtflags* are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file *ios\_base.h*.

#### 4.303.2.4 iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

*\_Ios\_Iostate* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *iostate* are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file *ios\_base.h*.

#### 4.303.2.5 openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 447 of file `ios_base.h`.

#### 4.303.2.6 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

### 4.303.3 Member Enumeration Documentation

#### 4.303.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 512 of file `ios_base.h`.

## 4.303.4 Constructor &amp; Destructor Documentation

## 4.303.4.1 basic\_ostringstream() [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream () [inline]
```

Default constructor starts with an empty string buffer.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 583 of file `sstream`.

## 4.303.4.2 basic\_ostringstream() [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (
 ios_base::openmode __mode) [inline], [explicit]
```

Starts with an empty string buffer.

## Parameters

|                     |                                                 |
|---------------------|-------------------------------------------------|
| <code>__mode</code> | Whether the buffer can read, or write, or both. |
|---------------------|-------------------------------------------------|

`ios_base::out` is automatically included in `mode`.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 600 of file `sstream`.

## 4.303.4.3 basic\_ostringstream() [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (
 const __string_type & __str,
 ios_base::openmode __mode = ios_base::out) [inline], [explicit]
```

Starts with an existing string buffer.

## Parameters

|                     |                                                 |
|---------------------|-------------------------------------------------|
| <code>__str</code>  | A string to copy as a starting buffer.          |
| <code>__mode</code> | Whether the buffer can read, or write, or both. |

`ios_base::out` is automatically included in *mode*.

Initializes `sb` using *str* and *mode*|out, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 618 of file `sstream`.

4.303.4.4 `~basic_ostringstream()`

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_ostringstream< _CharT, _Traits, _Alloc >::~basic_ostringstream () [inline]
```

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

Definition at line 629 of file `sstream`.

## 4.303.5 Member Function Documentation

4.303.5.1 `_M_getloc()`

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

## Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 804 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _Inlter >::do_get()`, `std::money_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_time()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_put< _CharT, _Outlter >::do_put()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_get< _CharT, _Inlter >::get()`, and `std::time_put< _CharT, _Outlter >::put()`.

4.303.5.2 `_M_write()`

```
template<typename _CharT, typename _Traits>
void std::basic_ostream< _CharT, _Traits >::_M_write (
 const char_type * __s,
 streamsize __n) [inline], [inherited]
```

Core write functionality, without sentry.

**Parameters**

|                        |                                         |
|------------------------|-----------------------------------------|
| <code>_↵<br/>_s</code> | The array to insert.                    |
| <code>_↵<br/>_n</code> | Maximum number of characters to insert. |

Definition at line 317 of file ostream.

**4.303.5.3 bad()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::bad () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

**4.303.5.4 clear()**

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

**Parameters**

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See std::ios\_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::exceptions(), std::\_\_detail::operator>>(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

#### 4.303.5.5 copyfmt()

```
template<typename _CharT, typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
 const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of \_\_rhs into this.

##### Parameters

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

##### Returns

Reference to this object.

All fields of \_\_rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase\_event. After copying, each (new) callback is invoked with copyfmt\_event. The final step is to copy exceptions().

Definition at line 63 of file basic\_ios.tcc.

#### 4.303.5.6 eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file basic\_ios.h.

#### 4.303.5.7 exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [inherited]
```

Throwing exceptions on errors.

##### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 222 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt().

## 4.303.5.8 exceptions() [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits >::exceptions (
 iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

## Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file `basic_ios.h`.

## 4.303.5.9 fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits >::fail () const [inline], [inherited]
```

Fast error checking.

## Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iostate` flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits >::operator bool()`, and `std::basic_ios<char, _Traits >::operator!()`.

**4.303.5.10** `fill()` [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [inherited]
```

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::basic_ios< char, _Traits >::fill()`, and `std::operator<<()`.

**4.303.5.11** `fill()` [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
 char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file `basic_ios.h`.

**4.303.5.12** `flags()` [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 649 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< char >::operator<<(), std::operator<<(), std::\_\_detail::operator>>(), and std::operator>>().

**4.303.5.13 flags()** [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file ios\_base.h.

**4.303.5.14 flush()**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush () [inherited]
```

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

#### 4.303.5.15 `getloc()`

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutIter >::do_put()`, and `std::ws()`.

#### 4.303.5.16 `good()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 4.303.5.17 `imbue()`

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
 const locale & __loc) [inherited]
```

Moves to a new locale.

##### Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 114 of file `basic_ios.tcc`.

**4.303.5.18 init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::init (
 basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< char, _Traits >::basic_ios()`.

**4.303.5.19 iword()**

```
long& std::ios_base::iword (
 int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file ios\_base.h.

#### 4.303.5.20 narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
 char_type __c,
 char __default) const [inline], [inherited]
```

Squeezes characters.

##### Parameters

|                        |                          |
|------------------------|--------------------------|
| <code>__c</code>       | The character to narrow. |
| <code>__default</code> | The character to narrow. |

##### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,default)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 430 of file basic\_ios.h.

#### 4.303.5.21 operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 117 of file basic\_ios.h.

## 4.303.5.22 operator!()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 125 of file `basic_ios.h`.

## 4.303.5.23 operator&lt;&lt;() [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 __ostream_type &(*) (__ostream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 108 of file `ostream`.

## 4.303.5.24 operator&lt;&lt;() [2/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 __ios_type &(*) (__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 117 of file `ostream`.

## 4.303.5.25 operator&lt;&lt;() [3/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 127 of file `ostream`.

## 4.303.5.26 operator&lt;&lt;() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                   |                                      |
|-----------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                  |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file `ostream`.

**4.303.5.27 operator<<() [5/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                     |                                      |
|-------------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                    |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file `ostream`.

**4.303.5.28 operator<<() [6/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

## 4.303.5.29 operator&lt;&lt;() [7/17]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 short __n) [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

## 4.303.5.30 operator&lt;&lt;() [8/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                    |                                      |
|------------------------------------|--------------------------------------|
| <code>_↵</code><br><code>_n</code> | A variable of builtin integral type. |
|------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file `ostream`.

**4.303.5.31 `operator<<()` [9/17]**

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 int __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                    |                                      |
|------------------------------------|--------------------------------------|
| <code>_↵</code><br><code>_n</code> | A variable of builtin integral type. |
|------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file `ostream.tcc`.

**4.303.5.32 `operator<<()` [10/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|       |                                      |
|-------|--------------------------------------|
| $\_n$ | A variable of builtin integral type. |
|-------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file ostream.

## 4.303.5.33 operator&lt;&lt;() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|       |                                      |
|-------|--------------------------------------|
| $\_n$ | A variable of builtin integral type. |
|-------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file ostream.

## 4.303.5.34 operator&lt;&lt;() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                       |                                      |
|-----------------------|--------------------------------------|
| $\leftarrow$<br>$\_n$ | A variable of builtin integral type. |
|-----------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file `ostream`.

**4.303.5.35 operator<<() [13/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

|                                                     |                                            |
|-----------------------------------------------------|--------------------------------------------|
| $\leftarrow$<br>$\_$<br>$\leftarrow$<br>$\_$<br>$f$ | A variable of builtin floating point type. |
|-----------------------------------------------------|--------------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file `ostream`.

**4.303.5.36 operator<<() [14/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

## 4.303.5.37 operator&lt;&lt;() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

## 4.303.5.38 operator&lt;&lt;() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

**Parameters**

|                        |                             |
|------------------------|-----------------------------|
| <code>_↵<br/>_p</code> | A variable of pointer type. |
|------------------------|-----------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file `ostream`.

**4.303.5.39 operator<<() [17/17]**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

**Parameters**

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file `ostream.tcc`.

## 4.303.5.40 precision() [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits >::copyfmt(), and std::operator<<().

## 4.303.5.41 precision() [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

**Returns**

The previous value of precision().

Definition at line 728 of file ios\_base.h.

## 4.303.5.42 put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
 char_type __c) [inherited]
```

Simple insertion.

**Parameters**

|                  |                          |
|------------------|--------------------------|
| <code>__c</code> | The character to insert. |
|------------------|--------------------------|

\*this

This function is not overloaded on signed char and unsigned char.

|   |                       |
|---|-----------------------|
| ← | Index into the array. |
|---|-----------------------|

|  |  |
|--|--|
|  |  |
|--|--|

A reference to a void\* associated with the index.

## Parameters

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

## Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file `basic_ios.tcc`.

4.303.5.45 `rdbuf()` [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__stringbuf_type* std::basic_ostringstream<_CharT, _Traits, _Alloc>::rdbuf () const [inline]
```

Accessing the underlying buffer.

## Returns

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Definition at line 669 of file `sstream`.

4.303.5.46 `rdstate()`

```
template<typename _CharT, typename _Traits>
iosstate std::basic_ios<_CharT, _Traits>::rdstate () const [inline], [inherited]
```

Returns the error state of the stream buffer.

## Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::bad()`, `std::basic_ios<char, _Traits>::eof()`, `std::basic_ios<char, _Traits>::fail()`, `std::basic_ios<char, _Traits>::good()`, `std::basic_istream<char>::putback()`, `std::basic_istream<char>::seekg()`, `std::basic_ios<char, _Traits>::setstate()`, and `std::basic_istream<char>::unset()`.

4.303.5.47 `register_callback()`

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**4.303.5.48 seekp()** [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
 pos_type __pos) [inherited]
```

Changing the current write position.

**Parameters**

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file `ostream.tcc`.

**4.303.5.49 seekp()** [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

**Parameters**

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets `failbit`.

Definition at line 290 of file `ostream.tcc`.

#### 4.303.5.50 `setf()` [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

##### Parameters

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

##### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file `ios_base.h`.

Referenced by `std::__detail::operator>>()`.

#### 4.303.5.51 `setf()` [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

##### Parameters

|                      |                                         |
|----------------------|-----------------------------------------|
| <code>__fmtfl</code> | Additional flags to set.                |
| <code>__mask</code>  | The flags mask for <code>fmtfl</code> . |

##### Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file ios\_base.h.

#### 4.303.5.52 setstate()

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

##### Parameters

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file basic\_ios.h.

Referenced by `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::ws()`.

#### 4.303.5.53 str() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_ostringstream< _CharT, _Traits, _Alloc >::str () const [inline]
```

Copying out the string buffer.

##### Returns

```
rdbuf()->str()
```

Definition at line 677 of file sstream.

Referenced by `std::__detail::operator<<()`.

#### 4.303.5.54 str() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_ostringstream< _CharT, _Traits, _Alloc >::str (
 const __string_type & __s) [inline]
```

Setting a new buffer.

## Parameters

|                 |                                      |
|-----------------|--------------------------------------|
| <code>_↵</code> | The string to use as a new sequence. |
| <code>_s</code> |                                      |

Calls `rdbuf() -> str(s)`.

Definition at line 687 of file `sstream`.

## 4.303.5.55 sync\_with\_stdio()

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

## Parameters

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

## 4.303.5.56 tellp()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()
[inherited]
```

Getting the current write position.

## Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

**4.303.5.57** `tie()` [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits >::tie () const [inline], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**4.303.5.58** `tie()` [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits >::tie (
 basic_ostream<_CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

**4.303.5.59** `unsetf()`

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

## Parameters

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file `ios_base.h`.

## 4.303.5.60 widen()

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
 char __c) const [inline], [inherited]
```

Widens characters.

## Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
|------------------|-------------------------|

## Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

## 4.303.5.61 width() [1/2]

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

## Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::num_put< _CharT, _OutIter >::do_put()`.

**4.303.5.62 width()** [2/2]

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

**Parameters**

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

**Returns**

The previous value of width().

Definition at line 751 of file ios\_base.h.

**4.303.5.63 write()**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
 const char_type * __s,
 streamsize __n) [inherited]
```

Character string insertion.

**Parameters**

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | The array to insert.                    |
| <code>__n</code> | Maximum number of characters to insert. |

**Returns**

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

#### 4.303.5.64 xalloc()

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

##### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 4.303.6 Member Data Documentation

#### 4.303.6.1 adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### 4.303.6.2 app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file `ios_base.h`.

#### 4.303.6.3 ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file `ios_base.h`.

#### 4.303.6.4 badbit

```
const ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::fail()`, and `std::operator<<()`.

#### 4.303.6.5 basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 399 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, `std::oct()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.303.6.6 beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file `ios_base.h`.

#### 4.303.6.7 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Definition at line 458 of file `ios_base.h`.

#### 4.303.6.8 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_←put()`, and `std::noboolalpha()`.

#### 4.303.6.9 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

#### 4.303.6.10 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::dec()`.

#### 4.303.6.11 end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

#### 4.303.6.12 eofbit

```
const ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<char, _Traits>::eof()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<char>::putback()`, `std::basic_istream<char>::seekg()`, `std::basic_istream<char>::unget()`, and `std::ws()`.

#### 4.303.6.13 failbit

```
const ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<char, _Traits>::fail()`, `std::time_get<_CharT, _InIter>::get()`, and `std::basic_ostream<_CharT, _Traits>::sentry()`.

#### 4.303.6.14 fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::hexfloat()`.

#### 4.303.6.15 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 402 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

## 4.303.6.16 goodbit

```
const ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file ios\_base.h.

Referenced by std::time\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< char >::flush(), std::basic\_istream< char >::get(), std::time\_get< \_CharT, \_InIter >::get(), std::basic\_istream< char >::getline(), std::basic\_istream< char >::ignore(), std::basic\_ostream< char >::operator<<(), std::basic\_istream< char >::operator>>(), std::operator>>(), std::basic\_istream< char >::peek(), std::basic\_ostream< char >::put(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::read(), std::basic\_istream< char >::readsome(), std::basic\_istream< char >::seekg(), std::basic\_ostream< char >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< char >::sync(), and std::basic\_istream< char >::unget().

## 4.303.6.17 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), and std::basic\_ostream< char >::operator<<().

## 4.303.6.18 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for ifstream and fstream.

Definition at line 461 of file ios\_base.h.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::overflow(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekoff(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::seekpos(), and std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::underflow().

#### 4.303.6.19 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 4.303.6.20 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, and `std::left()`.

#### 4.303.6.21 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.303.6.22 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`.

#### 4.303.6.23 right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file ios\_base.h.

Referenced by std::right().

#### 4.303.6.24 scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file ios\_base.h.

Referenced by std::hexfloat(), and std::scientific().

#### 4.303.6.25 showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file ios\_base.h.

Referenced by std::num\_put<\_CharT, \_OutIter>::do\_put(), std::noshowbase(), and std::showbase().

#### 4.303.6.26 showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

**4.303.6.27 showpos**

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

**4.303.6.28 skipws**

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

**4.303.6.29 trunc**

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

Definition at line 467 of file ios\_base.h.

**4.303.6.30 unitbuf**

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file ios\_base.h.

Referenced by std::nunitbuf(), and std::unitbuf().

## 4.303.6.31 uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following files:

- [iosfwd](#)

### 4.304.1 Detailed Description

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
class std::basic_regex< _Ch_type, _Rx_traits >
```

Objects of specializations of this class represent regular expressions constructed from sequences of character type `_Ch_type`.

Storage for the regular expression is allocated and deallocated as necessary by the member functions of this class.

Definition at line 36 of file `regex.h`.

## 4.304.2 Constructor &amp; Destructor Documentation

## 4.304.2.1 basic\_regex() [1/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex () [inline]
```

Constructs a basic regular expression that does not match any character sequence.

Definition at line 423 of file regex.h.

Referenced by std::basic\_regex< \_Ch\_type, \_Rx\_traits >::assign().

## 4.304.2.2 basic\_regex() [2/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
 const _Ch_type * __p,
 flag_type __f = ECMAScript) [inline], [explicit]
```

Constructs a basic regular expression from the sequence [\_\_p, \_\_p + char\_traits<\_Ch\_type>::length(\_\_p)) interpreted according to the flags in \_\_f.

## Parameters

|                                                                                            |                                                                                             |
|--------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| <br>__p | A pointer to the start of a C-style null-terminated string containing a regular expression. |
| <br>__f | Flags indicating the syntax rules and options.                                              |

## Exceptions

|                    |                                           |
|--------------------|-------------------------------------------|
| <i>regex_error</i> | if __p is not a valid regular expression. |
|--------------------|-------------------------------------------|

Definition at line 439 of file regex.h.

## 4.304.2.3 basic\_regex() [3/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
 const _Ch_type * __p,
```

```
std::size_t __len,
flag_type __f = ECMAScript) [inline]
```

Constructs a basic regular expression from the sequence [p, p + len) interpreted according to the flags in f.

## Parameters

|                    |                                                                     |
|--------------------|---------------------------------------------------------------------|
| <code>__p</code>   | A pointer to the start of a string containing a regular expression. |
| <code>__len</code> | The length of the string containing the regular expression.         |
| <code>__f</code>   | Flags indicating the syntax rules and options.                      |

## Exceptions

|                          |                                                        |
|--------------------------|--------------------------------------------------------|
| <code>regex_error</code> | if <code>__p</code> is not a valid regular expression. |
|--------------------------|--------------------------------------------------------|

Definition at line 455 of file regex.h.

## 4.304.2.4 basic\_regex() [4/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
 const basic_regex< _Ch_type, _Rx_traits > & __rhs) [default]
```

Copy-constructs a basic regular expression.

## Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__rhs</code> | A regex object. |
|--------------------|-----------------|

## 4.304.2.5 basic\_regex() [5/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
 basic_regex< _Ch_type, _Rx_traits > && __rhs) [default], [noexcept]
```

Move-constructs a basic regular expression.

## Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__rhs</code> | A regex object. |
|--------------------|-----------------|

## 4.304.2.6 basic\_regex() [6/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits , typename _Ch_alloc >
```

```
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
 const std::basic_string< _Ch_type, _Ch_traits, _Ch_alloc > & __s,
 flag_type __f = ECMAScript) [inline], [explicit]
```

Constructs a basic regular expression from the string `s` interpreted according to the flags in `f`.

#### Parameters

|                  |                                                |
|------------------|------------------------------------------------|
| <code>__s</code> | A string containing a regular expression.      |
| <code>__f</code> | Flags indicating the syntax rules and options. |

#### Exceptions

|                          |                                                        |
|--------------------------|--------------------------------------------------------|
| <code>regex_error</code> | if <code>__s</code> is not a valid regular expression. |
|--------------------------|--------------------------------------------------------|

Definition at line 485 of file `regex.h`.

#### 4.304.2.7 `basic_regex()` [7/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _FwdIter >
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
 _FwdIter __first,
 _FwdIter __last,
 flag_type __f = ECMAScript) [inline]
```

Constructs a basic regular expression from the range `[first, last)` interpreted according to the flags in `f`.

#### Parameters

|                      |                                                             |
|----------------------|-------------------------------------------------------------|
| <code>__first</code> | The start of a range containing a valid regular expression. |
| <code>__last</code>  | The end of a range containing a valid regular expression.   |
| <code>__f</code>     | The format flags of the regular expression.                 |

#### Exceptions

|                          |                                                                      |
|--------------------------|----------------------------------------------------------------------|
| <code>regex_error</code> | if <code>[__first, __last)</code> is not a valid regular expression. |
|--------------------------|----------------------------------------------------------------------|

Definition at line 505 of file `regex.h`.

## 4.304.2.8 basic\_regex() [8/8]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex<_Ch_type, _Rx_traits >::basic_regex (
 initializer_list<_Ch_type > __l,
 flag_type __f = ECMAScript) [inline]
```

Constructs a basic regular expression from an initializer list.

## Parameters

|                                |                                             |
|--------------------------------|---------------------------------------------|
| ↩<br>_↩<br>↩<br>_↩<br><i>l</i> | The initializer list.                       |
| ↩<br>_↩<br>↩<br>_↩<br><i>f</i> | The format flags of the regular expression. |

## Exceptions

|                    |                                                        |
|--------------------|--------------------------------------------------------|
| <i>regex_error</i> | if <code>__l</code> is not a valid regular expression. |
|--------------------|--------------------------------------------------------|

Definition at line 518 of file regex.h.

## 4.304.2.9 ~basic\_regex()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex<_Ch_type, _Rx_traits >::~~basic_regex () [inline]
```

Destroys a basic regular expression.

Definition at line 525 of file regex.h.

## 4.304.3 Member Function Documentation

## 4.304.3.1 assign() [1/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex<_Ch_type, _Rx_traits >::assign (
 const basic_regex<_Ch_type, _Rx_traits > & __rhs) [inline]
```

the real assignment operator.

**Parameters**

|                    |                                    |
|--------------------|------------------------------------|
| <code>__rhs</code> | Another regular expression object. |
|--------------------|------------------------------------|

Definition at line 583 of file `regex.h`.

References `std::basic_regex<_Ch_type, _Rx_traits >::swap()`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits >::assign()`, and `std::basic_regex<_Ch_type, _Rx_traits >::operator=()`.

**4.304.3.2 assign()** [2/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex<_Ch_type, _Rx_traits >::assign (
 basic_regex<_Ch_type, _Rx_traits > && __rhs) [inline], [noexcept]
```

The move-assignment operator.

**Parameters**

|                    |                                    |
|--------------------|------------------------------------|
| <code>__rhs</code> | Another regular expression object. |
|--------------------|------------------------------------|

Definition at line 596 of file `regex.h`.

References `std::move()`, and `std::basic_regex<_Ch_type, _Rx_traits >::swap()`.

**4.304.3.3 assign()** [3/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex<_Ch_type, _Rx_traits >::assign (
 const _Ch_type * __p,
 flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

**Parameters**

|                      |                                                                                        |
|----------------------|----------------------------------------------------------------------------------------|
| <code>__p</code>     | A pointer to a C-style null-terminated string containing a regular expression pattern. |
| <code>__flags</code> | Syntax option flags.                                                                   |

## Exceptions

|                    |                                                                                                                                                                                                      |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>regex_error</i> | if <code>__p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged. |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Definition at line 617 of file `regex.h`.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

## 4.304.3.4 assign() [4/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
 const _Ch_type * __p,
 size_t __len,
 flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

## Parameters

|                      |                                                                        |
|----------------------|------------------------------------------------------------------------|
| <code>__p</code>     | A pointer to a C-style string containing a regular expression pattern. |
| <code>__len</code>   | The length of the regular expression pattern string.                   |
| <code>__flags</code> | Syntax option flags.                                                   |

## Exceptions

|                    |                                                                                                                                                                                                    |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>regex_error</i> | if <code>p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged. |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Definition at line 636 of file `regex.h`.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

## 4.304.3.5 assign() [5/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits , typename _Alloc >
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
 const basic_string< _Ch_type, _Ch_traits, _Alloc > & __s,
 flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

## Parameters

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__s</code>     | A string containing a regular expression pattern. |
| <code>__flags</code> | Syntax option flags.                              |

## Exceptions

|                          |                                                                                                                                                                                                      |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>regex_error</code> | if <code>__s</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged. |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Definition at line 652 of file `regex.h`.

References `std::basic_regex<_Ch_type, _Rx_traits>::assign()`, `std::basic_regex<_Ch_type, _Rx_traits>::basic_regex()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

4.304.3.6 `assign()` [6/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _InputIterator >
basic_regex& std::basic_regex<_Ch_type, _Rx_traits>::assign (
 _InputIterator __first,
 _InputIterator __last,
 flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object.

## Parameters

|                      |                                                             |
|----------------------|-------------------------------------------------------------|
| <code>__first</code> | The start of a range containing a valid regular expression. |
| <code>__last</code>  | The end of a range containing a valid regular expression.   |
| <code>__flags</code> | Syntax option flags.                                        |

## Exceptions

|                          |                                                                                                                                                                                            |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>regex_error</code> | if <code>p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, the object remains unchanged. |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Definition at line 674 of file `regex.h`.

References `std::basic_regex<_Ch_type, _Rx_traits>::assign()`.

## 4.304.3.7 assign() [7/7]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex<_Ch_type, _Rx_traits >::assign (
 initializer_list<_Ch_type > __l,
 flag_type __flags = ECMAScript) [inline]
```

Assigns a new regular expression to a regex object.

## Parameters

|                      |                                                        |
|----------------------|--------------------------------------------------------|
| <code>__l</code>     | An initializer list representing a regular expression. |
| <code>__flags</code> | Syntax option flags.                                   |

## Exceptions

|                          |                                                                                                                                                                                              |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>regex_error</code> | if <code>__l</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, the object remains unchanged. |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Definition at line 690 of file `regex.h`.

References `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

## 4.304.3.8 flags()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
flag_type std::basic_regex<_Ch_type, _Rx_traits >::flags () const [inline]
```

Gets the flags used to construct the regular expression or in the last call to `assign()`.

Definition at line 711 of file `regex.h`.

## 4.304.3.9 getloc()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
locale_type std::basic_regex<_Ch_type, _Rx_traits >::getloc () const [inline]
```

Gets the locale currently imbued in the regular expression object.

Definition at line 733 of file `regex.h`.

## 4.304.3.10 imbue()

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
locale_type std::basic_regex<_Ch_type, _Rx_traits >::imbue (
 locale_type __loc) [inline]
```

Imbues the regular expression object with the given locale.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__loc</code> | A locale. |
|--------------------|-----------|

Definition at line 721 of file `regex.h`.

**4.304.3.11** `mark_count()`

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
unsigned int std::basic_regex< _Ch_type, _Rx_traits >::mark_count () const [inline]
```

Gets the number of marked subexpressions within the regular expression.

Definition at line 699 of file `regex.h`.

**4.304.3.12** `operator=()` [1/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
 const basic_regex< _Ch_type, _Rx_traits > & __rhs) [inline]
```

Assigns one regular expression to another.

Definition at line 532 of file `regex.h`.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

**4.304.3.13** `operator=()` [2/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
 basic_regex< _Ch_type, _Rx_traits > && __rhs) [inline], [noexcept]
```

Move-assigns one regular expression to another.

Definition at line 539 of file `regex.h`.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`, and `std::move()`.

**4.304.3.14** `operator=()` [3/5]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
 const _Ch_type * __p) [inline]
```

Replaces a regular expression with a new one constructed from a C-style null-terminated string.

## Parameters

|                 |                                                                                             |
|-----------------|---------------------------------------------------------------------------------------------|
| <code>_p</code> | A pointer to the start of a null-terminated C-style string containing a regular expression. |
|-----------------|---------------------------------------------------------------------------------------------|

Definition at line 550 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

## 4.304.3.15 operator=() [ 4 / 5 ]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
 initializer_list< _Ch_type > __l) [inline]
```

Replaces a regular expression with a new one constructed from an initializer list.

## Parameters

|                  |                       |
|------------------|-----------------------|
| <code>__l</code> | The initializer list. |
|------------------|-----------------------|

## Exceptions

|                          |                                                        |
|--------------------------|--------------------------------------------------------|
| <code>regex_error</code> | if <code>__l</code> is not a valid regular expression. |
|--------------------------|--------------------------------------------------------|

Definition at line 562 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

## 4.304.3.16 operator=() [ 5 / 5 ]

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits , typename _Alloc >
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
 const basic_string< _Ch_type, _Ch_traits, _Alloc > & __s) [inline]
```

Replaces a regular expression with a new one constructed from a string.

**Parameters**

|                                 |                                                        |
|---------------------------------|--------------------------------------------------------|
| <a href="#"><code>_↵</code></a> | A pointer to a string containing a regular expression. |
| <a href="#"><code>_S</code></a> |                                                        |

Definition at line 573 of file `regex.h`.

References `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

**4.304.3.17 swap()**

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
void std::basic_regex<_Ch_type, _Rx_traits >::swap (
 basic_regex<_Ch_type, _Rx_traits > & __rhs) [inline]
```

Swaps the contents of two regular expression objects.

**Parameters**

|                                    |                                    |
|------------------------------------|------------------------------------|
| <a href="#"><code>__rhs</code></a> | Another regular expression object. |
|------------------------------------|------------------------------------|

Definition at line 743 of file `regex.h`.

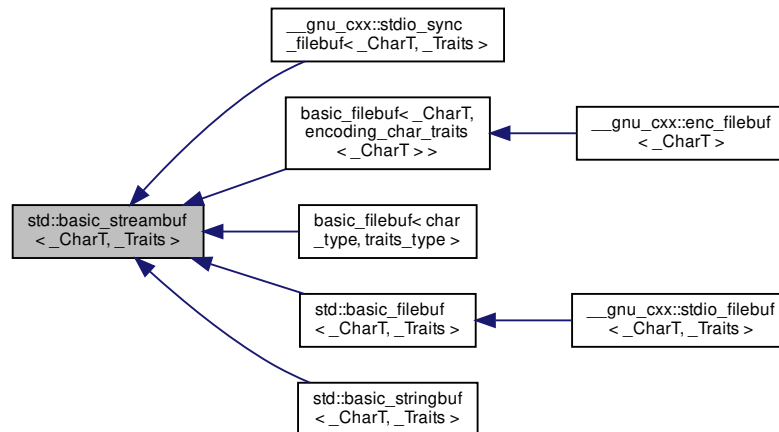

Referenced by `std::basic_regex<_Ch_type, _Rx_traits >::assign()`.

## 4.305.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_streambuf<_CharT, _Traits>
```

The actual work of input and output (interface).

## Template Parameters

|                         |                                                                                                |
|-------------------------|------------------------------------------------------------------------------------------------|
| <a href="#">_CharT</a>  | Type of character stream.                                                                      |
| <a href="#">_Traits</a> | Traits for character type, defaults to <a href="#">char_traits</a> < <a href="#">_CharT</a> >. |

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output.

Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:
  - The controlled input sequence can be not readable.
  - The controlled output sequence can be not writable.
  - The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.
  - The controlled sequences can support operations *directly* to or from associated sequences.
  - The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.
2. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` array object. The array object represents, at any moment, a (sub)sequence of characters from the sequence. Operations performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:
  - the *beginning pointer*, or lowest element address in the array (called *xbeg* here);
  - the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
  - the *end pointer*, or first element address beyond the end of the array (called *xend* here).
3. The following semantic constraints shall always apply for any set of three pointers for a sequence, using the pointer names given immediately above:
  - If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` array, as described above; otherwise, *xbeg* and *xend* shall also be null.
  - If *xnext* is not a null pointer and  $xnext < xend$  for an output sequence, then a *write position* is available. In this case, *\*xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
  - If *xnext* is not a null pointer and  $xbeg < xnext$  for an input sequence, then a *putback position* is available. In this case, *xnext[-1]* shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
  - If *xnext* is not a null pointer and  $xnext < xend$  for an input sequence, then a *read position* is available. In this case, *\*xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

Definition at line 80 of file iosfwd.

#### 4.305.2 Member Typedef Documentation

#### 4.305.2.1 \_\_streambuf\_type

```
template<typename _CharT, typename _Traits>
typedef basic_streambuf<char_type, traits_type> std::basic_streambuf< _CharT, _Traits >::__streambuf_type
```

This is a non-standard type.

Definition at line 140 of file streambuf.

#### 4.305.2.2 char\_type

```
template<typename _CharT, typename _Traits>
typedef _CharT std::basic_streambuf< _CharT, _Traits >::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 131 of file streambuf.

#### 4.305.2.3 int\_type

```
template<typename _CharT, typename _Traits>
typedef traits_type::int_type std::basic_streambuf< _CharT, _Traits >::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 133 of file streambuf.

#### 4.305.2.4 off\_type

```
template<typename _CharT, typename _Traits>
typedef traits_type::off_type std::basic_streambuf< _CharT, _Traits >::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 135 of file streambuf.

#### 4.305.2.5 pos\_type

```
template<typename _CharT, typename _Traits>
typedef traits_type::pos_type std::basic_streambuf< _CharT, _Traits >::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 134 of file streambuf.

#### 4.305.2.6 traits\_type

```
template<typename _CharT, typename _Traits>
typedef _Traits std::basic_streambuf< _CharT, _Traits >::traits_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 132 of file streambuf.

### 4.305.3 Constructor & Destructor Documentation

#### 4.305.3.1 ~basic\_streambuf()

```
template<typename _CharT, typename _Traits>
virtual std::basic_streambuf< _CharT, _Traits >::~~basic_streambuf () [inline], [virtual]
```

Destructor deallocates no buffer space.

Definition at line 204 of file streambuf.

#### 4.305.3.2 basic\_streambuf()

```
template<typename _CharT, typename _Traits>
std::basic_streambuf< _CharT, _Traits >::basic_streambuf () [inline], [protected]
```

Base constructor.

Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the basic\_streambuf class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

Definition at line 470 of file streambuf.

## 4.305.4 Member Function Documentation

## 4.305.4.1 eback()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::eback () const [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 489 of file streambuf.

## 4.305.4.2 egptr()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::egptr () const [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 495 of file streambuf.

#### 4.305.4.3 epptr()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::epptr () const [inline], [protected]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

#### 4.305.4.4 gbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::gbump (
 int __n) [inline], [protected]
```

Moving the read position.

##### Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the read position without returning any data.

Definition at line 505 of file streambuf.

#### 4.305.4.5 getloc()

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::getloc () const [inline]
```

Locale access.

##### Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent loc is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file streambuf.

## 4.305.4.6 gptr()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf<_CharT, _Traits>::gptr () const [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

## 4.305.4.7 imbue()

```
template<typename _CharT, typename _Traits>
virtual void std::basic_streambuf<_CharT, _Traits>::imbue (
 const locale & __loc) [inline], [protected], [virtual]
```

Changes translations.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__loc</code> | A new locale. |
|--------------------|---------------|

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

## Note

Base class version does nothing.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 583 of file streambuf.

#### 4.305.4.8 `in_avail()`

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail () [inline]
```

Looking ahead into the stream.

##### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file `streambuf`.

#### 4.305.4.9 `overflow()`

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::overflow (
 int_type __c = traits_type::eof()) [inline], [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

##### Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__c</code> | An additional character to consume. |
|------------------|-------------------------------------|

##### Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

##### Note

Base class version does nothing, returns `eof()`.

Reimplemented in `std::wbuffer_convert< _Codecvt, _Elem, _Tr >`, `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_type, traits_type, _Alloc >`, `std::basic_filebuf< char_type, traits_type >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, and `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits, _Alloc >`.

Definition at line 775 of file `streambuf`.

## 4.305.4.10 pbackfail()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf<_CharT, _Traits>::pbackfail (
 int_type __c = traits_type::eof()) [inline], [protected], [virtual]
```

Tries to back up the input sequence.

## Parameters

|                  |                                                      |
|------------------|------------------------------------------------------|
| <code>__c</code> | The character to be inserted back into the sequence. |
|------------------|------------------------------------------------------|

## Returns

`eof()` on failure, *some other value* on success

## Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

## Note

Base class version does nothing, returns `eof()`.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<char\\_type, traits\\_type>](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>](#), and [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits, \\_Alloc>](#).

Definition at line 731 of file `streambuf`.

## 4.305.4.11 pbase()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf<_CharT, _Traits>::pbase () const [inline], [protected]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 536 of file `streambuf`.

## 4.305.4.12 pbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf<_CharT, _Traits>::pbump (
 int __n) [inline], [protected]
```

Moving the write position.

**Parameters**

|                 |                             |
|-----------------|-----------------------------|
| <code>_↵</code> | The delta by which to move. |
| <code>_n</code> |                             |

This just advances the write position without returning any data.

Definition at line 552 of file streambuf.

**4.305.4.13 pptr()**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::pptr () const [inline], [protected]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

**4.305.4.14 pubimbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
 const locale & __loc) [inline]
```

Entry point for imbue().

**Parameters**

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls the derived imbue(\_\_loc).

Definition at line 216 of file streambuf.

## 4.305.4.15 pubseekoff()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
 off_type __off,
 ios_base::seekdir __way,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__off</code>  | Offset.                                     |
| <code>__way</code>  | Value for <code>ios_base::seekdir</code> .  |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual seekoff function.

Definition at line 258 of file streambuf.

## 4.305.4.16 pubseekpos()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
 pos_type __sp,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]
```

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__sp</code>   | Position                                    |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual seekpos function.

Definition at line 270 of file streambuf.

## 4.305.4.17 pubsetbuf()

```
template<typename _CharT, typename _Traits>
basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
 char_type * __s,
 streamsize __n) [inline]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file `streambuf`.

#### 4.305.4.18 `pubsync()`

```
template<typename _CharT, typename _Traits>
int std::basic_streambuf< _CharT, _Traits >::pubsync () [inline]
```

Calls virtual `sync` function.

Definition at line 278 of file `streambuf`.

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync()`.

#### 4.305.4.19 `sbumpc()`

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc () [inline]
```

Getting the next character.

##### Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file `streambuf`.

#### 4.305.4.20 `seekoff()`

```
template<typename _CharT, typename _Traits>
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (
 off_type ,
 ios_base::seekdir ,
 ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

##### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< char_type, traits_type >`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >`.

Definition at line 609 of file `streambuf`.

## 4.305.4.21 seekpos()

```
template<typename _CharT, typename _Traits>
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekpos (
 pos_type ,
 ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

## Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< char_type, traits_type >`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >`.

Definition at line 621 of file `streambuf`.

## 4.305.4.22 setbuf()

```
template<typename _CharT, typename _Traits>
virtual basic_streambuf<char_type,_Traits>* std::basic_streambuf< _CharT, _Traits >::setbuf (
 char_type * ,
 streamsize) [inline], [protected], [virtual]
```

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more on this function.

## Note

Base class version does nothing, returns `this`.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< char_type, traits_type >`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >`.

Definition at line 598 of file `streambuf`.

## 4.305.4.23 setg()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setg (
 char_type * __gbeg,
 char_type * __gnext,
 char_type * __gend) [inline], [protected]
```

Setting the three read area pointers.

**Parameters**

|                      |            |
|----------------------|------------|
| <code>__gbeg</code>  | A pointer. |
| <code>__gnext</code> | A pointer. |
| <code>__gend</code>  | A pointer. |

**Postcondition**

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 516 of file `streambuf`.

**4.305.4.24 setp()**

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setp (
 char_type * __pbeg,
 char_type * __pend) [inline], [protected]
```

Setting the three write area pointers.

**Parameters**

|                     |            |
|---------------------|------------|
| <code>__pbeg</code> | A pointer. |
| <code>__pend</code> | A pointer. |

**Postcondition**

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 562 of file `streambuf`.

**4.305.4.25 sgetc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sgetc () [inline]
```

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file `streambuf`.

## 4.305.4.26 sgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (
 char_type * __s,
 streamsize __n) [inline]
```

Entry point for xsgetn.

## Parameters

|                  |                |
|------------------|----------------|
| <code>__s</code> | A buffer area. |
| <code>__n</code> | A count.       |

Returns xsgetn(\_\_s,\_\_n). The effect is to fill \_\_s[0] through \_\_s[\_\_n-1] with characters from the input sequence, if possible.

Definition at line 364 of file streambuf.

## 4.305.4.27 showmanyc()

```
template<typename _CharT, typename _Traits>
virtual streamsize std::basic_streambuf<_CharT, _Traits>::showmanyc () [inline], [protected],
[virtual]
```

Investigating the data available.

## Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1*

## Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

Definition at line 656 of file streambuf.

**4.305.4.28   snextc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::snextc () [inline]
```

Getting the next character.

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file `streambuf`.

**4.305.4.29   sputbackc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
 char_type __c) [inline]
```

Pushing characters back into the input stream.

**Parameters**

|                  |                             |
|------------------|-----------------------------|
| <code>__c</code> | The character to push back. |
|------------------|-----------------------------|

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 379 of file `streambuf`.

**4.305.4.30   sputc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
 char_type __c) [inline]
```

Entry point for all single-character output functions.

## Parameters

|                  |                        |
|------------------|------------------------|
| <code>__c</code> | A character to output. |
|------------------|------------------------|

## Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 431 of file `streambuf`.

Referenced by `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

## 4.305.4.31 sputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sputn (
 const char_type * __s,
 streamsize __n) [inline]
```

Entry point for all single-character output functions.

## Parameters

|                  |                     |
|------------------|---------------------|
| <code>__s</code> | A buffer read area. |
| <code>__n</code> | A count.            |

One of two public output functions.

Returns `xputn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 457 of file `streambuf`.

## 4.305.4.32 sungetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sungetc () [inline]
```

Moving backwards in the input stream.

**Returns**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 404 of file `streambuf`.

**4.305.4.33 sync()**

```
template<typename _CharT, typename _Traits>
virtual int std::basic_streambuf< _CharT, _Traits >::sync (
 void) [inline], [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

**Returns**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented in `std::wbuffer_convert< _Codecvt, _Elem, _Tr >`, `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_type, traits_type >`, `std::basic_filebuf< char_type, traits_type >`, and `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 634 of file `streambuf`.

**4.305.4.34 uflow()**

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow () [inline], [protected], [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 707 of file `streambuf`.

## 4.305.4.35 underflow()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf<_CharT, _Traits>::underflow () [inline], [protected],
[virtual]
```

Fetches more data from the controlled sequence.

## Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

## Note

Base class version does nothing, returns eof().

Reimplemented in `std::wbuffer_convert<_Codecvt, _Elem, _Tr>`, `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_type, traits_type>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, and `__gnu_cxx::stdio_sync_filebuf<_CharT, traits_type>`.

Definition at line 694 of file streambuf.

## 4.305.4.36 xsggetn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf<_CharT, _Traits>::xsggetn (
 char_type * __s,
 streamsize __n) [protected], [virtual]
```

Multiple character extraction.

## Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | A buffer area.                          |
| <code>__n</code> | Maximum number of characters to assign. |

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

Definition at line 46 of file `streambuf.tcc`.

**4.305.4.37 xsputn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::xsputn (
 const char_type * __s,
 streamsize __n) [protected], [virtual]
```

Multiple character insertion.

**Parameters**

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A buffer area.                         |
| <code>__n</code> | Maximum number of characters to write. |

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

Definition at line 80 of file `streambuf.tcc`.

**4.305.5 Member Data Documentation**

#### 4.305.5.1 \_M\_buf\_locale

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected]
```

Current locale setting.

Definition at line 199 of file streambuf.

#### 4.305.5.2 \_M\_in\_beg

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected]

#### Static Public Attributes

- static const size\_type npos

## Protected Types

- typedef iterator `__const_iterator`

## 4.306.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_string< _CharT, _Traits, _Alloc >
```

Managing sequences of characters and character-like objects.

## Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character                                                               |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |
| <code>_Alloc</code>  | Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .              |

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#). Of the [optional sequence requirements](#), only `push_back`, `at`, and array access are supported.

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation↵\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation↵_style.html)

Documentation? What's that? Nathan Myers [ncm@cantrip.org](mailto:ncm@cantrip.org).

A string looks like this:

```

[basic_string<char_type>] [_Rep]
_M_dataplus _M_length
_M_p -----> _M_capacity
 _M_refcount
 unnamed array of char_type
```

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_data()`, and `string↵::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

Definition at line 3139 of file `basic_string.h`.

## 4.306.2 Constructor &amp; Destructor Documentation

## 4.306.2.1 basic\_string() [1/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string () [inline], [noexcept]
```

Default constructor creates an empty string.

Definition at line 3546 of file basic\_string.h.

Referenced by std::basic\_string< char >::substr().

## 4.306.2.2 basic\_string() [2/12]

```
template<typename _CharT , typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
 const _Alloc & __a) [explicit]
```

Construct an empty string using allocator *a*.

Definition at line 620 of file basic\_string.tcc.

## 4.306.2.3 basic\_string() [3/12]

```
template<typename _CharT , typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
 const basic_string< _CharT, _Traits, _Alloc > & __str)
```

Construct string with copy of value of *str*.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

Definition at line 612 of file basic\_string.tcc.

## 4.306.2.4 basic\_string() [4/12]

```
template<typename _CharT , typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
```

```
const basic_string< _CharT, _Traits, _Alloc > & __str,
size_type __pos,
const _Alloc & __a = _Alloc())
```

Construct string as copy of a substring.

#### Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__str</code> | Source string.                         |
| <code>__pos</code> | Index of first character to copy from. |
| <code>__a</code>   | Allocator to use.                      |

Definition at line 626 of file `basic_string.tcc`.

#### 4.306.2.5 `basic_string()` [5/12]

```
template<typename _CharT , typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos,
 size_type __n)
```

Construct string as copy of a substring.

#### Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__str</code> | Source string.                         |
| <code>__pos</code> | Index of first character to copy from. |
| <code>__n</code>   | Number of characters to copy.          |

Definition at line 636 of file `basic_string.tcc`.

#### 4.306.2.6 `basic_string()` [6/12]

```
template<typename _CharT , typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos,
 size_type __n,
 const _Alloc & __a)
```

Construct string as copy of a substring.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__str</code> | Source string.                         |
| <code>__pos</code> | Index of first character to copy from. |
| <code>__n</code>   | Number of characters to copy.          |
| <code>__a</code>   | Allocator to use.                      |

Definition at line 646 of file `basic_string.tcc`.

## 4.306.2.7 basic\_string() [7/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string<_CharT, _Traits, _Alloc >::basic_string (
 const _CharT * __s,
 size_type __n,
 const _Alloc & __a = _Alloc())
```

Construct string initialized by a character array.

## Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__s</code> | Source character array.                          |
| <code>__n</code> | Number of characters to copy.                    |
| <code>__a</code> | Allocator to use (default is default allocator). |

NB: `__s` must have at least `__n` characters, `'\0'` has no special meaning.

Definition at line 658 of file `basic_string.tcc`.

## 4.306.2.8 basic\_string() [8/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string<_CharT, _Traits, _Alloc >::basic_string (
 const _CharT * __s,
 const _Alloc & __a = _Alloc()) [inline]
```

Construct string as copy of a C string.

## Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__s</code> | Source C string.                                 |
| <code>__a</code> | Allocator to use (default is default allocator). |

Definition at line 3619 of file basic\_string.h.

#### 4.306.2.9 basic\_string() [9/12]

```
template<typename _CharT, typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
 size_type __n,
 _CharT __c,
 const _Alloc & __a = _Alloc())
```

Construct string as multiple characters.

##### Parameters

|                       |                                                  |
|-----------------------|--------------------------------------------------|
| <code>↔<br/>_n</code> | Number of characters.                            |
| <code>↔<br/>_c</code> | Character to use.                                |
| <code>↔<br/>_a</code> | Allocator to use (default is default allocator). |

Definition at line 664 of file basic\_string.tcc.

#### 4.306.2.10 basic\_string() [10/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
 basic_string< _CharT, _Traits, _Alloc > && __str) [inline], [noexcept]
```

Move construct string.

##### Parameters

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

The newly-created string contains the exact contents of `__str`. `__str` is a valid, but unspecified string.

Definition at line 3640 of file basic\_string.h.

#### 4.306.2.11 basic\_string() [11/12]

```
template<typename _CharT, typename _Traits , typename _Alloc>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
```

```
initializer_list<_CharT> __l,
const _Alloc & __a = _Alloc())
```

Construct string from an initializer list.

#### Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__l</code> | std::initializer_list of characters.             |
| <code>__a</code> | Allocator to use (default is default allocator). |

Definition at line 679 of file basic\_string.tcc.

#### 4.306.2.12 basic\_string() [12/12]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _InputIterator>
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (
 _InputIterator __beg,
 _InputIterator __end,
 const _Alloc & __a = _Alloc())
```

Construct string as copy of a range.

#### Parameters

|                    |                                                  |
|--------------------|--------------------------------------------------|
| <code>__beg</code> | Start of range.                                  |
| <code>__end</code> | End of range.                                    |
| <code>__a</code>   | Allocator to use (default is default allocator). |

Definition at line 672 of file basic\_string.tcc.

#### 4.306.2.13 ~basic\_string()

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_string<_CharT, _Traits, _Alloc>::~~basic_string () [inline], [noexcept]
```

Destroy the string instance.

Definition at line 3717 of file basic\_string.h.

### 4.306.3 Member Function Documentation

**4.306.3.1** `append()` [1/7]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
 const basic_string< _CharT, _Traits, _Alloc > & __str)
```

Append a string to this string.

**Parameters**

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

**Returns**

Reference to this string.

Definition at line 769 of file `basic_string.tcc`.

Referenced by `std::basic_string< char >::append()`, and `std::basic_string< char >::operator+=()`.

**4.306.3.2** `append()` [2/7]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos,
 size_type __n = npos)
```

Append a substring.

**Parameters**

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__str</code> | The string to append.                                       |
| <code>__pos</code> | Index of the first character of <code>str</code> to append. |
| <code>__n</code>   | The number of characters to append.                         |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                             |
|--------------------------------|---------------------------------------------|
| <code>std::out_of_range</code> | if <code>__pos</code> is not a valid index. |
|--------------------------------|---------------------------------------------|

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of

available characters in `__str`, the remainder of `__str` is appended.

Definition at line 786 of file `basic_string.tcc`.

#### 4.306.3.3 `append()` [3/7]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::append (
 const _CharT * __s,
 size_type __n)
```

Append a C substring.

##### Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__s</code> | The C string to append.             |
| <code>__n</code> | The number of characters to append. |

##### Returns

Reference to this string.

Definition at line 742 of file `basic_string.tcc`.

#### 4.306.3.4 `append()` [4/7]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::append (
 const _CharT * __s) [inline]
```

Append a C string.

##### Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__s</code> | The C string to append. |
|------------------|-------------------------|

##### Returns

Reference to this string.

Definition at line 4252 of file `basic_string.h`.

**4.306.3.5 append()** [5/7]

```
template<typename _CharT, typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
 size_type __n,
 _CharT __c)
```

Append multiple characters.

**Parameters**

|                                                                                                    |                                     |
|----------------------------------------------------------------------------------------------------|-------------------------------------|
|  <code>__n</code> | The number of characters to append. |
|  <code>__c</code> | The character to use.               |

**Returns**

Reference to this string.

Appends `__n` copies of `__c` to this string.

Definition at line 725 of file `basic_string.tcc`.

**4.306.3.6 append()** [6/7]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append (
 initializer_list< _CharT > __l) [inline]
```

Append an `initializer_list` of characters.

**Parameters**

|                                                                                                      |                                                            |
|------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
|  <code>__l</code> | The <code>initializer_list</code> of characters to append. |
|------------------------------------------------------------------------------------------------------|------------------------------------------------------------|

**Returns**

Reference to this string.

Definition at line 4276 of file `basic_string.h`.

#### 4.306.3.7 append() [7/7]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append (
 _InputIterator __first,
 _InputIterator __last) [inline]
```

Append a range of characters.

##### Parameters

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to append. |
| <code>__last</code>  | Iterator marking the end of the range.              |

##### Returns

Reference to this string.

Appends characters in the range [`__first`,`__last`) to this string.

Definition at line 4290 of file `basic_string.h`.

#### 4.306.3.8 assign() [1/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
 const basic_string< _CharT, _Traits, _Alloc > & __str)
```

Set value to contents of another string.

##### Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

##### Returns

Reference to this string.

Definition at line 687 of file `basic_string.tcc`.

Referenced by `std::basic_string< char >::assign()`, and `std::basic_string< char >::operator=()`.

**4.306.3.9** `assign()` [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
 basic_string< _CharT, _Traits, _Alloc > && __str) [inline], [noexcept]
```

Set value to contents of another string.

**Parameters**

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

**Returns**

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

Definition at line 4358 of file `basic_string.h`.

**4.306.3.10** `assign()` [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos,
 size_type __n = npos) [inline]
```

Set value to a substring of a string.

**Parameters**

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__str</code> | The string to use.                   |
| <code>__pos</code> | Index of the first character of str. |
| <code>__n</code>   | Number of characters to use.         |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                           |
|--------------------------------|-------------------------------------------|
| <code>std::out_of_range</code> | if <code>pos</code> is not a valid index. |
|--------------------------------|-------------------------------------------|

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the

number of available characters in `__str`, the remainder of `__str` is used.

Definition at line 4380 of file `basic_string.h`.

#### 4.306.3.11 `assign()` [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc >
basic_string<_CharT, _Traits, _Alloc > & std::basic_string<_CharT, _Traits, _Alloc >::assign (
 const _CharT * __s,
 size_type __n)
```

Set value to a C substring.

##### Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__s</code> | The C string to use.         |
| <code>__n</code> | Number of characters to use. |

##### Returns

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

Definition at line 703 of file `basic_string.tcc`.

#### 4.306.3.12 `assign()` [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::assign (
 const _CharT * __s) [inline]
```

Set value to contents of a C string.

##### Parameters

|                  |                      |
|------------------|----------------------|
| <code>__s</code> | The C string to use. |
|------------------|----------------------|

**Returns**

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

Definition at line 4408 of file `basic_string.h`.

**4.306.3.13 assign()** [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
 size_type __n,
 _CharT __c) [inline]
```

Set value to multiple characters.

**Parameters**

|                  |                                 |
|------------------|---------------------------------|
| <code>__n</code> | Length of the resulting string. |
| <code>__c</code> | The character to use.           |

**Returns**

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

Definition at line 4424 of file `basic_string.h`.

**4.306.3.14 assign()** [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
 _InputIterator __first,
 _InputIterator __last) [inline]
```

Set value to a range of characters.

**Parameters**

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to append. |
| <code>__last</code>  | Iterator marking the end of the range.              |

**Returns**

Reference to this string.

Sets value of string to characters in the range [`__first`,`__last`).

Definition at line 4437 of file `basic_string.h`.

**4.306.3.15 assign()** [8/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::assign (
 initializer_list<_CharT > __l) [inline]
```

Set value to an `initializer_list` of characters.

**Parameters**

|                |                                                            |
|----------------|------------------------------------------------------------|
| <code>↔</code> | The <code>initializer_list</code> of characters to assign. |
| <code>↔</code> |                                                            |
| <code>↔</code> |                                                            |
| <code>↔</code> |                                                            |
| <code>/</code> |                                                            |

**Returns**

Reference to this string.

Definition at line 4447 of file `basic_string.h`.

**4.306.3.16 at()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string<_CharT, _Traits, _Alloc >::at (
 size_type __n) const [inline]
```

Provides access to the data contained in the string.

**Parameters**

|                  |                                       |
|------------------|---------------------------------------|
| <code>↔</code>   | The index of the character to access. |
| <code>__n</code> |                                       |

**Returns**

Read-only (const) reference to the character.

**Exceptions**

|                                |                             |
|--------------------------------|-----------------------------|
| <code>std::out_of_range</code> | If $n$ is an invalid index. |
|--------------------------------|-----------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

Definition at line 4080 of file `basic_string.h`.

**4.306.3.17 at()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::at (
 size_type __n) [inline]
```

Provides access to the data contained in the string.

**Parameters**

|                 |                                       |
|-----------------|---------------------------------------|
| <code>_↔</code> | The index of the character to access. |
| <code>_n</code> |                                       |

**Returns**

Read/write reference to the character.

**Exceptions**

|                                |                             |
|--------------------------------|-----------------------------|
| <code>std::out_of_range</code> | If $n$ is an invalid index. |
|--------------------------------|-----------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

Definition at line 4102 of file `basic_string.h`.

**4.306.3.18 back()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::back () [inline]
```

Returns a read/write reference to the data at the last element of the string.

Definition at line 4141 of file basic\_string.h.

#### 4.306.3.19 back() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::back () const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

Definition at line 4152 of file basic\_string.h.

#### 4.306.3.20 begin() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () [inline]
```

Returns a read/write iterator that points to the first character in the string. Unshares the string.

Definition at line 3803 of file basic\_string.h.

Referenced by std::basic\_string< char >::crend(), std::regex\_match(), std::regex\_replace(), std::regex\_search(), and std::basic\_string< char >::rend().

#### 4.306.3.21 begin() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::begin () const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 3814 of file basic\_string.h.

#### 4.306.3.22 c\_str()

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT* std::basic_string< _CharT, _Traits, _Alloc >::c_str () const [inline], [noexcept]
```

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 5207 of file basic\_string.h.

Referenced by std::collate< \_CharT >::do\_compare(), std::money\_get< \_CharT, \_Inlter >::do\_get(), std::num\_get< \_CharT, \_Inlter >::do\_get(), std::collate< \_CharT >::do\_transform(), std::regex\_replace(), and std::experimental::filesystem::v1::filesystem\_error::what().

#### 4.306.3.23 capacity()

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::capacity () const [inline], [noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 3976 of file basic\_string.h.

Referenced by `std::basic_string< char >::push_back()`, and `std::basic_string< char >::shrink_to_fit()`.

#### 4.306.3.24 cbegin()

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cbegin () const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 3878 of file basic\_string.h.

#### 4.306.3.25 cend()

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cend () const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 3886 of file basic\_string.h.

#### 4.306.3.26 clear()

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::clear () [inline], [noexcept]
```

Erases the string, making it empty.

Definition at line 4004 of file basic\_string.h.

#### 4.306.3.27 compare() [1/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
 const basic_string< _CharT, _Traits, _Alloc > & __str) const [inline]
```

Compare to a string.

## Parameters

|                    |                            |
|--------------------|----------------------------|
| <code>__str</code> | String to compare against. |
|--------------------|----------------------------|

## Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__str`, 0 if their values are equivalent, or > 0 if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 5763 of file `basic_string.h`.

## 4.306.3.28 compare() [2/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
 size_type __pos,
 size_type __n,
 const basic_string< _CharT, _Traits, _Alloc > & __str) const
```

Compare substring to a string.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n</code>   | Number of characters in substring.     |
| <code>__str</code> | String to compare against.             |

## Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 1388 of file `basic_string.tcc`.

**4.306.3.29 compare()** [3/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
 size_type __pos1,
 size_type __n1,
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos2,
 size_type __n2 = npos) const
```

Compare substring to a substring.

**Parameters**

|                     |                                               |
|---------------------|-----------------------------------------------|
| <code>__pos1</code> | Index of first character of substring.        |
| <code>__n1</code>   | Number of characters in substring.            |
| <code>__str</code>  | String to compare against.                    |
| <code>__pos2</code> | Index of first character of substring of str. |
| <code>__n2</code>   | Number of characters in substring of str.     |

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 1403 of file `basic_string.tcc`.

**4.306.3.30 compare()** [4/6]

```
template<typename _CharT, typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
 const _CharT * __s) const [noexcept]
```

Compare to a C string.

**Parameters**

|                  |                              |
|------------------|------------------------------|
| <code>__s</code> | C string to compare against. |
|------------------|------------------------------|

**Returns**

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before \_\_s, 0 if their values are equivalent, or > 0 if this string is ordered after \_\_s. Determines the effective length rlen of the strings to compare as the smallest of size() and the length of a string constructed from \_\_s. The function then compares the two strings by calling traits::compare(data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 1421 of file basic\_string.tcc.

**4.306.3.31 compare()** [5/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
 size_type __pos,
 size_type __n1,
 const _CharT * __s) const
```

Compare substring to a C string.

**Parameters**

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n1</code>  | Number of characters in substring.     |
| <code>__s</code>   | C string to compare against.           |

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the \_\_n1 characters starting at pos. Returns an integer < 0 if the substring is ordered before \_\_s, 0 if their values are equivalent, or > 0 if the substring is ordered after \_\_s. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and the length of a string constructed from \_\_s. The function then compares the two string by calling traits::compare(substring.data(),\_\_s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 1436 of file basic\_string.tcc.

**4.306.3.32 compare()** [6/6]

```
template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
 size_type __pos,
 size_type __n1,
 const _CharT * __s,
 size_type __n2) const
```

Compare substring against a character array.

**Parameters**

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n1</code>  | Number of characters in substring.     |
| <code>__s</code>   | character array to compare against.    |
| <code>__n2</code>  | Number of characters of s.             |

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least `n2` characters, `'\0'` has no special meaning.

Definition at line 1452 of file `basic_string.tcc`.

**4.306.3.33 copy()**

```
template<typename _CharT, typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::copy (
 _CharT * __s,
 size_type __n,
 size_type __pos = 0) const
```

Copy substring into C string.

**Parameters**

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__s</code>   | C string to copy value into.      |
| <code>__n</code>   | Number of characters to copy.     |
| <code>__pos</code> | Index of first character to copy. |

**Returns**

Number of characters actually copied

**Exceptions**

|                                |                                     |
|--------------------------------|-------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> . |
|--------------------------------|-------------------------------------|

Copies up to `__n` characters starting at `__pos` into the C string `__s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

Definition at line 1138 of file `basic_string.tcc`.

#### 4.306.3.34 `crbegin()`

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::crbegin () const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 3895 of file `basic_string.h`.

#### 4.306.3.35 `crend()`

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::crend () const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 3904 of file `basic_string.h`.

#### 4.306.3.36 `data()`

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT* std::basic_string<_CharT, _Traits, _Alloc>::data () const [inline], [noexcept]
```

Return const pointer to contents.

This is a pointer to internal data. It is undefined to modify the contents through the returned pointer. To get a pointer that allows modifying the contents use `&str[0]` instead, (or in C++17 the non-const `str.data()` overload).

Definition at line 5219 of file `basic_string.h`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits>::assign()`, `std::basic_string<char>::compare()`, `std::collate<_CharT>::do_compare()`, `std::collate<_CharT>::do_transform()`, `std::match_results<_Bi_iter>::format()`, `std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::from_bytes()`, `std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::to_bytes()`, and `std::regex_traits<_CharType>::transform()`.

**4.306.3.37 empty()**

```
template<typename _CharT, typename _Traits, typename _Alloc>
bool std::basic_string<_CharT, _Traits, _Alloc>::empty () const [inline], [noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

Definition at line 4026 of file `basic_string.h`.

**4.306.3.38 end()** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string<_CharT, _Traits, _Alloc>::end () [inline]
```

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

Definition at line 3822 of file `basic_string.h`.

Referenced by `std::basic_string< char >::rbegin()`, `std::basic_string< char >::rbegin()`, `std::regex_match()`, `std::regex_replace()`, and `std::regex_search()`.

**4.306.3.39 end()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string<_CharT, _Traits, _Alloc>::end () const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 3833 of file `basic_string.h`.

**4.306.3.40 erase()** [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::erase (
 size_type __pos = 0,
 size_type __n = npos) [inline]
```

Remove characters.

**Parameters**

|                    |                                                     |
|--------------------|-----------------------------------------------------|
| <code>__pos</code> | Index of first character to remove (default 0).     |
| <code>__n</code>   | Number of characters to remove (default remainder). |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::out_of_range</code> | If <i>pos</i> is beyond the end of this string. |
|--------------------------------|-------------------------------------------------|

Removes *\_\_n* characters from this string starting at *\_\_pos*. The length of the string is reduced by *\_\_n*. If there are *< \_\_n* characters to remove, the remainder of the string is truncated. If *\_\_p* is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4710 of file `basic_string.h`.

**4.306.3.41 erase()** [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
 iterator __position) [inline]
```

Remove one character.

**Parameters**

|                   |                                               |
|-------------------|-----------------------------------------------|
| <i>__position</i> | Iterator referencing the character to remove. |
|-------------------|-----------------------------------------------|

**Returns**

iterator referencing same location after removal.

Removes the character at *\_\_position* from this string. The value of the string doesn't change if an error is thrown.

Definition at line 4726 of file `basic_string.h`.

**4.306.3.42 erase()** [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc >←
::erase (
 iterator __first,
 iterator __last)
```

Remove a range of characters.

**Parameters**

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to remove. |
| <code>__last</code>  | Iterator referencing the end of the range.          |

**Returns**

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

Definition at line 835 of file basic\_string.tcc.

**4.306.3.43 find()** [1/4]

```
template<typename _CharT, typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
 const _CharT * __s,
 size_type __pos,
 size_type __n) const [noexcept]
```

Find position of a C substring.

**Parameters**

|                    |                                                         |
|--------------------|---------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                     |
| <code>__pos</code> | Index of character to search from.                      |
| <code>__n</code>   | Number of characters from <code>s</code> to search for. |

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1191 of file basic\_string.tcc.

Referenced by `std::basic_string< char >::find()`, and `std::basic_string< char >::find_first_of()`.

## 4.306.3.44 find() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc >::find (
 const basic_string<_CharT, _Traits, _Alloc > & __str,
 size_type __pos = 0) const [inline], [noexcept]
```

Find position of a string.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String to locate.                              |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 5271 of file `basic_string.h`.

## 4.306.3.45 find() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc >::find (
 const _CharT * __s,
 size_type __pos = 0) const [inline], [noexcept]
```

Find position of a C string.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__s</code>   | C string to locate.                            |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 5286 of file `basic_string.h`.

**4.306.3.46** `find()` [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
 _CharT __c,
 size_type __pos = 0) const [noexcept]
```

Find position of a character.

**Parameters**

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__c</code>   | Character to locate.                           |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1227 of file `basic_string.tcc`.

**4.306.3.47** `find_first_not_of()` [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character not in string.

**Parameters**

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String containing characters to avoid.         |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5579 of file `basic_string.h`.

Referenced by `std::basic_string< char >::find_first_not_of()`.

## 4.306.3.48 find\_first\_not\_of() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc >
basic_string<_CharT, _Traits, _Alloc >::size_type std::basic_string<_CharT, _Traits, _Alloc
>::find_first_not_of (
 const _CharT * __s,
 size_type __pos,
 size_type __n) const [noexcept]
```

Find position of a character not in C substring.

## Parameters

|                    |                                                         |
|--------------------|---------------------------------------------------------|
| <code>__s</code>   | C string containing characters to avoid.                |
| <code>__pos</code> | Index of character to search from.                      |
| <code>__n</code>   | Number of characters from <code>__s</code> to consider. |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1322 of file `basic_string.tcc`.

## 4.306.3.49 find\_first\_not\_of() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc >::find_first_not_of (
 const _CharT * __s,
 size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character not in C string.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__s</code>   | C string containing characters to avoid.       |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5610 of file basic\_string.h.

#### 4.306.3.50 find\_first\_not\_of() [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
 _CharT __c,
 size_type __pos = 0) const [noexcept]
```

Find position of a different character.

##### Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__c</code>   | Character to avoid.                            |
| <code>__pos</code> | Index of character to search from (default 0). |

##### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1335 of file basic\_string.tcc.

#### 4.306.3.51 find\_first\_of() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character of string.

##### Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String containing characters to locate.        |
| <code>__pos</code> | Index of character to search from (default 0). |

##### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5412 of file `basic_string.h`.

Referenced by `std::basic_string<char>::find_first_of()`.

#### 4.306.3.52 find\_first\_of() [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc >
basic_string<_CharT, _Traits, _Alloc >::size_type std::basic_string<_CharT, _Traits, _Alloc
>::find_first_of (
 const _CharT * __s,
 size_type __pos,
 size_type __n) const [noexcept]
```

Find position of a character of C substring.

##### Parameters

|                    |                                                         |
|--------------------|---------------------------------------------------------|
| <code>__s</code>   | String containing characters to locate.                 |
| <code>__pos</code> | Index of character to search from.                      |
| <code>__n</code>   | Number of characters from <code>s</code> to search for. |

##### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1284 of file `basic_string.tcc`.

#### 4.306.3.53 find\_first\_of() [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc >::find_first_of (
 const _CharT * __s,
 size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character of C string.

##### Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__s</code>   | String containing characters to locate.        |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5443 of file `basic_string.h`.

**4.306.3.54 find\_first\_of()** [ 4 / 4 ]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
 _CharT __c,
 size_type __pos = 0) const [inline], [noexcept]
```

Find position of a character.

**Parameters**

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__c</code>   | Character to locate.                           |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(__c, __pos)`.

Definition at line 5463 of file `basic_string.h`.

**4.306.3.55 find\_last\_not\_of()** [ 1 / 4 ]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character not in string.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String containing characters to avoid.                |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5661 of file `basic_string.h`.

Referenced by `std::basic_string< char >::find_last_not_of()`.

**4.306.3.56 find\_last\_not\_of()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
 const _CharT * __s,
 size_type __pos,
 size_type __n) const [noexcept]
```

Find last position of a character not in C substring.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__s</code>   | C string containing characters to avoid.              |
| <code>__pos</code> | Index of character to search back from.               |
| <code>__n</code>   | Number of characters from <code>s</code> to consider. |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1346 of file `basic_string.tcc`.

**4.306.3.57 find\_last\_not\_of()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
 const _CharT * __s,
 size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character not in C string.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__s</code>   | C string containing characters to avoid.              |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5692 of file `basic_string.h`.

**4.306.3.58 find\_last\_not\_of()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
 _CharT __c,
 size_type __pos = npos) const [noexcept]
```

Find last position of a different character.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__c</code>   | Character to avoid.                                   |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1368 of file `basic_string.tcc`.

**4.306.3.59 find\_last\_of()** [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character of string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String containing characters to locate.               |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5496 of file `basic_string.h`.

Referenced by `std::basic_string< char >::find_last_of()`.

## 4.306.3.60 find\_last\_of() [2/4]

```
template<typename _CharT, typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_of (
 const _CharT * __s,
 size_type __pos,
 size_type __n) const [noexcept]
```

Find last position of a character of C substring.

## Parameters

|                    |                                                         |
|--------------------|---------------------------------------------------------|
| <code>__s</code>   | C string containing characters to locate.               |
| <code>__pos</code> | Index of character to search back from.                 |
| <code>__n</code>   | Number of characters from <code>s</code> to search for. |

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1300 of file `basic_string.tcc`.

**4.306.3.61** `find_last_of()` [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of (
 const _CharT * __s,
 size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character of C string.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__s</code>   | C string containing characters to locate.             |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5527 of file `basic_string.h`.

**4.306.3.62** `find_last_of()` [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of (
 _CharT __c,
 size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a character.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__c</code>   | Character to locate.                                  |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(__c, __pos)`.

Definition at line 5547 of file `basic_string.h`.

**4.306.3.63** front() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string<_CharT, _Traits, _Alloc>::front () [inline]
```

Returns a read/write reference to the data at the first element of the string.

Definition at line 4119 of file basic\_string.h.

**4.306.3.64** front() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string<_CharT, _Traits, _Alloc>::front () const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 4130 of file basic\_string.h.

**4.306.3.65** get\_allocator()

```
template<typename _CharT, typename _Traits, typename _Alloc>
allocator_type std::basic_string<_CharT, _Traits, _Alloc>::get_allocator () const [inline],
[noexcept]
```

Return copy of allocator used to construct this string.

Definition at line 5241 of file basic\_string.h.

Referenced by std::basic\_string<char>::assign(), std::basic\_string<char>::basic\_string(), std::basic\_string<char>::clear(), std::wstring\_convert<\_Codecvt, \_Elem, \_Wide\_alloc, \_Byte\_alloc>::from\_bytes(), std::operator+(), std::wstring\_convert<\_Codecvt, \_Elem, \_Wide\_alloc, \_Byte\_alloc>::to\_bytes(), and std::basic\_string<char>::~basic\_string().

**4.306.3.66** insert() [1/9]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::insert (
 iterator __p,
 size_type __n,
 _CharT __c) [inline]
```

Insert multiple characters.

**Parameters**

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing location in string to insert at. |
| <code>__n</code> | Number of characters to insert                        |
| <code>__c</code> | The character to insert.                              |

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4497 of file `basic_string.h`.

Referenced by `std::basic_string<char>::insert()`.

**4.306.3.67 insert()** [2/9]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator >
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
 iterator __p,
 _InputIterator __beg,
 _InputIterator __end) [inline]
```

Insert a range of characters.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__p</code>   | Iterator referencing location in string to insert at. |
| <code>__beg</code> | Start of range.                                       |
| <code>__end</code> | End of range.                                         |

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts characters in range `[__beg,__end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4514 of file `basic_string.h`.

## 4.306.3.68 insert() [3/9]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc >::insert (
 iterator __p,
 initializer_list<_CharT > __l) [inline]
```

Insert an initializer\_list of characters.

## Parameters

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing location in string to insert at. |
| <code>__l</code> | The initializer_list of characters to insert.         |

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Definition at line 4525 of file basic\_string.h.

## 4.306.3.69 insert() [4/9]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::insert (
 size_type __pos1,
 const basic_string<_CharT, _Traits, _Alloc > & __str) [inline]
```

Insert value of a string.

## Parameters

|                     |                                  |
|---------------------|----------------------------------|
| <code>__pos1</code> | Position in string to insert at. |
| <code>__str</code>  | The string to insert.            |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is

thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4545 of file basic\_string.h.

#### 4.306.3.70 insert() [5/9]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
 size_type __pos1,
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos2,
 size_type __n = npos) [inline]
```

Insert a substring.

##### Parameters

|                     |                                       |
|---------------------|---------------------------------------|
| <code>__pos1</code> | Position in string to insert at.      |
| <code>__str</code>  | The string to insert.                 |
| <code>__pos2</code> | Start of characters in str to insert. |
| <code>__n</code>    | Number of characters to insert.       |

##### Returns

Reference to this string.

##### Exceptions

|                                |                                                                             |
|--------------------------------|-----------------------------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                             |
| <code>std::out_of_range</code> | If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> . |

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4567 of file basic\_string.h.

#### 4.306.3.71 insert() [6/9]

```
template<typename _CharT, typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::insert (
 size_type __pos,
 const _CharT * __s,
 size_type __n)
```

Insert a C substring.

## Parameters

|                    |                                     |
|--------------------|-------------------------------------|
| <code>__pos</code> | Position in string to insert at.    |
| <code>__s</code>   | The C string to insert.             |
| <code>__n</code>   | The number of characters to insert. |

## Returns

Reference to this string.

## Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 804 of file `basic_string.tcc`.

## 4.306.3.72 insert() [7/9]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::insert (
 size_type __pos,
 const _CharT * __s) [inline]
```

Insert a C string.

## Parameters

|                    |                                  |
|--------------------|----------------------------------|
| <code>__pos</code> | Position in string to insert at. |
| <code>__s</code>   | The C string to insert.          |

## Returns

Reference to this string.

## Exceptions

|                                |                                                       |
|--------------------------------|-------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .       |
| <code>std::out_of_range</code> | If <code>pos</code> is beyond the end of this string. |

Inserts the first  $n$  characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4608 of file `basic_string.h`.

#### 4.306.3.73 `insert()` [8/9]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
 size_type __pos,
 size_type __n,
 _CharT __c) [inline]
```

Insert multiple characters.

##### Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__pos</code> | Index in string to insert at.  |
| <code>__n</code>   | Number of characters to insert |
| <code>__c</code>   | The character to insert.       |

##### Returns

Reference to this string.

##### Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4631 of file `basic_string.h`.

#### 4.306.3.74 `insert()` [9/9]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
 iterator __p,
 _CharT __c) [inline]
```

Insert one character.

## Parameters

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing position in string to insert at. |
| <code>__c</code> | The character to insert.                              |

## Returns

Iterator referencing newly inserted char.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4649 of file `basic_string.h`.

## 4.306.3.75 length()

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::length () const [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Definition at line 3919 of file `basic_string.h`.

Referenced by `std::collate<_CharT>::do_compare()`, and `std::collate<_CharT>::do_transform()`.

## 4.306.3.76 max\_size()

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::max_size () const [inline], [noexcept]
```

Returns the `size()` of the largest possible string.

Definition at line 3924 of file `basic_string.h`.

Referenced by `std::getline()`.

## 4.306.3.77 operator+=( ) [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::operator+= (
 const basic_string<_CharT, _Traits, _Alloc> & __str) [inline]
```

Append a string to this string.

**Parameters**

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

**Returns**

Reference to this string.

Definition at line 4166 of file `basic_string.h`.

**4.306.3.78 operator+=()** [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::operator+= (
 const _CharT * __s) [inline]
```

Append a C string.

**Parameters**

|                  |                         |
|------------------|-------------------------|
| <code>__s</code> | The C string to append. |
|------------------|-------------------------|

**Returns**

Reference to this string.

Definition at line 4175 of file `basic_string.h`.

**4.306.3.79 operator+=()** [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::operator+= (
 _CharT __c) [inline]
```

Append a character.

**Parameters**

|                  |                          |
|------------------|--------------------------|
| <code>__c</code> | The character to append. |
|------------------|--------------------------|

**Returns**

Reference to this string.

Definition at line 4184 of file basic\_string.h.

**4.306.3.80 operator+=()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::operator+= (
 initializer_list<_CharT > __l) [inline]
```

Append an initializer\_list of characters.

**Parameters**

|   |                                                    |
|---|----------------------------------------------------|
| ↩ | The initializer_list of characters to be appended. |
| ↩ |                                                    |
| ↩ |                                                    |
| ↩ |                                                    |
| / |                                                    |

**Returns**

Reference to this string.

Definition at line 4197 of file basic\_string.h.

**4.306.3.81 operator=()** [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::operator= (
 const basic_string<_CharT, _Traits, _Alloc > & __str) [inline]
```

Assign the value of *str* to this string.

**Parameters**

|       |                |
|-------|----------------|
| __str | Source string. |
|-------|----------------|

Definition at line 3725 of file basic\_string.h.

**4.306.3.82 operator=()** [2/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (
 const _CharT * __s) [inline]
```

Copy contents of *s* into this string.

**Parameters**

|                                                                                          |                                |
|------------------------------------------------------------------------------------------|--------------------------------|
| <br>__s | Source null-terminated string. |
|------------------------------------------------------------------------------------------|--------------------------------|

Definition at line 3733 of file basic\_string.h.

**4.306.3.83 operator=()** [3/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (
 _CharT __c) [inline]
```

Set value to string of length 1.

**Parameters**

|                                                                                            |                   |
|--------------------------------------------------------------------------------------------|-------------------|
| <br>__c | Source character. |
|--------------------------------------------------------------------------------------------|-------------------|

Assigning to a character makes this string length 1 and `(*this)[0] == c`.

Definition at line 3744 of file basic\_string.h.

**4.306.3.84 operator=()** [4/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (
 basic_string< _CharT, _Traits, _Alloc > && __str) [inline], [noexcept]
```

Move assign the value of *str* to this string.

**Parameters**

|       |                |
|-------|----------------|
| __str | Source string. |
|-------|----------------|

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

Definition at line 3759 of file basic\_string.h.

#### 4.306.3.85 operator=() [5/5]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::operator= (
 initializer_list<_CharT > __l) [inline]
```

Set value to string constructed from initializer list.

##### Parameters

|   |                        |
|---|------------------------|
| ↩ | std::initializer_list. |
| ↩ |                        |
| ↩ |                        |
| ↩ |                        |
| ↩ |                        |

Definition at line 3772 of file basic\_string.h.

#### 4.306.3.86 operator[]() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reference std::basic_string<_CharT, _Traits, _Alloc >::operator[] (
 size_type __pos) const [inline], [noexcept]
```

Subscript access to the data contained in the string.

##### Parameters

|       |                                       |
|-------|---------------------------------------|
| __pos | The index of the character to access. |
|-------|---------------------------------------|

##### Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out\_of\_range lookups are not defined. (For checked lookups see at().)

Definition at line 4041 of file basic\_string.h.

**4.306.3.87 operator[]()** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
 size_type __pos) [inline]
```

Subscript access to the data contained in the string.

**Parameters**

|                    |                                       |
|--------------------|---------------------------------------|
| <code>__pos</code> | The index of the character to access. |
|--------------------|---------------------------------------|

**Returns**

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.) Unshares the string.

Definition at line 4058 of file `basic_string.h`.

**4.306.3.88 pop\_back()**

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::pop_back () [inline]
```

Remove the last character.

The string must be non-empty.

Definition at line 4755 of file `basic_string.h`.

**4.306.3.89 push\_back()**

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::push_back (
 _CharT __c) [inline]
```

Append a single character.

**Parameters**

|                  |                      |
|------------------|----------------------|
| <code>__c</code> | Character to append. |
|------------------|----------------------|

Definition at line 4331 of file basic\_string.h.

Referenced by std::basic\_string<char>::operator+=( ).

#### 4.306.3.90 rbegin() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rbegin () [inline]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 3842 of file basic\_string.h.

#### 4.306.3.91 rbegin() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rbegin () const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 3851 of file basic\_string.h.

#### 4.306.3.92 rend() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rend () [inline]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 3860 of file basic\_string.h.

#### 4.306.3.93 rend() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rend () const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 3869 of file basic\_string.h.

#### 4.306.3.94 replace() [1/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace (
 size_type __pos,
 size_type __n,
 const basic_string<_CharT, _Traits, _Alloc> & __str) [inline]
```

Replace characters with value from another string.

**Parameters**

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n</code>   | Number of characters to be replaced. |
| <code>__str</code> | String to insert.                    |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::out_of_range</code> | If <i>pos</i> is beyond the end of this string. |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |

Removes the characters in the range `[__pos, __pos+__n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4780 of file `basic_string.h`.

Referenced by `std::basic_string< char >::append()`, `std::basic_string< char >::assign()`, `std::basic_string< char >::insert()`, and `std::basic_string< char >::replace()`.

**4.306.3.95 replace()** [2/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
 size_type __pos1,
 size_type __n1,
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos2,
 size_type __n2 = npos) [inline]
```

Replace characters with value from another string.

**Parameters**

|                     |                                                |
|---------------------|------------------------------------------------|
| <code>__pos1</code> | Index of first character to replace.           |
| <code>__n1</code>   | Number of characters to be replaced.           |
| <code>__str</code>  | String to insert.                              |
| <code>__pos2</code> | Index of first character of <i>str</i> to use. |
| <code>__n2</code>   | Number of characters from <i>str</i> to use.   |

**Returns**

Reference to this string.

**Exceptions**

|                          |                                                                           |
|--------------------------|---------------------------------------------------------------------------|
| <i>std::out_of_range</i> | If <i>__pos1</i> > <i>size()</i> or <i>__pos2</i> > <i>__str.size()</i> . |
| <i>std::length_error</i> | If new length exceeds <i>max_size()</i> .                                 |

Removes the characters in the range [*\_\_pos1*, *\_\_pos1* + *n*) from this string. In place, the value of *\_\_str* is inserted. If *\_\_pos* is beyond end of string, *out\_of\_range* is thrown. If the length of the result exceeds *max\_size()*, *length\_error* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4802 of file *basic\_string.h*.

**4.306.3.96 replace()** [3/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::replace
(
 size_type __pos,
 size_type __n1,
 const _CharT * __s,
 size_type __n2)
```

Replace characters with value of a C substring.

**Parameters**

|              |                                            |
|--------------|--------------------------------------------|
| <i>__pos</i> | Index of first character to replace.       |
| <i>__n1</i>  | Number of characters to be replaced.       |
| <i>__s</i>   | C string to insert.                        |
| <i>__n2</i>  | Number of characters from <i>s</i> to use. |

**Returns**

Reference to this string.

**Exceptions**

|                          |                                           |
|--------------------------|-------------------------------------------|
| <i>std::out_of_range</i> | If <i>pos1</i> > <i>size()</i> .          |
| <i>std::length_error</i> | If new length exceeds <i>max_size()</i> . |

Removes the characters in the range [*\_\_pos*, *\_\_pos* + *\_\_n1*) from this string. In place, the first *\_\_n2* characters of *\_\_s* are inserted, or all of *\_\_s* if *\_\_n2* is too large. If *\_\_pos* is beyond end of string, *out\_of\_range* is thrown. If the length of

result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 858 of file `basic_string.tcc`.

#### 4.306.3.97 `replace()` [4/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
 size_type __pos,
 size_type __n1,
 const _CharT * __s) [inline]
```

Replace characters with value of a C string.

##### Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n1</code>  | Number of characters to be replaced. |
| <code>__s</code>   | C string to insert.                  |

##### Returns

Reference to this string.

##### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::out_of_range</code> | If <code>pos &gt; size()</code> .               |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the characters of `__s` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4847 of file `basic_string.h`.

#### 4.306.3.98 `replace()` [5/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
 size_type __pos,
 size_type __n1,
 size_type __n2,
 _CharT __c) [inline]
```

Replace characters with multiple characters.

## Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n1</code>  | Number of characters to be replaced. |
| <code>__n2</code>  | Number of characters to insert.      |
| <code>__c</code>   | Character to insert.                 |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> .             |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4871 of file `basic_string.h`.

## 4.306.3.99 replace() [6/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace (
 iterator __i1,
 iterator __i2,
 const basic_string<_CharT, _Traits, _Alloc > & __str) [inline]
```

Replace range of characters with string.

## Parameters

|                    |                                                 |
|--------------------|-------------------------------------------------|
| <code>__i1</code>  | Iterator referencing start of range to replace. |
| <code>__i2</code>  | Iterator referencing end of range to replace.   |
| <code>__str</code> | String value to insert.                         |

## Returns

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1,__i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4889 of file `basic_string.h`.

**4.306.3.100 replace()** [7/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
 iterator __i1,
 iterator __i2,
 const _CharT * __s,
 size_type __n) [inline]
```

Replace range of characters with C substring.

**Parameters**

|                   |                                                     |
|-------------------|-----------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace.     |
| <code>__i2</code> | Iterator referencing end of range to replace.       |
| <code>__s</code>  | C string value to insert.                           |
| <code>__n</code>  | Number of characters from <code>s</code> to insert. |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1,__i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4908 of file `basic_string.h`.

## 4.306.3.101 replace() [8/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace (
 iterator __i1,
 iterator __i2,
 const _CharT * __s) [inline]
```

Replace range of characters with C string.

## Parameters

|                                                                                                     |                                                 |
|-----------------------------------------------------------------------------------------------------|-------------------------------------------------|
|  <code>__i1</code> | Iterator referencing start of range to replace. |
|  <code>__i2</code> | Iterator referencing end of range to replace.   |
|  <code>__s</code>  | C string value to insert.                       |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1,__i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4929 of file `basic_string.h`.

## 4.306.3.102 replace() [9/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc >::replace (
 iterator __i1,
 iterator __i2,
 size_type __n,
 _CharT __c) [inline]
```

Replace range of characters with multiple characters.

## Parameters

|                                                                                                       |                                                 |
|-------------------------------------------------------------------------------------------------------|-------------------------------------------------|
|  <code>__i1</code> | Iterator referencing start of range to replace. |
|-------------------------------------------------------------------------------------------------------|-------------------------------------------------|

**Parameters**

|                   |                                               |
|-------------------|-----------------------------------------------|
| <code>__i2</code> | Iterator referencing end of range to replace. |
| <code>__n</code>  | Number of characters to insert.               |
| <code>__c</code>  | Character to insert.                          |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1,__i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4950 of file `basic_string.h`.

**4.306.3.103 replace()** [10/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
 iterator __i1,
 iterator __i2,
 _InputIterator __k1,
 _InputIterator __k2) [inline]
```

Replace range of characters with range.

**Parameters**

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__k1</code> | Iterator referencing start of range to insert.  |
| <code>__k2</code> | Iterator referencing end of range to insert.    |

**Returns**

Reference to this string.

**Exceptions**

|                          |                                                 |
|--------------------------|-------------------------------------------------|
| <i>std::length_error</i> | If new length exceeds <code>max_size()</code> . |
|--------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, characters in the range `[__k1, __k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4974 of file `basic_string.h`.

**4.306.3.104 replace()** [11/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace (
 iterator __i1,
 iterator __i2,
 initializer_list<_CharT> __l) [inline]
```

Replace range of characters with `initializer_list`.

**Parameters**

|                   |                                                            |
|-------------------|------------------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace.            |
| <code>__i2</code> | Iterator referencing end of range to replace.              |
| <code>__l</code>  | The <code>initializer_list</code> of characters to insert. |

**Returns**

Reference to this string.

**Exceptions**

|                          |                                                 |
|--------------------------|-------------------------------------------------|
| <i>std::length_error</i> | If new length exceeds <code>max_size()</code> . |
|--------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, characters in the range `[__k1, __k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 5043 of file `basic_string.h`.

**4.306.3.105 reserve()**

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::reserve (
 size_type __res_arg = 0)
```

Attempt to preallocate enough memory for specified number of characters.

**Parameters**

|                        |                                |
|------------------------|--------------------------------|
| <code>__res_arg</code> | Number of characters required. |
|------------------------|--------------------------------|

**Exceptions**

|                                |                                                             |
|--------------------------------|-------------------------------------------------------------|
| <code>std::length_error</code> | If <code>__res_arg</code> exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------------------|

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 946 of file `basic_string.tcc`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::tr2::operator>>()`, `std::basic_stringbuf< _CharT, _↵ Traits, _Alloc >::overflow()`, `std::basic_string< char >::push_back()`, and `std::basic_string< char >::shrink_to_fit()`.

**4.306.3.106 resize()** [1/2]

```
template<typename _CharT, typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
 size_type __n,
 _CharT __c)
```

Resizes the string to the specified number of characters.

**Parameters**

|                        |                                                 |
|------------------------|-------------------------------------------------|
| <code>↵<br/>__n</code> | Number of characters the string should contain. |
| <code>↵<br/>__c</code> | Character to fill any new elements.             |

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

Definition at line 1085 of file basic\_string.tcc.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), and std::basic\_string< char >::resize().

#### 4.306.3.107 resize() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
 size_type __n) [inline]
```

Resizes the string to the specified number of characters.

##### Parameters

|                                                                                                       |                                                 |
|-------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| <br><code>__n</code> | Number of characters the string should contain. |
|-------------------------------------------------------------------------------------------------------|-------------------------------------------------|

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

Definition at line 3951 of file basic\_string.h.

#### 4.306.3.108 rfind() [1/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
 const basic_string< _CharT, _Traits, _Alloc > & __str,
 size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a string.

##### Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String to locate.                                     |
| <code>__pos</code> | Index of character to search back from (default end). |

##### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 5333 of file basic\_string.h.

Referenced by `std::basic_string< char >::find_last_of()`, and `std::basic_string< char >::rfind()`.

#### 4.306.3.109 `rfind()` [2/4]

```
template<typename _CharT, typename _Traits, typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
 const _CharT * __s,
 size_type __pos,
 size_type __n) const [noexcept]
```

Find last position of a C substring.

##### Parameters

|                    |                                                         |
|--------------------|---------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                     |
| <code>__pos</code> | Index of character to search back from.                 |
| <code>__n</code>   | Number of characters from <code>s</code> to search for. |

##### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1245 of file `basic_string.tcc`.

#### 4.306.3.110 `rfind()` [3/4]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
 const _CharT * __s,
 size_type __pos = npos) const [inline], [noexcept]
```

Find last position of a C string.

##### Parameters

|                    |                                                      |
|--------------------|------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                  |
| <code>__pos</code> | Index of character to start search at (default end). |

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 5364 of file `basic_string.h`.

**4.306.3.111 rfind()** [4/4]

```
template<typename _CharT, typename _Traits, typename _Alloc >
basic_string<_CharT, _Traits, _Alloc >::size_type std::basic_string<_CharT, _Traits, _Alloc
>::rfind (
 _CharT __c,
 size_type __pos = npos) const [noexcept]
```

Find last position of a character.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__c</code>   | Character to locate.                                  |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1267 of file `basic_string.tcc`.

**4.306.3.112 shrink\_to\_fit()**

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc >::shrink_to_fit () [inline], [noexcept]
```

A non-binding request to reduce `capacity()` to `size()`.

Definition at line 3957 of file `basic_string.h`.

**4.306.3.113** `size()`

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string< _CharT, _Traits, _Alloc >::size () const [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Definition at line 3913 of file `basic_string.h`.

Referenced by `std::basic_string< char >::append()`, `std::basic_regex< _Ch_type, _Rx_traits >::assign()`, `std::basic_string< char >::assign()`, `std::basic_string< char >::at()`, `std::basic_string< char >::cend()`, `std::basic_string< char >::compare()`, `std::basic_string< char >::empty()`, `std::basic_string< char >::end()`, `std::match_results< _Bi_iter >::format()`, `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes()`, `std::operator+`, `std::basic_string< char >::push_back()`, `std::basic_string< char >::shrink_to_fit()`, `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes()`, and `std::regex_traits< _CharType >::transform()`.

**4.306.3.114** `substr()`

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string std::basic_string< _CharT, _Traits, _Alloc >::substr (
 size_type __pos = 0,
 size_type __n = npos) const [inline]
```

Get a substring.

**Parameters**

|                    |                                                        |
|--------------------|--------------------------------------------------------|
| <code>__pos</code> | Index of first character (default 0).                  |
| <code>__n</code>   | Number of characters in substring (default remainder). |

**Returns**

The new string.

**Exceptions**

|                                |                                     |
|--------------------------------|-------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> . |
|--------------------------------|-------------------------------------|

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

Definition at line 5744 of file `basic_string.h`.

4.306.3.115 `swap()`

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::swap (
 basic_string<_CharT, _Traits, _Alloc> & __s) [noexcept]
```

Swap contents with another string.

## Parameters

|                  |                      |
|------------------|----------------------|
| <code>__s</code> | String to swap with. |
|------------------|----------------------|

Exchanges the contents of this string with that of `__s` in constant time.

Definition at line 963 of file `basic_string.tcc`.

Referenced by `std::basic_string<char>::assign()`, and `std::basic_string<char>::operator=()`.

## 4.306.4 Member Data Documentation

4.306.4.1 `npos`

```
template<typename _CharT, typename _Traits, typename _Alloc>
const basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _
_Alloc>::npos [static]
```

Value returned by various member functions when they fail.

Definition at line 3353 of file `basic_string.h`.

The documentation for this class was generated from the following files:

- [basic\\_string.h](#)
- [basic\\_string.tcc](#)

4.307 `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>` Class Template Reference

### Friends

- `template<typename _ItT, typename _SeqT, typename _CatT >`  
class `::__gnu_debug::Safe_iterator`

#### 4.307.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>>
class __gnu_debug::basic_string<_CharT, _Traits, _Allocator >
```

Class `std::basic_string` with safety/checking/debug instrumentation.

Definition at line 86 of file `debug/string`.

#### 4.307.2 Member Function Documentation

##### 4.307.2.1 [\\_M\\_detach\\_all](#)()

```
void __gnu_debug::Safe_sequence_base::_M_detach_all () [protected], [inherited]
```

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~Safe_sequence_base()`.

## 4.307.2.2 \_M\_detach\_singular()

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular () [protected], [inherited]
```

Detach all singular iterators.

**Postcondition**

for all iterators *i* attached to this sequence, *i*->\_M\_version == \_M\_version.

## 4.307.2.3 \_M\_get\_mutex()

```
__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex () throw () [protected],
[inherited]
```

For use in \_Safe\_sequence.

Referenced by \_\_gnu\_debug::\_Safe\_sequence< map< \_Key, \_Tp, \_Compare, \_Allocator > >::\_M\_transfer\_from\_if().

## 4.307.2.4 \_M\_invalidate\_all()

```
void __gnu_debug::_Safe_sequence_base::_M_invalidate_all () const [inline], [protected], [inherited]
```

Invalidates all iterators.

Definition at line 256 of file safe\_base.h.

References \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_version.

## 4.307.2.5 \_M\_invalidate\_if()

```
void __gnu_debug::_Safe_sequence< basic_string< _CharT, _Traits, _Allocator > >::_M_invalidate←
_if (
 _Predicate __pred) [inherited]
```

Invalidates all iterators *x* that reference this sequence, are not singular, and for which \_\_pred(*x*) returns true. \_\_pred will be invoked with the normal iterators nested in the safe ones.

Definition at line 38 of file safe\_sequence.tcc.

#### 4.307.2.6 `_M_revalidate_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular () [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

#### 4.307.2.7 `_M_swap()`

```
void __gnu_debug::_Safe_sequence_base::_M_swap (
 _Safe_sequence_base & __x) [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

#### 4.307.2.8 `_M_transfer_from_if()`

```
void __gnu_debug::_Safe_sequence< basic_string< _CharT, _Traits, _Allocator > >::_M_transfer_↵
from_if (
 _Safe_sequence< basic_string< _CharT, _Traits, _Allocator > > & __from,
 _Predicate __pred) [inherited]
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 69 of file `safe_sequence.tcc`.

#### 4.307.2.9 `append()` [1/3]

```
basic_string< _CharT, _Traits, _Allocator > & std::basic_string< _CharT, _Traits, _Allocator >↵
::append (
 const basic_string< _CharT, _Traits, _Allocator > & __str) [inherited]
```

Append a string to this string.

##### Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

##### Returns

Reference to this string.

Definition at line 769 of file `basic_string.tcc`.

## 4.307.2.10 append() [2/3]

```
basic_string<_CharT, _Traits, _Allocator> & std::basic_string<_CharT, _Traits, _Allocator>::append (
 const basic_string<_CharT, _Traits, _Allocator> & __str,
 size_type __pos,
 size_type __n = npos) [inherited]
```

Append a substring.

## Parameters

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__str</code> | The string to append.                                       |
| <code>__pos</code> | Index of the first character of <code>str</code> to append. |
| <code>__n</code>   | The number of characters to append.                         |

## Returns

Reference to this string.

## Exceptions

|                                |                                             |
|--------------------------------|---------------------------------------------|
| <code>std::out_of_range</code> | if <code>__pos</code> is not a valid index. |
|--------------------------------|---------------------------------------------|

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

Definition at line 786 of file `basic_string.tcc`.

## 4.307.2.11 append() [3/3]

```
basic_string& std::basic_string<_CharT, _Traits, _Allocator>::append (
 initializer_list<_CharT> __l) [inline], [inherited]
```

Append an `initializer_list` of characters.

## Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>__l</code> | The <code>initializer_list</code> of characters to append. |
|------------------|------------------------------------------------------------|

**Returns**

Reference to this string.

Definition at line 4276 of file basic\_string.h.

**4.307.2.12 assign()** [1/3]

```
basic_string<_CharT, _Traits, _Allocator> & std::basic_string<_CharT, _Traits, _Allocator>::assign (
 const basic_string<_CharT, _Traits, _Allocator> & __str) [inherited]
```

Set value to contents of another string.

**Parameters**

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

**Returns**

Reference to this string.

Definition at line 687 of file basic\_string.tcc.

**4.307.2.13 assign()** [2/3]

```
basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign (
 basic_string<_CharT, _Traits, _Allocator> && __str) [inline], [noexcept], [inherited]
```

Set value to contents of another string.

**Parameters**

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

**Returns**

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

Definition at line 4358 of file basic\_string.h.

4.307.2.14 `assign()` [3/3]

```
basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign (
 const basic_string<_CharT, _Traits, _Allocator> & __str,
 size_type __pos,
 size_type __n = npos) [inline], [inherited]
```

Set value to a substring of a string.

## Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__str</code> | The string to use.                   |
| <code>__pos</code> | Index of the first character of str. |
| <code>__n</code>   | Number of characters to use.         |

## Returns

Reference to this string.

## Exceptions

|                                |                                           |
|--------------------------------|-------------------------------------------|
| <code>std::out_of_range</code> | if <code>pos</code> is not a valid index. |
|--------------------------------|-------------------------------------------|

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

Definition at line 4380 of file `basic_string.h`.

4.307.2.15 `at()` [1/2]

```
const_reference std::basic_string<_CharT, _Traits, _Allocator>::at (
 size_type __n) const [inline], [inherited]
```

Provides access to the data contained in the string.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__↔</code> | The index of the character to access. |
| <code>__n</code> |                                       |

## Returns

Read-only (const) reference to the character.

**Exceptions**

|                                |                             |
|--------------------------------|-----------------------------|
| <code>std::out_of_range</code> | If $n$ is an invalid index. |
|--------------------------------|-----------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

Definition at line 4080 of file `basic_string.h`.

**4.307.2.16** `at()` [2/2]

```
reference std::basic_string<_CharT, _Traits, _Allocator>::at (
 size_type __n) [inline], [inherited]
```

Provides access to the data contained in the string.

**Parameters**

|                          |                                       |
|--------------------------|---------------------------------------|
| <code>__↔<br/>__n</code> | The index of the character to access. |
|--------------------------|---------------------------------------|

**Returns**

Read/write reference to the character.

**Exceptions**

|                                |                             |
|--------------------------------|-----------------------------|
| <code>std::out_of_range</code> | If $n$ is an invalid index. |
|--------------------------------|-----------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

Definition at line 4102 of file `basic_string.h`.

**4.307.2.17** `back()` [1/2]

```
reference std::basic_string<_CharT, _Traits, _Allocator>::back () [inline], [inherited]
```

Returns a read/write reference to the data at the last element of the string.

Definition at line 4141 of file `basic_string.h`.

**4.307.2.18 back()** [2/2]

```
const_reference std::basic_string< _CharT, _Traits, _Allocator >::back () const [inline], [noexcept],
[inherited]
```

Returns a read-only (constant) reference to the data at the last element of the string.

Definition at line 4152 of file basic\_string.h.

**4.307.2.19 capacity()**

```
size_type std::basic_string< _CharT, _Traits, _Allocator >::capacity () const [inline], [noexcept],
[inherited]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 3976 of file basic\_string.h.

**4.307.2.20 compare()** [1/3]

```
int std::basic_string< _CharT, _Traits, _Allocator >::compare (
 const basic_string< _CharT, _Traits, _Allocator > & __str) const [inline], [inherited]
```

Compare to a string.

**Parameters**

|                    |                            |
|--------------------|----------------------------|
| <code>__str</code> | String to compare against. |
|--------------------|----------------------------|

**Returns**

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__str`, 0 if their values are equivalent, or > 0 if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 5763 of file basic\_string.h.

**4.307.2.21 compare()** [2/3]

```
int std::basic_string<_CharT, _Traits, _Allocator >::compare (
 size_type __pos,
 size_type __n,
 const basic_string<_CharT, _Traits, _Allocator > & __str) const [inherited]
```

Compare substring to a string.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n</code>   | Number of characters in substring.     |
| <code>__str</code> | String to compare against.             |

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 1388 of file `basic_string.tcc`.

4.307.2.22 `compare()` [3/3]

```
int std::basic_string<_CharT, _Traits, _Allocator>::compare (
 size_type __pos1,
 size_type __n1,
 const basic_string<_CharT, _Traits, _Allocator> & __str,
 size_type __pos2,
 size_type __n2 = npos) const [inherited]
```

Compare substring to a substring.

## Parameters

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| <code>__pos1</code> | Index of first character of substring.                      |
| <code>__n1</code>   | Number of characters in substring.                          |
| <code>__str</code>  | String to compare against.                                  |
| <code>__pos2</code> | Index of first character of substring of <code>str</code> . |
| <code>__n2</code>   | Number of characters in substring of <code>str</code> .     |

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer  $< 0$  if this substring is ordered before the substring of `__str`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the

two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 1403 of file `basic_string.tcc`.

#### 4.307.2.23 `empty()`

```
bool std::basic_string<_CharT, _Traits, _Allocator >::empty () const [inline], [noexcept],
[inherited]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

Definition at line 4026 of file `basic_string.h`.

#### 4.307.2.24 `erase()` [1/2]

```
iterator std::basic_string<_CharT, _Traits, _Allocator >::erase (
 iterator __position) [inline], [inherited]
```

Remove one character.

##### Parameters

|                         |                                               |
|-------------------------|-----------------------------------------------|
| <code>__position</code> | Iterator referencing the character to remove. |
|-------------------------|-----------------------------------------------|

##### Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

Definition at line 4726 of file `basic_string.h`.

#### 4.307.2.25 `erase()` [2/2]

```
basic_string<_CharT, _Traits, _Allocator >::iterator std::basic_string<_CharT, _Traits, _↵
Allocator >::erase (
 iterator __first,
 iterator __last) [inherited]
```

Remove a range of characters.

## Parameters

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to remove. |
| <code>__last</code>  | Iterator referencing the end of the range.          |

## Returns

Iterator referencing location of first after removal.

Removes the characters in the range `[first,last)` from this string. The value of the string doesn't change if an error is thrown.

Definition at line 835 of file `basic_string.tcc`.

4.307.2.26 `find()`

```
size_type std::basic_string<_CharT, _Traits, _Allocator>::find (
 const basic_string<_CharT, _Traits, _Allocator> & __str,
 size_type __pos = 0) const [inline], [noexcept], [inherited]
```

Find position of a string.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String to locate.                              |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 5271 of file `basic_string.h`.

4.307.2.27 `find_first_not_of()`

```
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_first_not_of (
 const basic_string<_CharT, _Traits, _Allocator> & __str,
 size_type __pos = 0) const [inline], [noexcept], [inherited]
```

Find position of a character not in string.

**Parameters**

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String containing characters to avoid.         |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5579 of file `basic_string.h`.

**4.307.2.28 find\_first\_of()**

```
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (
 const basic_string< _CharT, _Traits, _Allocator > & __str,
 size_type __pos = 0) const [inline], [noexcept], [inherited]
```

Find position of a character of string.

**Parameters**

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String containing characters to locate.        |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5412 of file `basic_string.h`.

**4.307.2.29 find\_last\_not\_of()**

```
size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (
 const basic_string< _CharT, _Traits, _Allocator > & __str,
 size_type __pos = npos) const [inline], [noexcept], [inherited]
```

Find last position of a character not in string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String containing characters to avoid.                |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5661 of file `basic_string.h`.

4.307.2.30 `find_last_of()`

```
size_type std::basic_string<_CharT, _Traits, _Allocator>::find_last_of (
 const basic_string<_CharT, _Traits, _Allocator> & __str,
 size_type __pos = npos) const [inline], [noexcept], [inherited]
```

Find last position of a character of string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String containing characters to locate.               |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5496 of file `basic_string.h`.

4.307.2.31 `front()` [1/2]

```
reference std::basic_string<_CharT, _Traits, _Allocator>::front () [inline], [inherited]
```

Returns a read/write reference to the data at the first element of the string.

Definition at line 4119 of file `basic_string.h`.

**4.307.2.32** `front()` [2/2]

```
const_reference std::basic_string< _CharT, _Traits, _Allocator >::front () const [inline],
[noexcept], [inherited]
```

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 4130 of file `basic_string.h`.

**4.307.2.33** `get_allocator()`

```
allocator_type std::basic_string< _CharT, _Traits, _Allocator >::get_allocator () const [inline],
[noexcept], [inherited]
```

Return copy of allocator used to construct this string.

Definition at line 5241 of file `basic_string.h`.

**4.307.2.34** `insert()` [1/6]

```
void std::basic_string< _CharT, _Traits, _Allocator >::insert (
 iterator __p,
 size_type __n,
 _CharT __c) [inline], [inherited]
```

Insert multiple characters.

**Parameters**

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing location in string to insert at. |
| <code>__n</code> | Number of characters to insert                        |
| <code>__c</code> | The character to insert.                              |

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4497 of file `basic_string.h`.

4.307.2.35 `insert()` [2/6]

```
void std::basic_string<_CharT, _Traits, _Allocator>::insert (
 iterator __p,
 _InputIterator __beg,
 _InputIterator __end) [inline], [inherited]
```

Insert a range of characters.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__p</code>   | Iterator referencing location in string to insert at. |
| <code>__beg</code> | Start of range.                                       |
| <code>__end</code> | End of range.                                         |

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts characters in range `[__beg, __end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4514 of file `basic_string.h`.

4.307.2.36 `insert()` [3/6]

```
void std::basic_string<_CharT, _Traits, _Allocator>::insert (
 iterator __p,
 initializer_list<_CharT> __l) [inline], [inherited]
```

Insert an `initializer_list` of characters.

## Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>__p</code> | Iterator referencing location in string to insert at.      |
| <code>__l</code> | The <code>initializer_list</code> of characters to insert. |

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Definition at line 4525 of file `basic_string.h`.

**4.307.2.37** `insert()` [4/6]

```
basic_string& std::basic_string<_CharT, _Traits, _Allocator>::insert (
 size_type __pos1,
 const basic_string<_CharT, _Traits, _Allocator> & __str) [inline], [inherited]
```

Insert value of a string.

**Parameters**

|                     |                                  |
|---------------------|----------------------------------|
| <code>__pos1</code> | Position in string to insert at. |
| <code>__str</code>  | The string to insert.            |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4545 of file `basic_string.h`.

**4.307.2.38** `insert()` [5/6]

```
basic_string& std::basic_string<_CharT, _Traits, _Allocator>::insert (
 size_type __pos1,
 const basic_string<_CharT, _Traits, _Allocator> & __str,
 size_type __pos2,
 size_type __n = npos) [inline], [inherited]
```

Insert a substring.

**Parameters**

|                     |                                                    |
|---------------------|----------------------------------------------------|
| <code>__pos1</code> | Position in string to insert at.                   |
| <code>__str</code>  | The string to insert.                              |
| <code>__pos2</code> | Start of characters in <code>str</code> to insert. |
| <code>__n</code>    | Number of characters to insert.                    |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                                           |
|--------------------------------|---------------------------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                           |
| <code>std::out_of_range</code> | If <code>pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> . |

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4567 of file `basic_string.h`.

**4.307.2.39 `insert()`** [6/6]

```
iterator std::basic_string<_CharT, _Traits, _Allocator>::insert (
 iterator __p,
 _CharT __c) [inline], [inherited]
```

Insert one character.

**Parameters**

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing position in string to insert at. |
| <code>__c</code> | The character to insert.                              |

**Returns**

Iterator referencing newly inserted char.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4649 of file `basic_string.h`.

**4.307.2.40 length()**

```
size_type std::basic_string< _CharT, _Traits, _Allocator >::length () const [inline], [noexcept],
[inherited]
```

Returns the number of characters in the string, not including any null-termination.

Definition at line 3919 of file basic\_string.h.

**4.307.2.41 max\_size()**

```
size_type std::basic_string< _CharT, _Traits, _Allocator >::max_size () const [inline], [noexcept],
[inherited]
```

Returns the size() of the largest possible string.

Definition at line 3924 of file basic\_string.h.

**4.307.2.42 operator+=( )**

```
basic_string& std::basic_string< _CharT, _Traits, _Allocator >::operator+= (
 const basic_string< _CharT, _Traits, _Allocator > & __str) [inline], [inherited]
```

Append a string to this string.

**Parameters**

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

**Returns**

Reference to this string.

Definition at line 4166 of file basic\_string.h.

**4.307.2.43 replace()** [1/8]

```
basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (
 size_type __pos,
 size_type __n,
 const basic_string< _CharT, _Traits, _Allocator > & __str) [inline], [inherited]
```

Replace characters with value from another string.

## Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n</code>   | Number of characters to be replaced. |
| <code>__str</code> | String to insert.                    |

## Returns

Reference to this string.

## Exceptions

|                                |                                                       |
|--------------------------------|-------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>pos</code> is beyond the end of this string. |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .       |

Removes the characters in the range `[__pos, __pos+__n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4780 of file `basic_string.h`.

4.307.2.44 `replace()` [2/8]

```
basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace (
 size_type __pos1,
 size_type __n1,
 const basic_string<_CharT, _Traits, _Allocator> & __str,
 size_type __pos2,
 size_type __n2 = npos) [inline], [inherited]
```

Replace characters with value from another string.

## Parameters

|                     |                                                      |
|---------------------|------------------------------------------------------|
| <code>__pos1</code> | Index of first character to replace.                 |
| <code>__n1</code>   | Number of characters to be replaced.                 |
| <code>__str</code>  | String to insert.                                    |
| <code>__pos2</code> | Index of first character of <code>str</code> to use. |
| <code>__n2</code>   | Number of characters from <code>str</code> to use.   |

## Returns

Reference to this string.

**Exceptions**

|                                |                                                                               |
|--------------------------------|-------------------------------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> . |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                               |

Removes the characters in the range `[__pos1, __pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4802 of file `basic_string.h`.

**4.307.2.45 `replace()`** [3/8]

```
basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace (
 iterator __i1,
 iterator __i2,
 const basic_string<_CharT, _Traits, _Allocator> & __str) [inline], [inherited]
```

Replace range of characters with string.

**Parameters**

|                    |                                                 |
|--------------------|-------------------------------------------------|
| <code>__i1</code>  | Iterator referencing start of range to replace. |
| <code>__i2</code>  | Iterator referencing end of range to replace.   |
| <code>__str</code> | String value to insert.                         |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4889 of file `basic_string.h`.

**4.307.2.46 `replace()`** [4/8]

```
basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace (
 iterator __i1,
```

```

 iterator __i2,
 const _CharT * __s,
 size_type __n) [inline], [inherited]

```

Replace range of characters with C substring.

#### Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__s</code>  | C string value to insert.                       |
| <code>__n</code>  | Number of characters from s to insert.          |

#### Returns

Reference to this string.

#### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4908 of file `basic_string.h`.

#### 4.307.2.47 `replace()` [5/8]

```

basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace (
 iterator __i1,
 iterator __i2,
 const _CharT * __s) [inline], [inherited]

```

Replace range of characters with C string.

#### Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__s</code>  | C string value to insert.                       |

**Returns**

Reference to this string.

**Exceptions**

|                          |                                                 |
|--------------------------|-------------------------------------------------|
| <i>std::length_error</i> | If new length exceeds <code>max_size()</code> . |
|--------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1,__i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4929 of file `basic_string.h`.

**4.307.2.48 replace()** [6/8]

```
basic_string& std::basic_string<_CharT, _Traits, _Allocator >::replace (
 iterator __i1,
 iterator __i2,
 size_type __n,
 _CharT __c) [inline], [inherited]
```

Replace range of characters with multiple characters.

**Parameters**

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__n</code>  | Number of characters to insert.                 |
| <code>__c</code>  | Character to insert.                            |

**Returns**

Reference to this string.

**Exceptions**

|                          |                                                 |
|--------------------------|-------------------------------------------------|
| <i>std::length_error</i> | If new length exceeds <code>max_size()</code> . |
|--------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1,__i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4950 of file `basic_string.h`.

## 4.307.2.49 replace() [7/8]

```
basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (
 iterator __i1,
 iterator __i2,
 _InputIterator __k1,
 _InputIterator __k2) [inline], [inherited]
```

Replace range of characters with range.

## Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__k1</code> | Iterator referencing start of range to insert.  |
| <code>__k2</code> | Iterator referencing end of range to insert.    |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range [`__i1`,`__i2`). In place, characters in the range [`__k1`,`__k2`) are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4974 of file `basic_string.h`.

## 4.307.2.50 replace() [8/8]

```
basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (
 iterator __i1,
 iterator __i2,
 initializer_list< _CharT > __l) [inline], [inherited]
```

Replace range of characters with `initializer_list`.

## Parameters

|                   |                                                            |
|-------------------|------------------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace.            |
| <code>__i2</code> | Iterator referencing end of range to replace.              |
| <code>__l</code>  | The <code>initializer_list</code> of characters to insert. |

**Returns**

Reference to this string.

**Exceptions**

|                                       |                                                 |
|---------------------------------------|-------------------------------------------------|
| <code><i>std::length_error</i></code> | If new length exceeds <code>max_size()</code> . |
|---------------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 5043 of file `basic_string.h`.

**4.307.2.51 `reserve()`**

```
void std::basic_string<_CharT, _Traits, _Allocator >::reserve (
 size_type __res_arg = 0) [inherited]
```

Attempt to preallocate enough memory for specified number of characters.

**Parameters**

|                        |                                |
|------------------------|--------------------------------|
| <code>__res_arg</code> | Number of characters required. |
|------------------------|--------------------------------|

**Exceptions**

|                                       |                                                             |
|---------------------------------------|-------------------------------------------------------------|
| <code><i>std::length_error</i></code> | If <code>__res_arg</code> exceeds <code>max_size()</code> . |
|---------------------------------------|-------------------------------------------------------------|

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 946 of file `basic_string.tcc`.

**4.307.2.52 `rfind()`**

```
size_type std::basic_string<_CharT, _Traits, _Allocator >::rfind (
 const basic_string<_CharT, _Traits, _Allocator > & __str,
 size_type __pos = npos) const [inline], [noexcept], [inherited]
```

Find last position of a string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String to locate.                                     |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 5333 of file `basic_string.h`.

4.307.2.53 `size()`

```
size_type std::basic_string<_CharT, _Traits, _Allocator>::size () const [inline], [noexcept],
[inherited]
```

Returns the number of characters in the string, not including any null-termination.

Definition at line 3913 of file `basic_string.h`.

4.307.2.54 `swap()`

```
void std::basic_string<_CharT, _Traits, _Allocator>::swap (
 basic_string<_CharT, _Traits, _Allocator> & __s) [noexcept], [inherited]
```

Swap contents with another string.

## Parameters

|                  |                      |
|------------------|----------------------|
| <code>__s</code> | String to swap with. |
|------------------|----------------------|

Exchanges the contents of this string with that of `__s` in constant time.

Definition at line 963 of file `basic_string.tcc`.

## 4.307.3 Member Data Documentation

#### 4.307.3.1 `_M_const_iterators`

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]
```

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

#### 4.307.3.2 `_M_iterators`

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]
```

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if()`.

#### 4.307.3.3 `_M_version`

```
unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]
```

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`.

#### 4.307.3.4 `npos`

```
const basic_string< _CharT, _Traits, _Allocator >::size_type std::basic_string< _CharT, _Traits, _Allocator >::npos [static], [inherited]
```

Value returned by various member functions when they fail.

Definition at line 3353 of file `basic_string.h`.

#### 4.308.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>>
class std::experimental::fundamentals_v1::basic_string_view<_CharT, _Traits >
```

A non-owning reference to a string.

#### Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character                                                               |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |

A basic\_string\_view looks like this:

```
_CharT* _M_str
size_t _M_len
```

Definition at line 75 of file experimental/string\_view.

#### 4.309.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringbuf< _CharT, _Traits, _Alloc >
```

The actual work of input and output (for std::string).

#### Template Parameters

|                         |                                                                                    |
|-------------------------|------------------------------------------------------------------------------------|
| <a href="#">_CharT</a>  | Type of character stream.                                                          |
| <a href="#">_Traits</a> | Traits for character type, defaults to <a href="#">char_traits&lt;_CharT&gt;</a> . |
| <a href="#">_Alloc</a>  | Allocator type, defaults to <a href="#">allocator&lt;_CharT&gt;</a> .              |

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.)

For this class, open modes (of type `ios_base::openmode`) have `in` set if the input sequence can be read, and `out` set if the output sequence can be written.

Definition at line 96 of file `iosfwd`.

#### 4.309.2 Constructor & Destructor Documentation

##### 4.309.2.1 `basic_stringbuf()` [1/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf () [inline]
```

Starts with an empty string buffer.

The default constructor initializes the parent class using its own default ctor.

Definition at line 99 of file `sstream`.

##### 4.309.2.2 `basic_stringbuf()` [2/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
 ios_base::openmode __mode) [inline], [explicit]
```

Starts with an empty string buffer.

###### Parameters

|                     |                                                 |
|---------------------|-------------------------------------------------|
| <code>__mode</code> | Whether the buffer can read, or write, or both. |
|---------------------|-------------------------------------------------|

The default constructor initializes the parent class using its own default ctor.

Definition at line 111 of file `sstream`.

##### 4.309.2.3 `basic_stringbuf()` [3/3]

```
template<typename _CharT, typename _Traits, typename _Alloc>
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
 const __string_type & __str,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [explicit]
```

Starts with an existing string buffer.

## Parameters

|                     |                                                 |
|---------------------|-------------------------------------------------|
| <code>__str</code>  | A string to copy as a starting buffer.          |
| <code>__mode</code> | Whether the buffer can read, or write, or both. |

This constructor initializes the parent class using its own default ctor.

Definition at line 124 of file sstream.

## 4.309.3 Member Function Documentation

## 4.309.3.1 eback()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::eback () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 489 of file streambuf.

## 4.309.3.2 egptr()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::egptr () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 495 of file streambuf.

#### 4.309.3.3 epptr()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::epptr () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

#### 4.309.3.4 gbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::gbump (
 int __n) [inline], [protected], [inherited]
```

Moving the read position.

##### Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the read position without returning any data.

Definition at line 505 of file streambuf.

#### 4.309.3.5 getloc()

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::getloc () const [inline], [inherited]
```

Locale access.

##### Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent loc is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file streambuf.

## 4.309.3.6 gptr()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::gptr () const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

## 4.309.3.7 imbue()

```
template<typename _CharT, typename _Traits>
virtual void std::basic_streambuf< _CharT, _Traits >::imbue (
 const locale & __loc) [inline], [protected], [virtual], [inherited]
```

Changes translations.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__loc</code> | A new locale. |
|--------------------|---------------|

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

## Note

Base class version does nothing.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 583 of file streambuf.

#### 4.309.3.8 in\_avail()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail () [inline], [inherited]
```

Looking ahead into the stream.

##### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file `streambuf`.

#### 4.309.3.9 overflow()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::overflow (
 int_type __c = traits_type::eof()) [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

##### Parameters

|                 |                                     |
|-----------------|-------------------------------------|
| <code>_↵</code> | An additional character to consume. |
| <code>_c</code> |                                     |

##### Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output `streambuf` can be created by overriding only this function (no buffer area will be used).

##### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 80 of file `sstream.tcc`.

References `__gnu_debug::__base()`, `std::ios_base::in`, `std::max()`, `std::min()`, `std::ios_base::out`, and `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`.

## 4.309.3.10 pbackfail()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::pbackfail (
 int_type __c = traits_type::eof()) [protected], [virtual]
```

Tries to back up the input sequence.

## Parameters

|                 |                                                      |
|-----------------|------------------------------------------------------|
| <code>_↵</code> | The character to be inserted back into the sequence. |
| <code>_C</code> |                                                      |

## Returns

`eof()` on failure, *some other value* on success

## Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

## Note

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 46 of file `sstream.tcc`.

References `std::ios_base::out`.

## 4.309.3.11 pbase()

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::pbase () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 536 of file `streambuf`.

## 4.309.3.12 pbump()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::pbump (
 int __n) [inline], [protected], [inherited]
```

Moving the write position.

**Parameters**

|                 |                             |
|-----------------|-----------------------------|
| <code>_↵</code> | The delta by which to move. |
| <code>_n</code> |                             |

This just advances the write position without returning any data.

Definition at line 552 of file streambuf.

**4.309.3.13 pptr()**

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::pptr () const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

**4.309.3.14 pubimbue()**

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
 const locale & __loc) [inline], [inherited]
```

Entry point for imbue().

**Parameters**

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls the derived imbue(\_\_loc).

Definition at line 216 of file streambuf.

## 4.309.3.15 pubseekoff()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_stringbuf< _CharT, _Traits >::pubseekoff (
 off_type __off,
 ios_base::seekdir __way,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [inherited]
```

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__off</code>  | Offset.                                     |
| <code>__way</code>  | Value for <code>ios_base::seekdir</code> .  |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual seekoff function.

Definition at line 258 of file streambuf.

## 4.309.3.16 pubseekpos()

```
template<typename _CharT, typename _Traits>
pos_type std::basic_stringbuf< _CharT, _Traits >::pubseekpos (
 pos_type __sp,
 ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [inherited]
```

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__sp</code>   | Position                                    |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual seekpos function.

Definition at line 270 of file streambuf.

## 4.309.3.17 pubsetbuf()

```
template<typename _CharT, typename _Traits>
basic_stringbuf* std::basic_stringbuf< _CharT, _Traits >::pubsetbuf (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file `streambuf`.

#### 4.309.3.18 `pubsync()`

```
template<typename _CharT, typename _Traits>
int std::basic_streambuf< _CharT, _Traits >::pubsync () [inline], [inherited]
```

Calls virtual `sync` function.

Definition at line 278 of file `streambuf`.

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync()`.

#### 4.309.3.19 `sbumpc()`

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc () [inline], [inherited]
```

Getting the next character.

##### Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file `streambuf`.

#### 4.309.3.20 `seekoff()`

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::seekoff (
 off_type ,
 ios_base::seekdir ,
 ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

##### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 168 of file `sstream.tcc`.

References `std::ios_base::cur`, `std::ios_base::end`, `std::ios_base::in`, and `std::ios_base::out`.

## 4.309.3.21 seekpos()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↵
Alloc >::seekpos (
 pos_type ,
 ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 216 of file `sstream.tcc`.

References `std::ios_base::in`, and `std::ios_base::out`.

## 4.309.3.22 setbuf()

```
template<typename _CharT, typename _Traits, typename _Alloc>
virtual __streambuf_type* std::basic_stringbuf< _CharT, _Traits, _Alloc >::setbuf (
 char_type * __s,
 streamsize __n) [inline], [protected], [virtual]
```

Manipulates the buffer.

**Parameters**

|                        |                            |
|------------------------|----------------------------|
| <code>↵<br/>__s</code> | Pointer to a buffer area.  |
| <code>↵<br/>__n</code> | Size of <code>__s</code> . |

**Returns**

`this`

If no buffer has already been created, and both `__s` and `__n` are non-zero, then `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.↵buffering> for more.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 255 of file `sstream`.

#### 4.309.3.23 setg()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setg (
 char_type * __gbeg,
 char_type * __gnext,
 char_type * __gend) [inline], [protected], [inherited]
```

Setting the three read area pointers.

##### Parameters

|                      |            |
|----------------------|------------|
| <code>__gbeg</code>  | A pointer. |
| <code>__gnext</code> | A pointer. |
| <code>__gend</code>  | A pointer. |

##### Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 516 of file streambuf.

#### 4.309.3.24 setp()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf< _CharT, _Traits >::setp (
 char_type * __pbeg,
 char_type * __pend) [inline], [protected], [inherited]
```

Setting the three write area pointers.

##### Parameters

|                     |            |
|---------------------|------------|
| <code>__pbeg</code> | A pointer. |
| <code>__pend</code> | A pointer. |

##### Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 562 of file streambuf.

#### 4.309.3.25 sgetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sgetc () [inline], [inherited]
```

Getting the next character.

##### Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file `streambuf`.

#### 4.309.3.26 sgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

Entry point for `xsgetn`.

##### Parameters

|       |                |
|-------|----------------|
| $\_s$ | A buffer area. |
| $\_n$ | A count.       |

Returns `xsgetn(__s,__n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 364 of file `streambuf`.

#### 4.309.3.27 showmanyc()

```
template<typename _CharT, typename _Traits, typename _Alloc>
virtual streamsize std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc () [inline],
[protected], [virtual]
```

Investigating the data available.

### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

### Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 223 of file `sstream`.

#### 4.309.3.28 `snextc()`

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::snextc () [inline], [inherited]
```

Getting the next character.

### Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file `streambuf`.

#### 4.309.3.29 `sputbackc()`

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sputbackc (
 char_type __c) [inline], [inherited]
```

Pushing characters back into the input stream.

### Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__c</code> | The character to push back. |
|------------------|-----------------------------|

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 379 of file `streambuf`.

**4.309.3.30 sputc()**

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
 char_type __c) [inline], [inherited]
```

Entry point for all single-character output functions.

**Parameters**

|                  |                        |
|------------------|------------------------|
| <code>__c</code> | A character to output. |
|------------------|------------------------|

**Returns**

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(←__c)`.

Definition at line 431 of file `streambuf`.

Referenced by `std::ostreambuf_iterator< _CharT, _Traits >::operator=()`.

**4.309.3.31 sputn()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
 const char_type * __s,
 streamsize __n) [inline], [inherited]
```

Entry point for all single-character output functions.

**Parameters**

|                                                                                                                       |                     |
|-----------------------------------------------------------------------------------------------------------------------|---------------------|
| <a href="#"></a><br><code>__s</code> | A buffer read area. |
| <a href="#"></a><br><code>__n</code> | A count.            |

One of two public output functions.

Returns `xsputn(__s,__n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 457 of file `streambuf`.

**4.309.3.32 `str()`** [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
__string_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::str () const [inline]
```

Copying out the string buffer.

**Returns**

A copy of one of the underlying sequences.

*If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence.* [27.7.1.2]/1

Definition at line 178 of file `sstream`.

**4.309.3.33 `str()`** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_stringbuf< _CharT, _Traits, _Alloc >::str (
 const __string_type & __s) [inline]
```

Setting a new buffer.

**Parameters**

|                                                                                                                         |                                      |
|-------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| <a href="#"></a><br><code>__s</code> | The string to use as a new sequence. |
|-------------------------------------------------------------------------------------------------------------------------|--------------------------------------|

Deallocates any previous stored sequence, then copies `s` to use as a new one.

Definition at line 202 of file `sstream`.

#### 4.309.3.34 sungetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf< _CharT, _Traits >::sungetc () [inline], [inherited]
```

Moving backwards in the input stream.

##### Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 404 of file streambuf.

#### 4.309.3.35 sync()

```
template<typename _CharT, typename _Traits>
virtual int std::basic_streambuf< _CharT, _Traits >::sync (
 void) [inline], [protected], [virtual], [inherited]
```

Synchronizes the buffer arrays with the controlled sequences.

##### Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

##### Note

Base class version does nothing, returns zero.

Reimplemented in [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_type, traits\\_type >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), and [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#).

Definition at line 634 of file streambuf.

#### 4.309.3.36 uflow()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow () [inline], [protected], [virtual],
[inherited]
```

Fetches more data from the controlled sequence.

##### Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 707 of file `streambuf`.

#### 4.309.3.37 underflow()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::underflow () [protected], [virtual]
```

Fetches more data from the controlled sequence.

##### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

##### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 150 of file `sstream.tcc`.

References `std::ios_base::in`.

#### 4.309.3.38 xsggetn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::xsggetn (
 char_type * __s,
 streamsize __n) [protected], [virtual], [inherited]
```

Multiple character extraction.

## Parameters

|                                                                                                                    |                                         |
|--------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| <a href="#"></a> <code>__s</code> | A buffer area.                          |
| <a href="#"></a> <code>__n</code> | Maximum number of characters to assign. |

## Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), and [std::basic\\_filebuf< char\\_type, traits\\_type >](#).

Definition at line 46 of file `streambuf.tcc`.

## 4.309.3.39 xsputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf< _CharT, _Traits >::xsputn (
 const char_type * __s,
 streamsize __n) [protected], [virtual], [inherited]
```

Multiple character insertion.

## Parameters

|                                                                                                                      |                                        |
|----------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| <a href="#"></a> <code>__s</code> | A buffer area.                         |
| <a href="#"></a> <code>__n</code> | Maximum number of characters to write. |

## Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), and [std::basic\\_filebuf< char\\_type, traits\\_type >](#).

Definition at line 80 of file `streambuf.tcc`.

#### 4.309.4 Member Data Documentation

##### 4.309.4.1 `_M_buf_locale`

```
template<typename _CharT, typename _Traits>
locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected], [inherited]
```

Current locale setting.

Definition at line 199 of file streambuf.

##### 4.309.4.2 `_M_in_beg`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]
```

Start of get area.

Definition at line 191 of file streambuf.

##### 4.309.4.3 `_M_in_cur`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]
```

Current read area.

Definition at line 192 of file streambuf.

##### 4.309.4.4 `_M_in_end`

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected], [inherited]
```

End of get area.

Definition at line 193 of file streambuf.

#### 4.309.4.5 \_M\_mode

```
template<typename _CharT, typename _Traits, typename _Alloc>
ios_base::openmode std::basic_stringbuf< _CharT, _Traits, _Alloc >::_M_mode [protected]
```

Place to stash in || out || in | out settings for current stringbuf.

Definition at line 85 of file sstream.

#### 4.309.4.6 \_M\_out\_beg

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_beg [protected], [inherited]
```

Start of put area.

Definition at line 194 of file streambuf.

#### 4.309.4.7 \_M\_out\_cur

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur [protected], [inherited]
```

Current put area.

Definition at line 195 of file streambuf.

#### 4.309.4.8 \_M\_out\_end

```
template<typename _CharT, typename _Traits>
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end [protected], [inherited]
```

End of put area.

Definition at line 196 of file streambuf.

### Extractors

All the [operator>>](#) functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- [\\_\\_istream\\_type](#) & [operator>>](#) (`bool` &\_\_n)
  - [\\_\\_istream\\_type](#) & [operator>>](#) (`short` &\_\_n)
  - [\\_\\_istream\\_type](#) & [operator>>](#) (`unsigned short` &\_\_n)

  - [\\_\\_istream\\_type](#) & [operator>>](#) (`double` &\_\_f)
  - [\\_\\_istream\\_type](#) & [operator>>](#) (`long double` &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

  - `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
  - `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
  - `__ostream_type & operator<< (unsigned long __n)`
  - `__ostream_type & operator<< (bool __n)`
  - `__ostream_type & operator<< (short __n)`
  - `__ostream_type & operator<< (unsigned short __n)`

  - `__ostream_type & operator<< (unsigned int __n)`
  - `__ostream_type & operator<< (long long __n)`
  - `__ostream_type & operator<< (unsigned long long __n)`
- 
- `__ostream_type & operator<< (double __f)`
  - `__ostream_type & operator<< (float __f)`
  - `__ostream_type & operator<< (long double __f)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

## 4.310.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringstream< _CharT, _Traits, _Alloc >
```

Controlling input and output for std::string.

## Template Parameters

|                      |                                                                                 |
|----------------------|---------------------------------------------------------------------------------|
| <code>_CharT</code>  | Type of character stream.                                                       |
| <code>_Traits</code> | Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> . |
| <code>_Alloc</code>  | Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .              |

This class supports reading from and writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 108 of file `iosfwd`.

## 4.310.2 Member Typedef Documentation

## 4.310.2.1 \_\_num\_put\_type

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

## 4.310.2.2 event\_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

## Parameters

|                  |                                                        |
|------------------|--------------------------------------------------------|
| <code>__e</code> | One of the members of the event enum.                  |
| <code>__b</code> | Reference to the <code>ios_base</code> object.         |
| <code>__i</code> | The integer provided when the callback was registered. |

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 529 of file `ios_base.h`.

#### 4.310.2.3 `fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 341 of file `ios_base.h`.

## 4.310.2.4 iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

*\_Ios\_Iostate* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *iostate* are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file *ios\_base.h*.

## 4.310.2.5 openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

*\_Ios\_Openmode* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *openmode* are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file *ios\_base.h*.

#### 4.310.2.6 seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 479 of file `ios_base.h`.

### 4.310.3 Member Enumeration Documentation

#### 4.310.3.1 event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 512 of file `ios_base.h`.

### 4.310.4 Constructor & Destructor Documentation

#### 4.310.4.1 basic\_stringstream() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream () [inline]
```

Default constructor starts with an empty string buffer.

Initializes `sb` using the mode `in|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 741 of file `sstream`.

#### 4.310.4.2 basic\_stringstream() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (
 ios_base::openmode __m) [inline], [explicit]
```

Starts with an empty string buffer.

## Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__m</code> | Whether the buffer can read, or write, or both. |
|------------------|-------------------------------------------------|

Initializes `sb` using the mode from `__m`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 756 of file `sstream`.

## 4.310.4.3 basic\_stringstream() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (
 const __string_type & __str,
 ios_base::openmode __m = ios_base::out | ios_base::in) [inline], [explicit]
```

Starts with an existing string buffer.

## Parameters

|                    |                                                 |
|--------------------|-------------------------------------------------|
| <code>__str</code> | A string to copy as a starting buffer.          |
| <code>__m</code>   | Whether the buffer can read, or write, or both. |

Initializes `sb` using `__str` and `__m`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 772 of file `sstream`.

## 4.310.4.4 ~basic\_stringstream()

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringstream< _CharT, _Traits, _Alloc >::~~basic_stringstream () [inline]
```

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

Definition at line 783 of file `sstream`.

## 4.310.5 Member Function Documentation

#### 4.310.5.1 `_M_getloc()`

```
const locale& std::ios_base::_M_getloc () const [inline], [inherited]
```

Locale access.

##### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 804 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _Inlter>::do_get()`, `std::money_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_date()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_time()`, `std::time_get<_CharT, _Inlter>::do_get_weekday()`, `std::time_put<_CharT, _Outlter>::do_put()`, `std::num_put<_CharT, _Outlter>::do_put()`, `std::time_get<_CharT, _Inlter>::get()`, and `std::time_put<_CharT, _Outlter>::put()`.

#### 4.310.5.2 `_M_write()`

```
template<typename _CharT, typename _Traits>
void std::basic_ostream<_CharT, _Traits>::_M_write (
 const char_type * __s,
 streamsize __n) [inline], [inherited]
```

Core write functionality, without sentry.

##### Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | The array to insert.                    |
| <code>__n</code> | Maximum number of characters to insert. |

Definition at line 317 of file `ostream`.

#### 4.310.5.3 `bad()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::bad () const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

**4.310.5.4 clear()**

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
 iostate __state = goodbit) [inherited]
```

[Re]sets the error state.

**Parameters**

|                      |                               |
|----------------------|-------------------------------|
| <code>__state</code> | The new state flag(s) to set. |
|----------------------|-------------------------------|

See std::ios\_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, \_Traits >::exceptions(), std::\_\_detail::operator>>(), std::basic\_istream< char >::putback(), std::basic\_istream< char >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< char >::unget().

**4.310.5.5 copyfmt()**

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
 const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

**Parameters**

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__rhs</code> | The source values for the copies. |
|--------------------|-----------------------------------|

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the pword

and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

Definition at line 63 of file `basic_ios.tcc`.

#### 4.310.5.6 `eof()`

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::eof () const [inline], [inherited]
```

Fast error checking.

##### Returns

True if the eofbit is set.

Note that other `iostate` flags may also be set.

Definition at line 190 of file `basic_ios.h`.

#### 4.310.5.7 `exceptions()` [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::exceptions () const [inline], [inherited]
```

Throwing exceptions on errors.

##### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 222 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`.

#### 4.310.5.8 `exceptions()` [2/2]

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::exceptions (
 iostate __except) [inline], [inherited]
```

Throwing exceptions on errors.

## Parameters

|                       |                          |
|-----------------------|--------------------------|
| <code>__except</code> | The new exceptions mask. |
|-----------------------|--------------------------|

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
 std::ifstream f ("/etc/motd");
 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file `basic_ios.h`.

## 4.310.5.9 fail()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::fail () const [inline], [inherited]
```

Fast error checking.

## Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator bool()`, and `std::basic_ios< char, _Traits >::operator!()`.

## 4.310.5.10 fill() [1/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill () const [inline], [inherited]
```

Retrieves the *empty* character.

## Returns

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::basic_ios< char, _Traits >::fill()`, and `std::operator<<()`.

**4.310.5.11** `fill()` [2/2]

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::fill (
 char_type __ch) [inline], [inherited]
```

Sets a new *empty* character.

**Parameters**

|                   |                    |
|-------------------|--------------------|
| <code>__ch</code> | The new character. |
|-------------------|--------------------|

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file `basic_ios.h`.

**4.310.5.12** `flags()` [1/2]

```
fmtflags std::ios_base::flags () const [inline], [inherited]
```

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 649 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _OutIter >::do_put()`, `std::basic_ostream< char >::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, and `std::operator>>()`.

**4.310.5.13** `flags()` [2/2]

```
fmtflags std::ios_base::flags (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags all at once.

**Parameters**

|                      |                       |
|----------------------|-----------------------|
| <code>__fmtfl</code> | The new flags to set. |
|----------------------|-----------------------|

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 660 of file `ios_base.h`.

**4.310.5.14 flush()**

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush () [inherited]
```

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

Definition at line 211 of file `ostream.tcc`.

**4.310.5.15 gcount()**

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream<_CharT, _Traits>::gcount () const [inline], [inherited]
```

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file `istream`.

**4.310.5.16** `get()` [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
 void) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 244 of file istream.tcc.

**4.310.5.17** `get()` [2/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type & __c) [inherited]
```

Simple extraction.

**Parameters**

|                  |                                       |
|------------------|---------------------------------------|
| <code>__c</code> | The character in which to store data. |
|------------------|---------------------------------------|

**Returns**

\*this

Tries to extract a character and store it in \_\_c. If none are available, sets failbit and returns traits::eof().

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file istream.tcc.

**4.310.5.18** `get()` [3/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Simple multiple-character extraction.

## Parameters

|                      |                                                             |
|----------------------|-------------------------------------------------------------|
| <code>__s</code>     | Pointer to an array.                                        |
| <code>__n</code>     | Maximum number of characters to store in <code>__s</code> . |
| <code>__delim</code> | A "stop" character.                                         |

## Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file istream.tcc.

4.310.5.19 `get()` [4/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream<_CharT, _Traits>::get (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

Simple multiple-character extraction.

## Parameters

|                  |                                                           |
|------------------|-----------------------------------------------------------|
| <code>__s</code> | Pointer to an array.                                      |
| <code>__n</code> | Maximum number of characters to store in <code>s</code> . |

**Returns**

\*this

Returns `get(__s,__n,widen("\n"))`.

Definition at line 354 of file `istream`.

**4.310.5.20 `get()`** [5/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb,
 char_type __delim) [inherited]
```

Extraction into another streambuf.

**Parameters**

|                      |                                     |
|----------------------|-------------------------------------|
| <code>__sb</code>    | A streambuf in which to store data. |
| <code>__delim</code> | A "stop" character.                 |

**Returns**

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, `failbit` is set in the stream's error state.

Definition at line 364 of file `istream.tcc`.

**4.310.5.21 `get()`** [6/6]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::get (
 __streambuf_type & __sb) [inline], [inherited]
```

Extraction into another streambuf.

## Parameters

|                   |                                     |
|-------------------|-------------------------------------|
| <code>__sb</code> | A streambuf in which to store data. |
|-------------------|-------------------------------------|

## Returns

\*this

Returns `get(__sb, widen("\n"))`.

Definition at line 387 of file istream.

4.310.5.22 `getline()` [1/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

String extraction.

## Parameters

|                      |                                               |
|----------------------|-----------------------------------------------|
| <code>__s</code>     | A character array in which to store the data. |
| <code>__n</code>     | Maximum number of characters to extract.      |
| <code>__delim</code> | A "stop" character.                           |

## Returns

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file istream.tcc.

**4.310.5.23** `getline()` [2/3]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
 char_type * __s,
 streamsize __n) [inline], [inherited]
```

String extraction.

**Parameters**

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__s</code> | A character array in which to store the data. |
| <code>__n</code> | Maximum number of characters to extract.      |

**Returns**

`*this`

Returns `getline(__s,__n,widen("\n"))`.

Definition at line 427 of file `istream`.

**4.310.5.24** `getline()` [3/3]

```
template<>
basic_istream< char > & std::basic_istream< char >::getline (
 char_type * __s,
 streamsize __n,
 char_type __delim) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

**4.310.5.25** `getloc()`

```
locale std::ios_base::getloc () const [inline], [inherited]
```

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 793 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, `std::money_put< _CharT, _Outiter >::do_put()`, and `std::ws()`.

## 4.310.5.26 good()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::good () const [inline], [inherited]
```

Fast error checking.

## Returns

True if no error flags are set.

A wrapper around rdbuf.

Definition at line 180 of file basic\_ios.h.

Referenced by std::\_\_detail::operator>>(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

## 4.310.5.27 ignore() [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n,
 int_type __delim) [inherited]
```

Discarding characters.

## Parameters

|                      |                                  |
|----------------------|----------------------------------|
| <code>__n</code>     | Number of characters to discard. |
| <code>__delim</code> | A "stop" character.              |

## Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file istream.tcc.

**4.310.5.28 ignore()** [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 streamsize __n) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 501 of file istream.tcc.

**4.310.5.29 ignore()** [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
 void) [inherited]
```

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 468 of file istream.tcc.

**4.310.5.30 imbue()**

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
 const locale & __loc) [inherited]
```

Moves to a new locale.

**Parameters**

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 114 of file `basic_ios.tcc`.

**4.310.5.31 init()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios<_CharT, _Traits>::init (
 basic_streambuf<_CharT, _Traits> * __sb) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<char, _Traits>::basic_ios()`.

**4.310.5.32 iword()**

```
long& std::ios_base::iword (
 int __ix) [inline], [inherited]
```

Access to integer array.

**Parameters**

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 839 of file ios\_base.h.

#### 4.310.5.33 narrow()

```
template<typename _CharT, typename _Traits>
char std::basic_ios< _CharT, _Traits >::narrow (
 char_type __c,
 char __default) const [inline], [inherited]
```

Squeezes characters.

##### Parameters

|                        |                          |
|------------------------|--------------------------|
| <code>__c</code>       | The character to narrow. |
| <code>__default</code> | The character to narrow. |

##### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Definition at line 430 of file basic\_ios.h.

#### 4.310.5.34 operator bool()

```
template<typename _CharT, typename _Traits>
std::basic_ios< _CharT, _Traits >::operator bool () const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 117 of file basic\_ios.h.

**4.310.5.35 operator!()**

```
template<typename _CharT, typename _Traits>
bool std::basic_ios< _CharT, _Traits >::operator! () const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 125 of file `basic_ios.h`.

**4.310.5.36 operator<<()** [1/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 __ostream_type &(*) (__ostream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 108 of file `ostream`.

**4.310.5.37 operator<<()** [2/17]

```
template<typename _CharT, typename _Traits>
__ios_type &(*) (__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 117 of file `ostream`.

**4.310.5.38 operator<<()** [3/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 127 of file `ostream`.

**4.310.5.39 operator<<()** [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                   |                                      |
|-----------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                  |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file `ostream`.

**4.310.5.40 operator<<() [5/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                                                                     |                                      |
|-------------------------------------------------------------------------------------|--------------------------------------|
|  | A variable of builtin integral type. |
| <code>__n</code>                                                                    |                                      |

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file `ostream`.

**4.310.5.41 operator<<() [6/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 bool __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

## 4.310.5.42 operator&lt;&lt;() [7/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
 short __n) [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

## 4.310.5.43 operator&lt;&lt;() [8/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 unsigned short __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                     |                                      |
|-------------------------------------|--------------------------------------|
| <code>__</code><br><code>__n</code> | A variable of builtin integral type. |
|-------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file `ostream`.

**4.310.5.44 `operator<<()` [9/17]**

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 int __n) [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                                     |                                      |
|-------------------------------------|--------------------------------------|
| <code>__</code><br><code>__n</code> | A variable of builtin integral type. |
|-------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file `ostream.tcc`.

**4.310.5.45 `operator<<()` [10/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 unsigned int __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file ostream.

## 4.310.5.46 operator&lt;&lt;() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__n</code> | A variable of builtin integral type. |
|------------------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file ostream.

## 4.310.5.47 operator&lt;&lt;() [12/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< (
 unsigned long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

**Parameters**

|                       |                                      |
|-----------------------|--------------------------------------|
| $\leftarrow$<br>$\_n$ | A variable of builtin integral type. |
|-----------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file `ostream`.

**4.310.5.48 operator<<() [13/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

**Parameters**

|                                                     |                                            |
|-----------------------------------------------------|--------------------------------------------|
| $\leftarrow$<br>$\_$<br>$\leftarrow$<br>$\_$<br>$f$ | A variable of builtin floating point type. |
|-----------------------------------------------------|--------------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file `ostream`.

**4.310.5.49 operator<<() [14/17]**

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 float __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

## 4.310.5.50 operator&lt;&lt;() [15/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

## 4.310.5.51 operator&lt;&lt;() [16/17]

```
template<typename _CharT, typename _Traits>
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
 const void * __p) [inline], [inherited]
```

Pointer arithmetic inserters.

**Parameters**

|                        |                             |
|------------------------|-----------------------------|
| <code>_↵<br/>_p</code> | A variable of pointer type. |
|------------------------|-----------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file `ostream`.

**4.310.5.52 operator<<() [17/17]**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
 __streambuf_type * __sb) [inherited]
```

Extracting from another streambuf.

**Parameters**

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file `ostream.tcc`.

## 4.310.5.53 operator&gt;&gt;() [1/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __istream_type &(*) (__istream_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 120 of file `istream`.

## 4.310.5.54 operator&gt;&gt;() [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 __ios_type &(*) (__ios_type &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 124 of file `istream`.

## 4.310.5.55 operator&gt;&gt;() [3/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 ios_base &(*) (ios_base &) __pf) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 131 of file `istream`.

## 4.310.5.56 operator&gt;&gt;() [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 bool & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                                                                                   |                                      |
|---------------------------------------------------------------------------------------------------|--------------------------------------|
|  <code>_n</code> | A variable of builtin integral type. |
|---------------------------------------------------------------------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file `istream`.

**4.310.5.57 operator>>() [5/17]**

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 short & __n) [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                                                                                     |                                      |
|-----------------------------------------------------------------------------------------------------|--------------------------------------|
|  <code>_n</code> | A variable of builtin integral type. |
|-----------------------------------------------------------------------------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 122 of file `istream.tcc`.

**4.310.5.58 operator>>() [6/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned short & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|       |                                      |
|-------|--------------------------------------|
| $\_n$ | A variable of builtin integral type. |
|-------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 175 of file istream.

## 4.310.5.59 operator&gt;&gt;() [7/17]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (
 int & __n) [inherited]
```

Integer arithmetic extractors.

## Parameters

|       |                                      |
|-------|--------------------------------------|
| $\_n$ | A variable of builtin integral type. |
|-------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file istream.tcc.

## 4.310.5.60 operator&gt;&gt;() [8/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream<_CharT, _Traits>::operator>> (
 unsigned int & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                  |                                      |
|----------------------------------|--------------------------------------|
| $\leftarrow$<br><code>__n</code> | A variable of builtin integral type. |
|----------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 182 of file `istream`.

**4.310.5.61 `operator>>()` [9/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                                  |                                      |
|----------------------------------|--------------------------------------|
| $\leftarrow$<br><code>__n</code> | A variable of builtin integral type. |
|----------------------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 186 of file `istream`.

**4.310.5.62 `operator>>()` [10/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 unsigned long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|       |                                      |
|-------|--------------------------------------|
| $\_n$ | A variable of builtin integral type. |
|-------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 190 of file `istream`.

## 4.310.5.63 operator&gt;&gt;() [11/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream<_CharT, _Traits>::operator>> (
 long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

## Parameters

|       |                                      |
|-------|--------------------------------------|
| $\_n$ | A variable of builtin integral type. |
|-------|--------------------------------------|

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file `istream`.

## 4.310.5.64 operator&gt;&gt;() [12/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream<_CharT, _Traits>::operator>> (
 unsigned long long & __n) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

|                       |                                      |
|-----------------------|--------------------------------------|
| $\leftarrow$<br>$\_n$ | A variable of builtin integral type. |
|-----------------------|--------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file `istream`.

**4.310.5.65 `operator>>()` [13/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 float & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

|                                                     |                                            |
|-----------------------------------------------------|--------------------------------------------|
| $\leftarrow$<br>$\_$<br>$\leftarrow$<br>$\_$<br>$f$ | A variable of builtin floating point type. |
|-----------------------------------------------------|--------------------------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file `istream`.

**4.310.5.66 `operator>>()` [14/17]**

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file `istream`.

## 4.310.5.67 operator&gt;&gt;() [15/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 long double & __f) [inline], [inherited]
```

Floating point arithmetic extractors.

## Parameters

|          |                                            |
|----------|--------------------------------------------|
| ↩        | A variable of builtin floating point type. |
| ↩        |                                            |
| ↩        |                                            |
| ↩        |                                            |
| <i>f</i> |                                            |

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

## 4.310.5.68 operator&gt;&gt;() [16/17]

```
template<typename _CharT, typename _Traits>
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
 void *& __p) [inline], [inherited]
```

Basic arithmetic extractors.

**Parameters**

|                        |                             |
|------------------------|-----------------------------|
| <code>_↵<br/>_p</code> | A variable of pointer type. |
|------------------------|-----------------------------|

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

**4.310.5.69 operator>>() [17/17]**

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 __streambuf_type * __sb) [inherited]
```

Extracting into another streambuf.

**Parameters**

|                   |                          |
|-------------------|--------------------------|
| <code>__sb</code> | A pointer to a streambuf |
|-------------------|--------------------------|

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 212 of file `istream.tcc`.

## 4.310.5.70 peek()

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek (
 void) [inherited]
```

Looking ahead in the stream.

## Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file `istream.tcc`.

## 4.310.5.71 precision() [1/2]

```
streamsize std::ios_base::precision () const [inline], [inherited]
```

Flags access.

## Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 719 of file `ios_base.h`.

Referenced by `std::basic_ios<char, _Traits>::copyfmt()`, and `std::operator<<()`.

## 4.310.5.72 precision() [2/2]

```
streamsize std::ios_base::precision (
 streamsize __prec) [inline], [inherited]
```

Changing flags.

## Parameters

|                     |                          |
|---------------------|--------------------------|
| <code>__prec</code> | The new precision value. |
|---------------------|--------------------------|

**Returns**

The previous value of `precision()`.

Definition at line 728 of file `ios_base.h`.

**4.310.5.73 put()**

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
 char_type __c) [inherited]
```

Simple insertion.

**Parameters**

|                                                                                   |                          |
|-----------------------------------------------------------------------------------|--------------------------|
|  | The character to insert. |
| <code>__c</code>                                                                  |                          |

**Returns**

`*this`

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file `ostream.tcc`.

**4.310.5.74 putback()**

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
 char_type __c) [inherited]
```

Unextracting a single character.

**Parameters**

|                                                                                     |                                                   |
|-------------------------------------------------------------------------------------|---------------------------------------------------|
|  | The character to push back into the input stream. |
| <code>__c</code>                                                                    |                                                   |

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 719 of file `istream.tcc`.

**4.310.5.75 pword()**

```
void*& std::ios_base::pword (
 int __ix) [inline], [inherited]
```

Access to void pointer array.

**Parameters**

|                   |                       |
|-------------------|-----------------------|
| <code>__ix</code> | Index into the array. |
|-------------------|-----------------------|

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 860 of file `ios_base.h`.

**4.310.5.76 rdbuf()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (
 basic_streambuf<_CharT, _Traits> * __sb) [inherited]
```

Changing the underlying buffer.

**Parameters**

|                   |                        |
|-------------------|------------------------|
| <code>__sb</code> | The new stream buffer. |
|-------------------|------------------------|

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;
foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 53 of file `basic_ios.tcc`.

**4.310.5.77 `rdbuf()`** [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc >
__stringbuf_type* std::basic_stringstream< _CharT, _Traits, _Alloc >::rdbuf () const [inline]
```

Accessing the underlying buffer.

**Returns**

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Definition at line 823 of file `sstream`.

**4.310.5.78 `rdstate()`**

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios< _CharT, _Traits >::rdstate () const [inline], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< char >::unget()`.

## 4.310.5.79 read()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction without delimiters.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

## Returns

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file `istream.tcc`.

## 4.310.5.80 readsome()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
 char_type * __s,
 streamsize __n) [inherited]
```

Extraction until the buffer is exhausted, but no more.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A character array.                     |
| <code>__n</code> | Maximum number of characters to store. |

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 687 of file `istream.tcc`.

**4.310.5.81 register\_callback()**

```
void std::ios_base::register_callback (
 event_callback __fn,
 int __index) [inherited]
```

Add the callback `__fn` with parameter `__index`.

**Parameters**

|                      |                                                   |
|----------------------|---------------------------------------------------|
| <code>__fn</code>    | The function to add.                              |
| <code>__index</code> | The integer to pass to the function when invoked. |

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**4.310.5.82 seekg()** [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
 pos_type __pos) [inherited]
```

Changing the current read position.

**Parameters**

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file `istream.tcc`.

**4.310.5.83 seekg()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current read position.

**Parameters**

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file `istream.tcc`.

**4.310.5.84 seekp()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
 pos_type __pos) [inherited]
```

Changing the current write position.

**Parameters**

|                    |                         |
|--------------------|-------------------------|
| <code>__pos</code> | A file position object. |
|--------------------|-------------------------|

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file `ostream.tcc`.

**4.310.5.85 seekp()** [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
 off_type __off,
 ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

**Parameters**

|                    |                                 |
|--------------------|---------------------------------|
| <code>__off</code> | A file offset object.           |
| <code>__dir</code> | The direction in which to seek. |

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 290 of file `ostream.tcc`.

**4.310.5.86 setf()** [1/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                          |
|----------------------|--------------------------|
| <code>__fmtfl</code> | Additional flags to set. |
|----------------------|--------------------------|

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 676 of file ios\_base.h.

Referenced by std::\_\_detail::operator>>().

**4.310.5.87 setf()** [2/2]

```
fmtflags std::ios_base::setf (
 fmtflags __fmtfl,
 fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

**Parameters**

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__fmtfl</code> | Additional flags to set.          |
| <code>__mask</code>  | The flags mask for <i>fmtfl</i> . |

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 693 of file ios\_base.h.

**4.310.5.88 setstate()**

```
template<typename _CharT, typename _Traits>
void std::basic_ios< _CharT, _Traits >::setstate (
 iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

**Parameters**

|                      |                                      |
|----------------------|--------------------------------------|
| <code>__state</code> | The additional state flag(s) to set. |
|----------------------|--------------------------------------|

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::ws()`.

#### 4.310.5.89 `str()` [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
__string_type std::basic_stringstream< _CharT, _Traits, _Alloc >::str () const [inline]
```

Copying out the string buffer.

##### Returns

`rdbuf() -> str()`

Definition at line 831 of file `sstream`.

#### 4.310.5.90 `str()` [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_stringstream< _CharT, _Traits, _Alloc >::str (
 const __string_type & __s) [inline]
```

Setting a new buffer.

##### Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__s</code> | The string to use as a new sequence. |
|------------------|--------------------------------------|

Calls `rdbuf() -> str(s)`.

Definition at line 841 of file `sstream`.

#### 4.310.5.91 `sync()`

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
 void) [inherited]
```

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file `istream.tcc`.

**4.310.5.92 sync\_with\_stdio()**

```
static bool std::ios_base::sync_with_stdio (
 bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

**Parameters**

|                     |                                |
|---------------------|--------------------------------|
| <code>__sync</code> | Whether to synchronize or not. |
|---------------------|--------------------------------|

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**4.310.5.93 tellg()**

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg (
 void) [inherited]
```

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

Definition at line 825 of file `istream.tcc`.

**4.310.5.94 tellp()**

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp ()
[inherited]
```

Getting the current write position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

**4.310.5.95 tie()** [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie () const [inline], [inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**4.310.5.96 tie()** [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
 basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]
```

Ties this stream to an output stream.

## Parameters

|                       |                    |
|-----------------------|--------------------|
| <code>__tiestr</code> | The output stream. |
|-----------------------|--------------------|

## Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 307 of file basic\_ios.h.

## 4.310.5.97 unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
 void) [inherited]
```

Unextracting the previous character.

## Returns

\*this

If rdbuf() is not null, calls rdbuf()->sungetc(c).

If rdbuf() is null or if sungetc() fails, sets badbit in the error state.

## Note

This function first clears eofbit. Since no characters are extracted, the next call to gcount() will return 0, as required by DR 60.

Definition at line 754 of file istream.tcc.

Referenced by std::\_\_detail::operator>>().

## 4.310.5.98 unsetf()

```
void std::ios_base::unsetf (
 fmtflags __mask) [inline], [inherited]
```

Clearing format flags.

**Parameters**

|                     |                     |
|---------------------|---------------------|
| <code>__mask</code> | The flags to unset. |
|---------------------|---------------------|

This function clears `__mask` in the format flags.

Definition at line 708 of file `ios_base.h`.

**4.310.5.99 widen()**

```
template<typename _CharT, typename _Traits>
char_type std::basic_ios< _CharT, _Traits >::widen (
 char __c) const [inline], [inherited]
```

Widens characters.

**Parameters**

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The character to widen. |
|------------------|-------------------------|

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::fill()`, `std::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**4.310.5.100 width()** [1/2]

```
streamsize std::ios_base::width () const [inline], [inherited]
```

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 742 of file `ios_base.h`.

Referenced by `std::basic_ios< char, _Traits >::copyfmt()`, and `std::num_put< _CharT, _OutIt >::do_put()`.

## 4.310.5.101 width() [2/2]

```
streamsize std::ios_base::width (
 streamsize __wide) [inline], [inherited]
```

Changing flags.

## Parameters

|                     |                      |
|---------------------|----------------------|
| <code>__wide</code> | The new width value. |
|---------------------|----------------------|

## Returns

The previous value of width().

Definition at line 751 of file ios\_base.h.

## 4.310.5.102 write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
 const char_type * __s,
 streamsize __n) [inherited]
```

Character string insertion.

## Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | The array to insert.                    |
| <code>__n</code> | Maximum number of characters to insert. |

## Returns

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

#### 4.310.5.103 xalloc()

```
static int std::ios_base::xalloc () throw () [static], [inherited]
```

Access to unique indices.

##### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

#### 4.310.6 Member Data Documentation

##### 4.310.6.1 \_M\_gcount

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< char >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< char >::peek()`, `std::basic_istream< char >::putback()`, `std::basic_istream< char >::read()`, `std::basic_istream< char >::readsomewhat()`, and `std::basic_istream< char >::unget()`.

##### 4.310.6.2 adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 396 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### 4.310.6.3 app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Definition at line 450 of file ios\_base.h.

#### 4.310.6.4 ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Definition at line 453 of file ios\_base.h.

#### 4.310.6.5 badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 420 of file ios\_base.h.

Referenced by std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< char, \_Traits >::fail(), and std::operator<<().

#### 4.310.6.6 basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 399 of file ios\_base.h.

Referenced by std::dec(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), std::oct(), and std::basic\_ostream< char >::operator<<().

#### 4.310.6.7 beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Definition at line 482 of file ios\_base.h.

#### 4.310.6.8 binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Definition at line 458 of file ios\_base.h.

#### 4.310.6.9 boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file ios\_base.h.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

#### 4.310.6.10 cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios\_base.h.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`.

#### 4.310.6.11 dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios\_base.h.

Referenced by `std::dec()`.

## 4.310.6.12 end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios\_base.h.

Referenced by std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc>::seekoff().

## 4.310.6.13 eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios\_base.h.

Referenced by std::time\_get<\_CharT, \_InIter>::do\_get(), std::num\_get<\_CharT, \_InIter>::do\_get(), std::time\_get<\_CharT, \_InIter>::do\_get\_date(), std::time\_get<\_CharT, \_InIter>::do\_get\_monthname(), std::time\_get<\_CharT, \_InIter>::do\_get\_time(), std::time\_get<\_CharT, \_InIter>::do\_get\_weekday(), std::time\_get<\_CharT, \_InIter>::do\_get\_year(), std::basic\_ios<char, \_Traits>::eof(), std::time\_get<\_CharT, \_InIter>::get(), std::basic\_istream<char>::putback(), std::basic\_istream<char>::seekg(), std::basic\_istream<char>::unget(), and std::ws().

## 4.310.6.14 failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios\_base.h.

Referenced by std::num\_get<\_CharT, \_InIter>::do\_get(), std::time\_get<\_CharT, \_InIter>::do\_get\_monthname(), std::time\_get<\_CharT, \_InIter>::do\_get\_weekday(), std::time\_get<\_CharT, \_InIter>::do\_get\_year(), std::basic\_ios<char, \_Traits>::fail(), std::time\_get<\_CharT, \_InIter>::get(), and std::basic\_ostream<\_CharT, \_Traits>::sentry() and std::basic\_ostream<\_CharT, \_Traits>::flush().

## 4.310.6.15 fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Definition at line 350 of file ios\_base.h.

Referenced by std::fixed(), and std::hexfloat().

#### 4.310.6.16 floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 402 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

#### 4.310.6.17 goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Definition at line 431 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<char>::flush()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<char>::getline()`, `std::basic_istream<char>::ignore()`, `std::basic_ostream<char>::operator<<()`, `std::basic_istream<char>::operator>>()`, `std::operator>>()`, `std::basic_istream<char>::peek()`, `std::basic_ostream<char>::put()`, `std::basic_istream<char>::putback()`, `std::basic_istream<char>::read()`, `std::basic_istream<char>::readsomewhat()`, `std::basic_istream<char>::seekg()`, `std::basic_ostream<char>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<char>::sync()`, and `std::basic_istream<char>::unget()`.

#### 4.310.6.18 hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::basic_ostream<char>::operator<<()`.

#### 4.310.6.19 in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Definition at line 461 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`.

#### 4.310.6.20 internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 4.310.6.21 left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

#### 4.310.6.22 oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< char >::operator<<()`.

#### 4.310.6.23 out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`.

#### 4.310.6.24 right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 369 of file ios\_base.h.

Referenced by std::right().

#### 4.310.6.25 scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Definition at line 372 of file ios\_base.h.

Referenced by std::hexfloat(), and std::scientific().

#### 4.310.6.26 showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 376 of file ios\_base.h.

Referenced by std::num\_put<\_CharT, \_OutIter >::do\_put(), std::noshowbase(), and std::showbase().

#### 4.310.6.27 showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 380 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

#### 4.310.6.28 showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Definition at line 383 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

#### 4.310.6.29 skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Definition at line 386 of file ios\_base.h.

Referenced by std::noskipws(), and std::skipws().

#### 4.310.6.30 trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

Definition at line 467 of file ios\_base.h.

#### 4.310.6.31 unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Definition at line 389 of file ios\_base.h.

Referenced by std::nunitbuf(), and std::unitbuf().

#### 4.310.6.32 uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 393 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

## Friends

- bool `operator==` (const `bernoulli_distribution` &\_\_d1, const `bernoulli_distribution` &\_\_d2)

## 4.311.1 Detailed Description

A Bernoulli random number distribution.

Generates a sequence of true and false values with likelihood  $p$  that true will come up and  $(1 - p)$  that false will appear.

Definition at line 3521 of file random.h.

## 4.311.2 Member Typedef Documentation

## 4.311.2.1 result\_type

```
typedef bool std::bernoulli_distribution::result_type
```

The type of the range of the distribution.

Definition at line 3525 of file random.h.

## 4.311.3 Constructor &amp; Destructor Documentation

## 4.311.3.1 bernoulli\_distribution() [1/2]

```
std::bernoulli_distribution::bernoulli_distribution () [inline]
```

Constructs a Bernoulli distribution with likelihood 0.5.

Definition at line 3561 of file random.h.

## 4.311.3.2 bernoulli\_distribution() [2/2]

```
std::bernoulli_distribution::bernoulli_distribution (
 double __p) [inline], [explicit]
```

Constructs a Bernoulli distribution with likelihood  $p$ .

**Parameters**

|                     |                                                                                         |
|---------------------|-----------------------------------------------------------------------------------------|
| $\leftarrow$<br>$p$ | [IN] The likelihood of a true result being returned. Must be in the interval $[0, 1]$ . |
|---------------------|-----------------------------------------------------------------------------------------|

Definition at line 3570 of file random.h.

**4.311.4 Member Function Documentation****4.311.4.1 max()**

```
result_type std::bernoulli_distribution::max () const [inline]
```

Returns the least upper bound value of the distribution.

Definition at line 3620 of file random.h.

References `std::numeric_limits<_Tp>::max()`.

**4.311.4.2 min()**

```
result_type std::bernoulli_distribution::min () const [inline]
```

Returns the greatest lower bound value of the distribution.

Definition at line 3613 of file random.h.

References `std::numeric_limits<_Tp>::min()`.

**4.311.4.3 operator()()**

```
template<typename _UniformRandomNumberGenerator >
result_type std::bernoulli_distribution::operator() (
 _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

Definition at line 3628 of file random.h.

#### 4.311.4.4 p()

```
double std::bernoulli_distribution::p () const [inline]
```

Returns the `p` parameter of the distribution.

Definition at line 3591 of file random.h.

#### 4.311.4.5 param() [1/2]

```
param_type std::bernoulli_distribution::param () const [inline]
```

Returns the parameter set of the distribution.

Definition at line 3598 of file random.h.

Referenced by `std::operator>>()`.

#### 4.311.4.6 param() [2/2]

```
void std::bernoulli_distribution::param (
 const param_type & __param) [inline]
```

Sets the parameter set of the distribution.

##### Parameters

|                      |                                            |
|----------------------|--------------------------------------------|
| <code>__param</code> | The new parameter set of the distribution. |
|----------------------|--------------------------------------------|

Definition at line 3606 of file random.h.

#### 4.311.4.7 reset()

```
void std::bernoulli_distribution::reset () [inline]
```

Resets the distribution state.

Does nothing for a Bernoulli distribution.

Definition at line 3585 of file random.h.

#### 4.311.5 Friends And Related Function Documentation

#### 4.311.5.1 operator==

```
bool operator== (
 const bernoulli_distribution & __d1,
 const bernoulli_distribution & __d2) [friend]
```

Return true if two Bernoulli distributions have the same parameters.

Definition at line 3670 of file random.h.

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

#### 4.312 std::bidirectional\_iterator\_tag Struct Reference

Inheritance diagram for std::bidirectional\_iterator\_tag:

##### 4.312.1 Detailed Description

Bidirectional iterators support a superset of forward iterator operations.

Definition at line 103 of file stl\_iterator\_base\_types.h.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

#### 4.313 `__gnu_pbds::detail::bin_search_tree_const_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc >` Class Template Reference

### 4.314.1 Detailed Description

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
class __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >
```

Const node iterator.

Definition at line 58 of file `bin_search_tree_/node_iterators.hpp`.

### 4.314.2 Member Typedef Documentation

#### 4.314.2.1 `const_reference`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::const_reference
```

Iterator's `__const` reference type.

Definition at line 77 of file `bin_search_tree_/node_iterators.hpp`.

#### 4.314.2.2 difference\_type

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::difference_type
```

Difference type.

Definition at line 68 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.314.2.3 iterator\_category

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::iterator_category
```

Category.

Definition at line 65 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.314.2.4 metadata\_const\_reference

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef rebind_traits<_Alloc, metadata_type>::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference
```

Const metadata reference type.

Definition at line 84 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.314.2.5 metadata\_type

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::metadata_type
```

Metadata type.

Definition at line 80 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.314.2.6 reference

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::reference
```

Iterator's reference type.

Definition at line 74 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.314.2.7 value\_type

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::value_type
```

Iterator's value type.

Definition at line 71 of file bin\_search\_tree\_/node\_iterators.hpp.

### 4.314.3 Member Function Documentation

#### 4.314.3.1 get\_l\_child()

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
bin_search_tree_const_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_const_
Node, Const_Iterator, Iterator, _Alloc >::get_l_child () const [inline]
```

Returns the \_\_const node iterator associated with the left node.

Definition at line 103 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.314.3.2 get\_metadata()

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::get_metadata () const [inline]
```

Metadata access.

Definition at line 98 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.314.3.3 `get_r_child()`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
bin_search_tree_const_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_const_
Node, Const_Iterator, Iterator, _Alloc >::get_r_child () const [inline]
```

Returns the `__const` node iterator associated with the right node.

Definition at line 108 of file `bin_search_tree_/node_iterators.hpp`.

#### 4.314.3.4 `operator!=(())`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator!=((
 const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
 other) const [inline]
```

Compares (negatively) to a different iterator object.

Definition at line 118 of file `bin_search_tree_/node_iterators.hpp`.

#### 4.314.3.5 `operator*()`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator,
_Alloc >::operator* () const [inline]
```

Access.

Definition at line 93 of file `bin_search_tree_/node_iterators.hpp`.

#### 4.314.3.6 `operator==(())`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator==((
 const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
 other) const [inline]
```

Compares to a different iterator object.

Definition at line 113 of file `bin_search_tree_/node_iterators.hpp`.

The documentation for this class was generated from the following file:

- [bin\\_search\\_tree\\_/node\\_iterators.hpp](#)

4.315 `__gnu_pbds::detail::bin_search_tree_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc >` Class Template Reference

```

Iterator's `__const` reference type.

Definition at line 146 of file `bin_search_tree_/node_iterators.hpp`.

##### 4.316.2.2 `difference_type`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::difference_type [inherited]
```

Difference type.

Definition at line 68 of file `bin_search_tree_/node_iterators.hpp`.

##### 4.316.2.3 `iterator_category`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↵
Iterator, Iterator, _Alloc >::iterator_category [inherited]
```

Category.

Definition at line 65 of file `bin_search_tree_/node_iterators.hpp`.

##### 4.316.2.4 `metadata_const_reference`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef rebind_traits<_Alloc, metadata_type>::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference [inherited]
```

Const metadata reference type.

Definition at line 84 of file `bin_search_tree_/node_iterators.hpp`.

#### 4.316.2.5 `metadata_type`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_
Iterator, Iterator, _Alloc >::metadata_type [inherited]
```

Metadata type.

Definition at line 80 of file `bin_search_tree_/node_iterators.hpp`.

#### 4.316.2.6 `reference`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _
Alloc >::reference
```

Iterator's reference type.

Definition at line 143 of file `bin_search_tree_/node_iterators.hpp`.

#### 4.316.2.7 `value_type`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _
Alloc >::value_type
```

Iterator's value type.

Definition at line 140 of file `bin_search_tree_/node_iterators.hpp`.

### 4.316.3 Member Function Documentation

#### 4.316.3.1 `get_l_child()`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
bin_search_tree_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::get_l_child () const [inline]
```

Returns the node iterator associated with the left node.

Definition at line 160 of file `bin_search_tree_/node_iterators.hpp`.

#### 4.316.3.2 get\_metadata()

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::get_metadata () const [inline], [inherited]
```

Metadata access.

Definition at line 98 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.316.3.3 get\_r\_child()

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
bin_search_tree_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::get_r_child () const [inline]
```

Returns the node iterator associated with the right node.

Definition at line 168 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.316.3.4 operator!=(())

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator!= (
 const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
 other) const [inline], [inherited]
```

Compares (negatively) to a different iterator object.

Definition at line 118 of file bin\_search\_tree\_/node\_iterators.hpp.

#### 4.316.3.5 operator\*()

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >↵
::operator* () const [inline]
```

Access.

Definition at line 155 of file bin\_search\_tree\_/node\_iterators.hpp.

4.316.3.6 `operator==()`

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator== (
 const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
 other) const [inline], [inherited]
```

Compares to a different iterator object.

Definition at line 113 of file `bin_search_tree_/node_iterators.hpp`.

The documentation for this class was generated from the following file:

- [bin\\_search\\_tree\\_/node\\_iterators.hpp](#)

4.317 `__gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >`

## Struct Template Reference

## Public Types

- typedef `bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc >` **const\_reverse\_iterator**
- typedef `Node` **node**
- typedef `bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc >` **node\_const\_iterator**
- typedef `bin_search_tree_node_it_< Node, point_const_iterator, point_iterator, _Alloc >` **node\_iterator**
- typedef `Node_Update< node_const_iterator, node_iterator, Cmp_Fn, _Alloc >` **node\_update**
- typedef `__gnu_pbds::null_node_update< node_const_iterator, node_iterator, Cmp_Fn, _Alloc > * null_node_↵_update_pointer`
- typedef `bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, true, _Alloc >` **point\_const\_iterator**
- typedef `bin_search_tree_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, true, _Alloc >` **point\_iterator**
- typedef `bin_search_tree_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc >` **reverse\_iterator**

## 4.317.1 Detailed Description

```
template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_Cltr, class Node_Itr, class _Cmp_Fn, typename
_Alloc > class Node_Update, class Node, typename _Alloc>
struct __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >
```

Binary search tree traits, primary template.

Definition at line 63 of file `bin_search_tree_/traits.hpp`.

#### 4.317.2 Member Typedef Documentation

##### 4.317.2.1 node\_const\_iterator

```
template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_Cltr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc>
typedef bin_search_tree_const_node_it< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_traits<
Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

Definition at line 128 of file `bin_search_tree_/traits.hpp`.

The documentation for this struct was generated from the following file:

- [bin\\_search\\_tree\\_/traits.hpp](#)

#### 4.318 [\\_\\_gnu\\_pbds::detail::bin\\_search\\_tree\\_traits](#)< Key, null\_type, Cmp\_Fn, Node\_Update, Node, \_Alloc > Struct Template Reference

##### Public Types

- typedef [bin\\_search\\_tree\\_const\\_it](#)< typename node\_alloc\_traits::pointer, typename [type\\_traits::value\\_type](#), typename type\_traits::pointer, typename type\_traits::const\_pointer, typename type\_traits::reference, typename type\_traits::const\_reference, false, \_Alloc > **const\_reverse\_iterator**
- typedef Node **node**
- typedef [bin\\_search\\_tree\\_const\\_node\\_it](#)< Node, [point\\_const\\_iterator](#), [point\\_iterator](#), \_Alloc > [node\\_const\\_iterator](#)
- typedef [node\\_const\\_iterator](#) **node\_iterator**
- typedef Node\_Update< [node\\_const\\_iterator](#), [node\\_iterator](#), Cmp\_Fn, \_Alloc > **node\_update**
- typedef [\\_\\_gnu\\_pbds::null\\_node\\_update](#)< [node\\_const\\_iterator](#), [node\\_iterator](#), Cmp\_Fn, \_Alloc > \* **null\_node\_update\_pointer**
- typedef [bin\\_search\\_tree\\_const\\_it](#)< typename node\_alloc\_traits::pointer, typename [type\\_traits::value\\_type](#), typename type\_traits::pointer, typename type\_traits::const\_pointer, typename type\_traits::reference, typename type\_traits::const\_reference, true, \_Alloc > **point\_const\_iterator**
- typedef [point\\_const\\_iterator](#) **point\_iterator**
- typedef [const\\_reverse\\_iterator](#) **reverse\_iterator**

##### 4.318.1 Detailed Description

```
template<typename Key, class Cmp_Fn, template< typename Node_Cltr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class
Node_Update, class Node, typename _Alloc>
struct __gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >
```

Specialization.

Definition at line 166 of file `bin_search_tree_/traits.hpp`.

## 4.318.2 Member Typedef Documentation

## 4.318.2.1 node\_const\_iterator

```
template<typename Key , class Cmp_Fn , template< typename Node_CItr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node , typename _Alloc >
typedef bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::node_const_iterator
Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

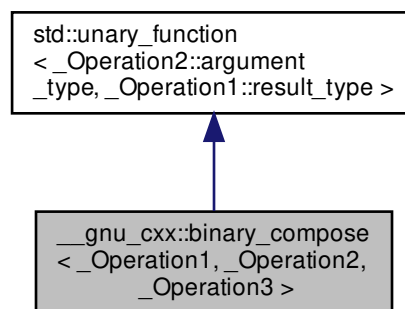

Definition at line 212 of file `bin_search_tree_/traits.hpp`.

The documentation for this struct was generated from the following file:

- [bin\\_search\\_tree\\_/traits.hpp](#)

## 4.319 \_\_gnu\_cxx::binary\_compose&lt; \_Operation1, \_Operation2, \_Operation3 &gt; Class Template Reference

Inheritance diagram for `__gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >`:

## Public Types

- typedef `_Operation2::argument_type` [argument\\_type](#)
- typedef `_Operation1::result_type` [result\\_type](#)

### Public Member Functions

- **binary\_compose** (const \_Operation1 &\_\_x, const \_Operation2 &\_\_y, const \_Operation3 &\_\_z)
- \_Operation1::result\_type **operator()** (const typename \_Operation2::argument\_type &\_\_x) const

### Protected Attributes

- \_Operation1 **\_M\_fn1**
- \_Operation2 **\_M\_fn2**
- \_Operation3 **\_M\_fn3**

#### 4.319.1 Detailed Description

```
template<class _Operation1, class _Operation2, class _Operation3>
class __gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >
```

An [SGI extension](#) .

Definition at line 142 of file ext/functional.

#### 4.319.2 Member Typedef Documentation

##### 4.319.2.1 argument\_type

```
typedef _Operation2::argument_type std::unary_function< _Operation2::argument_type , _Operation1↵
::result_type >::argument_type [inherited]
```

argument\_type is the type of the argument

Definition at line 108 of file stl\_function.h.

##### 4.319.2.2 result\_type

```
typedef _Operation1::result_type std::unary_function< _Operation2::argument_type , _Operation1↵
::result_type >::result_type [inherited]
```

result\_type is the return type

Definition at line 111 of file stl\_function.h.

The documentation for this class was generated from the following file:

- [ext/functional](#)

## 4.320 std::binary\_function< \_Arg1, \_Arg2, \_Result > Struct Template Reference

Inheritance diagram for std::binary\_function< \_Arg1, \_Arg2, \_Result >:

### Public Types

- typedef \_Arg1 [first\\_argument\\_type](#)
- typedef \_Result [result\\_type](#)
- typedef \_Arg2 [second\\_argument\\_type](#)

#### 4.320.1 Detailed Description

```
template<typename _Arg1, typename _Arg2, typename _Result>
struct std::binary_function< _Arg1, _Arg2, _Result >
```

This is one of the [functor base classes](#).

Definition at line 118 of file `stl_function.h`.

#### 4.320.2 Member Typedef Documentation

##### 4.320.2.1 first\_argument\_type

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg1 std::binary_function< _Arg1, _Arg2, _Result >::first_argument_type
```

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

#### 4.320.2.2 result\_type

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Result std::binary_function< _Arg1, _Arg2, _Result >::result_type
```

result\_type is the return type

Definition at line 127 of file stl\_function.h.

#### 4.320.2.3 second\_argument\_type

```
template<typename _Arg1, typename _Arg2, typename _Result>
typedef _Arg2 std::binary_function< _Arg1, _Arg2, _Result >::second_argument_type
```

second\_argument\_type is the type of the second argument

Definition at line 124 of file stl\_function.h.

The documentation for this struct was generated from the following file:

### 4.322.1 Detailed Description

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
class __gnu_pbds::detail::binary_heap_const_iterator_ < Value_Type, Entry, Simple, _Alloc >
```

Const point-type iterator.

Definition at line 60 of file `binary_heap_/const_iterator.hpp`.

### 4.322.2 Member Typedef Documentation

#### 4.322.2.1 `const_pointer`

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::const_pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::const_pointer
```

Iterator's const pointer type.

Definition at line 80 of file `binary_heap_/const_iterator.hpp`.

#### 4.322.2.2 `const_reference`

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::const_reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::const_reference
```

Iterator's const reference type.

Definition at line 86 of file `binary_heap_/const_iterator.hpp`.

#### 4.322.2.3 `difference_type`

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef _Alloc::difference_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::difference_type
```

Difference type.

Definition at line 71 of file `binary_heap_/const_iterator.hpp`.

#### 4.322.2.4 `iterator_category`

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef std::forward_iterator_tag __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::iterator_category
```

Category.

Definition at line 68 of file `binary_heap_/const_iterator.hpp`.

#### 4.322.2.5 pointer

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,
Simple, _Alloc >::pointer
```

Iterator's pointer type.

Definition at line 77 of file `binary_heap_/const_iterator.hpp`.

#### 4.322.2.6 reference

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,
Simple, _Alloc >::reference
```

Iterator's reference type.

Definition at line 83 of file `binary_heap_/const_iterator.hpp`.

#### 4.322.2.7 value\_type

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::value_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,
Simple, _Alloc >::value_type
```

Iterator's value type.

Definition at line 74 of file `binary_heap_/const_iterator.hpp`.

### 4.322.3 Constructor & Destructor Documentation

#### 4.322.3.1 `binary_heap_const_iterator_()` [1/2]

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_heap_const_iterator_
() [inline]
```

Default constructor.

Definition at line 94 of file `binary_heap_/const_iterator.hpp`.

#### 4.322.3.2 `binary_heap_const_iterator_()` [2/2]

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_heap_const_iterator_
(
 const binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)
[inline]
```

Copy constructor.

Definition at line 99 of file `binary_heap_/const_iterator.hpp`.

#### 4.322.4 Member Function Documentation

##### 4.322.4.1 `operator!=()` [1/2]

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
bool __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator!=
(
 const binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)
const [inline]
```

Compares content (negatively) to a different iterator object.

Definition at line 110 of file `binary_heap_/const_iterator.hpp`.

##### 4.322.4.2 `operator!=()` [2/2]

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::operator!= (
 const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other
) const [inline], [inherited]
```

Compares content (negatively) to a different iterator object.

Definition at line 122 of file `binary_heap_/point_const_iterator.hpp`.

##### 4.322.4.3 `operator*()`

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple,
_Alloc >::operator* () const [inline], [inherited]
```

Access.

Definition at line 109 of file `binary_heap_/point_const_iterator.hpp`.

#### 4.322.4.4 `operator->()`

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, ↵
_Alloc >::operator-> () const [inline], [inherited]
```

Access.

Definition at line 101 of file `binary_heap_/point_const_iterator.hpp`.

#### 4.322.4.5 `operator==()` [1/2]

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
bool __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator==
(
 const binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other)
const [inline]
```

Compares content to a different iterator object.

Definition at line 105 of file `binary_heap_/const_iterator.hpp`.

#### 4.322.4.6 `operator==()` [2/2]

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::operator== (
 const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other
) const [inline], [inherited]
```

Compares content to a different iterator object.

Definition at line 117 of file `binary_heap_/point_const_iterator.hpp`.

The documentation for this class was generated from the following file:

- [binary\\_heap\\_/const\\_iterator.hpp](#)

#### 4.323 `__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >`:

##### Public Types

- typedef `rebind_traits< _Alloc, value_type >::const_pointer` `const_pointer`
- typedef `rebind_traits< _Alloc, value_type >::const_reference` `const_reference`
- typedef `trivial_iterator_difference_type` `difference_type`
- typedef `trivial_iterator_tag` `iterator_category`
- typedef `rebind_traits< _Alloc, value_type >::pointer` `pointer`
- typedef `rebind_traits< _Alloc, value_type >::reference` `reference`
- typedef `Value_Type` `value_type`

##### Public Member Functions

- `binary_heap_point_const_iterator_` (`entry_pointer p_e`)
- `binary_heap_point_const_iterator_` ()
- `binary_heap_point_const_iterator_` (`const binary_heap_point_const_iterator_ &other`)
- `bool operator!=` (`const binary_heap_point_const_iterator_ &other`) `const`
- `const_reference operator*` () `const`
- `const_pointer operator->` () `const`
- `bool operator==` (`const binary_heap_point_const_iterator_ &other`) `const`

##### Public Attributes

- `entry_pointer m_p_e`

##### Protected Types

- typedef `rebind_traits< _Alloc, Entry >::pointer` `entry_pointer`

#### 4.323.1 Detailed Description

```
template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
class __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >
```

Const point-type iterator.

Definition at line 55 of file `binary_heap_/point_const_iterator.hpp`.

#### 4.323.2 Member Typedef Documentation

##### 4.323.2.1 const\_pointer

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef rebind_traits<_Alloc, value_type>::const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_
Value_Type, Entry, Simple, _Alloc >::const_pointer
```

Iterator's const pointer type.

Definition at line 75 of file `binary_heap_/point_const_iterator.hpp`.

##### 4.323.2.2 const\_reference

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef rebind_traits<_Alloc, value_type>::const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_
Value_Type, Entry, Simple, _Alloc >::const_reference
```

Iterator's const reference type.

Definition at line 83 of file `binary_heap_/point_const_iterator.hpp`.

##### 4.323.2.3 difference\_type

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef trivial_iterator_difference_type __gnu_pbds::detail::binary_heap_point_const_iterator_
Value_Type, Entry, Simple, _Alloc >::difference_type
```

Difference type.

Definition at line 65 of file `binary_heap_/point_const_iterator.hpp`.

#### 4.323.2.4 iterator\_category

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef trivial_iterator_tag __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type,
Entry, Simple, _Alloc >::iterator_category
```

Category.

Definition at line 62 of file binary\_heap\_/point\_const\_iterator.hpp.

#### 4.323.2.5 pointer

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef rebind_traits<_Alloc, value_type>::pointer __gnu_pbds::detail::binary_heap_point_const_iterator_<
Value_Type, Entry, Simple, _Alloc >::pointer
```

Iterator's pointer type.

Definition at line 71 of file binary\_heap\_/point\_const\_iterator.hpp.

#### 4.323.2.6 reference

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef rebind_traits<_Alloc, value_type>::reference __gnu_pbds::detail::binary_heap_point_const_iterator_<
Value_Type, Entry, Simple, _Alloc >::reference
```

Iterator's reference type.

Definition at line 79 of file binary\_heap\_/point\_const\_iterator.hpp.

#### 4.323.2.7 value\_type

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef Value_Type __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry,
Simple, _Alloc >::value_type
```

Iterator's value type.

Definition at line 68 of file binary\_heap\_/point\_const\_iterator.hpp.

### 4.323.3 Constructor & Destructor Documentation

#### 4.323.3.1 binary\_heap\_point\_const\_iterator\_() [1/2]

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::binary_heap_point_const_iterator_ () [inline]
```

Default constructor.

Definition at line 91 of file binary\_heap\_/point\_const\_iterator.hpp.

#### 4.323.3.2 binary\_heap\_point\_const\_iterator\_() [2/2]

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::binary_heap_point_const_iterator_ (
 const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other
) [inline]
```

Copy constructor.

Definition at line 95 of file binary\_heap\_/point\_const\_iterator.hpp.

### 4.323.4 Member Function Documentation

#### 4.323.4.1 operator!=(())

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::operator!=(
 const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other
) const [inline]
```

Compares content (negatively) to a different iterator object.

Definition at line 122 of file binary\_heap\_/point\_const\_iterator.hpp.

#### 4.323.4.2 operator\*()

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple,
_Alloc >::operator* () const [inline]
```

Access.

Definition at line 109 of file binary\_heap\_/point\_const\_iterator.hpp.

#### 4.323.4.3 operator->()

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, ↔
_Alloc >::operator-> () const [inline]
```

Access.

Definition at line 101 of file `binary_heap_/point_const_iterator.hpp`.

#### 4.323.4.4 operator==()

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↔
::operator== (
 const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other
) const [inline]
```

Compares content to a different iterator object.

Definition at line 117 of file `binary_heap_/point_const_iterator.hpp`.

The documentation for this class was generated from the following file:

- [binary\\_heap\\_/point\\_const\\_iterator.hpp](#)

### 4.324 \_\_gnu\_pbds::binary\_heap\_tag Struct Reference

Inheritance diagram for `__gnu_pbds::binary_heap_tag`:

## 4.324.1 Detailed Description

Binary-heap (array-based).

Definition at line 183 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

4.325 `std::binary_negate<_Predicate>` Class Template Reference

Inheritance diagram for `std::binary_negate<_Predicate>`:

## Public Types

- typedef `_Predicate::first_argument_type` [first\\_argument\\_type](#)
- typedef bool [result\\_type](#)
- typedef `_Predicate::second_argument_type` [second\\_argument\\_type](#)

## Public Member Functions

- constexpr **binary\_negate** (const `_Predicate` &\_\_x)
- constexpr bool **operator()** (const typename `_Predicate::first_argument_type` &\_\_x, const typename `_Predicate::second_argument_type` &\_\_y) const

## Protected Attributes

- `_Predicate` **\_M\_pred**

#### 4.325.1 Detailed Description

```
template<typename _Predicate>
class std::binary_negate<_Predicate >
```

One of the [negation functors](#).

Definition at line 1029 of file `stl_function.h`.

#### 4.325.2 Member Typedef Documentation

##### 4.325.2.1 first\_argument\_type

```
typedef _Predicate::first_argument_type std::binary_function<_Predicate::first_argument_type , ↔
_Predicate::second_argument_type , bool >::first_argument_type [inherited]
```

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

##### 4.325.2.2 result\_type

```
typedef bool std::binary_function<_Predicate::first_argument_type , _Predicate::second_argument↔
_type , bool >::result_type [inherited]
```

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

##### 4.325.2.3 second\_argument\_type

```
typedef _Predicate::second_argument_type std::binary_function<_Predicate::first_argument_type ,
_Predicate::second_argument_type , bool >::second_argument_type [inherited]
```

`second_argument_type` is the type of the second argument

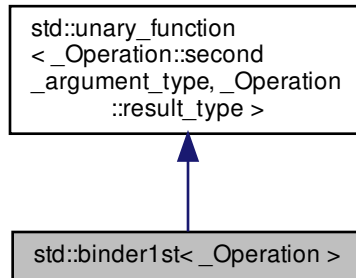

Definition at line 124 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 4.326 std::binder1st&lt; \_Operation &gt; Class Template Reference

Inheritance diagram for std::binder1st< \_Operation >:

## Public Types

- typedef `_Operation::second_argument_type` [argument\\_type](#)
- typedef `_Operation::result_type` [result\\_type](#)

## Public Member Functions

- **binder1st** (const `_Operation` &\_\_x, const typename `_Operation::first_argument_type` &\_\_y)
- `_Operation::result_type` **operator()** (const typename `_Operation::second_argument_type` &\_\_x) const
- `_Operation::result_type` **operator()** (typename `_Operation::second_argument_type` &\_\_x) const

## Protected Attributes

- `_Operation` **op**
- `_Operation::first_argument_type` **value**

## 4.326.1 Detailed Description

```
template<typename _Operation>
class std::binder1st< _Operation >
```

One of the [binder functors](#).

Definition at line 108 of file `binders.h`.

#### 4.326.2 Member Typedef Documentation

##### 4.326.2.1 `argument_type`

```
typedef _Operation::second_argument_type std::unary_function< _Operation::second_argument_type ,
_Operation::result_type >::argument_type [inherited]
```

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

##### 4.326.2.2 `result_type`

```
typedef _Operation::result_type std::unary_function< _Operation::second_argument_type , _Operation↔
::result_type >::result_type [inherited]
```

`result_type` is the return type

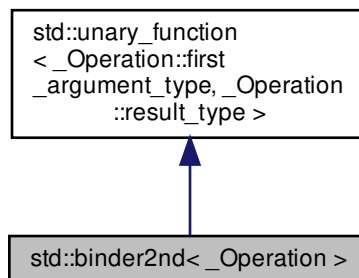

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [binders.h](#)

#### 4.327 `std::binder2nd< _Operation >` Class Template Reference

Inheritance diagram for `std::binder2nd< _Operation >`:

### Public Types

- typedef \_Operation::first\_argument\_type [argument\\_type](#)
- typedef \_Operation::result\_type [result\\_type](#)

### Public Member Functions

- **binder2nd** (const \_Operation &\_\_x, const typename \_Operation::second\_argument\_type &\_\_y)
- \_Operation::result\_type **operator()** (const typename \_Operation::first\_argument\_type &\_\_x) const
- \_Operation::result\_type **operator()** (typename \_Operation::first\_argument\_type &\_\_x) const

### Protected Attributes

- \_Operation **op**
- \_Operation::second\_argument\_type **value**

#### 4.327.1 Detailed Description

```
template<typename _Operation>
class std::binder2nd< _Operation >
```

One of the [binder functors](#).

Definition at line 143 of file binders.h.

#### 4.327.2 Member Typedef Documentation

##### 4.327.2.1 argument\_type

```
typedef _Operation::first_argument_type std::unary_function< _Operation::first_argument_type , _↵
Operation::result_type >::argument_type [inherited]
```

[argument\\_type](#) is the type of the argument

Definition at line 108 of file stl\_function.h.

#### 4.327.2.2 `result_type`

```
typedef _Operation::result_type std::unary_function< _Operation::first_argument_type , _Operation↵
::result_type >::result_type [inherited]
```

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

std::basic\_istream< \_CharT, \_Traits > & operator>> (std::basic\_istream< \_CharT, \_Traits > &\_\_is, std::binomial\_distribution< \_IntType1 > &\_\_x)

## 4.328.1 Detailed Description

```
template<typename _IntType = int>
class std::binomial_distribution< _IntType >
```

A discrete binomial random number distribution.

The formula for the binomial probability density function is  $p(i|t, p) = \binom{t}{i} p^i (1-p)^{t-i}$  where  $t$  and  $p$  are the parameters of the distribution.

Definition at line 3738 of file random.h.

## 4.328.2 Member Typedef Documentation

## 4.328.2.1 result\_type

```
template<typename _IntType = int>
typedef _IntType std::binomial_distribution< _IntType >::result_type
```

The type of the range of the distribution.

Definition at line 3741 of file random.h.

## 4.328.3 Member Function Documentation

## 4.328.3.1 max()

```
template<typename _IntType = int>
result_type std::binomial_distribution< _IntType >::max () const [inline]
```

Returns the least upper bound value of the distribution.

Definition at line 3857 of file random.h.

#### 4.328.3.2 min()

```
template<typename _IntType = int>
result_type std::binomial_distribution< _IntType >::min () const [inline]
```

Returns the greatest lower bound value of the distribution.

Definition at line 3850 of file random.h.

#### 4.328.3.3 operator() [1/2]

```
template<typename _IntType = int>
template<typename _UniformRandomNumberGenerator >
result_type std::binomial_distribution< _IntType >::operator() (
 _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

Definition at line 3865 of file random.h.

#### 4.328.3.4 operator() [2/2]

```
template<typename _IntType >
template<typename _UniformRandomNumberGenerator >
binomial_distribution< _IntType >::result_type std::binomial_distribution< _IntType >::operator()
(
 _UniformRandomNumberGenerator & __urng,
 const param_type & __param)
```

A rejection algorithm when  $t * p \geq 8$  and a simple waiting time method - the second in the referenced book - otherwise.  
NB: The former is available only if `_GLIBCXX_USE_C99_MATH_TR1` is defined.

Reference: Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. X, Sect. 4 (+ Errata!).

Definition at line 1524 of file bits/random.tcc.

References `std::abs()`, `std::numeric_limits< _Tp >::epsilon()`, `std::log()`, and `std::numeric_limits< _Tp >::max()`.

#### 4.328.3.5 p()

```
template<typename _IntType = int>
double std::binomial_distribution< _IntType >::p () const [inline]
```

Returns the distribution `p` parameter.

Definition at line 3828 of file random.h.

**4.328.3.6 param()** [1/2]

```
template<typename _IntType = int>
param_type std::binomial_distribution< _IntType >::param () const [inline]
```

Returns the parameter set of the distribution.

Definition at line 3835 of file random.h.

**4.328.3.7 param()** [2/2]

```
template<typename _IntType = int>
void std::binomial_distribution< _IntType >::param (
 const param_type & __param) [inline]
```

Sets the parameter set of the distribution.

**Parameters**

|                      |                                            |
|----------------------|--------------------------------------------|
| <code>__param</code> | The new parameter set of the distribution. |
|----------------------|--------------------------------------------|

Definition at line 3843 of file random.h.

**4.328.3.8 reset()**

```
template<typename _IntType = int>
void std::binomial_distribution< _IntType >::reset () [inline]
```

Resets the distribution state.

Definition at line 3814 of file random.h.

References std::normal\_distribution< \_RealType >::reset().

**4.328.3.9 t()**

```
template<typename _IntType = int>
_IntType std::binomial_distribution< _IntType >::t () const [inline]
```

Returns the distribution `t` parameter.

Definition at line 3821 of file random.h.

#### 4.328.4 Friends And Related Function Documentation

##### 4.328.4.1 operator<<

```
template<typename _IntType = int>
template<typename _IntType1 , typename _CharT , typename _Traits >
std::basic_ostream<_CharT, _Traits>& operator<< (
 std::basic_ostream< _CharT, _Traits > & __os,
 const std::binomial_distribution< _IntType1 > & __x) [friend]
```

Inserts a binomial\_distribution random number distribution \_\_x into the output stream \_\_os.

##### Parameters

|      |                                                     |
|------|-----------------------------------------------------|
| __os | An output stream.                                   |
| __x  | A binomial_distribution random number distribution. |

##### Returns

The output stream with the state of \_\_x inserted or in an error state.

##### 4.328.4.2 operator==

```
template<typename _IntType = int>
bool operator== (
 const binomial_distribution< _IntType > & __d1,
 const binomial_distribution< _IntType > & __d2) [friend]
```

Return true if two binomial distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 3901 of file random.h.

##### 4.328.4.3 operator>>

```
template<typename _IntType = int>
template<typename _IntType1 , typename _CharT , typename _Traits >
std::basic_istream<_CharT, _Traits>& operator>> (
 std::basic_istream< _CharT, _Traits > & __is,
 std::binomial_distribution< _IntType1 > & __x) [friend]
```

Extracts a binomial\_distribution random number distribution \_\_x from the input stream \_\_is.

## Parameters

|                   |                                                         |
|-------------------|---------------------------------------------------------|
| <code>__is</code> | An input stream.                                        |
| <code>__x</code>  | A binomial_distribution random number generator engine. |

## Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

4.329 `__gnu_pbds::detail::binomial_heap< Value_Type, Cmp_Fn, _Alloc >` Class Template Reference

## 4.332.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::bitmap_allocator<_Tp>
```

Bitmap Allocator, primary template.

Definition at line 658 of file `bitmap_allocator.h`.

#### 4.332.2 Member Function Documentation

##### 4.332.2.1 `_M_allocate_single_object()`

```
template<typename _Tp >
pointer __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object () [inline]
```

Allocates memory for a single object of size `sizeof(_Tp)`.

##### Exceptions

|                              |                                |
|------------------------------|--------------------------------|
| <code>std::bad_alloc.</code> | If memory cannot be allocated. |
|------------------------------|--------------------------------|

Complexity: Worst case complexity is  $O(N)$ , but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of  $O(1)$ ! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.

Definition at line 823 of file `bitmap_allocator.h`.

References `__gnu_cxx::__detail::__bit_allocate()`, `__gnu_cxx::__detail::__num_bitmaps()`, and `__gnu_cxx::_Bit_scan←_forward()`.

##### 4.332.2.2 `_M_deallocate_single_object()`

```
template<typename _Tp >
void __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object (
 pointer __p) throw () [inline]
```

Deallocates memory that belongs to a single object of size `sizeof(_Tp)`.

Complexity:  $O(\lg(N))$ , but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in  $O(1)$  time by the `deallocate` function.

Definition at line 914 of file `bitmap_allocator.h`.

### 4.333.1 Detailed Description

```
template<size_t _Nb>
class std::bitset<_Nb>
```

The `bitset` class represents a *fixed-size* sequence of bits.

(Note that `bitset` does *not* meet the formal requirements of a [container](#). Mainly, it lacks iterators.)

The template argument, *Nb*, may be any non-negative number, specifying the number of bits (e.g., "0", "12", "1024\*1024").

In the general unoptimized case, storage is allocated in word-sized blocks. Let *B* be the number of bits in a word, then  $(Nb+(B-1))/B$  words will be used for storage. *B* - *NbB* bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.

If you think of `bitset` as a *simple array of bits*, be aware that your mental picture is reversed: a `bitset` behaves the same way as bits in integers do, with the bit at index 0 in the *least significant* / *right-hand* position, and the bit at index *Nb*-1 in the *most significant* / *left-hand* position. Thus, unlike other containers, a `bitset`'s index *counts from right to left*, to put it very loosely.

This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints *b('a') is 0001100001* on a modern ASCII system.

```
#include <bitset>
#include <iostream>
#include <sstream>
using namespace std;
int main()
{
 long a = 'a';
 bitset<10> b(a);
 cout << "b('a') is " << b << endl;
 ostringstream s;
 s << b;
 string str = s.str();
 cout << "index 3 in the string is " << str[3] << " but\n"
 << "index 3 in the bitset is " << b[3] << endl;
}
```

Also see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext\\_containers.html](https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext_containers.html) for a description of extensions.

Most of the actual code isn't contained in `bitset<>` itself, but in the base class `_Base_bitset`. The base class works with whole words, not with individual bits. This allows us to specialize `_Base_bitset` for the important special case where the `bitset` is only a single word.

Extra confusion can result due to the fact that the storage for `_Base_bitset` is a regular array, and is indexed as such. This is carefully encapsulated.

Definition at line 751 of file `bitset`.

## 4.333.2 Constructor &amp; Destructor Documentation

## 4.333.2.1 bitset() [1/5]

```
template<size_t _Nb>
constexpr std::bitset< _Nb >::bitset () [inline], [noexcept]
```

All bits set to zero.

Definition at line 869 of file `bitset`.

## 4.333.2.2 bitset() [2/5]

```
template<size_t _Nb>
constexpr std::bitset< _Nb >::bitset (
 unsigned long long __val) [inline], [noexcept]
```

Initial bits bitwise-copied from a single word (others set to zero).

Definition at line 874 of file `bitset`.

## 4.333.2.3 bitset() [3/5]

```
template<size_t _Nb>
template<class _CharT , class _Traits , class _Alloc >
std::bitset< _Nb >::bitset (
 const std::basic_string< _CharT, _Traits, _Alloc > & __s,
 size_t __position = 0) [inline], [explicit]
```

Use a subset of a string.

## Parameters

|                         |                                                                            |
|-------------------------|----------------------------------------------------------------------------|
| <code>__s</code>        | A string of 0 and 1 characters.                                            |
| <code>__position</code> | Index of the first character in <code>__s</code> to use; defaults to zero. |

## Exceptions

|                                    |                                                                |
|------------------------------------|----------------------------------------------------------------|
| <code>std::out_of_range</code>     | If <code>pos</code> is bigger the size of <code>__s</code> .   |
| <code>std::invalid_argument</code> | If a character appears in the string which is neither 0 nor 1. |

Definition at line 893 of file `bitset`.

4.333.2.4 `bitset()` [4/5]

```
template<size_t _Nb>
template<class _CharT , class _Traits , class _Alloc >
std::bitset< _Nb >::bitset (
 const std::basic_string< _CharT, _Traits, _Alloc > & __s,
 size_t __position,
 size_t __n) [inline]
```

Use a subset of a string.

## Parameters

|                         |                                                          |
|-------------------------|----------------------------------------------------------|
| <code>__s</code>        | A string of <i>0</i> and <i>1</i> characters.            |
| <code>__position</code> | Index of the first character in <code>__s</code> to use. |
| <code>__n</code>        | The number of characters to copy.                        |

## Exceptions

|                                    |                                                                               |
|------------------------------------|-------------------------------------------------------------------------------|
| <code>std::out_of_range</code>     | If <code>__position</code> is bigger the size of <code>__s</code> .           |
| <code>std::invalid_argument</code> | If a character appears in the string which is neither <i>0</i> nor <i>1</i> . |

Definition at line 914 of file `bitset`.

4.333.2.5 `bitset()` [5/5]

```
template<size_t _Nb>
template<typename _CharT >
std::bitset< _Nb >::bitset (
 const _CharT * __str,
 typename std::basic_string< _CharT >::size_type __n = std::basic_string<_CharT>::npos,
 _CharT __zero = _CharT('0'),
 _CharT __one = _CharT('1')) [inline], [explicit]
```

Construct from a character array.

## Parameters

|                     |                                                     |
|---------------------|-----------------------------------------------------|
| <code>__str</code>  | An array of characters <i>zero</i> and <i>one</i> . |
| <code>__n</code>    | The number of characters to use.                    |
| <code>__zero</code> | The character corresponding to the value 0.         |
| <code>__one</code>  | The character corresponding to the value 1.         |

**Exceptions**

|                                    |                                                                                                    |
|------------------------------------|----------------------------------------------------------------------------------------------------|
| <code>std::invalid_argument</code> | If a character appears in the string which is neither <code>__zero</code> nor <code>__one</code> . |
|------------------------------------|----------------------------------------------------------------------------------------------------|

Definition at line 946 of file `bitset`.

**4.333.3 Member Function Documentation****4.333.3.1 all()**

```
template<size_t _Nb>
bool std::bitset<_Nb>::all () const [inline], [noexcept]
```

Tests whether all the bits are on.

**Returns**

True if all the bits are set.

Definition at line 1336 of file `bitset`.

**4.333.3.2 any()**

```
template<size_t _Nb>
bool std::bitset<_Nb>::any () const [inline], [noexcept]
```

Tests whether any of the bits are on.

**Returns**

True if at least one bit is set.

Definition at line 1344 of file `bitset`.

**4.333.3.3 count()**

```
template<size_t _Nb>
size_t std::bitset<_Nb>::count () const [inline], [noexcept]
```

Returns the number of bits which are set.

Definition at line 1295 of file `bitset`.

**4.333.3.4 flip()** [1/2]

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::flip () [inline], [noexcept]
```

Toggles every bit to its opposite value.

Definition at line 1123 of file `bitset`.

**4.333.3.5 flip()** [2/2]

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::flip (
 size_t __position) [inline]
```

Toggles a given bit to its opposite value.

**Parameters**

|                         |                       |
|-------------------------|-----------------------|
| <code>__position</code> | The index of the bit. |
|-------------------------|-----------------------|

**Exceptions**

|                                |                                              |
|--------------------------------|----------------------------------------------|
| <code>std::out_of_range</code> | If <i>pos</i> is bigger the size of the set. |
|--------------------------------|----------------------------------------------|

Definition at line 1136 of file `bitset`.

**4.333.3.6 none()**

```
template<size_t _Nb>
bool std::bitset<_Nb>::none () const [inline], [noexcept]
```

Tests whether any of the bits are on.

**Returns**

True if none of the bits are set.

Definition at line 1352 of file `bitset`.

## 4.333.3.7 operator!=(())

```
template<size_t _Nb>
bool std::bitset<_Nb>::operator!=(
 const bitset<_Nb> & __rhs) const [inline], [noexcept]
```

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1311 of file `bitset`.

## 4.333.3.8 operator&amp;=()

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::operator&= (
 const bitset<_Nb> & __rhs) [inline], [noexcept]
```

Operations on bitsets.

## Parameters

|                    |                                    |
|--------------------|------------------------------------|
| <code>__rhs</code> | A same-sized <code>bitset</code> . |
|--------------------|------------------------------------|

These should be self-explanatory.

Definition at line 972 of file `bitset`.

## 4.333.3.9 operator&lt;&lt;()

```
template<size_t _Nb>
bitset<_Nb> std::bitset<_Nb>::operator<< (
 size_t __position) const [inline], [noexcept]
```

Self-explanatory.

Definition at line 1358 of file `bitset`.

## 4.333.3.10 operator&lt;&lt;=()

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::operator<<= (
 size_t __position) [inline], [noexcept]
```

Operations on bitsets.

**Parameters**

|                         |                                |
|-------------------------|--------------------------------|
| <code>__position</code> | The number of places to shift. |
|-------------------------|--------------------------------|

These should be self-explanatory.

Definition at line 1001 of file `bitset`.

**4.333.3.11 `operator==()`**

```
template<size_t _Nb>
bool std::bitset< _Nb >::operator== (
 const bitset< _Nb > & __rhs) const [inline], [noexcept]
```

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1306 of file `bitset`.

**4.333.3.12 `operator>>()`**

```
template<size_t _Nb>
bitset<_Nb> std::bitset< _Nb >::operator>> (
 size_t __position) const [inline], [noexcept]
```

Self-explanatory.

Definition at line 1362 of file `bitset`.

**4.333.3.13 `operator>>=()`**

```
template<size_t _Nb>
bitset<_Nb>& std::bitset< _Nb >::operator>>= (
 size_t __position) [inline], [noexcept]
```

Operations on bitsets.

**Parameters**

|                         |                                |
|-------------------------|--------------------------------|
| <code>__position</code> | The number of places to shift. |
|-------------------------|--------------------------------|

These should be self-explanatory.

Definition at line 1014 of file `bitset`.

## 4.333.3.14 operator[]() [1/2]

```
template<size_t _Nb>
reference std::bitset<_Nb>::operator[] (
 size_t __position) [inline]
```

Array-indexing support.

## Parameters

|                         |                        |
|-------------------------|------------------------|
| <code>__position</code> | Index into the bitset. |
|-------------------------|------------------------|

## Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

## Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

\_GLIBCXX\_RESOLVE\_LIB\_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

Definition at line 1163 of file bitset.

## 4.333.3.15 operator[]() [2/2]

```
template<size_t _Nb>
constexpr bool std::bitset<_Nb>::operator[] (
 size_t __position) const [inline]
```

Array-indexing support.

## Parameters

|                         |                        |
|-------------------------|------------------------|
| <code>__position</code> | Index into the bitset. |
|-------------------------|------------------------|

## Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

**Note**

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

`__GLIBCXX_RESOLVE_LIB_DEFECTS` Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

Definition at line 1167 of file `bitset`.

**4.333.3.16 `operator^=()`**

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::operator^= (
 const bitset<_Nb> & __rhs) [inline], [noexcept]
```

Operations on bitsets.

**Parameters**

|                    |                      |
|--------------------|----------------------|
| <code>__rhs</code> | A same-sized bitset. |
|--------------------|----------------------|

These should be self-explanatory.

Definition at line 986 of file `bitset`.

**4.333.3.17 `operator" |=()`**

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::operator|= (
 const bitset<_Nb> & __rhs) [inline], [noexcept]
```

Operations on bitsets.

**Parameters**

|                    |                      |
|--------------------|----------------------|
| <code>__rhs</code> | A same-sized bitset. |
|--------------------|----------------------|

These should be self-explanatory.

Definition at line 979 of file `bitset`.

## 4.333.3.18 operator~()

```
template<size_t _Nb>
bitset<_Nb> std::bitset<_Nb>::operator~ () const [inline], [noexcept]
```

See the no-argument flip().

Definition at line 1144 of file `bitset`.

## 4.333.3.19 reset() [1/2]

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::reset () [inline], [noexcept]
```

Sets every bit to false.

Definition at line 1099 of file `bitset`.

## 4.333.3.20 reset() [2/2]

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::reset (
 size_t __position) [inline]
```

Sets a given bit to false.

## Parameters

|                         |                       |
|-------------------------|-----------------------|
| <code>__position</code> | The index of the bit. |
|-------------------------|-----------------------|

## Exceptions

|                                |                                                    |
|--------------------------------|----------------------------------------------------|
| <code>std::out_of_range</code> | If <code>pos</code> is bigger the size of the set. |
|--------------------------------|----------------------------------------------------|

Same as writing `set (pos, false)`.

Definition at line 1113 of file `bitset`.

## 4.333.3.21 set() [1/2]

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::set () [inline], [noexcept]
```

Sets every bit to true.

Definition at line 1075 of file `bitset`.

#### 4.333.3.22 `set()` [2/2]

```
template<size_t _Nb>
bitset<_Nb>& std::bitset<_Nb>::set (
 size_t __position,
 bool __val = true) [inline]
```

Sets a given bit to a particular value.

##### Parameters

|                         |                                         |
|-------------------------|-----------------------------------------|
| <code>__position</code> | The index of the bit.                   |
| <code>__val</code>      | Either true or false, defaults to true. |

##### Exceptions

|                                |                                              |
|--------------------------------|----------------------------------------------|
| <code>std::out_of_range</code> | If <i>pos</i> is bigger the size of the set. |
|--------------------------------|----------------------------------------------|

Definition at line 1089 of file `bitset`.

#### 4.333.3.23 `size()`

```
template<size_t _Nb>
constexpr size_t std::bitset<_Nb>::size () const [inline], [noexcept]
```

Returns the total number of bits.

Definition at line 1300 of file `bitset`.

#### 4.333.3.24 `test()`

```
template<size_t _Nb>
bool std::bitset<_Nb>::test (
 size_t __position) const [inline]
```

Tests the value of a bit.

**Parameters**

|                         |                     |
|-------------------------|---------------------|
| <code>__position</code> | The index of a bit. |
|-------------------------|---------------------|

**Returns**

The value at *pos*.

**Exceptions**

|                                |                                              |
|--------------------------------|----------------------------------------------|
| <code>std::out_of_range</code> | If <i>pos</i> is bigger the size of the set. |
|--------------------------------|----------------------------------------------|

Definition at line 1323 of file `bitset`.

**4.333.3.25 to\_string()**

```
template<size_t _Nb>
template<class _CharT , class _Traits , class _Alloc >
std::basic_string<_CharT, _Traits, _Alloc> std::bitset< _Nb >::to_string () const [inline]
```

Returns a character interpretation of the bitset.

**Returns**

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

Definition at line 1197 of file `bitset`.

**4.333.3.26 to\_ulong()**

```
template<size_t _Nb>
unsigned long std::bitset< _Nb >::to_ulong () const [inline]
```

Returns a numerical interpretation of the bitset.

**Returns**

The integral equivalent of the bits.

## Exceptions

|                                  |                                                                   |
|----------------------------------|-------------------------------------------------------------------|
| <code>std::overflow_error</code> | If there are too many bits to be represented in an unsigned long. |
|----------------------------------|-------------------------------------------------------------------|

Definition at line 1178 of file `bitset`.

The documentation for this class was generated from the following file:

- [bitset](#)

#### 4.334 `std::__debug::bitset<_Nb>` Class Template Reference

Inherits `bitset<_Nb>`.

#### 4.335.1 Detailed Description

##### [bool\\_set](#)

See N2136, Bool\_set: multi-valued logic by Hervé Brönnimann, Guillaume Melquiond, Sylvain Pion.

The implicit conversion to bool is slippery! I may use the new explicit conversion. This has been specialized in the language so that in contexts requiring a bool the conversion happens implicitly. Thus most objections should be eliminated.

Definition at line 54 of file [bool\\_set](#).

#### 4.335.2 Constructor & Destructor Documentation

##### 4.335.2.1 [bool\\_set](#)() [1/2]

```
constexpr std::tr2::bool_set::bool_set () [inline]
```

Default constructor.

Definition at line 59 of file [bool\\_set](#).

##### 4.335.2.2 [bool\\_set](#)() [2/2]

```
constexpr std::tr2::bool_set::bool_set (
 bool __t) [inline]
```

Constructor from bool.

Definition at line 62 of file [bool\\_set](#).

### 4.335.3 Member Function Documentation

#### 4.335.3.1 equals()

```
bool std::tr2::bool_set::equals (
 bool_set __b) const [inline]
```

Return true if states are equal.

Definition at line 69 of file bool\_set.

#### 4.335.3.2 is\_emptyset()

```
bool std::tr2::bool_set::is_emptyset () const [inline]
```

Return true if this is empty.

Definition at line 73 of file bool\_set.

#### 4.335.3.3 is\_indeterminate()

```
bool std::tr2::bool_set::is_indeterminate () const [inline]
```

Return true if this is indeterminate.

Definition at line 77 of file bool\_set.

#### 4.335.3.4 is\_singleton()

```
bool std::tr2::bool_set::is_singleton () const [inline]
```

Return true if this is false or true (normal boolean).

Definition at line 81 of file bool\_set.

#### 4.335.3.5 operator bool()

```
std::tr2::bool_set::operator bool () const [inline]
```

Conversion to bool.

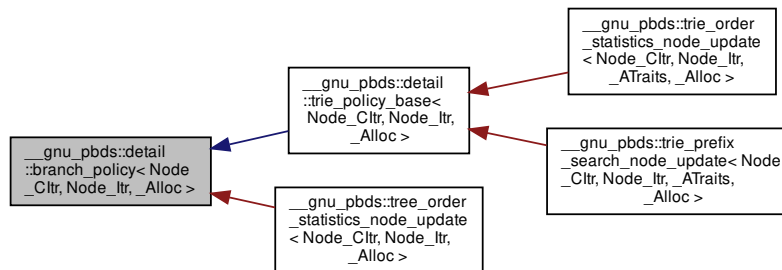

Definition at line 86 of file bool\_set.

The documentation for this class was generated from the following files:

## Friends

- bool `operator==` (const `cauchy_distribution` &\_\_d1, const `cauchy_distribution` &\_\_d2)

## 4.338.1 Detailed Description

```
template<typename _RealType = double>
class std::cauchy_distribution< _RealType >
```

A `cauchy_distribution` random number distribution.

The formula for the normal probability mass function is  $p(x|a,b) = (\pi b(1 + (\frac{x-a}{b})^2))^{-1}$

Definition at line 2854 of file `random.h`.

## 4.338.2 Member Typedef Documentation

## 4.338.2.1 result\_type

```
template<typename _RealType = double>
typedef _RealType std::cauchy_distribution< _RealType >::result_type
```

The type of the range of the distribution.

Definition at line 2857 of file `random.h`.

## 4.338.3 Member Function Documentation

## 4.338.3.1 a()

```
template<typename _RealType = double>
_RealType std::cauchy_distribution< _RealType >::a () const [inline]
```

Definition at line 2919 of file `random.h`.

#### 4.338.3.2 max()

```
template<typename _RealType = double>
result_type std::cauchy_distribution< _RealType >::max () const [inline]
```

Returns the least upper bound value of the distribution.

Definition at line 2952 of file random.h.

References `std::numeric_limits<_Tp>::max()`.

#### 4.338.3.3 min()

```
template<typename _RealType = double>
result_type std::cauchy_distribution< _RealType >::min () const [inline]
```

Returns the greatest lower bound value of the distribution.

Definition at line 2945 of file random.h.

References `std::numeric_limits<_Tp>::lowest()`.

#### 4.338.3.4 operator>()

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator >
result_type std::cauchy_distribution< _RealType >::operator() (
 _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

Definition at line 2960 of file random.h.

#### 4.338.3.5 param() [1/2]

```
template<typename _RealType = double>
param_type std::cauchy_distribution< _RealType >::param () const [inline]
```

Returns the parameter set of the distribution.

Definition at line 2930 of file random.h.

Referenced by `std::operator>>()`.

#### 4.338.3.6 param() [2/2]

```
template<typename _RealType = double>
void std::cauchy_distribution< _RealType >::param (
 const param_type & __param) [inline]
```

Sets the parameter set of the distribution.

## Parameters

|                      |                                            |
|----------------------|--------------------------------------------|
| <code>__param</code> | The new parameter set of the distribution. |
|----------------------|--------------------------------------------|

Definition at line 2938 of file random.h.

4.338.3.7 `reset()`

```
template<typename _RealType = double>
void std::cauchy_distribution< _RealType >::reset () [inline]
```

Resets the distribution state.

Definition at line 2912 of file random.h.

## 4.338.4 Friends And Related Function Documentation

4.338.4.1 `operator==`

```
template<typename _RealType = double>
bool operator== (
 const cauchy_distribution< _RealType > & __d1,
 const cauchy_distribution< _RealType > & __d2) [friend]
```

Return true if two Cauchy distributions have the same parameters.

Definition at line 2995 of file random.h.

#### 4.339.1 Detailed Description

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
class __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
```

A resize trigger policy based on collision checks. It keeps the simulated load factor lower than some given load factor.

Definition at line 293 of file hash\_policy.hpp.

#### 4.339.2 Member Enumeration Documentation

##### 4.339.2.1 anonymous enum

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
anonymous enum
```

## Enumerator

|                                   |                                                                                                                                                                 |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>external_load_access</code> | Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation. |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|

Definition at line 298 of file `hash_policy.hpp`.

## 4.339.3 Constructor & Destructor Documentation

### 4.339.3.1 `cc_hash_max_collision_check_resize_trigger()`

```
template<bool External_Load_Access, typename Size_Type >
__gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::cc_hash_max_collision_
(
 float load = 0.5)
```

Default constructor, or constructor taking `load`, a `__load` factor which it will attempt to maintain.

Definition at line 46 of file `hash_policy.hpp`.

## 4.339.4 Member Function Documentation

### 4.339.4.1 `get_load()`

```
template<bool External_Load_Access, typename Size_Type >
float __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::get_load () const [inline]
```

Returns the current load.

Definition at line 192 of file `hash_policy.hpp`.

### 4.339.4.2 `is_grow_needed()`

```
template<bool External_Load_Access, typename Size_Type >
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::is_grow_needed (
 size_type size,
 size_type num_entries) const [inline], [protected]
```

Queries whether a grow is needed. This method is called only if this object indicated is needed.

Definition at line 135 of file `hash_policy.hpp`.

#### 4.339.4.3 is\_resize\_needed()

```
template<bool External_Load_Access, typename Size_Type >
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::is_resize_needed () const [inline], [protected]
```

Queries whether a resize is needed.

Definition at line 129 of file hash\_policy.hpp.

#### 4.339.4.4 notify\_cleared()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_cleared () [protected]
```

Notifies the table was cleared.

Definition at line 123 of file hash\_policy.hpp.

#### 4.339.4.5 notify\_erase\_search\_collision()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erase_search_collision () [inline], [protected]
```

Notifies a search encountered a collision.

Definition at line 99 of file hash\_policy.hpp.

#### 4.339.4.6 notify\_erase\_search\_end()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erase_search_end () [inline], [protected]
```

Notifies a search ended.

Definition at line 105 of file hash\_policy.hpp.

#### 4.339.4.7 notify\_erase\_search\_start()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erase_search_start () [inline], [protected]
```

Notifies an erase search started.

Definition at line 93 of file hash\_policy.hpp.

#### 4.339.4.8 notify\_erased()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erased (
 size_type num_entries) [inline], [protected]
```

Notifies an element was erased.

Definition at line 117 of file hash\_policy.hpp.

#### 4.339.4.9 notify\_externally\_resized()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_externally_resized (
 size_type new_size) [protected]
```

Notifies the table was resized externally.

Definition at line 174 of file hash\_policy.hpp.

#### 4.339.4.10 notify\_find\_search\_collision()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_find_search_collision () [inline], [protected]
```

Notifies a search encountered a collision.

Definition at line 63 of file hash\_policy.hpp.

#### 4.339.4.11 notify\_find\_search\_end()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_find_search_end () [inline], [protected]
```

Notifies a search ended.

Definition at line 69 of file hash\_policy.hpp.

#### 4.339.4.12 notify\_find\_search\_start()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_find_search_start () [inline], [protected]
```

Notifies a find search started.

Definition at line 57 of file hash\_policy.hpp.

#### 4.339.4.13 notify\_insert\_search\_collision()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_insert_search_collision () [inline], [protected]
```

Notifies a search encountered a collision.

Definition at line 81 of file hash\_policy.hpp.

#### 4.339.4.14 notify\_insert\_search\_end()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_insert_search_end () [inline], [protected]
```

Notifies a search ended.

Definition at line 87 of file hash\_policy.hpp.

#### 4.339.4.15 notify\_insert\_search\_start()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_insert_search_start () [inline], [protected]
```

Notifies an insert search started.

Definition at line 75 of file hash\_policy.hpp.

#### 4.339.4.16 notify\_inserted()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_inserted (
 size_type num_entries) [inline], [protected]
```

Notifies an element was inserted.

Definition at line 111 of file hash\_policy.hpp.

#### 4.339.4.17 notify\_resized()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_resized (
 size_type new_size) [protected]
```

Notifies the table was resized as a result of this object's signifying that a resize is needed.

Definition at line 141 of file hash\_policy.hpp.

#### 4.339.4.18 set\_load()

```
template<bool External_Load_Access, typename Size_Type >
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::set_load (
 float load)
```

Sets the load; does not resize the container.

Definition at line 207 of file hash\_policy.hpp.

The documentation for this class was generated from the following file:

- [hash\\_policy.hpp](#)

#### 4.340 `__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >`:

#### Public Types

- typedef Comb\_Hash\_Fn **comb\_hash\_fn**
- typedef `cc_hash_tag` **container\_category**
- typedef Eq\_Fn **eq\_fn**
- typedef Hash\_Fn **hash\_fn**
- typedef Resize\_Policy **resize\_policy**

## 4.340.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn
= typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =
typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename
_Alloc = std::allocator<char>>>
class __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >
```

A collision-chaining hash-based associative container.

## Template Parameters

|                      |                                                                                                                                                                                                                      |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Key</i>           | Key type.                                                                                                                                                                                                            |
| <i>Mapped</i>        | Map type.                                                                                                                                                                                                            |
| <i>Hash_Fn</i>       | Hashing functor.                                                                                                                                                                                                     |
| <i>Eq_Fn</i>         | Equal functor.                                                                                                                                                                                                       |
| <i>Comb_Hash_Fn</i>  | Combining hash functor. If <i>Hash_Fn</i> is not <code>null_type</code> , then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.) |
| <i>Resize_Policy</i> | Resizes hash.                                                                                                                                                                                                        |
| <i>Store_Hash</i>    | Indicates whether the hash value will be stored along with each key. If <i>Hash_Fn</i> is <code>null_type</code> , then the container will not compile if this value is true                                         |
| <i>_Alloc</i>        | Allocator type.                                                                                                                                                                                                      |

Base tag choices are: `cc_hash_tag`.

Base is `basic_hash_table`.

Definition at line 204 of file `assoc_container.hpp`.

## 4.340.2 Constructor &amp; Destructor Documentation

4.340.2.1 `cc_hash_table()` [1/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn =
typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =
typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc =
std::allocator<char>>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table () [inline]
```

Default constructor.

Definition at line 217 of file `assoc_container.hpp`.

**4.340.2.2 cc\_hash\_table()** [2/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
 const hash_fn & h) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `Hash_Fn` object of the container object.

Definition at line 221 of file `assoc_container.hpp`.

**4.340.2.3 cc\_hash\_table()** [3/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
 const hash_fn & h,
 const eq_fn & e) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, and `r_eq_fn` will be copied by the `eq_fn` object of the container object.

Definition at line 228 of file `assoc_container.hpp`.

**4.340.2.4 cc\_hash\_table()** [4/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
 const hash_fn & h,
 const eq_fn & e,
 const comb_hash_fn & ch) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, and `r_comb_hash_fn` will be copied by the `comb_hash_fn` object of the container object.

Definition at line 236 of file `assoc_container.hpp`.

4.340.2.5 `cc_hash_table()` [5/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
 const hash_fn & h,
 const eq_fn & e,
 const comb_hash_fn & ch,
 const resize_policy & rp) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, `r_comb_hash_fn` will be copied by the `comb_hash_fn` object of the container object, and `r_resize_policy` will be copied by the `resize_policy` object of the container object.

Definition at line 245 of file `assoc_container.hpp`.

4.340.2.6 `cc_hash_table()` [6/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
 It first,
 It last) [inline]
```

Constructor taking `__iterators` to a range of `value_types`. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

Definition at line 253 of file `assoc_container.hpp`.

4.340.2.7 `cc_hash_table()` [7/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
 It first,
```

```

 It last,
 const hash_fn & h) [inline]

```

Constructor taking `__iterators` to a range of `value_types` and some policy objects. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

Definition at line 260 of file `assoc_container.hpp`.

#### 4.340.2.8 `cc_hash_table()` [8/10]

```

template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
 It first,
 It last,
 const hash_fn & h,
 const eq_fn & e) [inline]

```

Constructor taking `__iterators` to a range of `value_types` and some policy objects The `value_types` between `first_it` and `last_it` will be inserted into the container object. `r_hash_fn` will be copied by the `hash_fn` object of the container object, and `r_eq_fn` will be copied by the `eq_fn` object of the container object.

Definition at line 271 of file `assoc_container.hpp`.

#### 4.340.2.9 `cc_hash_table()` [9/10]

```

template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
 It first,
 It last,
 const hash_fn & h,
 const eq_fn & e,
 const comb_hash_fn & ch) [inline]

```

Constructor taking `__iterators` to a range of `value_types` and some policy objects The `value_types` between `first_↵` it and `last_it` will be inserted into the container object. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, and `r_comb_hash_fn` will be copied by the `comb_hash_fn` object of the container object.

Definition at line 283 of file `assoc_container.hpp`.

## 4.340.2.10 cc\_hash\_table() [10/10]

```

template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type,
bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
 It first,
 It last,
 const hash_fn & h,
 const eq_fn & e,
 const comb_hash_fn & ch,
 const resize_policy & rp) [inline]

```

Constructor taking \_\_iterators to a range of value\_types and some policy objects The value\_types between first\_it and last\_it will be inserted into the container object. r\_hash\_fn will be copied by the hash\_fn object of the container object, r\_eq\_fn will be copied by the eq\_fn object of the container object, r\_comb\_hash\_fn will be copied by the comb\_hash\_fn object of the container object, and r\_resize\_policy will be copied by the resize\_policy object of the container object.

## 4.342.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename
Comb_Hash_Fn, typename Resize_Policy>
class __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >
```

A collision-chaining hash-based container.

## Template Parameters

|                      |                                                                                                                                                                                                                                                         |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Key</i>           | Key type.                                                                                                                                                                                                                                               |
| <i>Mapped</i>        | Map type.                                                                                                                                                                                                                                               |
| <i>Hash_Fn</i>       | Hashing functor. Default is <code>__gnu_cxx::hash</code> .                                                                                                                                                                                              |
| <i>Eq_Fn</i>         | Equal functor. Default <code>std::equal_to&lt;Key&gt;</code>                                                                                                                                                                                            |
| <i>_Alloc</i>        | Allocator type.                                                                                                                                                                                                                                         |
| <i>Store_Hash</i>    | If key type stores extra metadata. Defaults to false.                                                                                                                                                                                                   |
| <i>Comb_Hash_Fn</i>  | Combining hash functor. If <i>Hash_Fn</i> is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.) Default <code>direct_mask_range_hashing</code> . |
| <i>Resize_Policy</i> | Resizes hash. Defaults to <code>hash_standard_resize_policy</code> , using <code>hash_exponential_size_policy</code> and <code>hash_load_check_resize_trigger</code> .                                                                                  |

Bases are: `detail::hash_eq_fn`, `Resize_Policy`, `detail::ranged_hash_fn`, `detail::types_traits`. (Optional: `detail::debug_↔map_base`.)

Definition at line 140 of file `cc_ht_map.hpp`.

## 4.342.2 Member Enumeration Documentation

## 4.342.2.1 anonymous enum

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
anonymous enum
```

Value stores hash, true or false.

Definition at line 203 of file `cc_ht_map.hpp`.

#### 4.342.3 Member Function Documentation

##### 4.342.3.1 `empty()`

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
bool __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::empty () const [inline]
```

True if `size() == 0`.

Definition at line 55 of file `cc_ht_map.hpp`.

##### 4.342.3.2 `get_comb_hash_fn()` [1/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ()
```

Return current `comb_hash_fn`.

Definition at line 72 of file `cc_ht_map.hpp`.

##### 4.342.3.3 `get_comb_hash_fn()` [2/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
const Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn () const
```

Return current `const comb_hash_fn`.

Definition at line 78 of file `cc_ht_map.hpp`.

##### 4.342.3.4 `get_eq_fn()` [1/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_eq_fn ()
```

Return current `eq_fn`.

Definition at line 60 of file `cc_ht_map.hpp`.

#### 4.342.3.5 `get_eq_fn()` [2/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
const Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_eq_fn () const
```

Return current const eq\_fn.

Definition at line 66 of file cc\_ht\_map.hpp.

#### 4.342.3.6 `get_hash_fn()` [1/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_↵
Hash_Fn, Resize_Policy >::get_hash_fn ()
```

Return current hash\_fn.

Definition at line 48 of file cc\_ht\_map.hpp.

#### 4.342.3.7 `get_hash_fn()` [2/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
const Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_hash_fn () const
```

Return current const hash\_fn.

Definition at line 54 of file cc\_ht\_map.hpp.

#### 4.342.3.8 `get_resize_policy()` [1/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_resize_policy ()
```

Return current resize\_policy.

Definition at line 84 of file cc\_ht\_map.hpp.

## 4.342.3.9 get\_resize\_policy() [2/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
const Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_resize_policy () const
```

Return current const resize\_policy.

Definition at line 90 of file cc\_ht\_map.hpp.

The documentation for this class was generated from the following file:

- [cc\\_ht\\_map.hpp](#)

- static constexpr int\_type **to\_int\_type** (const char\_type &\_\_c)

### 4.343.1 Detailed Description

```
template<typename _CharT>
struct __gnu_cxx::char_traits< _CharT >
```

Base class used to implement std::char\_traits.

#### Note

For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the int\_type and state\_type typedefs, and the eof() member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace std may not be specialized for fundamental types, but classes in namespace \_\_gnu\_cxx may be.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character\\_types](https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types) for advice on how to make use of this class for *unusual* character types. Also, check out include/ext/pod\_char\_traits.h.

Definition at line 90 of file char\_traits.h.

- static constexpr int\_type **to\_int\_type** (const char\_type &\_\_c)

#### 4.344.1 Detailed Description

```
template<class _CharT>
struct std::char_traits< _CharT >
```

Basis for explicit traits specializations.

##### Note

For any given actual character type, this definition is probably wrong. Since this is just a thin wrapper around `__gnu_cxx::char_traits`, it is possible to achieve a more appropriate definition by specializing `__gnu_cxx::char_traits`.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character\\_types](https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types) for advice on how to make use of this class for *unusual* character types. Also, check out `include/ext/pod_char_traits.h`.

Definition at line 310 of file `char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

## 4.349.1 Detailed Description

```
template<typename _RealType = double>
class std::chi_squared_distribution< _RealType >
```

A [chi\\_squared\\_distribution](#) random number distribution.

The formula for the normal probability mass function is  $p(x|n) = \frac{x^{(n/2)-1} e^{-x/2}}{\Gamma(n/2) 2^{n/2}}$

Definition at line 2630 of file random.h.

## 4.349.2 Member Typedef Documentation

#### 4.349.2.1 result\_type

```
template<typename _RealType = double>
typedef _RealType std::chi_squared_distribution< _RealType >::result_type
```

The type of the range of the distribution.

Definition at line 2633 of file random.h.

### 4.349.3 Member Function Documentation

#### 4.349.3.1 max()

```
template<typename _RealType = double>
result_type std::chi_squared_distribution< _RealType >::max () const [inline]
```

Returns the least upper bound value of the distribution.

Definition at line 2724 of file random.h.

References std::numeric\_limits<\_Tp>::max().

#### 4.349.3.2 min()

```
template<typename _RealType = double>
result_type std::chi_squared_distribution< _RealType >::min () const [inline]
```

Returns the greatest lower bound value of the distribution.

Definition at line 2717 of file random.h.

#### 4.349.3.3 n()

```
template<typename _RealType = double>
_RealType std::chi_squared_distribution< _RealType >::n () const [inline]
```

Definition at line 2690 of file random.h.

#### 4.349.3.4 operator()

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator >
result_type std::chi_squared_distribution< _RealType >::operator() (
 _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

Definition at line 2732 of file random.h.

#### 4.349.3.5 param() [1/2]

```
template<typename _RealType = double>
param_type std::chi_squared_distribution< _RealType >::param () const [inline]
```

Returns the parameter set of the distribution.

Definition at line 2697 of file random.h.

#### 4.349.3.6 param() [2/2]

```
template<typename _RealType = double>
void std::chi_squared_distribution< _RealType >::param (
 const param_type & __param) [inline]
```

Sets the parameter set of the distribution.

##### Parameters

|                      |                                            |
|----------------------|--------------------------------------------|
| <code>__param</code> | The new parameter set of the distribution. |
|----------------------|--------------------------------------------|

Definition at line 2705 of file random.h.

References `std::gamma_distribution< _RealType >::param()`.

#### 4.349.3.7 reset()

```
template<typename _RealType = double>
void std::chi_squared_distribution< _RealType >::reset () [inline]
```

Resets the distribution state.

Definition at line 2683 of file random.h.

References `std::gamma_distribution< _RealType >::reset()`.

## 4.349.4 Friends And Related Function Documentation

## 4.349.4.1 operator&lt;&lt;

```
template<typename _RealType = double>
template<typename _RealType1, typename _CharT, typename _Traits >
std::basic_ostream<_CharT, _Traits>& operator<< (
 std::basic_ostream<_CharT, _Traits> & __os,
 const std::chi_squared_distribution<_RealType1> & __x) [friend]
```

Inserts a chi\_squared\_distribution random number distribution \_\_x into the output stream \_\_os.

## Parameters

|      |                                                        |
|------|--------------------------------------------------------|
| __os | An output stream.                                      |
| __x  | A chi_squared_distribution random number distribution. |

## Returns

The output stream with the state of \_\_x inserted or in an error state.

## 4.349.4.2 operator==

```
template<typename _RealType = double>
bool operator== (
 const chi_squared_distribution<_RealType> & __d1,
 const chi_squared_distribution<_RealType> & __d2) [friend]
```

Return true if two Chi-squared distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2783 of file random.h.

## 4.349.4.3 operator&gt;&gt;

```
template<typename _RealType = double>
template<typename _RealType1, typename _CharT, typename _Traits >
std::basic_istream<_CharT, _Traits>& operator>> (
 std::basic_istream<_CharT, _Traits> & __is,
 std::chi_squared_distribution<_RealType1> & __x) [friend]
```

Extracts a chi\_squared\_distribution random number distribution \_\_x from the input stream \_\_is.

## Parameters

|                         |                                                                         |
|-------------------------|-------------------------------------------------------------------------|
| <code>_↵<br/>_is</code> | An input stream.                                                        |
| <code>_↵<br/>_x</code>  | A <code>chi_squared_distribution</code> random number generator engine. |

## Returns

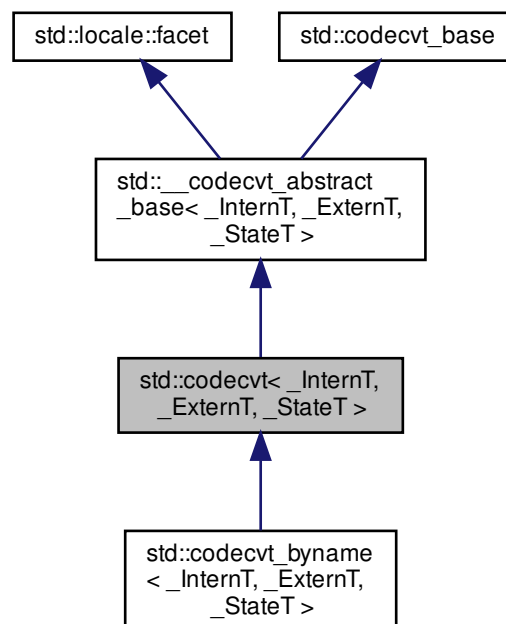

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

### 4.350.1 Detailed Description

```
template<typename _InternT, typename _ExternT, typename _StateT>
class std::codecvt< _InternT, _ExternT, _StateT >
```

Primary class template codecvt.

NB: Generic, mostly useless implementation.

Definition at line 274 of file codecvt.h.

### 4.350.2 Member Function Documentation

#### 4.350.2.1 `do_out()`

```
template<typename _InternT, typename _ExternT, typename _StateT>
virtual result std::codecvt< _InternT, _ExternT, _StateT >::do_out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

#### See also

`out` for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base](#)< `_InternT`, `_ExternT`, `_StateT` >.

## 4.350.2.2 in()

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (
 state_type & __state,
 const extern_type * __from,
 const extern_type * __from_end,
 const extern_type *& __from_next,
 intern_type * __to,
 intern_type * __to_end,
 intern_type *& __to_next) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

## Parameters

|                          |                                      |
|--------------------------|--------------------------------------|
| <code>__state</code>     | Persistent conversion state data.    |
| <code>__from</code>      | Start of input.                      |
| <code>__from_end</code>  | End of input.                        |
| <code>__from_next</code> | Returns start of unconverted data.   |
| <code>__to</code>        | Start of output buffer.              |
| <code>__to_end</code>    | End of output buffer.                |
| <code>__to_next</code>   | Returns start of unused output area. |

## Returns

`codecvt_base::result`.

Definition at line 196 of file `codecvt.h`.

#### 4.350.2.3 out()

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

##### Parameters

|                          |                                      |
|--------------------------|--------------------------------------|
| <code>__state</code>     | Persistent conversion state data.    |
| <code>__from</code>      | Start of input.                      |
| <code>__from_end</code>  | End of input.                        |
| <code>__from_next</code> | Returns start of unconverted data.   |
| <code>__to</code>        | Start of output buffer.              |
| <code>__to_end</code>    | End of output buffer.                |
| <code>__to_next</code>   | Returns start of unused output area. |

##### Returns

`codecvt_base::result`.

Definition at line 116 of file `codecvt.h`.

## 4.350.2.4 unshift()

```
template<typename _InternT, typename _ExternT, typename _StateT>
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (
 state_type & __state,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

## Parameters

|                        |                                      |
|------------------------|--------------------------------------|
| <code>__state</code>   | Persistent conversion state data.    |
| <code>__to</code>      | Start of output buffer.              |
| <code>__to_end</code>  | End of output buffer.                |
| <code>__to_next</code> | Returns start of unused output area. |

## Returns

`codecvt_base::result`.

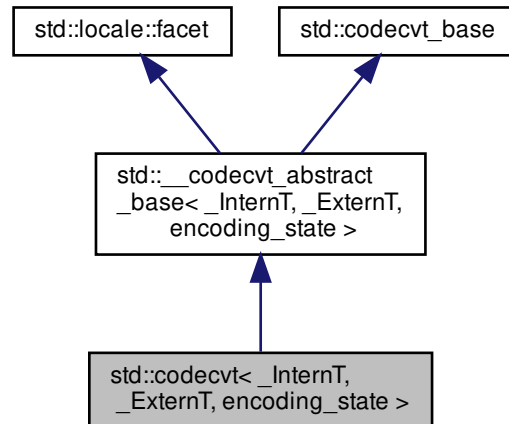

Definition at line 155 of file `codecvt.h`.

## 4.351.1 Detailed Description

```
template<typename _InternT, typename _ExternT>
class std::codecvt<_InternT, _ExternT, encoding_state >
```

codecvt<InternT, \_ExternT, encoding\_state> specialization.

Definition at line 233 of file codecvt\_specializations.h.

## 4.351.2 Member Function Documentation

## 4.351.2.1 do\_out()

```
template<typename _InternT , typename _ExternT >
codecvt_base::result std::codecvt<_InternT, _ExternT, encoding_state >::do_out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type * & __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type * & __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base<\\_InternT, \\_ExternT, encoding\\_state>](#).

Definition at line 309 of file `codecvt_specializations.h`.

#### 4.351.2.2 in()

```
result std::__codecvt_abstract_base<_InternT, _ExternT, encoding_state>::in (
 state_type & __state,
 const extern_type * __from,
 const extern_type * __from_end,
 const extern_type *& __from_next,
 intern_type * __to,
 intern_type * __to_end,
 intern_type *& __to_next) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

##### Parameters

|                          |                                      |
|--------------------------|--------------------------------------|
| <code>__state</code>     | Persistent conversion state data.    |
| <code>__from</code>      | Start of input.                      |
| <code>__from_end</code>  | End of input.                        |
| <code>__from_next</code> | Returns start of unconverted data.   |
| <code>__to</code>        | Start of output buffer.              |
| <code>__to_end</code>    | End of output buffer.                |
| <code>__to_next</code>   | Returns start of unused output area. |

**Returns**

codecvt\_base::result.

Definition at line 196 of file codecvt.h.

**4.351.2.3 out()**

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This is analogous to wcsrtombs. It does this by calling codecvt::do\_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt\_base::result. If all the input is converted, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt\_base::partial. Otherwise the conversion failed and codecvt\_base::error is returned.

**Parameters**

|                    |                                      |
|--------------------|--------------------------------------|
| <i>__state</i>     | Persistent conversion state data.    |
| <i>__from</i>      | Start of input.                      |
| <i>__from_end</i>  | End of input.                        |
| <i>__from_next</i> | Returns start of unconverted data.   |
| <i>__to</i>        | Start of output buffer.              |
| <i>__to_end</i>    | End of output buffer.                |
| <i>__to_next</i>   | Returns start of unused output area. |

**Returns**

codecvt\_base::result.

Definition at line 116 of file codecvt.h.

#### 4.351.2.4 unshift()

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::unshift (
 state_type & __state,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

##### Parameters

|                        |                                      |
|------------------------|--------------------------------------|
| <code>__state</code>   | Persistent conversion state data.    |
| <code>__to</code>      | Start of output buffer.              |
| <code>__to_end</code>  | End of output buffer.                |
| <code>__to_next</code> | Returns start of unused output area. |

##### Returns

`codecvt_base::result`.

#### 4.352.1 Detailed Description

```
template<>
class std::codecvt< char, char, mbstate_t >
```

class codecvt<char, char, mbstate\_t> specialization.

Definition at line 338 of file codecvt.h.

#### 4.352.2 Member Function Documentation

4.352.2.1 `do_out()`

```
virtual result std::codecvt< char, char, mbstate_t >::do_out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

**See also**

`out` for more information.

Implements `std::__codecvt_abstract_base< char, char, mbstate_t >`.

4.352.2.2 `in()`

```
result std::__codecvt_abstract_base< char , char , mbstate_t >::in (
 state_type & __state,
 const extern_type * __from,
 const extern_type * __from_end,
 const extern_type *& __from_next,
 intern_type * __to,
 intern_type * __to_end,
 intern_type *& __to_next) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

**Parameters**

|                          |                                      |
|--------------------------|--------------------------------------|
| <code>__state</code>     | Persistent conversion state data.    |
| <code>__from</code>      | Start of input.                      |
| <code>__from_end</code>  | End of input.                        |
| <code>__from_next</code> | Returns start of unconverted data.   |
| <code>__to</code>        | Start of output buffer.              |
| <code>__to_end</code>    | End of output buffer.                |
| <code>__to_next</code>   | Returns start of unused output area. |

**Returns**

`codecvt_base::result`.

Definition at line 196 of file `codecvt.h`.

**4.352.2.3 out()**

```
result std::__codecvt_abstract_base< char , char , mbstate_t >::out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

**Parameters**

|                          |                                    |
|--------------------------|------------------------------------|
| <code>__state</code>     | Persistent conversion state data.  |
| <code>__from</code>      | Start of input.                    |
| <code>__from_end</code>  | End of input.                      |
| <code>__from_next</code> | Returns start of unconverted data. |
| <code>__to</code>        | Start of output buffer.            |

**Returns**

codecvt\_base::result.

Definition at line 116 of file codecvt.h.

**4.352.2.4 unshift()**

```
result std::__codecvt_abstract_base< char , char , mbstate_t >::unshift (
 state_type & __state,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do\_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt\_base::result. If the state could be reset and data written, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the output has insufficient space, returns codecvt\_base::partial. Otherwise the reset failed and codecvt\_base::error is returned.

**Parameters**

|                        |                                      |
|------------------------|--------------------------------------|
| <code>__state</code>   | Persistent conversion state data.    |
| <code>__to</code>      | Start of output buffer.              |
| <code>__to_end</code>  | End of output buffer.                |
| <code>__to_next</code> | Returns start of unused output area. |

**Returns**

codecvt\_base::result.

Converts between UTF-16 and UTF-8.

Definition at line 467 of file `codecvt.h`.

## 4.353.2 Member Function Documentation

#### 4.353.2.1 do\_out()

```
virtual result std::codecvt< char16_t, char, mbstate_t >::do_out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

##### See also

[out](#) for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base](#)< char16\_t, char, mbstate\_t >.

#### 4.353.2.2 in()

```
result std::__codecvt_abstract_base< char16_t , char , mbstate_t >::in (
 state_type & __state,
 const extern_type * __from,
 const extern_type * __from_end,
 const extern_type *& __from_next,
 intern_type * __to,
 intern_type * __to_end,
 intern_type *& __to_next) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern\_type to output string of intern\_type. This is analogous to mbsrtowcs. It does this by calling [codecvt::do\\_in](#).

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of [codecvt\\_base::result](#). If all the input is converted, returns [codecvt\\_base::ok](#). If no conversion is necessary, returns [codecvt\\_base::noconv](#). If the input ends early or there is insufficient space in the output, returns [codecvt\\_base::partial](#). Otherwise the conversion failed and [codecvt\\_base::error](#) is returned.

## Parameters

|                          |                                      |
|--------------------------|--------------------------------------|
| <code>__state</code>     | Persistent conversion state data.    |
| <code>__from</code>      | Start of input.                      |
| <code>__from_end</code>  | End of input.                        |
| <code>__from_next</code> | Returns start of unconverted data.   |
| <code>__to</code>        | Start of output buffer.              |
| <code>__to_end</code>    | End of output buffer.                |
| <code>__to_next</code>   | Returns start of unused output area. |

## Returns

`codecvt_base::result`.

Definition at line 196 of file `codecvt.h`.

4.353.2.3 `out()`

```
result std::__codecvt_abstract_base< char16_t , char , mbstate_t >::out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

## Parameters

|                          |                                    |
|--------------------------|------------------------------------|
| <code>__state</code>     | Persistent conversion state data.  |
| <code>__from</code>      | Start of input.                    |
| <code>__from_end</code>  | End of input.                      |
| <code>__from_next</code> | Returns start of unconverted data. |
| <code>__to</code>        | Start of output buffer.            |

**Returns**

codecvt\_base::result.

Definition at line 116 of file codecvt.h.

**4.353.2.4 unshift()**

```
result std::__codecvt_abstract_base< char16_t , char , mbstate_t >::unshift (
 state_type & __state,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do\_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt\_base::result. If the state could be reset and data written, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the output has insufficient space, returns codecvt\_base::partial. Otherwise the reset failed and codecvt\_base::error is returned.

**Parameters**

|                        |                                      |
|------------------------|--------------------------------------|
| <code>__state</code>   | Persistent conversion state data.    |
| <code>__to</code>      | Start of output buffer.              |
| <code>__to_end</code>  | End of output buffer.                |
| <code>__to_next</code> | Returns start of unused output area. |

**Returns**

codecvt\_base::result.

#### 4.354.1 Detailed Description

```
template<>
class std::codecvt< char32_t, char, mbstate_t >
```

Class codecvt<char32\_t, char, mbstate\_t> specialization.

Converts between UTF-32 and UTF-8.

Definition at line 524 of file codecvt.h.

#### 4.354.2 Member Function Documentation

4.354.2.1 `do_out()`

```
virtual result std::codecvt< char32_t, char, mbstate_t >::do_out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

## See also

`out` for more information.

Implements `std::__codecvt_abstract_base< char32_t, char, mbstate_t >`.

4.354.2.2 `in()`

```
result std::__codecvt_abstract_base< char32_t , char , mbstate_t >::in (
 state_type & __state,
 const extern_type * __from,
 const extern_type * __from_end,
 const extern_type *& __from_next,
 intern_type * __to,
 intern_type * __to_end,
 intern_type *& __to_next) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

## Parameters

|                          |                                      |
|--------------------------|--------------------------------------|
| <code>__state</code>     | Persistent conversion state data.    |
| <code>__from</code>      | Start of input.                      |
| <code>__from_end</code>  | End of input.                        |
| <code>__from_next</code> | Returns start of unconverted data.   |
| <code>__to</code>        | Start of output buffer.              |
| <code>__to_end</code>    | End of output buffer.                |
| <code>__to_next</code>   | Returns start of unused output area. |

## Returns

`codecvt_base::result`.

Definition at line 196 of file `codecvt.h`.

4.354.2.3 `out()`

```
result std::__codecvt_abstract_base< char32_t , char , mbstate_t >::out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

## Parameters

|                          |                                    |
|--------------------------|------------------------------------|
| <code>__state</code>     | Persistent conversion state data.  |
| <code>__from</code>      | Start of input.                    |
| <code>__from_end</code>  | End of input.                      |
| <code>__from_next</code> | Returns start of unconverted data. |
| <code>__to</code>        | Start of output buffer.            |

**Returns**

codecvt\_base::result.

Definition at line 116 of file codecvt.h.

**4.354.2.4 unshift()**

```
result std::__codecvt_abstract_base< char32_t , char , mbstate_t >::unshift (
 state_type & __state,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do\_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt\_base::result. If the state could be reset and data written, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the output has insufficient space, returns codecvt\_base::partial. Otherwise the reset failed and codecvt\_base::error is returned.

**Parameters**

|                        |                                      |
|------------------------|--------------------------------------|
| <code>__state</code>   | Persistent conversion state data.    |
| <code>__to</code>      | Start of output buffer.              |
| <code>__to_end</code>  | End of output buffer.                |
| <code>__to_next</code> | Returns start of unused output area. |

**Returns**

codecvt\_base::result.

## 4.355.1 Detailed Description

template<>

class `std::codecvt< wchar_t, char, mbstate_t >`

Class `codecvt<wchar_t, char, mbstate_t>` specialization.

Converts between narrow and wide characters in the native character set

Definition at line 401 of file `codecvt.h`.

## 4.355.2 Member Function Documentation

#### 4.355.2.1 do\_out()

```
virtual result std::codecvt< wchar_t, char, mbstate_t >::do_out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

##### See also

out for more information.

Implements [std::\\_\\_codecvt\\_abstract\\_base< wchar\\_t, char, mbstate\\_t >](#).

#### 4.355.2.2 in()

```
result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::in (
 state_type & __state,
 const extern_type * __from,
 const extern_type * __from_end,
 const extern_type *& __from_next,
 intern_type * __to,
 intern_type * __to_end,
 intern_type *& __to_next) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern\_type to output string of intern\_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do\_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt\_base::result. If all the input is converted, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt\_base::partial. Otherwise the conversion failed and codecvt\_base::error is returned.

## Parameters

|                          |                                      |
|--------------------------|--------------------------------------|
| <code>__state</code>     | Persistent conversion state data.    |
| <code>__from</code>      | Start of input.                      |
| <code>__from_end</code>  | End of input.                        |
| <code>__from_next</code> | Returns start of unconverted data.   |
| <code>__to</code>        | Start of output buffer.              |
| <code>__to_end</code>    | End of output buffer.                |
| <code>__to_next</code>   | Returns start of unused output area. |

## Returns

`codecvt_base::result`.

Definition at line 196 of file `codecvt.h`.

## 4.355.2.3 out()

```
result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::out (
 state_type & __state,
 const intern_type * __from,
 const intern_type * __from_end,
 const intern_type *& __from_next,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

## Parameters

|                          |                                    |
|--------------------------|------------------------------------|
| <code>__state</code>     | Persistent conversion state data.  |
| <code>__from</code>      | Start of input.                    |
| <code>__from_end</code>  | End of input.                      |
| <code>__from_next</code> | Returns start of unconverted data. |
| <code>__to</code>        | Start of output buffer.            |

**Returns**

codecvt\_base::result.

Definition at line 116 of file codecvt.h.

**4.355.2.4 unshift()**

```
result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::unshift (
 state_type & __state,
 extern_type * __to,
 extern_type * __to_end,
 extern_type *& __to_next) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do\_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt\_base::result. If the state could be reset and data written, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the output has insufficient space, returns codecvt\_base::partial. Otherwise the reset failed and codecvt\_base::error is returned.

**Parameters**

|                        |                                      |
|------------------------|--------------------------------------|
| <code>__state</code>   | Persistent conversion state data.    |
| <code>__to</code>      | Start of output buffer.              |
| <code>__to_end</code>  | End of output buffer.                |
| <code>__to_next</code> | Returns start of unused output area. |

**Returns**

codecvt\_base::result.
