- void `__insert_start` (const `_Tp` &`__key`, int `__source`, bool)

### Protected Attributes

- `_Compare _M_comp`
- `unsigned int _M_ik`
- `unsigned int _M_k`
- `_Loser * _M_losers`
- `unsigned int _M_offset`

#### 5.137.1 Detailed Description

`template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreePointerUnguarded< false, _Tp, _Compare >`

Unstable unguarded [\\_LoserTree](#) variant storing pointers. Stable variant is above.

Definition at line 957 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

### 5.138 `__gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >` Class Template Reference

Unguarded loser tree, keeping only pointers to the elements in the tree structure.

Inheritance diagram for `__gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreePointerUnguardedBase` (`unsigned int __k, const _Tp &__sentinel, _Compare __comp=std::less< _Tp >()`)
- `int __get_min_source ()`
- `void __insert_start` (`const _Tp &__key, int __source, bool`)

## 5.139 `__gnu_parallel::_LoserTreeTraits<_Tp>` Struct Template Reference 245

### Protected Attributes

- `_Compare` `_M_comp`
- `unsigned int` `_M_ik`
- `unsigned int` `_M_k`
- `_Loser *` `_M_losers`
- `unsigned int` `_M_offset`

#### 5.138.1 Detailed Description

`template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreePointerUnguardedBase<_Tp, _Compare>`

Unguarded loser tree, keeping only pointers to the elements in the tree structure. No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.

Definition at line 809 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.139 `__gnu_parallel::_LoserTreeTraits<_Tp>` Struct Template Reference

Traits for determining whether the loser tree should use pointers or copies.

### Static Public Attributes

- `static const bool` `_M_use_pointer`

#### 5.139.1 Detailed Description

`template<typename _Tp> struct __gnu_parallel::_LoserTreeTraits<_Tp>`

Traits for determining whether the loser tree should use pointers or copies. The field `"_M_use_pointer"` is used to determine whether to use pointers in the loser trees or whether to copy the values into the loser tree.

The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.

Specialize for your data type to customize the behavior.

Example:

```
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false;
};

template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_
use_pointer = true; };
```

#### Parameters

`_Tp` type to give the loser tree traits for.

Definition at line 727 of file `multiway_merge.h`.

#### 5.139.2 Member Data Documentation

**5.139.2.1** `template<typename _Tp > const bool __gnu_parallel::_LoserTreeTraits< _Tp >::_M_use_pointer`  
`[static]`

True iff to use pointers instead of values in loser trees.

The default behavior is to use pointers if the data type is four times as big as the pointer to it.

Definition at line 735 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

#### **5.140** `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >` Class Template Reference

Stable implementation of unguarded [\\_LoserTree](#).

Inheritance diagram for `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _`

Compare >:

### Public Member Functions

- **\_LoserTreeUnguarded** (unsigned int \_\_k, const \_Tp \_\_sentinel, \_Compare \_\_comp=[std::less](#)< \_Tp >())
- void **\_\_delete\_min\_insert** (\_Tp \_\_key, bool)
- int **\_\_get\_min\_source** ()
- void **\_\_init** ()
- unsigned int **\_\_init\_winner** (unsigned int \_\_root)
- void **\_\_insert\_start** (const \_Tp &\_\_key, int \_\_source, bool)

### Protected Attributes

- \_Compare **\_M\_comp**
- unsigned int **\_M\_ik**
- unsigned int **\_M\_k**
- \_Loser \* **\_M\_losers**
- unsigned int **\_M\_offset**

#### 5.140.1 Detailed Description

`template<bool __stable, typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >`

Stable implementation of unguarded [\\_LoserTree](#). Unstable variant is selected below with partial specialization.

### 5.141 `__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >` Class Template Reference 1248

---

Definition at line 629 of file losertree.h.

The documentation for this class was generated from the following file:

- [losertree.h](#)

### 5.141 `__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >` Class Template Reference

Non-Stable implementation of unguarded [\\_LoserTree](#).

Inheritance diagram for `__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >`:

#### Public Member Functions

- `_LoserTreeUnguarded` (unsigned int \_\_k, const \_Tp \_\_sentinel, \_Compare \_\_comp=[std::less](#)< \_Tp >())
- void `__delete_min_insert` (\_Tp \_\_key, bool)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int \_\_root)
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool)

#### Protected Attributes

- `_Compare _M_comp`
- unsigned int `_M_ik`

## 5.142 `__gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >` Class Template Reference 1249

---

- unsigned int `_M_k`
- `_Loser * _M_losers`
- unsigned int `_M_offset`

### 5.141.1 Detailed Description

`template<typename _Tp, typename _Compare> class __gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >`

Non-Stable implementation of unguarded [\\_LoserTree](#). Stable implementation is above.

Definition at line 716 of file `losertree.h`.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.142 `__gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >` Class Template Reference

Base class for unguarded [\\_LoserTree](#) implementation.

Inheritance diagram for `__gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreeUnguardedBase` (unsigned int `__k`, const `_Tp` `__sentinel`, `_Compare` `__comp=std::less< _Tp >()`)
- `int __get_min_source ()`
- `void __insert_start` (const `_Tp` &`__key`, int `__source`, bool)

### Protected Attributes

- `_Compare` `_M_comp`
- unsigned int `_M_ik`

### 5.143 `__gnu_parallel::_Multiplies<_Tp1, _Tp2, _Result>` Struct Template Reference 1250

---

- unsigned int `_M_k`
- `_Loser * _M_losers`
- unsigned int `_M_offset`

#### 5.142.1 Detailed Description

**template<typename `_Tp`, typename `_Compare`> class `__gnu_parallel::_LoserTreeUnguardedBase<_Tp, _Compare>`**

Base class for ungarded [\\_LoserTree](#) implementation. The whole element is copied into the tree structure.

No guarding is done, therefore not a single input sequence must run empty. Unused `__sequence` heads are marked with a sentinel which is `>` all elements that are to be merged.

This is a very fast variant.

Definition at line 566 of file `losertree.h`.

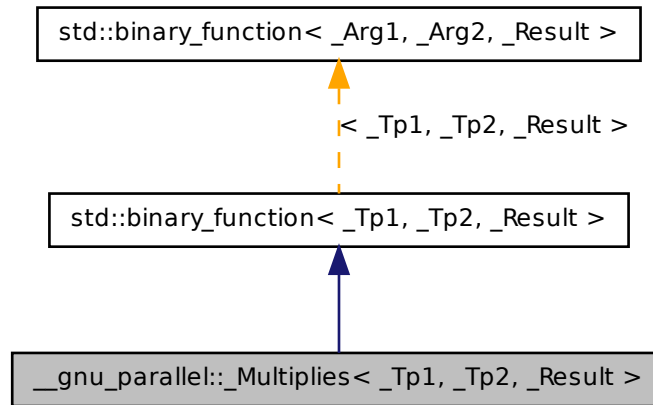

The documentation for this class was generated from the following file:

- [losertree.h](#)

### 5.143 `__gnu_parallel::_Multiplies<_Tp1, _Tp2, _Result>` Struct Template Reference

Similar to [std::multiplies](#), but allows two different types.

Inheritance diagram for `__gnu_parallel::_Multiplies< _Tp1, _Tp2, _Result >`:

## Public Types

- typedef `_Tp1` `first_argument_type`
- typedef `_Result` `result_type`
- typedef `_Tp2` `second_argument_type`

## Public Member Functions

- `_Result operator()` (`const _Tp1 &__x, const _Tp2 &__y`) `const`

### 5.143.1 Detailed Description

`template<typename _Tp1, typename _Tp2, typename _Result = __typeof__ - (*static_cast<_Tp1*>(0) * *static_cast<_Tp2*>(0))> struct __gnu_parallel::_Multiplies< _Tp1, _Tp2, _Result >`

Similar to `std::multiplies`, but allows two different types.

Definition at line 288 of file `parallel/base.h`.

### 5.143.2 Member Typedef Documentation

#### 5.143.2.1 `typedef _Tp1 std::binary_function< _Tp1 , _Tp2 , _Result >::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

#### 5.143.2.2 `typedef _Result std::binary_function< _Tp1 , _Tp2 , _Result >::result_type [inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

#### 5.143.2.3 `typedef _Tp2 std::binary_function< _Tp1 , _Tp2 , _Result >::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

## 5.144 `__gnu_parallel::_Nothing` Struct Reference

Functor doing nothing.

### Public Member Functions

- `template<typename _It >  
void operator\(\) (_It)`

#### 5.144.1 Detailed Description

Functor doing nothing. For some `__reduction` tasks (this is not a function object, but is passed as `__selector` `__dummy` parameter.

## **5.145 \_\_gnu\_parallel::\_Piece< \_DifferenceTp > Struct Template Reference**

Definition at line 288 of file `for_each_selectors.h`.

### **5.144.2 Member Function Documentation**

#### **5.144.2.1 `template<typename _It > void __gnu_parallel::_Nothing::operator() ( _It ) [inline]`**

Functor execution.

#### **Parameters**

`__i` iterator referencing object.

Definition at line 294 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## **5.145 \_\_gnu\_parallel::\_Piece< \_DifferenceTp > Struct Template Reference**

Subsequence description.

### **Public Types**

- `typedef _DifferenceTp _DifferenceType`

### **Public Attributes**

- `_DifferenceType _M_begin`
- `_DifferenceType _M_end`

### **5.145.1 Detailed Description**

**`template<typename _DifferenceTp> struct __gnu_parallel::_Piece< _DifferenceTp >`**

Subsequence description.

Definition at line 46 of file `multiway_mergesort.h`.

### 5.145.2 Member Data Documentation

#### 5.145.2.1 `template<typename _DifferenceTp > _DifferenceType __gnu_parallel::_Piece< _DifferenceTp >::_M_begin`

Begin of subsequence.

Definition at line 51 of file `multiway_mergesort.h`.

#### 5.145.2.2 `template<typename _DifferenceTp > _DifferenceType __gnu_parallel::_Piece< _DifferenceTp >::_M_end`

End of subsequence.

Definition at line 54 of file `multiway_mergesort.h`.

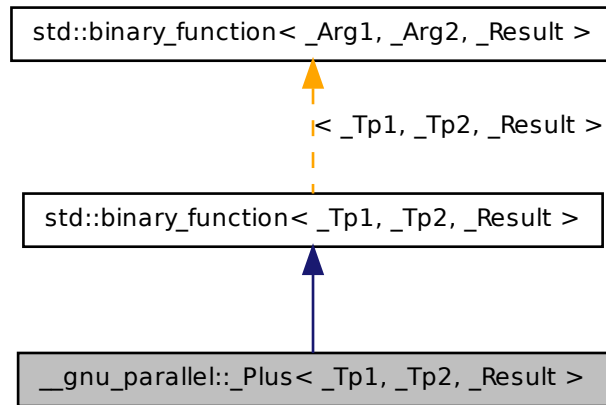

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

### 5.146 `__gnu_parallel::_Plus< _Tp1, _Tp2, _Result >` Struct Template Reference

Similar to [std::plus](#), but allows two different types.

Inheritance diagram for `__gnu_parallel::_Plus< _Tp1, _Tp2, _Result >`:

### Public Types

- typedef `_Tp1` `first_argument_type`
- typedef `_Result` `result_type`
- typedef `_Tp2` `second_argument_type`

### Public Member Functions

- `_Result operator()` (`const _Tp1 &__x, const _Tp2 &__y`) `const`

#### 5.146.1 Detailed Description

`template<typename _Tp1, typename _Tp2, typename _Result = __typeof__ - (*static_cast<_Tp1*>(0) + *static_cast<_Tp2*>(0))> struct __gnu_parallel::_Plus< _Tp1, _Tp2, _Result >`

Similar to `std::plus`, but allows two different types.

Definition at line 272 of file `parallel/base.h`.

### 5.146.2 Member Typedef Documentation

5.146.2.1 `typedef _Tp1 std::binary_function<_Tp1, _Tp2, _Result>::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

5.146.2.2 `typedef _Result std::binary_function<_Tp1, _Tp2, _Result>::result_type [inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

5.146.2.3 `typedef _Tp2 std::binary_function<_Tp1, _Tp2, _Result>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

## 5.147 `__gnu_parallel::_PMWMSSortingData<_RAIter>` Struct Template Reference

Data accessed by all threads.

### Public Types

- `typedef _TraitsType::difference_type` **DifferenceType**
- `typedef std::iterator_traits<_RAIter>` **\_TraitsType**
- `typedef _TraitsType::value_type` **ValueType**

## Public Attributes

- [\\_ThreadIndex](#) [\\_M\\_num\\_threads](#)

- [\\_DifferenceType](#) \* [\\_M\\_starts](#)
- [\\_ValueType](#) \*\* [\\_M\\_temporary](#)

### 5.147.1 Detailed Description

**template<typename [\\_RAIter](#)> struct `__gnu_parallel::PMWMSortingData<  
_RAIter` >**

Data accessed by all threads. PMWMS = parallel multiway mergesort

Definition at line 61 of file `multiway_mergesort.h`.

### 5.147.2 Member Data Documentation

**5.147.2.1 `template<typename \_RAIter> \_ThreadIndex  
__gnu_parallel::PMWMSortingData< \_RAIter  
>::_M_num_threads`**

Number of threads involved.

Definition at line 68 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

**5.147.2.2 `template<typename \_RAIter> \_DifferenceType*  
__gnu_parallel::PMWMSortingData< \_RAIter >::_M_offsets`**

Offsets to add to the found positions.

Definition at line 83 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`.

**5.147.2.3 template<typename \_RAIter> std::vector<\_Piece<\_DifferenceType> >\* \_\_gnu\_parallel::PMWMSSortingData<\_RAIter>::\_M\_pieces**

Pieces of data to merge [thread][\_\_sequence].

Definition at line 86 of file multiway\_mergesort.h.

Referenced by \_\_gnu\_parallel::parallel\_sort\_mwms(), and \_\_gnu\_parallel::parallel\_sort\_mwms\_pu().

**5.147.2.4 template<typename \_RAIter> \_ValueType\* \_\_gnu\_parallel::PMWMSSortingData<\_RAIter>::\_M\_samples**

Samples.

Definition at line 80 of file multiway\_mergesort.h.

Referenced by \_\_gnu\_parallel::\_\_determine\_samples(), and \_\_gnu\_parallel::parallel\_sort\_mwms().

**5.147.2.5 template<typename \_RAIter> \_RAIter \_\_gnu\_parallel::PMWMSSortingData<\_RAIter>::\_M\_source**

Input \_\_begin.

Definition at line 71 of file multiway\_mergesort.h.

Referenced by \_\_gnu\_parallel::\_\_determine\_samples(), \_\_gnu\_parallel::parallel\_sort\_mwms(), and \_\_gnu\_parallel::parallel\_sort\_mwms\_pu().

**5.147.2.6 template<typename \_RAIter> \_DifferenceType\* \_\_gnu\_parallel::PMWMSSortingData<\_RAIter>::\_M\_starts**

Start indices, per thread.

Definition at line 74 of file multiway\_mergesort.h.

Referenced by \_\_gnu\_parallel::\_\_determine\_samples(), \_\_gnu\_parallel::parallel\_sort\_mwms(), and \_\_gnu\_parallel::parallel\_sort\_mwms\_pu().

5.147.2.7 `template<typename _RAIter> _ValueType**  
__gnu_parallel::_PMWMSortingData< _RAIter >::_M_temporary`

Storage in which to sort.

Definition at line 77 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 5.148 `__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >` **Class Template Reference**

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

### Public Types

- `typedef _DifferenceTp _DifferenceType`
- `typedef \_PseudoSequenceIterator< _Tp, uint64_t > iterator`

### Public Member Functions

- [\\_PseudoSequence](#) (const \_Tp &\_\_val, \_DifferenceType \_\_count)
- [iterator begin](#) () const
- [iterator end](#) () const

#### 5.148.1 Detailed Description

`template<typename _Tp, typename _DifferenceTp> class __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >`

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

### Parameters

- `_Tp` Sequence `_M_value` type.
- `_DifferenceTp` Sequence difference type.

Definition at line 359 of file `parallel/base.h`.

#### 5.148.2 Constructor & Destructor Documentation

5.148.2.1 `template<typename _Tp, typename _DifferenceTp>  
__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp  
>::_PseudoSequence ( const _Tp & __val, _DifferenceType __count  
) [inline]`

Constructor.

##### Parameters

`__M_val` Element of the sequence.  
`__count` Number of (virtual) copies.

Definition at line 371 of file `parallel/base.h`.

#### 5.148.3 Member Function Documentation

5.148.3.1 `template<typename _Tp, typename _DifferenceTp> iterator  
__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>::begin ( ) const [inline]`

Begin iterator.

Definition at line 376 of file `parallel/base.h`.

5.148.3.2 `template<typename _Tp, typename _DifferenceTp> iterator  
__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>::end ( )  
const [inline]`

End iterator.

Definition at line 381 of file `parallel/base.h`.

### 5.150.1 Detailed Description

`template<typename _RAIter> struct __gnu_parallel::__QSBThreadLocal< _RAIter >`

Information local to one thread in the parallel quicksort run.

Definition at line 62 of file `balanced_quicksort.h`.

### 5.150.2 Member Typedef Documentation

**5.150.2.1** `template<typename _RAIter> typedef std::pair<_RAIter, _RAIter> __gnu_parallel::__QSBThreadLocal< _RAIter >::_Piece`

Continuous part of the sequence, described by an iterator pair.

Definition at line 69 of file `balanced_quicksort.h`.

### 5.150.3 Constructor & Destructor Documentation

**5.150.3.1** `template<typename _RAIter> __gnu_parallel::__QSBThreadLocal< _RAIter >::_QSBThreadLocal ( int __queue_size ) [inline]`

Constructor.

### Parameters

*\_\_queue\_size* size of the work-stealing queue.

Definition at line 88 of file `balanced_quicksort.h`.

### 5.150.4 Member Data Documentation

#### 5.150.4.1 `template<typename _RAIter> volatile _DifferenceType* __gnu_parallel::__QSBThreadLocal<_RAIter >::__M_elements_leftover`

Pointer to a counter of elements left over to sort.

Definition at line 81 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::__qsb_conquer()`, and `__gnu_parallel::__qsb_local_sort_with_helping()`.

#### 5.150.4.2 `template<typename _RAIter> _Piece __gnu_parallel::_ QSBThreadLocal<_RAIter>::__M_global`

The complete sequence to sort.

Definition at line 84 of file `balanced_quicksort.h`.

#### 5.150.4.3 `template<typename _RAIter> _Piece __gnu_parallel::_ QSBThreadLocal<_RAIter>::__M_initial`

Initial piece to work on.

Definition at line 72 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::__qsb_conquer()`, and `__gnu_parallel::__qsb_local_sort_with_helping()`.

**5.150.4.4** `template<typename _RAIter> _-`  
**RestrictedBoundedConcurrentQueue<\_Piece>**  
**\_\_gnu\_parallel::\_QSBThreadLocal<\_RAIter>::\_M\_leftover\_parts**

Work-stealing queue.

Definition at line 75 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::_qsb_local_sort_with_helping()`.

**5.150.4.5** `template<typename _RAIter> _ThreadIndex`  
**\_\_gnu\_parallel::\_QSBThreadLocal<\_RAIter>::\_M\_num\_threads**

Number of threads involved in this algorithm.

Definition at line 78 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::_qsb_local_sort_with_helping()`.

- uint32\_t [operator\(\)](#) (uint64\_t local\_supremum)

#### 5.151.1 Detailed Description

Random number generator, based on the Mersenne twister.

Definition at line 42 of file `random_number.h`.

### 5.151.2 Constructor & Destructor Documentation

#### 5.151.2.1 \_\_gnu\_parallel::\_RandomNumber::\_RandomNumber ( ) [inline]

Default constructor. Seed with 0.

Definition at line 74 of file random\_number.h.

#### 5.151.2.2 \_\_gnu\_parallel::\_RandomNumber::\_RandomNumber ( uint32\_t \_\_seed, uint64\_t \_M\_supremum = 0x100000000ULL ) [inline]

Constructor.

##### Parameters

*\_\_seed* Random \_\_seed.

*\_M\_supremum* Generate integer random numbers in the interval [0, *\_M\_supremum*).

Definition at line 85 of file random\_number.h.

### 5.151.3 Member Function Documentation

#### 5.151.3.1 unsigned long \_\_gnu\_parallel::\_RandomNumber::\_genrand\_bits ( int *\_\_bits* ) [inline]

Generate a number of random bits, run-time parameter.

##### Parameters

*bits* Number of bits to generate.

Definition at line 109 of file random\_number.h.

#### 5.151.3.2 uint32\_t \_\_gnu\_parallel::\_RandomNumber::operator() ( ) [inline]

## 5.152 `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>` Class Template Reference 1266

---

Generate unsigned random 32-bit integer.

Definition at line 94 of file `random_number.h`.

### 5.151.3.3 `uint32_t __gnu_parallel::_RandomNumber::operator() ( uint64_t local_supremum ) [inline]`

Generate unsigned random 32-bit integer in the interval `[0,local_supremum)`.

Definition at line 100 of file `random_number.h`.

The documentation for this class was generated from the following file:

- [random\\_number.h](#)

## 5.152 `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>` Class Template Reference

Double-ended queue of bounded size, allowing lock-free atomic access. `push_front()` and `pop_front()` must not be called concurrently to each other, while `pop_back()` can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

Inheritance diagram for `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>`:

## Public Member Functions

- [`\_RestrictedBoundedConcurrentQueue`](#) ([`\_SequenceIndex`](#) `__max_size`)
- [`~\_RestrictedBoundedConcurrentQueue`](#) ()

- `bool` [`pop\_front`](#) (`_Tp` &`__t`)
- `void` [`push\_front`](#) (`const _Tp` &`__t`)

### 5.152.1 Detailed Description

**template<typename `_Tp`> class `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>`**

Double-ended queue of bounded size, allowing lock-free atomic access. [`push\_front\(\)`](#) and [`pop\_front\(\)`](#) must not be called concurrently to each other, while [`pop\_back\(\)`](#) can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

#### Parameters

`_Tp` Contained element type.

Definition at line 52 of file `queue.h`.

### 5.152.2 Constructor & Destructor Documentation

**5.152.2.1 `template<typename _Tp> __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>::__RestrictedBoundedConcurrentQueue ( _SequenceIndex __max_size ) [inline]`**

Constructor. Not to be called concurrent, of course.

#### Parameters

`__M_max_size` Maximal number of elements to be contained.

Definition at line 68 of file `queue.h`.

**5.152.2.2 `template<typename _Tp> __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>::~~_RestrictedBoundedConcurrentQueue ( ) [inline]`**

Destructor. Not to be called concurrent, of course.

Definition at line 77 of file queue.h.

### 5.152.3 Member Function Documentation

**5.152.3.1** `template<typename _Tp> bool __gnu_parallel::_-`  
`RestrictedBoundedConcurrentQueue< _Tp >::pop_back ( _Tp &`  
`__t ) [inline]`

Pops one element from the queue at the front end. Must not be called concurrently with [pop\\_front\(\)](#).

Definition at line 127 of file queue.h.

**5.152.3.2** `template<typename _Tp> bool __gnu_parallel::_-`  
`RestrictedBoundedConcurrentQueue< _Tp >::pop_front ( _Tp &`  
`__t ) [inline]`

Pops one element from the queue at the front end. Must not be called concurrently with [pop\\_front\(\)](#).

Definition at line 100 of file queue.h.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

**5.152.3.3** `template<typename _Tp> void __gnu_parallel::_-`  
`RestrictedBoundedConcurrentQueue< _Tp >::push_front ( const`  
`_Tp & __t ) [inline]`

Pushes one element into the queue at the front end. Must not be called concurrently with [pop\\_front\(\)](#).

Definition at line 83 of file queue.h.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

**5.155.2.2** `static void __gnu_parallel::_Settings::set ( _Settings & ) throw ()`  
**[static]**

Set the global settings.

### 5.155.3 Member Data Documentation

#### 5.155.3.1 `_SequenceIndex __gnu_parallel::_Settings::accumulate_minimal_n`

Minimal input size for accumulate.

Definition at line 139 of file `settings.h`.

#### 5.155.3.2 `unsigned int __gnu_parallel::_Settings::adjacent_difference_minimal_n`

Minimal input size for `adjacent_difference`.

Definition at line 142 of file `settings.h`.

#### 5.155.3.3 `unsigned int __gnu_parallel::_Settings::cache_line_size`

Overestimation of cache line size. Used to avoid false /// sharing, i.e. elements of different threads are at least this /// amount apart.

Definition at line 265 of file `settings.h`.

Referenced by `__gnu_parallel::__for_each_template_random_access_workstealing()`.

**5.155.3.4 `_SequenceIndex __gnu_parallel::_Settings::count_minimal_n`**

Minimal input size for count and count\_if.

Definition at line 145 of file settings.h.

**5.155.3.5 `_SequenceIndex __gnu_parallel::_Settings::fill_minimal_n`**

Minimal input size for fill.

Definition at line 148 of file settings.h.

**5.155.3.6 `double __gnu_parallel::_Settings::find_increasing_factor`**

Block size increase factor for find.

Definition at line 151 of file settings.h.

**5.155.3.7 `_SequenceIndex __gnu_parallel::_Settings::find_initial_block_size`**

Initial block size for find.

Definition at line 154 of file settings.h.

Referenced by `__gnu_parallel::__find_template()`.

**5.155.3.8 `_SequenceIndex __gnu_parallel::_Settings::find_maximum_block_size`**

Maximal block size for find.

Definition at line 157 of file settings.h.

**5.155.3.9 `float __gnu_parallel::_Settings::find_scale_factor`**

Block size scale-down factor with respect to current position.

Definition at line 276 of file settings.h.

Referenced by `__gnu_parallel::__find_template()`.

#### 5.155.3.10 `_SequenceIndex __gnu_parallel::_Settings::find_sequential_search_size`

Start with looking for this many elements sequentially, for find.

Definition at line 160 of file settings.h.

Referenced by `__gnu_parallel::__find_template()`.

#### 5.155.3.11 `_SequenceIndex __gnu_parallel::_Settings::for_each_minimal_n`

Minimal input size for `for_each`.

Definition at line 163 of file settings.h.

#### 5.155.3.12 `_SequenceIndex __gnu_parallel::_Settings::generate_minimal_n`

Minimal input size for `generate`.

Definition at line 166 of file settings.h.

#### 5.155.3.13 `unsigned long long __gnu_parallel::_Settings::L1_cache_size`

size of the L1 cache in bytes (underestimation).

Definition at line 254 of file settings.h.

#### 5.155.3.14 `unsigned long long __gnu_parallel::_Settings::L2_cache_size`

size of the L2 cache in bytes (underestimation).

Definition at line 257 of file settings.h.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__sequential_random_shuffle()`.

**5.155.3.15** `_SequenceIndex __gnu_parallel::_Settings::max_element_minimal_n`

Minimal input size for `max_element`.

Definition at line 169 of file `settings.h`.

**5.155.3.16** `_SequenceIndex __gnu_parallel::_Settings::merge_minimal_n`

Minimal input size for `merge`.

Definition at line 172 of file `settings.h`.

**5.155.3.17** `unsigned int __gnu_parallel::_Settings::merge_oversampling`

Oversampling factor for `merge`.

Definition at line 175 of file `settings.h`.

Referenced by `__gnu_parallel::multiway_merge_sampling_splitting()`, and `__gnu_parallel::parallel_multiway_merge()`.

**5.155.3.18** `_SequenceIndex __gnu_parallel::_Settings::min_element_minimal_n`

Minimal input size for `min_element`.

Definition at line 178 of file `settings.h`.

**5.155.3.19** `int __gnu_parallel::_Settings::multiway_merge_minimal_k`

Oversampling factor for `multiway_merge`.

Definition at line 184 of file `settings.h`.

**5.155.3.20 `_SequenceIndex __gnu_parallel::_Settings::multiway_merge_minimal_n`**

Minimal input size for `multiway_merge`.

Definition at line 181 of file `settings.h`.

**5.155.3.21 `unsigned int __gnu_parallel::_Settings::multiway_merge_oversampling`**

Oversampling factor for `multiway_merge`.

Definition at line 187 of file `settings.h`.

**5.155.3.22 `_SequenceIndex __gnu_parallel::_Settings::nth_element_minimal_n`**

Minimal input size for `nth_element`.

Definition at line 190 of file `settings.h`.

Referenced by `__gnu_parallel::__parallel_nth_element()`.

**5.155.3.23 `_SequenceIndex __gnu_parallel::_Settings::partial_sort_minimal_n`**

Minimal input size for `partial_sort`.

Definition at line 203 of file `settings.h`.

**5.155.3.24 `float __gnu_parallel::_Settings::partial_sum_dilation`**

Ratio for `partial_sum`. Assume "sum and write result" to be /// this factor slower than just "sum".

Definition at line 207 of file `settings.h`.

Referenced by `__gnu_parallel::__parallel_partial_sum_linear()`.

**5.155.3.25 unsigned int \_\_gnu\_parallel::\_Settings::partial\_sum\_minimal\_n**

Minimal input size for partial\_sum.

Definition at line 210 of file settings.h.

**5.155.3.26 double \_\_gnu\_parallel::\_Settings::partition\_chunk\_share**

Chunk size for partition, relative to input size. If > 0.0, /// this value overrides partition\_chunk\_size.

Definition at line 197 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_partition().

**5.155.3.27 \_SequenceIndex \_\_gnu\_parallel::\_Settings::partition\_chunk\_size**

Chunk size for partition.

Definition at line 193 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_partition().

**5.155.3.28 \_SequenceIndex \_\_gnu\_parallel::\_Settings::partition\_minimal\_n**

Minimal input size for partition.

Definition at line 200 of file settings.h.

Referenced by \_\_gnu\_parallel::\_\_parallel\_nth\_element().

**5.155.3.29 \_SequenceIndex \_\_gnu\_parallel::\_Settings::qsb\_steals**

The number of stolen ranges in load-balanced quicksort.

Definition at line 270 of file settings.h.

**5.155.3.30 unsigned int \_\_gnu\_parallel::\_Settings::random\_shuffle\_minimal\_n**

Minimal input size for random\_shuffle.

Definition at line 213 of file settings.h.

**5.155.3.31 \_SequenceIndex \_\_gnu\_parallel::\_Settings::replace\_minimal\_n**

Minimal input size for replace and replace\_if.

Definition at line 216 of file settings.h.

**5.155.3.32 \_SequenceIndex \_\_gnu\_parallel::\_Settings::search\_minimal\_n**

Minimal input size for search and search\_n.

Definition at line 273 of file settings.h.

**5.155.3.33 \_SequenceIndex \_\_gnu\_parallel::\_Settings::set\_difference\_minimal\_n**

Minimal input size for set\_difference.

Definition at line 219 of file settings.h.

**5.155.3.34 \_SequenceIndex \_\_gnu\_parallel::\_Settings::set\_intersection\_minimal\_n**

Minimal input size for set\_intersection.

Definition at line 222 of file settings.h.

**5.155.3.35 \_SequenceIndex \_\_gnu\_parallel::\_Settings::set\_symmetric\_difference\_minimal\_n**

Minimal input size for set\_symmetric\_difference.

Definition at line 225 of file `settings.h`.

#### 5.155.3.36 `_SequenceIndex __gnu_parallel::_Settings::set_union_minimal_n`

Minimal input size for `set_union`.

Definition at line 228 of file `settings.h`.

#### 5.155.3.37 `_SequenceIndex __gnu_parallel::_Settings::sort_minimal_n`

Minimal input size for parallel sorting.

Definition at line 231 of file `settings.h`.

#### 5.155.3.38 `unsigned int __gnu_parallel::_Settings::sort_mwms_oversampling`

Oversampling factor for parallel `std::sort` (MWMS).

Definition at line 234 of file `settings.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

#### 5.155.3.39 `unsigned int __gnu_parallel::_Settings::sort_qs_num_samples_preset`

Such many samples to take to find a good pivot (quicksort).

Definition at line 237 of file `settings.h`.

#### 5.155.3.40 `_SequenceIndex __gnu_parallel::_Settings::sort_qsb_base_case_maximal_n`

Maximal subsequence `__length` to switch to unbalanced `__base` case. /// Applies to `std::sort` with dynamically load-balanced quicksort.

Definition at line 241 of file `settings.h`.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

## 5.159 `__gnu_parallel::balanced_quicksort_tag` Struct Reference

Forces parallel sorting using balanced quicksort at compile time.

Inheritance diagram for `__gnu_parallel::balanced_quicksort_tag`:

### Public Member Functions

- `balanced_quicksort_tag` ([\\_ThreadIndex](#) \_\_num\_threads)
- [\\_ThreadIndex](#) `__get_num_threads` ()
- `void` `set_num_threads` ([\\_ThreadIndex](#) \_\_num\_threads)

### 5.159.1 Detailed Description

Forces parallel sorting using balanced quicksort at compile time.

Definition at line 164 of file `tags.h`.

## 5.159.2 Member Function Documentation

### 5.159.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( )` `[inline, inherited]`

Find out desired number of threads.

#### Returns

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort()`.

### 5.159.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads ) [inline, inherited]`

Set the desired number of threads.

#### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.160 `__gnu_parallel::balanced_tag` Struct Reference

Recommends parallel execution using dynamic load-balancing at compile time.

Inheritance diagram for \_\_gnu\_parallel::balanced\_tag:

### Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads\(\)](#)
- void [set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#)

#### 5.160.1 Detailed Description

Recommends parallel execution using dynamic load-balancing at compile time.

Definition at line 88 of file tags.h.

#### 5.160.2 Member Function Documentation

##### 5.160.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads()` [inline, inherited]

Find out desired number of threads.

### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

5.160.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex  
                   __num_threads ) [inline, inherited]`

Set the desired number of threads.

#### Parameters

*\_\_num\_threads* Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.161 `__gnu_parallel::constant_size_blocks_tag` Struct Reference

Selects the constant block size variant for `std::find()`.

Inheritance diagram for `__gnu_parallel::constant_size_blocks_tag`:

### 5.161.1 Detailed Description

Selects the constant block size variant for `std::find()`.

#### See also

[\\_GLIBCXX\\_FIND\\_CONSTANT\\_SIZE\\_BLOCKS](#)

Definition at line 178 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.162 `__gnu_parallel::default_parallel_tag` Struct Reference

Recommends parallel execution using the default parallel algorithm.

Inheritance diagram for `__gnu_parallel::default_parallel_tag`:

### Public Member Functions

- `default_parallel_tag` ([\\_ThreadIndex](#) \_\_num\_threads)
- [\\_ThreadIndex](#) `__get_num_threads` ()
- void [set\\_num\\_threads](#) ([\\_ThreadIndex](#) \_\_num\_threads)

#### 5.162.1 Detailed Description

Recommends parallel execution using the default parallel algorithm.

Definition at line 79 of file `tags.h`.

### 5.162.2 Member Function Documentation

#### 5.162.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( )` `[inline, inherited]`

Find out desired number of threads.

##### Returns

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort()`.

#### 5.162.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads ) [inline, inherited]`

Set the desired number of threads.

##### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

### 5.163 `__gnu_parallel::equal_split_tag` Struct Reference

Selects the equal splitting variant for `std::find()`.

Inheritance diagram for \_\_gnu\_parallel::equal\_split\_tag:

#### 5.163.1 Detailed Description

Selects the equal splitting variant for `std::find()`.

See also

[\\_GLIBCXX\\_FIND\\_EQUAL\\_SPLIT](#)

Definition at line 182 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

#### 5.164 \_\_gnu\_parallel::exact\_tag Struct Reference

Forces parallel merging with exact splitting, at compile time.

Inheritance diagram for \_\_gnu\_parallel::exact\_tag:

### Public Member Functions

- `exact_tag` (`_ThreadIndex` \_\_num\_threads)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` \_\_num\_threads)

#### 5.164.1 Detailed Description

Forces parallel merging with exact splitting, at compile time.

Definition at line 109 of file tags.h.

#### 5.164.2 Member Function Documentation

##### 5.164.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` ( ) [inline, inherited]

Find out desired number of threads.

### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort`().

### 5.164.2.2 void \_\_gnu\_parallel::parallel\_tag::set\_num\_threads ( \_ThreadIndex \_\_num\_threads ) [inline, inherited]

Set the desired number of threads.

#### Parameters

*\_\_num\_threads* Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.165 \_\_gnu\_parallel::find\_tag Struct Reference

Base class for for std::find() variants.

Inheritance diagram for \_\_gnu\_parallel::find\_tag:

### 5.165.1 Detailed Description

Base class for for std::find() variants.

Definition at line 104 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.166 `__gnu_parallel::growing_blocks_tag` Struct Reference

Selects the growing block size variant for `std::find()`.

Inheritance diagram for `__gnu_parallel::growing_blocks_tag`:

### 5.166.1 Detailed Description

Selects the growing block size variant for `std::find()`.

See also

[\\_GLIBCXX\\_FIND\\_GROWING\\_BLOCKS](#)

Definition at line 174 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.167 `__gnu_parallel::multiway_mergesort_exact_tag` Struct Reference

Forces parallel sorting using multiway mergesort with exact splitting at compile time.

Inheritance diagram for `__gnu_parallel::multiway_mergesort_exact_tag`:

### Public Member Functions

- `multiway_mergesort_exact_tag` ([\\_ThreadIndex](#) \_\_num\_threads)
- [\\_ThreadIndex](#) `__get_num_threads` ()
- void `set_num_threads` ([\\_ThreadIndex](#) \_\_num\_threads)

#### 5.167.1 Detailed Description

Forces parallel sorting using multiway mergesort with exact splitting at compile time.

Definition at line 137 of file tags.h.

#### 5.167.2 Member Function Documentation

##### 5.167.2.1 [\\_ThreadIndex](#) `__gnu_parallel::parallel_tag::__get_num_threads` ( ) [inline, inherited]

Find out desired number of threads.

### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort`().

## 5.168 `__gnu_parallel::multiway_mergesort_sampling_tag` Struct Reference 293

5.167.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads ) [inline, inherited]`

Set the desired number of threads.

### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.168 `__gnu_parallel::multiway_mergesort_sampling_tag` Struct Reference

Forces parallel sorting using multiway mergesort with splitting by sampling at compile time.

Inheritance diagram for `__gnu_parallel::multiway_mergesort_sampling_tag`:

### Public Member Functions

- `multiway_mergesort_sampling_tag ( _ThreadIndex __num_threads )`
- `_ThreadIndex __get_num_threads ()`
- `void set_num_threads ( _ThreadIndex __num_threads )`

### 5.168.1 Detailed Description

Forces parallel sorting using multiway mergesort with splitting by sampling at compile time.

Definition at line 146 of file tags.h.

### 5.168.2 Member Function Documentation

#### 5.168.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( )` [inline, inherited]

Find out desired number of threads.

#### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

#### 5.168.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads )` [inline, inherited]

Set the desired number of threads.

#### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.169 `__gnu_parallel::multiway_mergesort_tag` Struct Reference

Forces parallel sorting using multiway mergesort at compile time.

Inheritance diagram for `__gnu_parallel::multiway_mergesort_tag`:

### Public Member Functions

- `multiway_mergesort_tag` (`_ThreadIndex` \_\_num\_threads)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` \_\_num\_threads)

#### 5.169.1 Detailed Description

Forces parallel sorting using multiway mergesort at compile time.

Definition at line 128 of file tags.h.

#### 5.169.2 Member Function Documentation

##### 5.169.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` ( ) [inline, inherited]

Find out desired number of threads.

### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort`().

5.169.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads ) [inline, inherited]`

Set the desired number of threads.

#### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.170 `__gnu_parallel::omp_loop_static_tag` Struct Reference

Recommends parallel execution using OpenMP static load-balancing at compile time.

Inheritance diagram for `__gnu_parallel::omp_loop_static_tag`:

#### Public Member Functions

- `_ThreadIndex __get_num_threads ()`
- `void set_num_threads (_ThreadIndex __num_threads)`

### 5.170.1 Detailed Description

Recommends parallel execution using OpenMP static load-balancing at compile time.

Definition at line 100 of file tags.h.

### 5.170.2 Member Function Documentation

#### 5.170.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( )` `[inline, inherited]`

Find out desired number of threads.

##### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

#### 5.170.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex` `__num_threads ) [inline, inherited]`

Set the desired number of threads.

##### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

### 5.171 `__gnu_parallel::omp_loop_tag` Struct Reference

Recommends parallel execution using OpenMP dynamic load-balancing at compile time.

Inheritance diagram for \_\_gnu\_parallel::omp\_loop\_tag:

### Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads\(\)](#)
- void [set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#)

#### 5.171.1 Detailed Description

Recommends parallel execution using OpenMP dynamic load-balancing at compile time.

Definition at line 96 of file tags.h.

#### 5.171.2 Member Function Documentation

##### 5.171.2.1 [\\_ThreadIndex \\_\\_gnu\\_parallel::parallel\\_tag::\\_\\_get\\_num\\_threads\(\)](#) [inline, inherited]

Find out desired number of threads.

### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

5.171.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex  
__num_threads ) [inline, inherited]`

Set the desired number of threads.

#### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.172 `__gnu_parallel::parallel_tag` Struct Reference

Recommends parallel execution at compile time, optionally using a user-specified number of threads.

Inheritance diagram for `__gnu_parallel::parallel_tag`:

### Public Member Functions

- [parallel\\_tag \(\)](#)
- [parallel\\_tag \(\\_ThreadIndex \\_\\_num\\_threads\)](#)
- [\\_ThreadIndex \\_\\_get\\_num\\_threads \(\)](#)
- [void set\\_num\\_threads \(\\_ThreadIndex \\_\\_num\\_threads\)](#)

### 5.172.1 Detailed Description

Recommends parallel execution at compile time, optionally using a user-specified number of threads.

Definition at line 46 of file tags.h.

### 5.172.2 Constructor & Destructor Documentation

#### 5.172.2.1 `__gnu_parallel::parallel_tag::parallel_tag ( ) [inline]`

Default constructor. Use default number of threads.

Definition at line 53 of file tags.h.

#### 5.172.2.2 `__gnu_parallel::parallel_tag::parallel_tag ( _ThreadIndex __num_threads ) [inline]`

Default constructor. Recommend number of threads to use.

#### Parameters

`__num_threads` Desired number of threads.

Definition at line 58 of file tags.h.

### 5.172.3 Member Function Documentation

#### 5.172.3.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline]`

Find out desired number of threads.

#### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

### 5.172.3.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads ) [inline]`

Set the desired number of threads.

#### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.173 `__gnu_parallel::quicksort_tag` Struct Reference

Forces parallel sorting using unbalanced quicksort at compile time.

Inheritance diagram for `__gnu_parallel::quicksort_tag`:

#### Public Member Functions

- `quicksort_tag ( _ThreadIndex __num_threads )`
- `_ThreadIndex __get_num_threads ()`
- `void set_num_threads ( _ThreadIndex __num_threads )`

### 5.173.1 Detailed Description

Forces parallel sorting using unbalanced quicksort at compile time.

Definition at line 155 of file `tags.h`.

### 5.173.2 Member Function Documentation

#### 5.173.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( )` [`inline`, `inherited`]

Find out desired number of threads.

#### Returns

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort()`.

#### 5.173.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex _num_threads )` [`inline`, `inherited`]

Set the desired number of threads.

#### Parameters

*`_num_threads`* Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.174 `__gnu_parallel::sampling_tag` Struct Reference

Forces parallel merging with exact splitting, at compile time.

Inheritance diagram for \_\_gnu\_parallel::sampling\_tag:

### Public Member Functions

- **sampling\_tag** ([\\_ThreadIndex](#) \_\_num\_threads)
- [\\_ThreadIndex](#) **\_\_get\_num\_threads** ()
- void **set\_num\_threads** ([\\_ThreadIndex](#) \_\_num\_threads)

#### 5.174.1 Detailed Description

Forces parallel merging with exact splitting, at compile time.

Definition at line 118 of file tags.h.

#### 5.174.2 Member Function Documentation

##### 5.174.2.1 [\\_ThreadIndex](#) \_\_gnu\_parallel::parallel\_tag::\_\_get\_num\_threads ( ) [inline, inherited]

Find out desired number of threads.

### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

### 5.174.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads ) [inline, inherited]`

Set the desired number of threads.

#### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.175 `__gnu_parallel::sequential_tag` Struct Reference

Forces sequential execution at compile time.

### 5.175.1 Detailed Description

Forces sequential execution at compile time.

Definition at line 42 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.176 `__gnu_parallel::unbalanced_tag` Struct Reference

Recommends parallel execution using static load-balancing at compile time.

Inheritance diagram for `__gnu_parallel::unbalanced_tag`:

### Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads\(\)](#)
- void [set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#)

#### 5.176.1 Detailed Description

Recommends parallel execution using static load-balancing at compile time.

Definition at line 92 of file `tags.h`.

#### 5.176.2 Member Function Documentation

##### 5.176.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads()` [inline, inherited]

Find out desired number of threads.

### Returns

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort()`.

### 5.176.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads ) [inline, inherited]`

Set the desired number of threads.

#### Parameters

`__num_threads` Desired number of threads.

Definition at line 73 of file `tags.h`.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.177 `__gnu_pbds::associative_container_tag` Struct Reference

Basic associative-container.

Inheritance diagram for `__gnu_pbds::associative_container_tag`:

### 5.177.1 Detailed Description

Basic associative-container.

Definition at line 103 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

**5.178** `__gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_TL, Allocator >` Class Template Reference 1308

**5.178** `__gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_TL, Allocator >` Class Template Reference

An abstract basic hash-based associative container.

Inheritance diagram for `__gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_TL, Allocator >`:

### Public Types

### 5.180.1 Detailed Description

template<typename Key, typename Mapped, typename Tag, typename Node\_Update, typename Policy\_Tl, typename Allocator> class `__gnu_pbds::basic_tree`< Key, Mapped, Tag, Node\_Update, Policy\_Tl, Allocator >

An abstract basic tree-like (tree, trie) associative container.

Definition at line 477 of file `assoc_container.hpp`.

The documentation for this class was generated from the following file:

- [assoc\\_container.hpp](#)

## 5.181 `__gnu_pbds::basic_tree_tag` Struct Reference

Basic tree.

Inheritance diagram for `__gnu_pbds::basic_tree_tag`:

### 5.181.1 Detailed Description

Basic tree.

Definition at line 115 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.182 \_\_gnu\_pbds::binary\_heap\_tag Struct Reference

Binary-heap (array-based).

Inheritance diagram for \_\_gnu\_pbds::binary\_heap\_tag:

### 5.182.1 Detailed Description

Binary-heap (array-based).

Definition at line 151 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.183 \_\_gnu\_pbds::binomial\_heap\_tag Struct Reference

Binomial-heap.

**5.184** `__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, Allocator >` Class Template Reference

1313

Inheritance diagram for `__gnu_pbds::binomial_heap_tag`:

**5.183.1 Detailed Description**

Binomial-heap.

Definition at line 145 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

**5.184** `__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, Allocator >` Class Template Reference

A concrete collision-chaining hash-based associative container.

Inheritance diagram for `__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, Allocator >`:

### Public Types

Splay tree.

Definition at line 124 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

#### 5.206 \_\_gnu\_pbds::string\_tag Struct Reference

Basic string container, inclusive of strings, ropes, etc.

Inheritance diagram for `__gnu_pbds::string_tag`:

#### 5.206.1 Detailed Description

Basic string container, inclusive of strings, ropes, etc.

Definition at line 97 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

#### 5.207 `__gnu_pbds::thin_heap_tag` Struct Reference

Thin heap.

Inheritance diagram for `__gnu_pbds::thin_heap_tag`:

#### 5.207.1 Detailed Description

Thin heap.

Definition at line 154 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

#### 5.208 `__gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, Allocator >` Class Template Reference

A concrete basic tree-based associative container.

Inheritance diagram for `__gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, Allocator >`:

## Public Types

- typedef Allocator **allocator\_type**
- typedef Cmp\_Fn **cmp\_fn**
- typedef base\_type::const\_iterator **const\_iterator**
- typedef key\_rebind::const\_pointer **const\_key\_pointer**
- typedef key\_rebind::const\_reference **const\_key\_reference**
- typedef mapped\_rebind::const\_pointer **const\_mapped\_pointer**
- typedef mapped\_rebind::const\_reference **const\_mapped\_reference**
- typedef base\_type::const\_point\_iterator **const\_point\_iterator**
- typedef value\_rebind::const\_pointer **const\_pointer**
- typedef value\_rebind::const\_reference **const\_reference**
- typedef Tag **container\_category**
- typedef allocator\_type::difference\_type **difference\_type**
- typedef base\_type::iterator **iterator**
- typedef key\_rebind::pointer **key\_pointer**
- typedef allocator\_type::template rebind< key\_type >::other **key\_rebind**
- typedef key\_rebind::reference **key\_reference**
- typedef allocator\_type::template rebind< Key >::other::value\_type **key\_type**
- typedef mapped\_rebind::pointer **mapped\_pointer**
- typedef allocator\_type::template rebind< mapped\_type >::other **mapped\_rebind**
- typedef mapped\_rebind::reference **mapped\_reference**
- typedef Mapped **mapped\_type**
- typedef detail::tree\_traits< Key, Mapped, Cmp\_Fn, Node\_Update, Tag, Allocator >::node\_update **node\_update**
- typedef base\_type::point\_iterator **point\_iterator**
- typedef value\_rebind::pointer **pointer**
- typedef value\_rebind::reference **reference**
- typedef allocator\_type::size\_type **size\_type**
- typedef allocator\_type::template rebind< value\_type >::other **value\_rebind**
- typedef base\_type::value\_type **value\_type**

## Public Member Functions

- **tree** (const cmp\_fn &c)
- template<typename It >  
  **tree** (It first, It last, const cmp\_fn &c)
- **tree** (const [tree](#) &other)

### 5.208.1 Detailed Description

```
template<typename Key, typename Mapped, typename Cmp_Fn =
std::less<Key>, typename Tag = rb_tree_tag, template< typename Const_
Node_Iterator, typename Node_Iterator, typename Cmp_Fn_, typename
Allocator_ > class Node_Update = __gnu_pbds::null_tree_node_update, type-
name Allocator = std::allocator<char>> class __gnu_pbds::tree< Key, Mapped,
Cmp_Fn, Tag, Node_Update, Allocator >
```

A concrete basic tree-based associative container.

Definition at line 510 of file `assoc_container.hpp`.

The documentation for this class was generated from the following file:

- [assoc\\_container.hpp](#)

## 5.209 \_\_gnu\_pbds::tree\_tag Struct Reference

tree.

Inheritance diagram for `__gnu_pbds::tree_tag`:

### 5.209.1 Detailed Description

tree.

Definition at line 118 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.210 `__gnu_pbds::trie< Key, Mapped, E_Access_Traits, Tag, Node_Update, Allocator >` Class Template Reference

A concrete basic trie-based associative container.

Inheritance diagram for `__gnu_pbds::trie< Key, Mapped, E_Access_Traits, Tag, Node_Update, Allocator >`:

#### Public Types

- typedef Allocator **allocator\_type**
- typedef base\_type::const\_iterator **const\_iterator**

  **trie** (It first, It last)
- [trie](#) & **operator=** (const [trie](#) &other)
- void **swap** ([trie](#) &other)

#### 5.210.1 Detailed Description

template<typename Key, typename Mapped, typename E\_Access\_Traits = typename detail::default\_trie\_e\_access\_traits<Key>::type, typename Tag = pat\_trie\_tag, template< typename Const\_Node\_Iterator, typename Node\_Iterator, typename E\_Access\_Traits\_, typename Allocator\_ > class Node\_Update = null\_trie\_node\_update, typename Allocator = std::allocator<char>> class \_\_gnu\_pbds::trie< Key, Mapped, E\_Access\_Traits, Tag, Node\_Update, Allocator >

A concrete basic trie-based associative container.

Definition at line 586 of file assoc\_container.hpp.

The documentation for this class was generated from the following file:

- [assoc\\_container.hpp](#)

### 5.211 \_\_gnu\_pbds::trie\_tag Struct Reference

trie.

Inheritance diagram for \_\_gnu\_pbds::trie\_tag:

#### 5.211.1 Detailed Description

trie.

Definition at line 130 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

#### 5.212 \_\_gnu\_profile::\_\_container\_size\_info Class Reference

A container size instrumentation line in the object table.

Inheritance diagram for `__gnu_profile::__container_size_info`:

### Public Member Functions

- `__container_size_info` (const `__container_size_info` &\_\_o)
- `__container_size_info` (`__stack_t` \_\_stack, `std::size_t` \_\_num)
- `std::string` `__advice` () const
- void `__destruct` (`std::size_t` \_\_num, `std::size_t` \_\_inum)
- bool `__is_valid` () const
- float `__magnitude` () const
- void `__merge` (const `__container_size_info` &\_\_o)
- void `__resize` (`std::size_t` \_\_from, `std::size_t` \_\_to)
- float `__resize_cost` (`std::size_t` \_\_from, `std::size_t`)
- `__stack_t` `__stack` () const
- void `__write` (FILE \*\_\_f) const

### Protected Attributes

- `__stack_t` `_M_stack`
- bool `_M_valid`

### 5.212.1 Detailed Description

A container size instrumentation line in the object table.

Definition at line 49 of file `profiler_container_size.h`.

The documentation for this class was generated from the following file:

- [profiler\\_container\\_size.h](#)

## 5.213 `__gnu_profile::__container_size_stack_info` Class Reference

A container size instrumentation line in the stack table.

Inheritance diagram for `__gnu_profile::__container_size_stack_info`:

### Public Member Functions

- `__container_size_stack_info` (const [\\_\\_container\\_size\\_info](#) &\_\_o)
- [std::string](#) `__advice` () const
- void `__destruct` (std::size\_t \_\_num, std::size\_t \_\_inum)
- bool `__is_valid` () const
- float `__magnitude` () const
- void `__merge` (const [\\_\\_container\\_size\\_info](#) &\_\_o)
- void `__resize` (std::size\_t \_\_from, std::size\_t \_\_to)

- float **\_\_resize\_cost** (std::size\_t \_\_from, std::size\_t)
- \_\_stack\_t **\_\_stack** () const
- void **\_\_write** (FILE \*\_\_f) const

#### Protected Attributes

- \_\_stack\_t **\_M\_stack**
- bool **\_M\_valid**

##### 5.213.1 Detailed Description

A container size instrumentation line in the stack table.

Definition at line 161 of file profiler\_container\_size.h.

The documentation for this class was generated from the following file:

- [profiler\\_container\\_size.h](#)

##### 5.214 \_\_gnu\_profile::\_\_hashfunc\_info Class Reference

A hash performance instrumentation line in the object table.

Inheritance diagram for \_\_gnu\_profile::\_\_hashfunc\_info:

### Public Member Functions

- `__hashfunc_info` (const `__hashfunc_info` &\_\_o)
- `__hashfunc_info` (`__stack_t` \_\_stack)
- `std::string __advice` () const
- void `__destruct` (std::size\_t \_\_chain, std::size\_t \_\_accesses, std::size\_t \_\_hops)
- bool `__is_valid` () const
- float `__magnitude` () const
- void `__merge` (const `__hashfunc_info` &\_\_o)
- `__stack_t __stack` () const
- void `__write` (FILE \*\_\_f) const

### Protected Attributes

- `__stack_t _M_stack`
- bool `_M_valid`

#### 5.214.1 Detailed Description

A hash performance instrumentation line in the object table.

Definition at line 47 of file `profiler_hash_func.h`.

The documentation for this class was generated from the following file:

- `profiler_hash_func.h`

### 5.215 `__gnu_profile::__hashfunc_stack_info` Class Reference

A hash performance instrumentation line in the stack table.

Inheritance diagram for `__gnu_profile::__hashfunc_stack_info`:

### Public Member Functions

- `__hashfunc_stack_info` (const `__hashfunc_info` &\_\_o)
- `std::string __advice` () const
- void `__destruct` (std::size\_t \_\_chain, std::size\_t \_\_accesses, std::size\_t \_\_hops)
- bool `__is_valid` () const
- float `__magnitude` () const
- void `__merge` (const `__hashfunc_info` &\_\_o)
- `__stack_t __stack` () const
- void `__write` (FILE \*\_\_f) const

### Protected Attributes

- `__stack_t _M_stack`
- bool `_M_valid`

#### 5.215.1 Detailed Description

A hash performance instrumentation line in the stack table.

Definition at line 102 of file `profiler_hash_func.h`.

The documentation for this class was generated from the following file:

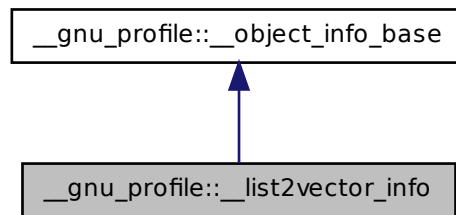

- [profiler\\_hash\\_func.h](#)

## 5.216 \_\_gnu\_profile::\_\_list2vector\_info Class Reference

A list-to-vector instrumentation line in the object table.

Inheritance diagram for \_\_gnu\_profile::\_\_list2vector\_info:

### Public Member Functions

- `__list2vector_info` (`__stack_t __stack`)
- `__list2vector_info` (`const __list2vector_info &__o`)
- `std::string __advice` () const
- `bool __is_valid` () const
- `bool __is_valid` ()
- `std::size_t __iterate` ()
- `float __list_cost` ()
- `float __magnitude` () const
- `void __merge` (`const __list2vector_info &__o`)
- `void __opr_insert` (`std::size_t __shift`, `std::size_t __size`)
- `void __opr_iterate` (`std::size_t __num`)
- `std::size_t __resize` ()
- `void __resize` (`std::size_t __from`, `std::size_t`)
- `void __set_invalid` ()
- `void __set_list_cost` (`float __lc`)
- `void __set_vector_cost` (`float __vc`)
- `std::size_t __shift_count` ()
- `__stack_t __stack` () const
- `void __write` (`FILE *__f`) const

### Protected Attributes

- `__stack_t _M_stack`

#### 5.216.1 Detailed Description

A list-to-vector instrumentation line in the object table.

Definition at line 49 of file `profiler_list_to_vector.h`.

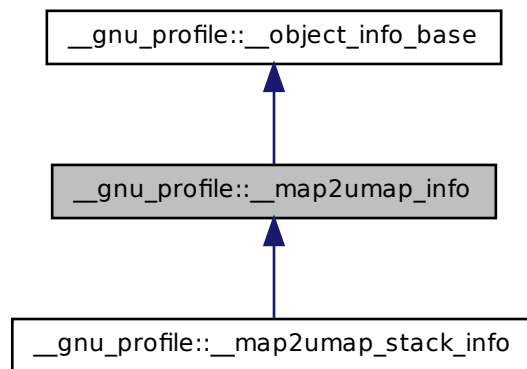

The documentation for this class was generated from the following file:

- [profiler\\_list\\_to\\_vector.h](#)

### 5.217 \_\_gnu\_profile::\_\_map2umap\_info Class Reference

A map-to-unordered\_map instrumentation line in the object table.

Inheritance diagram for `__gnu_profile::__map2umap_info`:

### Public Member Functions

- `__map2umap_info (__stack_t __stack)`
- `__map2umap_info (const __map2umap_info &__o)`
- `std::string __advice () const`

- `bool __is_valid () const`
- `float __magnitude () const`
- `void __merge (const \_\_map2umap\_info &__o)`
- `void __record_erase (std::size_t __size, std::size_t __count)`
- `void __record_find (std::size_t __size)`
- `void __record_insert (std::size_t __size, std::size_t __count)`
- `void __record_invalidate ()`
- `void __record_iterate (std::size_t __count)`
- `__stack_t __stack () const`
- `void __write (FILE *__f) const`

#### Protected Attributes

- `__stack_t _M_stack`

##### 5.217.1 Detailed Description

A map-to-unordered\_map instrumentation line in the object table.

Definition at line 73 of file `profiler_map_to_unordered_map.h`.

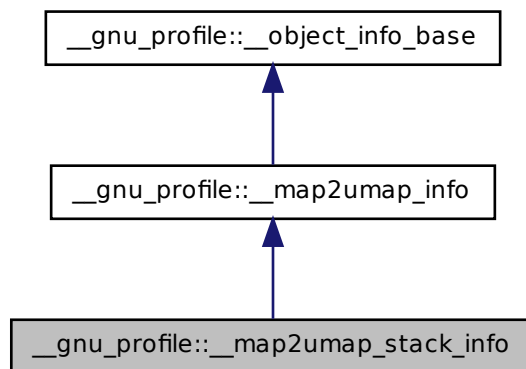

The documentation for this class was generated from the following file:

- [profiler\\_map\\_to\\_unordered\\_map.h](#)

## 5.218 `__gnu_profile::__map2umap_stack_info` Class Reference

A map-to-unordered\_map instrumentation line in the stack table.

Inheritance diagram for \_\_gnu\_profile::\_\_map2umap\_stack\_info:

### Public Member Functions

- `__map2umap_stack_info` (const `__map2umap_info` &\_\_o)
- `std::string __advice` () const
- `bool __is_valid` () const
- `float __magnitude` () const
- `void __merge` (const `__map2umap_info` &\_\_o)
- `void __record_erase` (std::size\_t \_\_size, std::size\_t \_\_count)
- `void __record_find` (std::size\_t \_\_size)
- `void __record_insert` (std::size\_t \_\_size, std::size\_t \_\_count)
- `void __record_invalidate` ()
- `void __record_iterate` (std::size\_t \_\_count)
- `__stack_t __stack` () const
- `void __write` (FILE \*\_\_f) const

### Protected Attributes

- `__stack_t _M_stack`

### 5.218.1 Detailed Description

A map-to-unordered\_map instrumentation line in the stack table.

Definition at line 177 of file `profiler_map_to_unordered_map.h`.

The documentation for this class was generated from the following file:

- [profiler\\_map\\_to\\_unordered\\_map.h](#)

## 5.219 `__gnu_profile::__object_info_base` Class Reference

Base class for a line in the object table.

Inheritance diagram for `__gnu_profile::__object_info_base`:

### Public Member Functions

- `__object_info_base` (`__stack_t` `__stack`)
- `__object_info_base` (`const __object_info_base &__o`)
- `bool __is_valid` () `const`
- `__stack_t __stack` () `const`
- `virtual void __write` (`FILE *` `__f`) `const` `=0`

### Protected Attributes

- `__stack_t` `_M_stack`
- `bool` `_M_valid`

### 5.219.1 Detailed Description

Base class for a line in the object table.

Definition at line 130 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler\\_node.h](#)

## 5.220 `__gnu_profile::__reentrance_guard` Struct Reference

Reentrance guard.

### Static Public Member Functions

- static bool `__get_in` ()
- static bool & `__inside` ()

### 5.220.1 Detailed Description

Reentrance guard. Mechanism to protect all [\\_\\_gnu\\_profile](#) operations against recursion, multithreaded and exception reentrance.

Definition at line 65 of file `profiler.h`.

The documentation for this struct was generated from the following file:

- [profiler.h](#)

## 5.221 `__gnu_profile::__stack_hash` Class Reference

Hash function for summary trace using call stack as index.

### Public Member Functions

- `std::size_t operator()` (`__stack_t __s`) const
- `bool operator()` (`__stack_t __stack1`, `__stack_t __stack2`) const

### 5.221.1 Detailed Description

Hash function for summary trace using call stack as index.

Definition at line 96 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler\\_node.h](#)

## 5.222 `__gnu_profile::__stack_info_base< __object_info >` Class Template Reference

Base class for a line in the stack table.

### Public Member Functions

- `__stack_info_base` (const `__object_info` &`__info`)=0
- virtual const char \* `__get_id` () const =0
- virtual float `__magnitude` () const =0
- void `__merge` (const `__object_info` &`__info`)=0

#### 5.222.1 Detailed Description

`template<typename __object_info> class __gnu_profile::__stack_info_base< __object_info >`

Base class for a line in the stack table.

Definition at line 161 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler\\_node.h](#)

## 5.223 `__gnu_profile::__trace_base< __object_info, __stack_info >` Class Template Reference

Base class for all trace producers.

Inheritance diagram for `__gnu_profile::__trace_base< __object_info, __stack_info >`:

### Public Member Functions

- void **\_\_add\_object** (`__object_t` object, `__object_info` \_\_info)
- void **\_\_collect\_warnings** (`__warning_vector_t` &\_\_warnings)
- `__object_info` \* **\_\_get\_object\_info** (`__object_t` \_\_object)
- void **\_\_retire\_object** (`__object_t` \_\_object)
- void **\_\_write** (`FILE` \*\_\_f)

### Protected Attributes

- const char \* **\_\_id**

#### 5.223.1 Detailed Description

template<typename `__object_info`, typename `__stack_info`> class `__gnu_profile::__trace_base`< `__object_info`, `__stack_info` >

Base class for all trace producers.

Definition at line 190 of file `profiler_trace.h`.

The documentation for this class was generated from the following file:

- [profiler\\_trace.h](#)

## 5.224 `__gnu_profile::__trace_container_size` Class Reference

Container size instrumentation trace producer.

Inheritance diagram for `__gnu_profile::__trace_container_size`:

### Public Member Functions

- void **\_\_add\_object** (`__object_t` object, `__container_size_info` \_\_info)
- void **\_\_collect\_warnings** (`__warning_vector_t` &\_\_warnings)
- void **\_\_construct** (const void \*\_\_obj, std::size\_t \_\_inum)
- void **\_\_destruct** (const void \*\_\_obj, std::size\_t \_\_num, std::size\_t \_\_inum)
- `__container_size_info` \* **\_\_get\_object\_info** (`__object_t` \_\_object)
- void **\_\_insert** (const `__object_t` \_\_obj, `__stack_t` \_\_stack, std::size\_t \_\_num)

- void **\_\_resize** (const void \*\_\_obj, int \_\_from, int \_\_to)
- void **\_\_retire\_object** (\_\_object\_t \_\_object)
- void **\_\_write** (FILE \*\_\_f)

### Protected Attributes

- const char \* **\_\_id**

#### 5.224.1 Detailed Description

Container size instrumentation trace producer.

Definition at line 171 of file profiler\_container\_size.h.

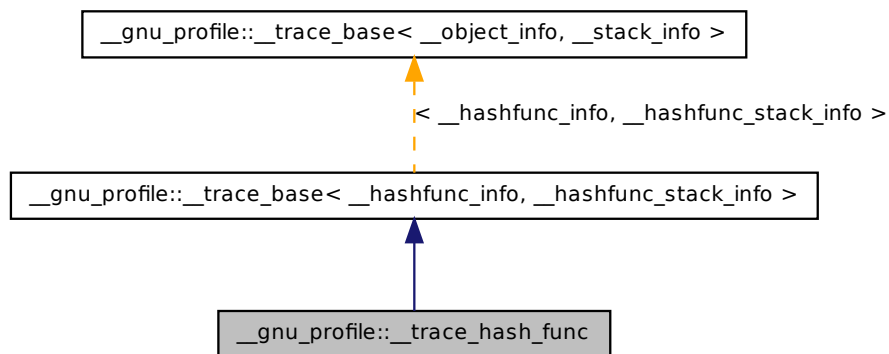

The documentation for this class was generated from the following file:

- [profiler\\_container\\_size.h](#)

#### 5.225 \_\_gnu\_profile::\_\_trace\_hash\_func Class Reference

Hash performance instrumentation producer.

Inheritance diagram for \_\_gnu\_profile::\_\_trace\_hash\_func:

### Public Member Functions

- void **\_\_add\_object** (`__object_t` object, `__hashfunc_info__info`)
- void **\_\_collect\_warnings** (`__warning_vector_t` &`__warnings`)
- void **\_\_destruct** (const void \*`__obj`, `std::size_t` `__chain`, `std::size_t` `__accesses`, `std::size_t` `__hops`)
- [\\_\\_hashfunc\\_info](#) \* **\_\_get\_object\_info** (`__object_t` `__object`)
- void **\_\_insert** (`__object_t` `__obj`, `__stack_t` `__stack`)
- void **\_\_retire\_object** (`__object_t` `__object`)
- void **\_\_write** (FILE \*`__f`)

### Protected Attributes

- const char \* **\_\_id**

#### 5.225.1 Detailed Description

Hash performance instrumentation producer.

Definition at line 112 of file `profiler_hash_func.h`.

The documentation for this class was generated from the following file:

- [profiler\\_hash\\_func.h](#)

## 5.226 `__gnu_profile::__trace_hashtable_size` Class Reference

Hashtable size instrumentation trace producer.

Inheritance diagram for `__gnu_profile::__trace_hashtable_size`:

### Public Member Functions

- void **\_\_add\_object** (`__object_t` object, `__container_size_info__info`)
- void **\_\_collect\_warnings** (`__warning_vector_t` &`__warnings`)
- void **\_\_construct** (const void \*`__obj`, `std::size_t` `__inum`)
- void **\_\_destruct** (const void \*`__obj`, `std::size_t` `__num`, `std::size_t` `__inum`)
- [\\_\\_container\\_size\\_info](#) \* **\_\_get\_object\_info** (`__object_t` `__object`)
- void **\_\_insert** (const `__object_t` `__obj`, `__stack_t` `__stack`, `std::size_t` `__num`)

- void **\_\_resize** (const void \*\_\_obj, int \_\_from, int \_\_to)
- void **\_\_retire\_object** (\_\_object\_t \_\_object)
- void **\_\_write** (FILE \*\_\_f)

### Protected Attributes

- const char \* **\_\_id**

#### 5.226.1 Detailed Description

Hashtable size instrumentation trace producer.

Definition at line 49 of file `profiler_hashtable_size.h`.

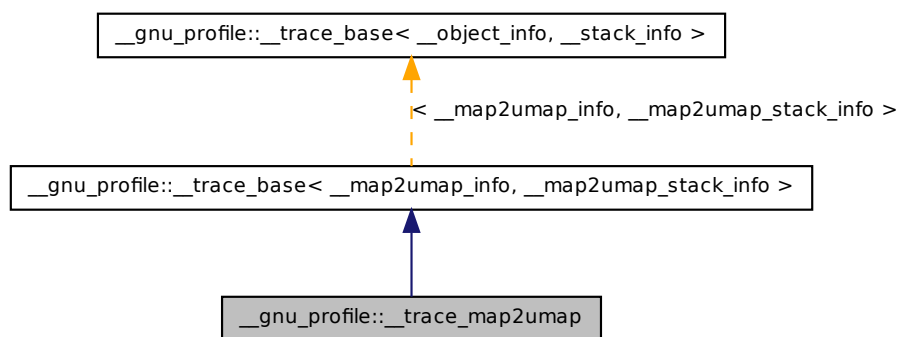

The documentation for this class was generated from the following file:

- [profiler\\_hashtable\\_size.h](#)

#### 5.227 `__gnu_profile::__trace_map2umap` Class Reference

Map-to-unordered\_map instrumentation producer.

Inheritance diagram for `__gnu_profile::__trace_map2umap`:

### Public Member Functions

- void **\_\_add\_object** (\_\_object\_t object, \_\_map2umap\_info\_\_info)

- void `__collect_warnings` (`__warning_vector_t` &`__warnings`)
- `__map2umap_info` \* `__get_object_info` (`__object_t` `__object`)
- void `__retire_object` (`__object_t` `__object`)
- void `__write` (`FILE` \*`__f`)

### Protected Attributes

- const char \* `__id`

#### 5.227.1 Detailed Description

Map-to-unordered\_map instrumentation producer.

Definition at line 186 of file `profiler_map_to_unordered_map.h`.

The documentation for this class was generated from the following file:

- [profiler\\_map\\_to\\_unordered\\_map.h](#)

## 5.228 `__gnu_profile::__trace_vector_size` Class Reference

Hashtable size instrumentation trace producer.

Inheritance diagram for `__gnu_profile::__trace_vector_size`:

### Public Member Functions

- void `__add_object` (`__object_t` `object`, `__container_size_info` `__info`)
- void `__collect_warnings` (`__warning_vector_t` &`__warnings`)
- void `__construct` (const void \*`__obj`, `std::size_t` `__inum`)
- void `__destruct` (const void \*`__obj`, `std::size_t` `__num`, `std::size_t` `__inum`)
- `__container_size_info` \* `__get_object_info` (`__object_t` `__object`)
- void `__insert` (const `__object_t` `__obj`, `__stack_t` `__stack`, `std::size_t` `__num`)
- void `__resize` (const void \*`__obj`, int `__from`, int `__to`)
- void `__retire_object` (`__object_t` `__object`)
- void `__write` (`FILE` \*`__f`)

### Protected Attributes

- const char \* `__id`

### 5.228.1 Detailed Description

Hashtable size instrumentation trace producer.

Definition at line 49 of file `profiler_vector_size.h`.

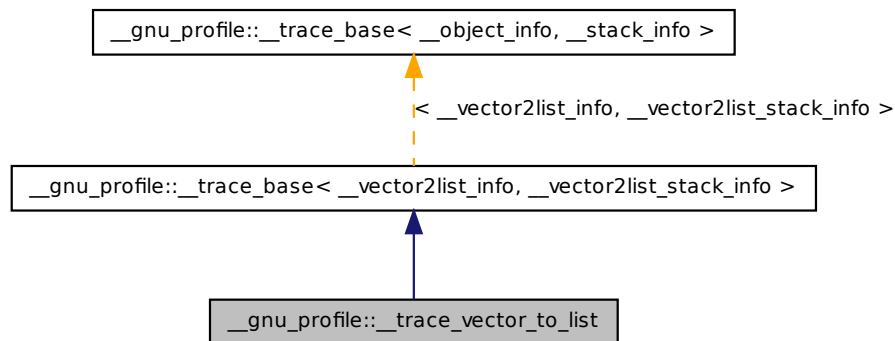

The documentation for this class was generated from the following file:

- [profiler\\_vector\\_size.h](#)

## 5.229 `__gnu_profile::__trace_vector_to_list` Class Reference

Vector-to-list instrumentation producer.

Inheritance diagram for `__gnu_profile::__trace_vector_to_list`:

### Public Member Functions

- `void __add_object (__object_t object, __vector2list_info __info)`
- `void __collect_warnings (__warning_vector_t &__warnings)`
- `void __destruct (const void *__obj)`
- `__vector2list_info * __find (const void *__obj)`
- `__vector2list_info * __get_object_info (__object_t __object)`
- `void __insert (__object_t __obj, __stack_t __stack)`
- `void __invalid_operator (const void *__obj)`
- `float __list_cost (std::size_t __shift, std::size_t __iterate, std::size_t __resize)`
- `void __opr_find (const void *__obj, std::size_t __size)`

- void **\_\_opr\_insert** (const void \*\_\_obj, std::size\_t \_\_pos, std::size\_t \_\_num)
- void **\_\_opr\_iterate** (const void \*\_\_obj, std::size\_t \_\_num)

#### 5.239 std::\_\_atomic\_flag\_base Struct Reference

Base type for atomic\_flag.

Inheritance diagram for `std::__atomic_flag_base`:

#### Public Attributes

- `bool _M_i`

#### 5.239.1 Detailed Description

Base type for `atomic_flag`. Base type is POD with data, allowing `atomic_flag` to derive from it and meet the standard layout type requirement. In addition to compatibility with a C interface, this allows different implementations of `atomic_flag` to use the same atomic operation functions, via a standard conversion to the `__atomic_flag_base` argument.

Definition at line 98 of file `atomic_base.h`.

The documentation for this struct was generated from the following file:

- [atomic\\_base.h](#)

#### 5.240 `std::__basic_future<_Res>` Class Template Reference

- `void __M_swap` (`__basic_future &__that`)

#### 5.240.1 Detailed Description

`template<typename _Res> class std::__basic_future< _Res >`

Common implementation for `future` and `shared_future`.

Definition at line 494 of file `future`.

#### 5.240.2 Member Function Documentation

5.240.2.1 `template<typename _Res> __result_type std::__basic_future< _Res >::__M_get_result` ( ) [`inline`, `protected`]

Wait for the state to be ready and rethrow any stored exception.

Definition at line 537 of file `future`.

Referenced by `std::shared_future< _Res >::get()`, `std::future< void >::get()`, and `std::future< _Res >::get()`.

The documentation for this class was generated from the following file:

- `future`

### 5.241 `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >` Class Template Reference

Common base for `codecvt` functions.

Inheritance diagram for `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`:

### Public Types

- typedef `_ExternT` **extern\_type**
- typedef `_InternT` **intern\_type**

#### 5.241.1 Detailed Description

`template<typename _InternT, typename _ExternT, typename _StateT> class std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>`

Common base for codecvt functions. This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 69 of file `codecvt.h`.

#### 5.241.2 Member Function Documentation

**5.241.2.1** `template<typename _InternT, typename _ExternT, typename _StateT> virtual result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::do_out ( state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const [protected, pure virtual]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

### See also

[out](#) for more information.

Implemented in [std::\\_\\_codecvt<\\_InternT, \\_ExternT, \\_StateT >](#).

Referenced by `std::__codecvt_abstract_base<_InternT, _ExternT, encoding_state >::out()`.

**5.241.2.2** `template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >::in ( state_type & __state, const extern_type * __from, const extern_type * __from_end, const extern_type *& __from_next, intern_type * __to, intern_type * __to_end, intern_type *& __to_next ) const [inline]`

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

- state* Persistent conversion state data.
- from* Start of input.
- from\_end* End of input.
- from\_next* Returns start of unconverted data.
- to* Start of output buffer.
- to\_end* End of output buffer.
- to\_next* Returns start of unused output area.

#### Returns

`codecvt_base::result`.

Definition at line 197 of file `codecvt.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::underflow()`.

**5.241.2.3** `template<typename _InternT, typename _ExternT, typename  
_StateT> result std::__codecvt_abstract_base<_InternT, _ExternT,  
_StateT>::out ( state_type & __state, const intern_type * __from,  
const intern_type * __from_end, const intern_type *& __from_next,  
extern_type * __to, extern_type * __to_end, extern_type *&  
__to_next ) const [inline]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling [codecvt::do\\_out](#).

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

*state* Persistent conversion state data.  
*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

#### Returns

`codecvt_base::result`.

Definition at line 117 of file `codecvt.h`.

**5.241.2.4** `template<typename _InternT, typename _ExternT, typename  
 _StateT> result std::__codecvt_abstract_base<_InternT, _ExternT,  
 _StateT>::unshift ( state_type & __state, extern_type * __to,  
 extern_type * __to_end, extern_type *& __to_next ) const  
 [inline]`

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

#### Parameters

- state* Persistent conversion state data.
- to* Start of output buffer.
- to\_end* End of output buffer.
- to\_next* Returns start of unused output area.

#### Returns

`codecvt_base::result`.

Definition at line 156 of file `codecvt.h`.

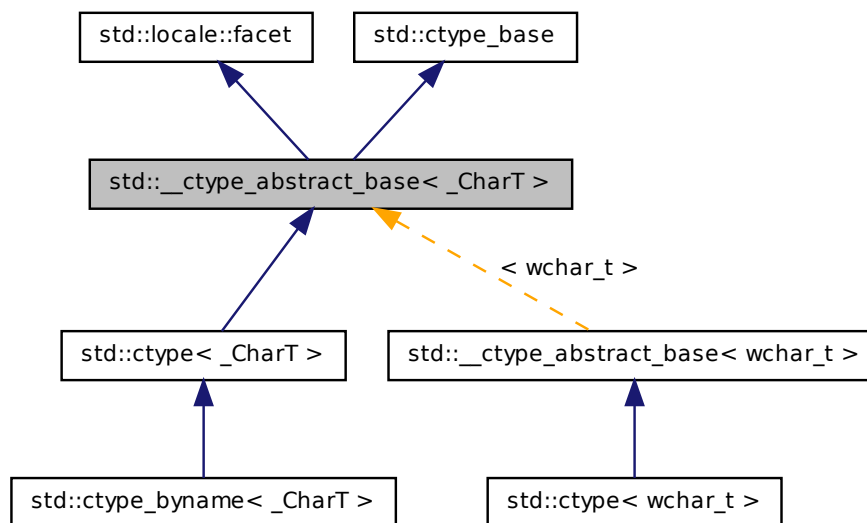

The documentation for this class was generated from the following file:

- [codecvt.h](#)

## 5.242 `std::__ctype_abstract_base<_CharT>` Class Template Reference

Common base for ctype facet.

Inheritance diagram for `std::__ctype_abstract_base<_CharT>`:

### Public Types

- typedef const int \* **\_\_to\_type**

#### 5.242.1 Detailed Description

`template<typename _CharT> class std::__ctype_abstract_base<_CharT>`

Common base for ctype facet. This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 145 of file `locale_facets.h`.

#### 5.242.2 Member Typedef Documentation

**5.242.2.1** `template<typename _CharT> typedef _CharT  
std::__ctype_abstract_base<_CharT>::char_type`

Typedef for the template parameter.

Reimplemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

Definition at line 150 of file `locale_facets.h`.

### 5.242.3 Member Function Documentation

**5.242.3.1** `template<typename _CharT> virtual bool std::__ctype_abstract_base<_CharT>::do_is ( mask __m, char_type __c ) const [protected, pure virtual]`

Test `char_type` classification.

This function finds a mask `M` for `c` and compares it to mask `m`.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

#### Parameters

*c* The `char_type` to find the mask of.

*m* The mask to compare against.

#### Returns

$(M \& m) \neq 0$ .

Implemented in `std::ctype<_CharT>`.

Referenced by `std::__ctype_abstract_base<wchar_t>::is()`.

**5.242.3.2** `template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_is ( const char_type * __lo, const char_type * __hi, mask * __vec ) const [protected, pure virtual]`

Return a mask array.

This function finds the mask for each `char_type` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the input.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*vec* Pointer to an array of mask storage.

**Returns**

*hi*.

Implemented in `std::__ctype<_CharT>`.

**5.242.3.3** `template<typename _CharT> virtual char std::__ctype_abstract_base<_CharT>::do_narrow ( char_type, char __dfault ) const [protected, pure virtual]`

Narrow `char_type` to `char`.

This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters**

*c* The `char_type` to convert.

*dfault* Char to return if conversion fails.

**Returns**

The converted `char`.

Implemented in `std::__ctype<_CharT>`.

Referenced by `std::__ctype_abstract_base<wchar_t>::narrow()`.

**5.242.3.4** `template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_narrow ( const char_type* __lo, const char_type* __hi, char __dfault, char* __dest ) const [protected, pure virtual]`

Narrow `char_type` array to `char`.

This virtual function converts each `char_type` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, `dfault` is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

#### Returns

*hi*.

Implemented in `std::ctype<_CharT>`.

**5.242.3.5** `template<typename _CharT> virtual const char_type*  
std::__ctype_abstract_base<_CharT>::do_scan_is ( mask  
__m, const char_type * __lo, const char_type * __hi ) const  
[protected, pure virtual]`

Find `char_type` matching mask.

This function searches for and returns the first `char_type` `c` in `[lo,hi)` for which `is(m,c)` is true.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

#### Parameters

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

#### Returns

Pointer to a matching `char_type` if found, else *hi*.

Implemented in `std::ctype<_CharT>`.

Referenced by `std::__ctype_abstract_base<wchar_t>::scan_is()`.

**5.242.3.6** `template<typename _CharT> virtual const char_type*  
std::__ctype_abstract_base<_CharT>::do_scan_not ( mask  
__m, const char_type * __lo, const char_type * __hi ) const  
[protected, pure virtual]`

Find char\_type not matching mask.

This function searches for and returns a pointer to the first char\_type c of [lo,hi) for which is(m,c) is false.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

#### Parameters

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

#### Returns

Pointer to a non-matching char\_type if found, else *hi*.

Implemented in [std::ctype<\\_CharT>](#).

Referenced by [std::\\_\\_ctype\\_abstract\\_base<wchar\\_t>::scan\\_not\(\)](#).

**5.242.3.7** `template<typename _CharT> virtual char_type  
std::__ctype_abstract_base<_CharT>::do_tolower ( char_type )  
const [protected, pure virtual]`

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

#### Parameters

- c* The char\_type to convert.

#### Returns

The lowercase char\_type if convertible, else *c*.

Implemented in `std::ctype<_CharT>`.

Referenced by `std::__ctype_abstract_base<wchar_t>::tolower()`.

**5.242.3.8** `template<typename _CharT> virtual const char_type*  
std::__ctype_abstract_base<_CharT>::do_tolower ( char_type  
* __lo, const char_type * __hi ) const [protected, pure  
virtual]`

Convert array to lowercase.

This virtual function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Implemented in `std::ctype<_CharT>`.

**5.242.3.9** `template<typename _CharT> virtual char_type  
std::__ctype_abstract_base<_CharT>::do_toupper ( char_type )  
const [protected, pure virtual]`

Convert to uppercase.

This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

#### Parameters

*c* The `char_type` to convert.

**Returns**

The uppercase char\_type if convertible, else *c*.

Implemented in [std::ctype<\\_CharT>](#).

Referenced by `std::__ctype_abstract_base<wchar_t>::toupper()`.

**5.242.3.10** `template<typename _CharT> virtual const char_type*  
std::__ctype_abstract_base<_CharT>::do_toupper ( char_type  
* __lo, const char_type * __hi ) const [protected, pure  
virtual]`

Convert array to uppercase.

This virtual function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns**

*hi*.

Implemented in [std::ctype<\\_CharT>](#).

**5.242.3.11** `template<typename _CharT> virtual char_type  
std::__ctype_abstract_base<_CharT>::do_widen ( char ) const  
[protected, pure virtual]`

Widen char.

This virtual function converts the char to char\_type using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters**

*c* The char to convert.

**Returns**

The converted `char_type`

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

Referenced by `std::__ctype_abstract_base<wchar_t>::widen()`.

**5.242.3.12** `template<typename _CharT> virtual const char*  
std::__ctype_abstract_base<_CharT>::do_widen ( const  
char * __lo, const char * __hi, char_type * __dest ) const  
[protected, pure virtual]`

Widen char array.

This function converts each char in the input to `char_type` using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters**

*lo* Pointer to start range.

*hi* Pointer to end of range.

*to* Pointer to the destination array.

**Returns**

*hi*.

Implemented in `std::ctype<_CharT>`.

**5.242.3.13** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base<_CharT>::is ( const char_type *  
__lo, const char_type * __hi, mask * __vec ) const [inline]`

Return a mask array.

This function finds the mask for each `char_type` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the char array. It does so by returning the value of `ctype<char_type>::do_is()`.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

#### Returns

*hi*.

Definition at line 180 of file `locale_facets.h`.

**5.242.3.14** `template<typename _CharT> bool std::__ctype_abstract_base<_CharT>::is ( mask __m, char_type __c ) const [inline]`

Test `char_type` classification.

This function finds a mask `M` for `c` and compares it to mask `m`. It does so by returning the value of `ctype<char_type>::do_is()`.

#### Parameters

- c* The `char_type` to compare the mask of.
- m* The mask to compare against.

#### Returns

$(M \& m) \neq 0$ .

Definition at line 163 of file `locale_facets.h`.

Referenced by `std::regex_traits<_Ch_type>::isctype()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.242.3.15** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::narrow ( const char_type * __lo, const char_type * __hi, char __dfault, char * __to ) const [inline]`

Narrow array to char array.

This function converts each `char_type` in the input to `char` using the simplest reasonable transformation and writes the results to the destination array. For any `char_type` in the input that cannot be converted, *dfault* is used instead. It does so by returning `ctype<char_type>::do_narrow(lo, hi, dfault, to)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 347 of file `locale_facets.h`.

```
5.242.3.16 template<typename _CharT> char std::__ctype_abstract_base<
 _CharT>::narrow (char_type __c, char __dfault) const
 [inline]
```

Narrow `char_type` to `char`.

This function converts the `char_type` to `char` using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. It does so by returning `ctype<char_type>::do_narrow(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- c* The `char_type` to convert.
- dfault* Char to return if conversion fails.

#### Returns

The converted `char`.

Definition at line 325 of file `locale_facets.h`.

Referenced by `std::time_put<_CharT, _OutIter>::put()`.

**5.242.3.17** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base<_CharT>::scan_is ( mask __m,  
const char_type * __lo, const char_type * __hi ) const [inline]`

Find char\_type matching a mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true. It does so by returning `ctype<char_type>::do_scan_is()`.

#### Parameters

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

Pointer to matching char\_type if found, else *hi*.

Definition at line 196 of file locale\_facets.h.

**5.242.3.18** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base<_CharT>::scan_not ( mask __m,  
const char_type * __lo, const char_type * __hi ) const [inline]`

Find char\_type not matching a mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is false. It does so by returning `ctype<char_type>::do_scan_not()`.

#### Parameters

*m* The mask to compare against.

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

#### Returns

Pointer to non-matching char if found, else *hi*.

Definition at line 212 of file locale\_facets.h.

**5.242.3.19** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::tolower ( char_type __c ) const [inline]`

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char\_type>::do\_toupper(c).

#### Parameters

*c* The char\_type to convert.

#### Returns

The lowercase char\_type if convertible, else *c*.

Definition at line 255 of file locale\_facets.h.

**5.242.3.20** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::tolower ( char_type * __lo, const char_type * __hi ) const [inline]`

Convert array to lowercase.

This function converts each char\_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char\_type>::do\_toupper(lo, hi).

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Definition at line 270 of file locale\_facets.h.

**5.242.3.21** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::toupper ( char_type __c ) const [inline]`

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

#### Parameters

*c* The char\_type to convert.

#### Returns

The uppercase char\_type if convertible, else *c*.

Definition at line 226 of file locale\_facets.h.

**5.242.3.22** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::toupper ( char_type * __lo, const char_type * __hi ) const [inline]`

Convert array to uppercase.

This function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Definition at line 241 of file locale\_facets.h.

**5.242.3.23** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::widen ( char __c ) const  
[inline]`

Widen char to char\_type.

This function converts the char argument to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

#### Parameters

*c* The char to convert.

#### Returns

The converted char\_type.

Definition at line 287 of file locale\_facets.h.

Referenced by std::money\_get<\_CharT, \_InIter>::do\_get(), std::time\_put<\_CharT, \_OutIter>::do\_put(), std::money\_put<\_CharT, \_OutIter>::do\_put(), std::regex\_traits<\_Ch\_type>::isctype(), and std::operator<<().

**5.242.3.24** `template<typename _CharT> const char* std::__ctype_abstract_base<_CharT>::widen ( const char * __lo, const char * __hi, char_type * __to ) const [inline]`

Widen array to char\_type.

This function converts each char in the input to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*to* Pointer to the destination array.

#### Returns

*hi*.

## 5.244 `std::__debug::deque<_Tp, _Allocator>` Class Template Reference 1405

---

### 5.244.1 Detailed Description

`template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class std::__debug::deque<_Tp, _Allocator>`

Class `std::deque` with safety/checking/debug instrumentation.

Definition at line 43 of file `debug/deque`.

### 5.244.2 Member Function Documentation

**5.244.2.1** `void __gnu_debug::_Safe_sequence_base::_M_attach (   
_Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

**5.244.2.2** `void __gnu_debug::_Safe_sequence_base::_M_attach_single   
( _Safe_iterator_base * __it, bool __constant ) throw ()   
[inherited]`

Likewise but not thread safe.

**5.244.2.3** `void __gnu_debug::_Safe_sequence_base::_M_detach (   
_Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

**5.244.2.4** `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( )   
[protected, inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base()`.

**5.244.2.5** `void __gnu_debug::_Safe_sequence_base::_M_detach_single (   
_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

**5.244.2.6** `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )   
[protected, inherited]`

Detach all singular iterators.

## 5.244 `std::__debug::deque<_Tp, _Allocator>` Class Template Reference 1406

### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**5.244.2.7** `__gnu_cxx::__mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex ( ) throw ()` [**protected**, **inherited**]

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

**5.244.2.8** `void __gnu_debug::Safe_sequence_base::_M_invalidate_all ( ) const` [**inline**, **inherited**]

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::_M_version`.

**5.244.2.9** `void __gnu_debug::Safe_sequence<deque<_Tp, _Allocator>>::_M_invalidate_if ( _Predicate __pred )` [**inherited**]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

**5.244.2.10** `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular ( )` [**protected**, **inherited**]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.244.2.11** `void __gnu_debug::Safe_sequence_base::_M_swap ( _Safe_sequence_base & __x )` [**protected**, **inherited**]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

## 5.244 std::\_\_debug::deque< \_Tp, \_Allocator > Class Template Reference 1407

---

**5.244.2.12** void \_\_gnu\_debug::Safe\_sequence< deque< \_Tp, \_Allocator  
> >::\_M\_transfer\_from\_if ( \_Safe\_sequence< deque< \_Tp,  
\_Allocator > > & \_\_from, \_Predicate \_\_pred ) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

### 5.244.3 Member Data Documentation

**5.244.3.1** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_  
const\_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`,  
and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_from_if()`.

**5.244.3.2** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_  
iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`,  
and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_from_if()`.

**5.244.3.3** unsigned int \_\_gnu\_debug::Safe\_sequence\_base::\_M\_version  
[mutable, inherited]

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_from_if()`.

## 5.245 `std::__debug::forward_list<_Tp, _Alloc>` Class Template Reference 4411

### 5.245.1 Detailed Description

`template<typename _Tp, typename _Alloc = std::allocator<_Tp>> class std::__debug::forward_list<_Tp, _Alloc>`

Class `std::forward_list` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/forward_list`.

### 5.245.2 Member Function Documentation

**5.245.2.1** `void __gnu_debug::_Safe_sequence_base::_M_attach (   
_Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

**5.245.2.2** `void __gnu_debug::_Safe_sequence_base::_M_attach_single   
( _Safe_iterator_base * __it, bool __constant ) throw ()   
[inherited]`

Likewise but not thread safe.

**5.245.2.3** `void __gnu_debug::_Safe_sequence_base::_M_detach (   
_Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

**5.245.2.4** `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( )   
[protected, inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base()`.

**5.245.2.5** `void __gnu_debug::_Safe_sequence_base::_M_detach_single (   
_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

**5.245.2.6** `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )   
[protected, inherited]`

Detach all singular iterators.

## 5.245 `std::__debug::forward_list<_Tp, _Alloc>` Class Template Reference 1412

### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**5.245.2.7** `__gnu_cxx::__mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex ( ) throw () [protected, inherited]`

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

**5.245.2.8** `void __gnu_debug::Safe_sequence_base::_M_invalidate_all ( ) const [inline, inherited]`

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::_M_version`.

**5.245.2.9** `void __gnu_debug::Safe_sequence<forward_list<_Tp, _Alloc>>::_M_invalidate_if ( _Predicate __pred ) [inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

**5.245.2.10** `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular ( ) [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.245.2.11** `void __gnu_debug::Safe_sequence_base::_M_swap ( _Safe_sequence_base & __x ) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

## 5.245 std::\_\_debug::forward\_list<\_Tp, \_Alloc> Class Template Reference 1413

**5.245.2.12** void \_\_gnu\_debug::Safe\_sequence< forward\_list<\_Tp, \_Alloc> >::\_M\_transfer\_from\_if ( \_Safe\_sequence< forward\_list<\_Tp, \_Alloc> > & \_\_from, \_Predicate \_\_pred ) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

### 5.245.3 Member Data Documentation

**5.245.3.1** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_const\_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

**5.245.3.2** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

**5.245.3.3** unsigned int \_\_gnu\_debug::Safe\_sequence\_base::\_M\_version [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

#### 5.246.1 Detailed Description

`template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class std::__debug::list<_Tp, _Allocator>`

Class `std::list` with safety/checking/debug instrumentation.

Definition at line 43 of file `debug/list`.

#### 5.246.2 Member Function Documentation

**5.246.2.1** `void __gnu_debug::_Safe_sequence_base::_M_attach (   
_Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

**5.246.2.2** `void __gnu_debug::_Safe_sequence_base::_M_attach_single   
( _Safe_iterator_base * __it, bool __constant ) throw ()   
[inherited]`

Likewise but not thread safe.

**5.246.2.3** `void __gnu_debug::_Safe_sequence_base::_M_detach (   
_Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

**5.246.2.4** void \_\_gnu\_debug::Safe\_sequence\_base::M\_detach\_all ( )  
[protected, inherited]

Detach all iterators, leaving them singular.

Referenced by \_\_gnu\_debug::Safe\_sequence\_base::~~Safe\_sequence\_base().

**5.246.2.5** void \_\_gnu\_debug::Safe\_sequence\_base::M\_detach\_single (   
\_Safe\_iterator\_base \* \_\_it ) throw () [inherited]

Likewise but not thread safe.

**5.246.2.6** void \_\_gnu\_debug::Safe\_sequence\_base::M\_detach\_singular ( )  
[protected, inherited]

Detach all singular iterators.

#### Postcondition

for all iterators i attached to this sequence, i->\_M\_version == \_M\_version.

**5.246.2.7** \_\_gnu\_cxx::mutex& \_\_gnu\_debug::Safe\_sequence\_  
base::M\_get\_mutex ( ) throw () [protected,  
inherited]

For use in [\\_Safe\\_sequence](#).

Referenced by \_\_gnu\_debug::Safe\_sequence< \_Sequence >::M\_invalidate\_if(),  
and \_\_gnu\_debug::Safe\_sequence< \_Sequence >::M\_transfer\_from\_if().

**5.246.2.8** void \_\_gnu\_debug::Safe\_sequence\_base::M\_invalidate\_all ( )  
const [inline, inherited]

Invalidates all iterators.

Definition at line 234 of file safe\_base.h.

References \_\_gnu\_debug::Safe\_sequence\_base::\_M\_version.

**5.246.2.9** void \_\_gnu\_debug::Safe\_sequence< list< \_Tp, \_Allocator >  
>::M\_invalidate\_if ( \_Predicate \_\_pred ) [inherited]

Invalidates all iterators x that reference  
this sequence, are not singular, and for which pred(x) returns true. pred will be  
invoked with the normal iterators nested in the safe ones.

**5.246.2.10** void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_revalidate\_singular ( ) [protected, inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.246.2.11** void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_swap ( \_Safe\_sequence\_base & \_\_x ) [protected, inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.246.2.12** void \_\_gnu\_debug::Safe\_sequence< list< \_Tp, \_Allocator > >::\_M\_transfer\_from\_if ( \_Safe\_sequence< list< \_Tp, \_Allocator > > & \_\_from, \_Predicate \_\_pred ) [inherited]

Transfers all iterators *x* that reference *from* sequence, are not singular, and for which *pred(x)* returns *true*. *pred* will be invoked with the normal iterators nested in the safe ones.

### 5.246.3 Member Data Documentation

**5.246.3.1** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_const\_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_from_if()`.

**5.246.3.2** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

## 5.247 `std::__debug::map<_Key, _Tp, _Compare, _Allocator>` Class Template Reference 1420

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.246.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

#### 5.248.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>,
typename _Allocator = std::allocator<std::pair<const _Key, _Tp>>>>
class std::__debug::multimap<_Key,_Tp,_Compare,_Allocator>
```

Class `std::multimap` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/multimap.h`.

#### 5.248.2 Member Function Documentation

**5.248.2.1** `void __gnu_debug::Safe_sequence_base::_M_attach (`  
`_Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

**5.248.2.2** `void __gnu_debug::Safe_sequence_base::_M_attach_single`  
`( _Safe_iterator_base * __it, bool __constant ) throw ()`  
`[inherited]`

Likewise but not thread safe.

**5.248.2.3** `void __gnu_debug::Safe_sequence_base::_M_detach (`  
`_Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

**5.248.2.4** `void __gnu_debug::Safe_sequence_base::_M_detach_all ( )`  
`[protected, inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base()`.

5.248.2.5 `void __gnu_debug::_Safe_sequence_base::_M_detach_single (`  
`_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

5.248.2.6 `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )`  
`[protected, inherited]`

Detach all singular iterators.

**Postcondition**

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.248.2.7 `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_-`  
`base::_M_get_mutex ( ) throw () [protected,`  
`inherited]`

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`,  
and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

5.248.2.8 `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( )`  
`const [inline, inherited]`

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

5.248.2.9 `void __gnu_debug::_Safe_sequence<multimap<_Key, _Tp,`  
`_Compare, _Allocator>>::_M_invalidate_if ( _Predicate __pred )`  
`[inherited]`

Invalidates all iterators `x` that reference  
this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be  
invoked with the normal iterators nested in the safe ones.

**5.248.2.10** `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular ( )` `[protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.248.2.11** `void __gnu_debug::Safe_sequence_base::_M_swap ( _Safe_sequence_base & __x )` `[protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.248.2.12** `void __gnu_debug::Safe_sequence<multimap<_Key,_Tp,_Compare,_Allocator>>::_M_transfer_from_if ( _Safe_sequence<multimap<_Key,_Tp,_Compare,_Allocator>> & __from, _Predicate __pred )` `[inherited]`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

### 5.248.3 Member Data Documentation

**5.248.3.1** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_const_iterators` `[inherited]`

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

**5.248.3.2** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_iterators` `[inherited]`

The list of mutable iterators that reference this container.

## 5.249 `std::__debug::multiset< _Key, _Compare, _Allocator >` Class Template Reference 1432

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

### 5.248.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

#### 5.250.1 Detailed Description

`template<typename _Key, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<_Key>> class std::__debug::set<_Key, _Compare, _Allocator>`

Class `std::set` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/set.h`.

## 5.250.2 Member Function Documentation

5.250.2.1 `void __gnu_debug::_Safe_sequence_base::_M_attach (`  
`_Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

5.250.2.2 `void __gnu_debug::_Safe_sequence_base::_M_attach_single`  
`( _Safe_iterator_base * __it, bool __constant ) throw ()`  
`[inherited]`

Likewise but not thread safe.

5.250.2.3 `void __gnu_debug::_Safe_sequence_base::_M_detach (`  
`_Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

5.250.2.4 `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( )`  
`[protected, inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base()`.

5.250.2.5 `void __gnu_debug::_Safe_sequence_base::_M_detach_single (`  
`_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

5.250.2.6 `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )`  
`[protected, inherited]`

Detach all singular iterators.

### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**5.250.2.7** `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_  
base::_M_get_mutex ( ) throw () [protected,  
inherited]`

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`,  
and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

**5.250.2.8** `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( )  
const [inline, inherited]`

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

**5.250.2.9** `void __gnu_debug::_Safe_sequence< set< _Key, _Compare,  
_Allocator > >::_M_invalidate_if ( _Predicate __pred )  
[inherited]`

Invalidates all iterators `x` that reference  
this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be  
invoked with the normal iterators nested in the safe ones.

**5.250.2.10** `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( )  
[protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate  
iterators that were invalidated before (but for some reason, such as an exception, need  
to become valid again).

**5.250.2.11** `void __gnu_debug::_Safe_sequence_base::_M_swap ( )  
_Safe_sequence_base & __x ) [protected, inherited]`

Swap this sequence with the given sequence. This  
operation also swaps ownership of the iterators, so that when the operation is complete  
all iterators that originally referenced one container now reference the other container.

**5.250.2.12 void \_\_gnu\_debug::Safe\_sequence< set< \_Key, \_Compare, \_Allocator > >::\_M\_transfer\_from\_if ( \_Safe\_sequence< set< \_Key, \_Compare, \_Allocator > > & \_\_from, \_Predicate \_\_pred ) [inherited]**

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

### 5.250.3 Member Data Documentation

**5.250.3.1 \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_const\_iterators [inherited]**

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_from_if()`.

**5.250.3.2 \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_iterators [inherited]**

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_from_if()`.

**5.250.3.3 unsigned int \_\_gnu\_debug::Safe\_sequence\_base::\_M\_version [mutable, inherited]**

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_from_if()`.

#### 5.251.1 Detailed Description

`template<typename _Key, typename _Tp, typename _Hash = std::hash<_Key>,  
typename _Pred = std::equal_to<_Key>, typename _Alloc = std::allocator<_  
Key>> class std::__debug::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc  
>`

Class `std::unordered_map` with safety/checking/debug instrumentation.

Definition at line 50 of file `debug/unordered_map`.

#### 5.251.2 Member Function Documentation

5.251.2.1 `void __gnu_debug::Safe_sequence_base::_M_attach (  
_Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

5.251.2.2 void \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_attach\_single  
( \_Safe\_iterator\_base \* \_\_it, bool \_\_constant ) throw ()  
[inherited]

Likewise but not thread safe.

5.251.2.3 void \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_detach (   
\_Safe\_iterator\_base \* \_\_it ) [inherited]

Detach an iterator from this sequence

5.251.2.4 void \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_detach\_all ( )  
[protected, inherited]

Detach all iterators, leaving them singular.

Referenced by \_\_gnu\_debug::\_Safe\_sequence\_base::~~\_Safe\_sequence\_base().

5.251.2.5 void \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_detach\_single (   
\_Safe\_iterator\_base \* \_\_it ) throw () [inherited]

Likewise but not thread safe.

5.251.2.6 void \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_detach\_singular ( )  
[protected, inherited]

Detach all singular iterators.

#### Postcondition

for all iterators *i* attached to this sequence, *i*->\_M\_version == \_M\_version.

5.251.2.7 \_\_gnu\_cxx::\_\_mutex& \_\_gnu\_debug::\_Safe\_sequence\_  
base::\_M\_get\_mutex ( ) throw () [protected,  
inherited]

For use in [\\_Safe\\_sequence](#).

Referenced by \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_invalidate\_if(),  
and \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if().

5.251.2.8 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_invalidate\_all ( )  
const [inline, inherited]

Invalidates all iterators.

Definition at line 234 of file safe\_base.h.

References \_\_gnu\_debug::Safe\_sequence\_base::\_M\_version.

5.251.2.9 void \_\_gnu\_debug::Safe\_sequence< unordered\_map<\_Key, \_Tp,  
\_Hash, \_Pred, \_Alloc > >::\_M\_invalidate\_if ( \_Predicate \_\_pred )  
[inherited]

Invalidates all iterators  $x$  that reference this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

5.251.2.10 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_revalidate\_singular ( )  
[protected, inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.251.2.11 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_swap (   
\_Safe\_sequence\_base & \_\_x ) [protected, inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.251.2.12 void \_\_gnu\_debug::Safe\_sequence< unordered\_map<\_Key, \_Tp,  
\_Hash, \_Pred, \_Alloc > >::\_M\_transfer\_from\_if ( \_Safe\_sequence<  
unordered\_map<\_Key, \_Tp, \_Hash, \_Pred, \_Alloc > > & \_\_from,  
\_Predicate \_\_pred ) [inherited]

Transfers all iterators  $x$  that reference `from` sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

### **5.251.3 Member Data Documentation**

#### **5.251.3.1 \_Safe\_iterator\_base\* \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_const\_iterators [inherited]**

The list of constant iterators that reference this container.

Definition at line 185 of file safe\_base.h.

Referenced by \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_invalidate\_if(), and \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if().

#### **5.251.3.2 \_Safe\_iterator\_base\* \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_iterators [inherited]**

The list of mutable iterators that reference this container.

Definition at line 182 of file safe\_base.h.

Referenced by \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_invalidate\_if(), and \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if().

#### **5.251.3.3 unsigned int \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_version [mutable, inherited]**

The container version number. This number may never be 0.

Definition at line 188 of file safe\_base.h.

Referenced by \_\_gnu\_debug::\_Safe\_sequence\_base::\_M\_invalidate\_all(), and \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if().

Alloc>`

Class `std::unordered_multimap` with safety/checking/debug instrumentation.

Definition at line 337 of file `debug/unordered_map`.

#### 5.252.2 Member Function Documentation

5.252.2.1 `void __gnu_debug::Safe_sequence_base::_M_attach (  
_Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

5.252.2.2 `void __gnu_debug::Safe_sequence_base::_M_attach_single  
( _Safe_iterator_base * __it, bool __constant ) throw ()  
[inherited]`

Likewise but not thread safe.

5.252.2.3 `void __gnu_debug::Safe_sequence_base::_M_detach (  
_Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

5.252.2.4 `void __gnu_debug::Safe_sequence_base::_M_detach_all ( )  
[protected, inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base()`.

5.252.2.5 `void __gnu_debug::_Safe_sequence_base::_M_detach_single (`  
`_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

5.252.2.6 `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )`  
`[protected, inherited]`

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.252.2.7 `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_-`  
`base::_M_get_mutex ( ) throw () [protected,`  
`inherited]`

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`,  
and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

5.252.2.8 `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( )`  
`const [inline, inherited]`

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

5.252.2.9 `void __gnu_debug::_Safe_sequence<unordered_multimap<_Key,`  
`_Tp, _Hash, _Pred, _Alloc>>::_M_invalidate_if ( _Predicate`  
`__pred ) [inherited]`

Invalidates all iterators `x` that reference  
this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be  
invoked with the normal iterators nested in the safe ones.

**5.252.2.10** void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_revalidate\_singular (  
 ) [protected, inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.252.2.11** void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_swap (  
 \_Safe\_sequence\_base & \_\_x ) [protected, inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.252.2.12** void \_\_gnu\_debug::Safe\_sequence< unordered\_multimap<  
 \_Key, \_Tp, \_Hash, \_Pred, \_Alloc > >::\_M\_transfer\_from\_if (  
 \_Safe\_sequence< unordered\_multimap< \_Key, \_Tp, \_Hash, \_Pred,  
 \_Alloc > > & \_\_from, \_Predicate \_\_pred ) [inherited]

Transfers all iterators *x* that reference *from* sequence, are not singular, and for which *pred*(*x*) returns true. *pred* will be invoked with the normal iterators nested in the safe ones.

### 5.252.3 Member Data Documentation

**5.252.3.1** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_  
const\_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 185 of file safe\_base.h.

Referenced by \_\_gnu\_debug::Safe\_sequence< \_Sequence >::\_M\_invalidate\_if(),  
and \_\_gnu\_debug::Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if().

**5.252.3.2** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_  
iterators [inherited]

The list of mutable iterators that reference this container.

### 5.253 `std::__debug::unordered_multiset<_Value, _Hash, _Pred, _Alloc>` Class Template Reference 1456

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

#### 5.252.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

#### 5.253.1 Detailed Description

template<typename \_Value, typename \_Hash = `std::hash`<\_Value>, typename  
\_Pred = `std::equal_to`<\_Value>, typename \_Alloc = `std::allocator`<\_Value>>  
class `std::__debug::unordered_multiset`< \_Value, \_Hash, \_Pred, \_Alloc >

Class `std::unordered_multiset` with safety/checking/debug instrumentation.

Definition at line 327 of file `debug/unordered_set`.

#### 5.253.2 Member Function Documentation

5.253.2.1 void `__gnu_debug::_Safe_sequence_base::_M_attach` (  
`_Safe_iterator_base` \* \_\_it, bool \_\_constant ) [*inherited*]

Attach an iterator to this sequence.

5.253.2.2 void `__gnu_debug::_Safe_sequence_base::_M_attach_single`  
( `_Safe_iterator_base` \* \_\_it, bool \_\_constant ) throw ()  
[*inherited*]

Likewise but not thread safe.

5.253.2.3 `void __gnu_debug::_Safe_sequence_base::_M_detach (`  
`_Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

5.253.2.4 `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( )`  
`[protected, inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~Safe_sequence_base()`.

5.253.2.5 `void __gnu_debug::_Safe_sequence_base::_M_detach_single (`  
`_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

5.253.2.6 `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )`  
`[protected, inherited]`

Detach all singular iterators.

#### Postcondition

for all iterators *i* attached to this sequence, `i->_M_version == _M_version`.

5.253.2.7 `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_-`  
`base::_M_get_mutex ( ) throw () [protected,`  
`inherited]`

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`,  
and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

5.253.2.8 `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( )`  
`const [inline, inherited]`

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

5.253.2.9 `void __gnu_debug::Safe_sequence< unordered_multiset< _Value, _Hash, _Pred, _Alloc > >::M_invalidate_if ( _Predicate __pred )`  
[*inherited*]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

5.253.2.10 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ( )` [*protected, inherited*]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.253.2.11 `void __gnu_debug::Safe_sequence_base::M_swap ( _Safe_sequence_base & __x )` [*protected, inherited*]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.253.2.12 `void __gnu_debug::Safe_sequence< unordered_multiset< _Value, _Hash, _Pred, _Alloc > >::M_transfer_from_if ( _Safe_sequence< unordered_multiset< _Value, _Hash, _Pred, _Alloc > > & __from, _Predicate __pred )` [*inherited*]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

### 5.253.3 Member Data Documentation

5.253.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [*inherited*]

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

## 5.254 `std::__debug::unordered_set<_Value, _Hash, _Pred, _Alloc>` Class Template Reference 1461

---

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.253.3.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.253.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.254.1 Detailed Description

```
template<typename _Value, typename _Hash = std::hash<_Value>, typename
_Pred = std::equal_to<_Value>, typename _Alloc = std::allocator<_Value>>
class std::__debug::unordered_set<_Value, _Hash, _Pred, _Alloc>
```

Class `std::unordered_set` with safety/checking/debug instrumentation.

Definition at line 50 of file `debug/unordered_set`.

### 5.254.2 Member Function Documentation

**5.254.2.1** `void __gnu_debug::Safe_sequence_base::_M_attach (`  
`_Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

**5.254.2.2** `void __gnu_debug::Safe_sequence_base::_M_attach_single`  
`( _Safe_iterator_base * __it, bool __constant ) throw ()`  
`[inherited]`

Likewise but not thread safe.

**5.254.2.3** `void __gnu_debug::Safe_sequence_base::_M_detach (`  
`_Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

5.254.2.4 `void __gnu_debug::Safe_sequence_base::M_detach_all ( )`  
`[protected, inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base()`.

5.254.2.5 `void __gnu_debug::Safe_sequence_base::M_detach_single (`  
`_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

5.254.2.6 `void __gnu_debug::Safe_sequence_base::M_detach_singular ( )`  
`[protected, inherited]`

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.254.2.7 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_-`  
`base::M_get_mutex ( ) throw () [protected,`  
`inherited]`

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_invalidate_if()`,  
 and `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

5.254.2.8 `void __gnu_debug::Safe_sequence_base::M_invalidate_all ( )`  
`const [inline, inherited]`

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::_M_version`.

5.254.2.9 `void __gnu_debug::Safe_sequence<unordered_set<_Value,`  
`_Hash, _Pred, _Alloc>::_M_invalidate_if ( _Predicate __pred )`  
`[inherited]`

Invalidates all iterators `x` that reference  
 this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be

invoked with the normal iterators nested in the safe ones.

**5.254.2.10** void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_revalidate\_singular ( ) [protected, inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.254.2.11** void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_swap ( \_Safe\_sequence\_base & \_\_x ) [protected, inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.254.2.12** void \_\_gnu\_debug::Safe\_sequence< unordered\_set< \_Value, \_Hash, \_Pred, \_Alloc > >::\_M\_transfer\_from\_if ( \_Safe\_sequence< unordered\_set< \_Value, \_Hash, \_Pred, \_Alloc > > & \_\_from, \_Predicate \_\_pred ) [inherited]

Transfers all iterators *x* that reference *from* sequence, are not singular, and for which *pred(x)* returns *true*. *pred* will be invoked with the normal iterators nested in the safe ones.

### 5.254.3 Member Data Documentation

**5.254.3.1** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_const\_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 185 of file *safe\_base.h*.

Referenced by \_\_gnu\_debug::Safe\_sequence< \_Sequence >::\_M\_invalidate\_if(), and \_\_gnu\_debug::Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if().

**5.254.3.2** \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::\_M\_iterators [inherited]

## **5.255 `std::__debug::vector< _Tp, _Allocator >` Class Template Reference 1467**

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

### **5.254.3.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]**

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

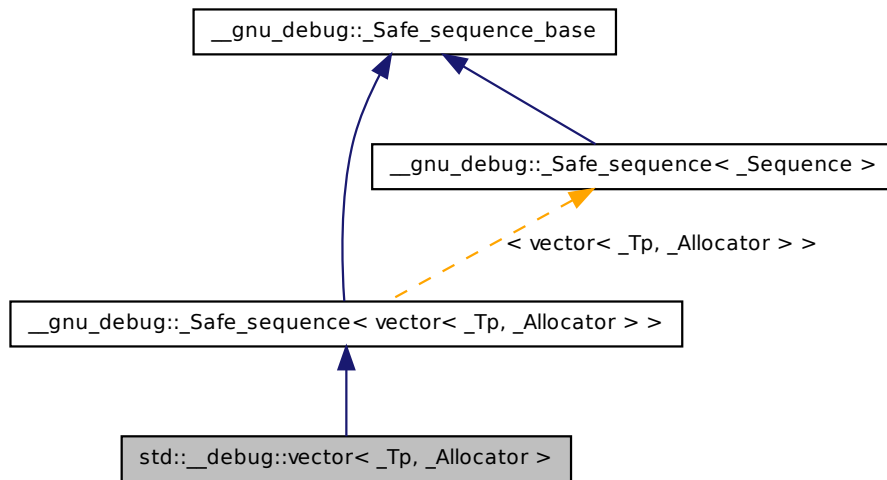

The documentation for this class was generated from the following file:

## 5.255 `std::__debug::vector<_Tp, _Allocator>` > Class Template Reference 1471

### 5.255.1 Detailed Description

`template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class std::__debug::vector<_Tp, _Allocator>`

Class `std::vector` with safety/checking/debug instrumentation.

Definition at line 45 of file `debug/vector`.

### 5.255.2 Constructor & Destructor Documentation

**5.255.2.1** `template<typename _Tp, typename _Allocator = std::allocator<_Tp>> std::__debug::vector<_Tp, _Allocator>::vector ( const _Base & __x ) [inline]`

Construction from a release-mode vector.

Definition at line 108 of file `debug/vector`.

### 5.255.3 Member Function Documentation

**5.255.3.1** `void __gnu_debug::_Safe_sequence_base::_M_attach ( _Safe_iterator_base * __it, bool __constant ) [inherited]`

Attach an iterator to this sequence.

**5.255.3.2** `void __gnu_debug::_Safe_sequence_base::_M_attach_single ( _Safe_iterator_base * __it, bool __constant ) throw () [inherited]`

Likewise but not thread safe.

**5.255.3.3** `void __gnu_debug::_Safe_sequence_base::_M_detach ( _Safe_iterator_base * __it ) [inherited]`

Detach an iterator from this sequence

**5.255.3.4** `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected, inherited]`

Detach all iterators, leaving them singular.

## **5.255 `std::__debug::vector<_Tp, _Allocator>` Class Template Reference 1472**

Referenced by `__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base()`.

**5.255.3.5** `void __gnu_debug::_Safe_sequence_base::_M_detach_single (   
_Safe_iterator_base * __it ) throw () [inherited]`

Likewise but not thread safe.

**5.255.3.6** `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )   
[protected, inherited]`

Detach all singular iterators.

### **Postcondition**

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**5.255.3.7** `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_  
base::_M_get_mutex ( ) throw () [protected,  
inherited]`

For use in [\\_Safe\\_sequence](#).

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`,  
and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

**5.255.3.8** `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( )   
const [inline, inherited]`

Invalidates all iterators.

Definition at line 234 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

**5.255.3.9** `void __gnu_debug::_Safe_sequence<vector<_Tp, _Allocator>  
>::_M_invalidate_if ( _Predicate __pred ) [inherited]`

Invalidates all iterators `x` that reference  
this sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be  
invoked with the normal iterators nested in the safe ones.

## 5.255 `std::__debug::vector<_Tp, _Allocator>` > Class Template Reference 1473

**5.255.3.10** `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular ( ) [protected, inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.255.3.11** `void __gnu_debug::Safe_sequence_base::_M_swap ( _Safe_sequence_base & __x ) [protected, inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.255.3.12** `void __gnu_debug::Safe_sequence< vector<_Tp, _Allocator> >::_M_transfer_from_if ( _Safe_sequence< vector<_Tp, _Allocator> > & __from, _Predicate __pred ) [inherited]`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `pred(x)` returns `true`. `pred` will be invoked with the normal iterators nested in the safe ones.

### 5.255.4 Member Data Documentation

**5.255.4.1** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_const_iterators [inherited]`

The list of constant iterators that reference this container.

Definition at line 185 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::_M_invalidate_if()`, and `__gnu_debug::Safe_sequence< _Sequence >::_M_transfer_from_if()`.

**5.255.4.2** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_iterators [inherited]`

The list of mutable iterators that reference this container.

Definition at line 182 of file `safe_base.h`.

## 5.256 `std::__declval_protector<_Tp>` Struct Template Reference 1474

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.255.4.3 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable, inherited]

The container version number. This number may never be 0.

Definition at line 188 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

The documentation for this class was generated from the following file:

- [debug/vector](#)

## 5.256 `std::__declval_protector<_Tp>` Struct Template Reference

`declval`

### Static Public Member Functions

- static [add\\_rvalue\\_reference](#)<\_Tp>::type `__delegate()`

### Static Public Attributes

- static const bool `__stop`

### 5.256.1 Detailed Description

`template<typename _Tp> struct std::__declval_protector<_Tp>`

`declval`

Definition at line 1124 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.257 std::\_\_detail::\_List\_node\_base Struct Reference

Common part of a node in the list.

Inheritance diagram for std::\_\_detail::\_List\_node\_base:

### Public Member Functions

- void `_M_hook` (`_List_node_base *const __position`) throw ()
- void `_M_reverse` () throw ()
- void `_M_transfer` (`_List_node_base *const __first`, `_List_node_base *const __last`) throw ()
- void `_M_unhook` () throw ()

### Static Public Member Functions

## 5.258 `std::__exception_ptr::exception_ptr` Class Reference

An opaque pointer to an arbitrary exception.

### Public Member Functions

- **exception\_ptr** (const [exception\\_ptr](#) &) throw ()
- **exception\_ptr** ([exception\\_ptr](#) &&\_\_o) throw ()
- **exception\_ptr** (nullptr\_t) throw ()
- class [type\\_info](#) \* **\_\_cxa\_exception\_type** () const `__attribute__((__pure__))` throw ()
- **operator bool** () const
- **exception\_ptr** & **operator=** (const [exception\\_ptr](#) &) throw ()
- **exception\_ptr** & **operator=** ([exception\\_ptr](#) &&\_\_o) throw ()
- void **swap** ([exception\\_ptr](#) &) throw ()

### Friends

- bool **operator==** (const [exception\\_ptr](#) &, const [exception\\_ptr](#) &) `__attribute__((__pure__))` throw ()
- [exception\\_ptr](#) **std::current\_exception** () throw ()
- void **std::rethrow\_exception** ([exception\\_ptr](#))

#### 5.258.1 Detailed Description

An opaque pointer to an arbitrary exception.

Definition at line 73 of file `exception_ptr.h`.

The documentation for this class was generated from the following file:

- [exception\\_ptr.h](#)

## 5.259 `std::__future_base` Struct Reference

Base class and enclosing scope.

Inheritance diagram for std::\_\_future\_base:

## Classes

- struct [\\_Ptr](#)  
*A [unique\\_ptr](#) based on the instantiating type.*
- struct [\\_Result](#)  
*Result.*
- struct [\\_Result<\\_Res &>](#)  
*Partial specialization for reference types.*
- struct [\\_Result<void>](#)  
*Explicit specialization for void.*
- struct [\\_Result\\_alloc](#)  
*Result\_alloc.*
- struct [\\_Result\\_base](#)  
*Base class for results.*
- class [\\_State\\_base](#)  
*Base class for state between a promise and one or more associated futures.*

## Static Public Member Functions

- template<typename \_Res, typename \_Allocator>  
static [\\_Ptr<\\_Result\\_alloc<\\_Res, \\_Allocator>>](#)::type [\\_S\\_allocate\\_result](#)  
(const \_Allocator &\_\_a)

### 5.259.1 Detailed Description

Base class and enclosing scope.

Definition at line 156 of file `future`.

The documentation for this struct was generated from the following file:

- [future](#)

## 5.260 `std::__future_base::_Ptr<_Res>` Struct Template Reference

A [unique\\_ptr](#) based on the instantiating type.

Inheritance diagram for `std::__future_base::_Ptr<_Res>`:

### Public Types

- typedef [unique\\_ptr](#)<`_Res`, `_Result_base::_Deleter`> **type**

### 5.260.1 Detailed Description

`template<typename _Res> struct std::__future_base::_Ptr<_Res>`

A [unique\\_ptr](#) based on the instantiating type.

Definition at line 231 of file `future`.

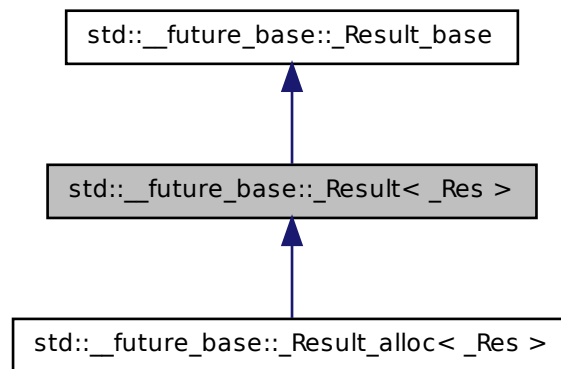

The documentation for this struct was generated from the following file:

- [future](#)

## 5.261 `std::__future_base::_Result< _Res >` Struct Template Reference

Result.

Inheritance diagram for `std::__future_base::_Result< _Res >`:

### Public Member Functions

- `void _M_set (const _Res &__res)`
- `void _M_set (_Res &&__res)`
- `_Res & _M_value ()`

### Public Attributes

- `exception_ptr _M_error`

#### 5.261.1 Detailed Description

`template<typename _Res> struct std::__future_base::_Result< _Res >`

Result.

Definition at line 181 of file `future`.

## 5.262 `std::__future_base::_Result< _Res & >` Struct Template Reference 1480

The documentation for this struct was generated from the following file:

- [future](#)

### 5.262 `std::__future_base::_Result< _Res & >` Struct Template Reference

Partial specialization for reference types.

Inheritance diagram for `std::__future_base::_Result< _Res & >`:

#### Public Member Functions

- `_Res & _M_get ()`
- `void _M_set (_Res &__res)`

#### Public Attributes

- `exception_ptr _M_error`

#### 5.262.1 Detailed Description

**template<typename \_Res> struct `std::__future_base::_Result< _Res & >`**

Partial specialization for reference types.

Definition at line 469 of file `future`.

The documentation for this struct was generated from the following file:

- [future](#)

### 5.263 `std::__future_base::_Result< void >` Struct Template Reference

Explicit specialization for void.

Inheritance diagram for `std::__future_base::_Result< void >`:

#### Public Attributes

- `exception_ptr _M_error`

#### 5.263.1 Detailed Description

**template<> struct `std::__future_base::_Result< void >`**

Explicit specialization for void.

Definition at line 485 of file `future`.

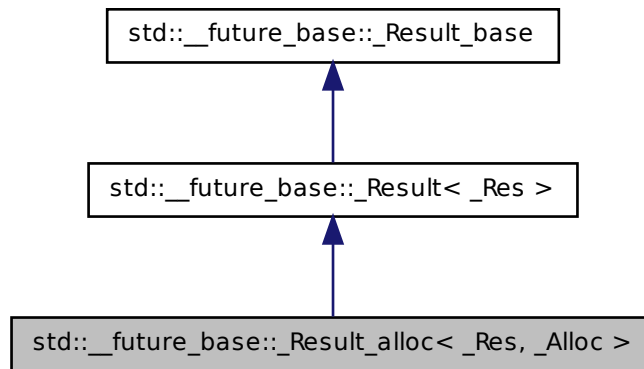

The documentation for this struct was generated from the following file:

- [future](#)

### 5.264 `std::__future_base::_Result_alloc< _Res, _Alloc >` Struct Template Reference

`Result_alloc`.

Inheritance diagram for `std::__future_base::__Result_alloc<_Res, _Alloc>`:

### Public Types

- `typedef _Alloc::template rebind< \_Result\_alloc>::other __allocator_type`

### Public Member Functions

- `_Result_alloc (const _Alloc &__a)`
- `void _M_set (_Res &&__res)`
- `void _M_set (const _Res &__res)`
- `_Res & _M_value ()`

### Public Attributes

- `exception_ptr _M_error`

#### 5.264.1 Detailed Description

`template<typename _Res, typename _Alloc> struct std::__future_base::__Result_alloc<_Res, _Alloc>`

`Result_alloc.`

Definition at line 238 of file `future`.

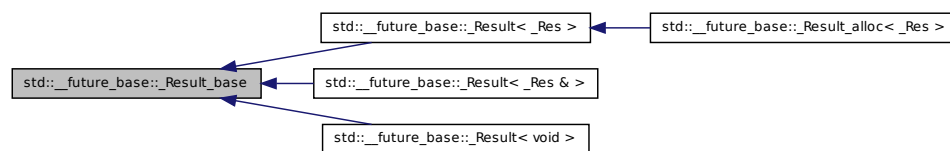

The documentation for this struct was generated from the following file:

- [future](#)

## 5.265 `std::__future_base::_Result_base` Struct Reference

Base class for results.

Inheritance diagram for `std::__future_base::_Result_base`:

### Public Member Functions

- `_Result_base` (const [\\_Result\\_base](#) &)
- virtual void `_M_destroy` ()=0
- [\\_Result\\_base](#) & `operator=` (const [\\_Result\\_base](#) &)

### Public Attributes

- exception\_ptr `_M_error`

#### 5.265.1 Detailed Description

Base class for results.

Definition at line 159 of file `future`.

The documentation for this struct was generated from the following file:

- [future](#)

## 5.266 `std::__future_base::__State_base` Class Reference

Base class for state between a promise and one or more associated futures.

Inherited by `std::__future_base::__Async_state< _Res >`, `std::__future_base::__Deferred_state< _Res >`, and `std::__future_base::__Task_state< _Res(_Args...)>`.

### Public Member Functions

- `_State_base` (const `_State_base` &)
- `void _M_break_promise` (`_Ptr_type` \_\_res)
- `void _M_set_result` (`function< _Ptr_type()>` \_\_res, `bool` \_\_ignore\_failure=false)
- `void _M_set_retrieved_flag` ()
- `_State_base` & `operator=` (const `_State_base` &)
- `_Result_base` & `wait` ()
- `template<typename _Rep, typename _Period >`  
`bool wait_for` (const `chrono::duration< _Rep, _Period >` &\_\_rel)
- `template<typename _Clock, typename _Duration >`  
`bool wait_until` (const `chrono::time_point< _Clock, _Duration >` &\_\_abs)

### Static Public Member Functions

- `template<typename _Res, typename _Arg >`  
`static _Setter< _Res, _Arg && >` `__setter` (`promise< _Res >` \*\_\_prom, `_Arg` &&\_\_arg)
- `template<typename _Res >`  
`static _Setter< _Res, __exception_ptr_tag >` `__setter` (`exception_ptr` &\_\_ex, `promise< _Res >` \*\_\_prom)
- `static _Setter< void, void >` `__setter` (`promise< void >` \*\_\_prom)
- `template<typename _Tp >`  
`static bool _S_check` (const `shared_ptr< _Tp >` &\_\_p)

#### 5.266.1 Detailed Description

Base class for state between a promise and one or more associated futures.

Definition at line 278 of file `future`.

The documentation for this class was generated from the following file:

- `future`

## 5.267 `std::__has_iterator_category_helper< _Tp >` Class Template Reference 1485

### 5.267 `std::__has_iterator_category_helper< _Tp >` Class Template Reference

Traits class for iterators.

Inherits `std::__sfn_`.

#### Static Public Attributes

- static const bool `value`

#### Private Types

- typedef char `__one`

#### 5.267.1 Detailed Description

`template<typename _Tp> class std::__has_iterator_category_helper< _Tp >`

Traits class for iterators. This class does nothing but define nested typedefs. The general version simply *forwards* the nested typedefs from the Iterator argument. Specialized versions for pointers and pointers-to-const provide tighter, more correct semantics.

Definition at line 143 of file `stl_iterator_base_types.h`.

The documentation for this class was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

### 5.268 `std::__is_location_invariant< _Tp >` Struct Template Reference

Inheritance diagram for `std::__is_location_invariant< _Tp >`:

#### Public Types

- typedef [integral\\_constant](#)< bool, `__v` > `type`
- typedef bool `value_type`

## 5.269 `std::__is_member_pointer_helper<_Tp>` Struct Template Reference 1486

### Public Member Functions

- `constexpr operator value_type()`

### Static Public Attributes

- `static constexpr bool value`

#### 5.268.1 Detailed Description

`template<typename _Tp> struct std::__is_location_invariant<_Tp>`

Trait identifying "location-invariant" types, meaning that the address of the object (or any of its members) will not escape. Also implies a trivial copy constructor and assignment operator.

Definition at line 1488 of file `functional`.

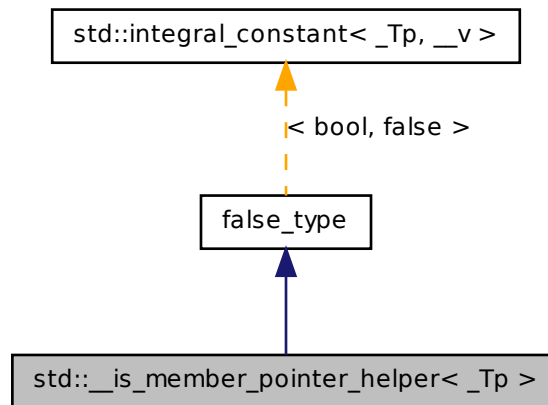

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.269 `std::__is_member_pointer_helper<_Tp>` Struct Template Reference

`is_member_pointer`

Inheritance diagram for `std::__is_member_pointer_helper<_Tp>`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr `bool` **value**

#### 5.269.1 Detailed Description

**template<typename \_Tp> struct `std::__is_member_pointer_helper<_Tp>`**

`is_member_pointer`

Definition at line 312 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.270 `std::__numeric_limits_base` Struct Reference

Part of [std::numeric\\_limits](#).

Inheritance diagram for `std::__numeric_limits_base`:

### Static Public Attributes

- static constexpr int [digits](#)
- static constexpr int [digits10](#)
- static constexpr [float\\_denorm\\_style](#) [has\\_denorm](#)
- static constexpr bool [has\\_denorm\\_loss](#)
- static constexpr bool [has\\_infinity](#)
- static constexpr bool [has\\_quiet\\_NaN](#)
- static constexpr bool [has\\_signaling\\_NaN](#)
- static constexpr bool [is\\_bounded](#)
- static constexpr bool [is\\_exact](#)
- static constexpr bool [is\\_iec559](#)
- static constexpr bool [is\\_integer](#)
- static constexpr bool [is\\_modulo](#)
- static constexpr bool [is\\_signed](#)
- static constexpr bool [is\\_specialized](#)
- static constexpr int [max\\_digits10](#)
- static constexpr int [max\\_exponent](#)

- static constexpr int [max\\_exponent10](#)
- static constexpr int [min\\_exponent](#)
- static constexpr int [min\\_exponent10](#)
- static constexpr int [radix](#)
- static constexpr [float\\_round\\_style](#) [round\\_style](#)
- static constexpr bool [tinyness\\_before](#)
- static constexpr bool [traps](#)

### 5.270.1 Detailed Description

Part of [std::numeric\\_limits](#). The `static const` members are usable as integral constant expressions.

#### Note

This is a separate class for purposes of efficiency; you should only access these members as part of an instantiation of the [std::numeric\\_limits](#) class.

Definition at line 192 of file `limits`.

### 5.270.2 Member Data Documentation

#### 5.270.2.1 `constexpr int std::__numeric_limits_base::digits` `[static]`

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

Definition at line 201 of file `limits`.

#### 5.270.2.2 `constexpr int std::__numeric_limits_base::digits10` `[static]`

The number of base 10 digits that can be represented without change.

Definition at line 204 of file `limits`.

#### 5.270.2.3 `constexpr float_denorm_style std::__numeric_limits_base::has_denorm` `[static]`

See [std::float\\_denorm\\_style](#) for more information.

Definition at line 258 of file `limits`.

**5.270.2.4 constexpr bool std::\_\_numeric\_limits\_base::has\_denorm\_loss  
[static]**

*True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result. [18.2.1.2]/42*

Definition at line 262 of file limits.

**5.270.2.5 constexpr bool std::\_\_numeric\_limits\_base::has\_infinity [static]**

True if the type has a representation for positive infinity.

Definition at line 247 of file limits.

**5.270.2.6 constexpr bool std::\_\_numeric\_limits\_base::has\_quiet\_NaN  
[static]**

True if the type has a representation for a quiet (non-signaling) *Not a Number*.

Definition at line 251 of file limits.

**5.270.2.7 constexpr bool std::\_\_numeric\_limits\_base::has\_signaling\_NaN  
[static]**

True if the type has a representation for a signaling *Not a Number*.

Definition at line 255 of file limits.

**5.270.2.8 constexpr bool std::\_\_numeric\_limits\_base::is\_bounded [static]**

*True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types. [18.2.1.2]/54*

Definition at line 271 of file limits.

**5.270.2.9 constexpr bool std::\_\_numeric\_limits\_base::is\_exact [static]**

True if the type uses an exact representation. *All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer. [18.2.1.2]/15*

Definition at line 223 of file limits.

**5.270.2.10 constexpr bool std::\_\_numeric\_limits\_base::is\_iec559 [static]**

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

Definition at line 266 of file limits.

**5.270.2.11 constexpr bool std::\_\_numeric\_limits\_base::is\_integer [static]**

True if the type is integer. Is this supposed to be *if the type is integral?*

Definition at line 217 of file limits.

**5.270.2.12 constexpr bool std::\_\_numeric\_limits\_base::is\_modulo [static]**

True if the type is *modulo*, that is, if it is possible to add two positive numbers and have a result that wraps around to a third number that is less. Typically false for floating types, true for unsigned integers, and true for signed integers.

Definition at line 277 of file limits.

**5.270.2.13 constexpr bool std::\_\_numeric\_limits\_base::is\_signed [static]**

True if the type is signed.

Definition at line 213 of file limits.

**5.270.2.14 constexpr bool std::\_\_numeric\_limits\_base::is\_specialized [static]**

This will be true for all fundamental types (which have specializations), and false for everything else.

Definition at line 196 of file limits.

**5.270.2.15 constexpr int std::\_\_numeric\_limits\_base::max\_digits10 [static]**

The number of base 10 digits required to ensure that values which differ are always differentiated.

Definition at line 209 of file limits.

**5.270.2.16 `constexpr int std::__numeric_limits_base::max_exponent`  
`[static]`**

The maximum positive integer such that `radix` raised to the power of (one less than that integer) is a representable finite floating point number.

Definition at line 240 of file `limits`.

**5.270.2.17 `constexpr int std::__numeric_limits_base::max_exponent10`  
`[static]`**

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

Definition at line 244 of file `limits`.

**5.270.2.18 `constexpr int std::__numeric_limits_base::min_exponent`  
`[static]`**

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

Definition at line 231 of file `limits`.

**5.270.2.19 `constexpr int std::__numeric_limits_base::min_exponent10`  
`[static]`**

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

Definition at line 235 of file `limits`.

**5.270.2.20 `constexpr int std::__numeric_limits_base::radix` `[static]`**

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

Definition at line 227 of file `limits`.

**5.270.2.21 `constexpr float_round_style std::__numeric_limits_base::round_style` `[static]`**

See [std::float\\_round\\_style](#) for more information. This is only meaningful for floating types; integer types will all be `round_toward_zero`.

## 5.271 `std::__parallel::_CRandNumber< _MustBeInt >` Struct Template Reference 1493

---

Definition at line 288 of file `limits`.

### 5.270.2.22 `constexpr bool std::__numeric_limits_base::tinyness_before` `[static]`

True if tininess is detected before rounding. (see IEC 559)

Definition at line 283 of file `limits`.

### 5.270.2.23 `constexpr bool std::__numeric_limits_base::traps` `[static]`

True if trapping is implemented for this type.

Definition at line 280 of file `limits`.

The documentation for this struct was generated from the following file:

- [limits](#)

## 5.271 `std::__parallel::_CRandNumber< _MustBeInt >` Struct Template Reference

Functor wrapper for `std::rand()`.

### Public Member Functions

- `int operator() (int __limit)`

### 5.271.1 Detailed Description

`template<typename _MustBeInt = int> struct std::__parallel::_CRandNumber< _MustBeInt >`

Functor wrapper for `std::rand()`.

Definition at line 1656 of file `algo.h`.

The documentation for this struct was generated from the following file:

- [algo.h](#)

## 5.272 `std::__profile::bitset< _Nb >` Class Template Reference

Class [std::bitset](#) wrapper with performance instrumentation.

Inherits `bitset<_Nb>`.

### Public Member Functions

- constexpr **bitset** (unsigned long long \_\_val)
- template<class \_CharT, class \_Traits, class \_Alloc >  
**bitset** (const [std::basic\\_string](#)< \_CharT, \_Traits, \_Alloc > &\_\_str, typename [std::basic\\_string](#)< \_CharT, \_Traits, \_Alloc >::size\_type \_\_pos, typename [std::basic\\_string](#)< \_CharT, \_Traits, \_Alloc >::size\_type \_\_n, \_CharT \_\_zero, \_CharT \_\_one=\_CharT('1'))

### 5.273.1 Detailed Description

`template<typename _Tp, typename _Allocator = std::allocator<_Tp>> class std::\_\_profile::deque<_Tp, _Allocator>`

Class [std::deque](#) wrapper with performance instrumentation.

Definition at line 40 of file `profile/deque`.

The documentation for this class was generated from the following file:

- [profile/deque](#)

## 5.274 `std::__profile::forward_list<_Tp, _Alloc>` Class Template Reference

Class `std::forward_list` wrapper with performance instrumentation.

Inherits `forward_list<_Tp, _Alloc>`.

### Public Types

- typedef `_Base::size_type` **size\_type**

### Public Member Functions

- **forward\_list** (const `_Alloc` &\_\_al=\_Alloc())
- **forward\_list** (const `forward_list` &\_\_list, const `_Alloc` &\_\_al)
- **forward\_list** (size\_type \_\_n)
- **forward\_list** (`forward_list` &&\_\_list)

**Protected Attributes**

- \_Deque\_impl **\_M\_impl**

**5.288.1 Detailed Description**

**template<typename \_Tp, typename \_Alloc> class std::\_Deque\_base< \_Tp, \_Alloc >**

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.

Nothing in this class ever constructs or destroys an actual Tp element. (Deque handles that itself.) Only/All memory management is performed here.

Definition at line 438 of file stl\_deque.h.

**5.288.2 Member Function Documentation**

**5.288.2.1** **template<typename \_Tp , typename \_Alloc > void**  
**std::\_Deque\_base< \_Tp, \_Alloc >::\_M\_initialize\_map ( size\_t**  
**\_\_num\_elements ) [protected]**

## 5.289 `std::_Deque_iterator< _Tp, _Ref, _Ptr >` Struct Template Reference 1523

Layout storage.

### Parameters

*num\_elements* The count of T's for which to allocate space at first.

### Returns

Nothing.

The initial underlying memory layout is a bit complicated...

Definition at line 574 of file `stl_deque.h`.

References `std::max()`.

Referenced by `std::deque< _Tp, _Alloc >::_M_range_initialize()`.

The documentation for this class was generated from the following file:

- [stl\\_deque.h](#)

## 5.289 `std::_Deque_iterator< _Tp, _Ref, _Ptr >` Struct Template Reference

A `deque::iterator`.

Inheritance diagram for `std::_Deque_iterator< _Tp, _Ref, _Ptr >`:

## 5.290 `std::_Derives_from_binary_function<_Tp>` Struct Template Reference 1525

### 5.289.1 Detailed Description

`template<typename _Tp, typename _Ref, typename _Ptr> struct std::_Deque_iterator<_Tp, _Ref, _Ptr>`

A `deque::iterator`. Quite a bit of intelligence here. Much of the functionality of `deque` is actually passed off to this class. A `deque` holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.

All the functions are op overloads except for `_M_set_node`.

Definition at line 105 of file `stl_deque.h`.

### 5.289.2 Member Function Documentation

**5.289.2.1** `template<typename _Tp, typename _Ref, typename _Ptr>`  
`void std::_Deque_iterator<_Tp, _Ref, _Ptr>::_M_set_node (`  
`_Map_pointer __new_node ) [inline]`

Prepares to traverse `new_node`. Sets everything except `_M_cur`, which should therefore be set by the caller immediately afterwards, based on `_M_first` and `_M_last`.

Definition at line 233 of file `stl_deque.h`.

The documentation for this struct was generated from the following file:

- [stl\\_deque.h](#)

## 5.290 `std::_Derives_from_binary_function<_Tp>` Struct Template Reference

Determines if the type `_Tp` derives from [binary\\_function](#).

Inherits `std::__sfinae_types`.

### Public Types

#### Protected Attributes

- `_Fwd_list_impl _M_impl`

#### 5.294.1 Detailed Description

`template<typename _Tp, typename _Alloc> struct std::_Fwd_list_base<_Tp, _Alloc>`

Base class for `forward_list`.

Definition at line 273 of file `forward_list.h`.

The documentation for this struct was generated from the following files:

- `forward_list.h`
- `forward_list.tcc`

#### 5.295 `std::_Fwd_list_const_iterator<_Tp>` Struct Template Reference

A `forward_list::const_iterator`.

#### Public Types

- `typedef const _Fwd_list_node<_Tp> _Node`
- `typedef _Fwd_list_const_iterator<_Tp> _Self`
- `typedef ptrdiff_t difference_type`
- `typedef _Fwd_list_iterator<_Tp> iterator`
- `typedef std::forward_iterator_tag iterator_category`
- `typedef const _Tp * pointer`
- `typedef const _Tp & reference`
- `typedef _Tp value_type`

**Public Member Functions**

- `_Fwd_list_const_iterator` (const `_Fwd_list_node_base` \*\_\_n)
- `_Fwd_list_const_iterator` (const `iterator` &\_\_iter)
- `_Self_M_next` () const

- `bool operator==` (const `_Self` &\_\_x) const

### Public Attributes

- `_Fwd_list_node_base * _M_node`

#### 5.296.1 Detailed Description

`template<typename _Tp> struct std::_Fwd_list_iterator<_Tp>`

A `forward_list::iterator`. All the functions are op overloads.

Definition at line 117 of file `forward_list.h`.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

### 5.297 `std::_Fwd_list_node<_Tp>` Struct Template Reference

A helper node class for `forward_list`. This is just a linked list with a data value in each node. There is a sorting utility method.

Inheritance diagram for `std::_Fwd_list_node< _Tp >`:

### Public Member Functions

- `template<typename... _Args>`  
`_Fwd_list_node` (`_Args &&...__args`)
- `void _M_reverse_after ()`
- `_Fwd_list_node_base * _M_transfer_after` (`_Fwd_list_node_base *__begin`, `_Fwd_list_node_base *__end`)
- `_Fwd_list_node_base * _M_transfer_after` (`_Fwd_list_node_base *__begin`)

### Public Attributes

- `_Fwd_list_node_base * _M_next`
- `_Tp _M_value`

#### 5.297.1 Detailed Description

**template<typename \_Tp> struct `std::_Fwd_list_node< _Tp >`**

A helper node class for `forward_list`. This is just a linked list with a data value in each node. There is a sorting utility method.

Definition at line 100 of file `forward_list.h`.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

## 5.298 `std::_Fwd_list_node_base` Struct Reference

A helper basic node class for `forward_list`. This is just a linked list with nothing inside it. There are purely list shuffling utility methods here.

Inheritance diagram for `std::_Fwd_list_node_base`:

### Public Member Functions

- `void _M_reverse_after()`
- `_Fwd_list_node_base * _M_transfer_after(_Fwd_list_node_base * __begin, _Fwd_list_node_base * __end)`
- `_Fwd_list_node_base * _M_transfer_after(_Fwd_list_node_base * __begin)`

### Public Attributes

- `_Fwd_list_node_base * _M_next`

#### 5.298.1 Detailed Description

A helper basic node class for `forward_list`. This is just a linked list with nothing inside it. There are purely list shuffling utility methods here.

Definition at line 47 of file `forward_list.h`.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

## 5.299 `std::_Index_tuple< _Indexes >` Struct Template Reference

### Public Types

- typedef `_Index_tuple< _Indexes..., sizeof...(_Indexes)>` `__next`

### 5.299.1 Detailed Description

`template<int... _Indexes> struct std::_Index_tuple< _Indexes >`

Stores a tuple of indices. Used by `bind()` to extract the elements in a tuple.

Definition at line 764 of file `tuple`.

The documentation for this struct was generated from the following file:

- `tuple`

## 5.300 `std::_List_base< _Tp, _Alloc >` Class Template Reference

See `bits/stl_deque.h`'s `_Deque_base` for an explanation.

Inheritance diagram for `std::_List_base< _Tp, _Alloc >`:

### Public Types

- typedef `_Alloc` `allocator_type`

**Public Member Functions**

- `_List_base` (const allocator\_type &\_\_a)
- `_List_base` ([\\_List\\_base](#) &&\_\_x)

- \_List\_node\_base \* **\_M\_prev**

#### 5.303.1 Detailed Description

**template<typename \_Tp> struct std::\_List\_node< \_Tp >**

An actual node in the list.

Definition at line 105 of file stl\_list.h.

### 5.303.2 Member Data Documentation

#### 5.303.2.1 `template<typename _Tp> _Tp std::_List_node<_Tp>::_M_data`

< User's data.

Definition at line 108 of file `stl_list.h`.

The documentation for this struct was generated from the following file:

- [stl\\_list.h](#)

### 5.304 `std::_Maybe_get_result_type<_Has_result_type, _Functor> Struct` Template Reference

If we have found a `result_type`, extract it.

Inheritance diagram for `std::_Maybe_get_result_type<_Has_result_type, _Functor>`:

#### 5.304.1 Detailed Description

`template<bool _Has_result_type, typename _Functor> struct std::_Maybe_get_result_type<_Has_result_type, _Functor>`

If we have found a `result_type`, extract it.

Definition at line 69 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.305 `std::_Maybe_unary_or_binary_function<_Res, _ArgTypes> Struct` Template Reference

Inheritance diagram for `std::_Maybe_unary_or_binary_function<_Res, _ArgTypes>`:

#### 5.305.1 Detailed Description

`template<typename _Res, typename... _ArgTypes> struct std::_Maybe_unary_or_binary_function<_Res, _ArgTypes>`

Derives from `unary_function` or `binary_function`, or perhaps nothing, depending on the number of arguments provided. The primary template is the basis case, which derives nothing.

Definition at line 502 of file `functional`.

The documentation for this struct was generated from the following file:

- `functional`

### 5.306 `std::_Maybe_unary_or_binary_function<_Res, _T1>` Struct Template Reference

Derives from `unary_function`, as appropriate.

Inheritance diagram for `std::_Maybe_unary_or_binary_function<_Res, _T1>`:

## Public Types

- typedef `_T1` [argument\\_type](#)
- typedef `_Res` [result\\_type](#)

### 5.306.1 Detailed Description

`template<typename _Res, typename _T1> struct std::_Maybe_unary_or_binary_function<_Res, _T1>`

Derives from [unary\\_function](#), as appropriate.

Definition at line 506 of file `functional`.

### 5.306.2 Member Typedef Documentation

**5.306.2.1** `typedef _T1 std::unary_function<_T1, _Res>::argument_type`  
[[inherited](#)]

`argument_type` is the type of the argument

Definition at line 105 of file `std_function.h`.

#### 5.306.2.2 `typedef _Res std::unary_function<_T1, _Res>::result_type` [`inherited`]

`result_type` is the return type

Definition at line 108 of file `std_function.h`.

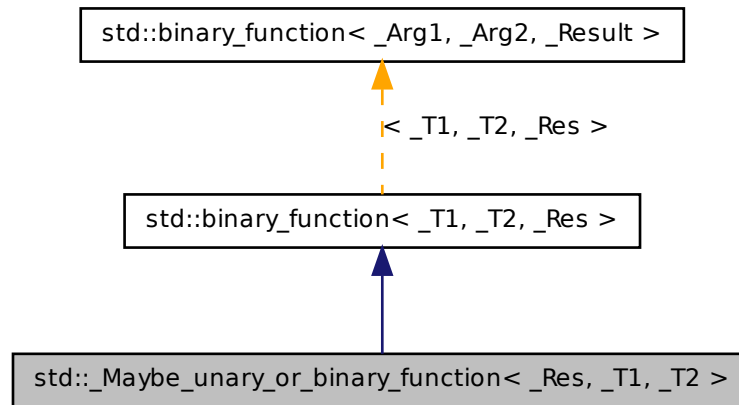

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.307 `std::_Maybe_unary_or_binary_function<_Res, _T1, _T2>` Struct Template Reference

Derives from [binary\\_function](#), as appropriate.

Inheritance diagram for `std::_Maybe_unary_or_binary_function<_Res, _T1, _T2>`:

## Public Types

- `typedef _T1` [first\\_argument\\_type](#)
- `typedef _Res` [result\\_type](#)
- `typedef _T2` [second\\_argument\\_type](#)

### 5.307.1 Detailed Description

`template<typename _Res, typename _T1, typename _T2> struct std::_Maybe_unary_or_binary_function<_Res, _T1, _T2>`

Derives from [binary\\_function](#), as appropriate.

Definition at line 511 of file `functional`.

### 5.307.2 Member Typedef Documentation

**5.307.2.1** `typedef _T1 std::binary_function<_T1, _T2, _Res>::first_argument_type` [[inherited](#)]

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.307.2.2** `typedef _Res std::binary_function<_T1, _T2, _Res>::result_type` [[inherited](#)]

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.307.2.3** `typedef _T2 std::binary_function<_T1, _T2, _Res>::second_argument_type` [[inherited](#)]

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.308 `std::_Maybe_wrap_member_pointer<_Tp>` Struct Template Reference 1545

### 5.308 `std::_Maybe_wrap_member_pointer<_Tp>` Struct Template Reference

#### Public Types

- `typedef _Tp type`

#### Static Public Member Functions

- `static const _Tp & __do_wrap (const _Tp &__x)`
- `static _Tp && __do_wrap (_Tp &&__x)`

#### 5.308.1 Detailed Description

`template<typename _Tp> struct std::_Maybe_wrap_member_pointer<_Tp>`

Maps member pointers into instances of `_Mem_fn` but leaves all other function objects untouched. Used by `tr1::bind()`. The primary template handles the non--member-pointer case.

Definition at line 1067 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.309 `std::_Maybe_wrap_member_pointer<_Tp _Class::*>` Struct Template Reference

#### Public Types

- `typedef _Mem_fn<_Tp _Class::*> type`

#### Static Public Member Functions

- `static type __do_wrap (_Tp _Class::*__pm)`

#### 5.309.1 Detailed Description

`template<typename _Tp, typename _Class> struct std::_Maybe_wrap_member_pointer<_Tp _Class::*>`

Maps member pointers into instances of `_Mem_fn` but leaves all other function objects untouched. Used by `tr1::bind()`. This partial specialization handles the member pointer

### 5.310 `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) const >` Class Template Reference

---

1546

case.

Definition at line 1086 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.310 `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) const >` Class Template Reference

Implementation of `mem_fn` for const member function pointers.

Inheritance diagram for `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) const >`:

#### Public Types

- `typedef _Res result_type`

#### Public Member Functions

- `_Mem_fn` (`_Functor __pmf`)
- `template<typename _Tp > _Res operator() (_Tp &__object, _ArgTypes...__args) const`
- `_Res operator() (const _Class *__object, _ArgTypes...__args) const`
- `_Res operator() (const _Class &__object, _ArgTypes...__args) const`

### 5.310.1 Detailed Description

`template<typename _Res, typename _Class, typename... _ArgTypes> class  
 std::_Mem_fn<_Res(_Class::*)(_ArgTypes...) const >`

Implementation of `mem_fn` for const member function pointers.

Definition at line 562 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

### 5.311 `std::_Mem_fn<_Res(_Class::*)(_ArgTypes...) const volatile > Class` Template Reference

Implementation of `mem_fn` for const volatile member function pointers.

Inheritance diagram for `std::_Mem_fn<_Res(_Class::*)(_ArgTypes...) const volatile >`:

### Public Types

- `typedef _Res result_type`

### Public Member Functions

- `_Mem_fn` (`_Functor __pmf`)
- `template<typename _Tp >  
 _Res operator() (_Tp &__object, _ArgTypes... __args) const`
- `_Res operator() (const volatile _Class *__object, _ArgTypes... __args) const`
- `_Res operator() (const volatile _Class &__object, _ArgTypes... __args) const`

### 5.311.1 Detailed Description

`template<typename _Res, typename _Class, typename... _ArgTypes> class  
 std::_Mem_fn<_Res(_Class::*)(_ArgTypes...) const volatile >`

Implementation of `mem_fn` for const volatile member function pointers.

### 5.312 `std::_Mem_fn<_Res(_Class::*)(_ArgTypes...) volatile >` Class Template Reference 1548

---

Definition at line 655 of file functional.

The documentation for this class was generated from the following file:

- [functional](#)

### 5.312 `std::_Mem_fn<_Res(_Class::*)(_ArgTypes...) volatile >` Class Template Reference

Implementation of `mem_fn` for volatile member function pointers.

Inheritance diagram for `std::_Mem_fn<_Res(_Class::*)(_ArgTypes...) volatile >`:

#### Public Types

- `typedef _Res result_type`

#### Public Member Functions

- `_Mem_fn` (`_Functor __pmf`)
- `template<typename _Tp > _Res operator() (_Tp &__object, _ArgTypes... __args) const`
- `_Res operator() (volatile _Class * __object, _ArgTypes... __args) const`
- `_Res operator() (volatile _Class & __object, _ArgTypes... __args) const`

#### 5.312.1 Detailed Description

`template<typename _Res, typename _Class, typename... _ArgTypes> class std::_Mem_fn<_Res(_Class::*)(_ArgTypes...) volatile >`

Implementation of `mem_fn` for volatile member function pointers.

Definition at line 608 of file `functional`.

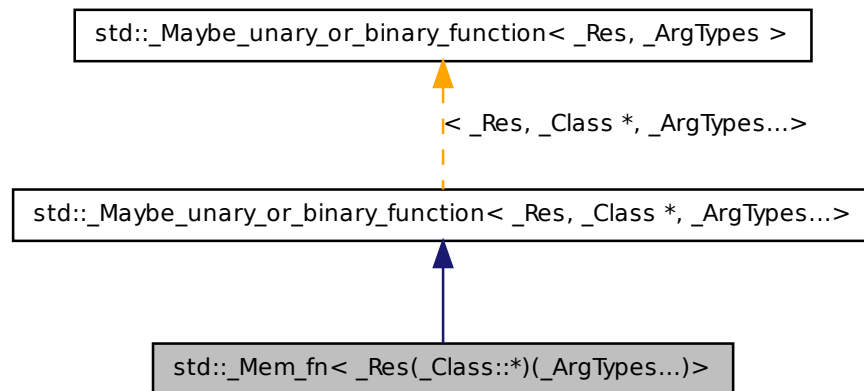

The documentation for this class was generated from the following file:

- [functional](#)

#### 5.313 `std::_Mem_fn<_Res(_Class::*)(_ArgTypes...)>` Class Template Reference

Implementation of `mem_fn` for member function pointers.

Inheritance diagram for `std::_Mem_fn<_Res(_Class::*)(_ArgTypes...)>`:

#### Public Types

- `typedef _Res result_type`

**Public Member Functions**

- `_Mem_fn` (`_Functor __pmf`)
- `template<typename _Tp > _Res operator() (_Tp &__object, _ArgTypes...__args) const`
- `_Res operator() (_Class *__object, _ArgTypes...__args) const`
- `_Res operator() (_Class &__object, _ArgTypes...__args) const`

**5.313.1 Detailed Description**

`template<typename _Res, typename _Class, typename... _ArgTypes> class std::_Mem_fn<_Res(_Class::*)(_ArgTypes...)>`

Implementation of `mem_fn` for member function pointers.

Definition at line 516 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

**5.314 `std::_Mu<_Arg, false, false >` Class Template Reference****Public Member Functions**

- `template<typename _CVarArg, typename _Tuple > _CVarArg && operator() (_CVarArg &&__arg, _Tuple &) const volatile`

**5.314.1 Detailed Description**

`template<typename _Arg> class std::_Mu<_Arg, false, false >`

If the argument is just a value, returns a reference to that value. The cv-qualifiers on the reference are the same as the cv-qualifiers on the `_Mu` object. [TR1 3.6.3/5 bullet 4]

Definition at line 1043 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

## 5.315 `std::_Mu<_Arg, false, true >` Class Template Reference

### Public Member Functions

- `template<typename _Tuple >  
result< _Mu(_Arg, _Tuple)>::type operator() (const volatile _Arg &, _Tuple  
&__tuple) const volatile`

#### 5.315.1 Detailed Description

`template<typename _Arg> class std::_Mu<_Arg, false, true >`

If the argument is a placeholder for the Nth argument, returns a reference to the Nth argument to the bind function object. [TR1 3.6.3/5 bullet 3]

Definition at line 1009 of file functional.

The documentation for this class was generated from the following file:

- [functional](#)

## 5.316 `std::_Mu<_Arg, true, false >` Class Template Reference

### Public Member Functions

- `template<typename _CVArg, typename... _Args>  
auto operator() (_CVArg &__arg, tuple<_Args...> &__tuple) const volatile->  
decltype(__arg(declval<_Args>()...))`

#### 5.316.1 Detailed Description

`template<typename _Arg> class std::_Mu<_Arg, true, false >`

If the argument is a bind expression, we invoke the underlying function object with the same cv-qualifiers as we are given and pass along all of our arguments (unwrapped). [TR1 3.6.3/5 bullet 2]

Definition at line 975 of file functional.

The documentation for this class was generated from the following file:

- [functional](#)

## **5.317 std::\_Mu< reference\_wrapper< \_Tp >, false, false > Class Template Reference**

### **Public Types**

- typedef \_Tp & **result\_type**

### **Public Member Functions**

- template<typename \_CVRef, typename \_Tuple >  
result\_type **operator()** (\_CVRef &\_\_arg, \_Tuple &) const volatile

#### **5.317.1 Detailed Description**

**template<typename \_Tp> class std::\_Mu< reference\_wrapper< \_Tp >, false, false >**

If the argument is reference\_wrapper<\_Tp>, returns the underlying reference. [TR1 3.6.3/5 bullet 1]

Definition at line 954 of file functional.

The documentation for this class was generated from the following file:

- [functional](#)

## **5.318 std::\_Placeholder< \_Num > Struct Template Reference**

The type of placeholder objects defined by libstdc++.

### **5.318.1 Detailed Description**

**template<int \_Num> struct std::\_Placeholder< \_Num >**

The type of placeholder objects defined by libstdc++.

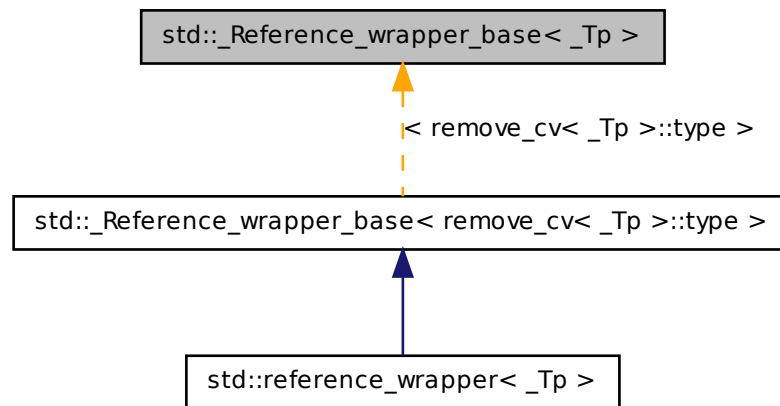

Definition at line 838 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.319 `std::_Reference_wrapper_base<_Tp>` Struct Template Reference

Inheritance diagram for `std::_Reference_wrapper_base<_Tp>`:

#### 5.319.1 Detailed Description

**template<typename \_Tp> struct `std::_Reference_wrapper_base<_Tp>`**

Derives from [unary\\_function](#) or [binary\\_function](#) when it can. Specializations handle all of the easy cases. The primary template determines what to do with a class type, which may derive from both [unary\\_function](#) and [binary\\_function](#).

Definition at line 307 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.320 `std::_Safe_tuple_element< __i, _Tuple >` Struct Template Reference 1554

### 5.320 `std::_Safe_tuple_element< __i, _Tuple >` Struct Template Reference

Inheritance diagram for `std::_Safe_tuple_element< __i, _Tuple >`:

#### 5.320.1 Detailed Description

`template<int __i, typename _Tuple> struct std::_Safe_tuple_element< __i, _Tuple >`

Like `tuple_element`, but returns `_No_tuple_element` when `tuple_element` would return an error.

Definition at line 928 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.321 `std::_Safe_tuple_element_impl< __i, _Tuple, _IsSafe >` Struct Template Reference

Inheritance diagram for `std::_Safe_tuple_element_impl< __i, _Tuple, _IsSafe >`:

#### 5.321.1 Detailed Description

`template<int __i, typename _Tuple, bool _IsSafe> struct std::_Safe_tuple_element_impl< __i, _Tuple, _IsSafe >`

Implementation helper for [\\_Safe\\_tuple\\_element](#). This primary template handles the case where it is safe to use `tuple_element`.

## 5.322 `std::_Safe_tuple_element_impl< __i, _Tuple, false >` Struct Template Reference 1555

---

Definition at line 909 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.322 `std::_Safe_tuple_element_impl< __i, _Tuple, false >` Struct Template Reference

### Public Types

- `typedef _No_tuple_element type`

### 5.322.1 Detailed Description

`template<int __i, typename _Tuple> struct std::_Safe_tuple_element_impl< __i, _Tuple, false >`

Implementation helper for [\\_Safe\\_tuple\\_element](#). This partial specialization handles the case where it is not safe to use `tuple_element`. We just return `_No_tuple_element`.

Definition at line 918 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.323 `std::_Temporary_buffer<_ForwardIterator, _Tp>` Class Template Reference

Inheritance diagram for `std::_Temporary_buffer<_ForwardIterator, _Tp>`:

#### Public Types

- typedef pointer **iterator**
- typedef value\_type \* **pointer**
- typedef ptrdiff\_t **size\_type**
- typedef `_Tp` **value\_type**

#### Public Member Functions

- `_Temporary_buffer` (`_ForwardIterator __first`, `_ForwardIterator __last`)
- iterator `begin` ()
- iterator `end` ()
- size\_type `requested_size` () const
- size\_type `size` () const

#### Protected Attributes

- pointer `_M_buffer`
- size\_type `_M_len`
- size\_type `_M_original_len`

### 5.323.1 Detailed Description

**template<typename \_ForwardIterator, typename \_Tp> class std::\_Temporary\_buffer<\_ForwardIterator, \_Tp>**

This class is used in two places: [stl\\_algo.h](#) and `ext/memory`, where it is wrapped as the `temporary_buffer` class. See `temporary_buffer` docs for more notes.

Definition at line 123 of file `stl_tempbuf.h`.

### 5.323.2 Constructor & Destructor Documentation

**5.323.2.1 template<typename \_ForwardIterator, typename \_Tp> std::\_Temporary\_buffer<\_ForwardIterator, \_Tp>::\_Temporary\_buffer ( \_ForwardIterator \_\_first, \_ForwardIterator \_\_last )**

Constructs a temporary buffer of a size somewhere between zero and the size of the given range.

Definition at line 246 of file `stl_tempbuf.h`.

References `std::pair<_T1, _T2>::first`, `std::get_temporary_buffer()`, `std::return_temporary_buffer()`, and `std::pair<_T1, _T2>::second`.

### 5.323.3 Member Function Documentation

**5.323.3.1 template<typename \_ForwardIterator, typename \_Tp> iterator std::\_Temporary\_buffer<\_ForwardIterator, \_Tp>::begin ( ) [inline]**

As per Table mumble.

Definition at line 152 of file `stl_tempbuf.h`.

Referenced by `std::inplace_merge()`, `std::stable_partition()`, and `std::stable_sort()`.

**5.323.3.2 template<typename \_ForwardIterator, typename \_Tp> iterator std::\_Temporary\_buffer<\_ForwardIterator, \_Tp>::end ( ) [inline]**

As per Table mumble.

Definition at line 157 of file `stl_tempbuf.h`.

**5.323.3.3** `template<typename _ForwardIterator, typename _Tp> size_type  
std::_Temporary_buffer<_ForwardIterator, _Tp>::requested_size ( ) const [inline]`

Returns the size requested by the constructor; may be [>size\(\)](#).

Definition at line 147 of file `stl_tempbuf.h`.

Referenced by `std::stable_partition()`.

**5.323.3.4** `template<typename _ForwardIterator, typename _Tp> size_type  
std::_Temporary_buffer<_ForwardIterator, _Tp>::size ( ) const [inline]`

As per Table mumble.

Definition at line 142 of file `stl_tempbuf.h`.

Referenced by `std::inplace_merge()`, `std::stable_partition()`, and `std::stable_sort()`.

The documentation for this class was generated from the following file:

- [stl\\_tempbuf.h](#)

## 5.324 `std::_Tuple_impl<_Idx>` Struct Template Reference

### Protected Member Functions

- `void _M_swap_impl (_Tuple_impl &)`

### 5.324.1 Detailed Description

`template<std::size_t _Idx> struct std::_Tuple_impl<_Idx>`

Zero-element tuple implementation. This is the basis case for the inheritance recursion.

Definition at line 132 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.325 `std::_Tuple_impl<_Idx, _Head, _Tail...>` Struct Template Reference

Inherits `_Tuple_impl<_Idx+1, _Tail...>`, and `_Head_base<_Idx, _Head, std::is_empty<_Head>::value>`.

### Public Types

- typedef `_Head_base<_Idx, _Head, std::is\_empty<_Head>::value>` **\_Base**
- typedef `_Tuple_impl<_Idx+1, _Tail...>` **\_Inherited**

### Public Member Functions

- constexpr **\_Tuple\_impl** (const `_Tuple_impl` &)
- **\_Tuple\_impl** (`_Tuple_impl` &&\_\_in)
- template<typename... `_UElements`>  
**\_Tuple\_impl** (const `_Tuple_impl`<\_Idx, `_UElements`...> &\_\_in)
- template<typename... `_UElements`>  
**\_Tuple\_impl** (`_Tuple_impl`<\_Idx, `_UElements`...> &&\_\_in)
- constexpr **\_Tuple\_impl** (const `_Head` &\_\_head, const `_Tail` &...\_\_tail)
- template<typename `_UHead`, typename... `_UTail`>  
**\_Tuple\_impl** (`_UHead` &&\_\_head, `_UTail` &&...\_\_tail)
- `_Head` & **\_M\_head** ()
- const `_Head` & **\_M\_head** () const
- const `_Inherited` & **\_M\_tail** () const
- `_Inherited` & **\_M\_tail** ()
- template<typename... `_UElements`>  
`_Tuple_impl` & **operator=** (`_Tuple_impl`<\_Idx, `_UElements`...> &&\_\_in)
- `_Tuple_impl` & **operator=** (const `_Tuple_impl` &\_\_in)
- `_Tuple_impl` & **operator=** (`_Tuple_impl` &&\_\_in)
- template<typename... `_UElements`>  
`_Tuple_impl` & **operator=** (const `_Tuple_impl`<\_Idx, `_UElements`...> &\_\_in)

### Protected Member Functions

- void **\_M\_swap\_impl** (`_Tuple_impl` &\_\_in)

### 5.325.1 Detailed Description

template<std::size\_t \_Idx, typename \_Head, typename... \_Tail> struct std::\_Tuple\_impl< \_Idx, \_Head, \_Tail...>

Recursive tuple implementation. Here we store the `Head` element and derive from a `Tuple_impl` containing the remaining elements (which contains the `Tail`).

Definition at line 144 of file `tuple`.

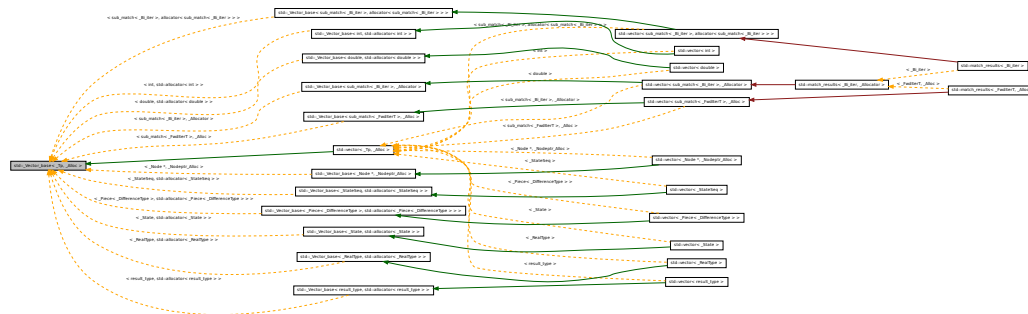

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.326 std::\_Vector\_base< \_Tp, \_Alloc > Struct Template Reference

See [bits/stl\\_deque.h](#)'s `_Deque_base` for an explanation.

Inheritance diagram for `std::_Vector_base< _Tp, _Alloc >`:

### Public Types

- typedef `_Alloc::template rebind< _Tp >::other_Tp_alloc_type`
- typedef `_Alloc allocator_type`

### Public Member Functions

- `_Vector_base` (const allocator\_type &\_\_a)
- `_Vector_base` (`_Vector_base` &&\_\_x)
- `_Vector_base` (size\_t \_\_n)
- `_Vector_base` (size\_t \_\_n, const allocator\_type &\_\_a)

- `_Tp_alloc_type::pointer _M_allocate (size_t __n)`
- `void _M_deallocate (typename _Tp_alloc_type::pointer __p, size_t __n)`
- `_Tp_alloc_type & _M_get_Tp_allocator ()`
- `const _Tp_alloc_type & _M_get_Tp_allocator () const`
- `allocator_type get_allocator () const`

### Public Attributes

- `_Vector_impl _M_impl`

#### 5.326.1 Detailed Description

`template<typename _Tp, typename _Alloc> struct std::_Vector_base< _Tp, _Alloc >`

See [bits/stl\\_deque.h](#)'s `_Deque_base` for an explanation.

Definition at line 71 of file `stl_vector.h`.

The documentation for this struct was generated from the following file:

- [stl\\_vector.h](#)

## 5.327 `std::_Weak_result_type<_Functor>` Struct Template Reference

Inheritance diagram for `std::_Weak_result_type<_Functor>`:

#### 5.327.1 Detailed Description

`template<typename _Functor> struct std::_Weak_result_type<_Functor>`

Strip top-level cv-qualifiers from the function object and let [\\_Weak\\_result\\_type\\_impl](#) perform the real work.

Definition at line 179 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

**1562**

### 5.328 `std::weak_result_type_impl<_Functor>` Struct Template Reference

Inheritance diagram for `std::_Weak_result_type_impl<_Functor>`:

### 5.328.1 Detailed Description

```
template<typename _Functor> struct std::_Weak_result_type_impl< _Functor
>
```

Base class for any function object that has a weak result type, as defined in 3.3/3 of TR1.

Definition at line 81 of file functional.

The documentation for this struct was generated from the following file:

- functional

### 5.329 `std::Weak_result_type_impl< _Res(&)(_ArgTypes...)>` Struct Template Reference

Retrieve the result type for a function reference.

## Public Types

- `typedef _Res result_type`

### 5.329.1 Detailed Description

```
template<typename _Res, typename... _ArgTypes> struct std::_Weak_result_
type_impl< _Res(&)(_ArgTypes...)>
```

Retrieve the result type for a function reference.

Definition at line 120 of file functional.

The documentation for this struct was generated from the following file:

- functional

### 5.330 `std::_Weak_result_type_impl< _Res(*)(_ArgTypes...)>` Struct Template Reference 1563

---

#### 5.330 `std::_Weak_result_type_impl< _Res(*)(_ArgTypes...)>` Struct Template Reference

Retrieve the result type for a function pointer.

##### Public Types

- `typedef _Res result_type`

##### 5.330.1 Detailed Description

`template<typename _Res, typename... _ArgTypes> struct std::_Weak_result_type_impl< _Res(*)(_ArgTypes...)>`

Retrieve the result type for a function pointer.

Definition at line 129 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

#### 5.331 `std::_Weak_result_type_impl< _Res(_ArgTypes...)>` Struct Template Reference

Retrieve the result type for a function type.

##### Public Types

- `typedef _Res result_type`

##### 5.331.1 Detailed Description

`template<typename _Res, typename... _ArgTypes> struct std::_Weak_result_type_impl< _Res(_ArgTypes...)>`

Retrieve the result type for a function type.

Definition at line 87 of file `functional`.

The documentation for this struct was generated from the following file:

- [functional](#)

**5.332** `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const >`  
**Struct Template Reference** **1564**

---

**5.332** `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const >` **Struct Template Reference**

Retrieve result type for a const member function pointer.

#### Public Types

- `typedef _Res result_type`

##### 5.332.1 Detailed Description

`template<typename _Res, typename _Class, typename... _ArgTypes> struct  
std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const >`

Retrieve result type for a const member function pointer.

Definition at line 147 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

**5.333** `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const volatile >` **Struct Template Reference**

Retrieve result type for a const volatile member function pointer.

#### Public Types

- `typedef _Res result_type`

##### 5.333.1 Detailed Description

`template<typename _Res, typename _Class, typename... _ArgTypes> struct  
std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const volatile >`

Retrieve result type for a const volatile member function pointer.

Definition at line 165 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

**5.334** `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) volatile >`  
**Struct Template Reference** **1565**

---

**5.334** `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) volatile >` **Struct Template Reference**

Retrieve result type for a volatile member function pointer.

#### Public Types

- `typedef _Res result_type`

##### 5.334.1 Detailed Description

`template<typename _Res, typename _Class, typename... _ArgTypes> struct  
std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) volatile >`

Retrieve result type for a volatile member function pointer.

Definition at line 156 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

**5.335** `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) >` **Struct Template Reference**

Retrieve result type for a member function pointer.

#### Public Types

- `typedef _Res result_type`

##### 5.335.1 Detailed Description

`template<typename _Res, typename _Class, typename... _ArgTypes> struct  
std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) >`

Retrieve result type for a member function pointer.

Definition at line 138 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

### 5.336 `std::add_const<_Tp>` Struct Template Reference

[add\\_const](#)

#### Public Types

- typedef `_Tp const` **type**

#### 5.336.1 Detailed Description

`template<typename _Tp> struct std::add_const<_Tp>`

[add\\_const](#)

Definition at line 443 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

### 5.337 `std::add_cv<_Tp>` Struct Template Reference

[add\\_cv](#)

#### Public Types

- typedef `add_const<typename add_volatile<_Tp>::type>::type` **type**

#### 5.337.1 Detailed Description

`template<typename _Tp> struct std::add_cv<_Tp>`

[add\\_cv](#)

Definition at line 453 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

### 5.338 `std::add_lvalue_reference<_Tp>` Struct Template Reference

[add\\_lvalue\\_reference](#)

Inherits `std::__add_lvalue_reference_helper< _Tp >`.

#### Public Types

- `typedef _Tp type`

##### 5.338.1 Detailed Description

`template<typename _Tp> struct std::add_lvalue_reference< _Tp >`

[add\\_lvalue\\_reference](#)

Definition at line 571 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.339 `std::add_pointer< _Tp >` Struct Template Reference

[add\\_pointer](#)

#### Public Types

- `typedef remove\_reference< \_Tp >::type * type`

##### 5.339.1 Detailed Description

`template<typename _Tp> struct std::add_pointer< _Tp >`

[add\\_pointer](#)

Definition at line 508 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.340 `std::add_rvalue_reference< _Tp >` Struct Template Reference

[add\\_rvalue\\_reference](#)

Inherits `std::__add_rvalue_reference_helper< _Tp >`.

**Public Types**

- `typedef _Tp type`

**5.340.1 Detailed Description**

`template<typename _Tp> struct std::add_rvalue_reference< _Tp >`

[add\\_rvalue\\_reference](#)

Definition at line 586 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.341 `std::add_volatile< _Tp >` Struct Template Reference**

[add\\_volatile](#)

**Public Types**

- `typedef _Tp volatile type`

**5.341.1 Detailed Description**

`template<typename _Tp> struct std::add_volatile< _Tp >`

[add\\_volatile](#)

Definition at line 448 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.342 `std::adopt_lock_t` Struct Reference**

Assume the calling thread has already obtained mutex ownership /// and manage it.

**5.342.1 Detailed Description**

Assume the calling thread has already obtained mutex ownership /// and manage it.

Definition at line 429 of file `mutex`.

The documentation for this struct was generated from the following file:

- [mutex](#)

### 5.343 `std::aligned_storage< _Len, _Align >` Struct Template Reference

Alignment type.

Inheritance diagram for `std::aligned_storage< _Len, _Align >`:

#### 5.343.1 Detailed Description

```
template<std::size_t _Len, std::size_t _Align = __alignof__(typename __-
aligned_storage_msa<_Len>::__type)> struct std::aligned_storage< _Len, _-
Align >
```

Alignment type. The value of `_Align` is a default-alignment which shall be the most stringent alignment requirement for any C++ object type whose size is no greater than `_Len` (3.9). The member typedef type shall be a POD type suitable for use as uninitialized storage for any object whose size is at most `_Len` and whose alignment is a divisor of `_Align`.

Definition at line 822 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.344 std::alignment\_of< \_Tp > Struct Template Reference**[alignment\\_of](#)

Inheritance diagram for std::alignment\_of&lt; \_Tp &gt;:

**Public Types**

- typedef [integral\\_constant](#)< std::size\_t, \_\_v > **type**
- typedef std::size\_t **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr std::size\_t **value**

### 5.344.1 Detailed Description

template<typename \_Tp> struct std::alignment\_of< \_Tp >

[alignment\\_of](#)

Definition at line 367 of file type\_traits.

The documentation for this struct was generated from the following file:

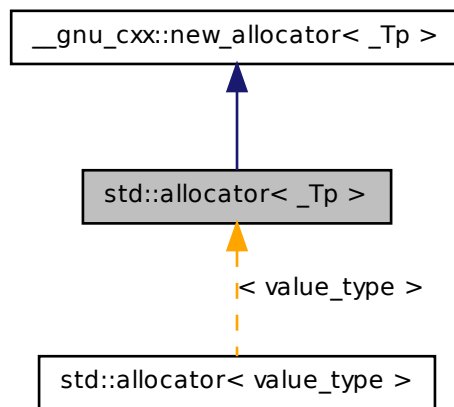

- [type\\_traits](#)

## 5.345 std::allocator< \_Tp > Class Template Reference

The *standard* allocator, as per [20.4].

Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt04ch11.html>.

Inheritance diagram for std::allocator< \_Tp >:

### Public Types

- typedef const \_Tp \* **const\_pointer**
- typedef const \_Tp & **const\_reference**
- typedef ptrdiff\_t **difference\_type**

- typedef `_Tp *` **pointer**
- typedef `_Tp &` **reference**
- typedef `size_t` **size\_type**
- typedef `_Tp` **value\_type**

### Public Member Functions

- **allocator** (const `allocator` &\_\_a) throw ()
- template<typename `_Tp1` >  
  **allocator** (const `allocator`< `_Tp1` > &) throw ()

- `element_type * release` () throw ()
- `void reset` (`element_type *__p=0`) throw ()

### 5.367.1 Detailed Description

`template<typename _Tp> class std::auto_ptr< _Tp >`

A simple smart pointer providing strict ownership semantics. The Standard says:

An `auto_ptr` owns the object it holds a pointer to. Copying an `auto_ptr` copies the pointer and transfers ownership to the destination. If more than one `auto_ptr` owns the same object at the same time the behavior of the program is undefined.

The uses of `auto_ptr` include providing temporary exception-safety for dynamically allocated memory, passing ownership of dynamically allocated memory to a function, and returning dynamically allocated memory from a function. `auto_ptr` does not meet the C++ requirements for Standard Library `container` elements and thus instantiating a Standard Library container with an `auto_ptr` results in undefined behavior.

Quoted from [20.4.5]/3.

Good examples of what can and cannot be done with `auto_ptr` can be found in the libstdc++ testsuite.

\_GLIBCXX\_RESOLVE\_LIB\_DEFECTS 127. `auto_ptr<>` conversion issues These resolutions have all been incorporated.

Definition at line 87 of file `auto_ptr.h`.

### 5.367.2 Member Typedef Documentation

#### 5.367.2.1 `template<typename _Tp> typedef _Tp std::auto_ptr<_Tp>::element_type`

The pointed-to type.

Definition at line 94 of file `auto_ptr.h`.

### 5.367.3 Constructor & Destructor Documentation

#### 5.367.3.1 `template<typename _Tp> std::auto_ptr<_Tp>::auto_ptr ( element_type * __p = 0 ) throw () [inline, explicit]`

An `auto_ptr` is usually constructed from a raw pointer.

#### Parameters

*p* A pointer (defaults to NULL).

This object now *owns* the object pointed to by *p*.

Definition at line 103 of file `auto_ptr.h`.

**5.367.3.2** `template<typename _Tp> std::auto_ptr< _Tp >::auto_ptr ( auto_ptr< _Tp > & __a ) throw () [inline]`

An auto\_ptr can be constructed from another auto\_ptr.

#### Parameters

*a* Another auto\_ptr of the same type.

This object now *owns* the object previously owned by *a*, which has given up ownership.

Definition at line 112 of file auto\_ptr.h.

**5.367.3.3** `template<typename _Tp> template<typename _Tp1 > std::auto_ptr< _Tp >::auto_ptr ( auto_ptr< _Tp1 > & __a ) throw () [inline]`

An auto\_ptr can be constructed from another auto\_ptr.

#### Parameters

*a* Another auto\_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element\_type.

This object now *owns* the object previously owned by *a*, which has given up ownership.

Definition at line 125 of file auto\_ptr.h.

**5.367.3.4** `template<typename _Tp> std::auto_ptr< _Tp >::~~auto_ptr ( ) [inline]`

When the auto\_ptr goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get ()` is NULL), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if `_Tp::~~_Tp()` throws, but this is prohibited. [17.4.3.6]/2

Definition at line 170 of file auto\_ptr.h.

**5.367.3.5** `template<typename _Tp> std::auto_ptr< _Tp >::auto_ptr ( auto_ptr_ref< element_type > __ref ) throw () [inline]`

Automatic conversions.

These operations convert an auto\_ptr into and from an [auto\\_ptr\\_ref](#) automatically as needed. This allows constructs such as

```
auto_ptr<Derived> func_returning_auto_ptr(...);
...
auto_ptr<Base> ptr = func_returning_auto_ptr(...);
```

Definition at line 260 of file auto\_ptr.h.

#### 5.367.4 Member Function Documentation

##### 5.367.4.1 template<typename \_Tp> element\_type\* std::auto\_ptr<\_Tp>::get ( void ) const throw () [inline]

Bypassing the smart pointer.

##### Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

##### Note

This auto\_ptr still owns the memory.

Definition at line 211 of file auto\_ptr.h.

##### 5.367.4.2 template<typename \_Tp> element\_type& std::auto\_ptr<\_Tp>::operator\* ( ) const throw () [inline]

Smart pointer dereferencing.

If this auto\_ptr no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

Definition at line 181 of file auto\_ptr.h.

**5.367.4.3** `template<typename _Tp> element_type* std::auto_ptr< _Tp  
>::operator-> ( ) const throw () [inline]`

Smart pointer dereferencing.

This returns the pointer itself, which the language then will automatically cause to be dereferenced.

Definition at line 194 of file auto\_ptr.h.

**5.367.4.4** `template<typename _Tp> template<typename _Tp1 > auto_ptr&  
std::auto_ptr< _Tp >::operator= ( auto_ptr< _Tp1 > & __a )  
throw () [inline]`

auto\_ptr assignment operator.

#### Parameters

*a* Another auto\_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element\_type.

This object now *owns* the object previously owned by *a*, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 154 of file auto\_ptr.h.

References std::auto\_ptr< \_Tp >::reset().

**5.367.4.5** `template<typename _Tp> auto_ptr& std::auto_ptr< _Tp  
>::operator= ( auto_ptr< _Tp > & __a ) throw () [inline]`

auto\_ptr assignment operator.

#### Parameters

*a* Another auto\_ptr of the same type.

This object now *owns* the object previously owned by *a*, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 136 of file auto\_ptr.h.

References std::auto\_ptr< \_Tp >::reset().

**5.367.4.6** `template<typename _Tp> element_type* std::auto_ptr<_Tp>::release ( ) throw () [inline]`

Bypassing the smart pointer.

#### Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

#### Note

This `auto_ptr` no longer owns the memory. When this object goes out of scope, nothing will happen.

Definition at line 225 of file `auto_ptr.h`.

**5.367.4.7** `template<typename _Tp> void std::auto_ptr<_Tp>::reset ( element_type * __p = 0 ) throw () [inline]`

Forcibly deletes the managed object.

#### Parameters

*p* A pointer (defaults to `NULL`).

This object now *owns* the object pointed to by *p*. The previous object has been deleted.

Definition at line 240 of file `auto_ptr.h`.

Referenced by `std::auto_ptr<_Tp>::operator=()`.

The documentation for this class was generated from the following file:

- [auto\\_ptr.h](#)

### Public Member Functions

- `auto_ptr_ref (_Tp1 * __p)`

## 5.369 `std::back_insert_iterator<_Container>` Class Template Reference 1597

### Public Attributes

- `_Tp1 * _M_ptr`

### 5.368.1 Detailed Description

**template<typename \_Tp1> struct `std::auto_ptr_ref<_Tp1>` >**

A wrapper class to provide [auto\\_ptr](#) with reference semantics. For example, an [auto\\_ptr](#) can be assigned (or constructed from) the result of a function which returns an [auto\\_ptr](#) by value.

All the [auto\\_ptr\\_ref](#) stuff should happen behind the scenes.

Definition at line 48 of file `auto_ptr.h`.

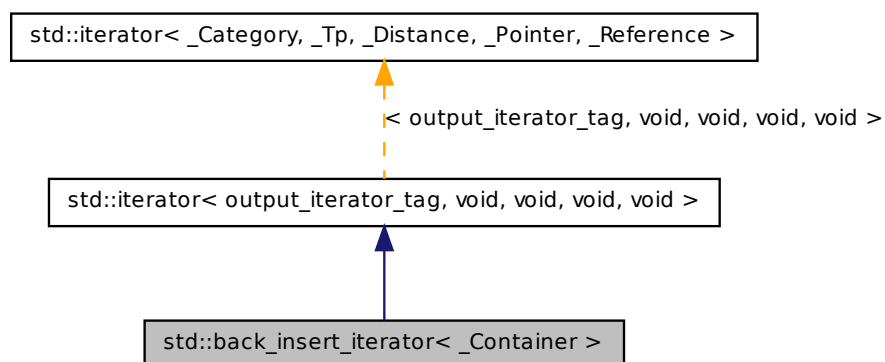

The documentation for this struct was generated from the following file:

- [auto\\_ptr.h](#)

## 5.369 `std::back_insert_iterator<_Container>` Class Template Reference

Turns assignment into insertion.

Inheritance diagram for `std::back_insert_iterator<_Container>`:

### Public Types

- typedef `_Container` `container_type`
- typedef void `difference_type`
- typedef `output_iterator_tag` `iterator_category`
- typedef void `pointer`
- typedef void `reference`
- typedef void `value_type`

### Public Member Functions

- `back_insert_iterator` (`_Container` &\_\_x)
- `back_insert_iterator` & `operator*` ()
- `back_insert_iterator` & `operator++` ()
- `back_insert_iterator` `operator++` (int)
- `back_insert_iterator` & `operator=` (const typename `_Container::value_type` &\_\_value)
- `back_insert_iterator` & **`operator=`** (typename `_Container::value_type` &&\_\_value)

### Protected Attributes

- `_Container` \* `container`

#### 5.369.1 Detailed Description

**template<typename `_Container`> class `std::back_insert_iterator<_Container>`**

Turns assignment into insertion. These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using `push_back`.

Tip: Using the `back_inserter` function to create these iterators can save typing.

Definition at line 396 of file `stl_iterator.h`.

#### 5.369.2 Member Typedef Documentation

**5.369.2.1 `template<typename _Container> typedef _Container std::back_insert_iterator<_Container>::container_type`**

A nested typedef for the type of whatever container you used.

Definition at line 404 of file `stl_iterator.h`.

**5.369.2.2** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]`

Distance between iterators is represented as this type.

Definition at line 126 of file stl\_iterator\_base\_types.h.

**5.369.2.3** `typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 122 of file stl\_iterator\_base\_types.h.

**5.369.2.4** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 128 of file stl\_iterator\_base\_types.h.

**5.369.2.5** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 130 of file stl\_iterator\_base\_types.h.

**5.369.2.6** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 124 of file stl\_iterator\_base\_types.h.

### **5.369.3 Constructor & Destructor Documentation**

**5.369.3.1** `template<typename _Container> std::back_insert_iterator<_Container>::back_insert_iterator ( _Container & __x )  
[inline, explicit]`

The only way to create this iterator is with a container.

Definition at line 408 of file stl\_iterator.h.

### **5.369.4 Member Function Documentation**

**5.369.4.1** `template<typename _Container> back_insert_iterator& std::back_insert_iterator<_Container>::operator* ( )  
[inline]`

Simply returns \*this.

Definition at line 446 of file stl\_iterator.h.

**5.369.4.2** `template<typename _Container> back_insert_iterator std::back_insert_iterator<_Container>::operator++ ( int )  
[inline]`

Simply returns \*this. (This iterator does not *move*.).

Definition at line 456 of file stl\_iterator.h.

**5.369.4.3** `template<typename _Container> back_insert_iterator& std::back_insert_iterator<_Container>::operator++ ( )  
[inline]`

Simply returns \*this. (This iterator does not *move*.).

Definition at line 451 of file stl\_iterator.h.

**5.369.4.4** `template<typename _Container > back_insert_iterator&  
std::back_insert_iterator<_Container >::operator= ( const  
typename _Container::value_type & __value ) [inline]`

#### Parameters

**value** An instance of whatever type `container_type::const_reference` is; presumably a reference-to-const T for `container<T>`.

#### Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.

Definition at line 430 of file `stl_iterator.h`.

The documentation for this class was generated from the following file:

- [stl\\_iterator.h](#)

## 5.370 std::bad\_alloc Class Reference

Exception possibly thrown by `new`.

`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

Inheritance diagram for `std::bad_alloc`:

## Public Member Functions

- virtual const char \* `what` () const throw ()

### 5.370.1 Detailed Description

Exception possibly thrown by `new`.

`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

Definition at line 56 of file `new`.

### 5.370.2 Member Function Documentation

#### 5.370.2.1 virtual const char\* `std::bad_alloc::what` ( ) const throw () [`virtual`]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from `std::exception`.

The documentation for this class was generated from the following file:

- `new`

## 5.371 `std::bad_cast` Class Reference

Thrown during incorrect typecasting.

If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.

Inheritance diagram for `std::bad_cast`:

### Public Member Functions

- virtual const char \* [what](#) () const throw ()

#### 5.371.1 Detailed Description

Thrown during incorrect typecasting.

If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.

Definition at line 190 of file `typeinfo`.

#### 5.371.2 Member Function Documentation

##### 5.371.2.1 virtual const char\* `std::bad_cast::what` ( ) const throw () [**virtual**]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 5.372 `std::bad_exception` Class Reference

Inheritance diagram for `std::bad_exception`:

### Public Member Functions

- virtual const char \* [what](#) () const throw ()

#### 5.372.1 Detailed Description

If an exception is thrown which is not listed in a function's exception specification, one of these may be thrown.

Definition at line 74 of file `exception`.

#### 5.372.2 Member Function Documentation

##### 5.372.2.1 virtual const char\* `std::bad_exception::what` ( ) const throw () [[virtual](#)]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [exception](#)

### 5.373 `std::bad_function_call` Class Reference

Exception class thrown when class template function's `operator()` is called with an empty target.

Inheritance diagram for `std::bad_function_call`:

#### Public Member Functions

- virtual const char \* `what` () const throw ()

#### 5.373.1 Detailed Description

Exception class thrown when class template function's `operator()` is called with an empty target.

Definition at line 1476 of file `functional`.

#### 5.373.2 Member Function Documentation

##### 5.373.2.1 virtual const char\* `std::exception::what` ( ) const throw () [**virtual**, **inherited**]

Returns a C-style character string describing the general cause of the current error.

Reimplemented in `std::bad_exception`, `std::bad_alloc`, `std::bad_cast`, `std::bad_typeid`, `std::future_error`, `std::logic_error`, `std::runtime_error`, `std::ios_base::failure`, and `std::bad_weak_ptr`.

The documentation for this class was generated from the following file:

- [functional](#)

### 5.374 `std::bad_typeid` Class Reference

Thrown when a NULL pointer in a `typeid` expression is used.

Inheritance diagram for `std::bad_typeid`:

#### Public Member Functions

- virtual const char \* [what](#) () const throw ()

#### 5.374.1 Detailed Description

Thrown when a NULL pointer in a `typeid` expression is used.

Definition at line 207 of file `typeinfo`.

#### 5.374.2 Member Function Documentation

##### 5.374.2.1 virtual const char\* `std::bad_typeid::what` ( ) const throw () [virtual]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 5.375 `std::bad_weak_ptr` Class Reference

Exception possibly thrown by [shared\\_ptr](#).

Inheritance diagram for `std::bad_weak_ptr`:

### Public Member Functions

- virtual char const \* [what](#) () const throw ()

#### 5.375.1 Detailed Description

Exception possibly thrown by [shared\\_ptr](#).

Definition at line 60 of file `shared_ptr_base.h`.

#### 5.375.2 Member Function Documentation

##### 5.375.2.1 virtual char const\* `std::bad_weak_ptr::what ( ) const throw ()` [**virtual**]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [shared\\_ptr\\_base.h](#)

## 5.376 `std::basic_filebuf< _CharT, _Traits >` Class Template Reference

The actual work of input and output (for files).

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Inheritance diagram for `std::basic_filebuf< _CharT, _Traits >`:

### Public Types

- typedef `codecvt< char_type, char, __state_type >` **`__codecvt_type`**
- typedef `__basic_file< char >` **`__file_type`**
- typedef `basic_filebuf< char_type, traits_type >` **`__filebuf_type`**
- typedef `traits_type::state_type` **`__state_type`**
- typedef `basic_streambuf< char_type, traits_type >` **`__streambuf_type`**
- typedef `_CharT` **`char_type`**
- typedef `traits_type::int_type` **`int_type`**
- typedef `traits_type::off_type` **`off_type`**
- typedef `traits_type::pos_type` **`pos_type`**
- typedef `_Traits` **`traits_type`**

### 5.376.1 Detailed Description

**template<typename \_CharT, typename \_Traits> class std::basic\_filebuf< \_CharT, \_Traits >**

The actual work of input and output (for files).

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Definition at line 69 of file `fstream`.

### 5.376.2 Member Typedef Documentation

**5.376.2.1    template<typename \_CharT, typename \_Traits> typedef  
              basic\_streambuf<char\_type, traits\_type> std::basic\_filebuf<  
              \_CharT, \_Traits >::\_\_streambuf\_type**

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 79 of file `fstream`.

**5.376.2.2    template<typename \_CharT, typename \_Traits> typedef \_CharT  
              std::basic\_filebuf< \_CharT, \_Traits >::char\_type**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >](#).

Definition at line 73 of file `fstream`.

**5.376.2.3    template<typename \_CharT, typename \_Traits> typedef  
              traits\_type::int\_type std::basic\_filebuf< \_CharT, \_Traits >::int\_type**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >](#).

Definition at line 75 of file `fstream`.

**5.376.2.4 `template<typename _CharT, typename _Traits> typedef traits_type::off_type std::basic_filebuf< _CharT, _Traits >::off_type`**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >](#).

Definition at line 77 of file `fstream`.

**5.376.2.5 `template<typename _CharT, typename _Traits> typedef traits_type::pos_type std::basic_filebuf< _CharT, _Traits >::pos_type`**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Reimplemented in [\\_\\_gnu\\_cxx::enc\\_filebuf< \\_CharT >](#), and [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >](#).

Definition at line 76 of file `fstream`.

**5.376.2.6 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_filebuf< _CharT, _Traits >::traits_type`**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Reimplemented in [\\_\\_gnu\\_cxx::enc\\_filebuf< \\_CharT >](#), and [\\_\\_gnu\\_cxx::stdio\\_filebuf< \\_CharT, \\_Traits >](#).

Definition at line 74 of file `fstream`.

### 5.376.3 Constructor & Destructor Documentation

#### 5.376.3.1 `template<typename _CharT, typename _Traits> std::basic_filebuf<_CharT, _Traits>::basic_filebuf ( )`

Does not open any files.

The default constructor initializes the parent class using its own default ctor.

Definition at line 81 of file `fstream.tcc`.

References `std::basic_streambuf<_CharT, _Traits>::_M_buf_locale`.

#### 5.376.3.2 `template<typename _CharT, typename _Traits> virtual std::basic_filebuf<_CharT, _Traits>::~~basic_filebuf ( ) [inline, virtual]`

The destructor closes the file first.

Definition at line 216 of file `fstream`.

### 5.376.4 Member Function Documentation

#### 5.376.4.1 `template<typename _CharT, typename _Traits> void std::basic_filebuf<_CharT, _Traits>::_M_create_pback ( ) [inline, protected]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Definition at line 174 of file `fstream`.

#### 5.376.4.2 `template<typename _CharT, typename _Traits> void std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback ( ) throw () [inline, protected]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 191 of file `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::underflow()`.

**5.376.4.3** `template<typename _CharT, typename _Traits> void  
std::basic_filebuf< _CharT, _Traits >::_M_set_buffer ( streamsize  
__off ) [inline, protected]`

This function sets the pointers of the internal buffer, both get and put areas. Typically: `__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `epptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 392 of file `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::open()`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

**5.376.4.4** `template<typename _CharT, typename _Traits > basic_filebuf<  
_CharT, _Traits >::_filebuf_type * std::basic_filebuf< _CharT,  
_Traits >::close ( )`

Closes the currently associated file.

#### Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 130 of file `fstream.tcc`.

References `std::basic_filebuf< _CharT, _Traits >::is_open()`.

Referenced by `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_filebuf< _CharT, _Traits >::open()`, and `std::basic_filebuf< char_type, traits_type >::~~basic_filebuf()`.

**5.376.4.5** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::eback ( ) const  
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 462 of file `streambuf`.

std::basic_streambuf< _CharT, _Traits >::pptr ( ) const  
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 515 of file streambuf.

Referenced by std::basic\_streambuf< char\_type, traits\_type >::sputc(), and std::basic\_streambuf< \_CharT, \_Traits >::xsputn().

**5.376.4.8** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::gbump ( int __n )  
[inline, protected, inherited]`

Moving the read position.

#### Parameters

- n* The delta by which to move.

This just advances the read position without returning any data.

Definition at line 478 of file streambuf.

Referenced by std::basic\_streambuf< char\_type, traits\_type >::sbumpc(), std::basic\_streambuf< char\_type, traits\_type >::sputbackc(), std::basic\_streambuf< char\_type, traits\_type >::sungetc(), and std::basic\_streambuf< char\_type, traits\_type >::uflow().

**5.376.4.9** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf< _CharT, _Traits >::getloc ( ) const  
[inline, inherited]`

Locale access.

#### Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 224 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubimbue()`.

**5.376.4.10** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::gptr ( ) const  
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

Referenced by `std::basic_filebuf< char_type, traits_type >::M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::M_destroy_pback()`, `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_streambuf< char_type, traits_type >::in_avail()`, `std::basic_streambuf< char_type, traits_type >::sbumpc()`, `std::basic_streambuf< char_type, traits_type >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_streambuf< char_type, traits_type >::sputbackc()`, `std::basic_streambuf< char_type, traits_type >::sungetc()`, `std::basic_streambuf< char_type, traits_type >::uflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_streambuf< _CharT, _Traits >::xsgetn()`.

**5.376.4.11** `template<typename _CharT, typename _Traits > void  
std::basic_filebuf< _CharT, _Traits >::imbue ( const locale & )  
[protected, virtual]`

Changes translations.

#### Parameters

*loc* A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

#### Note

Base class version does nothing.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 912 of file fstream.tcc.

References `std::basic_filebuf< _CharT, _Traits >::_M_ext_buf`, `std::basic_filebuf< _CharT, _Traits >::_M_ext_next`, `std::basic_filebuf< _CharT, _Traits >::_M_mode`, `std::basic_filebuf< _CharT, _Traits >::_M_reading`, `std::basic_filebuf< _CharT, _Traits >::_M_set_buffer()`, `std::ios_base::cur`, `std::basic_streambuf< _CharT, _Traits >::eback()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, and `std::basic_filebuf< _CharT, _Traits >::is_open()`.

**5.376.4.12** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::in_avail ( )  
[inline, inherited]`

Looking ahead into the stream.

#### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived [showmanyc\(\)](#).

Definition at line 264 of file streambuf.

**5.376.4.13** `template<typename _CharT, typename _Traits> bool  
std::basic_filebuf< _CharT, _Traits >::is_open ( ) const throw ()  
[inline]`

Returns true if the external file is open.

Definition at line 224 of file fstream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::close()`, `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_fstream< _CharT, _Traits >::is_open()`, `std::basic_ofstream< _CharT, _Traits >::is_open()`, `std::basic_ifstream< _CharT, _Traits >::is_open()`, `std::basic_filebuf< _CharT, _Traits >::open()`, `std::basic_filebuf< _CharT, _Traits >::setbuf()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, and `__gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf()`.

**5.376.4.14** `template<typename _CharT, typename _Traits > basic_filebuf<  
_CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT,  
_Traits >::open ( const char * __s, ios_base::openmode __mode )`

Opens an external file.

#### Parameters

- s* The name of the file.
- mode* The open mode flags.

#### Returns

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *s* using the flags given in *mode*.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent fopen() flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596) +-----+

std::basic_filebuf< _CharT, _Traits >::open ( const std::string &  
__s, ios_base::openmode __mode ) [inline]`

Opens an external file.

#### Parameters

- s* The name of the file.
- mode* The open mode flags.

#### Returns

*this* on success, NULL on failure

Definition at line 277 of file fstream.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::open().

**5.376.4.16** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf< _CharT, _Traits >::overflow ( int_type =  
traits_type::eof() ) [inline, protected, virtual,  
inherited]`

Consumes data from the buffer; writes to the controlled sequence.

#### Parameters

- c* An additional character to consume.

#### Returns

eof() to indicate failure, something else (usually *c*, or not\_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some*

*effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 748 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::sputc()`, and `std::basic_streambuf<_CharT, _Traits>::xsputn()`.

**5.376.4.17** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf<_CharT, _Traits>::pbackfail ( int_type =  
traits_type::eof() ) [inline, protected, virtual,  
inherited]`

Tries to back up the input sequence.

#### Parameters

*c* The character to be inserted back into the sequence.

#### Returns

`eof()` on failure, *some other value* on success

#### Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 704 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::sputbackc()`, and `std::basic_streambuf<char_type, traits_type>::sungetc()`.

[inline, inherited]`

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 246 of file `streambuf`.

**5.376.4.24** `template<typename _CharT, typename _Traits>  
__streambuf_type* std::basic_streambuf<_CharT, _Traits  
>::pubsetbuf ( char_type * __s, streamsize __n ) [inline,  
inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 237 of file `streambuf`.

**5.376.4.25** `template<typename _CharT, typename _Traits> int  
std::basic_streambuf<_CharT, _Traits>::pubsync ( )  
[inline, inherited]`

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 251 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::sync()`.

**5.376.4.26** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline,  
inherited]`

Getting the next character.

#### Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 296 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::istreambuf_iterator< _CharT, _Traits >::operator++()`, and `std::basic_streambuf< char_type, traits_type >::snextc()`.

**5.376.4.27** `template<typename _CharT, typename _Traits> virtual  
pos_type std::basic_streambuf< _CharT, _Traits >::seekoff  
( off_type, ios_base::seekdir, ios_base::openmode =  
ios_base::in | ios_base::out ) [inline, protected,  
virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 582 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubseekoff()`.

**5.376.4.28** `template<typename _CharT, typename _Traits> virtual pos_type  
std::basic_streambuf< _CharT, _Traits >::seekpos ( pos_type ,  
ios_base::openmode = ios_base::in | ios_base::out ) [inline,  
protected, virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 594 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubseekpos()`.

**5.376.4.29** `template<typename _CharT, typename _Traits > basic_filebuf<  
_CharT, _Traits >::__streambuf_type * std::basic_filebuf<  
_CharT, _Traits >::setbuf ( char_type * __s, streamsize __n )  
[protected, virtual]`

Manipulates the buffer.

#### Parameters

*s* Pointer to a buffer area.

*n* Size of *s*.

#### Returns

`this`

If no file has been opened, and both *s* and *n* are zero, then the stream becomes unbuffered. Otherwise, *s* is used as a buffer; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more.

Definition at line 686 of file `fstream.tcc`.

References `std::basic_filebuf< _CharT, _Traits >::_M_buf`, `std::basic_filebuf< _CharT, _Traits >::_M_buf_size`, and `std::basic_filebuf< _CharT, _Traits >::is_open()`.

protected, virtual, inherited]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this function.

#### Note

Base class version does nothing, returns `this`.

Definition at line 571 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubsetbuf()`.

**5.376.4.31** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::setg ( char_type *  
__gbeg, char_type * __gnext, char_type * __gend ) [inline,  
protected, inherited]`

Setting the three read area pointers.

#### Parameters

*gbeg* A pointer.

*gnext* A pointer.

*gend* A pointer.

#### Postcondition

*gbeg* == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 489 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.376.4.32** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::setp ( char_type  
* __pbeg, char_type * __pend ) [inline, protected,  
inherited]`

Setting the three write area pointers.

#### Parameters

*pbeg* A pointer.

*pend* A pointer.

#### Postcondition

*pbeg* == `pbase()`, *pbeg* == `pptr()`, and *pend* == `epptr()`

Definition at line 535 of file streambuf.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.376.4.33** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sgetc ( ) [inline,  
inherited]`

Getting the next character.

#### Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 318 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_streambuf< char_type, traits_type >::snextc()`.

**5.376.4.34** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::sgetn ( char_type * __s,  
streamsize __n ) [inline, inherited]`

Entry point for `xsgetn`.

#### Parameters

*s* A buffer area.

*n* A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 337 of file `streambuf`.

**5.376.4.35** `template<typename _CharT, typename _Traits > streamsize  
std::basic_filebuf< _CharT, _Traits >::showmanyc ( )  
[protected, virtual]`

Investigating the data available.

#### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.*  
[27.5.2.4.3]/1

#### Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 180 of file `fstream.tcc`.

References `std::basic_filebuf< _CharT, _Traits >::_M_mode`, `std::ios_base::binary`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gpptr()`, `std::ios_base::in`, and `std::basic_filebuf< _CharT, _Traits >::is_open()`.

**5.376.4.36** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::snextc ( ) [inline,  
inherited]`

Getting the next character.

#### Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 278 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.376.4.37** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sputbackc ( char_type  
__c ) [inline, inherited]`

Pushing characters back into the input stream.

#### Parameters

*c* The character to push back.

#### Returns

The previous character, if possible.

Similar to `sungetc()`, but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 352 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::putback()`.

**5.376.4.38** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sputc ( char_type __c )  
[inline, inherited]`

Entry point for all single-character output functions.

#### Parameters

*c* A character to output.

#### Returns

*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 404 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, and `std::ostreambuf_iterator< _CharT, _Traits >::operator=()`.

**5.376.4.39** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::sputn ( const char_type  
* __s, streamsize __n ) [inline, inherited]`

Entry point for all single-character output functions.

#### Parameters

*s* A buffer read area.

*n* A count.

One of two public output functions.

Returns `xspn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 430 of file `streambuf`.

**5.376.4.40** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline,  
inherited]`

Moving backwards in the input stream.

**Returns**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns [pbackfail\(\)](#). The effect is to *unget* the last character *gotten*.

Definition at line 377 of file streambuf.

Referenced by std::basic\_istream< \_CharT, \_Traits >::unget().

**5.376.4.41** `template<typename _CharT, typename _Traits> int  
std::basic_filebuf< _CharT, _Traits >::sync ( ) [protected,  
virtual]`

Synchronizes the buffer arrays with the controlled sequences.

**Returns**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 895 of file fstream.tcc.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::pbase\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::pptr\(\)](#).

**5.376.4.42** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline,  
protected, virtual, inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 680 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::sbumpc()`, and `std::basic_streambuf< _CharT, _Traits >::xsgetn()`.

**5.376.4.43** `template<typename _CharT, typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow( ) [protected, virtual]`

Fetches more data from the controlled sequence.

#### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 206 of file `fstream.tcc`.

References `std::basic_filebuf< _CharT, _Traits >::_M_buf_size`, `std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback()`, `std::basic_filebuf< _CharT, _Traits >::_M_ext_buf`, `std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size`, `std::basic_filebuf< _CharT, _Traits >::_M_ext_next`, `std::basic_filebuf< _CharT, _Traits >::_M_mode`, `std::basic_filebuf< _CharT, _Traits >::_M_reading`, `std::basic_filebuf< _CharT, _Traits >::_M_set_buffer()`, `std::basic_streambuf< _CharT, _Traits >::eback()`,

`std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in()`, `std::ios_base::in`, and `std::min()`.

**5.376.4.44** `template<typename _CharT, typename _Traits > streamsize  
std::basic_streambuf< _CharT, _Traits >::xsgetn ( char_type *  
__s, streamsize __n ) [protected, virtual, inherited]`

Multiple character extraction.

#### Parameters

- s* A buffer area.
- n* Maximum number of characters to assign.

#### Returns

The number of characters assigned.

Fills `s[0]` through `s[n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either *n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 47 of file `streambuf.tcc`.

References `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, `std::min()`, and `std::basic_streambuf< _CharT, _Traits >::uflow()`.

Referenced by `std::basic_streambuf< char_type, traits_type >::sgetn()`.

**5.376.4.45** `template<typename _CharT, typename _Traits > streamsize  
std::basic_streambuf< _CharT, _Traits >::xspn ( const  
char_type * __s, streamsize __n ) [protected, virtual,  
inherited]`

Multiple character insertion.

#### Parameters

- s* A buffer area.

*n* Maximum number of characters to write.

### Returns

The number of characters written.

Writes *s*[0] through *s*[*n*-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 81 of file `streambuf.tcc`.

References `std::basic_streambuf< _CharT, _Traits >::epptr()`, `std::min()`, `std::basic_streambuf< _CharT, _Traits >::overflow()`, and `std::basic_streambuf< _CharT, _Traits >::pptr()`.

Referenced by `std::basic_streambuf< char_type, traits_type >::sputn()`.

## 5.376.5 Member Data Documentation

### 5.376.5.1 `template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf` [protected]

Pointer to the beginning of internal buffer.

Definition at line 111 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, and `std::basic_filebuf< _CharT, _Traits >::setbuf()`.

### 5.376.5.2 `template<typename _CharT, typename _Traits> locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale` [protected, inherited]

Current locale setting.

Definition at line 190 of file `streambuf`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::basic_filebuf()`, `std::basic_streambuf< char_type, traits_type >::getloc()`, and `std::basic_streambuf< char_type, traits_type >::pubimbue()`.

**5.376.5.3    template<typename \_CharT, typename \_Traits> size\_t  
              std::basic\_filebuf< \_CharT, \_Traits >::\_M\_buf\_size    [protected]**

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 118 of file fstream.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::\_M\_set\_buffer(), std::basic\_filebuf< \_CharT, \_Traits >::setbuf(), \_\_gnu\_cxx::stdio\_filebuf< \_CharT, \_Traits >::stdio\_filebuf(), and std::basic\_filebuf< \_CharT, \_Traits >::underflow().

**5.376.5.4    template<typename \_CharT, typename \_Traits> char\*  
              std::basic\_filebuf< \_CharT, \_Traits >::\_M\_ext\_buf    [protected]**

Buffer for external characters. Used for input when codecvt::always\_noconv() == false. When valid, this corresponds to [eback\(\)](#).

Definition at line 153 of file fstream.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), and std::basic\_filebuf< \_CharT, \_Traits >::underflow().

**5.376.5.5    template<typename \_CharT, typename \_Traits> streamsize  
              std::basic\_filebuf< \_CharT, \_Traits >::\_M\_ext\_buf\_size  
              [protected]**

Size of buffer held by \_M\_ext\_buf.

Definition at line 158 of file fstream.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::underflow().

**5.376.5.6    template<typename \_CharT, typename \_Traits> const  
              char\* std::basic\_filebuf< \_CharT, \_Traits >::\_M\_ext\_next  
              [protected]**

Pointers into the buffer held by \_M\_ext\_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, \_M\_ext\_next corresponds to [egptr\(\)](#).

Definition at line 165 of file fstream.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), and std::basic\_filebuf< \_CharT, \_Traits >::underflow().

**5.376.5.7** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_in_beg  
[protected, inherited]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

- `get == input == read`
- `put == output == write`

Definition at line 182 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::eback()`, and `std::basic_streambuf< char_type, traits_type >::setg()`.

**5.376.5.8** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_in_cur  
[protected, inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 183 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::gbump()`, `std::basic_streambuf< char_type, traits_type >::gptr()`, and `std::basic_streambuf< char_type, traits_type >::setg()`.

**5.376.5.9** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_in_end  
[protected, inherited]`

Entry point for `imbue()`.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived imbue(loc).

Definition at line 184 of file streambuf.

Referenced by std::basic\_streambuf< char\_type, traits\_type >::egptr(), and std::basic\_streambuf< char\_type, traits\_type >::setg().

**5.376.5.10** `template<typename _CharT, typename _Traits>  
ios_base::openmode std::basic_filebuf< _CharT, _Traits  
>::_M_mode [protected]`

Place to stash in || out || in | out settings for current filebuf.

Definition at line 96 of file fstream.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::\_M\_set\_buffer(), std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_filebuf< \_CharT, \_Traits >::open(), std::basic\_filebuf< \_CharT, \_Traits >::showmanyc(), \_\_gnu\_cxx::stdio\_filebuf< \_CharT, \_Traits >::stdio\_filebuf(), and std::basic\_filebuf< \_CharT, \_Traits >::underflow().

**5.376.5.11** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::_M_out_beg  
[protected, inherited]`

Entry point for [imbue\(\)](#).

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived imbue(loc).

Definition at line 185 of file streambuf.

Referenced by `std::basic_streambuf< char_type, traits_type >::pbase()`, and `std::basic_streambuf< char_type, traits_type >::setp()`.

**5.376.5.12** `template<typename _CharT, typename _Traits> char_type*`  
`std::basic_streambuf< _CharT, _Traits >::_M_out_cur`  
`[protected, inherited]`

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 186 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pbump()`, `std::basic_streambuf< char_type, traits_type >::pptr()`, and `std::basic_streambuf< char_type, traits_type >::setp()`.

**5.376.5.13** `template<typename _CharT, typename _Traits> char_type*`  
`std::basic_streambuf< _CharT, _Traits >::_M_out_end`  
`[protected, inherited]`

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 187 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::epptr()`, and `std::basic_streambuf< char_type, traits_type >::setp()`.

**5.376.5.14** `template<typename _CharT, typename _Traits> char_type  
std::basic_filebuf< _CharT, _Traits >::_M_pback [protected]`

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 139 of file fstream.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::\_M\_create\_pback().

**5.376.5.15** `template<typename _CharT, typename _Traits> char_type*  
std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save  
[protected]`

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 140 of file fstream.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::\_M\_create\_pback(), and  
std::basic\_filebuf< char\_type, traits\_type >::\_M\_destroy\_pback().

**5.376.5.16** `template<typename _CharT, typename _Traits> char_type*  
std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save  
[protected]`

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 141 of file fstream.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::\_M\_create\_pback(), and  
std::basic\_filebuf< char\_type, traits\_type >::\_M\_destroy\_pback().

**5.376.5.17** `template<typename _CharT, typename _Traits> bool  
std::basic_filebuf< _CharT, _Traits >::_M_pback_init  
[protected]`

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 142 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`.

**5.376.5.18** `template<typename _CharT, typename _Traits> bool  
std::basic_filebuf< _CharT, _Traits >::_M_reading  
[protected]`

`_M_reading == false && _M_writing == false` for **uncommitted** mode; `_M_reading == true` for **read** mode; `_M_writing == true` for **write** mode;

NB: `_M_reading == true && _M_writing == true` is unused.

Definition at line 130 of file `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::open()`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

The documentation for this class was generated from the following files:

- [fstream.tcc](#)

## 5.377 `std::basic_fstream< _CharT, _Traits >` Class Template Reference

Controlling input and output for files.

This class supports reading from and writing to named files, using the inherited functions from [std::basic\\_iostream](#). To control the associated sequence, an instance of [std::basic\\_filebuf](#) is used, which this page refers to as `sb`.

Inheritance diagram for std::basic\_fstream<\_CharT, \_Traits>:

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__istream_type & operator>> (long double &__f)`
- `__istream_type & operator>> (void *&__p)`
- `__istream_type & operator>> (__streambuf_type * __sb)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

*If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.*

*If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.*

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`

- `__ostream_type & operator<< (__streambuf_type *__sb)`

### Unformatted Output Functions

*All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.*

*If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.*

*If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.*

- `__ostream_type & put (char_type __c)`
- `void _M_write (const char_type *__s, streamsize __n)`
- `__ostream_type & write (const char_type *__s, streamsize __n)`

### Static Public Member Functions

- static bool `sync_with_stdio` (bool \_\_sync=true)
- static int `xalloc` () throw ()

### Static Public Attributes

#### 5.377.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_fstream<_CharT, _Traits>`

Controlling input and output for files.

This class supports reading from and writing to named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 761 of file `fstream`.

### 5.377.2 Member Typedef Documentation

**5.377.2.1** `template<typename _CharT, typename _Traits> typedef  
ctype<_CharT> std::basic_istream<_CharT, _Traits  
>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 73 of file `istream`.

**5.377.2.2** `template<typename _CharT, typename _Traits> typedef  
ctype<_CharT> std::basic_ostream<_CharT, _Traits  
>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 73 of file `ostream`.

**5.377.2.3** `template<typename _CharT, typename _Traits> typedef  
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>  
> std::basic_istream<_CharT, _Traits>::__num_get_type  
[inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 72 of file `istream`.

**5.377.2.4** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
> std::basic_ostream<_CharT, _Traits>::__num_put_type  
[inherited]`

These are non-standard types.

Reimplemented in `std::basic_ostream<_CharT, _Traits>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 86 of file `basic_ios.h`.

**5.377.2.5** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
> std::basic_ostream<_CharT, _Traits>::__num_put_type  
[inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 72 of file `ostream`.

**5.377.2.6** `template<typename _CharT, typename _Traits> typedef _CharT  
std::basic_istream<_CharT, _Traits>::char_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istreamstream<_CharT, _Traits, _Alloc>`.

Definition at line 61 of file `istream`.

**5.377.2.7** `template<typename _CharT, typename _Traits> typedef _CharT  
std::basic_fstream<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_iostream<_CharT, _Traits>`.

Definition at line 765 of file `fstream`.

**5.377.2.8** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)  
[inherited]`

The type of an event callback function.

#### Parameters

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

#### 5.377.2.9 `typedef _Ios_Fmtflags std::ios_base::fmtflags` [inherited]

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 257 of file `ios_base.h`.

**5.377.2.10** `template<typename _CharT, typename _Traits> typedef  
_Traits::int_type std::basic_istream<_CharT, _Traits>::int_type  
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istream<_CharT, _Traits, _Alloc>`.

Definition at line 62 of file `istream`.

**5.377.2.11** `template<typename _CharT, typename _Traits> typedef  
traits_type::int_type std::basic_fstream<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_iostream<_CharT, _Traits>`.

Definition at line 767 of file `fstream`.

**5.377.2.12** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 332 of file `ios_base.h`.

**5.377.2.13** `template<typename _CharT, typename _Traits> typedef  
_Traits::off_type std::basic_istream<_CharT, _Traits>::off_type  
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istream<_CharT, _Traits, _Alloc>`.

Definition at line 64 of file `istream`.

**5.377.2.14** `template<typename _CharT, typename _Traits> typedef  
traits_type::off_type std::basic_fstream<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_iostream<_CharT, _Traits>`.

Definition at line 769 of file `fstream`.

**5.377.2.15** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 363 of file `ios_base.h`.

**5.377.2.16** `template<typename _CharT, typename _Traits> typedef traits_type::pos_type std::basic_fstream<_CharT, _Traits>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream<_CharT, _Traits>`.

Definition at line 768 of file `fstream`.

**5.377.2.17** `template<typename _CharT, typename _Traits> typedef _Traits::pos_type std::basic_istream<_CharT, _Traits>::pos_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istream<_CharT, _Traits, _Alloc>`.

Definition at line 63 of file `istream`.

**5.377.2.18** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

**5.377.2.19** `template<typename _CharT, typename _Traits> typedef _Traits std::basic_fstream<_CharT, _Traits>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream<_CharT, _Traits>`.

Definition at line 766 of file `fstream`.

**5.377.2.20** `template<typename _CharT, typename _Traits> typedef  
_Traits std::basic_istream<_CharT, _Traits>::traits_type  
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istream<_CharT, _Traits, _Alloc>`.

Definition at line 65 of file `istream`.

### 5.377.3 Member Enumeration Documentation

**5.377.3.1** `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 421 of file `ios_base.h`.

### 5.377.4 Constructor & Destructor Documentation

**5.377.4.1** `template<typename _CharT, typename _Traits>  
std::basic_fstream<_CharT, _Traits>::basic_fstream ( )  
[inline]`

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 788 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`.

**5.377.4.2** `template<typename _CharT , typename _Traits >  
std::basic_fstream< _CharT, _Traits >::basic_fstream ( const char *  
__s, ios_base::openmode __mode = ios_base::in | ios_base::out )  
[inline, explicit]`

Create an input/output file stream.

#### Parameters

*s* Null terminated string specifying the filename.

*mode* Open file in specified mode (see [std::ios\\_base](#)).

Tip: When using std::string to hold the filename, you must use .c\_str() before passing it to this constructor.

Definition at line 801 of file fstream.

References std::basic\_ios<\_CharT, \_Traits>::init(), and std::basic\_fstream<\_CharT, \_Traits>::open().

**5.377.4.3** `template<typename _CharT , typename _Traits >  
std::basic_fstream< _CharT, _Traits >::basic_fstream  
( const std::string & __s, ios_base::openmode __mode =  
ios_base::in | ios_base::out ) [inline, explicit]`

Create an input/output file stream.

#### Parameters

*s* Null terminated string specifying the filename.

*mode* Open file in specified mode (see [std::ios\\_base](#)).

Definition at line 816 of file fstream.

References std::basic\_ios<\_CharT, \_Traits>::init(), and std::basic\_fstream<\_CharT, \_Traits>::open().

**5.377.4.4** `template<typename _CharT , typename _Traits >  
std::basic_fstream< _CharT, _Traits >::~basic_fstream ( )  
[inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 831 of file fstream.

### **5.377.5 Member Function Documentation**

#### **5.377.5.1 const locale& std::ios\_base::\_M\_getloc ( ) const [inline, inherited]**

Locale access.

##### **Returns**

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 708 of file ios\_base.h.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::time\_put< \_CharT, \_OutIter >::put().

#### **5.377.5.2 template<typename \_CharT, typename \_Traits> void std::basic\_ostream< \_CharT, \_Traits >::\_M\_write ( const char\_type \* \_\_s, streamsize \_\_n ) [inline, inherited]**

Simple insertion.

##### **Parameters**

*c* The character to insert.

##### **Returns**

\*this

Tries to insert *c*.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 289 of file ostream.

**5.377.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits >::bad ( ) const [inline, inherited]`

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 203 of file basic\_ios.h.

**5.377.5.4** `template<typename _CharT , typename _Traits > void std::basic_ios< _CharT, _Traits >::clear ( iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

**Parameters**

*state* The new state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file basic\_ios.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ios< char, _Traits >::exceptions()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.377.5.5** `template<typename _CharT, typename _Traits> void  
std::basic_fstream< _CharT, _Traits >::close ( ) [inline]`

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 911 of file `fstream`.

References `std::basic_filebuf< _CharT, _Traits >::close()`, `std::ios_base::failbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.377.5.6** `template<typename _CharT, typename _Traits> basic_ios<  
_CharT, _Traits> & std::basic_ios< _CharT, _Traits >::copyfmt (   
const basic_ios< _CharT, _Traits> & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

#### Parameters

`__rhs` The source values for the copies.

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 64 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

**5.377.5.7** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits>::eof ( ) const [inline, inherited]`

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.377.5.8** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::exceptions( ) const [inline,  
inherited]`

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 214 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::clear()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.377.5.9** `template<typename _CharT, typename _Traits> void std::basic_ios<  
_CharT, _Traits>::exceptions( iostate __except ) [inline,  
inherited]`

Throwing exceptions on errors.

**Parameters**

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios\\_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 249 of file basic\_ios.h.

**5.377.5.10** `template<typename _CharT, typename _Traits> bool  
std::basic_ios<_CharT, _Traits>::fail ( ) const [inline,  
inherited]`

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file basic\_ios.h.

Referenced by `std::basic_ios<char, _Traits>::operator void*()`, `std::basic_ios<char, _Traits>::operator!()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_Ch_type>::value()`.

**5.377.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::fill ( char_type __ch )  
[inline, inherited]`

Sets a new *empty* character.

**Parameters**

*ch* The new character.

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 382 of file `basic_ios.h`.

**5.377.5.12** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill ( ) const [inline,  
inherited]`

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 362 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::basic_ios< char, _Traits >::fill()`.

**5.377.5.13** `fmtflags std::ios_base::flags ( fmtflags __fmtfl ) [inline,  
inherited]`

Setting new format flags all at once.

**Parameters**

*fmtfl* The new flags to set.

**Returns**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file ios\_base.h.

#### 5.377.5.14 fmtflags std::ios\_base::flags ( ) const [inline, inherited]

Access to format flags.

##### Returns

The format control flags for both input and output.

Definition at line 553 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), std::num\_get<\_CharT, \_InIter>::do\_get(), std::num\_put<\_CharT, \_OutIter>::do\_put(), std::basic\_ostream<\_CharT, \_Traits>::operator<<(), std::operator<<(), std::operator>>(), and std::basic\_istream<\_CharT, \_Traits>::sentry::sentry().

#### 5.377.5.15 template<typename \_CharT, typename \_Traits> basic\_ostream<\_CharT, \_Traits> & std::basic\_ostream<\_CharT, \_Traits>::flush ( ) [inherited]

Synchronizing the stream buffer.

##### Returns

\*this

If *rdbuf()* is a null pointer, changes nothing.

Otherwise, calls *rdbuf()* -> *pubsync()*, and if that returns -1, sets *badbit*.

Definition at line 213 of file ostream.tcc.

References std::ios\_base::badbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

Referenced by std::flush().

#### 5.377.5.16 template<typename \_CharT, typename \_Traits> streamsize std::basic\_istream<\_CharT, \_Traits>::gcount ( ) const [inline, inherited]

Character counting.

#### Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 251 of file istream.

**5.377.5.17** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get ( void ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 238 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.377.5.18** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get ( char_type & __c ) [inherited]`

Simple extraction.

#### Parameters

*c* The character in which to store data.

#### Returns

`*this`

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 274 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.377.5.19** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n, char_type __delim )`  
[*inherited*]

Simple multiple-character extraction.

**Parameters**

- s* Pointer to an array.
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

**Returns**

\*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*−1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 311 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.377.5.20** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( __streambuf_type & __sb, char_type __delim ) [inherited]`

Extraction into another streambuf.

#### Parameters

*sb* A streambuf in which to store data.

*delim* A "stop" character.

#### Returns

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 358 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

**5.377.5.21** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::get ( char_type * __s,  
streamsize __n ) [inline, inherited]`

Simple multiple-character extraction.

#### Parameters

- s* Pointer to an array.
- n* Maximum number of characters to store in *s*.

#### Returns

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 335 of file istream.

**5.377.5.22** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::get ( __streambuf_type &  
__sb ) [inline, inherited]`

Extraction into another streambuf.

#### Parameters

- sb* A streambuf in which to store data.

#### Returns

\*this

Returns `get(sb,widen('\n'))`.

Definition at line 368 of file istream.

**5.377.5.23** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::getline ( char_type * __s,  
streamsize __n ) [inline, inherited]`

String extraction.

**Parameters**

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.

**Returns**

`*this`

Returns `getline(s,n,widen('\n'))`.

Definition at line 408 of file `istream`.

Referenced by `std::basic_istream<char>::getline()`.

**5.377.5.24** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

String extraction.

**Parameters**

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

**Returns**

`*this`

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 402 of file istream.tcc.

References std::basic\_istream<\_CharT, \_Traits>::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios<\_CharT, \_Traits>::eof(), std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), std::basic\_streambuf<\_CharT, \_Traits>::sbumpc(), std::basic\_ios<\_CharT, \_Traits>::setstate(), std::basic\_streambuf<\_CharT, \_Traits>::sgetc(), and std::basic\_streambuf<\_CharT, \_Traits>::snextc().

#### **5.377.5.25 locale std::ios\_base::getloc ( ) const [inline, inherited]**

Locale access.

##### **Returns**

A copy of the current locale.

If imbue(loc) has previously been called, then this function returns loc. Otherwise, it returns a copy of std::locale(), the global C++ locale.

Definition at line 697 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), std::money\_put<\_CharT, \_OutIter>::do\_put(), std::basic\_ios<\_CharT, \_Traits>::imbue(), std::operator>>(), and std::ws().

#### **5.377.5.26 template<typename \_CharT, typename \_Traits> bool std::basic\_ios<\_CharT, \_Traits>::good ( ) const [inline, inherited]**

Fast error checking.

##### **Returns**

True if no error flags are set.

A wrapper around rdstate.

Definition at line 172 of file basic\_ios.h.

Referenced by std::basic\_ostream<\_CharT, \_Traits>::sentry::sentry(), and std::basic\_istream<\_CharT, \_Traits>::sentry::sentry().

**5.377.5.27** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore( void ) [inherited]`

Discarding characters.

#### Parameters

*n* Number of characters to discard.

*delim* A "stop" character.

#### Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if *n* != `std::numeric_limits<int>::max()`, *n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 462 of file istream.tcc.

**5.377.5.28** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore( streamsize __n ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 495 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

**5.377.5.29** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore ( streamsize __n, int_type __delim ) [inherited]`

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 557 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_streambuf< \_CharT, \_Traits >::sbumpc(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

**5.377.5.30** `template<typename _CharT, typename _Traits > locale std::basic_ios< _CharT, _Traits >::imbue ( const locale & __loc ) [inherited]`

Moves to a new locale.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Reimplemented from `std::ios_base`.

Definition at line 115 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.377.5.31** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<  
_CharT, _Traits> * __sb ) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, _Traits>::basic_ios()`, `std::basic_istream<char>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<char>::basic_ostream()`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**5.377.5.32** `template<typename _CharT, typename _Traits> bool  
std::basic_fstream<_CharT, _Traits>::is_open ( ) [inline]`

Wrapper to test for an open file.

#### Returns

`rdbuf() -> is_open()`

Definition at line 850 of file `fstream`.

References `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.377.5.33 long& std::ios\_base::iword ( int \_\_ix ) [inline, inherited]**

Access to integer array.

**Parameters**

*\_\_ix* Index into the array.

**Returns**

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file ios\_base.h.

**5.377.5.34 template<typename \_CharT, typename \_Traits> char  
std::basic\_ios<\_CharT, \_Traits>::narrow ( char\_type \_\_c, char  
\_\_dfault ) const [inline, inherited]**

Squeezes characters.

**Parameters**

*c* The character to narrow.

*dfault* The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 422 of file basic\_ios.h.

**5.377.5.35** `template<typename _CharT, typename _Traits> void  
std::basic_fstream<_CharT, _Traits>::open ( const char * __s,  
ios_base::openmode __mode = ios_base::in | ios_base::out )  
[inline]`

Opens an external file.

#### Parameters

- s* The name of the file.
- mode* The open mode flags.

Calls `std::basic_filebuf::open(s, mode)`. If that function fails, `failbit` is set in the stream's error state.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 871 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::failbit`, `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Definition at line 206 of file `ostream`.

**5.377.5.55** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<<( __streambuf_type * __sb ) [inherited]`

Extracting from another streambuf.

#### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 122 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 126 of file istream.

**5.377.5.57** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::operator>> ( unsigned  
long & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 191 of file `istream`.

**5.377.5.58** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::operator>> ( long long &  
__n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 196 of file `istream`.

**5.377.5.59** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::operator>> ( unsigned  
long long & __n ) [inline, inherited]`

Basic arithmetic extractors.

**Parameters**

*A* variable of builtin type.

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 200 of file `istream`.

**5.377.5.60** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( ios_base &(*) (ios_base &) __pf ) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 133 of file `istream`.

**5.377.5.61** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( float & __f ) [inline, inherited]`

Basic arithmetic extractors.

**Parameters**

*A* variable of builtin type.

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 205 of file `istream`.

**5.377.5.62** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::operator>> ( unsigned int  
& __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 183 of file istream.

**5.377.5.63** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::operator>> ( double &  
__f ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 209 of file istream.

**5.377.5.64** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::operator>> ( bool & __n  
) [inline, inherited]`

Basic arithmetic extractors.

**Parameters**

*A* variable of builtin type.

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 169 of file istream.

**5.377.5.65** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( long double & __f ) [inline, inherited]`

Basic arithmetic extractors.

**Parameters**

*A* variable of builtin type.

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 213 of file istream.

**5.377.5.66** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> ( short & __n ) [inherited]`

Basic arithmetic extractors.

**Parameters**

*A* variable of builtin type.

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 116 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.377.5.67** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> ( __streambuf_type * __sb ) [inherited]`

Extracting into another streambuf.

#### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 206 of file `istream.tcc`.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.377.5.68** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( __istream_type &(*)(__istream_type &) __pf ) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 122 of file `istream`.

```
5.377.5.69 template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream<_CharT, _Traits>::operator>> (unsigned
short & __n) [inline, inherited]
```

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 176 of file `istream`.

```
5.377.5.70 template<typename _CharT, typename _Traits> __istream_type&
std::basic_istream<_CharT, _Traits>::operator>> (long & __n
) [inline, inherited]
```

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 187 of file `istream`.

**5.377.5.71** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> ( int & __n ) [inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 161 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.377.5.72** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( void *& __p ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 217 of file `istream`.

**5.377.5.73** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek ( void ) [inherited]`

Looking ahead in the stream.

#### Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 622 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

#### 5.377.5.74 `streamsize std::ios_base::precision ( ) const [inline, inherited]`

Flags access.

#### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

#### 5.377.5.75 `streamsize std::ios_base::precision ( streamsize __prec ) [inline, inherited]`

Changing flags.

#### Parameters

*prec* The new precision value.

#### Returns

The previous value of `precision()`.

Definition at line 632 of file `ios_base.h`.

**5.377.5.76** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put (char_type __c) [inherited]`

Simple insertion.

#### Parameters

*c* The character to insert.

#### Returns

\*this

Tries to insert *c*.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 151 of file ostream.tcc.

References std::ios\_base::badbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

Referenced by std::endl(), and std::ends().

**5.377.5.77** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback (char_type __c) [inherited]`

Unextracting a single character.

#### Parameters

*c* The character to push back into the input stream.

#### Returns

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

**Note**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 713 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

**5.377.5.78** `void*& std::ios_base::pword ( int __ix ) [inline, inherited]`

Access to void pointer array.

**Parameters**

`__ix` Index into the array.

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file `ios_base.h`.

**5.377.5.79** `template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( basic_streambuf< _CharT, _Traits > * __sb ) [inherited]`

Changing the underlying buffer.

**Parameters**

*sb* The new stream buffer.

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 54 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.377.5.80** `template<typename _CharT, typename _Traits> __filebuf_type*`  
`std::basic_fstream<_CharT, _Traits>::rdbuf( ) const`  
`[inline]`

Accessing the underlying buffer.

**Returns**

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 842 of file `fstream`.

**5.377.5.81** `template<typename _CharT, typename _Traits> iostate`  
`std::basic_ios<_CharT, _Traits>::rdstate( ) const` `[inline,`  
`inherited]`

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 129 of file basic\_ios.h.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.377.5.82** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read ( char_type * __s, streamsize __n ) [inherited]`

Extraction without delimiters.

**Parameters**

- s* A character array.
- n* Maximum number of characters to store.

**Returns**

\*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 652 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.377.5.83** `template<typename _CharT, typename _Traits > streamsize  
std::basic_istream< _CharT, _Traits >::readsome ( char_type *  
__s, streamsize __n ) [inherited]`

Extraction until the buffer is exhausted, but no more.

#### Parameters

- s* A character array.
- n* Maximum number of characters to store.

#### Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets eofbit and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 681 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.377.5.84** `void std::ios_base::register_callback ( event_callback __fn, int  
__index ) [inherited]`

Add the callback *\_\_fn* with parameter *\_\_index*.

#### Parameters

- \_\_fn* The function to add.
- \_\_index* The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.377.5.85** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

#### Parameters

*off* A file offset object.  
*dir* The direction in which to seek.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 886 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.377.5.86** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg( pos_type __pos ) [inherited]`

Changing the current read position.

#### Parameters

*pos* A file position object.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 847 of file istream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.377.5.87** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp( pos_type __pos ) [inherited]`

Changing the current write position.

#### Parameters

*pos* A file position object.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 260 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.377.5.88** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current write position.

**Parameters**

*off* A file offset object.

*dir* The direction in which to seek.

**Returns**

\*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 292 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.377.5.89 fmtflags std::ios\_base::setf ( fmtflags \_\_fmtfl ) [inline, inherited]**

Setting new format flags.

**Parameters**

*fmtfl* Additional flags to set.

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file ios\_base.h.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.377.5.90 fmtflags std::ios\_base::setf ( fmtflags \_\_fmtfl, fmtflags \_\_mask ) [inline, inherited]**

Setting new format flags.

**Parameters**

*fmtfl* Additional flags to set.

*mask* The flags mask for *fmtfl*.

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is [ios\\_base::adjustfield](#).

Definition at line 597 of file [ios\\_base.h](#).

```
5.377.5.91 template<typename _CharT, typename _Traits> void
std::basic_ios<_CharT, _Traits>::setstate (iostate __state)
[inline, inherited]
```

Sets additional flags in the error state.

**Parameters**

*state* The additional state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 149 of file [basic\\_ios.h](#).

Referenced by [std::basic\\_ostream<char>::\\_M\\_write\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::peek\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#), and [std::ws\(\)](#).

**5.377.5.92** `template<typename _CharT, typename _Traits> int  
std::basic_istream<_CharT, _Traits>::sync ( void )  
[inherited]`

Synchronizing the stream buffer.

#### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 783 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.377.5.93** `static bool std::ios_base::sync_with_stdio ( bool __sync = true )  
[static, inherited]`

Interaction with the standard C I/O objects.

#### Parameters

*sync* Whether to synchronize or not.

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.377.5.94** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg( void ) [inherited]`

Getting the current read position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 819 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.377.5.95** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp( ) [inherited]`

Getting the current write position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 239 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.377.5.96** `template<typename _CharT, typename _Traits>  
 basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie( ) const [inline, inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.377.5.97** `template<typename _CharT, typename _Traits>  
 basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie( basic_ostream<_CharT, _Traits> * __tiestr ) [inline,  
inherited]`

Ties this stream to an output stream.

#### Parameters

*tiestr* The output stream.

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 299 of file `basic_ios.h`.

**5.377.5.98** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget  
( void ) [inherited]`

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 748 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

**5.377.5.99** `void std::ios_base::unsetf ( fmtflags __mask ) [inline, inherited]`

Clearing format flags.

**Parameters**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.377.5.100** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::widen ( char __c ) const  
[inline, inherited]`

Widens characters.

**Parameters**

*c* The character to widen.

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 441 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::basic_ios<char, _Traits>::fill()`, `std::basic_istream<char>::get()`, `std::basic_istream<char>::getline()`, `std::getline()`, and `std::operator>>()`.

#### 5.377.5.101 streamsize std::ios\_base::width ( streamsize \_\_wide ) [inline, inherited]

Changing flags.

**Parameters**

*wide* The new width value.

**Returns**

The previous value of `width()`.

Definition at line 655 of file `ios_base.h`.

#### 5.377.5.102 streamsize std::ios\_base::width ( ) const [inline, inherited]

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outputter>::do_put()`, and `std::operator>>()`.

**5.377.5.103** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::write ( const char_type * __s, streamsize __n ) [inherited]`

Character string insertion.

#### Parameters

- s* The array to insert.
- n* Maximum number of characters to insert.

#### Returns

\*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- n* characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

#### Note

This function is not overloaded on signed char and unsigned char.

**5.377.5.104** `static int std::ios_base::xalloc ( ) throw () [static, inherited]`

Access to unique indices.

#### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 5.377.6 Member Data Documentation

#### 5.377.6.1 template<typename \_CharT, typename \_Traits> streamsize std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount [protected, inherited]

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 81 of file istream.

Referenced by std::basic\_istream< char >::gcount(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::basic\_istream< char >::~basic\_istream().

#### 5.377.6.2 const fmtflags std::ios\_base::adjustfield [static, inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 312 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), std::internal(), std::left(), and std::right().

#### 5.377.6.3 const openmode std::ios\_base::app [static, inherited]

Seek to end before each write.

Definition at line 366 of file ios\_base.h.

#### 5.377.6.4 const openmode std::ios\_base::ate [static, inherited]

Open and seek to end immediately after opening.

Definition at line 369 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

**5.377.6.5 const iostate std::ios\_base::badbit [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 336 of file ios\_base.h.

Referenced by std::basic\_ostream<char>::M\_write(), std::basic\_ios<char, \_Traits>::bad(), std::basic\_ios<\_CharT, \_Traits>::clear(), std::basic\_ios<char, \_Traits>::fail(), std::basic\_ostream<\_CharT, \_Traits>::flush(), std::basic\_istream<\_CharT, \_Traits>::get(), std::basic\_istream<\_CharT, \_Traits>::getline(), std::basic\_istream<\_CharT, \_Traits>::ignore(), std::basic\_ios<\_CharT, \_Traits>::init(), std::basic\_ostream<\_CharT, \_Traits>::operator<<(), std::operator<<(), std::operator>>(), std::basic\_istream<\_CharT, \_Traits>::operator>>(), std::basic\_istream<\_CharT, \_Traits>::peek(), std::basic\_ostream<\_CharT, \_Traits>::put(), std::basic\_istream<\_CharT, \_Traits>::putback(), std::basic\_istream<\_CharT, \_Traits>::read(), std::basic\_istream<\_CharT, \_Traits>::readsome(), std::basic\_istream<\_CharT, \_Traits>::seekg(), std::basic\_ostream<\_CharT, \_Traits>::seekp(), std::basic\_istream<\_CharT, \_Traits>::sync(), std::basic\_istream<\_CharT, \_Traits>::tellg(), std::basic\_ostream<\_CharT, \_Traits>::tellp(), std::basic\_istream<\_CharT, \_Traits>::unset(), and std::basic\_ostream<\_CharT, \_Traits>::sentry::~sentry().

**5.377.6.6 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 315 of file ios\_base.h.

Referenced by std::dec(), std::num\_get<\_CharT, \_InIter>::do\_get(), std::hex(), std::oct(), and std::basic\_ostream<\_CharT, \_Traits>::operator<<().

**5.377.6.7 const seekdir std::ios\_base::beg [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 398 of file ios\_base.h.

**5.377.6.8 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text

## **5.377 std::basic\_fstream< \_CharT, \_Traits > Class Template Reference 1710**

mode). `/// This is probably not what you think it is; see http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html.`

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

### **5.377.6.9 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 260 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

### **5.377.6.10 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 401 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

### **5.377.6.11 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file `ios_base.h`.

Referenced by `std::dec()`.

### **5.377.6.12 const seekdir std::ios\_base::end [static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**5.377.6.13 const iostate std::ios\_base::eofbit [static, inherited]**

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::ws().

**5.377.6.14 const iostate std::ios\_base::failbit [static, inherited]**

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file ios\_base.h.

Referenced by std::basic\_fstream< \_CharT, \_Traits >::close(), std::basic\_ofstream< \_CharT, \_Traits >::close(), std::basic\_ifstream< \_CharT, \_Traits >::close(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_fstream< \_CharT, \_Traits >::open(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

**5.377.6.15 const fmtflags std::ios\_base::fixed [static, inherited]**

Generate floating-point output in fixed-point notation.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::fixed()`.

#### 5.377.6.16 `const fmtflags std::ios_base::floatfield` [`static`, `inherited`]

A mask of `scientific`|`fixed`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::scientific()`.

#### 5.377.6.17 `const iostate std::ios_base::goodbit` [`static`, `inherited`]

Indicates all is well.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::init()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

#### 5.377.6.18 `const fmtflags std::ios_base::hex` [`static`, `inherited`]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::basic_ostream<_CharT, _Traits>`

>::operator<<().

**5.377.6.19 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

**5.377.6.20 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 274 of file `ios_base.h`.

Referenced by `std::internal()`.

**5.377.6.21 const fmtflags std::ios\_base::left [static, inherited]**

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

**5.377.6.22 const fmtflags std::ios\_base::oct [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 281 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

**5.377.6.23 const openmode std::ios\_base::out [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

**5.377.6.24 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain `///` generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file `ios_base.h`.

Referenced by `std::right()`.

**5.377.6.25 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 288 of file `ios_base.h`.

Referenced by `std::scientific()`.

**5.377.6.26 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer `///` output.

Definition at line 292 of file `ios_base.h`.

Referenced by `std::noshowbase()`, and `std::showbase()`.

**5.377.6.27 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated `///` floating-point output.

Definition at line 296 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

**5.377.6.28 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

**5.377.6.29 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 302 of file ios\_base.h.

Referenced by std::noskipws(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), and std::skipws().

**5.377.6.30 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for ofstream.

Definition at line 383 of file ios\_base.h.

**5.377.6.31 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 305 of file ios\_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry().

**5.377.6.32 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following file:

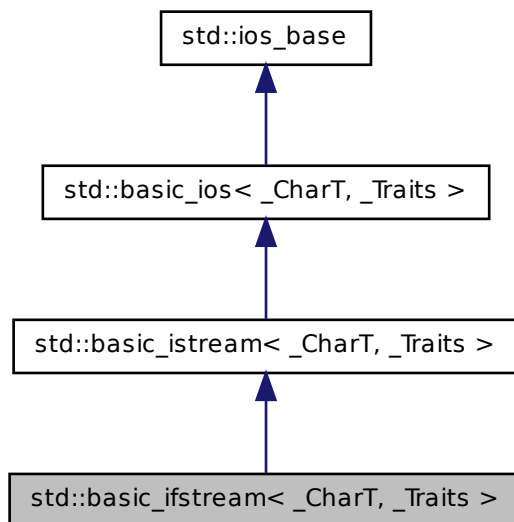

- [fstream](#)

### 5.378 `std::basic_ifstream< _CharT, _Traits >` Class Template Reference

Controlling input for files.

This class supports reading from named files, using the inherited functions from [std::basic\\_istream](#). To control the associated sequence, an instance of [std::basic\\_filebuf](#) is used, which this page refers to as `sb`.

Inheritance diagram for `std::basic_ifstream< _CharT, _Traits >`:

### Public Types

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ifstream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__istream_type & operator>> (__streambuf_type * __sb)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ifstream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `int_type get ()`
- `__istream_type & get (char_type &__c)`
- `__istream_type & get (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type & get (char_type *__s, streamsize __n)`
- `__istream_type & get (__streambuf_type &__sb, char_type __delim)`

### Friends

- `class` `sentry`

#### 5.378.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_ifstream< _CharT, _Traits >`

Controlling input for files.

This class supports reading from named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 420 of file `fstream`.

## 5.378.2 Member Typedef Documentation

**5.378.2.1** `template<typename _CharT, typename _Traits> typedef  
 ctype<_CharT> std::basic_istream< _CharT, _Traits  
 >::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Definition at line 73 of file `istream`.

**5.378.2.2** `template<typename _CharT, typename _Traits> typedef  
 num_get<_CharT, istreambuf_iterator<_CharT, _Traits>  
 > std::basic_istream< _CharT, _Traits >::__num_get_type  
 [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Definition at line 72 of file `istream`.

**5.378.2.3** `template<typename _CharT, typename _Traits> typedef  
 num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
 > std::basic_ios< _CharT, _Traits >::__num_put_type  
 [inherited]`

These are non-standard types.

Reimplemented in `std::basic_ostream< _CharT, _Traits >`, `std::basic_ostream< char, _Traits >`, and `std::basic_ostream< char >`.

Definition at line 86 of file `basic_ios.h`.

**5.378.2.4** `template<typename _CharT, typename _Traits > typedef _CharT  
 std::basic_ifstream< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream< _CharT, _Traits >`.

Definition at line 424 of file `fstream`.

**5.378.2.5** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`  
`[inherited]`

The type of an event callback function.

**Parameters**

- event* One of the members of the event enum.
- ios\_base* Reference to the `ios_base` object.
- int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

**5.378.2.6** `typedef _Ios_Fmtflags std::ios_base::fmtflags` `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`

- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 257 of file `ios_base.h`.

**5.378.2.7** `template<typename _CharT, typename _Traits> typedef traits_type::int_type std::basic_ifstream< _CharT, _Traits >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 426 of file `fstream`.

**5.378.2.8** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 332 of file `ios_base.h`.

**5.378.2.9** `template<typename _CharT , typename _Traits > typedef  
traits_type::off_type std::basic_ifstream< _CharT, _Traits  
>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 428 of file `fstream`.

**5.378.2.10** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 363 of file `ios_base.h`.

**5.378.2.11** `template<typename _CharT , typename _Traits > typedef  
traits_type::pos_type std::basic_ifstream< _CharT, _Traits  
>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 427 of file `fstream`.

**5.378.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir` [inherited]**

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

**5.378.2.13 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_ifstream<_CharT, _Traits>::traits_type`**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream<_CharT, _Traits>`.

Definition at line 425 of file `fstream`.

**5.378.3 Member Enumeration Documentation****5.378.3.1 `enum std::ios_base::event` [inherited]**

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 421 of file `ios_base.h`.

**5.378.4 Constructor & Destructor Documentation****5.378.4.1 `template<typename _CharT, typename _Traits> std::basic_ifstream<_CharT, _Traits>::basic_ifstream ( )` [inline]**

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 446 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`.

**5.378.4.2** `template<typename _CharT, typename _Traits>`  
`std::basic_ifstream<_CharT, _Traits>::basic_ifstream ( const char`  
`* __s, ios_base::openmode __mode = ios_base::in ) [inline,`  
`explicit]`

Create an input file stream.

#### Parameters

*s* Null terminated string specifying the filename.

*mode* Open file in specified mode (see [std::ios\\_base](#)).

[ios\\_base::in](#) is automatically included in *mode*.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 460 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`, and `std::basic_ifstream<_CharT, _Traits>::open()`.

**5.378.4.3** `template<typename _CharT, typename _Traits>`  
`std::basic_ifstream<_CharT, _Traits>::basic_ifstream ( const`  
`std::string & __s, ios_base::openmode __mode = ios_base::in )`  
`[inline, explicit]`

Create an input file stream.

#### Parameters

*s* `std::string` specifying the filename.

*mode* Open file in specified mode (see [std::ios\\_base](#)).

[ios\\_base::in](#) is automatically included in *mode*.

Definition at line 476 of file fstream.

References std::basic\_ios< \_CharT, \_Traits >::init(), and std::basic\_ifstream< \_CharT, \_Traits >::open().

**5.378.4.4** `template<typename _CharT , typename _Traits >  
std::basic_ifstream< _CharT, _Traits >::~~basic_ifstream ( )  
[inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 491 of file fstream.

## **5.378.5 Member Function Documentation**

**5.378.5.1** `const locale& std::ios_base::_M_getloc ( ) const [inline,  
inherited]`

Locale access.

### **Returns**

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 708 of file ios\_base.h.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::time\_put< \_CharT, \_OutIter >::put().

**5.378.5.2** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::bad ( ) const [inline, inherited]`

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 203 of file `basic_ios.h`.

**5.378.5.3** `template<typename _CharT , typename _Traits > void  
std::basic_ios< _CharT, _Traits >::clear ( iostate __state = goodbit )  
[inherited]`

[Re]sets the error state.

**Parameters**

*state* The new state flag(s) to set.

See [`std::ios\_base::iostate`](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ios< char, _Traits >::exceptions()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.378.5.4** `template<typename _CharT , typename _Traits > void  
std::basic_ifstream< _CharT, _Traits >::close ( ) [inline]`

Close the file.

Calls [`std::basic\_filebuf::close\(\)`](#). If that function fails, `failbit` is set in the stream's error state.

Definition at line 569 of file `fstream`.

References `std::basic_filebuf< _CharT, _Traits >::close()`, `std::ios_base::failbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.5** `template<typename _CharT, typename _Traits > basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt ( const basic_ios< _CharT, _Traits > & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

#### Parameters

`__rhs` The source values for the copies.

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 64 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

**5.378.5.6** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline, inherited]`

Fast error checking.

#### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.378.5.7** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::exceptions( ) const [inline,  
inherited]`

Throwing exceptions on errors.

#### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 214 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::clear()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.378.5.8** `template<typename _CharT, typename _Traits> void std::basic_ios<  
_CharT, _Traits>::exceptions( iostate __except ) [inline,  
inherited]`

Throwing exceptions on errors.

#### Parameters

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios\\_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);
```

```
std::cerr << "Setting exception mask\n";
f.exceptions (std::ios_base::badbit);
}
```

Definition at line 249 of file `basic_ios.h`.

#### 5.378.5.9 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline, inherited]`

Fast error checking.

##### Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator void *()`, `std::basic_ios< char, _Traits >::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

#### 5.378.5.10 `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill ( char_type __ch ) [inline, inherited]`

Sets a new *empty* character.

##### Parameters

*ch* The new character.

##### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ' ) in the current locale.

Definition at line 382 of file `basic_ios.h`.

**5.378.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill ( ) const [inline,  
inherited]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 362 of file basic\_ios.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::basic\_ios< char, \_Traits >::fill().

**5.378.5.12** `fmtflags std::ios_base::flags ( fmtflags __fmtfl ) [inline,  
inherited]`

Setting new format flags all at once.

#### Parameters

*fmtfl* The new flags to set.

#### Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file ios\_base.h.

**5.378.5.13** `fmtflags std::ios_base::flags ( ) const [inline, inherited]`

Access to format flags.

#### Returns

The format control flags for both input and output.

Definition at line 553 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

**5.378.5.14** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream< _CharT, _Traits >::gcount ( ) const  
[inline, inherited]`

Character counting.

#### Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 251 of file istream.

**5.378.5.15** `template<typename _CharT, typename _Traits > basic_istream<  
_CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits  
>::get ( void ) [inherited]`

Simple extraction.

#### Returns

A character, or [eof\(\)](#).

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 238 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.378.5.16** `template<typename _CharT, typename _Traits > basic_istream<  
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (   
char_type & __c ) [inherited]`

Simple extraction.

#### Parameters

*c* The character in which to store data.

#### Returns

`*this`

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 274 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.17** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

Simple multiple-character extraction.

#### Parameters

*s* Pointer to an array.

*n* Maximum number of characters to store in *s*.

*delim* A "stop" character.

#### Returns

`*this`

Characters are extracted and stored into *s* until one of the following happens:

- *n*−1 characters are stored
- the input sequence reaches EOF

- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 311 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snexctc()`.

**5.378.5.18** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get ( __streambuf_type & __sb, char_type __delim ) [inherited]`

Extraction into another streambuf.

#### Parameters

*sb* A streambuf in which to store data.

*delim* A "stop" character.

#### Returns

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 358 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

**5.378.5.19** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n ) [inline, inherited]`

Simple multiple-character extraction.

#### Parameters

- s* Pointer to an array.
- n* Maximum number of characters to store in *s*.

#### Returns

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 335 of file `istream`.

**5.378.5.20** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get ( __streambuf_type & __sb ) [inline, inherited]`

Extraction into another streambuf.

#### Parameters

- sb* A streambuf in which to store data.

#### Returns

\*this

Returns `get(sb,widen('\n'))`.

Definition at line 368 of file `istream`.

**5.378.5.21** `template<typename _CharT, typename _Traits> __istream_type& std::basic_ifstream< _CharT, _Traits >::getline ( char_type * __s, streamsize __n ) [inline, inherited]`

String extraction.

#### Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.

#### Returns

\*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 408 of file istream.

Referenced by `std::basic_ifstream< char >::getline()`.

**5.378.5.22** `template<typename _CharT, typename _Traits > basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::getline ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

String extraction.

#### Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

#### Returns

\*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state

2. the next character equals `delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 402 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::sngetc()`.

#### 5.378.5.23 `locale std::ios_base::getloc() const [inline, inherited]`

Locale access.

##### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutIter >::do_put()`, `std::basic_ios< _CharT, _Traits >::imbue()`, `std::operator>>()`, and `std::ws()`.

#### 5.378.5.24 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good() const [inline, inherited]`

Fast error checking.

##### Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 172 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.378.5.25** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore ( void ) [inherited]`

Discarding characters.

#### Parameters

*n* Number of characters to discard.

*delim* A "stop" character.

#### Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if *n* != `std::numeric_limits<int>::max()`, *n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 462 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.26** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore ( streamsize __n ) [inherited]`

Simple extraction.

### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 495 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.378.5.27** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore ( streamsize __n, int_type __delim ) [inherited]`

Simple extraction.

### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 557 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.378.5.28** `template<typename _CharT, typename _Traits > locale std::basic_ios< _CharT, _Traits >::imbue ( const locale & __loc ) [inherited]`

Moves to a new locale.

### Parameters

*loc* The new locale.

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Reimplemented from `std::ios_base`.

Definition at line 115 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::operator<<()`.

**5.378.5.29** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::init ( basic_streambuf<  
_CharT, _Traits > * __sb ) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

Referenced by `std::basic_fstream< _CharT, _Traits >::basic_fstream()`, `std::basic_ifstream< _CharT, _Traits >::basic_ifstream()`, `std::basic_ios< char, _Traits >::basic_ios()`, `std::basic_istream< char >::basic_istream()`, `std::basic_istreamstream< _CharT, _Traits, _Alloc >::basic_istreamstream()`, `std::basic_ofstream< _CharT, _Traits >::basic_ofstream()`, `std::basic_ostream< char >::basic_ostream()`, `std::basic_ostreamstream< _CharT, _Traits, _Alloc >::basic_ostreamstream()`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream()`.

**5.378.5.30** `template<typename _CharT, typename _Traits > bool  
std::basic_ifstream< _CharT, _Traits >::is_open ( ) [inline]`

Wrapper to test for an open file.

**Returns**

`rdbuf() -> is_open()`

Definition at line 510 of file fstream.

References `std::basic_filebuf< _CharT, _Traits >::is_open()`.

**5.378.5.31 long& std::ios\_base::iword ( int \_\_ix ) [inline, inherited]**

Access to integer array.

**Parameters**

*\_\_ix* Index into the array.

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file `ios_base.h`.

**5.378.5.32 template<typename \_CharT, typename \_Traits> char  
std::basic\_ios< \_CharT, \_Traits >::narrow ( char\_type \_\_c, char  
\_\_dfault ) const [inline, inherited]**

Squeezes characters.

**Parameters**

*c* The character to narrow.

*dfault* The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 422 of file `basic_ios.h`.

**5.378.5.33** `template<typename _CharT, typename _Traits> void  
std::basic_ifstream<_CharT, _Traits>::open ( const std::string &  
__s, ios_base::openmode __mode = ios_base::in ) [inline]`

Opens an external file.

#### Parameters

- s* The name of the file.
- mode* The open mode flags.

Calls `std::basic_filebuf::open(s,mode|in)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 551 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::failbit`, `std::ios_base::in`, `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.378.5.34** `template<typename _CharT, typename _Traits> void  
std::basic_ifstream<_CharT, _Traits>::open ( const char * __s,  
ios_base::openmode __mode = ios_base::in ) [inline]`

Opens an external file.

#### Parameters

- s* The name of the file.
- mode* The open mode flags.

Calls `std::basic_filebuf::open(s,mode|in)`. If that function fails, `failbit` is set in the stream's error state.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 531 of file `fstream`.

## 5.378 `std::basic_ifstream<_CharT, _Traits>` Class Template Reference 1746

References `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::failbit`, `std::ios_base::in`, `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`.

_CharT, _Traits > & std::basic_istream< _CharT, _Traits  
>::operator>> ( short & __n ) [inherited]`

Basic arithmetic extractors.

### Parameters

*A* variable of builtin type.

### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 116 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get< _CharT, _InIter >::get()`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.46** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> ( void *& __p ) [inline, inherited]`

Basic arithmetic extractors.

### Parameters

*A* variable of builtin type.

### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 217 of file `istream`.

**5.378.5.47** `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> ( __streambuf_type * __sb ) [inherited]`

Extracting into another streambuf.

### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 206 of file `istream.tcc`.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.48** `template<typename _CharT, typename _Traits> __istream_type& std::basic_ifstream< _CharT, _Traits >::operator>> ( unsigned short & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 176 of file `istream`.

**5.378.5.49** `template<typename _CharT, typename _Traits> __istream_type& std::basic_ifstream< _CharT, _Traits >::operator>> ( unsigned long long & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 200 of file `istream`.

**5.378.5.50** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> ( int & __n ) [inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 161 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get< _CharT, _InIter >::get()`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.51** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> ( unsigned int & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 183 of file `istream`.

**5.378.5.52** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( __istream_type &(*)(__istream_type &) __pf ) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 122 of file `istream`.

**5.378.5.53** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( long & __n ) [inline, inherited]`

Basic arithmetic extractors.

**Parameters**

*A* variable of builtin type.

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 187 of file `istream`.

**5.378.5.54** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek ( void ) [inherited]`

Looking ahead in the stream.

### Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 622 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

### 5.378.5.55 `streamsize std::ios_base::precision ( streamsize __prec )` `[inline, inherited]`

Changing flags.

### Parameters

*prec* The new precision value.

### Returns

The previous value of `precision()`.

Definition at line 632 of file `ios_base.h`.

### 5.378.5.56 `streamsize std::ios_base::precision ( ) const` `[inline, inherited]`

Flags access.

### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::operator<<()`.

**5.378.5.57** `template<typename _CharT, typename _Traits > basic_ifstream<  
_CharT, _Traits > & std::basic_ifstream< _CharT, _Traits  
>::putback( char_type __c ) [inherited]`

Unextracting a single character.

#### Parameters

*c* The character to push back into the input stream.

#### Returns

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

#### Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 713 of file `istream.tcc`.

References `std::basic_ifstream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

**5.378.5.58** `void*& std::ios_base::pword( int __ix ) [inline,  
inherited]`

Access to void pointer array.

#### Parameters

*\_\_ix* Index into the array.

#### Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file `ios_base.h`.

**5.378.5.59** `template<typename _CharT, typename _Traits > __filebuf_type*  
std::basic_ifstream< _CharT, _Traits >::rdbuf ( ) const  
[inline]`

Accessing the underlying buffer.

#### Returns

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Definition at line 502 of file `fstream`.

**5.378.5.60** `template<typename _CharT, typename _Traits> basic_streambuf<  
_CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (   
basic_streambuf< _CharT, _Traits > * __sb ) [inherited]`

Changing the underlying buffer.

#### Parameters

*sb* The new stream buffer.

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

## 5.378 `std::basic_ifstream< _CharT, _Traits >` Class Template Reference 1757

---

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 54 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::clear()`.

### 5.378.5.61 `template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline, inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 129 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

### 5.378.5.62 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read ( char_type * __s, streamsize __n ) [inherited]`

Extraction without delimiters.

#### Parameters

*s* A character array.

*n* Maximum number of characters to store.

#### Returns

\*this

If the stream state is `good()`, extracts characters and stores them into `s` until one of the following happens:

- `n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 652 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.63** `template<typename _CharT, typename _Traits > streamsize  
std::basic_istream< _CharT, _Traits >::readsome ( char_type *  
__s, streamsize __n ) [inherited]`

Extraction until the buffer is exhausted, but no more.

#### Parameters

- `s` A character array.
- `n` Maximum number of characters to store.

#### Returns

The number of characters extracted.

Extracts characters and stores them into `s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 681 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.64** `void std::ios_base::register_callback ( event_callback __fn, int  
__index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

#### Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.378.5.65** `template<typename _CharT, typename _Traits > basic_istream<  
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg  
( pos_type __pos ) [inherited]`

Changing the current read position.

#### Parameters

`pos` A file position object.

#### Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 847 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.66** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg ( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

#### Parameters

*off* A file offset object.

*dir* The direction in which to seek.

#### Returns

\*this

If `fail()` is not true, calls `rddbuf()` → `pubseekoff(off, dir)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 886 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rddbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.67** `fmtflags std::ios_base::setf ( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

#### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file `ios_base.h`.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.378.5.68** `fmtflags std::ios_base::setf ( fmtflags __fmtfl, fmtflags __mask )`  
`[inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

*mask* The flags mask for *fmtfl*.

#### Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 597 of file `ios_base.h`.

**5.378.5.69** `template<typename _CharT, typename _Traits> void`  
`std::basic_ios< _CharT, _Traits >::setstate ( iostate __state )`  
`[inline, inherited]`

Sets additional flags in the error state.

#### Parameters

*state* The additional state flag(s) to set.

See `std::ios_base::iostate` for the possible bit values.

Definition at line 149 of file `basic_ios.h`.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`,

`std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.378.5.70** `template<typename _CharT, typename _Traits> int  
std::basic_istream< _CharT, _Traits >::sync ( void )  
[inherited]`

Synchronizing the stream buffer.

#### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 783 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.378.5.71** `static bool std::ios_base::sync_with_stdio ( bool __sync = true )  
[static, inherited]`

Interaction with the standard C I/O objects.

### Parameters

*sync* Whether to synchronize or not.

### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.378.5.72** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg( void ) [inherited]`

Getting the current read position.

### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 819 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.378.5.73** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie( ) const [inline, inherited]`

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ifstream< _CharT, _Traits >::sentry::sentry()`.

**5.378.5.74** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits`  
`>::tie ( basic_ostream<_CharT, _Traits > * __tiestr ) [inline,`  
`inherited]`

Ties this stream to an output stream.

**Parameters**

*tiestr* The output stream.

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 299 of file `basic_ios.h`.

**5.378.5.75** `template<typename _CharT, typename _Traits > basic_istream<`  
`_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::unget`  
`( void ) [inherited]`

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 748 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sungetc()`.

**5.378.5.76** `void std::ios_base::unsetf ( fmtflags __mask ) [inline, inherited]`

Clearing format flags.

**Parameters**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.378.5.77** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::widen ( char __c ) const  
[inline, inherited]`

Widens characters.

**Parameters**

*c* The character to widen.

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

## 5.378 std::basic\_ifstream< \_CharT, \_Traits > Class Template Reference 1766

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.ht>

Definition at line 441 of file basic\_ios.h.

Referenced by std::endl(), std::basic\_ios< char, \_Traits >::fill(), std::basic\_istream< char >::get(), std::basic\_istream< char >::getline(), std::getline(), and std::operator>>().

### 5.378.5.78 streamsize std::ios\_base::width ( ) const [inline, inherited]

Flags access.

#### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::operator>>().

### 5.378.5.79 streamsize std::ios\_base::width ( streamsize \_\_wide ) [inline, inherited]

Changing flags.

#### Parameters

*wide* The new width value.

#### Returns

The previous value of [width\(\)](#).

Definition at line 655 of file ios\_base.h.

### 5.378.5.80 static int std::ios\_base::xalloc ( ) throw () [static, inherited]

Access to unique indices.

### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 5.378.6 Member Data Documentation

### 5.378.6.1 `template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount` [**protected**, **inherited**]

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 81 of file `istream`.

Referenced by `std::basic_istream< char >::gcount()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::basic_istream< char >::~~basic_istream()`.

### 5.378.6.2 `const fmtflags std::ios_base::adjustfield` [**static**, **inherited**]

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

### 5.378.6.3 `const openmode std::ios_base::app` [**static**, **inherited**]

Seek to end before each write.

Definition at line 366 of file ios\_base.h.

#### **5.378.6.4 const openmode std::ios\_base::ate [static, inherited]**

Open and seek to end immediately after opening.

Definition at line 369 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

#### **5.378.6.5 const iostate std::ios\_base::badbit [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 336 of file ios\_base.h.

Referenced by std::basic\_ostream< char >::M\_write(), std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< \_CharT, \_Traits >::clear(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry().

#### **5.378.6.6 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 315 of file ios\_base.h.

Referenced by std::dec(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::hex(), std::oct(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.378.6.7 const seekdir std::ios\_base::beg [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 398 of file ios\_base.h.

**5.378.6.8 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see /// <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 374 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::showmanyc().

**5.378.6.9 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 260 of file ios\_base.h.

Referenced by std::boolalpha(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::noboolalpha().

**5.378.6.10 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 401 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

**5.378.6.11 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file ios\_base.h.

Referenced by `std::dec()`.

#### 5.378.6.12 `const seekdir std::ios_base::end` [**static, inherited**]

Request a seek relative to the current end of the sequence.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

#### 5.378.6.13 `const iostate std::ios_base::eofbit` [**static, inherited**]

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

#### 5.378.6.14 `const iostate std::ios_base::failbit` [**static, inherited**]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file `ios_base.h`.

Referenced by `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits`

`>::getline()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 5.378.6.15 `const fmtflags std::ios_base::fixed` [`static`, `inherited`]

Generate floating-point output in fixed-point notation.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::fixed()`.

#### 5.378.6.16 `const fmtflags std::ios_base::floatfield` [`static`, `inherited`]

A mask of `scientific|fixed`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::scientific()`.

#### 5.378.6.17 `const iostate std::ios_base::goodbit` [`static`, `inherited`]

Indicates all is well.

Definition at line 347 of file `ios_base.h`.

**5.379.1 Detailed Description**

`template<typename _CharT, typename _Traits> class std::basic_ios<_CharT, _Traits>`

Virtual base class for all stream classes.

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.

Definition at line 64 of file `basic_ios.h`.

**5.379.2 Member Typedef Documentation**

**5.379.2.1** `template<typename _CharT, typename _Traits> typedef`  
`ctype<_CharT> std::basic_ios<_CharT, _Traits>::__ctype_type`

These are non-standard types.

Reimplemented in `std::basic_istream<_CharT, _Traits>`, `std::basic_ostream<_CharT, _Traits>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 84 of file `basic_ios.h`.

**5.379.2.2** `template<typename _CharT, typename _Traits> typedef  
num_get<_CharT, istreambuf_iterator<_CharT, _Traits> >  
std::basic_ios<_CharT, _Traits>::__num_get_type`

These are non-standard types.

Reimplemented in `std::basic_istream<_CharT, _Traits>`, `std::basic_istream<char, _Traits>`, and `std::basic_istream<char>`.

Definition at line 88 of file `basic_ios.h`.

**5.379.2.3** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> >  
std::basic_ios<_CharT, _Traits>::__num_put_type`

These are non-standard types.

Reimplemented in `std::basic_ostream<_CharT, _Traits>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 86 of file `basic_ios.h`.

**5.379.2.4** `template<typename _CharT, typename _Traits> typedef _CharT  
std::basic_ios<_CharT, _Traits>::__char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_iostream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 73 of file `basic_ios.h`.

**5.379.2.5** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)  
[inherited]`

The type of an event callback function.

### Parameters

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

#### 5.379.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags` [inherited]

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`

- `basefield`
- `floatfield`

Definition at line 257 of file `ios_base.h`.

#### 5.379.2.7 `template<typename _CharT, typename _Traits> typedef _Traits::int_type std::basic_ios<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_iostream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 74 of file `basic_ios.h`.

#### 5.379.2.8 `typedef _Ios_Iostate std::ios_base::iostate` **[inherited]**

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 332 of file `ios_base.h`.

### 5.379.2.9 `template<typename _CharT, typename _Traits> typedef _Traits::off_type std::basic_ios<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_iostream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 76 of file `basic_ios.h`.

### 5.379.2.10 `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 363 of file `ios_base.h`.

### 5.379.2.11 `template<typename _CharT, typename _Traits> typedef _Traits::pos_type std::basic_ios<_CharT, _Traits>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_iostream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 75 of file `basic_ios.h`.

#### 5.379.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

#### 5.379.2.13 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_ios<_CharT, _Traits>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, `std::basic_istream<char, _Traits>`, `std::basic_istream<char>`, `std::basic_iostream<char>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 77 of file `basic_ios.h`.

### 5.379.3 Member Enumeration Documentation

#### 5.379.3.1 `enum std::ios_base::event` `[inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 421 of file `ios_base.h`.

### 5.379.4 Constructor & Destructor Documentation

#### 5.379.4.1 `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::basic_ios ( basic_streambuf<_CharT, _Traits> * __sb )` `[inline, explicit]`

Constructor performs initialization.

The parameter is passed by derived streams.

Definition at line 262 of file `basic_ios.h`.

#### 5.379.4.2 `template<typename _CharT, typename _Traits> virtual std::basic_ios<_CharT, _Traits>::~~basic_ios ( )` `[inline, virtual]`

Empty.

The destructor does nothing. More specifically, it does not destroy the streambuf held by `rdbuf()`.

Definition at line 274 of file `basic_ios.h`.

#### 5.379.4.3 `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::basic_ios ( )` `[inline, protected]`

Empty.

The default constructor does nothing and is not normally accessible to users.

Definition at line 452 of file `basic_ios.h`.

### 5.379.5 Member Function Documentation

#### 5.379.5.1 const locale& std::ios\_base::\_M\_getloc ( ) const [inline, inherited]

Locale access.

##### Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 708 of file ios\_base.h.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::time\_put< \_CharT, \_OutIter >::put().

#### 5.379.5.2 template<typename \_CharT, typename \_Traits> bool std::basic\_ios< \_CharT, \_Traits >::bad ( ) const [inline]

Fast error checking.

##### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 203 of file basic\_ios.h.

#### 5.379.5.3 template<typename \_CharT, typename \_Traits > void std::basic\_ios< \_CharT, \_Traits >::clear ( iostate \_\_state = goodbit )

[Re]sets the error state.

##### Parameters

*state* The new state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ios< char, _Traits >::exceptions()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.379.5.4** `template<typename _CharT, typename _Traits > basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt ( const basic_ios< _CharT, _Traits > & __rhs )`

Copies fields of `__rhs` into this.

#### Parameters

`__rhs` The source values for the copies.

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy [exceptions\(\)](#).

Definition at line 64 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

**5.379.5.5** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline]`

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.379.5.6** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline]`

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 214 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.379.5.7** `template<typename _CharT, typename _Traits> void std::basic_ios<  
_CharT, _Traits >::exceptions ( iostate __except ) [inline]`

Throwing exceptions on errors.

**Parameters**

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios\\_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```

#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}

```

Definition at line 249 of file basic\_ios.h.

#### 5.379.5.8 template<typename \_CharT, typename \_Traits> bool std::basic\_ios<\_CharT, \_Traits>::fail ( ) const [inline]

Fast error checking.

##### Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file basic\_ios.h.

Referenced by std::basic\_ios<char, \_Traits>::operator void \*(), std::basic\_ios<char, \_Traits>::operator!(), std::basic\_istream<\_CharT, \_Traits>::seekg(), std::basic\_ostream<\_CharT, \_Traits>::seekp(), std::basic\_istream<\_CharT, \_Traits>::tellg(), std::basic\_ostream<\_CharT, \_Traits>::tellp(), and std::regex\_traits<\_Ch\_type>::value().

#### 5.379.5.9 template<typename \_CharT, typename \_Traits> char\_type std::basic\_ios<\_CharT, \_Traits>::fill ( ) const [inline]

Retrieves the *empty* character.

##### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 362 of file basic\_ios.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::basic\_ios< char, \_Traits >::fill().

**5.379.5.10** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill ( char_type __ch )  
[inline]`

Sets a new *empty* character.

#### Parameters

*ch* The new character.

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 382 of file basic\_ios.h.

**5.379.5.11** `fmtflags std::ios_base::flags ( ) const [inline, inherited]`

Access to format flags.

#### Returns

The format control flags for both input and output.

Definition at line 553 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

**5.379.5.12** `fmtflags std::ios_base::flags ( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags all at once.

**Parameters**

*fmtfl* The new flags to set.

**Returns**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file ios\_base.h.

**5.379.5.13** `locale std::ios_base::getloc ( ) const [inline, inherited]`

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file ios\_base.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutputIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

**5.379.5.14** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline]`

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 172 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.379.5.15** `template<typename _CharT, typename _Traits> locale  
std::basic_ios<_CharT, _Traits>::imbue ( const locale & __loc )`

Moves to a new locale.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Reimplemented from `std::ios_base`.

Definition at line 115 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.379.5.16** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<  
_CharT, _Traits> * __sb ) [protected]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, _Traits>`

>::basic\_ios(), std::basic\_istream< char >::basic\_istream(), std::basic\_istream< \_CharT, \_Traits, \_Alloc >::basic\_istream(), std::basic\_ofstream< \_CharT, \_Traits >::basic\_ofstream(), std::basic\_ostream< char >::basic\_ostream(), std::basic\_ostringstream< \_CharT, \_Traits, \_Alloc >::basic\_ostringstream(), and std::basic\_stringstream< \_CharT, \_Traits, \_Alloc >::basic\_stringstream().

#### 5.379.5.17 long& std::ios\_base::iword ( int \_\_ix ) [inline, inherited]

Access to integer array.

##### Parameters

*\_\_ix* Index into the array.

##### Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file ios\_base.h.

#### 5.379.5.18 template<typename \_CharT, typename \_Traits> char std::basic\_ios< \_CharT, \_Traits >::narrow ( char\_type \_\_c, char \_\_dfault ) const [inline]

Squeezes characters.

##### Parameters

*c* The character to narrow.

*dfault* The character to narrow.

##### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 422 of file `basic_ios.h`.

**5.379.5.19** `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::operator void * ( ) const` **[inline]**

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 113 of file `basic_ios.h`.

**5.379.5.20** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::operator! ( ) const` **[inline]**

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 117 of file `basic_ios.h`.

**5.379.5.21** `streamsize std::ios_base::precision ( ) const` **[inline, inherited]**

Flags access.

### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

### 5.379.5.22 streamsize std::ios\_base::precision ( streamsize \_\_prec ) [inline, inherited]

Changing flags.

#### Parameters

*prec* The new precision value.

#### Returns

The previous value of [precision\(\)](#).

Definition at line 632 of file ios\_base.h.

### 5.379.5.23 void\*& std::ios\_base::pword ( int \_\_ix ) [inline, inherited]

Access to void pointer array.

#### Parameters

*\_\_ix* Index into the array.

#### Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file ios\_base.h.

### 5.379.5.24 template<typename \_CharT, typename \_Traits> basic\_streambuf<\_CharT, \_Traits> \* std::basic\_ios<\_CharT, \_Traits>::rdbuf ( basic\_streambuf<\_CharT, \_Traits> \* \_\_sb )

Changing the underlying buffer.

**Parameters**

*sb* The new stream buffer.

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 54 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.379.5.25** `template<typename _CharT, typename _Traits>`  
`basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT,`  
`_Traits>::rdbuf( ) const [inline]`

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istringstream<_CharT, _Traits, _Alloc>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 313 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char>::M_write()`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`,

std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::ws().

#### 5.379.5.26 template<typename \_CharT, typename \_Traits> iostate std::basic\_ios< \_CharT, \_Traits >::rdstate ( ) const [inline]

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 129 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< \_CharT, \_Traits >::clear(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_ios< char, \_Traits >::good(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ios< char, \_Traits >::setstate(), and std::basic\_istream< \_CharT, \_Traits >::unget().

#### 5.379.5.27 void std::ios\_base::register\_callback ( event\_callback \_\_fn, int \_\_index ) [inherited]

Add the callback \_\_fn with parameter \_\_index.

#### Parameters

**\_\_fn** The function to add.

**\_\_index** The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

#### 5.379.5.28 `fmtflags std::ios_base::setf ( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags.

##### Parameters

*fmtfl* Additional flags to set.

##### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file `ios_base.h`.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

#### 5.379.5.29 `fmtflags std::ios_base::setf ( fmtflags __fmtfl, fmtflags __mask ) [inline, inherited]`

Setting new format flags.

##### Parameters

*fmtfl* Additional flags to set.

*mask* The flags mask for *fmtfl*.

##### Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 597 of file `ios_base.h`.

#### 5.379.5.30 `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate ( iostate __state ) [inline]`

Sets additional flags in the error state.

### Parameters

*state* The additional state flag(s) to set.

See `std::ios_base::iostate` for the possible bit values.

Definition at line 149 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char>::_M_write()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

#### 5.379.5.31 `static bool std::ios_base::sync_with_stdio ( bool __sync = true )` [static, inherited]

Interaction with the standard C I/O objects.

### Parameters

*sync* Whether to synchronize or not.

### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.379.5.32** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie ( ) const [inline]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.379.5.33** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie ( basic_ostream<_CharT, _Traits > * __tiestr ) [inline]`

Ties this stream to an output stream.

#### Parameters

*tiestr* The output stream.

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 299 of file `basic_ios.h`.

**5.379.5.34** `void std::ios_base::unsetf ( fmtflags __mask ) [inline,  
inherited]`

Clearing format flags.

### Parameters

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file ios\_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

**5.379.5.35** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::widen ( char __c ) const  
[inline]`

Widens characters.

### Parameters

*c* The character to widen.

### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 441 of file basic\_ios.h.

Referenced by std::endl(), std::basic\_ios<char, \_Traits>::fill(), std::basic\_istream<char>::get(), std::basic\_istream<char>::getline(), std::getline(), and std::operator>>().

**5.379.5.36** `streamsize std::ios_base::width ( ) const [inline,  
inherited]`

Flags access.

### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::operator<>().

#### 5.379.5.37 streamsize std::ios\_base::width ( streamsize \_\_wide ) [inline, inherited]

Changing flags.

##### Parameters

*wide* The new width value.

##### Returns

The previous value of [width\(\)](#).

Definition at line 655 of file ios\_base.h.

#### 5.379.5.38 static int std::ios\_base::xalloc ( ) throw () [static, inherited]

Access to unique indices.

##### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 5.379.6 Member Data Documentation

#### 5.379.6.1 const fmtflags std::ios\_base::adjustfield [static, inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### 5.379.6.2 `const openmode std::ios_base::app` [`static`, `inherited`]

Seek to end before each write.

Definition at line 366 of file `ios_base.h`.

#### 5.379.6.3 `const openmode std::ios_base::ate` [`static`, `inherited`]

Open and seek to end immediately after opening.

Definition at line 369 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

#### 5.379.6.4 `const iostate std::ios_base::badbit` [`static`, `inherited`]

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 336 of file `ios_base.h`.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`.

**5.379.6.5 `const fmtflags std::ios_base::basefield` [`static`, `inherited`]**

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 315 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::hex()`, `std::oct()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

**5.379.6.6 `const seekdir std::ios_base::beg` [`static`, `inherited`]**

Request a seek relative to the beginning of the stream.

Definition at line 398 of file `ios_base.h`.

**5.379.6.7 `const openmode std::ios_base::binary` [`static`, `inherited`]**

Perform input and output in binary mode (as opposed to text mode). `/// This is probably not what you think it is; see http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html.`

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

**5.379.6.8 `const fmtflags std::ios_base::boolalpha` [`static`, `inherited`]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 260 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

**5.379.6.9 `const seekdir std::ios_base::cur` [`static`, `inherited`]**

Request a seek relative to the current position within the sequence.

Definition at line 401 of file `ios_base.h`.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

#### 5.379.6.10 const fmtflags std::ios\_base::dec [static, inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file ios\_base.h.

Referenced by std::dec().

#### 5.379.6.11 const seekdir std::ios\_base::end [static, inherited]

Request a seek relative to the current end of the sequence.

Definition at line 404 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

#### 5.379.6.12 const iostate std::ios\_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::ws().

#### 5.379.6.13 const iostate std::ios\_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file ios\_base.h.

Referenced by std::basic\_fstream< \_CharT, \_Traits >::close(), std::basic\_ofstream< \_CharT, \_Traits >::close(), std::basic\_ifstream< \_CharT, \_Traits >::close(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_fstream< \_CharT, \_Traits >::open(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

#### 5.379.6.14 const fmtflags std::ios\_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 266 of file ios\_base.h.

Referenced by std::fixed().

#### 5.379.6.15 const fmtflags std::ios\_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of setf.

Definition at line 318 of file ios\_base.h.

Referenced by std::fixed(), and std::scientific().

#### 5.379.6.16 const iostate std::ios\_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 347 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_

`get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 5.379.6.17 `const fmtflags std::ios_base::hex` [**static, inherited**]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.379.6.18 `const openmode std::ios_base::in` [**static, inherited**]

Open for input. Default for `ifstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::M_set_buffer()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

#### 5.379.6.19 `const fmtflags std::ios_base::internal` [**static, inherited**]

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 274 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 5.379.6.20 `const fmtflags std::ios_base::left` [`static`, `inherited`]

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, and `std::left()`.

#### 5.379.6.21 `const fmtflags std::ios_base::oct` [`static`, `inherited`]

Converts integer input or generates integer output in octal base.

Definition at line 281 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

#### 5.379.6.22 `const openmode std::ios_base::out` [`static`, `inherited`]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::M_set_buffer()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

#### 5.379.6.23 `const fmtflags std::ios_base::right` [`static`, `inherited`]

Adds fill characters on the left (initial positions) of certain `///` generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file `ios_base.h`.

Referenced by `std::right()`.

#### 5.379.6.24 `const fmtflags std::ios_base::scientific` [`static`, `inherited`]

Generates floating-point output in scientific notation.

Definition at line 288 of file ios\_base.h.

Referenced by std::scientific().

#### **5.379.6.25 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 292 of file ios\_base.h.

Referenced by std::noshowbase(), and std::showbase().

#### **5.379.6.26 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 296 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

#### **5.379.6.27 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

#### **5.379.6.28 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 302 of file ios\_base.h.

Referenced by std::noskipws(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), and std::skipws().

## **5.380 `std::basic_iostream< _CharT, _Traits >` Class Template Reference 1810**

### **5.379.6.29 `const openmode std::ios_base::trunc` [static, inherited]**

Open for input. Default for `ofstream`.

Definition at line 383 of file `ios_base.h`.

### **5.379.6.30 `const fmtflags std::ios_base::unitbuf` [static, inherited]**

Flushes output after each output operation.

Definition at line 305 of file `ios_base.h`.

Referenced by `std::nunitbuf()`, `std::unitbuf()`, and `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`.

### **5.379.6.31 `const fmtflags std::ios_base::uppercase` [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

- [basic\\_ios.h](#)
- [basic\\_ios.tcc](#)

## **5.380 `std::basic_iostream< _CharT, _Traits >` Class Template Reference**

Merging `istream` and `ostream` capabilities.

This class multiply inherits from the input and output stream classes simply to provide a single interface.

Inheritance diagram for std::basic\_istream<\_CharT, \_Traits>:

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__istream_type & operator>> (bool &__n)`
- `__istream_type & operator>> (short &__n)`
- `__istream_type & operator>> (unsigned short &__n)`
- `__istream_type & operator>> (int &__n)`

- `__istream_type & operator>> (unsigned int &__n)`
- `__istream_type & operator>> (long &__n)`
- `__istream_type & operator>> (unsigned long &__n)`
- `__istream_type & operator>> (long long &__n)`
- `__istream_type & operator>> (unsigned long long &__n)`
- `__istream_type & operator>> (float &__f)`
- `__istream_type & operator>> (double &__f)`
- `__istream_type & operator>> (long double &__f)`
- `__istream_type & operator>> (void *&__p)`
- `__istream_type & operator>> (__streambuf_type *__sb)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `int_type get ()`
- `__istream_type & get (char_type &__c)`
- `__istream_type & get (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type & get (char_type *__s, streamsize __n)`
- `__istream_type & get (__streambuf_type &__sb, char_type __delim)`
- `__istream_type & get (__streambuf_type &__sb)`
- `__istream_type & getline (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type & getline (char_type *__s, streamsize __n)`
- `__istream_type & ignore ()`
- `__istream_type & ignore (streamsize __n)`
- `__istream_type & ignore (streamsize __n, int_type __delim)`
- `int_type peek ()`
- `__istream_type & read (char_type *__s, streamsize __n)`
- `streamsize readsome (char_type *__s, streamsize __n)`
- `__istream_type & putback (char_type __c)`
- `__istream_type & unget ()`
- `int sync ()`

- `__istream_type & seekg (pos_type)`
- `__istream_type & seekg (off_type, ios_base::seekdir)`
- `operator void * () const`
- `bool operator! () const`

- `__ostream_type & operator<< (__ostream_type &(__pf)(__ostream_type &))`
- `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- `__ostream_type & put (char_type __c)`
- `void _M_write (const char_type *__s, streamsize __n)`
- `__ostream_type & write (const char_type *__s, streamsize __n)`

**5.380.2.6** `template<typename _CharT, typename _Traits> typedef _CharT  
 std::basic_istream< _CharT, _Traits >::char_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, and `std::basic_istream< _CharT, _Traits, _Alloc >`.

Definition at line 61 of file istream.

**5.380.2.7** `template<typename _CharT, typename _Traits> typedef _CharT  
 std::basic_iostream< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream< _CharT, _Traits >`.

Reimplemented in `std::basic_fstream< _CharT, _Traits >`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >`.

Definition at line 779 of file `istream`.

**5.380.2.8** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`  
`[inherited]`

The type of an event callback function.

#### Parameters

- event* One of the members of the event enum.
- ios\_base* Reference to the `ios_base` object.
- int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

**5.380.2.9** `typedef _Ios_Fmtflags std::ios_base::fmtflags` `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`

- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 257 of file `ios_base.h`.

**5.380.2.10** `template<typename _CharT, typename _Traits> typedef  
_Traits::int_type std::basic_istream<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream<_CharT, _Traits>`.

Reimplemented in `std::basic_fstream<_CharT, _Traits>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 780 of file `istream`.

**5.380.2.11** `template<typename _CharT, typename _Traits> typedef  
_Traits::int_type std::basic_istream<_CharT, _Traits>::int_type  
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istream<_CharT, _Traits, _Alloc>`.

Definition at line 62 of file `istream`.

**5.380.2.12** `typedef _Ios_Iostate std::ios_base::iostate` `[inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 332 of file `ios_base.h`.

**5.380.2.13** `template<typename _CharT, typename _Traits> typedef`  
`_Traits::off_type std::basic_iostream<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream<_CharT, _Traits>`.

Reimplemented in `std::basic_fstream<_CharT, _Traits>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 782 of file `istream`.

**5.380.2.14** `template<typename _CharT, typename _Traits> typedef`  
`_Traits::off_type std::basic_istream<_CharT, _Traits>::off_type`  
`[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istreamstream<_CharT, _Traits, _Alloc>`.

Definition at line 64 of file `istream`.

**5.380.2.15** `typedef _Ios_Openmode std::ios_base::openmode` `[inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 363 of file `ios_base.h`.

**5.380.2.16** `template<typename _CharT, typename _Traits> typedef`  
`_Traits::pos_type std::basic_iostream<_CharT, _Traits`  
`>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream<_CharT, _Traits>`.

Reimplemented in `std::basic_fstream<_CharT, _Traits>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 781 of file `istream`.

**5.380.2.17** `template<typename _CharT, typename _Traits> typedef`  
`_Traits::pos_type std::basic_istream<_CharT, _Traits>::pos_type`  
`[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

## 5.380 `std::basic_iostream<_CharT, _Traits>` Class Template Reference 1824

Reimplemented in [std::basic\\_ifstream<\\_CharT, \\_Traits>](#), and [std::basic\\_istream<\\_CharT, \\_Traits, \\_Alloc>](#).

Definition at line 63 of file `istream`.

### 5.380.2.18 `typedef _Ios_Seekdir std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

### 5.380.2.19 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_istream<_CharT, _Traits>::traits_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ios<\\_CharT, \\_Traits>](#).

Reimplemented in [std::basic\\_ifstream<\\_CharT, \\_Traits>](#), and [std::basic\\_istream<\\_CharT, \\_Traits, \\_Alloc>](#).

Definition at line 65 of file `istream`.

### 5.380.2.20 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_iostream<_CharT, _Traits>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ostream<\\_CharT, \\_Traits>](#).

Reimplemented in [std::basic\\_fstream<\\_CharT, \\_Traits>](#), and [std::basic\\_stringstream<\\_CharT, \\_Traits, \\_Alloc>](#).

Definition at line 783 of file `istream`.

### **5.380.3 Member Enumeration Documentation**

#### **5.380.3.1 enum std::ios\_base::event [inherited]**

The set of events that may be passed to an event callback.

erase\_event is used during ~ios() and copyfmt(). imbue\_event is used during [imbue\(\)](#). copyfmt\_event is used during copyfmt().

Definition at line 421 of file ios\_base.h.

### **5.380.4 Constructor & Destructor Documentation**

#### **5.380.4.1 template<typename \_CharT, typename \_Traits> std::basic\_iostream<\_CharT, \_Traits>::basic\_iostream ( basic\_streambuf<\_CharT, \_Traits> \* \_\_sb ) [inline, explicit]**

Constructor does nothing.

Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.

Definition at line 796 of file istream.

#### **5.380.4.2 template<typename \_CharT, typename \_Traits> virtual std::basic\_iostream<\_CharT, \_Traits>::~~basic\_iostream ( ) [inline, virtual]**

Destructor does nothing.

Definition at line 803 of file istream.

### **5.380.5 Member Function Documentation**

#### **5.380.5.1 const locale& std::ios\_base::\_M\_getloc ( ) const [inline, inherited]**

Locale access.

**Returns**

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 708 of file ios\_base.h.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::time\_put< \_CharT, \_OutIter >::put().

**5.380.5.2** `template<typename _CharT, typename _Traits> void  
std::basic_ostream< _CharT, _Traits >::M_write ( const char_type  
* __s, streamsize __n ) [inline, inherited]`

Simple insertion.

**Parameters**

*c* The character to insert.

**Returns**

\*this

Tries to insert *c*.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 289 of file ostream.

**5.380.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::bad ( ) const [inline, inherited]`

Fast error checking.

**Returns**

True if the badbit is set.

Note that other `iosstate` flags may also be set.

Definition at line 203 of file `basic_ios.h`.

```
5.380.5.4 template<typename _CharT, typename _Traits > void
 std::basic_ios< _CharT, _Traits >::clear (iosstate __state = goodbit)
 [inherited]
```

[Re]sets the error state.

#### Parameters

*state* The new state flag(s) to set.

See [std::ios\\_base::iosstate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ios< char, _Traits >::exceptions()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

```
5.380.5.5 template<typename _CharT, typename _Traits > basic_ios<
 _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
 const basic_ios< _CharT, _Traits > & __rhs) [inherited]
```

Copies fields of `__rhs` into this.

#### Parameters

*\_\_rhs* The source values for the copies.

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 64 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

#### 5.380.5.6 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof( ) const` [`inline`, `inherited`]

Fast error checking.

##### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 5.380.5.7 `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions( iostate __except )` [`inline`, `inherited`]

Throwing exceptions on errors.

##### Parameters

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 249 of file basic\_ios.h.

**5.380.5.8** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline,  
inherited]`

Throwing exceptions on errors.

#### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 214 of file basic\_ios.h.

Referenced by `std::basic_ios<_CharT, _Traits>::clear()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.380.5.9** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits>::fail ( ) const [inline, inherited]`

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

## 5.380 `std::basic_iostream<_CharT, _Traits>` Class Template Reference 1830

---

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::operator void *()`, `std::basic_ios<char, _Traits>::operator!()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_Ch_type>::value()`.

**5.380.5.10** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::fill ( char_type __ch )  
[inline, inherited]`

Sets a new *empty* character.

### Parameters

*ch* The new character.

### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 382 of file `basic_ios.h`.

**5.380.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::fill ( ) const [inline,  
inherited]`

Retrieves the *empty* character.

### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 362 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::basic_ios<char, _Traits>::fill()`.

**5.380.5.12** `fmtflags std::ios_base::flags ( ) const` `[inline, inherited]`

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 553 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, `std::operator>>()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.380.5.13** `fmtflags std::ios_base::flags ( fmtflags __fmtfl )` `[inline, inherited]`

Setting new format flags all at once.

**Parameters**

*fmtfl* The new flags to set.

**Returns**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file `ios_base.h`.

**5.380.5.14** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush ( )` `[inherited]`

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets badbit.

Definition at line 213 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

**5.380.5.15** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::gcount ( ) const  
[inline, inherited]`

Character counting.

#### Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 251 of file istream.

**5.380.5.16** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits  
>::get ( void ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 238 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.17** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

Simple multiple-character extraction.

#### Parameters

- s* Pointer to an array.
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

#### Returns

\*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*-1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 311 of file istream.tcc.

References std::basic\_istream<\_CharT, \_Traits>::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios<\_CharT, \_Traits>::eof(), std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), std::basic\_ios<\_CharT, \_Traits>::setstate(), std::basic\_streambuf<\_CharT, \_Traits>::sgetc(), and std::basic\_streambuf<\_CharT, \_Traits>::snextc().

**5.380.5.18** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type & __c ) [inherited]`

Simple extraction.

### Parameters

*c* The character in which to store data.

### Returns

\*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 274 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.19** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n ) [inline, inherited]`

Simple multiple-character extraction.

### Parameters

*s* Pointer to an array.

*n* Maximum number of characters to store in *s*.

### Returns

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 335 of file `istream`.

**5.380.5.20** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( __streambuf_type & __sb, char_type __delim ) [inherited]`

Extraction into another streambuf.

**Parameters**

- sb* A streambuf in which to store data.
- delim* A "stop" character.

**Returns**

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 358 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

**5.380.5.21** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get ( __streambuf_type & __sb ) [inline, inherited]`

Extraction into another streambuf.

**Parameters**

- sb* A streambuf in which to store data.

**Returns**

\*this

Returns `get(sb, widen('\n'))`.

Definition at line 368 of file istream.

**5.380.5.22** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline( char_type * __s, streamsize __n, char_type __delim )`  
**[inherited]**

String extraction.

#### Parameters

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

#### Returns

*\*this*

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*−1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 402 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.380.5.23** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline ( char_type * __s, streamsize __n ) [inline, inherited]`

String extraction.

#### Parameters

*s* A character array in which to store the data.

*n* Maximum number of characters to extract.

#### Returns

\*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 408 of file `istream`.

Referenced by `std::basic_istream<char>::getline()`.

**5.380.5.24** `locale std::ios_base::getloc ( ) const [inline, inherited]`

Locale access.

#### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

**5.380.5.25** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline, inherited]`

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 172 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.380.5.26** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore( void ) [inherited]`

Discarding characters.

**Parameters**

*n* Number of characters to discard.

*delim* A "stop" character.

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if *n* != `std::numeric_limits<int>::max()`, *n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 462 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.27** `template<typename _CharT, typename _Traits > basic_istream<  
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore  
( streamsize __n, int_type __delim ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 557 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.380.5.28** `template<typename _CharT, typename _Traits > basic_istream<  
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore  
( streamsize __n ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 495 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.380.5.29** `template<typename _CharT, typename _Traits > locale  
std::basic_ios< _CharT, _Traits >::imbue ( const locale & __loc )  
[inherited]`

Moves to a new locale.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Reimplemented from `std::ios_base`.

Definition at line 115 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.380.5.30** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<  
_CharT, _Traits> * __sb ) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, _Traits>::basic_ios()`, `std::basic_istream<char>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<char>::basic_ostream()`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc>::basic_ostreamstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**5.380.5.31** `long& std::ios_base::iword ( int __ix ) [inline, inherited]`

Access to integer array.

**Parameters**

`__ix` Index into the array.

**Returns**

A reference to an integer associated with the index.

The `ix` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file `ios_base.h`.

**5.380.5.32** `template<typename _CharT, typename _Traits> char  
std::basic_ios<_CharT, _Traits>::narrow ( char_type __c, char  
__dfault ) const [inline, inherited]`

Squeezes characters.

**Parameters**

`c` The character to narrow.

`dfault` The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

**5.380.5.49** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< ( __streambuf_type * __sb ) [inherited]`

Extracting from another streambuf.

#### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 122 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.50** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< ( unsigned int __n ) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 193 of file `ostream`.

**5.380.5.51** `template<typename _CharT, typename _Traits> __ostream_type&

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 213 of file istream.

**5.380.5.68** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( unsigned short & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 176 of file istream.

**5.380.5.69** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek ( void ) [inherited]`

Looking ahead in the stream.

#### Returns

The next character, or `eof()`.

## 5.380 `std::basic_istream<_CharT, _Traits>` Class Template Reference 1857

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 622 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

### 5.380.5.70 `streamsize std::ios_base::precision ( streamsize __prec )` `[inline, inherited]`

Changing flags.

#### Parameters

*prec* The new precision value.

#### Returns

The previous value of `precision()`.

Definition at line 632 of file `ios_base.h`.

### 5.380.5.71 `streamsize std::ios_base::precision ( ) const` `[inline, inherited]`

Flags access.

#### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

### 5.380.5.72 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put ( char_type __c )` `[inherited]`

Simple insertion.

#### Parameters

*c* The character to insert.

#### Returns

\*this

Tries to insert *c*.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 151 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

**5.380.5.73** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback( char_type __c ) [inherited]`

Unextracting a single character.

#### Parameters

*c* The character to push back into the input stream.

#### Returns

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

#### Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 713 of file istream.tcc.

References std::basic\_istream<\_CharT, \_Traits>::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios<\_CharT, \_Traits>::clear(), std::basic\_ios<\_CharT, \_Traits>::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), std::basic\_ios<\_CharT, \_Traits>::rdstate(), std::basic\_ios<\_CharT, \_Traits>::setstate(), and std::basic\_streambuf<\_CharT, \_Traits>::sputbackc().

Referenced by std::operator>>().

#### **5.380.5.74 void\*& std::ios\_base::pword ( int \_\_ix ) [inline, inherited]**

Access to void pointer array.

##### **Parameters**

`__ix` Index into the array.

##### **Returns**

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file ios\_base.h.

#### **5.380.5.75 template<typename \_CharT, typename \_Traits> basic\_streambuf<\_CharT, \_Traits>\* std::basic\_ios<\_CharT, \_Traits>::rdbuf ( ) const [inline, inherited]**

Accessing the underlying buffer.

##### **Returns**

The current stream buffer.

This does not change the state of the stream.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istream<_CharT, _Traits, _Alloc>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 313 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char>::_M_write()`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

#### 5.380.5.76 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf ( basic_streambuf<_CharT, _Traits> * __sb ) [inherited]`

Changing the underlying buffer.

##### Parameters

*sb* The new stream buffer.

##### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

## 5.380 `std::basic_iostream<_CharT, _Traits>` Class Template Reference 1861

---

Definition at line 54 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.380.5.77** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::rdstate ( ) const [inline,  
inherited]`

Returns the error state of the stream buffer.

### Returns

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 129 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ios<char, _Traits>::eof()`, `std::basic_ios<char, _Traits>::fail()`, `std::basic_ios<char, _Traits>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.380.5.78** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::read (   
char_type * __s, streamsize __n ) [inherited]`

Extraction without delimiters.

### Parameters

*s* A character array.

*n* Maximum number of characters to store.

### Returns

\*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored

- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 652 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.79** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::readsome ( char_type *  
__s, streamsize __n ) [inherited]`

Extraction until the buffer is exhausted, but no more.

**Parameters**

- s* A character array.
- n* Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets `eofbit` and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 681 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.80** void std::ios\_base::register\_callback ( event\_callback \_\_fn, int  
\_\_index ) [inherited]

Add the callback \_\_fn with parameter \_\_index.

#### Parameters

\_\_fn The function to add.

\_\_index The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.380.5.81** template<typename \_CharT, typename \_Traits> basic\_istream<  
\_CharT, \_Traits> & std::basic\_istream<\_CharT, \_Traits>::seekg  
( pos\_type \_\_pos ) [inherited]

Changing the current read position.

#### Parameters

pos A file position object.

#### Returns

\*this

If fail() is not true, calls rdbuf()->pubseekpos(pos). If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to gcount().

Definition at line 847 of file istream.tcc.

References std::ios\_base::badbit, std::basic\_ios<\_CharT, \_Traits>::clear(), std::ios\_base::eofbit, std::basic\_ios<\_CharT, \_Traits>::fail(), std::ios\_base::failbit, std::ios\_base::goodbit, std::ios\_base::in, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), std::basic\_ios<\_CharT, \_Traits>::rdstate(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

**5.380.5.82** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg ( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

#### Parameters

*off* A file offset object.  
*dir* The direction in which to seek.

#### Returns

\*this

If `fail()` is not true, calls `rddbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 886 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rddbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.83** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp ( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current write position.

#### Parameters

*off* A file offset object.  
*dir* The direction in which to seek.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 292 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.84** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp( pos_type __pos ) [inherited]`

Changing the current write position.

#### Parameters

*pos* A file position object.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 260 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.85** `fmtflags std::ios_base::setf( fmtflags __fmtfl, fmtflags __mask ) [inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

*mask* The flags mask for *fmtfl*.

#### Returns

The previous format control flags.

## 5.380 `std::basic_ostream<_CharT, _Traits>` Class Template Reference 1866

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is [ios\\_base::adjustfield](#).

Definition at line 597 of file `ios_base.h`.

**5.380.5.86** `fmtflags std::ios_base::setf ( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags.

### Parameters

*fmtfl* Additional flags to set.

### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file `ios_base.h`.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.380.5.87** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::setstate ( iostate __state )  
[inline, inherited]`

Sets additional flags in the error state.

### Parameters

*state* The additional state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 149 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char>::_M_write()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ostream<_CharT, _Traits>::flush()`,

std::basic\_istream<\_CharT, \_Traits>::get(), std::basic\_istream<\_CharT, \_Traits>::getline(), std::getline(), std::basic\_istream<\_CharT, \_Traits>::ignore(), std::basic\_fstream<\_CharT, \_Traits>::open(), std::basic\_ofstream<\_CharT, \_Traits>::open(), std::basic\_ifstream<\_CharT, \_Traits>::open(), std::basic\_ostream<\_CharT, \_Traits>::operator<<(), std::basic\_istream<\_CharT, \_Traits>::operator>>(), std::operator>>(), std::basic\_istream<\_CharT, \_Traits>::peek(), std::basic\_ostream<\_CharT, \_Traits>::put(), std::basic\_istream<\_CharT, \_Traits>::putback(), std::basic\_istream<\_CharT, \_Traits>::read(), std::basic\_istream<\_CharT, \_Traits>::readsome(), std::basic\_istream<\_CharT, \_Traits>::seekg(), std::basic\_ostream<\_CharT, \_Traits>::seekp(), std::basic\_ostream<\_CharT, \_Traits>::sentry::sentry(), std::basic\_istream<\_CharT, \_Traits>::sentry::sentry(), std::basic\_istream<\_CharT, \_Traits>::sync(), std::basic\_istream<\_CharT, \_Traits>::unget(), and std::ws().

**5.380.5.88** `template<typename _CharT, typename _Traits> int  
std::basic_istream<_CharT, _Traits>::sync ( void )  
[inherited]`

Synchronizing the stream buffer.

#### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 783 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.380.5.89** `static bool std::ios_base::sync_with_stdio ( bool __sync = true )  
[static, inherited]`

Interaction with the standard C I/O objects.

### Parameters

*sync* Whether to synchronize or not.

### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.380.5.90** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg( void ) [inherited]`

Getting the current read position.

### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 819 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.380.5.91** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp( ) [inherited]`

Getting the current write position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 239 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.380.5.92** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie( basic_ostream<_CharT, _Traits> * __tiestr ) [inline,  
inherited]`

Ties this stream to an output stream.

**Parameters**

*tiestr* The output stream.

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 299 of file `basic_ios.h`.

**5.380.5.93** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie( ) const [inline, inherited]`

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file basic\_ios.h.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.380.5.94** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget ( void ) [inherited]`

Unextracting the previous character.

#### Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

#### Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 748 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sungetc()`.

**5.380.5.95** `void std::ios_base::unsetf ( fmtflags __mask ) [inline, inherited]`

Clearing format flags.

#### Parameters

*mask* The flags to unset.

This function clears *mask* in the format flags.

## 5.380 std::basic\_iostream<\_CharT, \_Traits> Class Template Reference 1871

Definition at line 612 of file ios\_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

**5.380.5.96** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::widen ( char __c ) const  
[inline, inherited]`

Widens characters.

### Parameters

*c* The character to widen.

### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.ht>

Definition at line 441 of file basic\_ios.h.

Referenced by std::endl(), std::basic\_ios< char, \_Traits >::fill(), std::basic\_istream< char >::get(), std::basic\_istream< char >::getline(), std::getline(), and std::operator>>().

**5.380.5.97** `streamsize std::ios_base::width ( ) const [inline,  
inherited]`

Flags access.

### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), std::num\_put<\_CharT, \_Outputter>::do\_put(), and std::operator>>().

**5.380.5.98** `streamsize std::ios_base::width ( streamsize __wide ) [inline, inherited]`

Changing flags.

**Parameters**

*wide* The new width value.

**Returns**

The previous value of `width()`.

Definition at line 655 of file `ios_base.h`.

**5.380.5.99** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::write ( const char_type * __s, streamsize __n ) [inherited]`

Character string insertion.

**Parameters**

*s* The array to insert.

*n* Maximum number of characters to insert.

**Returns**

`*this`

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**5.380.5.100** `static int std::ios_base::xalloc ( ) throw () [static, inherited]`

Access to unique indices.

#### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 5.380.6 Member Data Documentation

**5.380.6.1** `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::_M_gcount [protected, inherited]`

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 81 of file `istream`.

Referenced by `std::basic_istream< char >::gcount()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::basic_istream< char >::~~basic_istream()`.

**5.380.6.2** `const fmtflags std::ios_base::adjustfield [static, inherited]`

A mask of `left`|`right`|`internal`. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**5.380.6.3 const openmode std::ios\_base::app [static, inherited]**

Seek to end before each write.

Definition at line 366 of file ios\_base.h.

**5.380.6.4 const openmode std::ios\_base::ate [static, inherited]**

Open and seek to end immediately after opening.

Definition at line 369 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

**5.380.6.5 const iostate std::ios\_base::badbit [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 336 of file ios\_base.h.

Referenced by std::basic\_ostream< char >::M\_write(), std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< \_CharT, \_Traits >::clear(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry().

**5.380.6.6 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 315 of file ios\_base.h.

## **5.380    `std::basic_iostream< _CharT, _Traits >` Class Template Reference    1875**

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::hex()`, `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

### **5.380.6.7    `const seekdir std::ios_base::beg`    [`static`, `inherited`]**

Request a seek relative to the beginning of the stream.

Definition at line 398 of file `ios_base.h`.

### **5.380.6.8    `const openmode std::ios_base::binary`    [`static`, `inherited`]**

Perform input and output in binary mode (as opposed to text mode).    /// This is probably not what you think it is; see /// <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

### **5.380.6.9    `const fmtflags std::ios_base::boolalpha`    [`static`, `inherited`]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 260 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

### **5.380.6.10    `const seekdir std::ios_base::cur`    [`static`, `inherited`]**

Request a seek relative to the current position within the sequence.

Definition at line 401 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

### **5.380.6.11    `const fmtflags std::ios_base::dec`    [`static`, `inherited`]**

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file ios\_base.h.

Referenced by std::dec().

#### **5.380.6.12 const seekdir std::ios\_base::end [static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 404 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

#### **5.380.6.13 const iostate std::ios\_base::eofbit [static, inherited]**

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::ws().

#### **5.380.6.14 const iostate std::ios\_base::failbit [static, inherited]**

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file ios\_base.h.

Referenced by std::basic\_fstream< \_CharT, \_Traits >::close(), std::basic\_ofstream< \_CharT, \_Traits >::close(), std::basic\_ifstream< \_CharT, \_Traits >::close(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_-

`get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<char, _Traits>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

#### 5.380.6.15 `const fmtflags std::ios_base::fixed` [`static`, `inherited`]

Generate floating-point output in fixed-point notation.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::fixed()`.

#### 5.380.6.16 `const fmtflags std::ios_base::floatfield` [`static`, `inherited`]

A mask of `scientific|fixed`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::scientific()`.

#### 5.380.6.17 `const iostate std::ios_base::goodbit` [`static`, `inherited`]

Indicates all is well.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::init()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`,

## 5.380 `std::basic_istream<_CharT, _Traits>` Class Template Reference 1878

`std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

### 5.380.6.18 `const fmtflags std::ios_base::hex` [static, inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

### 5.380.6.19 `const openmode std::ios_base::in` [static, inherited]

Open for input. Default for `ifstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::underflow()`.

### 5.380.6.20 `const fmtflags std::ios_base::internal` [static, inherited]

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 274 of file `ios_base.h`.

Referenced by `std::internal()`.

### 5.380.6.21 `const fmtflags std::ios_base::left` [static, inherited]

## **5.380 std::basic\_iostream< \_CharT, \_Traits > Class Template Reference 1879**

---

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

### **5.380.6.22 const fmtflags std::ios\_base::oct [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 281 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

### **5.380.6.23 const openmode std::ios\_base::out [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::M_set_buffer()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

### **5.380.6.24 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain `///` generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file `ios_base.h`.

Referenced by `std::right()`.

### **5.380.6.25 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 288 of file `ios_base.h`.

Referenced by `std::scientific()`.

## **5.380   `std::basic_ostream<_CharT, _Traits>` Class Template Reference   1880**

---

### **5.380.6.26   `const fmtflags std::ios_base::showbase`   `[static, inherited]`**

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 292 of file `ios_base.h`.

Referenced by `std::noshowbase()`, and `std::showbase()`.

### **5.380.6.27   `const fmtflags std::ios_base::showpoint`   `[static, inherited]`**

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 296 of file `ios_base.h`.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

### **5.380.6.28   `const fmtflags std::ios_base::showpos`   `[static, inherited]`**

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file `ios_base.h`.

Referenced by `std::noshowpos()`, and `std::showpos()`.

### **5.380.6.29   `const fmtflags std::ios_base::skipws`   `[static, inherited]`**

Skips leading white space before certain input operations.

Definition at line 302 of file `ios_base.h`.

Referenced by `std::noskipws()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::skipws()`.

### **5.380.6.30   `const openmode std::ios_base::trunc`   `[static, inherited]`**

Open for input. Default for `ofstream`.

Definition at line 383 of file `ios_base.h`.

Definition at line 305 of file ios\_base.h.

Referenced by `std::nunitbuf()`, `std::unitbuf()`, and `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`.

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following file:

- **istream**

Controlling input.

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual input.

Inheritance diagram for `std::basic_istream<_CharT, _Traits>`:

## Classes

- class `sentry`  
*Performs setup work for input streams.*

## Public Types

- typedef `ctype<_CharT>` `__ctype_type`
- typedef `basic_ios<_CharT, _Traits>` `__ios_type`
- typedef `basic_istream<_CharT, _Traits>` `__istream_type`
- typedef `num_get<_CharT, istreambuf_iterator<_CharT, _Traits>>` `__num_get_type`
- typedef `basic_streambuf<_CharT, _Traits>` `__streambuf_type`
- typedef `_CharT` `char_type`
- enum `event` { `erase_event`, `imbue_event`, `copyfmt_event` }
- typedef `void(* event_callback)(event, ios_base &, int)`
- typedef `_Ios_Fmtflags` `fmtflags`
- typedef `_Traits::int_type` `int_type`
- typedef `int` `io_state`
- typedef `_Ios_Iostate` `iostate`
- typedef `_Traits::off_type` `off_type`
- typedef `int` `open_mode`
- typedef `_Ios_Openmode` `openmode`
- typedef `_Traits::pos_type` `pos_type`
- typedef `int` `seek_dir`
- typedef `_Ios_Seekdir` `seekdir`
- typedef `std::streamoff` `streamoff`
- typedef `std::streampos` `streampos`
- typedef `_Traits` `traits_type`
  
- typedef `num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>>` `__num_put_type`

## Public Member Functions

- `__istream_type & operator>> (__ios_type &(__pf)(__ios_type &))`
- `__istream_type & operator>> (ios_base &(__pf)(ios_base &))`

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__istream_type & operator>> (bool &__n)`
- `__istream_type & operator>> (short &__n)`
- `__istream_type & operator>> (unsigned short &__n)`
- `__istream_type & operator>> (int &__n)`
- `__istream_type & operator>> (unsigned int &__n)`
- `__istream_type & operator>> (long &__n)`
- `__istream_type & operator>> (unsigned long &__n)`
- `__istream_type & operator>> (long long &__n)`
- `__istream_type & operator>> (unsigned long long &__n)`
- `__istream_type & operator>> (float &__f)`
- `__istream_type & operator>> (double &__f)`
- `__istream_type & operator>> (long double &__f)`
- `__istream_type & operator>> (void *&__p)`
- `__istream_type & operator>> (__streambuf_type *__sb)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `int_type` `get ()`
- `__istream_type` & `get (char_type &__c)`
- `__istream_type` & `get (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type` & `get (char_type *__s, streamsize __n)`
- `__istream_type` & `get (__streambuf_type &__sb, char_type __delim)`
- `__istream_type` & `get (__streambuf_type &__sb)`
- `__istream_type` & `getline (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type` & `getline (char_type *__s, streamsize __n)`
- `__istream_type` & `ignore ()`
- `__istream_type` & `ignore (streamsize __n)`
- `__istream_type` & `ignore (streamsize __n, int_type __delim)`
- `int_type` `peek ()`

- `class` `sentry`

#### 5.381.1 Detailed Description

`template<typename _CharT, typename _Traits> class std::basic_istream< _CharT, _Traits>`

Controlling input.

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual input.

Definition at line 57 of file `istream`.

### 5.381.2 Member Typedef Documentation

**5.381.2.1** `template<typename _CharT, typename _Traits> typedef  
ctype<_CharT> std::basic_istream<_CharT, _Traits  
>::__ctype_type`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 73 of file `istream`.

**5.381.2.2** `template<typename _CharT, typename _Traits> typedef  
num_get<_CharT, istreambuf_iterator<_CharT, _Traits> >  
std::basic_istream<_CharT, _Traits>::__num_get_type`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 72 of file `istream`.

**5.381.2.3** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
> std::basic_ios<_CharT, _Traits>::__num_put_type  
[inherited]`

These are non-standard types.

Reimplemented in `std::basic_ostream<_CharT, _Traits>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 86 of file `basic_ios.h`.

**5.381.2.4** `template<typename _CharT, typename _Traits> typedef _CharT  
std::basic_istream<_CharT, _Traits>::__char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istreamstream<_CharT, _Traits, _Alloc>`.

Definition at line 61 of file `istream`.

**5.381.2.5** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`  
`[inherited]`

The type of an event callback function.

**Parameters**

- event* One of the members of the event enum.
- ios\_base* Reference to the `ios_base` object.
- int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

**5.381.2.6** `typedef _Ios_Fmtflags std::ios_base::fmtflags` `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`

- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 257 of file `ios_base.h`.

#### 5.381.2.7 `template<typename _CharT, typename _Traits> typedef _Traits::int_type std::basic_istream<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istream<_CharT, _Traits, _Alloc>`.

Definition at line 62 of file `istream`.

#### 5.381.2.8 `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 332 of file `ios_base.h`.

**5.381.2.9** `template<typename _CharT, typename _Traits> typedef  
_Traits::off_type std::basic_istream<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istreamstream<_CharT, _Traits, _Alloc>`.

Definition at line 64 of file `istream`.

**5.381.2.10** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 363 of file `ios_base.h`.

**5.381.2.11** `template<typename _CharT, typename _Traits> typedef  
_Traits::pos_type std::basic_istream<_CharT, _Traits>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istreamstream<_CharT, _Traits, _Alloc>`.

Definition at line 63 of file `istream`.

**5.381.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir` [inherited]**

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

**5.381.2.13 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_istream<_CharT, _Traits>::traits_type`**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istream<_CharT, _Traits, _Alloc>`.

Definition at line 65 of file `istream`.

**5.381.3 Member Enumeration Documentation****5.381.3.1 `enum std::ios_base::event` [inherited]**

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 421 of file `ios_base.h`.

#### 5.381.4 Constructor & Destructor Documentation

**5.381.4.1** `template<typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits >::basic_istream ( __streambuf_type * __sb )  
[inline, explicit]`

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 93 of file istream.

**5.381.4.2** `template<typename _CharT, typename _Traits> virtual  
std::basic_istream< _CharT, _Traits >::~~basic_istream ( )  
[inline, virtual]`

Base destructor.

This does very little apart from providing a virtual base dtor.

Definition at line 103 of file istream.

#### 5.381.5 Member Function Documentation

**5.381.5.1** `const locale& std::ios_base::_M_getloc ( ) const [inline,  
inherited]`

Locale access.

##### Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 708 of file ios\_base.h.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::time\_put< \_CharT, \_OutIter >::put().

**5.381.5.2** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::bad ( ) const [inline, inherited]`

Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 203 of file `basic_ios.h`.

**5.381.5.3** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::clear ( iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

#### Parameters

*state* The new state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_ios<char, _Traits>::exceptions()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.381.5.4** `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt ( const basic_ios<_CharT, _Traits> & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

#### Parameters

`__rhs` The source values for the copies.

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 64 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

#### 5.381.5.5 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof( ) const` [`inline`, `inherited`]

Fast error checking.

#### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 5.381.5.6 `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions( iostate __except )` [`inline`, `inherited`]

Throwing exceptions on errors.

**Parameters**

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 249 of file `basic_ios.h`.

**5.381.5.7** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::exceptions( ) const [inline,  
inherited]`

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 214 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::clear()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.381.5.8** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail ( ) const [inline, inherited]`

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file basic\_ios.h.

Referenced by `std::basic_ios<char, _Traits>::operator void *()`, `std::basic_ios<char, _Traits>::operator!()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_Ch_type>::value()`.

**5.381.5.9** `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill ( char_type __ch ) [inline, inherited]`

Sets a new *empty* character.

#### Parameters

*ch* The new character.

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 382 of file basic\_ios.h.

**5.381.5.10** `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill ( ) const [inline, inherited]`

Retrieves the *empty* character.

### Returns

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 362 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::basic_ios< char, _Traits >::fill()`.

#### 5.381.5.11 `fmtflags std::ios_base::flags ( ) const [inline, inherited]`

Access to format flags.

### Returns

The format control flags for both input and output.

Definition at line 553 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 5.381.5.12 `fmtflags std::ios_base::flags ( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags all at once.

### Parameters

*fmtfl* The new flags to set.

### Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file `ios_base.h`.

**5.381.5.13** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::gcount ( ) const  
[inline]`

Character counting.

#### Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 251 of file `istream`.

**5.381.5.14** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get ( void )`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 238 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.381.5.15** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (   
char_type & __c )`

Simple extraction.

#### Parameters

*c* The character in which to store data.

**Returns**

`*this`

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns `traits::eof()`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 274 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.381.5.16** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get ( char_type * __s, streamsize __n, char_type __delim )`

Simple multiple-character extraction.

**Parameters**

- s* Pointer to an array.
- n* Maximum number of characters to store in *s*.
- delim* A "stop" character.

**Returns**

`*this`

Characters are extracted and stored into *s* until one of the following happens:

- *n*−1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 311 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.381.5.17** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n ) [inline]`

Simple multiple-character extraction.

**Parameters**

- s* Pointer to an array.
- n* Maximum number of characters to store in *s*.

**Returns**

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 335 of file `istream`.

**5.381.5.18** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( __streambuf_type & __sb, char_type __delim )`

Extraction into another streambuf.

**Parameters**

- sb* A streambuf in which to store data.
- delim* A "stop" character.

**Returns**

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 358 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

**5.381.5.19** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get ( __streambuf_type & __sb ) [inline]`

Extraction into another streambuf.

#### Parameters

*sb* A streambuf in which to store data.

#### Returns

\*this

Returns `get(sb, widen('\n'))`.

Definition at line 368 of file `istream`.

**5.381.5.20** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline ( char_type * __s, streamsize __n, char_type __delim )`

String extraction.

**Parameters**

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

**Returns**

`*this`

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*-1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 402 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.381.5.21** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::getline ( char_type * __s, streamsize __n ) [inline]`

String extraction.

**Parameters**

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.

**Returns**

`*this`

Returns `getline(s,n,widen('\n'))`.

Definition at line 408 of file `istream`.

Referenced by `std::basic_istream< char >::getline()`.

**5.381.5.22** `locale std::ios_base::getloc ( ) const [inline, inherited]`

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutIter >::do_put()`, `std::basic_ios< _CharT, _Traits >::imbue()`, `std::operator>>()`, and `std::ws()`.

**5.381.5.23** `template<typename _CharT, typename _Traits> bool  
std::basic_ios< _CharT, _Traits >::good ( ) const [inline,  
inherited]`

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 172 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.381.5.24** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( void )`

Discarding characters.

#### Parameters

*n* Number of characters to discard.

*delim* A "stop" character.

#### Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if *n* != `std::numeric_limits<int>::max()`, *n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 462 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.381.5.25** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( streamsize __n )`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 495 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

**5.381.5.26** `template<typename _CharT, typename _Traits > basic_istream<  
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore  
( streamsize __n, int_type __delim )`

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 557 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_streambuf< \_CharT, \_Traits >::sbumpc(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

**5.381.5.27** `template<typename _CharT, typename _Traits > locale  
std::basic_ios< _CharT, _Traits >::imbue ( const locale & __loc )  
[inherited]`

Moves to a new locale.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Reimplemented from `std::ios_base`.

Definition at line 115 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.381.5.28** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<  
_CharT, _Traits> * __sb ) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, _Traits>::basic_ios()`, `std::basic_istream<char>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<char>::basic_ostream()`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**5.381.5.29** `long& std::ios_base::iword ( int __ix ) [inline, inherited]`

Access to integer array.

#### Parameters

`__ix` Index into the array.

#### Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any

purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file `ios_base.h`.

**5.381.5.30** `template<typename _CharT, typename _Traits> char  
std::basic_ios<_CharT, _Traits>::narrow ( char_type __c, char  
__dfault ) const [inline, inherited]`

Squeezes characters.

#### Parameters

*c* The character to narrow.

*dfault* The character to narrow.

#### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

\**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 183 of file `istream`.

**5.381.5.34** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits  
>::operator>> ( __streambuf_type * __sb )`

Extracting into another streambuf.

#### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 206 of file `istream.tcc`.

__f ) [inline]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 209 of file `istream`.

**5.381.5.48** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits  
>::operator>> ( int & __n )`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 161 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.381.5.49** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits>::operator>> ( long double  
& __f ) [inline]`

Basic arithmetic extractors.

### Parameters

*A* variable of builtin type.

### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 213 of file `istream`.

**5.381.5.50** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek ( void )`

Looking ahead in the stream.

### Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 622 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.381.5.51** `streamsize std::ios_base::precision ( streamsize __prec )`  
`[inline, inherited]`

Changing flags.

### Parameters

*prec* The new precision value.

**Returns**

The previous value of [precision\(\)](#).

Definition at line 632 of file ios\_base.h.

**5.381.5.52** streamsize std::ios\_base::precision ( ) const [inline, inherited]

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::operator<<().

**5.381.5.53** template<typename \_CharT, typename \_Traits > basic\_istream< \_CharT, \_Traits > & std::basic\_istream< \_CharT, \_Traits >::putback ( char\_type \_\_c )

Unextracting a single character.

**Parameters**

*c* The character to push back into the input stream.

**Returns**

\*this

If [rdbuf\(\)](#) is not null, calls [rdbuf\(\) -> sputbackc\(c\)](#).

If [rdbuf\(\)](#) is null or if [sputbackc\(\)](#) fails, sets badbit in the error state.

**Note**

Since no characters are extracted, the next call to [gcount\(\)](#) will return 0, as required by DR 60.

Definition at line 713 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

#### 5.381.5.54 `void*& std::ios_base::pword ( int __ix ) [inline, inherited]`

Access to void pointer array.

##### Parameters

`__ix` Index into the array.

##### Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file `ios_base.h`.

#### 5.381.5.55 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::rdbuf ( ) const [inline, inherited]`

Accessing the underlying buffer.

##### Returns

The current stream buffer.

This does not change the state of the stream.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>`.

Definition at line 313 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char>::_M_write()`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unset()`, and `std::ws()`.

#### 5.381.5.56 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf ( basic_streambuf<_CharT, _Traits> * __sb ) [inherited]`

Changing the underlying buffer.

##### Parameters

*sb* The new stream buffer.

##### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 54 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.381.5.57** `template<typename _CharT, typename _Traits> istate  
std::basic_ios<_CharT, _Traits>::rdstate ( ) const [inline,  
inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See [std::ios\\_base::istate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 129 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ios<char, _Traits>::eof()`, `std::basic_ios<char, _Traits>::fail()`, `std::basic_ios<char, _Traits>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.381.5.58** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read (  
char_type * __s, streamsize __n )`

Extraction without delimiters.

#### Parameters

*s* A character array.

*n* Maximum number of characters to store.

#### Returns

\*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- *n* characters are stored

- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 652 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.381.5.59** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::readsome ( char_type *  
__s, streamsize __n )`

Extraction until the buffer is exhausted, but no more.

### Parameters

- s* A character array.
- n* Maximum number of characters to store.

### Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets `eofbit` and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 681 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.381.5.60** `void std::ios_base::register_callback ( event_callback __fn, int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

#### Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.381.5.61** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg ( pos_type __pos )`

Changing the current read position.

#### Parameters

`pos` A file position object.

#### Returns

`*this`

If `fail()` is not true, calls `rddbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 847 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rddbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.381.5.62** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg ( off_type __off, ios_base::seekdir __dir )`

Changing the current read position.

#### Parameters

*off* A file offset object.

*dir* The direction in which to seek.

#### Returns

\*this

If `fail()` is not true, calls `rddbuf()` → `pubseekoff(off, dir)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 886 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rddbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.381.5.63** `fmtflags std::ios_base::setf ( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

#### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file `ios_base.h`.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.381.5.64** `fmtflags std::ios_base::setf ( fmtflags __fmtfl, fmtflags __mask )`  
`[inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

*mask* The flags mask for *fmtfl*.

#### Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 597 of file `ios_base.h`.

**5.381.5.65** `template<typename _CharT, typename _Traits> void`  
`std::basic_ios<_CharT, _Traits>::setstate ( iostate __state )`  
`[inline, inherited]`

Sets additional flags in the error state.

#### Parameters

*state* The additional state flag(s) to set.

See `std::ios_base::iostate` for the possible bit values.

Definition at line 149 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char>::_M_write()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ostream<_CharT, _Traits>::flush()`,

std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_fstream< \_CharT, \_Traits >::open(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::ws().

#### 5.381.5.66 template<typename \_CharT, typename \_Traits > int std::basic\_istream< \_CharT, \_Traits >::sync ( void )

Synchronizing the stream buffer.

##### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

##### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 783 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

#### 5.381.5.67 static bool std::ios\_base::sync\_with\_stdio ( bool \_\_sync = true ) [static, inherited]

Interaction with the standard C I/O objects.

### Parameters

*sync* Whether to synchronize or not.

### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.381.5.68** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg ( void )`

Getting the current read position.

### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 819 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.381.5.69** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits>::tie ( ) const [inline, inherited]`

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.381.5.70** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits`  
`>::tie ( basic_ostream<_CharT, _Traits> * __tiestr ) [inline,`  
`inherited]`

Ties this stream to an output stream.

**Parameters**

*tiestr* The output stream.

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 299 of file `basic_ios.h`.

**5.381.5.71** `template<typename _CharT, typename _Traits> basic_istream<`  
`_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget`  
`( void )`

Unextracting the previous character.

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf() -> sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 748 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

**5.381.5.72** `void std::ios_base::unsetf ( fmtflags __mask ) [inline, inherited]`

Clearing format flags.

**Parameters**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.381.5.73** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::widen ( char __c ) const  
[inline, inherited]`

Widens characters.

**Parameters**

*c* The character to widen.

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.ht>

Definition at line 441 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::basic_ios<char, _Traits>::fill()`, `std::basic_istream<char>::get()`, `std::basic_istream<char>::getline()`, `std::getline()`, and `std::operator>>()`.

#### 5.381.5.74 `streamsize std::ios_base::width ( streamsize __wide ) [inline, inherited]`

Changing flags.

##### Parameters

*wide* The new width value.

##### Returns

The previous value of `width()`.

Definition at line 655 of file `ios_base.h`.

#### 5.381.5.75 `streamsize std::ios_base::width ( ) const [inline, inherited]`

Flags access.

##### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator>>()`.

#### 5.381.5.76 `static int std::ios_base::xalloc ( ) throw () [static, inherited]`

Access to unique indices.

### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 5.381.6 Member Data Documentation

### 5.381.6.1 `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::_M_gcount` `[protected]`

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 81 of file `istream`.

Referenced by `std::basic_istream<char>::gcount()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsomewhat()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::basic_istream<char>::~~basic_istream()`.

### 5.381.6.2 `const fmtflags std::ios_base::adjustfield` `[static, inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

### 5.381.6.3 `const openmode std::ios_base::app` `[static, inherited]`

Seek to end before each write.

Definition at line 366 of file ios\_base.h.

#### **5.381.6.4 const openmode std::ios\_base::ate [static, inherited]**

Open and seek to end immediately after opening.

Definition at line 369 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

#### **5.381.6.5 const iostate std::ios\_base::badbit [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 336 of file ios\_base.h.

Referenced by std::basic\_ostream< char >::M\_write(), std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< \_CharT, \_Traits >::clear(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry().

#### **5.381.6.6 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 315 of file ios\_base.h.

Referenced by std::dec(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::hex(), std::oct(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.381.6.7 const seekdir std::ios\_base::beg [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 398 of file ios\_base.h.

**5.381.6.8 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see /// <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 374 of file ios\_base.h.

Referenced by std::basic\_filebuf<\_CharT, \_Traits>::showmanyc().

**5.381.6.9 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 260 of file ios\_base.h.

Referenced by std::boolalpha(), std::num\_get<\_CharT, \_InIter>::do\_get(), std::num\_put<\_CharT, \_OutIter>::do\_put(), and std::noboolalpha().

**5.381.6.10 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 401 of file ios\_base.h.

Referenced by std::basic\_filebuf<\_CharT, \_Traits>::imbue(), std::basic\_istream<\_CharT, \_Traits>::tellg(), and std::basic\_ostream<\_CharT, \_Traits>::tellp().

**5.381.6.11 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file ios\_base.h.

Referenced by `std::dec()`.

#### 5.381.6.12 `const seekdir std::ios_base::end` [**static, inherited**]

Request a seek relative to the current end of the sequence.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

#### 5.381.6.13 `const iostate std::ios_base::eofbit` [**static, inherited**]

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

#### 5.381.6.14 `const iostate std::ios_base::failbit` [**static, inherited**]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file `ios_base.h`.

Referenced by `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits`

`>::getline()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 5.381.6.15 `const fmtflags std::ios_base::fixed` [`static`, `inherited`]

Generate floating-point output in fixed-point notation.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::fixed()`.

#### 5.381.6.16 `const fmtflags std::ios_base::floatfield` [`static`, `inherited`]

A mask of `scientific|fixed`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::scientific()`.

#### 5.381.6.17 `const iostate std::ios_base::goodbit` [`static`, `inherited`]

Indicates all is well.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`,

std::basic\_istream< \_CharT, \_Traits >::sync(), and std::basic\_istream< \_CharT, \_Traits >::unget().

**5.381.6.18 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.381.6.19 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for ifstream and fstream.

Definition at line 377 of file ios\_base.h.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::\_M\_set\_buffer(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::showmanyc(), std::basic\_filebuf< \_CharT, \_Traits >::showmanyc(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::underflow(), and std::basic\_filebuf< \_CharT, \_Traits >::underflow().

**5.381.6.20 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain /// generated output, or identical to right if no such point is /// designated.

Definition at line 274 of file ios\_base.h.

Referenced by std::internal().

**5.381.6.21 const fmtflags std::ios\_base::left [static, inherited]**

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file ios\_base.h.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

**5.381.6.22 const fmtflags std::ios\_base::oct [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 281 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

**5.381.6.23 const openmode std::ios\_base::out [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::M_set_buffer()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

**5.381.6.24 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain `///` generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file `ios_base.h`.

Referenced by `std::right()`.

**5.381.6.25 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 288 of file `ios_base.h`.

Referenced by `std::scientific()`.

**5.381.6.26 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 292 of file ios\_base.h.

Referenced by std::noshowbase(), and std::showbase().

**5.381.6.27 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 296 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

**5.381.6.28 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

**5.381.6.29 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 302 of file ios\_base.h.

Referenced by std::noskipws(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), and std::skipws().

**5.381.6.30 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for ofstream.

Definition at line 383 of file ios\_base.h.

**5.381.6.31 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 305 of file `ios_base.h`.

Referenced by `std::nunitbuf()`, `std::unitbuf()`, and `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`.

#### 5.381.6.32 `const fmtflags std::ios_base::uppercase` [`static`, `inherited`]

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

- [istream](#)
- [istream.tcc](#)

## 5.382 `std::basic_istream< _CharT, _Traits >::sentry` Class Reference

Performs setup work for input streams.

### Public Types

- `typedef __istream_type::__ctype_type __ctype_type`
- `typedef _Traits::int_type __int_type`
- `typedef basic_istream< _CharT, _Traits > __istream_type`
- `typedef basic_streambuf< _CharT, _Traits > __streambuf_type`
- `typedef _Traits traits_type`

### Public Member Functions

- `sentry (basic_istream< _CharT, _Traits > &__is, bool __noskipws=false)`
- `operator bool () const`

### 5.382.1 Detailed Description

**template<typename \_CharT, typename \_Traits> class std::basic\_istream< \_CharT, \_Traits>::sentry**

Performs setup work for input streams. Objects of this class are created before all of the standard extractors are run. It is responsible for *exception-safe prefix and suffix operations*, although only prefix actions are currently required by the standard.

Definition at line 635 of file `istream`.

### 5.382.2 Member Typedef Documentation

**5.382.2.1    template<typename \_CharT, typename \_Traits> typedef \_Traits  
std::basic\_istream< \_CharT, \_Traits>::sentry::traits\_type**

Easy access to dependant types.

Definition at line 642 of file `istream`.

### 5.382.3 Constructor & Destructor Documentation

**5.382.3.1    template<typename \_CharT, typename \_Traits> std::basic\_istream<  
\_CharT, \_Traits>::sentry::sentry ( basic\_istream< \_CharT, \_Traits  
> & \_\_is, bool \_\_noskipws = false ) [explicit]**

The constructor performs all the work.

#### Parameters

*is*    The input stream to guard.

*noskipws*    Whether to consume whitespace or not.

If the stream state is good (*is.good()* is true), then the following actions are performed, otherwise the sentry state is false (*not okay*) and failbit is set in the stream state.

The sentry's preparatory actions are:

1. if the stream is tied to an output stream, `is.tie()->flush()` is called to synchronize the output sequence
2. if *noskipws* is false, and `ios_base::skipws` is set in `is.flags()`, the sentry extracts and discards whitespace characters from the stream. The currently imbued locale is used to determine whether each character is whitespace.

### 5.383 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference 1940

---

If the stream state is still good, then the sentry state becomes true (*okay*).

Definition at line 49 of file `istream.tcc`.

References `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::flags()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::ios_base::goodbit`, `std::__ctype_abstract_base< _CharT >::is()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, `std::ios_base::skipws`, `std::basic_streambuf< _CharT, _Traits >::snextc()`, and `std::basic_ios< _CharT, _Traits >::tie()`.

#### 5.382.4 Member Function Documentation

**5.382.4.1** `template<typename _CharT, typename _Traits> std::basic_istream< _CharT, _Traits >::operator bool ( ) const [inline, explicit]`

Quick status checking.

##### Returns

The sentry state.

For ease of use, sentries may be converted to booleans. The return value is that of the sentry state (`true == okay`).

Definition at line 683 of file `istream`.

The documentation for this class was generated from the following files:

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__istream_type & operator>> (bool &__n)`
- `__istream_type & operator>> (short &__n)`
- `__istream_type & operator>> (unsigned short &__n)`
- `__istream_type & operator>> (int &__n)`

- `__istream_type & operator>> (long &__n)`
- `__istream_type & operator>> (unsigned long &__n)`
- `__istream_type & operator>> (long long &__n)`
- `__istream_type & operator>> (unsigned long long &__n)`
- `__istream_type & operator>> (float &__f)`
- `__istream_type & operator>> (double &__f)`
- `__istream_type & operator>> (long double &__f)`
- `__istream_type & operator>> (void *&__p)`
- `__istream_type & operator>> (__streambuf_type *__sb)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

## Friends

- class `sentry`

### 5.383.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_istream<_CharT, _Traits, _Alloc>`

Controlling input for `std::string`.

This class supports reading from objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 263 of file `sstream`.

### 5.383.2 Member Typedef Documentation

5.383.2.1 `template<typename _CharT, typename _Traits> typedef type<_CharT> std::basic_istream<_CharT, _Traits>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 73 of file `istream`.

5.383.2.2 `template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits>> std::basic_istream<_CharT, _Traits>::__num_get_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 72 of file `istream`.

5.383.2.3 `template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>> std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]`

These are non-standard types.

### 5.383 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference 1948

---

Reimplemented in [std::basic\\_ostream< \\_CharT, \\_Traits >](#), [std::basic\\_ostream< char, \\_Traits >](#), and [std::basic\\_ostream< char >](#).

Definition at line 86 of file `basic_ios.h`.

**5.383.2.4** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`typedef _CharT std::basic_istream< _CharT, _Traits, _Alloc`  
`>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 267 of file `sstream`.

**5.383.2.5** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`  
`[inherited]`

The type of an event callback function.

#### Parameters

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

**5.383.2.6** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`

- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 257 of file `ios_base.h`.

**5.383.2.7** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`typedef traits_type::int_type std::basic_istream< _CharT,`  
`_Traits, _Alloc >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 272 of file `sstream`.

**5.383.2.8 typedef \_Ios\_Iostate std::ios\_base::iostate [inherited]**

This is a bitmask type.

*\_Ios\_Iostate* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *iostate* are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 332 of file *ios\_base.h*.

**5.383.2.9 template<typename \_CharT, typename \_Traits, typename \_Alloc> typedef traits\_type::off\_type std::basic\_istream< \_CharT, \_Traits, \_Alloc >::off\_type**

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 274 of file *sstream*.

**5.383.2.10 typedef \_Ios\_Openmode std::ios\_base::openmode [inherited]**

This is a bitmask type.

*\_Ios\_Openmode* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *openmode* are:

- app
- ate
- binary
- in

- out
- trunc

Definition at line 363 of file ios\_base.h.

**5.383.2.11** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::pos_type std::basic_istream< _CharT,  
_Traits, _Alloc >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 273 of file sstream.

**5.383.2.12** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file ios\_base.h.

**5.383.2.13** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef _Traits std::basic_istream< _CharT, _Traits, _Alloc  
>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_istream< \\_CharT, \\_Traits >](#).

Definition at line 268 of file sstream.

### 5.383.3 Member Enumeration Documentation

#### 5.383.3.1 `enum std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 421 of file `ios_base.h`.

### 5.383.4 Constructor & Destructor Documentation

#### 5.383.4.1 `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream ( ios_base::openmode __mode = ios_base::in ) [inline, explicit]`

Default constructor starts with an empty string buffer.

##### Parameters

*mode* Whether the buffer can read, or write, or both.

`ios_base::in` is automatically included in *mode*.

Initializes `sb` using `mode|in`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 299 of file `sstream`.

References `std::basic_ios< _CharT, _Traits >::init()`.

#### 5.383.4.2 `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream ( const __string_type & __str, ios_base::openmode __mode = ios_base::in ) [inline, explicit]`

Starts with an existing string buffer.

### Parameters

*str* A string to copy as a starting buffer.

*mode* Whether the buffer can read, or write, or both.

`ios_base::in` is automatically included in *mode*.

Initializes `sb` using *str* and `mode|in`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 317 of file `sstream`.

References `std::basic_ios< _CharT, _Traits >::init()`.

**5.383.4.3** `template<typename _CharT, typename _Traits, typename  
_Alloc> std::basic_istream< _CharT, _Traits, _Alloc  
>::~basic_istream ( ) [inline]`

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

Definition at line 328 of file `sstream`.

### 5.383.5 Member Function Documentation

**5.383.5.1** `const locale& std::ios_base::_M_getloc ( ) const [inline,  
inherited]`

Locale access.

### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 708 of file `ios_base.h`.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

**5.383.5.2** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad ( ) const` [**inline, inherited**]

Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 203 of file `basic_ios.h`.

**5.383.5.3** `template<typename _CharT, typename _Traits > void std::basic_ios< _CharT, _Traits >::clear ( iostate __state = goodbit )` [**inherited**]

[Re]sets the error state.

#### Parameters

*state* The new state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ios< char, _Traits >::exceptions()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.383.5.4** `template<typename _CharT, typename _Traits > basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt ( const basic_ios< _CharT, _Traits > & __rhs )` [**inherited**]

Copies fields of `__rhs` into this.

#### Parameters

`__rhs` The source values for the copies.

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 64 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

#### 5.383.5.5 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof( ) const [inline, inherited]`

Fast error checking.

#### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 5.383.5.6 `template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions( ) const [inline, inherited]`

Throwing exceptions on errors.

### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 214 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**5.383.5.7** `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions ( iostate __except ) [inline, inherited]`

Throwing exceptions on errors.

### Parameters

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios\\_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 249 of file `basic_ios.h`.

**5.383.5.8** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::fail( ) const [inline, inherited]`

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::operator void *()`, `std::basic_ios< char, _Traits >::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

**5.383.5.9** `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill( ) const [inline, inherited]`

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 362 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::basic_ios< char, _Traits >::fill()`.

**5.383.5.10** `template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill( char_type __ch ) [inline, inherited]`

Sets a new *empty* character.

**Parameters**

*ch* The new character.

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 382 of file `basic_ios.h`.

**5.383.5.11 fmtflags std::ios\_base::flags ( ) const [inline, inherited]**

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 553 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.383.5.12 fmtflags std::ios\_base::flags ( fmtflags \_\_fmtfl ) [inline, inherited]**

Setting new format flags all at once.

**Parameters**

*fmtfl* The new flags to set.

**Returns**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file `ios_base.h`.

**5.383.5.13** `template<typename _CharT, typename _Traits> streamsize  
std::basic_istream<_CharT, _Traits>::gcount ( ) const  
[inline, inherited]`

Character counting.

#### Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 251 of file istream.

**5.383.5.14** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits  
>::get ( void ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 238 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.383.5.15** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (   
char_type & __c ) [inherited]`

Simple extraction.

#### Parameters

*c* The character in which to store data.

### Returns

\*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns traits::eof().

### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 274 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.383.5.16** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get ( char_type * __s, streamsize __n ) [inline, inherited]`

Simple multiple-character extraction.

### Parameters

*s* Pointer to an array.

*n* Maximum number of characters to store in *s*.

### Returns

\*this

Returns get(s,n,widen('\n')).

Definition at line 335 of file istream.

**5.383.5.17** `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get ( __streambuf_type & __sb, char_type __delim ) [inherited]`

Extraction into another streambuf.

### Parameters

*sb* A streambuf in which to store data.

*delim* A "stop" character.

#### Returns

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 358 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), std::basic\_streambuf< \_CharT, \_Traits >::snextc(), and std::basic\_streambuf< \_CharT, \_Traits >::sputc().

**5.383.5.18** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream< _CharT, _Traits>::get  
( char_type * __s, streamsize __n, char_type __delim )  
[inherited]`

Simple multiple-character extraction.

#### Parameters

*s* Pointer to an array.

*n* Maximum number of characters to store in *s*.

*delim* A "stop" character.

#### Returns

\*this

Characters are extracted and stored into *s* until one of the following happens:

- $n-1$  characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 311 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

**5.383.5.19** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get ( __streambuf_type & __sb ) [inline, inherited]`

Extraction into another streambuf.

#### Parameters

*sb* A streambuf in which to store data.

#### Returns

\*this

Returns `get(sb, widen('\n'))`.

Definition at line 368 of file istream.

**5.383.5.20** `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

String extraction.

**Parameters**

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.
- delim* A "stop" character.

**Returns**

\*this

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*−1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 402 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.383.5.21** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline ( char_type * __s, streamsize __n ) [inline, inherited]`

String extraction.

**Parameters**

- s* A character array in which to store the data.
- n* Maximum number of characters to extract.

**Returns**

\*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 408 of file `istream`.

Referenced by `std::basic_istream< char >::getline()`.

**5.383.5.22 locale std::ios\_base::getloc ( ) const [inline, inherited]**

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutputIter >::do_put()`, `std::basic_ios< _CharT, _Traits >::imbue()`, `std::operator>>()`, and `std::ws()`.

**5.383.5.23 template<typename \_CharT, typename \_Traits> bool  
std::basic\_ios< \_CharT, \_Traits >::good ( ) const [inline,  
inherited]**

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 172 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.383.5.24** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore( streamsize __n ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 495 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.383.5.25** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore( void ) [inherited]`

Discarding characters.

#### Parameters

*n* Number of characters to discard.

*delim* A "stop" character.

#### Returns

`*this`

Extracts characters and throws them away until one of the following happens:

- if *n* != `std::numeric_limits<int>::max()`, *n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 462 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_streambuf< \_CharT, \_Traits >::sbumpc(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore  
( streamsize __n, int_type __delim ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 557 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_streambuf< \_CharT, \_Traits >::sbumpc(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::nextc().

**5.383.5.27** `template<typename _CharT, typename _Traits > locale  
std::basic_ios< _CharT, _Traits >::imbue ( const locale & __loc )  
[inherited]`

Moves to a new locale.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

### 5.383 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference

1967

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Reimplemented from `std::ios_base`.

Definition at line 115 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::operator<<()`.

**5.383.5.28** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::init ( basic_streambuf<  
_CharT, _Traits > * __sb ) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

Referenced by `std::basic_fstream< _CharT, _Traits >::basic_fstream()`, `std::basic_ifstream< _CharT, _Traits >::basic_ifstream()`, `std::basic_ios< char, _Traits >::basic_ios()`, `std::basic_istream< char >::basic_istream()`, `std::basic_istreamstream< _CharT, _Traits, _Alloc >::basic_istreamstream()`, `std::basic_ofstream< _CharT, _Traits >::basic_ofstream()`, `std::basic_ostream< char >::basic_ostream()`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream()`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream()`.

**5.383.5.29** `long& std::ios_base::iword ( int __ix ) [inline, inherited]`

Access to integer array.

#### Parameters

`__ix` Index into the array.

#### Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any

### 5.383 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference 1968

---

purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file `ios_base.h`.

**5.383.5.30** `template<typename _CharT, typename _Traits> char  
std::basic_ios<_CharT, _Traits>::narrow ( char_type __c, char  
__dfault ) const [inline, inherited]`

Squeezes characters.

#### Parameters

*c* The character to narrow.  
*dfault* The character to narrow.

#### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

**5.383.5.39** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> ( __streambuf_type * __sb ) [inherited]`

Extracting into another streambuf.

#### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 206 of file istream.tcc.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.383.5.40** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( unsigned int & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 183 of file istream.

**5.383.5.41** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> ( __istream_type &(*)(__istream_type &) __pf ) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 133 of file `istream`.

**5.383.5.44** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> ( long & __n ) [inline, inherited]`

Basic arithmetic extractors.

**Parameters**

*A* variable of builtin type.

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 187 of file istream.

**5.383.5.45** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits >::operator>> ( unsigned  
long & __n ) [inline, inherited]`

Basic arithmetic extractors.

**Parameters**

*A* variable of builtin type.

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 191 of file istream.

**5.383.5.46** `template<typename _CharT, typename _Traits> __istream_type&  
std::basic_istream<_CharT, _Traits >::operator>> ( double &  
__f ) [inline, inherited]`

Basic arithmetic extractors.

**Parameters**

*A* variable of builtin type.

**Returns**

\*this if successful

### 5.383 `std::basic_istream<_CharT, _Traits, _Alloc>` Class Template Reference 1975

---

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 209 of file `istream`.

**5.383.5.47** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( long long & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 196 of file `istream`.

**5.383.5.48** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( bool & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 169 of file `istream`.

**5.383.5.49** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::operator>> ( unsigned long long & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

`A` variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 200 of file `istream`.

**5.383.5.50** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek ( void ) [inherited]`

Looking ahead in the stream.

#### Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 622 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.383.5.51** `streamsize std::ios_base::precision ( ) const [inline, inherited]`

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::operator<<().

**5.383.5.52 streamsize std::ios\_base::precision ( streamsize \_\_prec )**  
**[inline, inherited]**

Changing flags.

**Parameters**

*prec* The new precision value.

**Returns**

The previous value of [precision\(\)](#).

Definition at line 632 of file ios\_base.h.

**5.383.5.53 template<typename \_CharT, typename \_Traits > basic\_istream<**  
**\_CharT, \_Traits > & std::basic\_istream< \_CharT, \_Traits**  
**>::putback ( char\_type \_\_c ) [inherited]**

Unextracting a single character.

**Parameters**

*c* The character to push back into the input stream.

**Returns**

\*this

If [rdbuf\(\)](#) is not null, calls [rdbuf\(\)->sputbackc\(c\)](#).

If [rdbuf\(\)](#) is null or if [sputbackc\(\)](#) fails, sets badbit in the error state.

**Note**

Since no characters are extracted, the next call to [gcount\(\)](#) will return 0, as required by DR 60.

### 5.383 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference 1978

---

Definition at line 713 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

#### 5.383.5.54 `void*& std::ios_base::pword ( int __ix ) [inline, inherited]`

Access to void pointer array.

##### Parameters

`__ix` Index into the array.

##### Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file `ios_base.h`.

#### 5.383.5.55 `template<typename _CharT, typename _Traits, typename _Alloc> __stringbuf_type* std::basic_istream< _CharT, _Traits, _Alloc >::rdbuf ( ) const [inline]`

Accessing the underlying buffer.

##### Returns

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 339 of file `sstream`.

**5.383.5.56** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf ( basic_streambuf<_CharT, _Traits> * __sb ) [inherited]`

Changing the underlying buffer.

#### Parameters

*sb* The new stream buffer.

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 54 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.383.5.57** `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::rdstate ( ) const [inline, inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

### 5.383 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference 1980

---

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 129 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.383.5.58** `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::read ( char_type * __s, streamsize __n ) [inherited]`

Extraction without delimiters.

#### Parameters

- s* A character array.
- n* Maximum number of characters to store.

#### Returns

\*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 652 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.383.5.59** `template<typename _CharT, typename _Traits > streamsize  
std::basic_istream< _CharT, _Traits >::readsome ( char_type *  
__s, streamsize __n ) [inherited]`

Extraction until the buffer is exhausted, but no more.

#### Parameters

- s* A character array.
- n* Maximum number of characters to store.

#### Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets eofbit and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 681 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.383.5.60** `void std::ios_base::register_callback ( event_callback __fn, int  
__index ) [inherited]`

Add the callback *\_\_fn* with parameter *\_\_index*.

#### Parameters

- \_\_fn* The function to add.
- \_\_index* The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.383.5.61** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg ( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

#### Parameters

*off* A file offset object.  
*dir* The direction in which to seek.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 886 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.383.5.62** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg ( pos_type __pos ) [inherited]`

Changing the current read position.

#### Parameters

*pos* A file position object.

#### Returns

\*this

### 5.383 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference 1983

---

If `fail()` is not true, calls `rdbuf()` -> `pubseekpos(pos)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 847 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

#### 5.383.5.63 `fmtflags std::ios_base::setf( fmtflags __fmtfl, fmtflags __mask )` [inline, inherited]

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.  
*mask* The flags mask for *fmtfl*.

#### Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 597 of file `ios_base.h`.

#### 5.383.5.64 `fmtflags std::ios_base::setf( fmtflags __fmtfl )` [inline, inherited]

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file ios\_base.h.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.383.5.65** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::setstate ( iostate __state )  
[inline, inherited]`

Sets additional flags in the error state.

### Parameters

*state* The additional state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 149 of file basic\_ios.h.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.383.5.66** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_istream< _CharT, _Traits, _Alloc >::str (   
const __string_type & __s ) [inline]`

Setting a new buffer.

#### Parameters

*s* The string to use as a new sequence.

Calls `rdbuf() -> str(s)`.

Definition at line 357 of file sstream.

**5.383.5.67** `template<typename _CharT, typename _Traits, typename _Alloc>  
__string_type std::basic_istream< _CharT, _Traits, _Alloc  
>::str ( ) const [inline]`

Copying out the string buffer.

#### Returns

`rdbuf() -> str()`

Definition at line 347 of file sstream.

**5.383.5.68** `template<typename _CharT, typename _Traits > int  
std::basic_istream< _CharT, _Traits >::sync ( void )  
[inherited]`

Synchronizing the stream buffer.

#### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 783 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.383.5.69 static bool std::ios\_base::sync\_with\_stdio ( bool \_\_sync = true )**  
**[static, inherited]**

Interaction with the standard C I/O objects.

**Parameters**

*sync* Whether to synchronize or not.

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.383.5.70 template<typename \_CharT, typename \_Traits > basic\_istream< \_CharT, \_Traits >::pos\_type std::basic\_istream< \_CharT, \_Traits >::tell ( void ) [inherited]**

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 819 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.383.5.71** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits`  
`>::tie( ) const [inline, inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.383.5.72** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits`  
`>::tie( basic_ostream<_CharT, _Traits> * __tiestr ) [inline,`  
`inherited]`

Ties this stream to an output stream.

#### Parameters

*tiestr* The output stream.

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 299 of file `basic_ios.h`.

**5.383.5.73** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream< _CharT, _Traits>::unget  
( void ) [inherited]`

Unextracting the previous character.

#### Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

#### Note

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 748 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits>::clear()`, `std::basic_ios< _CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits>::rdbuf()`, `std::basic_ios< _CharT, _Traits>::rdstate()`, `std::basic_ios< _CharT, _Traits>::setstate()`, and `std::basic_streambuf< _CharT, _Traits>::sungetc()`.

**5.383.5.74** `void std::ios_base::unsetf( fmtflags __mask ) [inline,  
inherited]`

Clearing format flags.

#### Parameters

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.383.5.75** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios<_CharT, _Traits>::widen ( char __c ) const  
[inline, inherited]`

Widens characters.

#### Parameters

*c* The character to widen.

#### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 441 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::basic_ios<char, _Traits>::fill()`, `std::basic_istream<char>::get()`, `std::basic_istream<char>::getline()`, `std::getline()`, and `std::operator>>()`.

**5.383.5.76** `streamsize std::ios_base::width ( ) const [inline,  
inherited]`

Flags access.

#### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outputter>::do_put()`, and `std::operator>>()`.

**5.383.5.77** `streamsize std::ios_base::width ( streamsize __wide ) [inline, inherited]`

Changing flags.

#### Parameters

*wide* The new width value.

#### Returns

The previous value of [width\(\)](#).

Definition at line 655 of file `ios_base.h`.

**5.383.5.78** `static int std::ios_base::xalloc ( ) throw () [static, inherited]`

Access to unique indices.

#### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### 5.383.6 Member Data Documentation

**5.383.6.1** `template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::M_gcount [protected, inherited]`

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 81 of file `istream`.

### 5.383 std::basic\_istream< \_CharT, \_Traits, \_Alloc > Class Template Reference 1991

---

Referenced by std::basic\_istream< char >::gcount(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::basic\_istream< char >::~~basic\_istream().

#### 5.383.6.2 const fmtflags std::ios\_base::adjustfield [static, inherited]

A mask of left|right|internal. Useful for the 2-arg form of set f.

Definition at line 312 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), std::internal(), std::left(), and std::right().

#### 5.383.6.3 const openmode std::ios\_base::app [static, inherited]

Seek to end before each write.

Definition at line 366 of file ios\_base.h.

#### 5.383.6.4 const openmode std::ios\_base::ate [static, inherited]

Open and seek to end immediately after opening.

Definition at line 369 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

#### 5.383.6.5 const iostate std::ios\_base::badbit [static, inherited]

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 336 of file ios\_base.h.

Referenced by std::basic\_ostream< char >::\_M\_write(), std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< \_CharT, \_Traits >::clear(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT,

`_Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unset()`, and `std::basic_ostream< _CharT, _Traits >::sentry::~~sentry()`.

#### 5.383.6.6 `const fmtflags std::ios_base::basefield` [static, inherited]

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 315 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::hex()`, `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.383.6.7 `const seekdir std::ios_base::beg` [static, inherited]

Request a seek relative to the beginning of the stream.

Definition at line 398 of file `ios_base.h`.

#### 5.383.6.8 `const openmode std::ios_base::binary` [static, inherited]

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see /// <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

#### 5.383.6.9 `const fmtflags std::ios_base::boolalpha` [static, inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

### 5.383 `std::basic_istream< _CharT, _Traits, _Alloc >` Class Template Reference 1993

---

Definition at line 260 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

#### 5.383.6.10 `const seekdir std::ios_base::cur` [`static`, `inherited`]

Request a seek relative to the current position within the sequence.

Definition at line 401 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

#### 5.383.6.11 `const fmtflags std::ios_base::dec` [`static`, `inherited`]

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file `ios_base.h`.

Referenced by `std::dec()`.

#### 5.383.6.12 `const seekdir std::ios_base::end` [`static`, `inherited`]

Request a seek relative to the current end of the sequence.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

#### 5.383.6.13 `const iostate std::ios_base::eofbit` [`static`, `inherited`]

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits`

#### **5.383.6.14 const iostate std::ios\_base::failbit [static, inherited]**

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file ios\_base.h.

Referenced by std::basic\_fstream< \_CharT, \_Traits >::close(), std::basic\_ofstream< \_CharT, \_Traits >::close(), std::basic\_ifstream< \_CharT, \_Traits >::close(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_fstream< \_CharT, \_Traits >::open(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

#### **5.383.6.15 const fmtflags std::ios\_base::fixed [static, inherited]**

Generate floating-point output in fixed-point notation.

Definition at line 266 of file ios\_base.h.

Referenced by std::fixed().

#### **5.383.6.16 const fmtflags std::ios\_base::floatfield [static, inherited]**

A mask of scientific|fixed. Useful for the 2-arg form of set f.

Definition at line 318 of file ios\_base.h.

Referenced by std::fixed(), and std::scientific().

**5.383.6.17 const iostate std::ios\_base::goodbit [static, inherited]**

Indicates all is well.

Definition at line 347 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sync(), and std::basic\_istream< \_CharT, \_Traits >::unget().

**5.383.6.18 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.383.6.19 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for ifstream and fstream.

Definition at line 377 of file ios\_base.h.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::M\_set\_buffer(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::showmanyc(),

**5.383 std::basic\_istream< \_CharT, \_Traits, \_Alloc > Class Template Reference 1996**

---

std::basic\_filebuf< \_CharT, \_Traits >::showmanyc(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::underflow(), and std::basic\_filebuf< \_CharT, \_Traits >::underflow().

**5.383.6.20 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain /// generated output, or identical to right if no such point is /// designated.

Definition at line 274 of file ios\_base.h.

Referenced by std::internal().

**5.383.6.21 const fmtflags std::ios\_base::left [static, inherited]**

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::left().

**5.383.6.22 const fmtflags std::ios\_base::oct [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 281 of file ios\_base.h.

Referenced by std::oct(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.383.6.23 const openmode std::ios\_base::out [static, inherited]**

Open for output. Default for ofstream and fstream.

Definition at line 380 of file ios\_base.h.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::M\_set\_buffer(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

**5.383.6.24** `const fmtflags std::ios_base::right` [`static`, `inherited`]

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file `ios_base.h`.

Referenced by `std::right()`.

**5.383.6.25** `const fmtflags std::ios_base::scientific` [`static`, `inherited`]

Generates floating-point output in scientific notation.

Definition at line 288 of file `ios_base.h`.

Referenced by `std::scientific()`.

**5.383.6.26** `const fmtflags std::ios_base::showbase` [`static`, `inherited`]

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 292 of file `ios_base.h`.

Referenced by `std::noshowbase()`, and `std::showbase()`.

**5.383.6.27** `const fmtflags std::ios_base::showpoint` [`static`, `inherited`]

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 296 of file `ios_base.h`.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**5.383.6.28** `const fmtflags std::ios_base::showpos` [`static`, `inherited`]

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file `ios_base.h`.

Referenced by `std::noshowpos()`, and `std::showpos()`.

**5.383.6.29 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 302 of file ios\_base.h.

Referenced by std::noskipws(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), and std::skipws().

**5.383.6.30 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for ofstream.

Definition at line 383 of file ios\_base.h.

**5.383.6.31 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 305 of file ios\_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry().

**5.383.6.32 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 309 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following file:

- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

*If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.*

*If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.*

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

### Unformatted Output Functions

*All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ofstream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.*

*If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.*

*If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.*

- `__ostream_type & put (char_type __c)`
- `void _M_write (const char_type *__s, streamsize __n)`
- `__ostream_type & write (const char_type *__s, streamsize __n)`
- `operator void * () const`
- `bool operator! () const`

#### 5.384.1 Detailed Description

template<typename \_CharT, typename \_Traits> class std::basic\_ofstream<\_CharT, \_Traits>

Controlling output for files.

This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 588 of file `fstream`.

### 5.384.2 Member Typedef Documentation

**5.384.2.1** `template<typename _CharT, typename _Traits> typedef  
    ctype<_CharT> std::basic_ostream<_CharT, _Traits>::  
    __ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 73 of file `ostream`.

**5.384.2.2** `template<typename _CharT, typename _Traits> typedef  
    num_get<_CharT, istreambuf_iterator<_CharT, _Traits>  
    > std::basic_ios<_CharT, _Traits>::  
    __num_get_type [inherited]`

These are non-standard types.

Reimplemented in `std::basic_istream<_CharT, _Traits>`, `std::basic_istream<char, _Traits>`, and `std::basic_istream<char>`.

Definition at line 88 of file `basic_ios.h`.

**5.384.2.3** `template<typename _CharT, typename _Traits> typedef  
    num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
    > std::basic_ostream<_CharT, _Traits>::  
    __num_put_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 72 of file `ostream`.

**5.384.2.4** `template<typename _CharT, typename _Traits> typedef _CharT  
    std::basic_ofstream<_CharT, _Traits>::  
    char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream<_CharT, _Traits>`.

Definition at line 592 of file `fstream`.

**5.384.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`  
`[inherited]`**

The type of an event callback function.

**Parameters**

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

**5.384.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags` `[inherited]`**

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`

**5.384.2.7** `template<typename _CharT, typename _Traits> typedef traits_type::int_type std::basic_ofstream<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream<_CharT, _Traits>`.

Definition at line 594 of file `fstream`.

**5.384.2.8** `typedef _Ios_Iostate std::ios_base::iostate` **[inherited]**

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 332 of file `ios_base.h`.

**5.384.2.9** `template<typename _CharT, typename _Traits> typedef  
traits_type::off_type std::basic_ofstream<_CharT, _Traits  
>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ostream<\\_CharT, \\_Traits>](#).

Definition at line 596 of file fstream.

**5.384.2.10** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

*\_Ios\_Openmode* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *openmode* are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 363 of file ios\_base.h.

**5.384.2.11** `template<typename _CharT, typename _Traits> typedef  
traits_type::pos_type std::basic_ofstream<_CharT, _Traits  
>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ostream<\\_CharT, \\_Traits>](#).

Definition at line 595 of file fstream.

#### 5.384.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

#### 5.384.2.13 `template<typename _CharT, typename _Traits> typedef _Traits std::basic_ofstream<_CharT, _Traits>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream<_CharT, _Traits>`.

Definition at line 593 of file `fstream`.

### 5.384.3 Member Enumeration Documentation

#### 5.384.3.1 `enum std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 421 of file `ios_base.h`.

### 5.384.4 Constructor & Destructor Documentation

#### 5.384.4.1 `template<typename _CharT, typename _Traits> std::basic_ofstream<_CharT, _Traits>::basic_ofstream ( )` [inline]

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 614 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`.

**5.384.4.2** `template<typename _CharT, typename _Traits>  
std::basic_ofstream<_CharT, _Traits>::basic_ofstream ( const char  
* __s, ios_base::openmode __mode = ios_base::out|ios_base::trunc )  
[inline, explicit]`

Create an output file stream.

#### Parameters

*s* Null terminated string specifying the filename.

*mode* Open file in specified mode (see [std::ios\\_base](#)).

[ios\\_base::out](#)|`ios_base::trunc` is automatically included in *mode*.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 629 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`, and `std::basic_ofstream<_CharT, _Traits>::open()`.

**5.384.4.3** `template<typename _CharT, typename _Traits>  
std::basic_ofstream<_CharT, _Traits>::basic_ofstream  
( const std::string & __s, ios_base::openmode __mode =  
ios_base::out|ios_base::trunc ) [inline, explicit]`

Create an output file stream.

#### Parameters

*s* `std::string` specifying the filename.

*mode* Open file in specified mode (see [std::ios\\_base](#)).

[ios\\_base::out](#)|`ios_base::trunc` is automatically included in *mode*.

Definition at line 647 of file fstream.

References `std::basic_ios<_CharT, _Traits>::init()`, and `std::basic_ofstream<_CharT, _Traits>::open()`.

**5.384.4.4** `template<typename _CharT, typename _Traits>  
std::basic_ofstream<_CharT, _Traits>::~~basic_ofstream ( )  
[inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 662 of file fstream.

## **5.384.5 Member Function Documentation**

**5.384.5.1** `const locale& std::ios_base::_M_getloc ( ) const [inline,  
inherited]`

Locale access.

### **Returns**

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 708 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::time_put<_CharT, _OutIter>::put()`.

**5.384.5.2** `template<typename _CharT, typename _Traits> void  
std::basic_ostream<_CharT, _Traits>::_M_write ( const char_type  
* __s, streamsize __n ) [inline, inherited]`

Simple insertion.

**Parameters**

*c* The character to insert.

**Returns**

\*this

Tries to insert *c*.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 289 of file ostream.

**5.384.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::bad ( ) const` `[inline, inherited]`

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 203 of file basic\_ios.h.

**5.384.5.4** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::clear ( iostate __state = goodbit )` `[inherited]`

[Re]sets the error state.

**Parameters**

*state* The new state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file basic\_ios.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_ios<char, _Traits>::exceptions()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

#### 5.384.5.5 `template<typename _CharT, typename _Traits> void std::basic_ofstream<_CharT, _Traits>::close ( ) [inline]`

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 742 of file `fstream`.

References `std::basic_filebuf<_CharT, _Traits>::close()`, `std::ios_base::failbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

#### 5.384.5.6 `template<typename _CharT, typename _Traits> basic_ios< _CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt ( const basic_ios<_CharT, _Traits> & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

##### Parameters

`__rhs` The source values for the copies.

##### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 64 of file `basic_ios.tcc`.

## 5.384 `std::basic_ofstream<_CharT, _Traits>` Class Template Reference 2014

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, and `std::ios_base::width()`.

### 5.384.5.7 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::eof( ) const` [`inline`, `inherited`]

Fast error checking.

#### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

### 5.384.5.8 `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::exceptions( ) const` [`inline`, `inherited`]

Throwing exceptions on errors.

#### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 214 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::clear()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.384.5.9** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::exceptions ( iostate __except ) [inline, inherited]`

Throwing exceptions on errors.

**Parameters**

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 249 of file `basic_ios.h`.

**5.384.5.10** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail ( ) const [inline, inherited]`

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::operator void \*(), std::basic\_ios< char, \_Traits >::operator!(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), and std::regex\_traits< \_Ch\_type >::value().

**5.384.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill ( char_type __ch )  
[inline, inherited]`

Sets a new *empty* character.

#### Parameters

*ch* The new character.

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ' ) in the current locale.

Definition at line 382 of file basic\_ios.h.

**5.384.5.12** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill ( ) const [inline,  
inherited]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 362 of file basic\_ios.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::basic\_ios< char, \_Traits >::fill().

**5.384.5.13 fmtflags std::ios\_base::flags ( ) const [inline, inherited]**

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 553 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), std::num\_get<\_CharT, \_InIter>::do\_get(), std::num\_put<\_CharT, \_OutIter>::do\_put(), std::basic\_ofstream<\_CharT, \_Traits>::operator<<(), std::operator<<(), std::operator>>(), and std::basic\_istream<\_CharT, \_Traits>::sentry::sentry().

**5.384.5.14 fmtflags std::ios\_base::flags ( fmtflags \_\_fmtfl ) [inline, inherited]**

Setting new format flags all at once.

**Parameters**

*fmtfl* The new flags to set.

**Returns**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file ios\_base.h.

**5.384.5.15 template<typename \_CharT, typename \_Traits> basic\_ofstream<\_CharT, \_Traits> & std::basic\_ofstream<\_CharT, \_Traits>::flush ( ) [inherited]**

Synchronizing the stream buffer.

**Returns**

\*this

## 5.384 `std::basic_ofstream<_CharT, _Traits>` Class Template Reference 2018

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit`.

Definition at line 213 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

### 5.384.5.16 `std::ios_base::getloc()` `const` `[inline, inherited]`

Locale access.

#### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

### 5.384.5.17 `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::good()` `const` `[inline, inherited]`

Fast error checking.

#### Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 172 of file `basic_ios.h`.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.384.5.18** `template<typename _CharT, typename _Traits> locale  
std::basic_ios<_CharT, _Traits>::imbue ( const locale & __loc )  
[inherited]`

Moves to a new locale.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional 110n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Reimplemented from `std::ios_base`.

Definition at line 115 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.384.5.19** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<  
_CharT, _Traits> * __sb ) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, _Traits>::basic_ios()`, `std::basic_istream<char>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<char>::basic_ostream()`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**5.384.5.20** `template<typename _CharT, typename _Traits> bool  
std::basic_ofstream<_CharT, _Traits>::is_open ( ) [inline]`

Wrapper to test for an open file.

**Returns**

`rdbuf () -> is_open ()`

Definition at line 681 of file fstream.

References `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.384.5.21** `long& std::ios_base::iword ( int __ix ) [inline, inherited]`

Access to integer array.

**Parameters**

`__ix` Index into the array.

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file `ios_base.h`.

**5.384.5.22** `template<typename _CharT, typename _Traits> char  
std::basic_ios<_CharT, _Traits>::narrow ( char_type __c, char  
__dfault ) const [inline, inherited]`

Squeezes characters.

**Parameters**

`c` The character to narrow.

*default* The character to narrow.

#### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 422 of file `basic_ios.h`.

**5.384.5.23** `template<typename _CharT, typename _Traits> void  
std::basic_ofstream<_CharT, _Traits>::open ( const char * __s,  
ios_base::openmode __mode = ios_base::out | ios_base::trunc )  
[inline]`

Opens an external file.

#### Parameters

*s* The name of the file.

*mode* The open mode flags.

Calls `std::basic_filebuf::open(s, mode | out | trunc)`. If that function fails, `failbit` is set in the stream's error state.

Tip: When using `std::string` to hold the filename, you must use `.c_str()` before passing it to this constructor.

Definition at line 702 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::failbit`, `std::basic_filebuf<_CharT, _Traits>::open()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`.

**5.384.5.24** `template<typename _CharT, typename _Traits> void  
std::basic_ofstream<_CharT, _Traits>::open ( const std::string &  
__s, ios_base::openmode __mode = ios_base::out | ios_base::trunc  
) [inline]`

Opens an external file.

#### Parameters

- s* The name of the file.
- mode* The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out|trunc)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 723 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::failbit`, `std::basic_filebuf<_CharT, _Traits>::open()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.384.5.25** `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits>::operator void * ( ) const` [**inline**, **inherited**]

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 113 of file `basic_ios.h`.

**5.384.5.26** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::operator! ( ) const` [**inline**, **inherited**]

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 117 of file `basic_ios.h`.

**5.384.5.27** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< ( __ios_type &(*)(__ios_type &) __pf )` [**inline**, **inherited**]

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 119 of file `ostream`.

**5.384.5.28** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<<( unsigned int __n ) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 193 of file `ostream`.

**5.384.5.29** `template<typename _CharT, typename _Traits> basic_ofstream<_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>::operator<<( __streambuf_type * __sb ) [inherited]`

Extracting from another streambuf.

#### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set `failbit` in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,

## 5.384 `std::basic_ofstream<_CharT, _Traits>` Class Template Reference 2024

- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 122 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.384.5.30** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<< ( ios_base &(*)(ios_base &) __pf ) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `iomanip` header.

Definition at line 129 of file ostream.

**5.384.5.31** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<< ( unsigned long long __n ) [inline, inherited]`

Basic arithmetic inserters.

### Parameters

*A* variable of builtin type.

### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 206 of file ostream.

**5.384.5.32** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ofstream<_CharT, _Traits>::operator<<( double __f  
) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

`A` variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 211 of file `ostream`.

**5.384.5.33** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ofstream<_CharT, _Traits>::operator<<( float __f )  
[inline, inherited]`

Basic arithmetic inserters.

#### Parameters

`A` variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 215 of file `ostream`.

**5.384.5.34** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ofstream<_CharT, _Traits>::operator<<( long __n )  
[inline, inherited]`

Basic arithmetic inserters.

**Parameters**

*A* variable of builtin type.

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 167 of file `ostream`.

**5.384.5.35** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<<( long double __f ) [inline, inherited]`

Basic arithmetic inserters.

**Parameters**

*A* variable of builtin type.

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 223 of file `ostream`.

**5.384.5.36** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<<( const void * __p ) [inline, inherited]`

Basic arithmetic inserters.

**Parameters**

*A* variable of builtin type.

**Returns**

`*this` if successful

## 5.384 `std::basic_ofstream<_CharT, _Traits>` Class Template Reference 2027

---

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 227 of file `ostream`.

**5.384.5.37** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<<( int __n ) [inherited]`

Basic arithmetic inserters.

### Parameters

`A` variable of builtin type.

### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 108 of file `ostream.tcc`.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

**5.384.5.38** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( unsigned long __n ) [inline, inherited]`

Basic arithmetic inserters.

### Parameters

`A` variable of builtin type.

### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 171 of file `ostream`.

**5.384.5.39** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ofstream<_CharT, _Traits>::operator<<( bool __n )  
[inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 175 of file ostream.

**5.384.5.40** `template<typename _CharT, typename _Traits> basic_ofstream<  
_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>  
>::operator<<( short __n ) [inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 94 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

**5.384.5.41** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ofstream<_CharT, _Traits>::operator<<( long long  
__n ) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 202 of file ostream.

**5.384.5.42** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<< ( unsigned short __n ) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 182 of file ostream.

**5.384.5.43** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ofstream<_CharT, _Traits>::operator<< ( __ostream_type &(*)(__ostream_type &) __pf ) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 110 of file ostream.

**5.384.5.44** `streamsize std::ios_base::precision ( ) const [inline, inherited]`

Flags access.

#### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

**5.384.5.45** `streamsize std::ios_base::precision ( streamsize __prec ) [inline, inherited]`

Changing flags.

#### Parameters

*prec* The new precision value.

#### Returns

The previous value of [precision\(\)](#).

Definition at line 632 of file `ios_base.h`.

**5.384.5.46** `template<typename _CharT, typename _Traits> basic_ofstream<_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>::put ( char_type __c ) [inherited]`

Simple insertion.

#### Parameters

*c* The character to insert.

#### Returns

\*this

Tries to insert *c*.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 151 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

**5.384.5.47** `void*& std::ios_base::pword ( int __ix ) [inline, inherited]`

Access to void pointer array.

**Parameters**

`__ix` Index into the array.

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file `ios_base.h`.

**5.384.5.48** `template<typename _CharT, typename _Traits> __filebuf_type* std::basic_ofstream<_CharT, _Traits>::rdbuf ( ) const [inline]`

Accessing the underlying buffer.

**Returns**

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 673 of file `fstream`.

**5.384.5.49** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf ( basic_streambuf<_CharT, _Traits> * __sb ) [inherited]`

Changing the underlying buffer.

#### Parameters

*sb* The new stream buffer.

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 54 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.384.5.50** `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::rdstate ( ) const [inline, inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 129 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ios<char, _Traits>::eof()`, `std::basic_ios<char, _Traits>::fail()`, `std::basic_ios<char, _Traits>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.384.5.51** `void std::ios_base::register_callback ( event_callback __fn, int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

#### Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.384.5.52** `template<typename _CharT, typename _Traits> basic_ofstream<_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>::seekp ( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current write position.

#### Parameters

`off` A file offset object.

`dir` The direction in which to seek.

#### Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 292 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.384.5.53** `template<typename _CharT, typename _Traits> basic_ofstream<_CharT, _Traits> & std::basic_ofstream<_CharT, _Traits>::seekp( pos_type __pos ) [inherited]`

Changing the current write position.

#### Parameters

*pos* A file position object.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 260 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.384.5.54** `fmtflags std::ios_base::setf( fmtflags __fmtfl, fmtflags __mask ) [inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

*mask* The flags mask for *fmtfl*.

#### Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is [ios\\_base::adjustfield](#).

Definition at line 597 of file ios\_base.h.

**5.384.5.55** `fmtflags std::ios_base::setf ( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

#### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file ios\_base.h.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.384.5.56** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::setstate ( iostate __state )  
[inline, inherited]`

Sets additional flags in the error state.

#### Parameters

*state* The additional state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 149 of file basic\_ios.h.

Referenced by `std::basic_ostream<char>::_M_write()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ostream<_CharT, _Traits>::flush()`,

`std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsomewhat()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**5.384.5.57** `static bool std::ios_base::sync_with_stdio ( bool __sync = true )`  
**[static, inherited]**

Interaction with the standard C I/O objects.

#### Parameters

*sync* Whether to synchronize or not.

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.384.5.58** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp ( )` **[inherited]**

Getting the current write position.

#### Returns

A file position object.

## 5.384 `std::basic_ofstream<_CharT, _Traits>` Class Template Reference 2037

---

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

Definition at line 239 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**5.384.5.59** `template<typename _CharT, typename _Traits>  
basic_ofstream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie( basic_ofstream<_CharT, _Traits> * __tiestr ) [inline,  
inherited]`

Ties this stream to an output stream.

### Parameters

*tiestr* The output stream.

### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 299 of file `basic_ios.h`.

**5.384.5.60** `template<typename _CharT, typename _Traits>  
basic_ofstream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie( ) const [inline, inherited]`

Fetches the current *tied* stream.

### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::basic_ofstream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.384.5.61** void std::ios\_base::unsetf ( fmtflags \_\_mask ) [inline, inherited]

Clearing format flags.

#### Parameters

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file ios\_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

**5.384.5.62** template<typename \_CharT, typename \_Traits> char\_type  
std::basic\_ios<\_CharT, \_Traits>::widen ( char \_\_c ) const  
[inline, inherited]

Widens characters.

#### Parameters

*c* The character to widen.

#### Returns

The widened character.

Maps a character of char to a character of char\_type.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 441 of file basic\_ios.h.

Referenced by std::endl(), std::basic\_ios<char, \_Traits>::fill(), std::basic\_istream<char>::get(), std::basic\_istream<char>::getline(), std::getline(), and std::operator>>().

**5.384.5.63** streamsize std::ios\_base::width ( streamsize \_\_wide ) [inline, inherited]

Changing flags.

**Parameters**

*wide* The new width value.

**Returns**

The previous value of [width\(\)](#).

Definition at line 655 of file ios\_base.h.

**5.384.5.64** streamsize std::ios\_base::width ( ) const [inline, inherited]

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), std::num\_put<\_CharT, \_OutIter>::do\_put(), and std::operator>>().

**5.384.5.65** template<typename \_CharT, typename \_Traits> \_\_ostream\_type& std::basic\_ostream<\_CharT, \_Traits>::write ( const char\_type \* \_\_s, streamsize \_\_n ) [inherited]

Character string insertion.

**Parameters**

*s* The array to insert.

*n* Maximum number of characters to insert.

**Returns**

\*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**5.384.5.66 static int std::ios\_base::xalloc ( ) throw () [static, inherited]**

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.384.6 Member Data Documentation**

**5.384.6.1 const fmtflags std::ios\_base::adjustfield [static, inherited]**

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**5.384.6.2 const openmode std::ios\_base::app [static, inherited]**

Seek to end before each write.

Definition at line 366 of file ios\_base.h.

**5.384.6.3 const openmode std::ios\_base::ate [static, inherited]**

Open and seek to end immediately after opening.

Definition at line 369 of file ios\_base.h.

Referenced by std::basic\_filebuf<\_CharT, \_Traits>::open().

**5.384.6.4 const iostate std::ios\_base::badbit [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 336 of file ios\_base.h.

Referenced by std::basic\_ostream<char>::M\_write(), std::basic\_ios<char, \_Traits>::bad(), std::basic\_ios<\_CharT, \_Traits>::clear(), std::basic\_ios<char, \_Traits>::fail(), std::basic\_ostream<\_CharT, \_Traits>::flush(), std::basic\_istream<\_CharT, \_Traits>::get(), std::basic\_istream<\_CharT, \_Traits>::getline(), std::basic\_istream<\_CharT, \_Traits>::ignore(), std::basic\_ios<\_CharT, \_Traits>::init(), std::basic\_ostream<\_CharT, \_Traits>::operator<<(), std::operator<<(), std::operator>>(), std::basic\_istream<\_CharT, \_Traits>::operator>>(), std::basic\_istream<\_CharT, \_Traits>::peek(), std::basic\_ostream<\_CharT, \_Traits>::put(), std::basic\_istream<\_CharT, \_Traits>::putback(), std::basic\_istream<\_CharT, \_Traits>::read(), std::basic\_istream<\_CharT, \_Traits>::readsome(), std::basic\_istream<\_CharT, \_Traits>::seekg(), std::basic\_ostream<\_CharT, \_Traits>::seekp(), std::basic\_istream<\_CharT, \_Traits>::sync(), std::basic\_istream<\_CharT, \_Traits>::tellg(), std::basic\_ostream<\_CharT, \_Traits>::tellp(), std::basic\_istream<\_CharT, \_Traits>::unget(), and std::basic\_ostream<\_CharT, \_Traits>::sentry::~sentry().

**5.384.6.5 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 315 of file ios\_base.h.

#### 5.384.6.14 const fmtflags std::ios\_base::fixed [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 266 of file ios\_base.h.

Referenced by std::fixed().

#### 5.384.6.15 const fmtflags std::ios\_base::floatfield [static, inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 318 of file ios\_base.h.

Referenced by std::fixed(), and std::scientific().

#### 5.384.6.16 const iostate std::ios\_base::goodbit [static, inherited]

Indicates all is well.

Definition at line 347 of file ios\_base.h.

Referenced by std::num\_get<\_CharT, \_InIter>::do\_get(), std::time\_get<\_CharT, \_InIter>::do\_get\_monthname(), std::time\_get<\_CharT, \_InIter>::do\_get\_weekday(), std::time\_get<\_CharT, \_InIter>::do\_get\_year(), std::basic\_ostream<\_CharT, \_Traits>::flush(), std::basic\_istream<\_CharT, \_Traits>::get(), std::basic\_istream<\_CharT, \_Traits>::getline(), std::basic\_istream<\_CharT, \_Traits>::ignore(), std::basic\_ios<\_CharT, \_Traits>::init(), std::basic\_ostream<\_CharT, \_Traits>::operator<<(), std::operator>>(), std::basic\_istream<\_CharT, \_Traits>::operator>>(), std::basic\_istream<\_CharT, \_Traits>::peek(), std::basic\_ostream<\_CharT, \_Traits>::put(), std::basic\_istream<\_CharT, \_Traits>::putback(),

std::basic\_istream<\_CharT, \_Traits>::read(), std::basic\_istream<\_CharT, \_Traits>::readsome(), std::basic\_istream<\_CharT, \_Traits>::seekg(), std::basic\_ostream<\_CharT, \_Traits>::seekp(), std::basic\_istream<\_CharT, \_Traits>::sentry::sentry(), std::basic\_istream<\_CharT, \_Traits>::sync(), and std::basic\_istream<\_CharT, \_Traits>::unget().

#### **5.384.6.17 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file ios\_base.h.

Referenced by std::num\_get<\_CharT, \_InIter>::do\_get(), std::num\_put<\_CharT, \_OutIter>::do\_put(), std::hex(), and std::basic\_ostream<\_CharT, \_Traits>::operator<<().

#### **5.384.6.18 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for ifstream and fstream.

Definition at line 377 of file ios\_base.h.

Referenced by std::basic\_filebuf<char\_type, traits\_type>::\_M\_set\_buffer(), std::basic\_ifstream<\_CharT, \_Traits>::open(), std::basic\_istream<\_CharT, \_Traits>::seekg(), std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc>::showmanyc(), std::basic\_filebuf<\_CharT, \_Traits>::showmanyc(), std::basic\_istream<\_CharT, \_Traits>::tellg(), std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc>::underflow(), and std::basic\_filebuf<\_CharT, \_Traits>::underflow().

#### **5.384.6.19 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain /// generated output, or identical to right if no such point is /// designated.

Definition at line 274 of file ios\_base.h.

Referenced by std::internal().

#### **5.384.6.20 const fmtflags std::ios\_base::left [static, inherited]**

## **5.384    `std::basic_ofstream<_CharT, _Traits>` Class Template Reference    2046**

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, and `std::left()`.

### **5.384.6.21    `const fmtflags std::ios_base::oct`    `[static, inherited]`**

Converts integer input or generates integer output in octal base.

Definition at line 281 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

### **5.384.6.22    `const openmode std::ios_base::out`    `[static, inherited]`**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

### **5.384.6.23    `const fmtflags std::ios_base::right`    `[static, inherited]`**

Adds fill characters on the left (initial positions) of certain `///` generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file `ios_base.h`.

Referenced by `std::right()`.

### **5.384.6.24    `const fmtflags std::ios_base::scientific`    `[static, inherited]`**

Generates floating-point output in scientific notation.

Definition at line 288 of file `ios_base.h`.

Referenced by `std::scientific()`.

**5.384.6.25 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 292 of file ios\_base.h.

Referenced by std::noshowbase(), and std::showbase().

**5.384.6.26 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 296 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

**5.384.6.27 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

**5.384.6.28 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 302 of file ios\_base.h.

Referenced by std::noskipws(), std::basic\_istream<\_CharT, \_Traits>::sentry::sentry(), and std::skipws().

**5.384.6.29 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for ofstream.

Definition at line 383 of file ios\_base.h.

### 5.384.6.30 `const fmtflags std::ios_base::unitbuf` [static, inherited]

Flushes output after each output operation.

Definition at line 305 of file ios\_base.h.

Referenced by `std::nunitbuf()`, `std::unitbuf()`, and `std::basic_ostream<_CharT, _Traits>::sentry::~~sentry()`.

**5.384.6.31** `const fmtflags std::ios_base::uppercase` `[static, inherited]`

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 309 of file ios\_base.h.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following file:

- fstream

### 5.385 `std::basic_ostream<_CharT,_Traits>` Class Template Reference

Controlling output.

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual output.

Inheritance diagram for `std::basic_ostream<_CharT, _Traits>`:

## Classes

  - `void unsetf` (fmtflags \_\_mask)
  - `char_type widen` (char \_\_c) const
  - `streamsize width` () const
  - `streamsize width` (streamsize \_\_wide)
- 
- `__ostream_type` & `operator<<` (\_\_ostream\_type &(\_\_pf)(\_\_ostream\_type &))
  - `__ostream_type` & `operator<<` (\_\_ios\_type &(\_\_pf)(\_\_ios\_type &))
  - `__ostream_type` & `operator<<` (ios\_base &(\_\_pf)(ios\_base &))

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- `__ostream_type & put (char_type __c)`
- `void _M_write (const char_type *__s, streamsize __n)`
- `__ostream_type & write (const char_type *__s, streamsize __n)`
- `operator void * () const`
- `bool operator! () const`

#### 5.385.1 Detailed Description

template<typename \_CharT, typename \_Traits> class std::basic\_ostream< \_CharT, \_Traits >

Controlling output.

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from [basic\\_streambuf](#) to do the actual output.

Definition at line 57 of file ostream.

## 5.385.2 Member Typedef Documentation

**5.385.2.1** `template<typename _CharT, typename _Traits> typedef  
cctype<_CharT> std::basic_ostream< _CharT, _Traits  
>::__cctype_type`

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 73 of file ostream.

**5.385.2.2** `template<typename _CharT, typename _Traits> typedef  
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>  
> std::basic_ios< _CharT, _Traits >::__num_get_type  
[inherited]`

These are non-standard types.

Reimplemented in [std::basic\\_istream< \\_CharT, \\_Traits >](#), [std::basic\\_istream< char, \\_Traits >](#), and [std::basic\\_istream< char >](#).

Definition at line 88 of file basic\_ios.h.

**5.385.2.3** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> >  
std::basic_ostream< _CharT, _Traits >::__num_put_type`

These are non-standard types.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 72 of file ostream.

**5.385.2.4** `template<typename _CharT, typename _Traits> typedef _CharT  
std::basic_ostream< _CharT, _Traits >::__char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, and `std::basic_istream< char >`.

Definition at line 61 of file `ostream`.

#### 5.385.2.5 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)` **[inherited]**

The type of an event callback function.

##### Parameters

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

#### 5.385.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags` **[inherited]**

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`

- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 257 of file `ios_base.h`.

#### 5.385.2.7 `template<typename _CharT, typename _Traits> typedef _Traits::int_type std::basic_ostream<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, and `std::basic_istream<char>`.

Definition at line 62 of file `ostream`.

#### 5.385.2.8 `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 332 of file `ios_base.h`.

#### 5.385.2.9 `template<typename _CharT, typename _Traits> typedef` `_Traits::off_type std::basic_ostream<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ofstream<_CharT, _Traits>`, `std::basic_fstream<_CharT, _Traits>`, `std::basic_iostream<_CharT, _Traits>`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>`, `std::basic_stringstream<_CharT, _Traits, _Alloc>`, and `std::basic_iostream<char>`.

Definition at line 64 of file `ostream`.

#### 5.385.2.10 `typedef _Ios_Openmode std::ios_base::openmode` `[inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 363 of file `ios_base.h`.

**5.385.2.11** `template<typename _CharT, typename _Traits> typedef  
_Traits::pos_type std::basic_ostream< _CharT, _Traits >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, and `std::basic_istream< char >`.

Definition at line 63 of file `ostream`.

**5.385.2.12** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

**5.385.2.13** `template<typename _CharT, typename _Traits> typedef _Traits  
std::basic_ostream< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ofstream< _CharT, _Traits >`, `std::basic_fstream< _CharT, _Traits >`, `std::basic_iostream< _CharT, _Traits >`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >`, `std::basic_stringstream< _CharT, _Traits, _Alloc >`, and `std::basic_istream< char >`.

Definition at line 65 of file `ostream`.

### 5.385.3 Member Enumeration Documentation

#### 5.385.3.1 `enum std::ios_base::event` `[inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 421 of file `ios_base.h`.

### 5.385.4 Constructor & Destructor Documentation

#### 5.385.4.1 `template<typename _CharT, typename _Traits>` `std::basic_ostream< _CharT, _Traits >::basic_ostream (` `__streambuf_type * __sb )` `[inline, explicit]`

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 84 of file `ostream`.

#### 5.385.4.2 `template<typename _CharT, typename _Traits> virtual` `std::basic_ostream< _CharT, _Traits >::~~basic_ostream ( )` `[inline, virtual]`

Base destructor.

This does very little apart from providing a virtual base dtor.

Definition at line 93 of file `ostream`.

### 5.385.5 Member Function Documentation

#### 5.385.5.1 `const locale& std::ios_base::_M_getloc ( ) const` `[inline,` `inherited]`

Locale access.

**Returns**

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 708 of file ios\_base.h.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::time\_put< \_CharT, \_OutIter >::put().

**5.385.5.2** `template<typename _CharT, typename _Traits> void  
std::basic_ostream< _CharT, _Traits >::M_write ( const char_type  
* __s, streamsize __n ) [inline]`

Simple insertion.

**Parameters**

*c* The character to insert.

**Returns**

\*this

Tries to insert *c*.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 289 of file ostream.

**5.385.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::bad ( ) const [inline, inherited]`

Fast error checking.

**Returns**

True if the badbit is set.

Note that other `iosstate` flags may also be set.

Definition at line 203 of file `basic_ios.h`.

**5.385.5.4** `template<typename _CharT, typename _Traits > void  
std::basic_ios< _CharT, _Traits >::clear ( iosstate __state = goodbit )  
[inherited]`

[Re]sets the error state.

#### Parameters

*state* The new state flag(s) to set.

See [std::ios\\_base::iosstate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ios< char, _Traits >::exceptions()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.385.5.5** `template<typename _CharT, typename _Traits > basic_ios<  
_CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (  
const basic_ios< _CharT, _Traits > & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

#### Parameters

*\_\_rhs* The source values for the copies.

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 64 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

#### 5.385.5.6 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof( ) const [inline, inherited]`

Fast error checking.

##### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 5.385.5.7 `template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions( ) const [inline, inherited]`

Throwing exceptions on errors.

##### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 214 of file `basic_ios.h`.

Referenced by std::basic\_ios< \_CharT, \_Traits >::clear(), and std::basic\_ios< \_CharT, \_Traits >::copyfmt().

**5.385.5.8** `template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions ( iostate __except ) [inline, inherited]`

Throwing exceptions on errors.

#### Parameters

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 249 of file basic\_ios.h.

**5.385.5.9** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline, inherited]`

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file basic\_ios.h.

Referenced by std::basic\_ios< char, \_Traits >::operator void \*(), std::basic\_ios< char, \_Traits >::operator!(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), and std::regex\_traits< \_Ch\_type >::value().

**5.385.5.10** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill ( ) const [inline,  
inherited]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 362 of file basic\_ios.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::basic\_ios< char, \_Traits >::fill().

**5.385.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill ( char_type __ch )  
[inline, inherited]`

Sets a new *empty* character.

#### Parameters

*ch* The new character.

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 382 of file basic\_ios.h.

#### 5.385.5.12 fmtflags std::ios\_base::flags ( ) const [inline, inherited]

Access to format flags.

##### Returns

The format control flags for both input and output.

Definition at line 553 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

#### 5.385.5.13 fmtflags std::ios\_base::flags ( fmtflags \_\_fmtfl ) [inline, inherited]

Setting new format flags all at once.

##### Parameters

*fmtfl* The new flags to set.

##### Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file ios\_base.h.

#### 5.385.5.14 template<typename \_CharT, typename \_Traits > basic\_ostream< \_CharT, \_Traits > & std::basic\_ostream< \_CharT, \_Traits >::flush ( )

Synchronizing the stream buffer.

##### Returns

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets badbit.

Definition at line 213 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

Referenced by `std::flush()`.

#### **5.385.5.15 locale std::ios\_base::getloc( ) const [inline, inherited]**

Locale access.

##### **Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutIter >::do_put()`, `std::basic_ios< _CharT, _Traits >::imbue()`, `std::operator>>()`, and `std::ws()`.

#### **5.385.5.16 template<typename \_CharT, typename \_Traits> bool std::basic\_ios< \_CharT, \_Traits >::good( ) const [inline, inherited]**

Fast error checking.

##### **Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 172 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.385.5.17** `template<typename _CharT, typename _Traits > locale  
std::basic_ios< _CharT, _Traits >::imbue ( const locale & __loc )  
[inherited]`

Moves to a new locale.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional 110n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Reimplemented from `std::ios_base`.

Definition at line 115 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::operator<<()`.

**5.385.5.18** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::init ( basic_streambuf<  
_CharT, _Traits > * __sb ) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

Referenced by `std::basic_fstream< _CharT, _Traits >::basic_fstream()`, `std::basic_ifstream< _CharT, _Traits >::basic_ifstream()`, `std::basic_ios< char, _Traits >::basic_ios()`, `std::basic_istream< char >::basic_istream()`, `std::basic_istreamstream< _CharT, _Traits, _Alloc >::basic_istreamstream()`, `std::basic_ofstream< _CharT, _Traits >::basic_ofstream()`, `std::basic_ostream< char >::basic_ostream()`, `std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream()`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream()`.

**5.385.5.19 long& std::ios\_base::iword ( int \_\_ix ) [inline, inherited]**

Access to integer array.

**Parameters**

*\_\_ix* Index into the array.

**Returns**

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file ios\_base.h.

**5.385.5.20 template<typename \_CharT, typename \_Traits> char  
std::basic\_ios< \_CharT, \_Traits >::narrow ( char\_type \_\_c, char  
\_\_dfault ) const [inline, inherited]**

Squeezes characters.

**Parameters**

*c* The character to narrow.

*dfault* The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.ht>

Definition at line 422 of file basic\_ios.h.

**5.385.5.21** `template<typename _CharT, typename _Traits> std::basic_ios<_CharT, _Traits >::operator void * ( ) const [inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 113 of file `basic_ios.h`.

**5.385.5.22** `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 117 of file `basic_ios.h`.

**5.385.5.23** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< ( __ios_type &(*)(__ios_type &) __pf ) [inline]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 119 of file `ostream`.

**5.385.5.24** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned short __n ) [inline]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 182 of file ostream.

**5.385.5.25** `template<typename _CharT, typename _Traits > basic_ostream<  
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits  
>::operator<< ( __streambuf_type * __sb )`

Extracting from another streambuf.

**Parameters**

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into \*this until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 122 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.385.5.26** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream< _CharT, _Traits >::operator<< ( long __n )  
[inline]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 167 of file `ostream`.

```
5.385.5.27 template<typename _CharT, typename _Traits> basic_ostream<
 _CharT, _Traits> & std::basic_ostream< _CharT, _Traits
 >::operator<< (int __n)
```

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 108 of file `ostream.tcc`.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

```
5.385.5.28 template<typename _CharT, typename _Traits> __ostream_type&
 std::basic_ostream< _CharT, _Traits>::operator<< (
 __ostream_type &(*)(__ostream_type &) __pf) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 110 of file `ostream`.

**5.385.5.29** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned int  
__n ) [inline]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 193 of file ostream.

**5.385.5.30** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned  
long __n ) [inline]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 171 of file ostream.

**5.385.5.31** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream< _CharT, _Traits >::operator<< ( long long  
__n ) [inline]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 202 of file `ostream`.

**5.385.5.32** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT,_Traits>::operator<<( unsigned  
long long __n ) [inline]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 206 of file `ostream`.

**5.385.5.33** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT,_Traits>::operator<<( bool __n )  
[inline]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 175 of file `ostream`.

```
5.385.5.34 template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream<_CharT, _Traits>::operator<<(const void *
__p) [inline]
```

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 227 of file `ostream`.

```
5.385.5.35 template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream<_CharT, _Traits>::operator<<(double __f
) [inline]
```

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 211 of file `ostream`.

**5.385.5.36** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream< _CharT, _Traits >::operator<< ( ios_base  
&(*)(ios_base &) __pf ) [inline]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `iomanip` header.

Definition at line 129 of file `ostream`.

**5.385.5.37** `template<typename _CharT, typename _Traits> basic_ostream<  
_CharT, _Traits > & std::basic_ostream< _CharT, _Traits  
>::operator<< ( short __n )`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

\**this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 94 of file `ostream.tcc`.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

**5.385.5.38** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream< _CharT, _Traits >::operator<< ( float __f )  
[inline]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 215 of file `ostream`.

**5.385.5.39** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( long double __f ) [inline]`

Basic arithmetic inserters.

### Parameters

*A* variable of builtin type.

### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 223 of file `ostream`.

**5.385.5.40** `streamsize std::ios_base::precision ( streamsize __prec ) [inline, inherited]`

Changing flags.

### Parameters

*prec* The new precision value.

### Returns

The previous value of `precision()`.

Definition at line 632 of file `ios_base.h`.

**5.385.5.41** streamsize std::ios\_base::precision ( ) const [inline, inherited]

Flags access.

#### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::operator<<().

**5.385.5.42** template<typename \_CharT, typename \_Traits > basic\_ostream< \_CharT, \_Traits > & std::basic\_ostream< \_CharT, \_Traits >::put ( char\_type \_\_c )

Simple insertion.

#### Parameters

*c* The character to insert.

#### Returns

\*this

Tries to insert *c*.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 151 of file ostream.tcc.

References std::ios\_base::badbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

Referenced by std::endl(), and std::ends().

**5.385.5.43** void\*& std::ios\_base::pword ( int \_\_ix ) [inline, inherited]

Access to void pointer array.

#### Parameters

`__ix` Index into the array.

#### Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file `ios_base.h`.

**5.385.5.44** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf ( basic_streambuf<_CharT, _Traits> * __sb ) [inherited]`

Changing the underlying buffer.

#### Parameters

`sb` The new stream buffer.

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 54 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.385.5.45** `template<typename _CharT, typename _Traits>  
 basic_streambuf<_CharT, _Traits>* std::basic_ios< _CharT,  
 _Traits >::rdbuf ( ) const [inline, inherited]`

Accessing the underlying buffer.

#### Returns

The current stream buffer.

This does not change the state of the stream.

Reimplemented in [std::basic\\_ifstream< \\_CharT, \\_Traits >](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >](#), [std::basic\\_fstream< \\_CharT, \\_Traits >](#), [std::basic\\_istream< \\_CharT, \\_Traits, \\_Alloc >](#), [std::basic\\_ostringstream< \\_CharT, \\_Traits, \\_Alloc >](#), and [std::basic\\_stringstream< \\_CharT, \\_Traits, \\_Alloc >](#).

Definition at line 313 of file `basic_ios.h`.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::imbue()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.385.5.46** `template<typename _CharT, typename _Traits> iostate  
 std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline,  
 inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 129 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ios< char, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 5.385.5.47 void std::ios\_base::register\_callback ( event\_callback \_\_fn, int \_\_index ) [inherited]

Add the callback `__fn` with parameter `__index`.

##### Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

#### 5.385.5.48 template<typename \_CharT, typename \_Traits > basic\_ostream< \_CharT, \_Traits > & std::basic\_ostream< \_CharT, \_Traits >::seekp ( pos\_type \_\_pos )

Changing the current write position.

##### Parameters

`pos` A file position object.

##### Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 260 of file `ostream.tcc`.

References std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::fail(), std::ios\_base::failbit, std::ios\_base::goodbit, std::ios\_base::out, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.385.5.49** `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp ( off_type __off, ios_base::seekdir __dir )`

Changing the current write position.

#### Parameters

*off* A file offset object.

*dir* The direction in which to seek.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 292 of file ostream.tcc.

References std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::fail(), std::ios\_base::failbit, std::ios\_base::goodbit, std::ios\_base::out, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.385.5.50** `fmtflags std::ios_base::setf ( fmtflags __fmtfl, fmtflags __mask ) [inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

*mask* The flags mask for *fmtfl*.

#### Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 597 of file ios\_base.h.

**5.385.5.51** `fmtflags std::ios_base::setf ( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags.

**Parameters**

*fmtfl* Additional flags to set.

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file ios\_base.h.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.385.5.52** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::setstate ( iostate __state )  
[inline, inherited]`

Sets additional flags in the error state.

**Parameters**

*state* The additional state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 149 of file basic\_ios.h.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`,

std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::ws().

**5.385.5.53** static bool std::ios\_base::sync\_with\_stdio ( bool \_\_sync = true )  
[static, inherited]

Interaction with the standard C I/O objects.

#### Parameters

*sync* Whether to synchronize or not.

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.385.5.54** template<typename \_CharT, typename \_Traits > basic\_ostream< \_CharT, \_Traits >::pos\_type std::basic\_ostream< \_CharT, \_Traits >::tellp ( )

Getting the current write position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rddbuf()->pubseekoff(0, cur, out)`.

Definition at line 239 of file ostream.tcc.

References std::ios\_base::badbit, std::ios\_base::cur, std::basic\_ios< \_CharT, \_Traits >::fail(), std::ios\_base::out, and std::basic\_ios< \_CharT, \_Traits >::rddbuf().

**5.385.5.55** `template<typename _CharT, typename _Traits>  
 basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
 >::tie( ) const [inline, inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.385.5.56** `template<typename _CharT, typename _Traits>  
 basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
 >::tie( basic_ostream<_CharT, _Traits> * __tiestr ) [inline,  
 inherited]`

Ties this stream to an output stream.

#### Parameters

*tiestr* The output stream.

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 299 of file `basic_ios.h`.

**5.385.5.57** `void std::ios_base::unsetf( fmtflags __mask ) [inline,  
 inherited]`

Clearing format flags.

**Parameters**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file ios\_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

**5.385.5.58** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::widen ( char __c ) const  
[inline, inherited]`

Widens characters.

**Parameters**

*c* The character to widen.

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 441 of file basic\_ios.h.

Referenced by std::endl(), std::basic\_ios< char, \_Traits >::fill(), std::basic\_istream< char >::get(), std::basic\_istream< char >::getline(), std::getline(), and std::operator>>().

**5.385.5.59** `streamsize std::ios_base::width ( ) const [inline,  
inherited]`

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::operator>>().

#### 5.385.5.60 streamsize std::ios\_base::width ( streamsize \_\_wide ) [inline, inherited]

Changing flags.

##### Parameters

*wide* The new width value.

##### Returns

The previous value of [width\(\)](#).

Definition at line 655 of file ios\_base.h.

#### 5.385.5.61 template<typename \_CharT, typename \_Traits> \_\_ostream\_type& std::basic\_ostream< \_CharT, \_Traits >::write ( const char\_type \* \_\_s, streamsize \_\_n )

Character string insertion.

##### Parameters

*s* The array to insert.

*n* Maximum number of characters to insert.

##### Returns

\*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**5.385.5.62** `static int std::ios_base::xalloc ( ) throw () [static, inherited]`

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.385.6 Member Data Documentation**

**5.385.6.1** `const fmtflags std::ios_base::adjustfield [static, inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**5.385.6.2** `const openmode std::ios_base::app [static, inherited]`

Seek to end before each write.

Definition at line 366 of file `ios_base.h`.

**5.385.6.3** `const openmode std::ios_base::ate [static, inherited]`

Open and seek to end immediately after opening.

Definition at line 369 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

#### 5.385.6.4 `const iostate std::ios_base::badbit` **[static, inherited]**

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 336 of file `ios_base.h`.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`.

#### 5.385.6.5 `const fmtflags std::ios_base::basefield` **[static, inherited]**

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 315 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::hex()`, `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.385.6.6 `const seekdir std::ios_base::beg` **[static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 398 of file `ios_base.h`.

**5.385.6.7 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see /// <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 374 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::showmanyc().

**5.385.6.8 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 260 of file ios\_base.h.

Referenced by std::boolalpha(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::noboolalpha().

**5.385.6.9 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 401 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

**5.385.6.10 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file ios\_base.h.

Referenced by std::dec().

**5.385.6.11 const seekdir std::ios\_base::end [static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 404 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

#### 5.385.6.12 const iostate std::ios\_base::eofbit [static, inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::ws().

#### 5.385.6.13 const iostate std::ios\_base::failbit [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file ios\_base.h.

Referenced by std::basic\_fstream< \_CharT, \_Traits >::close(), std::basic\_ofstream< \_CharT, \_Traits >::close(), std::basic\_ifstream< \_CharT, \_Traits >::close(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_fstream< \_CharT, \_Traits >::open(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

**5.385.6.14 const fmtflags std::ios\_base::fixed [static, inherited]**

Generate floating-point output in fixed-point notation.

Definition at line 266 of file ios\_base.h.

Referenced by std::fixed().

**5.385.6.15 const fmtflags std::ios\_base::floatfield [static, inherited]**

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 318 of file ios\_base.h.

Referenced by std::fixed(), and std::scientific().

**5.385.6.16 const iostate std::ios\_base::goodbit [static, inherited]**

Indicates all is well.

Definition at line 347 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sync(), and std::basic\_istream< \_CharT, \_Traits >::unget().

**5.385.6.17 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.385.6.18 `const openmode std::ios_base::in` [`static`, `inherited`]

Open for input. Default for `ifstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

#### 5.385.6.19 `const fmtflags std::ios_base::internal` [`static`, `inherited`]

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 274 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 5.385.6.20 `const fmtflags std::ios_base::left` [`static`, `inherited`]

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

#### 5.385.6.21 `const fmtflags std::ios_base::oct` [`static`, `inherited`]

Converts integer input or generates integer output in octal base.

Definition at line 281 of file ios\_base.h.

Referenced by std::oct(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.385.6.22 const openmode std::ios\_base::out [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 380 of file ios\_base.h.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::\_M\_set\_buffer(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

**5.385.6.23 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file ios\_base.h.

Referenced by std::right().

**5.385.6.24 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 288 of file ios\_base.h.

Referenced by std::scientific().

**5.385.6.25 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 292 of file ios\_base.h.

Referenced by std::noshowbase(), and std::showbase().

**5.385.6.26** `const fmtflags std::ios_base::showpoint` [`static`, `inherited`]

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 296 of file `ios_base.h`.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**5.385.6.27** `const fmtflags std::ios_base::showpos` [`static`, `inherited`]

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file `ios_base.h`.

Referenced by `std::noshowpos()`, and `std::showpos()`.

**5.385.6.28** `const fmtflags std::ios_base::skipws` [`static`, `inherited`]

Skips leading white space before certain input operations.

Definition at line 302 of file `ios_base.h`.

Referenced by `std::noskipws()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::skipws()`.

**5.385.6.29** `const openmode std::ios_base::trunc` [`static`, `inherited`]

Open for input. Default for `ofstream`.

Definition at line 383 of file `ios_base.h`.

**5.385.6.30** `const fmtflags std::ios_base::unitbuf` [`static`, `inherited`]

Flushes output after each output operation.

Definition at line 305 of file `ios_base.h`.

Referenced by `std::nounitbuf()`, `std::unitbuf()`, and `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`.

**5.385.6.31 `const fmtflags std::ios_base::uppercase` [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

- [ostream](#)
- [ostream.tcc](#)

**5.386 `std::basic_ostream< _CharT, _Traits >::sentry` Class Reference**

Performs setup work for output streams.

**Public Member Functions**

- [sentry](#) ([basic\\_ostream< \\_CharT, \\_Traits > &\\_\\_os](#))
- [~sentry](#) ()
- [operator bool](#) () const

**5.386.1 Detailed Description**

**template<typename \_CharT, typename \_Traits> class `std::basic_ostream< _CharT, _Traits >::sentry`**

Performs setup work for output streams. Objects of this class are created before all of the standard inserters are run. It is responsible for *exception-safe prefix and suffix operations*.

Definition at line 379 of file `ostream`.

## 5.386.2 Constructor & Destructor Documentation

**5.386.2.1** `template<typename _CharT, typename _Traits>  
std::basic_ostream< _CharT, _Traits >::sentry::sentry (   
 basic_ostream< _CharT, _Traits > & __os ) [explicit]`

The constructor performs preparatory work.

### Parameters

*os* The output stream to guard.

If the stream state is good (*os.good()* is true), then if the stream is tied to another output stream, *is.tie()* -> *flush()* is called to synchronize the output sequences.

If the stream state is still good, then the sentry state becomes true (*okay*).

Definition at line 49 of file ostream.tcc.

References `std::ios_base::failbit`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_ios< _CharT, _Traits >::tie()`.

**5.386.2.2** `template<typename _CharT, typename _Traits>  
std::basic_ostream< _CharT, _Traits >::sentry::~sentry ( )  
[inline]`

Possibly flushes the stream.

If `ios_base::unitbuf` is set in *os.flags()*, and `std::uncaught_exception()` is true, the sentry destructor calls *flush()* on the output stream.

Definition at line 407 of file ostream.

References `std::ios_base::badbit`, `std::uncaught_exception()`, and `std::ios_base::unitbuf`.

## 5.386.3 Member Function Documentation

**5.386.3.1** `template<typename _CharT, typename _Traits>  
std::basic_ostream< _CharT, _Traits >::sentry::operator bool ( )  
const [inline, explicit]`

Quick status checking.

### Returns

The sentry state.

For ease of use, sentries may be converted to booleans. The return value is that of the sentry state (`true == okay`).

Definition at line 428 of file `ostream`.

The documentation for this class was generated from the following files:

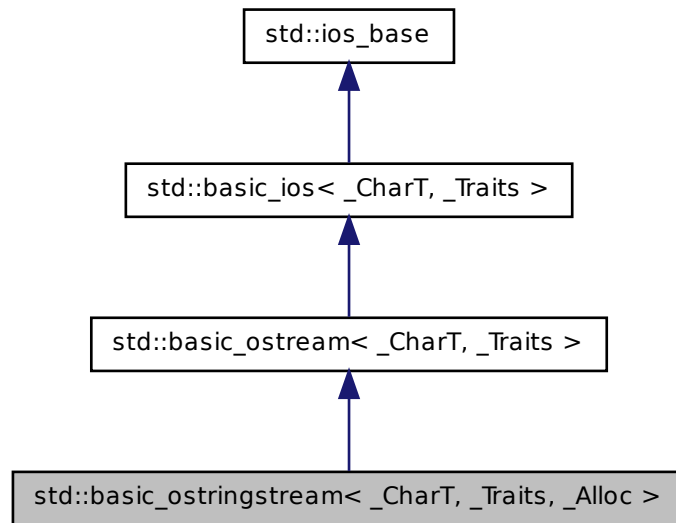

- [ostream](#)
- [ostream.tcc](#)

## **5.387 `std::basic_ostringstream< _CharT, _Traits, _Alloc >` Class Template Reference**

Controlling output for `std::string`.

This class supports writing to objects of type [std::basic\\_string](#), using the inherited functions from [std::basic\\_ostream](#). To control the associated sequence, an instance of [std::basic\\_stringbuf](#) is used, which this page refers to as `sb`.

Inheritance diagram for `std::basic_ostringstream<_CharT, _Traits, _Alloc>`:

  - `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
  - `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`

- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

## Friends

- class `sentry`

### 5.387.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_ostringstream<_CharT, _Traits, _Alloc>`

Controlling output for `std::string`.

This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 373 of file `sstream`.

### 5.387.2 Member Typedef Documentation

**5.387.2.1** `template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_ostream<_CharT, _Traits>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Definition at line 73 of file `ostream`.

**5.387.2.2** `template<typename _CharT, typename _Traits> typedef  
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>  
> std::basic_ios< _CharT, _Traits >::__num_get_type  
[inherited]`

These are non-standard types.

Reimplemented in `std::basic_istream< _CharT, _Traits >`, `std::basic_istream< char, _Traits >`, and `std::basic_istream< char >`.

Definition at line 88 of file `basic_ios.h`.

**5.387.2.3** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
> std::basic_ostream< _CharT, _Traits >::__num_put_type  
[inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Definition at line 72 of file `ostream`.

**5.387.2.4** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef _CharT std::basic_ostringstream< _CharT, _Traits, _Alloc  
>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream< _CharT, _Traits >`.

Definition at line 377 of file `sstream`.

**5.387.2.5** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)  
[inherited]`

The type of an event callback function.

### Parameters

- event* One of the members of the event enum.
- ios\_base* Reference to the `ios_base` object.
- int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

#### 5.387.2.6 `typedef _Ios_Fmtflags std::ios_base::fmtflags` [inherited]

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`

- basefield
- floatfield

Definition at line 257 of file ios\_base.h.

**5.387.2.7** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::int_type std::basic_ostringstream< _CharT,  
_Traits, _Alloc >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ostream< \\_CharT, \\_Traits >](#).

Definition at line 382 of file sstream.

**5.387.2.8** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 332 of file ios\_base.h.

**5.387.2.9** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::off_type std::basic_ostringstream< _CharT,  
_Traits, _Alloc >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ostream< \\_CharT, \\_Traits >](#).

Definition at line 384 of file sstream.

**5.387.2.10** `typedef _Ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 363 of file `ios_base.h`.

**5.387.2.11** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`typedef traits_type::pos_type std::basic_ostringstream<_CharT,`  
`_Traits, _Alloc>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream<_CharT, _Traits>`.

Definition at line 383 of file `sstream`.

**5.387.2.12** `typedef _Ios_Seekdir std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

**5.387.2.13** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef _Traits std::basic_ostringstream<_CharT, _Traits, _Alloc  
>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ostream<_CharT, _Traits>`.

Definition at line 378 of file `sstream`.

### 5.387.3 Member Enumeration Documentation

**5.387.3.1** `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 421 of file `ios_base.h`.

### 5.387.4 Constructor & Destructor Documentation

**5.387.4.1** `template<typename _CharT, typename _Traits, typename  
_Alloc> std::basic_ostringstream<_CharT, _Traits, _Alloc  
>::basic_ostringstream ( ios_base::openmode __mode =  
ios_base::out ) [inline, explicit]`

Default constructor starts with an empty string buffer.

#### Parameters

*mode* Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in *mode*.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 409 of file `sstream`.

References std::basic\_ios< \_CharT, \_Traits >::init().

**5.387.4.2** `template<typename _CharT, typename _Traits, typename  
_Alloc> std::basic_ostringstream< _CharT, _Traits, _Alloc  
>::basic_ostringstream ( const __string_type & __str,  
ios_base::openmode __mode = ios_base::out ) [inline,  
explicit]`

Starts with an existing string buffer.

#### Parameters

*str* A string to copy as a starting buffer.

*mode* Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in *mode*.

Initializes `sb` using *str* and `mode|out`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 427 of file `sstream`.

References std::basic\_ios< \_CharT, \_Traits >::init().

**5.387.4.3** `template<typename _CharT, typename _Traits, typename  
_Alloc> std::basic_ostringstream< _CharT, _Traits, _Alloc  
>::~~basic_ostringstream ( ) [inline]`

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

Definition at line 438 of file `sstream`.

### 5.387.5 Member Function Documentation

**5.387.5.1** `const locale& std::ios_base::_M_getloc ( ) const [inline,  
inherited]`

Locale access.

### Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 708 of file ios\_base.h.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::time\_put< \_CharT, \_OutIter >::put().

**5.387.5.2** `template<typename _CharT, typename _Traits> void  
std::basic_ostream< _CharT, _Traits >::_M_write ( const char_type  
* __s, streamsize __n ) [inline, inherited]`

Simple insertion.

### Parameters

*c* The character to insert.

### Returns

\*this

Tries to insert *c*.

### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 289 of file ostream.

**5.387.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<  
_CharT, _Traits >::bad ( ) const [inline, inherited]`

Fast error checking.

### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 203 of file basic\_ios.h.

**5.387.5.4** `template<typename _CharT, typename _Traits > void  
std::basic_ios< _CharT, _Traits >::clear ( iostate __state = goodbit )  
[inherited]`

[Re]sets the error state.

#### Parameters

*state* The new state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file basic\_ios.tcc.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ios< char, _Traits >::exceptions()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.387.5.5** `template<typename _CharT, typename _Traits > basic_ios<  
_CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (  
const basic_ios< _CharT, _Traits > & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

#### Parameters

*\_\_rhs* The source values for the copies.

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 64 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

#### **5.387.5.6 template<typename \_CharT, typename \_Traits> bool std::basic\_ios< \_CharT, \_Traits >::eof( ) const [inline, inherited]**

Fast error checking.

##### **Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### **5.387.5.7 template<typename \_CharT, typename \_Traits> iostate std::basic\_ios< \_CharT, \_Traits >::exceptions( ) const [inline, inherited]**

Throwing exceptions on errors.

##### **Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 214 of file `basic_ios.h`.

## 5.387 std::basic\_ostringstream<\_CharT, \_Traits, \_Alloc> Class Template Reference 2113

---

Referenced by `std::basic_ios<_CharT, _Traits>::clear()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.387.5.8** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::exceptions ( iostate __except ) [inline, inherited]`

Throwing exceptions on errors.

### Parameters

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 249 of file `basic_ios.h`.

**5.387.5.9** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail ( ) const [inline, inherited]`

Fast error checking.

### Returns

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file basic\_ios.h.

Referenced by `std::basic_ios< char, _Traits >::operator void *()`, `std::basic_ios< char, _Traits >::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _Ch_type >::value()`.

**5.387.5.10** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill ( ) const [inline,  
inherited]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 362 of file basic\_ios.h.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::basic_ios< char, _Traits >::fill()`.

**5.387.5.11** `template<typename _CharT, typename _Traits> char_type  
std::basic_ios< _CharT, _Traits >::fill ( char_type __ch )  
[inline, inherited]`

Sets a new *empty* character.

#### Parameters

*ch* The new character.

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 382 of file basic\_ios.h.

**5.387.5.12 fmtflags std::ios\_base::flags ( ) const [inline, inherited]**

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 553 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostringstream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

**5.387.5.13 fmtflags std::ios\_base::flags ( fmtflags \_\_fmtfl ) [inline, inherited]**

Setting new format flags all at once.

**Parameters**

*fmtfl* The new flags to set.

**Returns**

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file ios\_base.h.

**5.387.5.14 template<typename \_CharT, typename \_Traits > basic\_ostream< \_CharT, \_Traits > & std::basic\_ostream< \_CharT, \_Traits >::flush ( ) [inherited]**

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets badbit.

Definition at line 213 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

Referenced by `std::flush()`.

#### **5.387.5.15 locale std::ios\_base::getloc() const [inline, inherited]**

Locale access.

##### **Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::money_put< _CharT, _OutTiter >::do_put()`, `std::basic_ios< _CharT, _Traits >::imbue()`, `std::operator>>()`, and `std::ws()`.

#### **5.387.5.16 template<typename \_CharT, typename \_Traits> bool std::basic\_ios< \_CharT, \_Traits >::good() const [inline, inherited]**

Fast error checking.

##### **Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 172 of file `basic_ios.h`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.387.5.17** `template<typename _CharT, typename _Traits> locale  
std::basic_ios<_CharT, _Traits>::imbue ( const locale & __loc )  
[inherited]`

Moves to a new locale.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional 110n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Reimplemented from `std::ios_base`.

Definition at line 115 of file `basic_ios.tcc`.

References `std::ios_base::getloc()`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

Referenced by `std::operator<<()`.

**5.387.5.18** `template<typename _CharT, typename _Traits> void  
std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<  
_CharT, _Traits> * __sb ) [protected, inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, and `std::ios_base::goodbit`.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, _Traits>::basic_ios()`, `std::basic_istream<char>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<char>::basic_ostream()`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**5.387.5.19 long& std::ios\_base::iword ( int \_\_ix ) [inline, inherited]**

Access to integer array.

**Parameters**

*\_\_ix* Index into the array.

**Returns**

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file ios\_base.h.

**5.387.5.20 template<typename \_CharT, typename \_Traits> char  
std::basic\_ios<\_CharT, \_Traits>::narrow ( char\_type \_\_c, char  
\_\_dfault ) const [inline, inherited]**

Squeezes characters.

**Parameters**

*c* The character to narrow.

*dfault* The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.ht>

Definition at line 422 of file basic\_ios.h.

**5.387.5.21** `template<typename _CharT, typename _Traits> std::basic_ios<  
_CharT, _Traits >::operator void * ( ) const [inline,  
inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 113 of file `basic_ios.h`.

**5.387.5.22** `template<typename _CharT, typename _Traits> bool  
std::basic_ios<_CharT, _Traits >::operator! ( ) const  
[inline, inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

Definition at line 117 of file `basic_ios.h`.

**5.387.5.23** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT, _Traits >::operator<< ( long __n )  
[inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 167 of file `ostream`.

**5.387.5.24** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT, _Traits>::operator<< ( double __f  
) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 211 of file ostream.

**5.387.5.25** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT, _Traits>::operator<< (  
__ostream_type &(*)(__ostream_type &) __pf ) [inline,  
inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `iomanip` header.

Definition at line 110 of file ostream.

**5.387.5.26** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT, _Traits>::operator<< ( long double  
__f ) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

## 5.387 `std::basic_ostringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2121

---

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 223 of file `ostream`.

**5.387.5.27** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< ( bool __n ) [inline, inherited]`

Basic arithmetic inserters.

### Parameters

*A* variable of builtin type.

### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 175 of file `ostream`.

**5.387.5.28** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< ( const void * __p ) [inline, inherited]`

Basic arithmetic inserters.

### Parameters

*A* variable of builtin type.

### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 227 of file `ostream`.

**5.387.5.29** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT, _Traits>::operator<<( __ios_type  
&(*)(__ios_type &) __pf ) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the `iomanip` header.

Definition at line 119 of file `ostream`.

**5.387.5.30** `template<typename _CharT, typename _Traits> basic_ostream<  
_CharT, _Traits> & std::basic_ostream<_CharT, _Traits  
>::operator<<( __streambuf_type * __sb ) [inherited]`

Extracting from another streambuf.

#### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 122 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.387.5.31** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT, _Traits>::operator<<( long long  
__n ) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 202 of file ostream.

**5.387.5.32** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT, _Traits>::operator<<( unsigned  
short __n ) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 182 of file ostream.

**5.387.5.33** `template<typename _CharT, typename _Traits> basic_ostream<  
_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>  
>::operator<<( int __n ) [inherited]`

Basic arithmetic inserters.

### Parameters

*A* variable of builtin type.

### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 108 of file `ostream.tcc`.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

**5.387.5.34** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( ios_base &(*) (ios_base &) __pf ) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

Definition at line 129 of file `ostream`.

**5.387.5.35** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( unsigned int __n ) [inline, inherited]`

Basic arithmetic inserters.

### Parameters

*A* variable of builtin type.

### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 193 of file `ostream`.

**5.387.5.36** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( unsigned long __n ) [inline, inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 171 of file ostream.

**5.387.5.37** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<<( short __n ) [inherited]`

Basic arithmetic inserters.

#### Parameters

*A* variable of builtin type.

#### Returns

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 94 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

**5.387.5.38** `template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( float __f ) [inline, inherited]`

Basic arithmetic inserters.

**Parameters**

*A* variable of builtin type.

**Returns**

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 215 of file ostream.

```
5.387.5.39 template<typename _CharT, typename _Traits> __ostream_type&
std::basic_ostream<_CharT, _Traits>::operator<< (unsigned
long long __n) [inline, inherited]
```

Basic arithmetic inserters.

**Parameters**

*A* variable of builtin type.

**Returns**

*\*this* if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 206 of file ostream.

```
5.387.5.40 streamsize std::ios_base::precision (streamsize __prec)
[inline, inherited]
```

Changing flags.

**Parameters**

*prec* The new precision value.

**Returns**

The previous value of `precision()`.

Definition at line 632 of file ios\_base.h.

**5.387.5.41** `streamsize std::ios_base::precision ( ) const [inline, inherited]`

Flags access.

#### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::operator<<()`.

**5.387.5.42** `template<typename _CharT, typename _Traits> basic_ostream< _CharT, _Traits> & std::basic_ostream< _CharT, _Traits>::put ( char_type __c ) [inherited]`

Simple insertion.

#### Parameters

*c* The character to insert.

#### Returns

*\*this*

Tries to insert *c*.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 151 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits>::rdbuf()`, and `std::basic_ios< _CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

**5.387.5.43** `void*& std::ios_base::pword ( int __ix ) [inline, inherited]`

Access to void pointer array.

#### Parameters

**\_\_ix** Index into the array.

#### Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file ios\_base.h.

**5.387.5.44** `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf ( basic_streambuf<_CharT, _Traits> * __sb ) [inherited]`

Changing the underlying buffer.

#### Parameters

**sb** The new stream buffer.

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 54 of file basic\_ios.tcc.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.387.5.45** `template<typename _CharT, typename _Traits, typename _Alloc>  
__stringbuf_type* std::basic_ostringstream< _CharT, _Traits,  
_Alloc >::rdbuf ( ) const [inline]`

Accessing the underlying buffer.

#### Returns

The current [basic\\_stringbuf](#) buffer.

This hides both signatures of [std::basic\\_ios::rdbuf\(\)](#).

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Definition at line 449 of file sstream.

**5.387.5.46** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline,  
inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 129 of file basic\_ios.h.

Referenced by [std::basic\\_ios< char, \\_Traits >::bad\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::basic\\_ios< char, \\_Traits >::eof\(\)](#), [std::basic\\_ios< char, \\_Traits >::fail\(\)](#), [std::basic\\_ios< char, \\_Traits >::good\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ios< char, \\_Traits >::setstate\(\)](#), and [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#).

**5.387.5.47** `void std::ios_base::register_callback ( event_callback __fn, int  
__index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

#### Parameters

- \_\_fn* The function to add.
- \_\_index* The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.387.5.48** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp( pos_type __pos ) [inherited]`

Changing the current write position.

#### Parameters

- pos* A file position object.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 260 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.387.5.49** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current write position.

#### Parameters

- off* A file offset object.
- dir* The direction in which to seek.

### Returns

\*this

If `fail()` is not true, calls `rddbuf() -> pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 292 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rddbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

#### 5.387.5.50 `fmtflags std::ios_base::setf ( fmtflags __fmtfl, fmtflags __mask )` `[inline, inherited]`

Setting new format flags.

### Parameters

*fmtfl* Additional flags to set.

*mask* The flags mask for *fmtfl*.

### Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 597 of file ios\_base.h.

#### 5.387.5.51 `fmtflags std::ios_base::setf ( fmtflags __fmtfl )` `[inline, inherited]`

Setting new format flags.

### Parameters

*fmtfl* Additional flags to set.

### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file ios\_base.h.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.387.5.52** `template<typename _CharT, typename _Traits> void  
std::basic_ios< _CharT, _Traits >::setstate ( iostate __state )  
[inline, inherited]`

Sets additional flags in the error state.

#### Parameters

*state* The additional state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values.

Definition at line 149 of file basic\_ios.h.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.387.5.53** `template<typename _CharT, typename _Traits, typename _Alloc>  
__string_type std::basic_ostringstream< _CharT, _Traits, _Alloc  
>::str ( ) const [inline]`

Copying out the string buffer.

**Returns**

`rdbuf()` -> `str()`

Definition at line 457 of file sstream.

Referenced by `std::operator<<()`.

**5.387.5.54** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_ostringstream<_CharT, _Traits, _Alloc>::str (  
const __string_type & __s ) [inline]`

Setting a new buffer.

**Parameters**

*s* The string to use as a new sequence.

Calls `rdbuf()` -> `str(s)`.

Definition at line 467 of file sstream.

**5.387.5.55** `static bool std::ios_base::sync_with_stdio ( bool __sync = true )  
[static, inherited]`

Interaction with the standard C I/O objects.

**Parameters**

*sync* Whether to synchronize or not.

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.387.5.56** `template<typename _CharT, typename _Traits> basic_ostream<  
_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits  
>::tellp ( ) [inherited]`

Getting the current write position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rddbuf()->pubseekoff(0, cur, out)`.

Definition at line 239 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits>::rddbuf()`.

**5.387.5.57** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie ( ) const [inline, inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.387.5.58** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie ( basic_ostream<_CharT, _Traits> * __tiestr ) [inline,  
inherited]`

Ties this stream to an output stream.

**Parameters**

*tiestr* The output stream.

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 299 of file basic\_ios.h.

**5.387.5.59 void std::ios\_base::unsetf ( fmtflags \_\_mask ) [inline, inherited]**

Clearing format flags.

**Parameters**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file ios\_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

**5.387.5.60 template<typename \_CharT, typename \_Traits> char\_type std::basic\_ios< \_CharT, \_Traits >::widen ( char \_\_c ) const [inline, inherited]**

Widens characters.

**Parameters**

*c* The character to widen.

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

## 5.387 std::basic\_ostringstream<\_CharT, \_Traits, \_Alloc> Class Template Reference 2136

---

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 441 of file basic\_ios.h.

Referenced by std::endl(), std::basic\_ios<char, \_Traits>::fill(), std::basic\_istream<char>::get(), std::basic\_istream<char>::getline(), std::getline(), and std::operator>>().

### 5.387.5.61 streamsize std::ios\_base::width ( streamsize \_\_wide ) [inline, inherited]

Changing flags.

#### Parameters

*wide* The new width value.

#### Returns

The previous value of [width\(\)](#).

Definition at line 655 of file ios\_base.h.

### 5.387.5.62 streamsize std::ios\_base::width ( ) const [inline, inherited]

Flags access.

#### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file ios\_base.h.

Referenced by std::basic\_ios<\_CharT, \_Traits>::copyfmt(), std::num\_put<\_CharT, \_OutIter>::do\_put(), and std::operator>>().

### 5.387.5.63 template<typename \_CharT, typename \_Traits> \_\_ostream\_type& std::basic\_ostream<\_CharT, \_Traits>::write ( const char\_type \* \_\_s, streamsize \_\_n ) [inherited]

Character string insertion.

#### Parameters

- s* The array to insert.
- n* Maximum number of characters to insert.

#### Returns

\*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

#### Note

This function is not overloaded on signed char and unsigned char.

#### 5.387.5.64 `static int std::ios_base::xalloc ( ) throw () [static, inherited]`

Access to unique indices.

#### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## **5.387.6 Member Data Documentation**

### **5.387.6.1 const fmtflags std::ios\_base::adjustfield [static, inherited]**

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

### **5.387.6.2 const openmode std::ios\_base::app [static, inherited]**

Seek to end before each write.

Definition at line 366 of file `ios_base.h`.

### **5.387.6.3 const openmode std::ios\_base::ate [static, inherited]**

Open and seek to end immediately after opening.

Definition at line 369 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

### **5.387.6.4 const iostate std::ios\_base::badbit [static, inherited]**

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 336 of file `ios_base.h`.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_ios< char, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`,

std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unset(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~~sentry().

#### **5.387.6.5 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 315 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::hex()`, `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### **5.387.6.6 const seekdir std::ios\_base::beg [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 398 of file `ios_base.h`.

#### **5.387.6.7 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see /// <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

#### **5.387.6.8 const fmtflags std::ios\_base::boolalpha [static, inherited]**

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 260 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

**5.387.6.9 const seekdir std::ios\_base::cur [static, inherited]**

Request a seek relative to the current position within the sequence.

Definition at line 401 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::imbue(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::basic\_ostream< \_CharT, \_Traits >::tellp().

**5.387.6.10 const fmtflags std::ios\_base::dec [static, inherited]**

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file ios\_base.h.

Referenced by std::dec().

**5.387.6.11 const seekdir std::ios\_base::end [static, inherited]**

Request a seek relative to the current end of the sequence.

Definition at line 404 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

**5.387.6.12 const iostate std::ios\_base::eofbit [static, inherited]**

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(),

## 5.387 `std::basic_ostringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2141

---

`std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

### 5.387.6.13 `const ios_base::failbit` [static, inherited]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file `ios_base.h`.

Referenced by `std::basic_fstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<char, _Traits>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

### 5.387.6.14 `const fmtflags std::ios_base::fixed` [static, inherited]

Generate floating-point output in fixed-point notation.

Definition at line 266 of file `ios_base.h`.

Referenced by `std::fixed()`.

### 5.387.6.15 `const fmtflags std::ios_base::floatfield` [static, inherited]

A mask of `scientific|fixed`. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::scientific()`.

**5.387.6.16 const iostate std::ios\_base::goodbit [static, inherited]**

Indicates all is well.

Definition at line 347 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sync(), and std::basic\_istream< \_CharT, \_Traits >::unset().

**5.387.6.17 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.387.6.18 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for ifstream and fstream.

Definition at line 377 of file ios\_base.h.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::M\_set\_buffer(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::showmanyc(), std::basic\_filebuf< \_CharT, \_Traits >::showmanyc(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::underflow(), and std::basic\_filebuf< \_CharT, \_Traits >::underflow().

**5.387.6.19 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain /// generated output, or identical to `right` if no such point is /// designated.

Definition at line 274 of file `ios_base.h`.

Referenced by `std::internal()`.

**5.387.6.20 const fmtflags std::ios\_base::left [static, inherited]**

Adds fill characters on the right (final positions) of certain /// generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, and `std::left()`.

**5.387.6.21 const fmtflags std::ios\_base::oct [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 281 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

**5.387.6.22 const openmode std::ios\_base::out [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**5.387.6.23 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain /// generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file ios\_base.h.

Referenced by std::right().

**5.387.6.24 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 288 of file ios\_base.h.

Referenced by std::scientific().

**5.387.6.25 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer /// output.

Definition at line 292 of file ios\_base.h.

Referenced by std::noshowbase(), and std::showbase().

**5.387.6.26 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated /// floating-point output.

Definition at line 296 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

**5.387.6.27 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

**5.387.6.28 const fmtflags std::ios\_base::skipws [static, inherited]**

## 5.388 `std::basic_regex< _Ch_type, _Rx_traits >` Class Template Reference 2145

Skips leading white space before certain input operations.

Definition at line 302 of file `ios_base.h`.

Referenced by `std::noskipws()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::skipws()`.

### 5.387.6.29 `const openmode std::ios_base::trunc` [`static`, `inherited`]

Open for input. Default for `ofstream`.

Definition at line 383 of file `ios_base.h`.

### 5.387.6.30 `const fmtflags std::ios_base::unitbuf` [`static`, `inherited`]

Flushes output after each output operation.

Definition at line 305 of file `ios_base.h`.

Referenced by `std::nounitbuf()`, `std::unitbuf()`, and `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`.

### 5.387.6.31 `const fmtflags std::ios_base::uppercase` [`static`, `inherited`]

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

### 5.388.1 Detailed Description

`template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> class std::basic_regex<_Ch_type, _Rx_traits>`

Objects of specializations of this class represent regular expressions constructed from sequences of character type `_Ch_type`.

Storage for the regular expression is allocated and deallocated as necessary by the member functions of this class.

Definition at line 341 of file `regex.h`.

## 5.388.2 Constructor & Destructor Documentation

**5.388.2.1** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::basic_regex<_Ch_type, _Rx_traits  
>::basic_regex ( ) [inline]`

Constructs a basic regular expression that does not match any character sequence.  
Definition at line 383 of file `regex.h`.

**5.388.2.2** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::basic_regex<_Ch_type, _Rx_traits  
>::basic_regex ( const _Ch_type * __p, flag_type __f =  
regex_constants::ECMAScript ) [inline, explicit]`

Constructs a basic regular expression from the sequence `[p, p + char_traits<_Ch_type>::length(p))` interpreted according to the flags in `f`.

### Parameters

- p* A pointer to the start of a C-style null-terminated string containing a regular expression.
- f* Flags indicating the syntax rules and options.

### Exceptions

*[regex\\_error](#)* if `p` is not a valid regular expression.

Definition at line 401 of file `regex.h`.

**5.388.2.3** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::basic_regex<_Ch_type, _Rx_traits  
>::basic_regex ( const _Ch_type * __p, std::size_t __len, flag_type  
__f ) [inline]`

Constructs a basic regular expression from the sequence `[p, p + len)` interpreted according to the flags in `f`.

### Parameters

- p* A pointer to the start of a string containing a regular expression.
- len* The length of the string containing the regular expression.

*f* Flags indicating the syntax rules and options.

### Exceptions

*regex\_error* if *p* is not a valid regular expression.

Definition at line 419 of file `regex.h`.

**5.388.2.4** `template<typename _Ch_type, typename _Rx_traits =  
 regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits  
 >::basic_regex ( const basic_regex< _Ch_type, _Rx_traits > &  
 __rhs ) [inline]`

Copy-constructs a basic regular expression.

### Parameters

*rhs* A `regex` object.

Definition at line 429 of file `regex.h`.

**5.388.2.5** `template<typename _Ch_type, typename _Rx_traits =  
 regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits  
 >::basic_regex ( const basic_regex< _Ch_type, _Rx_traits > &&  
 __rhs ) [inline]`

Move-constructs a basic regular expression.

### Parameters

*rhs* A `regex` object.

Definition at line 439 of file `regex.h`.

**5.388.2.6** `template<typename _Ch_type, typename _Rx_traits =  
 regex_traits<_Ch_type>> template<typename _Ch_traits ,  
 typename _Ch_alloc > std::basic_regex< _Ch_type, _Rx_traits  
 >::basic_regex ( const std::basic_string< _Ch_type, _Ch_traits,  
 _Ch_alloc > & __s, flag_type __f = regex_constants::ECMAScript )  
 [inline, explicit]`

## 5.388 `std::basic_regex<_Ch_type, _Rx_traits>` Class Template Reference 2150

---

Constructs a basic regular expression from the string *s* interpreted according to the flags in *f*.

### Parameters

- s* A string containing a regular expression.
- f* Flags indicating the syntax rules and options.

### Exceptions

*regex\_error* if *s* is not a valid regular expression.

Definition at line 455 of file `regex.h`.

```
5.388.2.7 template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> template<typename _InputIterator
 > std::basic_regex<_Ch_type, _Rx_traits>::basic_regex (
 _InputIterator __first, _InputIterator __last, flag_type __f =
 regex_constants::ECMAScript) [inline]
```

Constructs a basic regular expression from the range [*first*, *last*) interpreted according to the flags in *f*.

### Parameters

- first* The start of a range containing a valid regular expression.
- last* The end of a range containing a valid regular expression.
- f* The format flags of the regular expression.

### Exceptions

*regex\_error* if [*first*, *last*) is not a valid regular expression.

Definition at line 477 of file `regex.h`.

```
5.388.2.8 template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> std::basic_regex<_Ch_type, _Rx_traits
 >::basic_regex (initializer_list<_Ch_type> __l, flag_type __f =
 regex_constants::ECMAScript) [inline]
```

Constructs a basic regular expression from an initializer list.

### Parameters

- l* The initializer list.
- f* The format flags of the regular expression.

### Exceptions

*regex\_error* if *l* is not a valid regular expression.

Definition at line 491 of file regex.h.

**5.388.2.9** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits  
>::~basic_regex ( ) [inline]`

Destroys a basic regular expression.

Definition at line 501 of file regex.h.

### 5.388.3 Member Function Documentation

**5.388.3.1** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
_Ch_type, _Rx_traits >::assign ( const basic_regex< _Ch_type,  
_Rx_traits > & __rhs ) [inline]`

the real assignment operator.

### Parameters

*rhs* Another regular expression object.

Definition at line 547 of file regex.h.

References std::basic\_regex< \_Ch\_type, \_Rx\_traits >::swap().

Referenced by std::basic\_regex< \_Ch\_type, \_Rx\_traits >::operator=().

**5.388.3.2** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
_Ch_type, _Rx_traits >::assign ( const _Ch_type * __p, std::size_t  
__len, flag_type __flags ) [inline]`

## 5.388 std::basic\_regex< \_Ch\_type, \_Rx\_traits > Class Template Reference 2152

---

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

### Parameters

- p* A pointer to a C-style string containing a regular expression pattern.
- len* The length of the regular expression pattern string.
- flags* Syntax option flags.

### Exceptions

- regex\_error* if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If *regex\_error* is thrown, *\*this* remains unchanged.

Definition at line 599 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

Referenced by `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

```
5.388.3.3 template<typename _Ch_type, typename _Rx_traits =
 regex_traits<_Ch_type>> template<typename _Ch_type, traits_type ,
 typename _Allocator > basic_regex& std::basic_regex< _Ch_type,
 _Rx_traits >::assign (const basic_string< _Ch_type, _Ch_type_traits,
 _Allocator > & __s, flag_type __f = regex_constants::ECMAScript
) [inline]
```

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

### Parameters

- s* A string containing a regular expression pattern.
- flags* Syntax option flags.

### Exceptions

- regex\_error* if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If *regex\_error* is thrown, *\*this* remains unchanged.

Definition at line 615 of file regex.h.

References `std::basic_regex< _Ch_type, _Rx_traits >::swap()`.

**5.388.3.4** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> template<typename _InputIterator >  
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (   
_InputIterator __first, _InputIterator __last, flag_type __flags =  
regex_constants::ECMAScript ) [inline]`

Assigns a new regular expression to a regex object.

#### Parameters

*first* The start of a range containing a valid regular expression.

*last* The end of a range containing a valid regular expression.

*flags* Syntax option flags.

#### Exceptions

*regex\_error* if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If *regex\_error* is thrown, the object remains unchanged.

Definition at line 638 of file `regex.h`.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

Referenced by `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

**5.388.3.5** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
_Ch_type, _Rx_traits >::assign ( initializer_list<_Ch_type> __l,  
flag_type __f = regex_constants::ECMAScript ) [inline]`

Assigns a new regular expression to a regex object.

#### Parameters

*l* An initializer list representing a regular expression.

*flags* Syntax option flags.

#### Exceptions

*regex\_error* if *l* does not contain a valid regular expression pattern interpreted according to *flags*. If *regex\_error* is thrown, the object remains unchanged.

Definition at line 653 of file `regex.h`.

---

References `std::basic_regex<_Ch_type, _Rx_traits>::assign()`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits>::assign()`.

**5.388.3.6** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
_Ch_type, _Rx_traits>::assign ( basic_regex<_Ch_type, _Rx_traits  
> && __rhs ) [inline]`

The move-assignment operator.

### Parameters

*rhs* Another regular expression object.

Definition at line 560 of file `regex.h`.

References `std::basic_regex<_Ch_type, _Rx_traits>::swap()`.

**5.388.3.7** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
_Ch_type, _Rx_traits>::assign ( const _Ch_type * __p, flag_type  
__flags = regex_constants::ECMAScript ) [inline]`

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

### Parameters

*p* A pointer to a C-style null-terminated string containing a regular expression pattern.

*flags* Syntax option flags.

### Exceptions

[\*regex\\_error\*](#) if *p* does not contain a valid regular expression pattern interpreted according to *flags*. If [\*regex\\_error\*](#) is thrown, *\*this* remains unchanged.

Definition at line 581 of file `regex.h`.

References `std::basic_regex<_Ch_type, _Rx_traits>::assign()`.

Referenced by `std::basic_regex<_Ch_type, _Rx_traits>::assign()`.

**5.388.3.8** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> flag_type std::basic_regex< _Ch_type,  
_Rx_traits >::flags ( ) const [inline]`

Gets the flags used to construct the regular expression or in the last call to [assign\(\)](#).

Definition at line 671 of file regex.h.

Referenced by std::basic\_regex< \_Ch\_type, \_Rx\_traits >::operator=().

**5.388.3.9** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> locale_type std::basic_regex< _Ch_type,  
_Rx_traits >::getloc ( ) const [inline]`

Gets the locale currently imbued in the regular expression object.

Definition at line 689 of file regex.h.

**5.388.3.10** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> locale_type std::basic_regex< _Ch_type,  
_Rx_traits >::imbue ( locale_type __loc ) [inline]`

Imbues the regular expression object with the given locale.

#### Parameters

*loc* A locale.

Definition at line 681 of file regex.h.

**5.388.3.11** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> unsigned int std::basic_regex<  
_Ch_type, _Rx_traits >::mark_count ( ) const [inline]`

Gets the number of marked subexpressions within the regular expression.

Definition at line 663 of file regex.h.

**5.388.3.12** `template<typename _Ch_type, typename _Rx_traits =  
 regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
 _Ch_type, _Rx_traits >::operator= ( basic_regex< _Ch_type,  
 _Rx_traits > && __rhs ) [inline]`

Move-assigns one regular expression to another.

Definition at line 515 of file regex.h.

References std::basic\_regex< \_Ch\_type, \_Rx\_traits >::assign().

**5.388.3.13** `template<typename _Ch_type, typename _Rx_traits =  
 regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
 _Ch_type, _Rx_traits >::operator= ( const basic_regex< _Ch_type,  
 _Rx_traits > & __rhs ) [inline]`

Assigns one regular expression to another.

Definition at line 508 of file regex.h.

References std::basic\_regex< \_Ch\_type, \_Rx\_traits >::assign().

**5.388.3.14** `template<typename _Ch_type, typename _Rx_traits =  
 regex_traits<_Ch_type>> template<typename _Ch_type traits,  
 typename _Allocator > basic_regex& std::basic_regex< _Ch_type,  
 _Rx_traits >::operator= ( const basic_string< _Ch_type,  
 _Ch_type traits, _Allocator > & __s ) [inline]`

Replaces a regular expression with a new one constructed from a string.

#### Parameters

**A** pointer to a string containing a regular expression.

Definition at line 537 of file regex.h.

References std::basic\_regex< \_Ch\_type, \_Rx\_traits >::assign(), and std::basic\_regex< \_Ch\_type, \_Rx\_traits >::flags().

**5.388.3.15** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> basic_regex& std::basic_regex<  
_Ch_type, _Rx_traits >::operator= ( const _Ch_type * __p )  
[inline]`

Replaces a regular expression with a new one constructed from a C-style null-terminated string.

#### Parameters

A pointer to the start of a null-terminated C-style string containing a regular expression.

Definition at line 526 of file `regex.h`.

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`, and `std::basic_regex< _Ch_type, _Rx_traits >::flags()`.

**5.388.3.16** `template<typename _Ch_type, typename _Rx_traits =  
regex_traits<_Ch_type>> void std::basic_regex< _Ch_type,  
_Rx_traits >::swap ( basic_regex< _Ch_type, _Rx_traits > &  
__rhs ) [inline]`

Swaps the contents of two regular expression objects.

#### Parameters

*rhs* Another regular expression object.

Definition at line 699 of file `regex.h`.

Referenced by `std::basic_regex< _Ch_type, _Rx_traits >::assign()`, and `std::swap()`.

### 5.389.1 Detailed Description

**template<typename \_CharT, typename \_Traits> class std::basic\_streambuf< \_CharT, \_Traits >**

The actual work of input and output (interface).

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output. Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:
  - The controlled input sequence can be not readable.
  - The controlled output sequence can be not writable.
  - The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.
  - The controlled sequences can support operations *directly* to or from associated sequences.

- The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.
2. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` array object. The array object represents, at any moment, a (sub)sequence of characters from the sequence. Operations performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:
    - the *beginning pointer*, or lowest element address in the array (called *xbeg* here);
    - the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
    - the *end pointer*, or first element address beyond the end of the array (called *xend* here).
  3. The following semantic constraints shall always apply for any set of three pointers for a sequence, using the pointer names given immediately above:
    - If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` array, as described above; otherwise, *xbeg* and *xend* shall also be null.
    - If *xnext* is not a null pointer and  $xnext < xend$  for an output sequence, then a *write position* is available. In this case, *\*xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
    - If *xnext* is not a null pointer and  $xbeg < xnext$  for an input sequence, then a *putback position* is available. In this case, *xnext[-1]* shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
    - If *xnext* is not a null pointer and  $xnext < xend$  for an input sequence, then a *read position* is available. In this case, *\*xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

## 5.389.2 Member Typedef Documentation

**5.389.2.1** `template<typename _CharT, typename _Traits> typedef  
basic_streambuf<char_type, traits_type> std::basic_streambuf<  
_CharT, _Traits >::__streambuf_type`

This is a non-standard type.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 135 of file `streambuf`.

**5.389.2.2** `template<typename _CharT, typename _Traits> typedef _CharT  
std::basic_streambuf< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 126 of file `streambuf`.

**5.389.2.3** `template<typename _CharT, typename _Traits> typedef  
traits_type::int_type std::basic_streambuf< _CharT, _Traits  
>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >`, `__gnu_cxx::stdio_filebuf< _CharT, _Traits >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 128 of file `streambuf`.

**5.389.2.4** `template<typename _CharT, typename _Traits> typedef  
traits_type::off_type std::basic_streambuf<_CharT, _Traits  
>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

### **5.389.3 Constructor & Destructor Documentation**

**5.389.3.1** `template<typename _CharT, typename _Traits> virtual  
std::basic_streambuf<_CharT, _Traits>::~~basic_streambuf ( )  
[inline, virtual]`

Destructor deallocates no buffer space.

Definition at line 195 of file streambuf.

**5.389.3.2** `template<typename _CharT, typename _Traits>  
std::basic_streambuf<_CharT, _Traits>::basic_streambuf ( )  
[inline, protected]`

Base constructor.

Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the [basic\\_streambuf](#) class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

Definition at line 443 of file streambuf.

### **5.389.4 Member Function Documentation**

**5.389.4.1** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::eback ( ) const  
[inline, protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2165

Definition at line 462 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_streambuf< char_type, traits_type >::sputbackc()`, `std::basic_streambuf< char_type, traits_type >::sungetc()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

**5.389.4.2** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::egptr ( ) const  
[inline, protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 468 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_streambuf< char_type, traits_type >::in_avail()`, `std::basic_streambuf< char_type, traits_type >::sbumpc()`, `std::basic_streambuf< char_type, traits_type >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_streambuf< _CharT, _Traits >::xsgetn()`.

**5.389.4.3** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::epptr ( ) const  
[inline, protected]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2166

- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 515 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::sputc()`, and `std::basic_streambuf< _CharT, _Traits >::xsputn()`.

**5.389.4.4** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::gbump ( int __n )  
[inline, protected]`

Moving the read position.

### Parameters

*n* The delta by which to move.

This just advances the read position without returning any data.

Definition at line 478 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::sbumpc()`, `std::basic_streambuf< char_type, traits_type >::sputbackc()`, `std::basic_streambuf< char_type, traits_type >::sungetc()`, and `std::basic_streambuf< char_type, traits_type >::uflow()`.

**5.389.4.5** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf< _CharT, _Traits >::getloc ( ) const  
[inline]`

Locale access.

### Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 224 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubimbue()`.

**5.389.4.6** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::gptr ( ) const  
[inline, protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 465 of file streambuf.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_streambuf< char_type, traits_type >::in_avail()`, `std::basic_streambuf< char_type, traits_type >::sbumpc()`, `std::basic_streambuf< char_type, traits_type >::sgetc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_streambuf< char_type, traits_type >::sputbackc()`, `std::basic_streambuf< char_type, traits_type >::sungetc()`, `std::basic_streambuf< char_type, traits_type >::uflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_streambuf<_CharT, _Traits>::xsgetn()`.

**5.389.4.7** `template<typename _CharT, typename _Traits> virtual void  
std::basic_streambuf<_CharT, _Traits>::imbue ( const locale & )  
[inline, protected, virtual]`

Changes translations.

#### Parameters

*loc* A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2168

---

### Note

Base class version does nothing.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

Definition at line 556 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::pubimbue()`.

**5.389.4.8** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::in_avail ( ) [inline]`

Looking ahead into the stream.

### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 264 of file `streambuf`.

**5.389.4.9** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf<_CharT, _Traits>::overflow ( int_type =  
traits_type::eof() ) [inline, protected, virtual]`

Consumes data from the buffer; writes to the controlled sequence.

### Parameters

*c* An additional character to consume.

### Returns

`eof()` to indicate failure, something else (usually *c*, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2169

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

### Note

Base class version does nothing, returns eof().

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 748 of file streambuf.

Referenced by `std::basic_streambuf<char_type, traits_type>::sputc()`, and `std::basic_streambuf<_CharT, _Traits>::xsputn()`.

**5.389.4.10** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf<_CharT, _Traits>::pbackfail ( int_type =  
traits_type::eof() ) [inline, protected, virtual]`

Tries to back up the input sequence.

### Parameters

*c* The character to be inserted back into the sequence.

### Returns

eof() on failure, *some other value* on success

### Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

### Note

Base class version does nothing, returns eof().

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits>](#).

Definition at line 704 of file streambuf.

Referenced by `std::basic_streambuf<char_type, traits_type>::sputbackc()`, and `std::basic_streambuf<char_type, traits_type>::sungetc()`.

**5.389.4.11** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::pbase ( ) const  
[inline, protected]`

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2170

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 509 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`, and `std::basic_filebuf<_CharT, _Traits>::sync()`.

**5.389.4.12** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::pbump ( int __n )  
[inline, protected]`

Moving the write position.

### Parameters

*n* The delta by which to move.

This just advances the write position without returning any data.

Definition at line 525 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::sputc()`.

**5.389.4.13** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::pptr ( ) const  
[inline, protected]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence

## 5.389 std::basic\_streambuf< \_CharT, \_Traits > Class Template Reference 2171

---

- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 512 of file streambuf.

Referenced by `std::basic_streambuf< char_type, traits_type >::sputc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`, `std::basic_filebuf< _CharT, _Traits >::sync()`, and `std::basic_streambuf< _CharT, _Traits >::xsputn()`.

**5.389.4.14** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf< _CharT, _Traits >::pubimbue ( const locale  
& __loc ) [inline]`

Entry point for [imbue\(\)](#).

### Parameters

*loc* The new locale.

### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 207 of file streambuf.

**5.389.4.15** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf< _CharT, _Traits >::pubseekoff ( off_type  
__off, ios_base::seekdir __way, ios_base::openmode __mode =  
ios_base::in | ios_base::out ) [inline]`

Entry point for [imbue\(\)](#).

### Parameters

*loc* The new locale.

### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 241 of file streambuf.

**5.389.4.16** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf<_CharT, _Traits>::pubseekpos ( pos_type  
__sp, ios_base::openmode __mode = ios_base::in | ios_base::out )  
[inline]`

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 246 of file `streambuf`.

**5.389.4.17** `template<typename _CharT, typename _Traits>  
__streambuf_type* std::basic_streambuf<_CharT, _Traits  
>::pubsetbuf ( char_type * __s, streamsize __n ) [inline]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 237 of file `streambuf`.

**5.389.4.18** `template<typename _CharT, typename _Traits> int  
std::basic_streambuf<_CharT, _Traits>::pubsync ( )  
[inline]`

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2173

---

Calls the derived `imbue(loc)`.

Definition at line 251 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::sync()`.

**5.389.4.19** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sbumpc( ) [inline]`

Getting the next character.

### Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 296 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, and `std::basic_streambuf<char_type, traits_type>::snextc()`.

**5.389.4.20** `template<typename _CharT, typename _Traits> virtual  
pos_type std::basic_streambuf<_CharT, _Traits>::seekoff  
( off_type, ios_base::seekdir, ios_base::openmode =  
ios_base::in | ios_base::out ) [inline, protected,  
virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 582 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::pubseekoff()`.

**5.389.4.21** `template<typename _CharT, typename _Traits> virtual pos_type  
std::basic_streambuf<_CharT, _Traits>::seekpos ( pos_type ,  
ios_base::openmode = ios_base::in | ios_base::out ) [inline,  
protected, virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 594 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubseekpos()`.

**5.389.4.22** `template<typename _CharT, typename _Traits> virtual  
basic_streambuf<char_type, _Traits>* std::basic_streambuf<  
_CharT, _Traits>::setbuf ( char_type *, streamsize ) [inline,  
protected, virtual]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this function.

**Note**

Base class version does nothing, returns `this`.

Definition at line 571 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubsetbuf()`.

**5.389.4.23** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::setg ( char_type *  
__gbeg, char_type * __gnext, char_type * __gend ) [inline,  
protected]`

Setting the three read area pointers.

## 5.389 std::basic\_streambuf<\_CharT, \_Traits> Class Template Reference 2175

### Parameters

*gbeg* A pointer.

*gnext* A pointer.

*gend* A pointer.

### Postcondition

*gbeg* == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 489 of file streambuf.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.389.4.24** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf<_CharT, _Traits>::setp ( char_type *  
__pbeg, char_type * __pend ) [inline, protected]`

Setting the three write area pointers.

### Parameters

*pbeg* A pointer.

*pend* A pointer.

### Postcondition

*pbeg* == `pbase()`, *pbeg* == `pptr()`, and *pend* == `epptr()`

Definition at line 535 of file streambuf.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.389.4.25** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sgetc ( ) [inline]`

Getting the next character.

### Returns

The next character, or eof.

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2176

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 318 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_streambuf<char_type, traits_type>::snextc()`.

**5.389.4.26** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::sgetn ( char_type * __s,  
streamsize __n ) [inline]`

Entry point for `xsgetn`.

### Parameters

*s* A buffer area.

*n* A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 337 of file `streambuf`.

**5.389.4.27** `template<typename _CharT, typename _Traits> virtual streamsize  
std::basic_streambuf<_CharT, _Traits>::showmanyc ( )  
[inline, protected, virtual]`

Investigating the data available.

### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.*  
[27.5.2.4.3]/1

### Note

Base class version does nothing, returns zero.

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2177

---

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 629 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::in_avail()`.

**5.389.4.28** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::snextc ( ) [inline]`

Getting the next character.

### Returns

The next character, or `eof`.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 278 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.389.4.29** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sputbackc ( char_type  
__c ) [inline]`

Pushing characters back into the input stream.

### Parameters

*c* The character to push back.

### Returns

The previous character, if possible.

## 5.389 std::basic\_streambuf< \_CharT, \_Traits > Class Template Reference 2178

---

Similar to [sungetc\(\)](#), but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 352 of file streambuf.

Referenced by std::basic\_istream< \_CharT, \_Traits >::putback().

**5.389.4.30** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sputc ( char_type __c )  
[inline]`

Entry point for all single-character output functions.

### Parameters

*c* A character to output.

### Returns

*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type (c)`. If a write position is not available, returns `overflow (c)`.

Definition at line 404 of file streambuf.

Referenced by std::basic\_istream< \_CharT, \_Traits >::get(), and std::ostreambuf\_iterator< \_CharT, \_Traits >::operator=().

**5.389.4.31** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::sputn ( const char_type  
* __s, streamsize __n ) [inline]`

Entry point for all single-character output functions.

### Parameters

*s* A buffer read area.

*n* A count.

One of two public output functions.

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2179

---

Returns `xspn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 430 of file `streambuf`.

**5.389.4.32** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline]`

Moving backwards in the input stream.

### Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 377 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::unget()`.

**5.389.4.33** `template<typename _CharT, typename _Traits> virtual int  
std::basic_streambuf<_CharT, _Traits>::sync ( void )  
[inline, protected, virtual]`

Synchronizes the buffer arrays with the controlled sequences.

### Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

### Note

Base class version does nothing, returns zero.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 607 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::pubsync()`.

**5.389.4.34** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline,  
protected, virtual]`

Fetches more data from the controlled sequence.

#### Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 680 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::sbumpc()`, and `std::basic_streambuf< _CharT, _Traits >::xsgetn()`.

**5.389.4.35** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf< _CharT, _Traits >::underflow ( )  
[inline, protected, virtual]`

Fetches more data from the controlled sequence.

#### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

#### Note

Base class version does nothing, returns `eof()`.

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2181

---

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 667 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::sgetc()`, and `std::basic_streambuf<char_type, traits_type>::uflow()`.

**5.389.4.36** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::xsgetn ( char_type *  
__s, streamsize __n ) [protected, virtual]`

Multiple character extraction.

### Parameters

*s* A buffer area.

*n* Maximum number of characters to assign.

### Returns

The number of characters assigned.

Fills `s[0]` through `s[n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either *n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 47 of file `streambuf.tcc`.

References `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gpptr()`, `std::min()`, and `std::basic_streambuf<_CharT, _Traits>::uflow()`.

Referenced by `std::basic_streambuf<char_type, traits_type>::sgetn()`.

**5.389.4.37** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf<_CharT, _Traits>::xspn ( const char_type *  
__s, streamsize __n ) [protected, virtual]`

## 5.389 `std::basic_streambuf< _CharT, _Traits >` Class Template Reference 2182

---

Multiple character insertion.

### Parameters

- s* A buffer area.
- n* Maximum number of characters to write.

### Returns

The number of characters written.

Writes *s*[0] through *s*[*n*-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

Definition at line 81 of file `streambuf.tcc`.

References `std::basic_streambuf< _CharT, _Traits >::epptr()`, `std::min()`, `std::basic_streambuf< _CharT, _Traits >::overflow()`, and `std::basic_streambuf< _CharT, _Traits >::pptr()`.

Referenced by `std::basic_streambuf< char_type, traits_type >::sputn()`.

### 5.389.5 Member Data Documentation

#### 5.389.5.1 `template<typename _CharT, typename _Traits> locale` `std::basic_streambuf< _CharT, _Traits >::_M_buf_locale` `[protected]`

Current locale setting.

Definition at line 190 of file `streambuf`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::basic_filebuf()`, `std::basic_streambuf< char_type, traits_type >::getloc()`, and `std::basic_streambuf< char_type, traits_type >::pubimbue()`.

#### 5.389.5.2 `template<typename _CharT, typename _Traits> char_type*` `std::basic_streambuf< _CharT, _Traits >::_M_in_beg` `[protected]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

## 5.389 `std::basic_streambuf<_CharT, _Traits>` Class Template Reference 2183

---

- `get` == input == read
- `put` == output == write

Definition at line 182 of file `streambuf`.

#### 5.390.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class std::basic_string<_CharT, _Traits, _Alloc>`

Managing sequences of characters and character-like objects. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#). Of the [optional sequence requirements](#), only `push_back`, `at`, and array access are supported.

#### Todo

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

Documentation? What's that? Nathan Myers <[ncm@cantrip.org](mailto:ncm@cantrip.org)>.

A string looks like this:

|                                              |                                         |
|----------------------------------------------|-----------------------------------------|
|                                              | <code>[_Rep]</code>                     |
|                                              | <code>_M_length</code>                  |
| <code>[basic_string&lt;char_type&gt;]</code> | <code>_M_capacity</code>                |
| <code>_M_dataplus</code>                     | <code>_M_refcount</code>                |
| <code>_M_p -----&gt;</code>                  | <code>unnamed array of char_type</code> |

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_data()`, and `string::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

Definition at line 107 of file `basic_string.h`.

## 5.390.2 Constructor & Destructor Documentation

**5.390.2.1** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string ( )  
[inline]`

Default constructor creates an empty string.

Definition at line 432 of file `basic_string.h`.

Referenced by `std::basic_string<char>::substr()`.

**5.390.2.2** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string ( const  
_Alloc & __a ) [explicit]`

Construct an empty string using allocator *a*.

Definition at line 180 of file `basic_string.tcc`.

**5.390.2.3** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string ( const  
basic_string<_CharT, _Traits, _Alloc> & __str )`

Construct string with copy of value of *str*.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2192

---

### Parameters

*str* Source string.

Definition at line 172 of file `basic_string.tcc`.

**5.390.2.4** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string ( const  
basic_string<_CharT, _Traits, _Alloc> & __str, size_type __pos,  
size_type __n = npos )`

Construct string as copy of a substring.

### Parameters

*str* Source string.

*pos* Index of first character to copy from.

*n* Number of characters to copy (default remainder).

Definition at line 186 of file `basic_string.tcc`.

**5.390.2.5** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string ( const  
basic_string<_CharT, _Traits, _Alloc> & __str, size_type __pos,  
size_type __n, const _Alloc & __a )`

Construct string as copy of a substring.

### Parameters

*str* Source string.

*pos* Index of first character to copy from.

*n* Number of characters to copy.

*a* Allocator to use.

Definition at line 196 of file `basic_string.tcc`.

**5.390.2.6** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string ( const  
_CharT * __s, size_type __n, const _Alloc & __a = _Alloc() )`

Construct string initialized by a character array.

**Parameters**

- s* Source character array.
- n* Number of characters to copy.
- a* Allocator to use (default is default allocator).

NB: *s* must have at least *n* characters, `'\0'` has no special meaning.

Definition at line 208 of file `basic_string.tcc`.

**5.390.2.7** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string ( const  
_CharT * __s, const _Alloc & __a = _Alloc() )`

Construct string as copy of a C string.

**Parameters**

- s* Source C string.
- a* Allocator to use (default is default allocator).

Definition at line 215 of file `basic_string.tcc`.

**5.390.2.8** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (  
size_type __n, _CharT __c, const _Alloc & __a = _Alloc() )`

Construct string as multiple characters.

**Parameters**

- n* Number of characters.
- c* Character to use.
- a* Allocator to use (default is default allocator).

Definition at line 222 of file `basic_string.tcc`.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2194

---

**5.390.2.9** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (  
 basic_string<_CharT, _Traits, _Alloc> && __str ) [inline]`

Move construct string.

### Parameters

*str* Source string.

The newly-created string contains the exact contents of *str*. *str* is a valid, but unspecified string.

Definition at line 502 of file `basic_string.h`.

**5.390.2.10** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::basic_string (  
 initializer_list<_CharT> __l, const _Alloc & __a = _Alloc() )`

Construct string from an initializer list.

### Parameters

*l* `std::initializer_list` of characters.

*a* Allocator to use (default is default allocator).

Definition at line 237 of file `basic_string.tcc`.

**5.390.2.11** `template<typename _CharT, typename _Traits, typename  
_Alloc> template<typename _InputIterator> std::basic_string<  
_CharT, _Traits, _Alloc>::basic_string ( _InputIterator __beg,  
_InputIterator __end, const _Alloc & __a = _Alloc() )`

Construct string as copy of a range.

### Parameters

*beg* Start of range.

*end* End of range.

*a* Allocator to use (default is default allocator).

Definition at line 230 of file `basic_string.tcc`.

**5.390.2.12** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_string<_CharT, _Traits, _Alloc>::~~basic_string ( )  
[inline]`

Destroy the string instance.

Definition at line 533 of file `basic_string.h`.

### 5.390.3 Member Function Documentation

**5.390.3.1** `template<typename _CharT, typename _Traits, typename _Alloc  
> basic_string<_CharT, _Traits, _Alloc> & std::basic_string<  
_CharT, _Traits, _Alloc>::append ( const basic_string<_CharT,  
_Traits, _Alloc> & __str, size_type __pos, size_type __n )`

Append a substring.

#### Parameters

*str* The string to append.

*pos* Index of the first character of *str* to append.

*n* The number of characters to append.

#### Returns

Reference to this string.

#### Exceptions

*std::out\_of\_range* if *pos* is not a valid index.

This function appends *n* characters from *str* starting at *pos* to this string. If *n* is larger than the number of available characters in *str*, the remainder of *str* is appended.

Definition at line 344 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.390.3.2** `template<typename _CharT, typename _Traits, typename _Alloc  
> basic_string<_CharT, _Traits, _Alloc> & std::basic_string<  
_CharT, _Traits, _Alloc>::append ( const _CharT * __s, size_type  
__n )`

Append a C substring.

#### Parameters

- s* The C string to append.
- n* The number of characters to append.

#### Returns

Reference to this string.

Definition at line 300 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.390.3.3** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::append  
( const _CharT * __s ) [inline]`

Append a C string.

#### Parameters

- s* The C string to append.

#### Returns

Reference to this string.

Definition at line 997 of file `basic_string.h`.

**5.390.3.4** `template<typename _CharT, typename _Traits, typename _Alloc  
> basic_string<_CharT, _Traits, _Alloc> & std::basic_string<  
_CharT, _Traits, _Alloc>::append ( size_type __n, _CharT __c )`

Append multiple characters.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2197

---

### Parameters

- n* The number of characters to append.
- c* The character to use.

### Returns

Reference to this string.

Appends *n* copies of *c* to this string.

Definition at line 283 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.390.3.5** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::append  
( initializer_list<_CharT> __l ) [inline]`

Append an [initializer\\_list](#) of characters.

### Parameters

- l* The [initializer\\_list](#) of characters to append.

### Returns

Reference to this string.

Definition at line 1021 of file `basic_string.h`.

Referenced by `std::basic_string<char>::append()`.

**5.390.3.6** `template<typename _CharT, typename _Traits, typename _Alloc>  
template<class _InputIterator> basic_string& std::basic_string<  
_CharT, _Traits, _Alloc>::append ( _InputIterator __first,  
_InputIterator __last ) [inline]`

Append a range of characters.

### Parameters

- first* Iterator referencing the first character to append.

*last* Iterator marking the end of the range.

### Returns

Reference to this string.

Appends characters in the range [first,last) to this string.

Definition at line 1035 of file `basic_string.h`.

**5.390.3.7** `template<typename _CharT, typename _Traits, typename _Alloc>  
 > basic_string<_CharT, _Traits, _Alloc> & std::basic_string<  
 _CharT, _Traits, _Alloc>::append ( const basic_string<_CharT,  
 _Traits, _Alloc> & __str )`

Append a string to this string.

### Parameters

*str* The string to append.

### Returns

Reference to this string.

Definition at line 327 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::basic_string<char>::append()`, `std::collate<_CharT>::do_transform()`, `std::operator+()`, `std::basic_string<char>::operator+=()`, `std::operator>>()`, and `std::basic_string<_CharT, _Traits, _Alloc>::resize()`.

**5.390.3.8** `template<typename _CharT, typename _Traits, typename _Alloc>  
 basic_string& std::basic_string<_CharT, _Traits, _Alloc>::assign (  
 basic_string<_CharT, _Traits, _Alloc> && __str ) [inline]`

Set value to contents of another string.

### Parameters

*str* Source string to use.

### Returns

Reference to this string.

This function sets this string to the exact contents of *str*. *str* is a valid, but unspecified string.

Definition at line 1070 of file `basic_string.h`.

**5.390.3.9** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::assign (  
const basic_string<_CharT, _Traits, _Alloc> & __str, size_type  
__pos, size_type __n ) [inline]`

Set value to a substring of a string.

### Parameters

*str* The string to use.

*pos* Index of the first character of *str*.

*n* Number of characters to use.

### Returns

Reference to this string.

### Exceptions

[\*std::out\\_of\\_range\*](#) if *pos* is not a valid index.

This function sets this string to the substring of *str* consisting of *n* characters at *pos*. If *n* is larger than the number of available characters in *str*, the remainder of *str* is used.

Definition at line 1090 of file `basic_string.h`.

Referenced by `std::basic_string<char>::assign()`.

**5.390.3.10** `template<typename _CharT, typename _Traits, typename _Alloc  
> basic_string<_CharT, _Traits, _Alloc> & std::basic_string<  
_CharT, _Traits, _Alloc>::assign ( const _CharT * __s, size_type  
__n )`

Set value to a C substring.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2200

---

### Parameters

- s* The C string to use.
- n* Number of characters to use.

### Returns

Reference to this string.

This function sets the value of this string to the first *n* characters of *s*. If *n* is larger than the number of available characters in *s*, the remainder of *s* is used.

Definition at line 261 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

```
5.390.3.11 template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string<_CharT, _Traits, _Alloc>::assign
 (const _CharT * __s) [inline]
```

Set value to contents of a C string.

### Parameters

- s* The C string to use.

### Returns

Reference to this string.

This function sets the value of this string to the value of *s*. The data is copied, so there is no dependence on *s* once the function returns.

Definition at line 1118 of file `basic_string.h`.

```
5.390.3.12 template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string<_CharT, _Traits, _Alloc>::assign
 (size_type __n, _CharT __c) [inline]
```

Set value to multiple characters.

### Parameters

- n* Length of the resulting string.

*c* The character to use.

### Returns

Reference to this string.

This function sets the value of this string to *n* copies of character *c*.

Definition at line 1134 of file `basic_string.h`.

**5.390.3.13** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<  
_CharT, _Traits, _Alloc>::assign ( _InputIterator __first,  
_InputIterator __last ) [inline]`

Set value to a range of characters.

### Parameters

*first* Iterator referencing the first character to append.

*last* Iterator marking the end of the range.

### Returns

Reference to this string.

Sets value of string to characters in the range [first,last).

Definition at line 1147 of file `basic_string.h`.

**5.390.3.14** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::assign  
( initializer_list<_CharT> __l ) [inline]`

Set value to an [initializer\\_list](#) of characters.

### Parameters

*l* The [initializer\\_list](#) of characters to assign.

### Returns

Reference to this string.

Definition at line 1157 of file `basic_string.h`.

Referenced by `std::basic_string<char>::assign()`.

**5.390.3.15** `template<typename _CharT, typename _Traits, typename _Alloc  
> basic_string<_CharT, _Traits, _Alloc> & std::basic_string<  
_CharT, _Traits, _Alloc>::assign ( const basic_string<_CharT,  
_Traits, _Alloc> & __str )`

Set value to contents of another string.

#### Parameters

*str* Source string to use.

#### Returns

Reference to this string.

Definition at line 245 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::get_allocator()`.

Referenced by `std::basic_string<char>::assign()`, `std::basic_string<char>::operator=()`, `std::basic_string<char>::push_back()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

**5.390.3.16** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reference std::basic_string<_CharT, _Traits, _Alloc>::at (  
size_type __n ) const [inline]`

Provides access to the data contained in the string.

#### Parameters

*n* The index of the character to access.

#### Returns

Read-only (const) reference to the character.

#### Exceptions

[\*std::out\\_of\\_range\*](#) If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws [`out\_of\_range`](#) if the check fails.

Definition at line 856 of file `basic_string.h`.

**5.390.3.17** `template<typename _CharT, typename _Traits, typename _Alloc>  
reference std::basic_string<_CharT, _Traits, _Alloc>::at (  
size_type __n ) [inline]`

Provides access to the data contained in the string.

#### Parameters

*n* The index of the character to access.

#### Returns

Read/write reference to the character.

#### Exceptions

[\*std::out\\_of\\_range\*](#) If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws [\*out\\_of\\_range\*](#) if the check fails. Success results in unsharing the string.

Definition at line 909 of file `basic_string.h`.

**5.390.3.18** `template<typename _CharT, typename _Traits, typename _Alloc>  
reference std::basic_string<_CharT, _Traits, _Alloc>::back ( )  
[inline]`

Returns a read/write reference to the data at the last element of the string.

Definition at line 885 of file `basic_string.h`.

**5.390.3.19** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reference std::basic_string<_CharT, _Traits, _Alloc>::back  
( ) const [inline]`

Returns a read-only (constant) reference to the data at the last element of the string.

Definition at line 893 of file `basic_string.h`.

**5.390.3.20** `template<typename _CharT, typename _Traits, typename _Alloc>  
iterator std::basic_string<_CharT, _Traits, _Alloc>::begin ( )  
[inline]`

Returns a read/write iterator that points to the first character in the string. Unshares the string.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference

---

Definition at line 600 of file `basic_string.h`.

Referenced by `std::basic_string<char>::crend()`, `std::regex_match()`, `std::regex_replace()`, `std::regex_search()`, and `std::basic_string<char>::rend()`.

**5.390.3.21** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_iterator std::basic_string<_CharT, _Traits, _Alloc>::begin (  
) const [inline]`

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 611 of file `basic_string.h`.

**5.390.3.22** `template<typename _CharT, typename _Traits, typename _Alloc>  
const _CharT* std::basic_string<_CharT, _Traits, _Alloc>::c_str (  
) const [inline]`

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1766 of file `basic_string.h`.

Referenced by `std::collate<_CharT>::do_compare()`, `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::collate<_CharT>::do_transform()`, and `std::basic_filebuf<char_type, traits_type>::open()`.

**5.390.3.23** `template<typename _CharT, typename _Traits, typename _Alloc>  
size_type std::basic_string<_CharT, _Traits, _Alloc>::capacity (  
) const [inline]`

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 768 of file `basic_string.h`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<char>::push_back()`, and `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`.

**5.390.3.24** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_iterator std::basic_string<_CharT, _Traits, _Alloc>::cbegin (  
) const [inline]`

Returns a read-only (constant) iterator that points to the first character in the string.

## 5.390 std::basic\_string<\_CharT, \_Traits, \_Alloc> Class Template Reference 2205

Definition at line 675 of file basic\_string.h.

**5.390.3.25** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_iterator std::basic_string<_CharT, _Traits, _Alloc>::cend (  
) const [inline]`

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 683 of file basic\_string.h.

**5.390.3.26** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_string<_CharT, _Traits, _Alloc>::clear ( )  
[inline]`

Erases the string, making it empty.

Definition at line 795 of file basic\_string.h.

Referenced by std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc>::setbuf().

**5.390.3.27** `template<typename _CharT, typename _Traits, typename _Alloc  
> int std::basic_string<_CharT, _Traits, _Alloc>::compare (  
size_type __pos, size_type __n1, const _CharT * __s, size_type  
__n2 ) const`

Compare substring against a character array.

### Parameters

*pos1* Index of first character of substring.

*n1* Number of characters in substring.

*s* character array to compare against.

*n2* Number of characters of *s*.

### Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *n1* characters starting at *pos1*. Form a string from the first *n2* characters of *s*. Returns an integer < 0 if this substring is ordered before the string from *s*, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from *s*. Determines the effective length *r1len* of the strings

to compare as the smallest of the length of the substring and  $n2$ . The function then compares the two strings by calling `traits::compare(substring.data(),s,r1en)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least  $n2$  characters, `'\0'` has no special meaning.

Definition at line 982 of file `basic_string.tcc`.

References `std::min()`.

**5.390.3.28** `template<typename _CharT, typename _Traits, typename _Alloc  
> int std::basic_string<_CharT, _Traits, _Alloc>::compare(  
size_type __pos, size_type __n, const basic_string<_CharT,  
_Traits, _Alloc> & __str) const`

Compare substring to a string.

#### Parameters

*pos* Index of first character of substring.

*n* Number of characters in substring.

*str* String to compare against.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the  $n$  characters starting at *pos*. Returns an integer  $< 0$  if the substring is ordered before *str*,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after *str*. Determines the effective length *r1en* of the strings to compare as the smallest of the length of the substring and *str.size()*. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),r1en)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 918 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::min()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.390.3.29** `template<typename _CharT, typename _Traits, typename _Alloc  
> int std::basic_string<_CharT, _Traits, _Alloc>::compare(  
size_type __pos1, size_type __n1, const basic_string<_CharT,  
_Traits, _Alloc> & __str, size_type __pos2, size_type __n2) const`

Compare substring to a substring.

#### Parameters

- pos1* Index of first character of substring.
- n1* Number of characters in substring.
- str* String to compare against.
- pos2* Index of first character of substring of *str*.
- n2* Number of characters in substring of *str*.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the *n1* characters starting at *pos1*. Form the substring of *str* from the *n2* characters starting at *pos2*. Returns an integer  $< 0$  if this substring is ordered before the substring of *str*,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the substring of *str*. Determines the effective length *rlen* of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(), str.substr(pos2, n2).data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 933 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::min()`.

```
5.390.3.30 template<typename _CharT, typename _Traits, typename _Alloc>
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
 const basic_string<_CharT, _Traits, _Alloc> & __str) const
[inline]
```

Compare to a string.

#### Parameters

- str* String to compare against.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before *str*,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after *str*. Determines the effective length *rlen* of the

strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 2173 of file `basic_string.h`.

**5.390.3.31** `template<typename _CharT, typename _Traits, typename _Alloc  
> int std::basic_string<_CharT, _Traits, _Alloc>::compare (  
size_type __pos, size_type __n1, const _CharT* __s ) const`

Compare substring to a C string.

#### Parameters

*pos* Index of first character of substring.

*n1* Number of characters in substring.

*s* C string to compare against.

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the *n1* characters starting at *pos*. Returns an integer  $< 0$  if the substring is ordered before *s*,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after *s*. Determines the effective length *rlen* of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *s*. The function then compares the two string by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 966 of file `basic_string.tcc`.

**5.390.3.32** `template<typename _CharT, typename _Traits, typename _Alloc>  
int std::basic_string<_CharT, _Traits, _Alloc>::compare ( const  
_CharT* __s ) const`

Compare to a C string.

### Parameters

*s* C string to compare against.

### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before *s*,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after *s*. Determines the effective length *rlen* of the strings to compare as the smallest of `size()` and the length of a string constructed from *s*. The function then compares the two strings by calling `traits::compare(data(), s, rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 951 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`, `std::basic_string<_CharT, _Traits, _Alloc>::length()`, `std::min()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.390.3.33** `template<typename _CharT, typename _Traits, typename _Alloc> basic_string<_CharT, _Traits, _Alloc>::size_type  
std::basic_string<_CharT, _Traits, _Alloc>::copy ( _CharT* __s,  
size_type __n, size_type __pos = 0 ) const`

Copy substring into C string.

### Parameters

*s* C string to copy value into.

*n* Number of characters to copy.

*pos* Index of first character to copy.

### Returns

Number of characters actually copied

### Exceptions

`std::out_of_range` If *pos*  $>$  `size()`.

Copies up to *n* characters starting at *pos* into the C string *s*. If *pos* is greater than `size()`, `out_of_range` is thrown.

Definition at line 725 of file `basic_string.tcc`.

**5.390.3.34** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rbegin ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 692 of file `basic_string.h`.

**5.390.3.35** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::crend ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 701 of file `basic_string.h`.

**5.390.3.36** `template<typename _CharT, typename _Traits, typename _Alloc>  
const _CharT* std::basic_string<_CharT, _Traits, _Alloc>::data ( ) const [inline]`

Return const pointer to contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1776 of file `basic_string.h`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::compare()`, `std::basic_string<char>::compare()`, `std::collate<_CharT>::do_compare()`, `std::collate<_CharT>::do_transform()`, `std::basic_string<char>::find()`, `std::basic_string<char>::find_first_not_of()`, `std::basic_string<char>::find_first_of()`, `std::basic_string<char>::find_last_not_of()`, `std::basic_string<char>::find_last_of()`, `std::match_results<_FwdIterT, _Alloc>::format()`, `std::basic_string<char>::rfind()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`, and `std::regex_traits<_Ch_type>::transform()`.

**5.390.3.37** `template<typename _CharT, typename _Traits, typename _Alloc>  
bool std::basic_string<_CharT, _Traits, _Alloc>::empty ( ) const [inline]`

Returns true if the string is empty. Equivalent to `*this == ""`.

Definition at line 803 of file `basic_string.h`.

Referenced by `std::operator>>()`.

**5.390.3.38** `template<typename _CharT, typename _Traits, typename _Alloc>  
 iterator std::basic_string<_CharT, _Traits, _Alloc>::end ( )  
 [inline]`

Returns a read/write iterator that points one past the last character in the string.  
 Unshares the string.

Definition at line 619 of file `basic_string.h`.

Referenced by `std::basic_string<char>::crbegin()`, `std::basic_string<char>::rbegin()`, `std::regex_match()`, `std::regex_replace()`, and `std::regex_search()`.

**5.390.3.39** `template<typename _CharT, typename _Traits, typename _Alloc>  
 const_iterator std::basic_string<_CharT, _Traits, _Alloc>::end ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 630 of file `basic_string.h`.

**5.390.3.40** `template<typename _CharT, typename _Traits, typename _Alloc>  
 basic_string& std::basic_string<_CharT, _Traits, _Alloc>::erase (   
 size_type __pos = 0, size_type __n = npos ) [inline]`

Remove characters.

#### Parameters

*pos* Index of first character to remove (default 0).

*n* Number of characters to remove (default remainder).

#### Returns

Reference to this string.

#### Exceptions

[\*std::out\\_of\\_range\*](#) If *pos* is beyond the end of this string.

Removes *n* characters from this string starting at *pos*. The length of the string is reduced by *n*. If there are < *n* characters to remove, the remainder of the string is truncated. If *p* is beyond end of string, [\*out\\_of\\_range\*](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1347 of file `basic_string.h`.

---

Referenced by `std::getline()`, `std::operator>>()`, and `std::basic_string<_CharT, _Traits, _Alloc>::resize()`.

**5.390.3.41** `template<typename _CharT, typename _Traits, typename _Alloc>  
iterator std::basic_string<_CharT, _Traits, _Alloc>::erase (  
iterator __position ) [inline]`

Remove one character.

### Parameters

*position* Iterator referencing the character to remove.

### Returns

iterator referencing same location after removal.

Removes the character at *position* from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1363 of file `basic_string.h`.

**5.390.3.42** `template<typename _CharT, typename _Traits, typename  
_Alloc> basic_string<_CharT, _Traits, _Alloc>::iterator  
std::basic_string<_CharT, _Traits, _Alloc>::erase ( iterator  
__first, iterator __last )`

Remove a range of characters.

### Parameters

*first* Iterator referencing the first character to remove.

*last* Iterator referencing the end of the range.

### Returns

Iterator referencing location of first after removal.

Removes the characters in the range `[first,last)` from this string. The value of the string doesn't change if an error is thrown.

Definition at line 393 of file `basic_string.tcc`.

**5.390.3.43** `template<typename _CharT, typename _Traits, typename  
_Alloc> basic_string<_CharT, _Traits, _Alloc>::size_type  
std::basic_string<_CharT, _Traits, _Alloc>::find ( const _CharT *  
__s, size_type __pos, size_type __n ) const`

Find position of a C substring.

#### Parameters

- s* C string to locate.
- pos* Index of character to search from.
- n* Number of characters from *s* to search for.

#### Returns

Index of start of first occurrence.

Starting from *pos*, searches forward for the first *n* characters in *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 739 of file basic\_string.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::npos`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

size_type std::basic_string<_CharT, _Traits, _Alloc>::find ( const  
_CharT* __s, size_type __pos = 0 ) const [inline]`

Find position of a C string.

#### Parameters

*s* C string to locate.

*pos* Index of character to search from (default 0).

#### Returns

Index of start of first occurrence.

Starting from *pos*, searches forward for the value of *s* within this string. If found, returns the index where it begins. If not found, returns *npos*.

Definition at line 1825 of file `basic_string.h`.

**5.390.3.46** `template<typename _CharT, typename _Traits, typename  
_Alloc> basic_string<_CharT, _Traits, _Alloc>::size_type  
std::basic_string<_CharT, _Traits, _Alloc>::find ( _CharT __c,  
size_type __pos = 0 ) const`

Find position of a character.

#### Parameters

*c* Character to locate.

*pos* Index of character to search from (default 0).

#### Returns

Index of first occurrence.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2215

Starting from *pos*, searches forward for *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 762 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::find()`, `std::basic_string<_CharT, _Traits, _Alloc>::npos`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.390.3.47** `template<typename _CharT, typename _Traits, typename  
_Alloc> size_type std::basic_string<_CharT, _Traits, _Alloc>::size_type  
std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of(  
_CharT __c, size_type __pos = 0) const`

Find position of a different character.

### Parameters

*c* Character to avoid.

*pos* Index of character to search from (default 0).

### Returns

Index of first occurrence.

Starting from *pos*, searches forward for a character other than *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 866 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::npos`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.390.3.48** `template<typename _CharT, typename _Traits, typename  
_Alloc> size_type std::basic_string<_CharT, _Traits, _Alloc  
>::find_first_not_of( const basic_string<_CharT, _Traits, _Alloc  
> & __str, size_type __pos = 0) const [inline]`

Find position of a character not in string.

### Parameters

*str* String containing characters to avoid.

*pos* Index of character to search from (default 0).

### Returns

Index of first occurrence.

Starting from *pos*, searches forward for a character not contained in *str* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2035 of file `basic_string.h`.

Referenced by `std::basic_string<char>::find_first_not_of()`.

```
5.390.3.49 template<typename _CharT, typename _Traits, typename
 _Alloc> size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of (
 const _CharT* __s, size_type __pos, size_type __n) const
```

Find position of a character not in C substring.

### Parameters

*s* C string containing characters to avoid.

*pos* Index of character to search from.

*n* Number of characters from *s* to consider.

### Returns

Index of first occurrence.

Starting from *pos*, searches forward for a character not contained in the first *n* characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 854 of file `basic_string.tcc`.

 _Alloc> size_type std::basic_string<_CharT, _Traits, _Alloc
 >::find_first_not_of (const _CharT* __s, size_type __pos = 0)
 const [inline]
```

Find position of a character not in C string.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2217

### Parameters

- s* C string containing characters to avoid.
- pos* Index of character to search from (default 0).

### Returns

Index of first occurrence.

Starting from *pos*, searches forward for a character not contained in *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2064 of file `basic_string.h`.

```
5.390.3.51 template<typename _CharT, typename _Traits, typename _Alloc>
 size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of
 (const basic_string<_CharT, _Traits, _Alloc> & __str, size_type
 __pos = 0) const [inline]
```

Find position of a character of string.

### Parameters

- str* String containing characters to locate.
- pos* Index of character to search from (default 0).

### Returns

Index of first occurrence.

Starting from *pos*, searches forward for one of the characters of *str* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 1913 of file `basic_string.h`.

Referenced by `std::basic_string<char>::find_first_of()`.

```
5.390.3.52 template<typename _CharT, typename _Traits, typename
 _Alloc> basic_string<_CharT, _Traits, _Alloc>::size_type
 std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (const
 _CharT* __s, size_type __pos, size_type __n) const
```

Find position of a character of C substring.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2218

---

### Parameters

- s* String containing characters to locate.
- pos* Index of character to search from.
- n* Number of characters from *s* to search for.

### Returns

Index of first occurrence.

Starting from *pos*, searches forward for one of the first *n* characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 818 of file `basic_string.tcc`.

5.390.3.59 template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of
(_CharT __c, size_type __pos = npos) const [inline]
```

Find last position of a character.

#### Parameters

*c* Character to locate.

*pos* Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from *pos*, searches backward for *c* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Note: equivalent to `rfind(c, pos)`.

Definition at line 2021 of file basic\_string.h.

```
5.390.3.60 template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of
(const basic_string<_CharT, _Traits, _Alloc> & __str, size_type
__pos = npos) const [inline]
```

Find last position of a character of string.

### Parameters

*str* String containing characters to locate.  
*pos* Index of character to search back from (default end).

### Returns

Index of last occurrence.

Starting from *pos*, searches backward for one of the characters of *str* within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1974 of file `basic_string.h`.

Referenced by `std::basic_string<char>::find_last_of()`.

size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of  
( const _CharT * __s, size_type __pos = npos ) const [inline]`

Find last position of a character of C string.

### Parameters

- s* C string containing characters to locate.
- pos* Index of character to search back from (default end).

### Returns

Index of last occurrence.

Starting from *pos*, searches backward for one of the characters of *s* within this string. If found, returns the index where it was found. If not found, returns *npos*.

Definition at line 2002 of file `basic_string.h`.

**5.390.3.63** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reference std::basic_string<_CharT, _Traits, _Alloc>::front  
( ) const [inline]`

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 877 of file `basic_string.h`.

**5.390.3.64** `template<typename _CharT, typename _Traits, typename _Alloc>  
reference std::basic_string<_CharT, _Traits, _Alloc>::front ( )  
[inline]`

Returns a read/write reference to the data at the first element of the string.

Definition at line 869 of file `basic_string.h`.

**5.390.3.65** `template<typename _CharT, typename _Traits, typename _Alloc>  
allocator_type std::basic_string<_CharT, _Traits, _Alloc>  
>::get_allocator ( ) const [inline]`

Return copy of allocator used to construct this string.

Definition at line 1783 of file `basic_string.h`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::assign()`, `std::basic_string<char>::basic_string()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, `std::basic_string<_CharT, _Traits, _Alloc>::swap()`, and `std::basic_string<char>::~~basic_string()`.

**5.390.3.66** `template<typename _CharT, typename _Traits, typename _Alloc  
> basic_string<_CharT, _Traits, _Alloc> & std::basic_string<  
_CharT, _Traits, _Alloc>::insert ( size_type __pos, const _CharT  
* __s, size_type __n )`

Insert a C substring.

#### Parameters

*pos* Iterator referencing location in string to insert at.

*s* The C string to insert.

*n* The number of characters to insert.

#### Returns

Reference to this string.

#### Exceptions

*std::length\_error* If new length exceeds `max_size()`.

*std::out\_of\_range* If *pos* is beyond the end of this string.

Inserts the first *n* characters of *s* starting at *pos*. If adding characters causes the length to exceed `max_size()`, *length\_error* is thrown. If *pos* is beyond `end()`, *out\_of\_range* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 362 of file `basic_string.tcc`.

**5.390.3.67** `template<typename _CharT, typename _Traits, typename _Alloc>  
iterator std::basic_string<_CharT, _Traits, _Alloc>::insert (  
iterator __p, _CharT __c ) [inline]`

Insert one character.

#### Parameters

*p* Iterator referencing position in string to insert at.

*c* The character to insert.

#### Returns

Iterator referencing newly inserted char.

### Exceptions

*`std::length_error`* If new length exceeds `max_size()`.

Inserts character *c* at position referenced by *p*. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If *p* is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1323 of file `basic_string.h`.

**5.390.3.68** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_string<_CharT, _Traits, _Alloc>::insert ( iterator  
__p, size_type __n, _CharT __c ) [inline]`

Insert multiple characters.

### Parameters

- p* Iterator referencing location in string to insert at.
- n* Number of characters to insert
- c* The character to insert.

### Exceptions

*`std::length_error`* If new length exceeds `max_size()`.

Inserts *n* copies of character *c* starting at the position referenced by iterator *p*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1174 of file `basic_string.h`.

Referenced by `std::basic_string<char>::insert()`.

**5.390.3.69** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::insert (  
size_type __pos1, const basic_string<_CharT, _Traits, _Alloc> &  
__str ) [inline]`

Insert value of a string.

### Parameters

- pos1* Iterator referencing location in string to insert at.

*str* The string to insert.

#### Returns

Reference to this string.

#### Exceptions

[`std::length\_error`](#) If new length exceeds `max_size()`.

Inserts value of *str* starting at *pos1*. If adding characters causes the length to exceed `max_size()`, [`length\_error`](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1220 of file `basic_string.h`.

Referenced by `std::basic_string<char>::insert()`.

**5.390.3.70** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_string<_CharT, _Traits, _Alloc>::insert ( iterator  
__p, initializer_list<_CharT> __l ) [inline]`

Insert an [`initializer\_list`](#) of characters.

#### Parameters

*p* Iterator referencing location in string to insert at.

*l* The [`initializer\_list`](#) of characters to insert.

#### Exceptions

[`std::length\_error`](#) If new length exceeds `max_size()`.

Definition at line 1201 of file `basic_string.h`.

**5.390.3.71** `template<typename _CharT, typename _Traits, typename _Alloc>  
template<class _InputIterator> void std::basic_string<_CharT,  
_Traits, _Alloc>::insert ( iterator __p, _InputIterator __beg,  
_InputIterator __end ) [inline]`

Insert a range of characters.

#### Parameters

*p* Iterator referencing location in string to insert at.

*beg* Start of range.

*end* End of range.

### Exceptions

*std::length\_error* If new length exceeds `max_size()`.

Inserts characters in range `[beg,end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1190 of file `basic_string.h`.

**5.390.3.72** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::insert (  
size_type __pos, size_type __n, _CharT __c ) [inline]`

Insert multiple characters.

### Parameters

*pos* Index in string to insert at.

*n* Number of characters to insert

*c* The character to insert.

### Returns

Reference to this string.

### Exceptions

*std::length\_error* If new length exceeds `max_size()`.

*std::out\_of\_range* If *pos* is beyond the end of this string.

Inserts *n* copies of character *c* starting at index *pos*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos* > `length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1306 of file `basic_string.h`.

**5.390.3.73** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::insert (  
size_type __pos1, const basic_string<_CharT, _Traits, _Alloc> &  
__str, size_type __pos2, size_type __n ) [inline]`

Insert a substring.

#### Parameters

- pos1* Iterator referencing location in string to insert at.
- str* The string to insert.
- pos2* Start of characters in *str* to insert.
- n* Number of characters to insert.

#### Returns

Reference to this string.

#### Exceptions

- [`std::length\_error`](#) If new length exceeds `max_size()`.
- [`std::out\_of\_range`](#) If *pos1* > `size()` or *pos2* > `str.size()`.

Starting at *pos1*, insert *n* character of *str* beginning with *pos2*. If adding characters causes the length to exceed `max_size()`, [`length\_error`](#) is thrown. If *pos1* is beyond the end of this string or *pos2* is beyond the end of *str*, [`out\_of\_range`](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1242 of file `basic_string.h`.

Referenced by `std::basic_string<char>::insert()`.

**5.390.3.74** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::insert (  
size_type __pos, const _CharT* __s ) [inline]`

Insert a C string.

#### Parameters

- pos* Iterator referencing location in string to insert at.
- s* The C string to insert.

#### Returns

Reference to this string.

#### Exceptions

- [`std::length\_error`](#) If new length exceeds `max_size()`.

*`std::out_of_range`* If *pos* is beyond the end of this string.

Inserts the first *n* characters of *s* starting at *pos*. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If *pos* is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

`size_type std::basic_string<_CharT, _Traits, _Alloc>::max_size (`  
`) const [inline]`

Returns the `size()` of the largest possible string.

Definition at line 721 of file `basic_string.h`.

Referenced by `std::getline()`, and `std::operator>>()`.

**5.390.3.77** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`basic_string& std::basic_string<_CharT, _Traits, _Alloc>`  
`>::operator+=( const basic_string<_CharT, _Traits, _Alloc> &`  
`__str ) [inline]`

Append a string to this string.

#### Parameters

*str* The string to append.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference

---

### Returns

Reference to this string.

Definition at line 924 of file `basic_string.h`.

**5.390.3.78** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc  
>::operator+=( const _CharT * __s ) [inline]`

Append a C string.

### Parameters

*s* The C string to append.

### Returns

Reference to this string.

Definition at line 933 of file `basic_string.h`.

**5.390.3.79** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc  
>::operator+=( _CharT __c ) [inline]`

Append a character.

### Parameters

*c* The character to append.

### Returns

Reference to this string.

Definition at line 942 of file `basic_string.h`.

**5.390.3.80** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc  
>::operator+=( initializer_list<_CharT> __l ) [inline]`

Append an [initializer\\_list](#) of characters.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2231

---

### Parameters

*l* The [initializer\\_list](#) of characters to be appended.

### Returns

Reference to this string.

Definition at line 955 of file `basic_string.h`.

```
5.390.3.81 template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string< _CharT, _Traits, _Alloc
 >::operator= (basic_string< _CharT, _Traits, _Alloc > && __str
) [inline]
```

Move assign the value of *str* to this string.

### Parameters

*str* Source string.

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

Definition at line 575 of file `basic_string.h`.

```
5.390.3.82 template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string< _CharT, _Traits, _Alloc
 >::operator= (const basic_string< _CharT, _Traits, _Alloc > &
 __str) [inline]
```

Assign the value of *str* to this string.

### Parameters

*str* Source string.

Definition at line 541 of file `basic_string.h`.

```
5.390.3.83 template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string< _CharT, _Traits, _Alloc
 >::operator= (const _CharT * __s) [inline]
```

### 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2232

Copy contents of *s* into this string.

#### Parameters

*s* Source null-terminated string.

Definition at line 549 of file `basic_string.h`.

**5.390.3.84** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc  
>::operator= ( initializer_list<_CharT> __l ) [inline]`

Set value to string constructed from initializer list.

#### Parameters

*l* `std::initializer_list`.

Definition at line 587 of file `basic_string.h`.

**5.390.3.85** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc  
>::operator= ( _CharT __c ) [inline]`

Set value to string of length 1.

#### Parameters

*c* Source character.

Assigning to a character makes this string length 1 and `(*this)[0] == c`.

Definition at line 560 of file `basic_string.h`.

**5.390.3.86** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reference std::basic_string<_CharT, _Traits, _Alloc  
>::operator[] ( size_type __pos ) const [inline]`

Subscript access to the data contained in the string.

**Parameters**

*pos* The index of the character to access.

**Returns**

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 818 of file `basic_string.h`.

Referenced by `std::basic_string< char >::back()`, and `std::basic_string< char >::front()`.

```
5.390.3.87 template<typename _CharT, typename _Traits, typename _Alloc>
 reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
 size_type __pos) [inline]
```

Subscript access to the data contained in the string.

**Parameters**

*pos* The index of the character to access.

**Returns**

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).) Unshares the string.

Definition at line 835 of file `basic_string.h`.

```
5.390.3.88 template<typename _CharT, typename _Traits, typename _Alloc>
 void std::basic_string< _CharT, _Traits, _Alloc >::push_back (
 _CharT __c) [inline]
```

Append a single character.

**Parameters**

*c* Character to append.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2234

---

Definition at line 1043 of file `basic_string.h`.

Referenced by `std::collate<_CharT>::do_transform()`, `std::basic_string<char>::operator+=()`, and `std::operator>>()`.

**5.390.3.89** `template<typename _CharT, typename _Traits, typename _Alloc>  
reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rbegin( ) [inline]`

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 639 of file `basic_string.h`.

**5.390.3.90** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rbegin( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 648 of file `basic_string.h`.

**5.390.3.91** `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rend( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 666 of file `basic_string.h`.

**5.390.3.92** `template<typename _CharT, typename _Traits, typename _Alloc>  
reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rend( ) [inline]`

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 657 of file `basic_string.h`.

**5.390.3.93** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace  
( size_type __pos, size_type __n, const basic_string<_CharT,  
_Traits, _Alloc> & __str ) [inline]`

Replace characters with value from another string.

#### Parameters

*pos* Index of first character to replace.  
*n* Number of characters to be replaced.  
*str* String to insert.

#### Returns

Reference to this string.

#### Exceptions

*std::out\_of\_range* If *pos* is beyond the end of this string.  
*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range [*pos*,*pos*+*n*) from this string. In place, the value of *str* is inserted. If *pos* is beyond end of string, *out\_of\_range* is thrown. If the length of the result exceeds `max_size()`, *length\_error* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1402 of file `basic_string.h`.

Referenced by `std::basic_string<char>::append()`, `std::basic_string<char>::assign()`, `std::basic_string<char>::insert()`, and `std::basic_string<char>::replace()`.

**5.390.3.94** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace  
( iterator __i1, iterator __i2, const basic_string<_CharT, _Traits,  
_Alloc> & __str ) [inline]`

Replace range of characters with string.

#### Parameters

*i1* Iterator referencing start of range to replace.

*i2* Iterator referencing end of range to replace.

*str* String value to insert.

### Returns

Reference to this string.

### Exceptions

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, the value of *str* is inserted. If the length of result exceeds `max_size()`, *length\_error* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1508 of file `basic_string.h`.

Referenced by `std::basic_string<char>::replace()`.

```
5.390.3.95 template<typename _CharT, typename _Traits, typename _Alloc>
 basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace
 (iterator __i1, iterator __i2, const _CharT* __s, size_type __n
) [inline]
```

Replace range of characters with C substring.

### Parameters

*i1* Iterator referencing start of range to replace.

*i2* Iterator referencing end of range to replace.

*s* C string value to insert.

*n* Number of characters from *s* to insert.

### Returns

Reference to this string.

### Exceptions

*std::length\_error* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, the first *n* characters of *s* are inserted. If the length of result exceeds `max_size()`, *length\_error* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1526 of file `basic_string.h`.

**5.390.3.96** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace  
( iterator __i1, iterator __i2, const _CharT* __s ) [inline]`

Replace range of characters with C string.

#### Parameters

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- s* C string value to insert.

#### Returns

Reference to this string.

#### Exceptions

[\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, the characters of *s* are inserted. If the length of result exceeds `max_size()`, [`length\_error`](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1547 of file `basic_string.h`.

**5.390.3.97** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace  
( size_type __pos1, size_type __n1, const basic_string<_CharT,  
_Traits, _Alloc> & __str, size_type __pos2, size_type __n2 )  
[inline]`

Replace characters with value from another string.

#### Parameters

- pos1* Index of first character to replace.
- n1* Number of characters to be replaced.
- str* String to insert.
- pos2* Index of first character of *str* to use.
- n2* Number of characters from *str* to use.

### Returns

Reference to this string.

### Exceptions

*`std::out_of_range`* If *pos1* > `size()` or *pos2* > `str.size()`.

*`std::length_error`* If new length exceeds `max_size()`.

Removes the characters in the range [*pos1*, *pos1* + *n*) from this string. In place, the value of *str* is inserted. If *pos* is beyond end of string, *`out_of_range`* is thrown. If the length of the result exceeds `max_size()`, *`length_error`* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1424 of file `basic_string.h`.

Referenced by `std::basic_string<char>::replace()`.

basic_string& std::basic_string<_CharT, _Traits, _Alloc>::replace  
( size_type __pos, size_type __n1, size_type __n2, _CharT __c )  
[inline]`

Replace characters with multiple characters.

### Parameters

*pos* Index of first character to replace.

*n1* Number of characters to be replaced.

*n2* Number of characters to insert.

*c* Character to insert.

### Returns

Reference to this string.

### Exceptions

*`std::out_of_range`* If *pos* > `size()`.

*`std::length_error`* If new length exceeds `max_size()`.

Removes the characters in the range [*pos*, *pos* + *n1*) from this string. In place, *n2* copies of *c* are inserted. If *pos* is beyond end of string, *`out_of_range`* is thrown. If the length of result exceeds `max_size()`, *`length_error`* is thrown. The value of the string doesn't change if an error is thrown.

_CharT, _Traits, _Alloc>::replace ( size_type __pos, size_type  
__n1, const _CharT* __s, size_type __n2 )`

Replace characters with value of a C substring.

### Parameters

*`pos`* Index of first character to replace.  
*`n1`* Number of characters to be replaced.  
*`s`* C string to insert.  
*`n2`* Number of characters from *`s`* to use.

### Returns

Reference to this string.

### Exceptions

*`std::out_of_range`* If *`pos1`* > `size()`.  
*`std::length_error`* If new length exceeds `max_size()`.

Removes the characters in the range `[pos,pos + n1)` from this string. In place, the first *`n2`* characters of *`s`* are inserted, or all of *`s`* if *`n2`* is too large. If *`pos`* is beyond end of string, *`out_of_range`* is thrown. If the length of result exceeds `max_size()`, *`length_error`* is thrown. Definition at line 416 of file `basic_string.tcc`.

**5.390.3.102** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc  
>::replace ( size_type __pos, size_type __n1, const _CharT * __s  
) [inline]`

Replace characters with value of a C string.

#### Parameters

- pos* Index of first character to replace.
- n1* Number of characters to be replaced.
- s* C string to insert.

#### Returns

Reference to this string.

#### Exceptions

- [\*std::out\\_of\\_range\*](#) If *pos* > `size()`.
- [\*std::length\\_error\*](#) If new length exceeds `max_size()`.

Removes the characters in the range [*pos*, *pos* + *n1*) from this string. In place, the characters of *s* are inserted. If *pos* is beyond end of string, [`out\_of\_range`](#) is thrown. If the length of result exceeds [`max\_size\(\)`](#), [`length\_error`](#) is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1467 of file `basic_string.h`.

**5.390.3.103** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string& std::basic_string<_CharT, _Traits, _Alloc  
>::replace ( iterator __i1, iterator __i2, initializer_list<_CharT  
> __l ) [inline]`

Replace range of characters with [`initializer\_list`](#).

#### Parameters

- i1* Iterator referencing start of range to replace.
- i2* Iterator referencing end of range to replace.
- l* The [`initializer\_list`](#) of characters to insert.

### Returns

Reference to this string.

### Exceptions

*`std::length_error`* If new length exceeds `max_size()`.

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, *`length_error`* is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1659 of file `basic_string.h`.

Referenced by `std::basic_string<char>::replace()`.

**5.390.3.104** `template<typename _CharT, typename _Traits, typename _Alloc  
> void std::basic_string<_CharT, _Traits, _Alloc>::reserve (  
size_type __res_arg = 0 )`

Attempt to preallocate enough memory for specified number of characters.

### Parameters

*`res_arg`* Number of characters required.

### Exceptions

*`std::length_error`* If *`res_arg`* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, *`length_error`* is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 504 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc>::get_allocator()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::operator>>()`, `std::basic_string<char>::push_back()`, and `std::basic_string<char>::shrink_to_fit()`.

**5.390.3.105** `template<typename _CharT, typename _Traits, typename _Alloc  
> void std::basic_string<_CharT, _Traits, _Alloc>::resize (  
size_type __n, _CharT __c )`

Resizes the string to the specified number of characters.

#### Parameters

- n* Number of characters the string should contain.
- c* Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to *c*.

Definition at line 642 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::erase()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`.

**5.390.3.106** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_string<_CharT, _Traits, _Alloc>::resize (  
size_type __n ) [inline]`

Resizes the string to the specified number of characters.

#### Parameters

- n* Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

Definition at line 748 of file `basic_string.h`.

Referenced by `std::basic_string<char>::resize()`.

**5.390.3.107** `template<typename _CharT, typename _Traits, typename _Alloc>  
size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind (  
const basic_string<_CharT, _Traits, _Alloc> & __str, size_type  
__pos = npos ) const [inline]`

Find last position of a string.

#### Parameters

*str* String to locate.

*pos* Index of character to search back from (default end).

#### Returns

Index of start of last occurrence.

Starting from *pos*, searches backward for value of *str* within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1855 of file `basic_string.h`.

Referenced by `std::basic_string<char>::find_last_of()`, and `std::basic_string<char>::rfind()`.

**5.390.3.108** `template<typename _CharT, typename _Traits, typename  
_Alloc> basic_string<_CharT, _Traits, _Alloc>::size_type  
std::basic_string<_CharT, _Traits, _Alloc>::rfind ( _CharT __c,  
size_type __pos = npos ) const`

Find last position of a character.

#### Parameters

*c* Character to locate.

*pos* Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from *pos*, searches backward for *c* within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 801 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::npos`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.390.3.109** `template<typename _CharT, typename _Traits, typename _Alloc>  
size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind (  
const _CharT * __s, size_type __pos = npos ) const [inline]`

Find last position of a C string.

#### Parameters

*s* C string to locate.

*pos* Index of character to start search at (default end).

#### Returns

Index of start of last occurrence.

Starting from *pos*, searches backward for the value of *s* within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1883 of file `basic_string.h`.

**5.390.3.110** `template<typename _CharT, typename _Traits, typename  
_Alloc> basic_string<_CharT, _Traits, _Alloc>::size_type  
std::basic_string<_CharT, _Traits, _Alloc>::rfind ( const  
_CharT * __s, size_type __pos, size_type __n ) const`

Find last position of a C substring.

#### Parameters

*s* C string to locate.

*pos* Index of character to search back from.

*n* Number of characters from *s* to search for.

#### Returns

Index of start of last occurrence.

Starting from *pos*, searches backward for the first *n* characters in *s* within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 780 of file `basic_string.tcc`.

References `std::min()`, `std::basic_string<_CharT, _Traits, _Alloc>::npos`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**5.390.3.111** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_string<_CharT, _Traits, _Alloc>::shrink_to_fit(  
) [inline]`

A non-binding request to reduce [capacity\(\)](#) to [size\(\)](#).

Definition at line 754 of file `basic_string.h`.

**5.390.3.112** `template<typename _CharT, typename _Traits, typename _Alloc>  
size_type std::basic_string<_CharT, _Traits, _Alloc>::size(  
) const [inline]`

Returns the number of characters in the string, not including any /// null-termination.

Definition at line 710 of file `basic_string.h`.

**5.390.3.113** `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string std::basic_string<_CharT, _Traits, _Alloc>::substr(  
size_type __pos = 0, size_type __n = npos) const [inline]`

Get a substring.

## 5.390 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference 2247

---

### Parameters

- pos* Index of first character (default 0).  
*n* Number of characters in substring (default remainder).

### Returns

The new string.

### Exceptions

*std::out\_of\_range* If *pos* > *size()*.

Construct and return a new string using the *n* characters starting at *pos*. If the string is too short, use the remainder of the characters. If *pos* is beyond the end of the string, *out\_of\_range* is thrown.

Definition at line 2155 of file `basic_string.h`.

**5.390.3.114** `template<typename _CharT, typename _Traits, typename _Alloc>  
> void std::basic_string<_CharT, _Traits, _Alloc>::swap (  
basic_string<_CharT, _Traits, _Alloc> & __s )`

Swap contents with another string.

### Parameters

- s* String to swap with.

Exchanges the contents of this string with that of *s* in constant time.

Definition at line 521 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::get_allocator()`.

Referenced by `std::basic_string<char>::assign()`, `std::basic_string<char>::operator=()`, and `std::swap()`.

## 5.390.4 Member Data Documentation

**5.390.4.1** `template<typename _CharT, typename _Traits, typename  
_Alloc> const basic_string<_CharT, _Traits, _Alloc>::size_type  
std::basic_string<_CharT, _Traits, _Alloc>::npos [static]`

Value returned by various member functions when they fail.

Definition at line 280 of file `basic_string.h`.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::find()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_first_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_last_of()`, and `std::basic_string< _CharT, _Traits, _Alloc >::rfind()`.

### 5.391.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class`  
`std::basic_stringbuf<_CharT, _Traits, _Alloc>`

The actual work of input and output (for `std::string`).

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.). For this class, open modes (of type `ios_base::openmode`) have `in` set if the input sequence can be read, and `out` set if the output sequence can be written.

Definition at line 60 of file `sstream`.

### **5.391.2 Member Typedef Documentation**

**5.391.2.1** `template<typename _CharT, typename _Traits, typename _Alloc> typedef basic_streambuf<char_type, traits_type> std::basic_stringbuf< _CharT, _Traits, _Alloc >::__streambuf_type`

This is a non-standard type.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 73 of file sstream.

**5.391.2.2** `template<typename _CharT, typename _Traits, typename _Alloc> typedef _CharT std::basic_stringbuf< _CharT, _Traits, _Alloc >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 64 of file sstream.

**5.391.2.3** `template<typename _CharT, typename _Traits, typename _Alloc> typedef traits_type::int_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 69 of file sstream.

**5.391.2.4** `template<typename _CharT, typename _Traits, typename _Alloc> typedef traits_type::off_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 71 of file sstream.

**5.391.2.5** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef traits_type::pos_type std::basic_stringbuf< _CharT, _Traits,  
_Alloc >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 70 of file sstream.

**5.391.2.6** `template<typename _CharT, typename _Traits, typename _Alloc>  
typedef _Traits std::basic_stringbuf< _CharT, _Traits, _Alloc  
>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 65 of file sstream.

### **5.391.3 Constructor & Destructor Documentation**

**5.391.3.1** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf  
( ios_base::openmode __mode = ios_base::in | ios_base::out )  
[inline, explicit]`

Starts with an empty string buffer.

#### **Parameters**

*mode* Whether the buffer can read, or write, or both.

The default constructor initializes the parent class using its own default ctor.

Definition at line 94 of file sstream.

**5.391.3.2** `template<typename _CharT, typename _Traits, typename _Alloc>  
std::basic_stringbuf<_CharT, _Traits, _Alloc>::basic_stringbuf  
( const __string_type & __str, ios_base::openmode __mode =  
ios_base::in | ios_base::out ) [inline, explicit]`

Starts with an existing string buffer.

#### Parameters

*str* A string to copy as a starting buffer.

*mode* Whether the buffer can read, or write, or both.

This constructor initializes the parent class using its own default ctor.

Definition at line 107 of file `sstream`.

#### 5.391.4 Member Function Documentation

**5.391.4.1** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::eback ( ) const  
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 462 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_streambuf< char_type, traits_type >::sputbackc()`, `std::basic_streambuf< char_type, traits_type >::sungetc()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

**5.391.4.2** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::egptr ( ) const  
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

Definition at line 468 of file streambuf.

Referenced by `std::basic_filebuf< char_type, traits_type >::M_create_pback()`, `std::basic_streambuf< char_type, traits_type >::in_avail()`, `std::basic_streambuf< char_type, traits_type >::sbumpc()`, `std::basic_streambuf< char_type, traits_type >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_streambuf< _CharT, _Traits >::xsgetn()`.

**5.391.4.3 template<typename \_CharT, typename \_Traits> char\_type\*  
std::basic\_streambuf< \_CharT, \_Traits >::epptr ( ) const  
[inline, protected, inherited]**

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence
- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 515 of file streambuf.

Referenced by `std::basic_streambuf< char_type, traits_type >::sputc()`, and `std::basic_streambuf< _CharT, _Traits >::xsputn()`.

**5.391.4.4 template<typename \_CharT, typename \_Traits> void  
std::basic\_streambuf< \_CharT, \_Traits >::gbump ( int \_\_n )  
[inline, protected, inherited]**

Moving the read position.

### Parameters

- n* The delta by which to move.

This just advances the read position without returning any data.

Definition at line 478 of file streambuf.

Referenced by `std::basic_streambuf< char_type, traits_type >::sbumpc()`, `std::basic_streambuf< char_type, traits_type >::sputbackc()`, `std::basic_streambuf< char_type, traits_type >::sungetc()`, and `std::basic_streambuf< char_type, traits_type >::uflow()`.

**5.391.4.5** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf< _CharT, _Traits >::getloc ( ) const  
[inline, inherited]`

Locale access.

### Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 224 of file streambuf.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubimbue()`.

**5.391.4.6** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::gptr ( ) const  
[inline, protected, inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 465 of file streambuf.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_streambuf< char_type, traits_type >::in_avail()`, `std::basic_streambuf< char_type, traits_type >::sbumpc()`, `std::basic_streambuf< char_type, traits_type >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_streambuf< char_type, traits_type >::sputbackc()`, `std::basic_streambuf< char_type, traits_type >::sungetc()`, `std::basic_streambuf< char_type, traits_type >::uflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_streambuf< _CharT, _Traits >::xsgetn()`.

**5.391.4.7** `template<typename _CharT, typename _Traits> virtual void  
std::basic_streambuf< _CharT, _Traits >::imbue ( const locale & )  
[inline, protected, virtual, inherited]`

Changes translations.

#### Parameters

*loc* A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

#### Note

Base class version does nothing.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 556 of file streambuf.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubimbue()`.

**5.391.4.8** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline,  
inherited]`

Looking ahead into the stream.

### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 264 of file `streambuf`.

**5.391.4.9** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf<_CharT, _Traits>::overflow ( int_type =  
traits_type::eof() ) [inline, protected, virtual,  
inherited]`

Consumes data from the buffer; writes to the controlled sequence.

### Parameters

*c* An additional character to consume.

### Returns

`eof()` to indicate failure, something else (usually *c*, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output `streambuf` can be created by overriding only this function (no buffer area will be used).

### Note

Base class version does nothing, returns `eof()`.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 748 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::sputc()`, and `std::basic_streambuf<_CharT, _Traits>::xsputn()`.

**5.391.4.10** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf<_CharT, _Traits>::pbackfail ( int_type =  
traits_type::eof() ) [inline, protected, virtual,  
inherited]`

Tries to back up the input sequence.

#### Parameters

*c* The character to be inserted back into the sequence.

#### Returns

`eof()` on failure, *some other value* on success

#### Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 704 of file `streambuf`.

Referenced by `std::basic_streambuf<char_type, traits_type>::sputbackc()`, and `std::basic_streambuf<char_type, traits_type>::sungetc()`.

**5.391.4.11** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf<_CharT, _Traits>::pbase ( ) const  
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 509 of file streambuf.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::str(), and std::basic\_filebuf< \_CharT, \_Traits >::sync().

**5.391.4.12** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::pbump ( int __n )  
[inline, protected, inherited]`

Moving the write position.

#### Parameters

*n* The delta by which to move.

This just advances the write position without returning any data.

Definition at line 525 of file streambuf.

Referenced by std::basic\_streambuf< char\_type, traits\_type >::sputc().

**5.391.4.13** `template<typename _CharT, typename _Traits> char_type*  
std::basic_streambuf< _CharT, _Traits >::pptr ( ) const  
[inline, protected, inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- [pbase\(\)](#) returns the beginning pointer for the output sequence
- [pptr\(\)](#) returns the next pointer for the output sequence
- [epptr\(\)](#) returns the end pointer for the output sequence

Definition at line 512 of file streambuf.

Referenced by std::basic\_streambuf< char\_type, traits\_type >::sputc(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::str(), std::basic\_filebuf< \_CharT, \_Traits >::sync(), and std::basic\_streambuf< \_CharT, \_Traits >::xsputn().

**5.391.4.14** `template<typename _CharT, typename _Traits> locale  
std::basic_streambuf< _CharT, _Traits >::pubimbue ( const locale  
& __loc ) [inline, inherited]`

Entry point for [imbue\(\)](#).

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived imbue(loc).

Definition at line 207 of file streambuf.

**5.391.4.15** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf< _CharT, _Traits >::pubseekoff ( off_type  
__off, ios_base::seekdir __way, ios_base::openmode __mode =  
ios_base::in | ios_base::out ) [inline, inherited]`

Entry point for [imbue\(\)](#).

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived imbue(loc).

Definition at line 241 of file streambuf.

**5.391.4.16** `template<typename _CharT, typename _Traits> pos_type  
std::basic_streambuf< _CharT, _Traits >::pubseekpos ( pos_type  
__sp, ios_base::openmode __mode = ios_base::in | ios_base::out )  
[inline, inherited]`

Entry point for [imbue\(\)](#).

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 246 of file `streambuf`.

**5.391.4.17** `template<typename _CharT, typename _Traits>`  
`__streambuf_type* std::basic_streambuf<_CharT, _Traits`  
`>::pubsetbuf( char_type * __s, streamsize __n ) [inline,`  
`inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 237 of file `streambuf`.

**5.391.4.18** `template<typename _CharT, typename _Traits> int`  
`std::basic_streambuf<_CharT, _Traits>::pubsync( )`  
`[inline, inherited]`

Entry point for `imbue()`.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 251 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::sync()`.

**5.391.4.19** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline,  
inherited]`

Getting the next character.

#### Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 296 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::istreambuf_iterator< _CharT, _Traits >::operator++()`, and `std::basic_streambuf< char_type, traits_type >::snextc()`.

**5.391.4.20** `template<typename _CharT, typename _Traits> virtual  
pos_type std::basic_streambuf< _CharT, _Traits >::seekoff  
( off_type, ios_base::seekdir, ios_base::openmode =  
ios_base::in | ios_base::out ) [inline, protected,  
virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 582 of file streambuf.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubseekoff()`.

**5.391.4.21** `template<typename _CharT, typename _Traits> virtual pos_type  
std::basic_streambuf< _CharT, _Traits >::seekpos ( pos_type,  
ios_base::openmode = ios_base::in | ios_base::out ) [inline,  
protected, virtual, inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 594 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubseekpos()`.

**5.391.4.22** `template<typename _CharT, typename _Traits, typename _Alloc>  
virtual __streambuf_type* std::basic_stringbuf< _CharT, _Traits,  
_Alloc >::setbuf ( char_type * __s, streamsize __n ) [inline,  
protected, virtual]`

Manipulates the buffer.

**Parameters**

*s* Pointer to a buffer area.

*n* Size of *s*.

**Returns**

`this`

If no buffer has already been created, and both *s* and *n* are non-zero, then *s* is used as a buffer; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more.

Definition at line 198 of file `sstream`.

References `std::basic_string< _CharT, _Traits, _Alloc >::clear()`.

**5.391.4.23** `template<typename _CharT, typename _Traits> virtual  
basic_streambuf<char_type,_Traits>* std::basic_streambuf<  
_CharT,_Traits >::setbuf ( char_type *, streamsize ) [inline,  
protected, virtual, inherited]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this function.

#### Note

Base class version does nothing, returns `this`.

Definition at line 571 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::pubsetbuf()`.

**5.391.4.24** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::setg ( char_type *  
__gbeg, char_type * __gnext, char_type * __gend ) [inline,  
protected, inherited]`

Setting the three read area pointers.

#### Parameters

*gbeg* A pointer.

*gnext* A pointer.

*gend* A pointer.

#### Postcondition

*gbeg* == `eback()`, *gnext* == `gptr()`, and *gend* == `egptr()`

Definition at line 489 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.391.4.25** `template<typename _CharT, typename _Traits> void  
std::basic_streambuf< _CharT, _Traits >::setp ( char_type  
* __pbeg, char_type * __pend ) [inline, protected,  
inherited]`

Setting the three write area pointers.

**Parameters**

*pbeg* A pointer.

*pend* A pointer.

**Postcondition**

*pbeg* == `pbase()`, *pbeg* == `pptr()`, and *pend* == `epptr()`

Definition at line 535 of file streambuf.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**5.391.4.26** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sgetc ( ) [inline,  
inherited]`

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 318 of file streambuf.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_streambuf< char_type, traits_type >::snextc()`.

**5.391.4.27** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::sgetn ( char_type * __s,  
streamsize __n ) [inline, inherited]`

Entry point for `xsgetn`.

**Parameters**

*s* A buffer area.

*n* A count.

Returns `xsgetn(s,n)`. The effect is to fill `s[0]` through `s[n-1]` with characters from the input sequence, if possible.

Definition at line 337 of file `streambuf`.

**5.391.4.28** `template<typename _CharT, typename _Traits, typename _Alloc>  
virtual streamsize std::basic_stringbuf< _CharT, _Traits, _Alloc  
>::showmanyc( ) [inline, protected, virtual]`

Investigating the data available.

#### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.*  
[27.5.2.4.3]/1

#### Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 166 of file `sstream`.

References `std::basic_stringbuf< _CharT, _Traits, _Alloc >::M_mode`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, and `std::ios_base::in`.

**5.391.4.29** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::snextc( ) [inline,  
inherited]`

Getting the next character.

#### Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 278 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.391.4.30** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sputbackc ( char_type  
__c ) [inline, inherited]`

Pushing characters back into the input stream.

#### Parameters

*c* The character to push back.

#### Returns

The previous character, if possible.

Similar to `sungetc()`, but *c* is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be *c*.

Definition at line 352 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::putback()`.

**5.391.4.31** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sputc ( char_type __c )  
[inline, inherited]`

Entry point for all single-character output functions.

#### Parameters

*c* A character to output.

#### Returns

*c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *c* in that position, increments the position, and returns `traits::to_int_type(c)`. If a write position is not available, returns `overflow(c)`.

Definition at line 404 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, and `std::ostreambuf_iterator< _CharT, _Traits >::operator=()`.

**5.391.4.32** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::sputn ( const char_type  
* __s, streamsize __n ) [inline, inherited]`

Entry point for all single-character output functions.

#### Parameters

*s* A buffer read area.

*n* A count.

One of two public output functions.

Returns `xspn(s,n)`. The effect is to write `s[0]` through `s[n-1]` to the output sequence, if possible.

Definition at line 430 of file `streambuf`.

**5.391.4.33** `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_stringbuf< _CharT, _Traits, _Alloc >::str ( const  
__string_type & __s ) [inline]`

Setting a new buffer.

#### Parameters

*s* The string to use as a new sequence.

Deallocates any previous stored sequence, then copies *s* to use as a new one.

Definition at line 146 of file `sstream`.

References `std::basic_stringbuf< _CharT, _Traits, _Alloc >::_M_mode`, `std::basic_string< _CharT, _Traits, _Alloc >::assign()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

**5.391.4.34** `template<typename _CharT, typename _Traits, typename _Alloc>  
__string_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::str ( ) const [inline]`

Copying out the string buffer.

#### Returns

A copy of one of the underlying sequences.

*If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence. [27.7.1.2]/1*

Definition at line 122 of file sstream.

References std::basic\_streambuf< \_CharT, \_Traits >::egptr(), std::basic\_streambuf< \_CharT, \_Traits >::pbase(), and std::basic\_streambuf< \_CharT, \_Traits >::pptr().

**5.391.4.35** `template<typename _CharT, typename _Traits> int_type  
std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline,  
inherited]`

Moving backwards in the input stream.

#### Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns [pbackfail\(\)](#). The effect is to *unget* the last character *gotten*.

Definition at line 377 of file streambuf.

Referenced by std::basic\_istream< \_CharT, \_Traits >::unget().

**5.391.4.36** `template<typename _CharT, typename _Traits> virtual int  
std::basic_streambuf< _CharT, _Traits >::sync ( void )  
[inline, protected, virtual, inherited]`

Synchronizes the buffer arrays with the controlled sequences.

**Returns**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), and [std::basic\\_filebuf< char\\_type, traits\\_type >](#).

Definition at line 607 of file streambuf.

Referenced by [std::basic\\_streambuf< char\\_type, traits\\_type >::pubsync\(\)](#).

**5.391.4.37** `template<typename _CharT, typename _Traits> virtual int_type  
std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline,  
protected, virtual, inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as [underflow\(\)](#), and in fact is required to call that function. It also returns the new character, like [underflow\(\)](#) does. However, this function also moves the read position forward by one.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#).

Definition at line 680 of file streambuf.

Referenced by [std::basic\\_streambuf< char\\_type, traits\\_type >::sbumpc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::xsgetn\(\)](#).

**5.391.4.38** `template<class _CharT , class _Traits , class _Alloc >  
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type  
std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow ( )  
[protected, virtual]`

Fetches more data from the controlled sequence.

### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

### Note

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

Definition at line 133 of file `sstream.tcc`.

References `std::basic_stringbuf< _CharT, _Traits, _Alloc >::_M_mode`, `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, and `std::ios_base::in`.

**5.391.4.39** `template<typename _CharT, typename _Traits> streamsize  
std::basic_streambuf< _CharT, _Traits >::xsgetn ( char_type *  
__s, streamsize __n ) [protected, virtual, inherited]`

Multiple character extraction.

### Parameters

*s* A buffer area.

*n* Maximum number of characters to assign.

### Returns

The number of characters assigned.

Fills `s[0]` through `s[n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either *n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#).

Definition at line 47 of file streambuf.tcc.

References `std::basic_streambuf< _CharT, _Traits >::egptr()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, `std::min()`, and `std::basic_streambuf< _CharT, _Traits >::uflow()`.

Referenced by `std::basic_streambuf< char_type, traits_type >::sgetn()`.

**5.391.4.40** `template<typename _CharT, typename _Traits > streamsize  
std::basic_streambuf< _CharT, _Traits >::xsputn ( const  
char_type * __s, streamsize __n ) [protected, virtual,  
inherited]`

Multiple character insertion.

#### Parameters

*s* A buffer area.

*n* Maximum number of characters to write.

#### Returns

The number of characters written.

Writes *s*[0] through *s*[*n*-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#).

Definition at line 81 of file streambuf.tcc.

References `std::basic_streambuf< _CharT, _Traits >::eptr()`, `std::min()`, `std::basic_streambuf< _CharT, _Traits >::overflow()`, and `std::basic_streambuf< _CharT, _Traits >::pptr()`.

Referenced by `std::basic_streambuf< char_type, traits_type >::sputn()`.

### 5.391.5 Member Data Documentation

#### 5.391.5.1 `template<typename _CharT, typename _Traits> locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected, inherited]`

Current locale setting.

Definition at line 190 of file `streambuf`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::basic_filebuf()`, `std::basic_streambuf< char_type, traits_type >::getloc()`, and `std::basic_streambuf< char_type, traits_type >::pubimbue()`.

#### 5.391.5.2 `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected, inherited]`

This is based on `_IO_FILE`, just reordered to be more consistent, and is intended to be the most minimal abstraction for an internal buffer.

- `get == input == read`
- `put == output == write`

Definition at line 182 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::eback()`, and `std::basic_streambuf< char_type, traits_type >::setg()`.

#### 5.391.5.3 `template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected, inherited]`

Entry point for `imbue()`.

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived imbue(loc).

Definition at line 183 of file streambuf.

Referenced by std::basic\_streambuf< char\_type, traits\_type >::gbump(), std::basic\_streambuf< char\_type, traits\_type >::gptr(), and std::basic\_streambuf< char\_type, traits\_type >::setg().

**5.391.5.4 template<typename \_CharT, typename \_Traits> char\_type\*  
std::basic\_streambuf< \_CharT, \_Traits >::\_M\_in\_end  
[protected, inherited]**

Entry point for [imbue\(\)](#).

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived imbue(loc).

Definition at line 184 of file streambuf.

Referenced by std::basic\_streambuf< char\_type, traits\_type >::egptr(), and std::basic\_streambuf< char\_type, traits\_type >::setg().

**5.391.5.5 template<typename \_CharT, typename \_Traits, typename \_Alloc>  
ios\_base::openmode std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc  
>::\_M\_mode [protected]**

Place to stash in || out || in | out settings for current stringbuf.

Definition at line 79 of file sstream.

Referenced by std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::showmanyc(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::str(), and std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::underflow().

**5.391.5.6 template<typename \_CharT, typename \_Traits> char\_type\*  
std::basic\_streambuf< \_CharT, \_Traits >::\_M\_out\_beg  
[protected, inherited]**

Entry point for [imbue\(\)](#).

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls the derived `imbue(loc)`.

Entry point for [imbue\(\)](#).

### 5.392 `std::basic_stringstream< _CharT, _Traits, _Alloc >` Class Template Reference 2277

---

#### Parameters

*loc* The new locale.

#### Returns

The previous locale.

Calls the derived `imbue(loc)`.

Definition at line 187 of file `streambuf`.

Referenced by `std::basic_streambuf< char_type, traits_type >::epptr()`, and `std::basic_streambuf< char_type, traits_type >::setp()`.

The documentation for this class was generated from the following files:

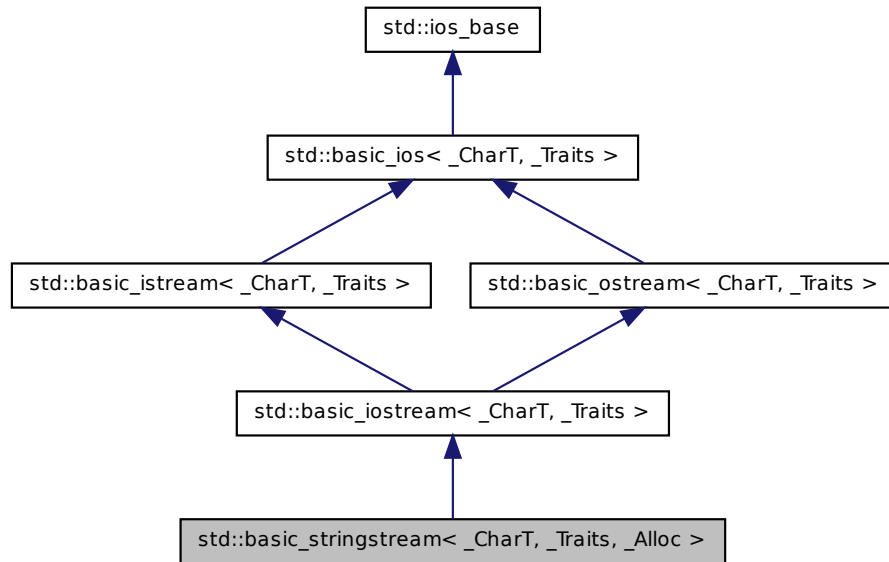

- [sstream](#)
- [sstream.tcc](#)

### 5.392 `std::basic_stringstream< _CharT, _Traits, _Alloc >` Class Template Reference

Controlling input and output for `std::string`.

This class supports reading from and writing to objects of type [std::basic\\_string](#), using the inherited functions from [std::basic\\_iostream](#). To control the associated sequence, an instance of [std::basic\\_stringbuf](#) is used, which this page refers to as `sb`.

### Arithmetic Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__istream_type & operator>> (bool &__n)`
- `__istream_type & operator>> (short &__n)`
- `__istream_type & operator>> (unsigned short &__n)`
- `__istream_type & operator>> (int &__n)`

- `__istream_type & operator>> (long double &__f)`
- `__istream_type & operator>> (void *&__p)`
- `__istream_type & operator>> (__streambuf_type *__sb)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `int_type get ()`
- `__istream_type & get (char_type &__c)`
- `__istream_type & get (char_type * __s, streamsize __n, char_type __delim)`
- `__istream_type & get (char_type * __s, streamsize __n)`
- `__istream_type & get (__streambuf_type &__sb, char_type __delim)`
- `__istream_type & get (__streambuf_type &__sb)`
- `__istream_type & getline (char_type * __s, streamsize __n, char_type __delim)`
- `__istream_type & getline (char_type * __s, streamsize __n)`
- `__istream_type & ignore ()`
- `__istream_type & ignore (streamsize __n)`
- `__istream_type & ignore (streamsize __n, int_type __delim)`
- `int_type peek ()`
- `__istream_type & read (char_type * __s, streamsize __n)`
- `streamsize readsome (char_type * __s, streamsize __n)`
- `__istream_type & putback (char_type __c)`
- `__istream_type & unget ()`
- `int sync ()`
- `pos_type tellg ()`
- `__istream_type & seekg (pos_type)`
- `__istream_type & seekg (off_type, ios_base::seekdir)`
- `operator void * () const`
- `bool operator! () const`
- `__ostream_type & operator<< (__ostream_type &(__pf)(__ostream_type &))`
- `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

### Arithmetic Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`

- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`
- `__ostream_type & operator<< (const void *__p)`
- `__ostream_type & operator<< (__streambuf_type *__sb)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

#### 5.392.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc> class  
std::basic_stringstream<_CharT, _Traits, _Alloc>`

Controlling input and output for `std::string`.

This class supports reading from and writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

Definition at line 483 of file `sstream`.

### 5.392.2 Member Typedef Documentation

**5.392.2.1** `template<typename _CharT, typename _Traits> typedef  
ctype<_CharT> std::basic_istream<_CharT, _Traits  
>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 73 of file `istream`.

**5.392.2.2** `template<typename _CharT, typename _Traits> typedef  
ctype<_CharT> std::basic_ostream<_CharT, _Traits  
>::__ctype_type [inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 73 of file `ostream`.

**5.392.2.3** `template<typename _CharT, typename _Traits> typedef  
num_get<_CharT, istreambuf_iterator<_CharT, _Traits>  
> std::basic_istream<_CharT, _Traits>::__num_get_type  
[inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 72 of file `istream`.

**5.392.2.4** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
> std::basic_ostream<_CharT, _Traits>::__num_put_type  
[inherited]`

These are non-standard types.

Reimplemented in `std::basic_ostream<_CharT, _Traits>`, `std::basic_ostream<char, _Traits>`, and `std::basic_ostream<char>`.

Definition at line 86 of file `basic_ios.h`.

**5.392.2.5** `template<typename _CharT, typename _Traits> typedef  
num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>  
> std::basic_ostream< _CharT, _Traits >::__num_put_type  
[inherited]`

These are non-standard types.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Definition at line 72 of file ostream.

**5.392.2.6** `template<typename _CharT, typename _Traits> typedef _CharT  
std::basic_istream< _CharT, _Traits >::char_type [inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, and `std::basic_istream< _CharT, _Traits, _Alloc >`.

Definition at line 61 of file istream.

**5.392.2.7** `template<typename _CharT, typename _Traits, typename _Alloc >  
typedef _CharT std::basic_stringstream< _CharT, _Traits, _Alloc  
>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_iostream< _CharT, _Traits >`.

Definition at line 487 of file sstream.

**5.392.2.8** `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)  
[inherited]`

The type of an event callback function.

#### Parameters

*event* One of the members of the event enum.

*ios\_base* Reference to the `ios_base` object.

*int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several [ios\\_base](#) and [basic\\_ios](#) functions, specifically [imbue\(\)](#), [copyfmt\(\)](#), and [~ios\(\)](#).

Definition at line 438 of file `ios_base.h`.

#### **5.392.2.9 typedef \_Ios\_Fmtflags std::ios\_base::fmtflags [inherited]**

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 257 of file `ios_base.h`.

**5.392.2.10** `template<typename _CharT, typename _Traits> typedef  
_Traits::int_type std::basic_istream< _CharT, _Traits >::int_type  
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Reimplemented in [std::basic\\_ifstream< \\_CharT, \\_Traits >](#), and [std::basic\\_istream< \\_CharT, \\_Traits, \\_Alloc >](#).

Definition at line 62 of file istream.

**5.392.2.11** `template<typename _CharT, typename _Traits, typename _Alloc  
> typedef traits_type::int_type std::basic_stringstream< _CharT,  
_Traits, _Alloc >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_iostream< \\_CharT, \\_Traits >](#).

Definition at line 492 of file sstream.

**5.392.2.12** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 332 of file `ios_base.h`.

**5.392.2.13** `template<typename _CharT, typename _Traits, typename _Alloc  
> typedef traits_type::off_type std::basic_stringstream<_CharT,  
_Traits, _Alloc>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream<_CharT, _Traits>`.

Definition at line 494 of file `sstream`.

**5.392.2.14** `template<typename _CharT, typename _Traits> typedef  
_Traits::off_type std::basic_istream<_CharT, _Traits>::off_type  
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Reimplemented in `std::basic_ifstream<_CharT, _Traits>`, and `std::basic_istreamstream<_CharT, _Traits, _Alloc>`.

Definition at line 64 of file `istream`.

**5.392.2.15** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 363 of file `ios_base.h`.

**5.392.2.16** `template<typename _CharT, typename _Traits, typename _Alloc  
> typedef traits_type::pos_type std::basic_stringstream< _CharT,  
_Traits, _Alloc >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_istream< _CharT, _Traits >`.

Definition at line 493 of file `sstream`.

**5.392.2.17** `template<typename _CharT, typename _Traits> typedef  
_Traits::pos_type std::basic_istream< _CharT, _Traits >::pos_type  
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from `std::basic_ios< _CharT, _Traits >`.

Reimplemented in `std::basic_ifstream< _CharT, _Traits >`, and `std::basic_istream< _CharT, _Traits, _Alloc >`.

Definition at line 63 of file `istream`.

**5.392.2.18** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

**5.392.2.19** `template<typename _CharT, typename _Traits> typedef  
_Traits std::basic_istream< _CharT, _Traits >::traits_type  
[inherited]`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which

are specific to the implementation.

Reimplemented from [std::basic\\_ios< \\_CharT, \\_Traits >](#).

Reimplemented in [std::basic\\_ifstream< \\_CharT, \\_Traits >](#), and [std::basic\\_istream< \\_CharT, \\_Traits, \\_Alloc >](#).

Definition at line 65 of file istream.

**5.392.2.20** `template<typename _CharT, typename _Traits, typename _Alloc  
> typedef _Traits std::basic_stringstream< _CharT, _Traits, _Alloc  
>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependant on) the template parameters, which are specific to the implementation.

Reimplemented from [std::basic\\_iostream< \\_CharT, \\_Traits >](#).

Definition at line 488 of file sstream.

### 5.392.3 Member Enumeration Documentation

**5.392.3.1** `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

erase\_event is used during ~ios() and copyfmt(). imbue\_event is used during [imbue\(\)](#). copyfmt\_event is used during copyfmt().

Definition at line 421 of file ios\_base.h.

### 5.392.4 Constructor & Destructor Documentation

**5.392.4.1** `template<typename _CharT, typename _Traits, typename  
_Alloc > std::basic_stringstream< _CharT, _Traits, _Alloc  
>::basic_stringstream ( ios_base::openmode __m =  
ios_base::out | ios_base::in ) [inline, explicit]`

Default constructor starts with an empty string buffer.

#### Parameters

*mode* Whether the buffer can read, or write, or both.

## 5.392 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2293

---

Initializes `sb` using `mode`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 517 of file `sstream`.

References `std::basic_ios<_CharT, _Traits>::init()`.

**5.392.4.2** `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream ( const __string_type & __str, ios_base::openmode __m = ios_base::out | ios_base::in ) [inline, explicit]`

Starts with an existing string buffer.

### Parameters

*str* A string to copy as a starting buffer.

*mode* Whether the buffer can read, or write, or both.

Initializes `sb` using `str` and `mode`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

Definition at line 533 of file `sstream`.

References `std::basic_ios<_CharT, _Traits>::init()`.

**5.392.4.3** `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_stringstream<_CharT, _Traits, _Alloc>::~~basic_stringstream ( ) [inline]`

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

Definition at line 544 of file `sstream`.

### 5.392.5 Member Function Documentation

#### 5.392.5.1 `const locale& std::ios_base::_M_getloc( ) const` [`inline`, `inherited`]

Locale access.

##### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 708 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::time_put<_CharT, _OutIter>::put()`.

#### 5.392.5.2 `template<typename _CharT, typename _Traits> void std::basic_ostream<_CharT, _Traits>::_M_write( const char_type * __s, streamsize __n )` [`inline`, `inherited`]

Simple insertion.

##### Parameters

*c* The character to insert.

##### Returns

`*this`

Tries to insert *c*.

##### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 289 of file `ostream`.

**5.392.5.3** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::bad ( ) const` `[inline, inherited]`

Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 203 of file `basic_ios.h`.

**5.392.5.4** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::clear ( iostate __state = goodbit )` `[inherited]`

[Re]sets the error state.

#### Parameters

*state* The new state flag(s) to set.

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Definition at line 42 of file `basic_ios.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_ios<char, _Traits>::exceptions()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.392.5.5** `template<typename _CharT, typename _Traits> basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt ( const basic_ios<_CharT, _Traits> & __rhs )` `[inherited]`

Copies fields of `__rhs` into this.

#### Parameters

`__rhs` The source values for the copies.

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 64 of file `basic_ios.tcc`.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, and `std::ios_base::width()`.

#### 5.392.5.6 `template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof( ) const [inline, inherited]`

Fast error checking.

#### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 182 of file `basic_ios.h`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 5.392.5.7 `template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions( ) const [inline, inherited]`

Throwing exceptions on errors.

### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of [exceptions\(iostate\)](#) for the meaning of the return value.

Definition at line 214 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::clear()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.392.5.8** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::exceptions ( iostate __except ) [inline, inherited]`

Throwing exceptions on errors.

### Parameters

*except* The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type [std::ios\\_base::failure](#) is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
 std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

 std::ifstream f ("/etc/motd");

 std::cerr << "Setting badbit\n";
 f.setstate (std::ios_base::badbit);

 std::cerr << "Setting exception mask\n";
 f.exceptions (std::ios_base::badbit);
}
```

Definition at line 249 of file `basic_ios.h`.

**5.392.5.9** `template<typename _CharT, typename _Traits> bool std::basic_ios<_CharT, _Traits>::fail( ) const [inline, inherited]`

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in [fail\(\)](#) is historical practice. Note that other iostate flags may also be set.

Definition at line 193 of file basic\_ios.h.

Referenced by `std::basic_ios<char, _Traits>::operator void *()`, `std::basic_ios<char, _Traits>::operator!()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_Ch_type>::value()`.

**5.392.5.10** `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill( ) const [inline, inherited]`

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 362 of file basic\_ios.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::basic_ios<char, _Traits>::fill()`.

**5.392.5.11** `template<typename _CharT, typename _Traits> char_type std::basic_ios<_CharT, _Traits>::fill( char_type __ch ) [inline, inherited]`

Sets a new *empty* character.

### Parameters

*ch* The new character.

### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 382 of file `basic_ios.h`.

#### 5.392.5.12 `fmtflags std::ios_base::flags ( ) const [inline, inherited]`

Access to format flags.

### Returns

The format control flags for both input and output.

Definition at line 553 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 5.392.5.13 `fmtflags std::ios_base::flags ( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags all at once.

### Parameters

*fmtfl* The new flags to set.

### Returns

The previous format control flags.

This function overwrites all the format flags with *fmtfl*.

Definition at line 564 of file `ios_base.h`.

**5.392.5.14** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush ( ) [inherited]`

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

Definition at line 213 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::flush()`.

**5.392.5.15** `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::gcount ( ) const [inline, inherited]`

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 251 of file istream.

**5.392.5.16** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get ( void ) [inherited]`

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 238 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.392.5.17** `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::get ( char_type & __c ) [inherited]`

Simple extraction.

#### Parameters

*c* The character in which to store data.

#### Returns

\*this

Tries to extract a character and store it in *c*. If none are available, sets failbit and returns traits::eof().

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 274 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.392.5.18** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits>::get ( char_type * __s, streamsize __n ) [inline, inherited]`

Simple multiple-character extraction.

#### Parameters

*s* Pointer to an array.

*n* Maximum number of characters to store in *s*.

**Returns**

\*this

Returns `get(s,n,widen('\n'))`.

Definition at line 335 of file `istream`.

**5.392.5.19** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( __streambuf_type & __sb, char_type __delim ) [inherited]`

Extraction into another streambuf.

**Parameters**

*sb* A streambuf in which to store data.

*delim* A "stop" character.

**Returns**

\*this

Characters are extracted and inserted into *sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, `failbit` is set in the stream's error state.

Definition at line 358 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

**5.392.5.20** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream<_CharT, _Traits>::get ( __streambuf_type & __sb ) [inline, inherited]`

Extraction into another streambuf.

#### Parameters

*sb* A streambuf in which to store data.

#### Returns

\*this

Returns `get(sb, widen('\n'))`.

Definition at line 368 of file `istream`.

**5.392.5.21** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

Simple multiple-character extraction.

#### Parameters

*s* Pointer to an array.

*n* Maximum number of characters to store in *s*.

*delim* A "stop" character.

#### Returns

\*this

Characters are extracted and stored into *s* until one of the following happens:

- *n*−1 characters are stored
- the input sequence reaches EOF
- the next character equals *delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 311 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.392.5.22** `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::getline( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

String extraction.

#### Parameters

*s* A character array in which to store the data.

*n* Maximum number of characters to extract.

*delim* A "stop" character.

#### Returns

*\*this*

Extracts and stores characters into *s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals *delim*, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. *n*−1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 402 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

**5.392.5.23** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline ( char_type * __s, streamsize __n ) [inline, inherited]`

String extraction.

#### Parameters

*s* A character array in which to store the data.

*n* Maximum number of characters to extract.

#### Returns

\*this

Returns `getline(s,n,widen('\n'))`.

Definition at line 408 of file istream.

Referenced by `std::basic_istream< char >::getline()`.

**5.392.5.24** `locale std::ios_base::getloc ( ) const [inline, inherited]`

Locale access.

#### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::money\_put< \_CharT, \_OutputIter >::do\_put(), std::basic\_ios< \_CharT, \_Traits >::imbue(), std::operator>>(), and std::ws().

**5.392.5.25** `template<typename _CharT, typename _Traits> bool  
std::basic_ios< _CharT, _Traits >::good ( ) const [inline,  
inherited]`

Fast error checking.

#### Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 172 of file basic\_ios.h.

Referenced by std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

**5.392.5.26** `template<typename _CharT, typename _Traits > basic_istream<  
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore  
( streamsize __n ) [inherited]`

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 495 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

5.392.5.27 `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore  
( void ) [inherited]`

Discarding characters.

#### Parameters

*n* Number of characters to discard.

*delim* A "stop" character.

#### Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if *n* != `std::numeric_limits<int>::max()`, *n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *delim* (in this case, the character is extracted); note that this condition will never occur if *delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 462 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.392.5.28 `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore  
( streamsize __n, int_type __delim ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 557 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::basic\_ios< \_CharT, \_Traits >::eof(), std::ios\_base::eofbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_streambuf< \_CharT, \_Traits >::sbumpc(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

**5.392.5.29 template<typename \_CharT, typename \_Traits > locale  
std::basic\_ios< \_CharT, \_Traits >::imbue ( const locale & \_\_loc )  
[inherited]**

Moves to a new locale.

**Parameters**

*loc* The new locale.

**Returns**

The previous locale.

Calls ios\_base::imbue(loc), and if a stream buffer is associated with this stream, calls that buffer's pubimbue(loc).

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.ht>

Reimplemented from [std::ios\\_base](#).

Definition at line 115 of file basic\_ios.tcc.

References std::ios\_base::getloc(), and std::basic\_ios< \_CharT, \_Traits >::rdbuf().

Referenced by std::operator<<().

**5.392.5.30 template<typename \_CharT, typename \_Traits> void  
std::basic\_ios< \_CharT, \_Traits >::init ( basic\_streambuf<  
\_CharT, \_Traits > \* \_\_sb ) [protected, inherited]**

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 127 of file basic\_ios.tcc.

References std::ios\_base::badbit, and std::ios\_base::goodbit.

Referenced by std::basic\_fstream< \_CharT, \_Traits >::basic\_fstream(), std::basic\_ifstream< \_CharT, \_Traits >::basic\_ifstream(), std::basic\_ios< char, \_Traits >::basic\_ios(), std::basic\_istream< char >::basic\_istream(), std::basic\_istreamstream< \_CharT, \_Traits, \_Alloc >::basic\_istreamstream(), std::basic\_ofstream< \_CharT, \_Traits >::basic\_ofstream(), std::basic\_ostream< char >::basic\_ostream(), std::basic\_ostreamstream< \_CharT, \_Traits, \_Alloc >::basic\_ostreamstream(), and std::basic\_stringstream< \_CharT, \_Traits, \_Alloc >::basic\_stringstream().

**5.392.5.31 long& std::ios\_base::iword ( int \_\_ix ) [inline, inherited]**

Access to integer array.

**Parameters**

***\_\_ix*** Index into the array.

**Returns**

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file ios\_base.h.

**5.392.5.32 template<typename \_CharT, typename \_Traits> char  
std::basic\_ios< \_CharT, \_Traits >::narrow ( char\_type \_\_c, char  
\_\_dfault ) const [inline, inherited]**

Squeezes characters.

**Parameters**

***c*** The character to narrow.

***dfault*** The character to narrow.

**Returns**

The narrowed character.

## 5.392 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2310

---

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

**5.392.5.48** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<<( __streambuf_type * __sb ) [inherited]`

Extracting from another streambuf.

#### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from *sb* and inserted into *\*this* until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from *sb*, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 122 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

\**this* if successful

These functions use the stream's current locale (specifically, the [num\\_get](#) facet) to parse the input data.

Definition at line 161 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter>::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.392.5.63** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>>(__streambuf_type * __sb) [inherited]`

Extracting into another streambuf.

#### Parameters

*sb* A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If *sb* is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the *sb* streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 206 of file istream.tcc.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.392.5.64** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> ( unsigned int & __n ) [inline, inherited]`

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 183 of file istream.

**5.392.5.65** `template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> ( __istream_type &(*)(__istream_type &) __pf ) [inline, inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Definition at line 122 of file istream.

**5.392.5.66** `template<typename _CharT, typename _Traits> __istream_type&

Basic arithmetic extractors.

#### Parameters

*A* variable of builtin type.

#### Returns

\**this* if successful

**5.392 std::basic\_stringstream< \_CharT, \_Traits, \_Alloc > Class Template Reference** 2325

---

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 200 of file `istream`.

**5.392.5.69** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek( void ) [inherited]`

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 622 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.392.5.70** `streamsize std::ios_base::precision( ) const [inline, inherited]`

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

**5.392.5.71** `streamsize std::ios_base::precision( streamsize __prec ) [inline, inherited]`

Changing flags.

#### Parameters

*prec* The new precision value.

#### Returns

The previous value of `precision()`.

Definition at line 632 of file `ios_base.h`.

**5.392.5.72** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put (char_type __c) [inherited]`

Simple insertion.

#### Parameters

*c* The character to insert.

#### Returns

`*this`

Tries to insert *c*.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 151 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::endl()`, and `std::ends()`.

**5.392.5.73** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback (char_type __c) [inherited]`

Unextracting a single character.

**Parameters**

*c* The character to push back into the input stream.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 713 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

**5.392.5.74 void\*& std::ios\_base::pword ( int \_\_ix ) [inline, inherited]**

Access to void pointer array.

**Parameters**

*\_\_ix* Index into the array.

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file `ios_base.h`.

**5.392.5.75** `template<typename _CharT, typename _Traits, typename _Alloc  
> __stringbuf_type* std::basic_stringstream<_CharT, _Traits,  
_Alloc>::rdbuf( ) const [inline]`

Accessing the underlying buffer.

#### Returns

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Reimplemented from `std::basic_ios<_CharT, _Traits>`.

Definition at line 555 of file `sstream`.

**5.392.5.76** `template<typename _CharT, typename _Traits> basic_streambuf<  
_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (  
basic_streambuf<_CharT, _Traits> * __sb ) [inherited]`

Changing the underlying buffer.

#### Parameters

*sb* The new stream buffer.

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo; // or some other derived type
std::streambuf* p =;

foo.ios::rdbuf(p); // ios == basic_ios<char>
```

Definition at line 54 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::clear()`.

**5.392.5.77** `template<typename _CharT, typename _Traits> iostate  
std::basic_ios<_CharT, _Traits>::rdstate ( ) const [inline,  
inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will call one of the interpreting wrappers, e.g., [good\(\)](#).

Definition at line 129 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ios<char, _Traits>::eof()`, `std::basic_ios<char, _Traits>::fail()`, `std::basic_ios<char, _Traits>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.392.5.78** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> &std::basic_istream<_CharT, _Traits>::read (  
char_type * __s, streamsize __n ) [inherited]`

Extraction without delimiters.

#### Parameters

- s* A character array.
- n* Maximum number of characters to store.

#### Returns

\*this

If the stream state is [good\(\)](#), extracts characters and stores them into *s* until one of the following happens:

- n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 652 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.392.5.79** `template<typename _CharT, typename _Traits > streamsize  
std::basic_istream< _CharT, _Traits >::readsome ( char_type *  
__s, streamsize __n ) [inherited]`

Extraction until the buffer is exhausted, but no more.

#### Parameters

- s* A character array.
- n* Maximum number of characters to store.

#### Returns

The number of characters extracted.

Extracts characters and stores them into *s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called *A* here:

- if *A* == -1, sets eofbit and extracts no characters
- if *A* == 0, extracts no characters
- if *A* > 0, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 681 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::goodbit, std::min(), std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

**5.392.5.80** `void std::ios_base::register_callback ( event_callback __fn, int  
__index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

#### Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.392.5.81** `template<typename _CharT, typename _Traits > basic_istream<  
_CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg  
( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

#### Parameters

`off` A file offset object.

`dir` The direction in which to seek.

#### Returns

`*this`

If `fail()` is not true, calls `rddbuf()`  $\rightarrow$  `pubseekoff(off, dir)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 886 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rddbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.392.5.82** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg( pos_type __pos ) [inherited]`

Changing the current read position.

#### Parameters

*pos* A file position object.

#### Returns

\*this

If `fail()` is not true, calls `rddbuf()`  $\rightarrow$  `pubseekpos(pos)`. If that function fails, sets failbit.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 847 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rddbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.392.5.83** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current write position.

#### Parameters

*off* A file offset object.

*dir* The direction in which to seek.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekoff(off, dir)`. If that function fails, sets failbit.

Definition at line 292 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.392.5.84** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp( pos_type __pos ) [inherited]`

Changing the current write position.

#### Parameters

*pos* A file position object.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() ->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 260 of file ostream.tcc.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.392.5.85** `fmtflags std::ios_base::setf( fmtflags __fmtfl ) [inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

#### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file ios\_base.h.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.392.5.86** `fmtflags std::ios_base::setf ( fmtflags __fmtfl, fmtflags __mask )`  
`[inline, inherited]`

Setting new format flags.

#### Parameters

*fmtfl* Additional flags to set.

*mask* The flags mask for *fmtfl*.

#### Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 597 of file ios\_base.h.

**5.392.5.87** `template<typename _CharT, typename _Traits> void`  
`std::basic_ios< _CharT, _Traits >::setstate ( iostate __state )`  
`[inline, inherited]`

Sets additional flags in the error state.

#### Parameters

*state* The additional state flag(s) to set.

See `std::ios_base::iostate` for the possible bit values.

Definition at line 149 of file basic\_ios.h.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`,

std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_fstream< \_CharT, \_Traits >::open(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::ws().

**5.392.5.88** `template<typename _CharT, typename _Traits, typename _Alloc  
> __string_type std::basic_stringstream< _CharT, _Traits, _Alloc  
>::str ( ) const [inline]`

Copying out the string buffer.

#### Returns

`rddbuf () -> str ()`

Definition at line 563 of file sstream.

**5.392.5.89** `template<typename _CharT, typename _Traits, typename _Alloc  
> void std::basic_stringstream< _CharT, _Traits, _Alloc >::str (   
const __string_type & __s ) [inline]`

Setting a new buffer.

#### Parameters

`s` The string to use as a new sequence.

Calls `rddbuf () -> str (s)`.

Definition at line 573 of file sstream.

**5.392.5.90** `template<typename _CharT, typename _Traits > int  
std::basic_istream< _CharT, _Traits >::sync ( void )  
[inherited]`

Synchronizing the stream buffer.

#### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 783 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_istream< _CharT, _Traits >::rdbuf()`, and `std::basic_istream< _CharT, _Traits >::setstate()`.

**5.392.5.91** `static bool std::ios_base::sync_with_stdio ( bool __sync = true )  
[static, inherited]`

Interaction with the standard C I/O objects.

#### Parameters

*sync* Whether to synchronize or not.

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.392.5.92** `template<typename _CharT, typename _Traits> basic_istream<_CharT,_Traits>::pos_type std::basic_istream<_CharT,_Traits>::tellg( void ) [inherited]`

Getting the current read position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 819 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT,_Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT,_Traits>::rdbuf()`.

**5.392.5.93** `template<typename _CharT, typename _Traits> basic_ostream<_CharT,_Traits>::pos_type std::basic_ostream<_CharT,_Traits>::tellp( ) [inherited]`

Getting the current write position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.

Definition at line 239 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT,_Traits>::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT,_Traits>::rdbuf()`.

**5.392.5.94** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie( basic_ostream<_CharT, _Traits> * __tiestr ) [inline,  
inherited]`

Ties this stream to an output stream.

#### Parameters

*tiestr* The output stream.

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see [tie\(\)](#) for more.

Definition at line 299 of file `basic_ios.h`.

**5.392.5.95** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>* std::basic_ios<_CharT, _Traits  
>::tie( ) const [inline, inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 287 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.392.5.96** `template<typename _CharT, typename _Traits> basic_istream<  
_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget  
( void ) [inherited]`

Unextracting the previous character.

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 748 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

**5.392.5.97 void std::ios\_base::unsetf ( fmtflags \_\_mask ) [inline, inherited]**

Clearing format flags.

**Parameters**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file `ios_base.h`.

Referenced by `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.392.5.98 template<typename \_CharT, typename \_Traits> char\_type  
std::basic\_ios<\_CharT, \_Traits>::widen ( char \_\_c ) const  
[inline, inherited]**

Widens characters.

**Parameters**

*c* The character to widen.

### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 441 of file `basic_ios.h`.

Referenced by `std::endl()`, `std::basic_ios<char, _Traits>::fill()`, `std::basic_istream<char>::get()`, `std::basic_istream<char>::getline()`, `std::getline()`, and `std::operator>>()`.

### 5.392.5.99 streamsize std::ios\_base::width ( streamsize \_\_wide ) [inline, inherited]

Changing flags.

### Parameters

*wide* The new width value.

### Returns

The previous value of `width()`.

Definition at line 655 of file `ios_base.h`.

### 5.392.5.100 streamsize std::ios\_base::width ( ) const [inline, inherited]

Flags access.

### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator>>()`.

**5.392.5.101** `template<typename _CharT, typename _Traits> __ostream_type&  
std::basic_ostream<_CharT, _Traits>::write ( const char_type *  
__s, streamsize __n ) [inherited]`

Character string insertion.

#### Parameters

- s* The array to insert.
- n* Maximum number of characters to insert.

#### Returns

\*this

Characters are copied from *s* and inserted into the stream until one of the following happens:

- *n* characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

#### Note

This function is not overloaded on signed char and unsigned char.

**5.392.5.102** `static int std::ios_base::xalloc ( ) throw () [static,  
inherited]`

Access to unique indices.

#### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

### **5.392.6 Member Data Documentation**

#### **5.392.6.1 template<typename \_CharT, typename \_Traits> streamsize std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount [protected, inherited]**

The number of characters extracted in the previous unformatted function; see [gcount\(\)](#).

Definition at line 81 of file `istream`.

Referenced by `std::basic_istream< char >::gcount()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::basic_istream< char >::~~basic_istream()`.

**5.392.6.6 const fmtflags std::ios\_base::basefield [static, inherited]**

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 315 of file ios\_base.h.

Referenced by std::dec(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::hex(), std::oct(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.392.6.7 const seekdir std::ios\_base::beg [static, inherited]**

Request a seek relative to the beginning of the stream.

Definition at line 398 of file ios\_base.h.

**5.392.6.8 const openmode std::ios\_base::binary [static, inherited]**

Perform input and output in binary mode (as opposed to text

## 5.392 `std::basic_stringstream<_CharT, _Traits, _Alloc>` Class Template Reference 2344

---

mode). `/// This is probably not what you think it is; see http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html.`

Definition at line 374 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

### 5.392.6.9 `const fmtflags std::ios_base::boolalpha` `[static, inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 260 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

### 5.392.6.10 `const seekdir std::ios_base::cur` `[static, inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 401 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

### 5.392.6.11 `const fmtflags std::ios_base::dec` `[static, inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file `ios_base.h`.

Referenced by `std::dec()`.

### 5.392.6.12 `const seekdir std::ios_base::end` `[static, inherited]`

Request a seek relative to the current end of the sequence.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

**5.392.6.13 const iostate std::ios\_base::eofbit [static, inherited]**

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_date(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_time(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::eof(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::unget(), and std::ws().

**5.392.6.14 const iostate std::ios\_base::failbit [static, inherited]**

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file ios\_base.h.

Referenced by std::basic\_fstream< \_CharT, \_Traits >::close(), std::basic\_ofstream< \_CharT, \_Traits >::close(), std::basic\_ifstream< \_CharT, \_Traits >::close(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_fstream< \_CharT, \_Traits >::open(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_ostream< \_CharT, \_Traits >::sentry::sentry(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

**5.392.6.15 const fmtflags std::ios\_base::fixed [static, inherited]**

Generate floating-point output in fixed-point notation.

Definition at line 266 of file ios\_base.h.

Referenced by std::fixed().

#### **5.392.6.16 const fmtflags std::ios\_base::floatfield [static, inherited]**

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 318 of file ios\_base.h.

Referenced by std::fixed(), and std::scientific().

#### **5.392.6.17 const iostate std::ios\_base::goodbit [static, inherited]**

Indicates all is well.

Definition at line 347 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::time\_get< \_CharT, \_InIter >::do\_get\_monthname(), std::time\_get< \_CharT, \_InIter >::do\_get\_weekday(), std::time\_get< \_CharT, \_InIter >::do\_get\_year(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsomewhat(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sync(), and std::basic\_istream< \_CharT, \_Traits >::unget().

#### **5.392.6.18 const fmtflags std::ios\_base::hex [static, inherited]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file ios\_base.h.

Referenced by std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

>::operator<<().

**5.392.6.19 const openmode std::ios\_base::in [static, inherited]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::M_set_buffer()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

**5.392.6.20 const fmtflags std::ios\_base::internal [static, inherited]**

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 274 of file `ios_base.h`.

Referenced by `std::internal()`.

**5.392.6.21 const fmtflags std::ios\_base::left [static, inherited]**

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

**5.392.6.22 const fmtflags std::ios\_base::oct [static, inherited]**

Converts integer input or generates integer output in octal base.

Definition at line 281 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

**5.392.6.23 const openmode std::ios\_base::out [static, inherited]**

Open for output. Default for `ofstream` and `fstream`.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

**5.392.6.24 const fmtflags std::ios\_base::right [static, inherited]**

Adds fill characters on the left (initial positions) of certain `///` generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file `ios_base.h`.

Referenced by `std::right()`.

**5.392.6.25 const fmtflags std::ios\_base::scientific [static, inherited]**

Generates floating-point output in scientific notation.

Definition at line 288 of file `ios_base.h`.

Referenced by `std::scientific()`.

**5.392.6.26 const fmtflags std::ios\_base::showbase [static, inherited]**

Generates a prefix indicating the numeric base of generated integer `///` output.

Definition at line 292 of file `ios_base.h`.

Referenced by `std::noshowbase()`, and `std::showbase()`.

**5.392.6.27 const fmtflags std::ios\_base::showpoint [static, inherited]**

Generates a decimal-point character unconditionally in generated `///` floating-point output.

**5.392 std::basic\_stringstream< \_CharT, \_Traits, \_Alloc > Class Template Reference** **2349**

---

Definition at line 296 of file ios\_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

**5.392.6.28 const fmtflags std::ios\_base::showpos [static, inherited]**

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

**5.392.6.29 const fmtflags std::ios\_base::skipws [static, inherited]**

Skips leading white space before certain input operations.

Definition at line 302 of file ios\_base.h.

Referenced by std::noskipws(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), and std::skipws().

**5.392.6.30 const openmode std::ios\_base::trunc [static, inherited]**

Open for input. Default for ofstream.

Definition at line 383 of file ios\_base.h.

**5.392.6.31 const fmtflags std::ios\_base::unitbuf [static, inherited]**

Flushes output after each output operation.

Definition at line 305 of file ios\_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry().

**5.392.6.32 const fmtflags std::ios\_base::uppercase [static, inherited]**

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 309 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

- [param\\_type](#) [param](#) () const
- void [reset](#) ()

### 5.393.1 Detailed Description

A Bernoulli random number distribution. Generates a sequence of true and false values with likelihood  $p$  that true will come up and  $(1 - p)$  that false will appear.

Definition at line 3217 of file random.h.

### 5.393.2 Member Typedef Documentation

#### 5.393.2.1 typedef bool std::bernoulli\_distribution::result\_type

The type of the range of the distribution.

Definition at line 3221 of file random.h.

### 5.393.3 Constructor & Destructor Documentation

#### 5.393.3.1 std::bernoulli\_distribution::bernoulli\_distribution ( double \_\_p = 0.5 ) [inline, explicit]

Constructs a Bernoulli distribution with likelihood  $p$ .

#### Parameters

**\_\_p** [IN] The likelihood of a true result being returned. Must be in the interval  $[0, 1]$ .

Definition at line 3254 of file random.h.

### 5.393.4 Member Function Documentation

#### 5.393.4.1 result\_type std::bernoulli\_distribution::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 3304 of file random.h.

#### 5.393.4.2 result\_type std::bernoulli\_distribution::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 3297 of file random.h.

**5.393.4.3** `template<typename _UniformRandomNumberGenerator  
> result_type std::bernoulli_distribution::operator() (  
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 3312 of file random.h.

References operator>(), and param().

Referenced by operator().

**5.393.4.4** `double std::bernoulli_distribution::p ( ) const [inline]`

Returns the *p* parameter of the distribution.

Definition at line 3275 of file random.h.

**5.393.4.5** `void std::bernoulli_distribution::param ( const param_type &  
__param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

*\_\_param* The new parameter set of the distribution.

Definition at line 3290 of file random.h.

**5.393.4.6** `param_type std::bernoulli_distribution::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 3282 of file random.h.

Referenced by operator(), std::operator==(), and std::operator>>().

#### 5.393.4.7 `void std::bernoulli_distribution::reset ( ) [inline]`

Resets the distribution state.

Does nothing for a Bernoulli distribution.

Definition at line 3269 of file `random.h`.

The documentation for this class was generated from the following file:

- [random.h](#)

### 5.394 `std::bernoulli_distribution::param_type` Struct Reference

#### Public Types

- typedef [bernoulli\\_distribution](#) `distribution_type`

#### Public Member Functions

- `param_type` (double \_\_p=0.5)
- double `p` () const

#### Friends

- bool `operator==` (const [param\\_type](#) &\_\_p1, const [param\\_type](#) &\_\_p2)

#### 5.394.1 Detailed Description

Parameter type.

Definition at line 3223 of file `random.h`.

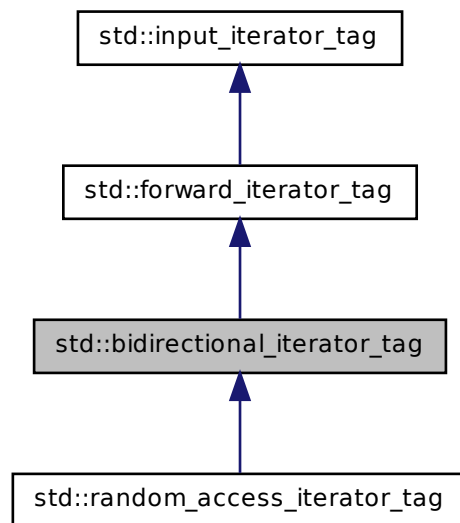

The documentation for this struct was generated from the following file:

- [random.h](#)

### 5.395 `std::bidirectional_iterator_tag` Struct Reference

Bidirectional iterators support a superset of forward iterator /// operations.

Inheritance diagram for `std::bidirectional_iterator_tag`:

#### 5.395.1 Detailed Description

Bidirectional iterators support a superset of forward iterator /// operations.

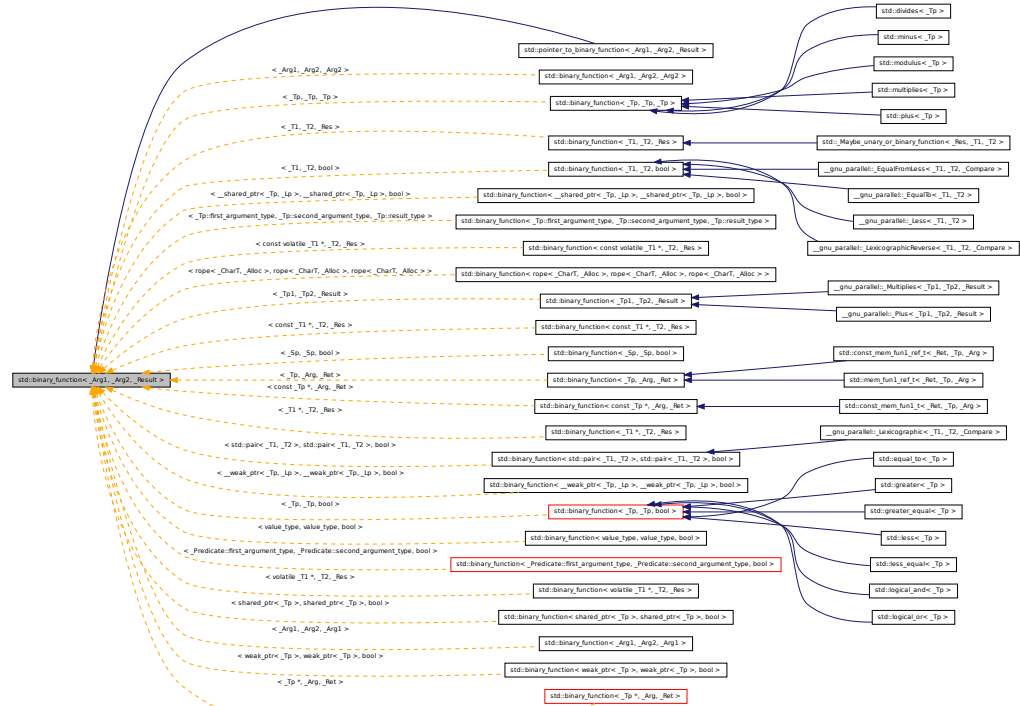

Definition at line 100 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.396 std::binary\_function< \_Arg1, \_Arg2, \_Result > Struct Template Reference

Inheritance diagram for std::binary\_function< \_Arg1, \_Arg2, \_Result >:

### Public Types

- typedef \_Arg1 [first\\_argument\\_type](#)
- typedef \_Result [result\\_type](#)
- typedef \_Arg2 [second\\_argument\\_type](#)

### 5.396.1 Detailed Description

template<typename \_Arg1, typename \_Arg2, typename \_Result> struct std::binary\_function< \_Arg1, \_Arg2, \_Result >

This is one of the [functor](#) base classes.

Definition at line 115 of file `stl_function.h`.

### 5.396.2 Member Typedef Documentation

**5.396.2.1** `template<typename _Arg1, typename _Arg2, typename _Result>`  
`typedef _Arg1 std::binary_function< _Arg1, _Arg2, _Result`  
`>::first_argument_type`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.396.2.2** `template<typename _Arg1, typename _Arg2, typename _Result>`  
`typedef _Result std::binary_function< _Arg1, _Arg2, _Result`  
`>::result_type`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.396.2.3** `template<typename _Arg1, typename _Arg2, typename _Result>`  
`typedef _Arg2 std::binary_function< _Arg1, _Arg2, _Result`  
`>::second_argument_type`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.397 `std::binary_negate< _Predicate >` Class Template Reference

One of the [negation functors](#).

Inheritance diagram for std::binary\_negate< \_Predicate >:

## Public Types

- typedef \_Predicate::first\_argument\_type [first\\_argument\\_type](#)
- typedef bool [result\\_type](#)
- typedef \_Predicate::second\_argument\_type [second\\_argument\\_type](#)

## Public Member Functions

- **binary\_negate** (const \_Predicate &\_\_x)
- bool **operator()** (const typename \_Predicate::first\_argument\_type &\_\_x, const typename \_Predicate::second\_argument\_type &\_\_y) const

## Protected Attributes

- \_Predicate \_M\_pred

### 5.397.1 Detailed Description

template<typename \_Predicate> class std::binary\_negate< \_Predicate >

One of the [negation functors](#).

Definition at line 375 of file stl\_function.h.

### 5.397.2 Member Typedef Documentation

**5.397.2.1** typedef \_Predicate::first\_argument\_type std::binary\_function< \_Predicate::first\_argument\_type, \_Predicate::second\_argument\_type, bool >::first\_argument\_type [\[inherited\]](#)

first\_argument\_type is the type of the first argument

Definition at line 118 of file stl\_function.h.

**5.397.2.2** `typedef bool std::binary_function<_Predicate::first_argument_type, _Predicate::second_argument_type, bool>::result_type`  
`[inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.397.2.3** `typedef _Predicate::second_argument_type std::binary_function<_Predicate::first_argument_type, _Predicate::second_argument_type, bool>::second_argument_type` `[inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

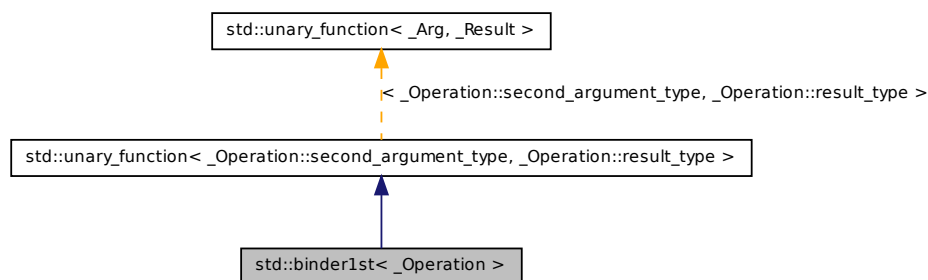

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 5.398 `std::binder1st<_Operation>` Class Template Reference

One of the [binder functors](#).

Inheritance diagram for `std::binder1st<_Operation>`:

## Public Types

- typedef \_Operation::second\_argument\_type [argument\\_type](#)
- typedef \_Operation::result\_type [result\\_type](#)

## Public Member Functions

- **binder1st** (const \_Operation &\_\_x, const typename \_Operation::first\_argument\_type &\_\_y)
- \_Operation::result\_type **operator**() (typename \_Operation::second\_argument\_type &\_\_x) const
- \_Operation::result\_type **operator**() (const typename \_Operation::second\_argument\_type &\_\_x) const

## Protected Attributes

- \_Operation **op**
- \_Operation::first\_argument\_type **value**

### 5.398.1 Detailed Description

**template<typename \_Operation> class std::binder1st< \_Operation >**

One of the [binder functors](#).

Definition at line 100 of file binders.h.

### 5.398.2 Member Typedef Documentation

**5.398.2.1** typedef \_Operation::second\_argument\_type std::unary\_function< \_Operation::second\_argument\_type , \_Operation::result\_type >::argument\_type **[inherited]**

`argument_type` is the type of the argument

Definition at line 105 of file stl\_function.h.

**5.398.2.2** typedef \_Operation::result\_type std::unary\_function< \_Operation::second\_argument\_type , \_Operation::result\_type >::result\_type **[inherited]**

result\_type is the return type

Definition at line 108 of file stl\_function.h.

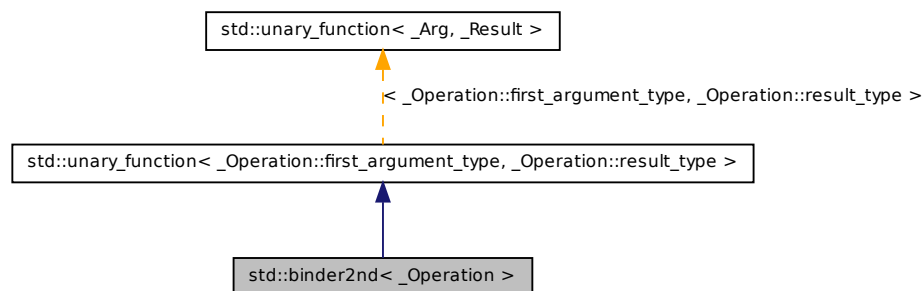

The documentation for this class was generated from the following file:

- [binders.h](#)

## 5.399 std::binder2nd< \_Operation > Class Template Reference

One of the [binder functors](#).

Inheritance diagram for std::binder2nd< \_Operation >:

### Public Types

- typedef \_Operation::first\_argument\_type [argument\\_type](#)
- typedef \_Operation::result\_type [result\\_type](#)

### Public Member Functions

- **binder2nd** (const \_Operation &\_\_x, const typename \_Operation::second\_argument\_type &\_\_y)
- \_Operation::result\_type **operator()** (typename \_Operation::first\_argument\_type &\_\_x) const
- \_Operation::result\_type **operator()** (const typename \_Operation::first\_argument\_type &\_\_x) const

### Protected Attributes

- `_Operation op`
- `_Operation::second_argument_type value`

#### 5.399.1 Detailed Description

**template<typename `_Operation`> class `std::binder2nd< _Operation >`**

One of the [binder functors](#).

Definition at line 135 of file `binders.h`.

#### 5.399.2 Member Typedef Documentation

**5.399.2.1 `typedef _Operation::first_argument_type std::unary_function< _Operation::first_argument_type , _Operation::result_type >::argument_type [inherited]`**

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.399.2.2 `typedef _Operation::result_type std::unary_function< _Operation::first_argument_type , _Operation::result_type >::result_type [inherited]`**

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [binders.h](#)

### **5.400 `std::binomial_distribution< _IntType >` Class Template Reference**

A discrete binomial random number distribution.

## Classes

- struct `param_type`

## Public Types

`std::basic_istream<_CharT, _Traits>` & `operator>>` (`std::basic_istream<_CharT, _Traits>` &, `std::binomial_distribution<_IntType1>` &)

### 5.400.1 Detailed Description

template<typename `_IntType` = int> class `std::binomial_distribution<_IntType>`

A discrete binomial random number distribution. The formula for the binomial probability density function is  $p(i|t, p) = \binom{t}{i} p^i (1 - p)^{t-i}$  where  $t$  and  $p$  are the parameters

of the distribution.

Definition at line 3394 of file random.h.

### **5.400.2 Member Typedef Documentation**

#### **5.400.2.1 template<typename \_IntType = int> typedef \_IntType std::binomial\_distribution< \_IntType >::result\_type**

The type of the range of the distribution.

Definition at line 3401 of file random.h.

### **5.400.3 Member Function Documentation**

#### **5.400.3.1 template<typename \_IntType = int> result\_type std::binomial\_distribution< \_IntType >::max ( ) const [inline]**

Returns the least upper bound value of the distribution.

Definition at line 3504 of file random.h.

Referenced by std::binomial\_distribution< \_IntType >::operator()().

#### **5.400.3.2 template<typename \_IntType = int> result\_type std::binomial\_distribution< \_IntType >::min ( ) const [inline]**

Returns the greatest lower bound value of the distribution.

Definition at line 3497 of file random.h.

#### **5.400.3.3 template<typename \_IntType = int> template<typename \_UniformRandomNumberGenerator > result\_type std::binomial\_distribution< \_IntType >::operator() ( \_UniformRandomNumberGenerator & \_\_urng ) [inline]**

Generating functions.

Definition at line 3512 of file random.h.

References std::binomial\_distribution< \_IntType >::operator()(), and std::binomial\_distribution< \_IntType >::param().

Referenced by std::binomial\_distribution< \_IntType >::operator()().

**5.400.3.4** `template<typename _IntType > template<typename  
_UniformRandomNumberGenerator > binomial_distribution<  
_IntType >::result_type std::binomial_distribution< _IntType  
>::operator() ( _UniformRandomNumberGenerator & __urng,  
const param_type & __param )`

A rejection algorithm when  $t * p \geq 8$  and a simple waiting time method - the second in the referenced book - otherwise. NB: The former is available only if `_GLIBCXX_USE_C99_MATH_TR1` is defined.

Reference: Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. X, Sect. 4 (+ Errata!).

Definition at line 1432 of file random.tcc.

References std::abs(), std::log(), and std::binomial\_distribution< \_IntType >::max().

**5.400.3.5** `template<typename _IntType = int> double  
std::binomial_distribution< _IntType >::p ( ) const [inline]`

Returns the distribution `p` parameter.

Definition at line 3475 of file random.h.

**5.400.3.6** `template<typename _IntType = int> void std::binomial_  
distribution< _IntType >::param ( const param_type & __param )  
[inline]`

Sets the parameter set of the distribution.

#### Parameters

`__param` The new parameter set of the distribution.

Definition at line 3490 of file random.h.

**5.400.3.7** `template<typename _IntType = int> param_type  
std::binomial_distribution< _IntType >::param ( ) const  
[inline]`

## 5.400 `std::binomial_distribution<_IntType>` Class Template Reference 2365

Returns the parameter set of the distribution.

Definition at line 3482 of file random.h.

Referenced by `std::binomial_distribution<_IntType>::operator()()`.

**5.400.3.8** `template<typename _IntType = int> void  
std::binomial_distribution<_IntType>::reset( ) [inline]`

Resets the distribution state.

Definition at line 3461 of file random.h.

References `std::normal_distribution<_RealType>::reset()`.

**5.400.3.9** `template<typename _IntType = int> _IntType  
std::binomial_distribution<_IntType>::t( ) const [inline]`

Returns the distribution  $t$  parameter.

Definition at line 3468 of file random.h.

### 5.400.4 Friends And Related Function Documentation

**5.400.4.1** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_ostream<_CharT,  
_Traits>& operator<<( std::basic_ostream<_CharT, _Traits> & ,  
const std::binomial_distribution<_IntType1> & ) [friend]`

Inserts a `binomial_distribution` random number distribution `__x` into the output stream `__os`.

#### Parameters

`__os` An output stream.

`__x` A `binomial_distribution` random number distribution.

#### Returns

The output stream with the state of `__x` inserted or in an error state.

## 5.401 `std::binomial_distribution< _IntType >::param_type` Struct Reference 2366

**5.400.4.2** `template<typename _IntType = int> template<typename _IntType1  
> bool operator==( const std::binomial_distribution< _IntType1 >  
& __d1, const std::binomial_distribution< _IntType1 > & __d2 )  
[friend]`

Return true if two binomial distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 3527 of file random.h.

**5.400.4.3** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_istream<_CharT,  
_Traits>& operator>> ( std::basic_istream< _CharT, _Traits > & ,  
std::binomial_distribution< _IntType1 > & ) [friend]`

Extracts a `binomial_distribution` random number distribution `__x` from the input stream `__is`.

### Parameters

- `__is` An input stream.
- `__x` A `binomial_distribution` random number generator engine.

### Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

### 5.402.1 Detailed Description

**template<size\_t \_Nb> class std::bitset<\_Nb>**

The bitset class represents a *fixed-size* sequence of bits. (Note that bitset does *not* meet the formal requirements of a [container](#). Mainly, it lacks iterators.)

The template argument, *Nb*, may be any non-negative number, specifying the number of bits (e.g., "0", "12", "1024\*1024").

In the general unoptimized case, storage is allocated in word-sized blocks. Let *B* be the number of bits in a word, then  $(Nb+(B-1))/B$  words will be used for storage. *B* - *NbB* bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.

If you think of bitset as *a simple array of bits*, be aware that your mental picture is reversed: a bitset behaves the same way as bits in integers do, with the bit at index 0 in the *least significant / right-hand* position, and the bit at index *Nb*-1 in the *most significant / left-hand* position. Thus, unlike other containers, a bitset's index *counts from right to left*, to put it very loosely.

This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints *b('a')* is 0001100001 on a modern ASCII system.

```
#include <bitset>
#include <iostream>
#include <sstream>

using namespace std;

int main()
{
 long a = 'a';
 bitset<10> b(a);

 cout << "b('a') is " << b << endl;

 ostringstream s;
 s << b;
 string str = s.str();
 cout << "index 3 in the string is " << str[3] << " but\n"
 << "index 3 in the bitset is " << b[3] << endl;
}
```

Also see: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch33s02.html> for a description of extensions.

Most of the actual code isn't contained in bitset<> itself, but in the base class [\\_Base\\_bitset](#). The base class works with whole words, not with individual bits. This allows us to specialize [\\_Base\\_bitset](#) for the important special case where the bitset is only a single word.

Extra confusion can result due to the fact that the storage for [\\_Base\\_bitset](#) is a regular array, and is indexed as such. This is carefully encapsulated.

Definition at line 722 of file `bitset`.

## 5.402.2 Constructor & Destructor Documentation

**5.402.2.1** `template<size_t _Nb> constexpr std::bitset<_Nb>::bitset ( )  
[inline]`

All bits set to zero.

Definition at line 816 of file `bitset`.

**5.402.2.2** `template<size_t _Nb> constexpr std::bitset<_Nb>::bitset (   
unsigned long long __val ) [inline]`

Initial bits bitwise-copied from a single word (others set to zero).

Definition at line 821 of file `bitset`.

**5.402.2.3** `template<size_t _Nb> template<class _CharT, class _Traits, class  
_Alloc> std::bitset<_Nb>::bitset ( const std::basic_string<  
_CharT, _Traits, _Alloc> & __s, size_t __position = 0 )  
[inline, explicit]`

Use a subset of a string.

### Parameters

*s* A string of 0 and 1 characters.

*position* Index of the first character in *s* to use; defaults to zero.

### Exceptions

[std::out\\_of\\_range](#) If *pos* is bigger the size of *s*.

[std::invalid\\_argument](#) If a character appears in the string which is neither 0 nor 1.

Definition at line 840 of file `bitset`.

**5.402.2.4** `template<size_t _Nb> template<class _CharT, class _Traits, class _Alloc> std::bitset<_Nb>::bitset ( const std::basic_string<_CharT, _Traits, _Alloc> & __s, size_t __position, size_t __n ) [inline]`

Use a subset of a string.

#### Parameters

- s* A string of 0 and 1 characters.
- position* Index of the first character in *s* to use.
- n* The number of characters to copy.

#### Exceptions

- std::out\_of\_range* If *pos* is bigger the size of *s*.
- std::invalid\_argument* If a character appears in the string which is neither 0 nor 1.

Definition at line 862 of file `bitset`.

**5.402.2.5** `template<size_t _Nb> template<typename _CharT> std::bitset<_Nb>::bitset ( const _CharT * __str, typename std::basic_string<_CharT>::size_type __n = std::basic_string<_CharT>::npos, _CharT __zero = _CharT('0'), _CharT __one = _CharT('1') ) [inline, explicit]`

Construct from a character array.

#### Parameters

- str* An array of characters *zero* and *one*.
- n* The number of characters to use.
- zero* The character corresponding to the value 0.
- one* The character corresponding to the value 1.

#### Exceptions

- std::invalid\_argument* If a character appears in the string which is neither *zero* nor *one*.

Definition at line 898 of file `bitset`.

### 5.402.3 Member Function Documentation

**5.402.3.1** `template<size_t _Nb> bool std::bitset<_Nb>::all ( ) const`  
`[inline]`

Tests whether all the bits are on.

#### Returns

True if all the bits are set.

Definition at line 1290 of file `bitset`.

**5.402.3.2** `template<size_t _Nb> bool std::bitset<_Nb>::any ( ) const`  
`[inline]`

Tests whether any of the bits are on.

#### Returns

True if at least one bit is set.

Definition at line 1298 of file `bitset`.

**5.402.3.3** `template<size_t _Nb> size_t std::bitset<_Nb>::count ( ) const`  
`[inline]`

Returns the number of bits which are set.

Definition at line 1250 of file `bitset`.

**5.402.3.4** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::flip (`  
`size_t __position ) [inline]`

Toggles a given bit to its opposite value.

#### Parameters

*position* The index of the bit.

### Exceptions

*[std::out\\_of\\_range](#)* If *pos* is bigger the size of the set.

Definition at line 1090 of file `bitset`.

**5.402.3.5** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::flip ( )`  
`[inline]`

Toggles every bit to its opposite value.

Definition at line 1077 of file `bitset`.

**5.402.3.6** `template<size_t _Nb> bool std::bitset<_Nb>::none ( ) const`  
`[inline]`

Tests whether any of the bits are on.

### Returns

True if none of the bits are set.

Definition at line 1306 of file `bitset`.

**5.402.3.7** `template<size_t _Nb> bool std::bitset<_Nb>::operator!= ( const`  
`bitset<_Nb> & __rhs ) const [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1265 of file `bitset`.

**5.402.3.8** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>`  
`>::operator&= ( const bitset<_Nb> & __rhs ) [inline]`

Operations on bitsets.

### Parameters

*rhs* A same-sized `bitset`.

These should be self-explanatory.

Definition at line 924 of file bitset.

**5.402.3.9** `template<size_t _Nb> bitset<_Nb> std::bitset<_Nb>::operator<<( size_t __position ) const [inline]`

Self-explanatory.

Definition at line 1312 of file bitset.

**5.402.3.10** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::operator<=<( size_t __position ) [inline]`

Operations on bitsets.

#### Parameters

*position* The number of places to shift.

These should be self-explanatory.

Definition at line 953 of file bitset.

**5.402.3.11** `template<size_t _Nb> bool std::bitset<_Nb>::operator==( const bitset<_Nb> & __rhs ) const [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1261 of file bitset.

**5.402.3.12** `template<size_t _Nb> bitset<_Nb> std::bitset<_Nb>::operator>>( size_t __position ) const [inline]`

Self-explanatory.

Definition at line 1316 of file bitset.

**5.402.3.13** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::operator>>= ( size_t __position ) [inline]`

Operations on bitsets.

#### Parameters

*position* The number of places to shift.

These should be self-explanatory.

Definition at line 966 of file bitset.

**5.402.3.14** `template<size_t _Nb> bool std::bitset<_Nb>::operator[] ( size_t __position ) const [inline]`

Array-indexing support.

#### Parameters

*position* Index into the bitset.

#### Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

#### Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

Definition at line 1122 of file bitset.

**5.402.3.15** `template<size_t _Nb> reference std::bitset<_Nb>::operator[] ( size_t __position ) [inline]`

Array-indexing support.

**Parameters**

*position* Index into the bitset.

**Returns**

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

**Note**

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

Definition at line 1118 of file `bitset`.

**5.402.3.16** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::operator^=( const bitset<_Nb> & __rhs ) [inline]`

Operations on bitsets.

**Parameters**

*rhs* A same-sized bitset.

These should be self-explanatory.

Definition at line 938 of file `bitset`.

**5.402.3.17** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::operator|=( const bitset<_Nb> & __rhs ) [inline]`

Operations on bitsets.

**Parameters**

*rhs* A same-sized bitset.

These should be self-explanatory.

Definition at line 931 of file `bitset`.

**5.402.3.18** `template<size_t _Nb> bitset<_Nb> std::bitset<_Nb>::operator~  
( ) const [inline]`

See the no-argument [flip\(\)](#).

Definition at line 1099 of file `bitset`.

**5.402.3.19** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::reset (  
) [inline]`

Sets every bit to false.

Definition at line 1052 of file `bitset`.

**5.402.3.20** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::reset (  
size_t __position ) [inline]`

Sets a given bit to false.

#### Parameters

*position* The index of the bit.

#### Exceptions

[std::out\\_of\\_range](#) If *pos* is bigger the size of the set.

Same as writing `set (pos, false)`.

Definition at line 1066 of file `bitset`.

**5.402.3.21** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::set ( )  
[inline]`

Sets every bit to true.

Definition at line 1027 of file `bitset`.

**5.402.3.22** `template<size_t _Nb> bitset<_Nb>& std::bitset<_Nb>::set ( size_t __position, bool __val = true ) [inline]`

Sets a given bit to a particular value.

#### Parameters

*position* The index of the bit.

*val* Either true or false, defaults to true.

#### Exceptions

[\*std::out\\_of\\_range\*](#) If *pos* is bigger the size of the set.

Definition at line 1041 of file `bitset`.

**5.402.3.23** `template<size_t _Nb> constexpr size_t std::bitset<_Nb>::size ( ) const [inline]`

Returns the total number of bits.

Definition at line 1255 of file `bitset`.

**5.402.3.24** `template<size_t _Nb> bool std::bitset<_Nb>::test ( size_t __position ) const [inline]`

Tests the value of a bit.

#### Parameters

*position* The index of a bit.

#### Returns

The value at *pos*.

#### Exceptions

[\*std::out\\_of\\_range\*](#) If *pos* is bigger the size of the set.

Definition at line 1276 of file `bitset`.

**5.402.3.25** `template<size_t _Nb> template<class _CharT, class _Traits, class _Alloc> std::basic_string<_CharT, _Traits, _Alloc> std::bitset<_Nb>::to_string ( ) const [inline]`

Returns a character interpretation of the bitset.

#### Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

Definition at line 1152 of file `bitset`.

**5.402.3.26** `template<size_t _Nb> unsigned long std::bitset<_Nb>::to_ulong ( ) const [inline]`

Returns a numerical interpretation of the bitset.

#### Returns

The integral equivalent of the bits.

#### Exceptions

*[std::overflow\\_error](#)* If there are too many bits to be represented in an unsigned long.

Definition at line 1133 of file `bitset`.

### 5.403.1 Detailed Description

**template<size\_t \_Nb> class std::bitset<\_Nb>::reference**

This encapsulates the concept of a single bit. An instance of this class is a proxy for an actual bit; this way the individual bit operations are done as faster word-size bitwise instructions.

Most users will never need to use this class directly; conversions to and from `bool` are automatic and should be transparent. Overloaded operators help to preserve the illusion.

(On a typical system, this *bit reference* is 64 times the size of an actual bit. Ha.)

Definition at line 753 of file `bitset`.

#### 5.404.1 Detailed Description

`template<typename _RealType = double> class std::cauchy_distribution< _RealType >`

A `cauchy_distribution` random number distribution. The formula for the normal probability mass function is  $p(x|a, b) = (\pi b (1 + (\frac{x-a}{b})^2))^{-1}$

Definition at line 2681 of file `random.h`.

#### 5.404.2 Member Typedef Documentation

**5.404.2.1** `template<typename _RealType = double> typedef _RealType  
std::cauchy_distribution< _RealType >::result_type`

The type of the range of the distribution.

Definition at line 2688 of file `random.h`.

#### 5.404.3 Member Function Documentation

**5.404.3.1** `template<typename _RealType = double> result_type  
std::cauchy_distribution< _RealType >::max() const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2772 of file `random.h`.

**5.404.3.2** `template<typename _RealType = double> result_type  
std::cauchy_distribution< _RealType >::min() const [inline]`

## 5.404 `std::cauchy_distribution<_RealType>` Class Template Reference 2384

---

Returns the greatest lower bound value of the distribution.

Definition at line 2765 of file random.h.

```
5.404.3.3 template<typename _RealType = double> template<typename
 _UniformRandomNumberGenerator > result_type
 std::cauchy_distribution< _RealType >::operator() (
 _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

Definition at line 2780 of file random.h.

References `std::cauchy_distribution<_RealType>::operator()()`, and `std::cauchy_distribution<_RealType>::param()`.

Referenced by `std::cauchy_distribution<_RealType>::operator()()`.

```
5.404.3.4 template<typename _RealType = double> void
 std::cauchy_distribution< _RealType >::param (const param_type
 & __param) [inline]
```

Sets the parameter set of the distribution.

### Parameters

**`__param`** The new parameter set of the distribution.

Definition at line 2758 of file random.h.

```
5.404.3.5 template<typename _RealType = double> param_type
 std::cauchy_distribution< _RealType >::param () const
 [inline]
```

Returns the parameter set of the distribution.

Definition at line 2750 of file random.h.

Referenced by `std::cauchy_distribution<_RealType>::operator()()`, `std::operator==( )`, and `std::operator>>()`.

#### 5.406.1 Detailed Description

`template<class _CharT> struct std::char_traits< _CharT >`

Basis for explicit traits specializations.

##### Note

For any given actual character type, this definition is probably wrong. Since this is just a thin wrapper around `__gnu_cxx::char_traits`, it is possible to achieve a more appropriate definition by specializing `__gnu_cxx::char_traits`.

See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt05ch13s03.html> for advice on how to make use of this class for *unusual* character types. Also, check out [include/ext/pod\\_char\\_traits.h](#).

Definition at line 229 of file `char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

#### 5.407 `std::char_traits< __gnu_cxx::character< V, I, S > >` Struct Template Reference

`char_traits<__gnu_cxx::character>` specialization.

### 5.410.1 Detailed Description

`template<typename _RealType = double> class std::chi_squared_distribution<  
_RealType >`

A `chi_squared_distribution` random number distribution. The formula for the normal probability mass function is  $p(x|n) = \frac{x^{(n/2)-1} e^{-x/2}}{\Gamma(n/2) 2^{n/2}}$

Definition at line 2516 of file random.h.

## 5.410 `std::chi_squared_distribution<_RealType>` Class Template Reference 2392

### 5.410.2 Member Typedef Documentation

**5.410.2.1** `template<typename _RealType = double> typedef _RealType  
std::chi_squared_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 2523 of file random.h.

### 5.410.3 Member Function Documentation

**5.410.3.1** `template<typename _RealType = double> result_type  
std::chi_squared_distribution<_RealType>::max ( ) const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 2596 of file random.h.

**5.410.3.2** `template<typename _RealType = double> result_type  
std::chi_squared_distribution<_RealType>::min ( ) const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2589 of file random.h.

**5.410.3.3** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator> result_type  
std::chi_squared_distribution<_RealType>::operator() (  
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 2604 of file random.h.

**5.410.3.4** `template<typename _RealType = double> param_type  
std::chi_squared_distribution<_RealType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 2574 of file random.h.

**5.410.3.5** `template<typename _RealType = double> void  
std::chi_squared_distribution<_RealType>::param ( const  
param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

*\_\_param* The new parameter set of the distribution.

Definition at line 2582 of file random.h.

**5.410.3.6** `template<typename _RealType = double> void  
std::chi_squared_distribution<_RealType>::reset ( ) [inline]`

Resets the distribution state.

Definition at line 2560 of file random.h.

References std::gamma\_distribution<\_RealType>::reset().

#### 5.410.4 Friends And Related Function Documentation

**5.410.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
( std::basic_ostream<_CharT, _Traits> & , const  
std::chi_squared_distribution<_RealType1> & ) [friend]`

Inserts a chi\_squared\_distribution random number distribution `__x` into the output stream `__os`.

## 5.410 `std::chi_squared_distribution<_RealType>` Class Template Reference 2394

### Parameters

- `__os` An output stream.
- `__x` A `chi_squared_distribution` random number distribution.

### Returns

The output stream with the state of `__x` inserted or in an error state.

**5.410.4.2** `template<typename _RealType = double> template<typename _RealType1> bool operator==( const std::chi_squared_distribution<_RealType1> & __d1, const std::chi_squared_distribution<_RealType1> & __d2 ) [friend]`

Return true if two Chi-squared distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2624 of file `random.h`.

**5.410.4.3** `template<typename _RealType = double> template<typename _RealType1, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits>& operator>>( std::basic_istream<_CharT, _Traits> & , std::chi_squared_distribution<_RealType1> & ) [friend]`

Extracts a `chi_squared_distribution` random number distribution `__x` from the input stream `__is`.

### Parameters

- `__is` An input stream.
- `__x` A `chi_squared_distribution` random number generator engine.

### Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following file:

- [random.h](#)

### 5.417.1 Detailed Description

`template<typename _InternT, typename _ExternT, typename _StateT> class std::codecvt<_InternT, _ExternT, _StateT >`

Primary class template `codecvt`.

NB: Generic, mostly useless implementation.

Definition at line 277 of file `codecvt.h`.

### 5.417.2 Member Function Documentation

**5.417.2.1** `template<typename _InternT, typename _ExternT, typename _StateT> virtual result std::codecvt<_InternT, _ExternT, _StateT>::do_out ( state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const` `[protected, virtual]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

#### See also

[out](#) for more information.

Implements `std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >`.

**5.417.2.2** `template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::in ( state_type & __state, const extern_type * __from, const extern_type * __from_end, const extern_type *& __from_next, intern_type * __to, intern_type * __to_end, intern_type *& __to_next ) const` `[inline, inherited]`

Convert from external to internal character set.

### 5.417 `std::codecvt<_InternT, _ExternT, _StateT >` Class Template Reference 2404

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

*state* Persistent conversion state data.  
*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

#### Returns

`codecvt_base::result`.

Definition at line 197 of file `codecvt.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::underflow()`.

**5.417.2.3** `template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::out ( state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const` `[inline, inherited]`

## 5.417 `std::codecvt<_InternT, _ExternT, _StateT >` Class Template Reference 2405

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

### Parameters

- state* Persistent conversion state data.
- from* Start of input.
- from\_end* End of input.
- from\_next* Returns start of unconverted data.
- to* Start of output buffer.
- to\_end* End of output buffer.
- to\_next* Returns start of unused output area.

### Returns

`codecvt_base::result`.

Definition at line 117 of file `codecvt.h`.

```
5.417.2.4 template<typename _InternT, typename _ExternT, typename
 _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT,
 _StateT >::unshift (state_type & __state, extern_type * __to,
 extern_type * __to_end, extern_type *& __to_next) const
 [inline, inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

### Parameters

- state* Persistent conversion state data.
- to* Start of output buffer.
- to\_end* End of output buffer.
- to\_next* Returns start of unused output area.

### Returns

`codecvt_base::result`.

Definition at line 156 of file `codecvt.h`.

#### 5.418.1 Detailed Description

**template<typename \_InternT, typename \_ExternT> class std::codecvt< \_InternT, \_ExternT, encoding\_state >**

`codecvt<InternT, _ExternT, encoding_state>` specialization.

Definition at line 232 of file `codecvt_specializations.h`.

## 5.418.2 Member Function Documentation

**5.418.2.1** `virtual result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::do_out ( state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type * __to, const intern_type * __to_end, const extern_type * __to_next ) const` `[protected, pure virtual, inherited]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

### See also

`do_in` for more information.

**5.418.2.2** `result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::in ( state_type & __state, const extern_type * __from, const extern_type * __from_end, const extern_type * __to, const intern_type * __to_end, const intern_type * __to_next ) const` `[inline, inherited]`

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

### Parameters

*state* Persistent conversion state data.  
*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

### Returns

`codecvt_base::result`.

Definition at line 197 of file `codecvt.h`.

**5.418.2.3** `result std::__codecvt_abstract_base<_InternT, _ExternT, encoding_state >::out ( state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const` [*inline, inherited*]

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

### Parameters

*state* Persistent conversion state data.

*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

### Returns

`codecvt_base::result`.

Definition at line 117 of file `codecvt.h`.

References `std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >::do_out()`.

**5.418.2.4** `result std::__codecvt_abstract_base<_InternT, _ExternT,  
encoding_state >::unshift ( state_type & __state, extern_type *  
__to, extern_type * __to_end, extern_type *& __to_next ) const  
[inline, inherited]`

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

### Parameters

*state* Persistent conversion state data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.

*to\_next* Returns start of unused output area.

### Returns

`codecvt_base::result`.

#### 5.420.1 Detailed Description

**template<> class std::codecvt< wchar\_t, char, mbstate\_t >**

class **codecvt<wchar\_t, char, mbstate\_t>** specialization.

Definition at line 397 of file codecvt.h.

## **5.420.2 Member Function Documentation**

**5.420.2.1** `virtual result std::__codecvt_abstract_base< wchar_t, char, mbstate_t >::do_out ( state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const [protected, pure virtual, inherited]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

### **See also**

out for more information.

**5.420.2.2** `result std::__codecvt_abstract_base< wchar_t, char, mbstate_t >::in ( state_type & __state, const extern_type * __from, const extern_type * __from_end, const extern_type *& __from_next, intern_type * __to, intern_type * __to_end, intern_type *& __to_next ) const [inline, inherited]`

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

**Parameters**

*state* Persistent conversion state data.  
*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

**Returns**

codecvt\_base::result.

Definition at line 197 of file codecvt.h.

**5.420.2.3** `result std::__codecvt_abstract_base< wchar_t, char, mbstate_t  
>::out ( state_type & __state, const intern_type * __from, const  
intern_type * __from_end, const intern_type *& __from_next,  
extern_type * __to, extern_type * __to_end, extern_type *&  
__to_next ) const [inline, inherited]`

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This is analogous to wcsrtombs. It does this by calling codecvt::do\_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt\_base::result. If all the input is converted, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt\_base::partial. Otherwise the conversion failed and codecvt\_base::error is returned.

**Parameters**

*state* Persistent conversion state data.

*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

### Returns

`codecvt_base::result`.

Definition at line 117 of file `codecvt.h`.

**5.420.2.4** `result std::__codecvt_abstract_base< wchar_t , char , mbstate_t  
>::unshift ( state_type & __state, extern_type * __to, extern_type  
* __to_end, extern_type *& __to_next ) const [inline,  
inherited]`

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

### Parameters

*state* Persistent conversion state data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

**Returns**

codecvt\_base::result.

### 5.422.1 Detailed Description

`template<typename _InternT, typename _ExternT, typename _StateT> class std::codecvt_byname<_InternT, _ExternT, _StateT>`

class `codecvt_byname` [22.2.1.6].

Definition at line 457 of file `codecvt.h`.

### 5.422.2 Member Function Documentation

**5.422.2.1** `template<typename _InternT, typename _ExternT, typename _StateT> virtual result std::codecvt<_InternT, _ExternT, _StateT>::do_out ( state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const` [`protected`, `virtual`, `inherited`]

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

#### See also

[out](#) for more information.

Implements `std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>`.

**5.422.2.2** `template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::in ( state_type & __state, const extern_type * __from, const extern_type * __from_end, const extern_type *& __from_next, intern_type * __to, intern_type * __to_end, intern_type *& __to_next ) const` [`inline`, `inherited`]

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

*state* Persistent conversion state data.  
*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

#### Returns

`codecvt_base::result`.

Definition at line 197 of file `codecvt.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::underflow()`.

**5.422.2.3** `template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out ( state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const` `[inline, inherited]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

*state* Persistent conversion state data.  
*from* Start of input.  
*from\_end* End of input.  
*from\_next* Returns start of unconverted data.  
*to* Start of output buffer.  
*to\_end* End of output buffer.  
*to\_next* Returns start of unused output area.

#### Returns

`codecvt_base::result`.

Definition at line 117 of file `codecvt.h`.

```
5.422.2.4 template<typename _InternT, typename _ExternT, typename
_StateT> result std::__codecvt_abstract_base<_InternT, _ExternT,
_StateT>::unshift (state_type & __state, extern_type * __to,
extern_type * __to_end, extern_type *& __to_next) const
[inline, inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

#### Parameters

- state* Persistent conversion state data.
- to* Start of output buffer.
- to\_end* End of output buffer.
- to\_next* Returns start of unused output area.

#### Returns

`codecvt_base::result`.

Definition at line 156 of file `codecvt.h`.

**5.423.1 Detailed Description**

**template<typename \_CharT> class std::collate<\_CharT>**

Facet for localized string comparison. This facet encapsulates the code to compare strings in a localized manner.

The collate template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the collate facet.

Definition at line 618 of file locale\_classes.h.

### 5.423.2 Member Typedef Documentation

#### 5.423.2.1 `template<typename _CharT> typedef _CharT std::collate<_CharT>::char_type`

Public typedefs.

Reimplemented in [std::collate\\_byname<\\_CharT>](#).

Definition at line 624 of file locale\_classes.h.

#### 5.423.2.2 `template<typename _CharT> typedef basic_string<_CharT> std::collate<_CharT>::string_type`

Public typedefs.

Reimplemented in [std::collate\\_byname<\\_CharT>](#).

Definition at line 625 of file locale\_classes.h.

### 5.423.3 Constructor & Destructor Documentation

#### 5.423.3.1 `template<typename _CharT> std::collate<_CharT>::collate ( size_t __refs = 0 ) [inline, explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

##### Parameters

*refs* Passed to the base facet class.

Definition at line 645 of file locale\_classes.h.

#### 5.423.3.2 `template<typename _CharT> std::collate<_CharT>::collate ( _c_locale __cloc, size_t __refs = 0 ) [inline, explicit]`

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

### Parameters

*cloc* The C locale.

*refs* Passed to the base facet class.

Definition at line 659 of file locale\_classes.h.

**5.423.3.3** `template<typename _CharT> virtual std::collate<_CharT>::~~collate( ) [inline, protected, virtual]`

Destructor.

Definition at line 722 of file locale\_classes.h.

### 5.423.4 Member Function Documentation

**5.423.4.1** `template<typename _CharT> int std::collate<_CharT>::compare( const _CharT* __lo1, const _CharT* __hi1, const _CharT* __lo2, const _CharT* __hi2 ) const [inline]`

Compare two strings.

This function compares two strings and returns the result by calling [collate::do\\_compare\(\)](#).

### Parameters

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

### Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 676 of file locale\_classes.h.

**5.423.4.2** `template<typename _CharT> int std::collate<_CharT  
>::do_compare ( const _CharT * __lo1, const _CharT *  
__hi1, const _CharT * __lo2, const _CharT * __hi2 ) const  
[protected, virtual]`

Compare two strings.

This function is a hook for derived classes to change the value returned.

See also

[compare\(\)](#).

#### Parameters

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

#### Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 136 of file locale\_classes.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc >::c_str()`, `std::basic_string<_CharT, _Traits, _Alloc >::data()`, and `std::basic_string<_CharT, _Traits, _Alloc >::length()`.

**5.423.4.3** `template<typename _CharT> long std::collate<_CharT  
>::do_hash ( const _CharT * __lo, const _CharT * __hi ) const  
[protected, virtual]`

Return hash of a string.

This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

#### Parameters

*lo* Start of string.

*hi* End of string.

**Returns**

Hash value.

Definition at line 231 of file locale\_classes.tcc.

**5.423.4.4** `template<typename _CharT> collate<_CharT>::string_type  
std::collate<_CharT>::do_transform ( const _CharT * __lo, const  
_CharT * __hi ) const [protected, virtual]`

Transform string to comparable form.

This function is a hook for derived classes to change the value returned.

**Parameters**

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

**Returns**

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 175 of file locale\_classes.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::c_str()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::basic_string<_CharT, _Traits, _Alloc>::length()`, and `std::basic_string<_CharT, _Traits, _Alloc>::push_back()`.

**5.423.4.5** `template<typename _CharT> long std::collate<_CharT>::hash (  
const _CharT * __lo, const _CharT * __hi ) const [inline]`

Return hash of a string.

This function computes and returns a hash on the input string. It does so by returning [collate::do\\_hash\(\)](#).

**Parameters**

*lo* Start of string.

*hi* End of string.

### Returns

Hash value.

Definition at line 709 of file `locale_classes.h`.

**5.423.4.6** `template<typename _CharT> string_type std::collate<_CharT  
>::transform ( const _CharT * __lo, const _CharT * __hi ) const  
[inline]`

Transform string to comparable form.

This function is a wrapper for `strxfrm` functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning [collate::do\\_transform\(\)](#).

### Parameters

*lo* Start of string.

*hi* End of string.

### Returns

Transformed `string_type`.

Definition at line 695 of file `locale_classes.h`.

Referenced by `std::regex_traits<_Ch_type>::transform()`.

#### 5.424.1 Detailed Description

**template<typename \_CharT> class std::collate\_byname<\_CharT>**

class [collate\\_byname](#) [22.2.4.2].

Definition at line 794 of file locale\_classes.h.

### 5.424.2 Member Typedef Documentation

#### 5.424.2.1 `template<typename _CharT> typedef _CharT std::collate_byname<_CharT>::char_type`

Public typedefs.

Reimplemented from `std::collate<_CharT>`.

Definition at line 799 of file `locale_classes.h`.

#### 5.424.2.2 `template<typename _CharT> typedef basic_string<_CharT> std::collate_byname<_CharT>::string_type`

Public typedefs.

Reimplemented from `std::collate<_CharT>`.

Definition at line 800 of file `locale_classes.h`.

### 5.424.3 Member Function Documentation

#### 5.424.3.1 `template<typename _CharT> int std::collate<_CharT>::compare ( const _CharT * __lo1, const _CharT * __hi1, const _CharT * __lo2, const _CharT * __hi2 ) const [inline, inherited]`

Compare two strings.

This function compares two strings and returns the result by calling `collate::do_compare()`.

#### Parameters

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

#### Returns

1 if `string1 > string2`, -1 if `string1 < string2`, else 0.

Definition at line 676 of file `locale_classes.h`.

**5.424.3.2** `template<typename _CharT> int std::collate<_CharT  
>::do_compare ( const _CharT * __lo1, const _CharT *  
__hi1, const _CharT * __lo2, const _CharT * __hi2 ) const  
[protected, virtual, inherited]`

Compare two strings.

This function is a hook for derived classes to change the value returned.

See also

[compare\(\)](#).

#### Parameters

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

#### Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 136 of file locale\_classes.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::c_str()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::basic_string<_CharT, _Traits, _Alloc>::length()`.

**5.424.3.3** `template<typename _CharT> long std::collate<_CharT  
>::do_hash ( const _CharT * __lo, const _CharT * __hi ) const  
[protected, virtual, inherited]`

Return hash of a string.

This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

#### Parameters

*lo* Start of string.

*hi* End of string.

**Returns**

Hash value.

Definition at line 231 of file locale\_classes.tcc.

**5.424.3.4** `template<typename _CharT> collate< _CharT >::string_type  
std::collate< _CharT >::do_transform( const _CharT * __lo, const  
_CharT * __hi ) const [protected, virtual, inherited]`

Transform string to comparable form.

This function is a hook for derived classes to change the value returned.

**Parameters**

*lo1* Start of string 1.

*hi1* End of string 1.

*lo2* Start of string 2.

*hi2* End of string 2.

**Returns**

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 175 of file locale\_classes.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::append()`, `std::basic_string< _CharT, _Traits, _Alloc >::c_str()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::basic_string< _CharT, _Traits, _Alloc >::length()`, and `std::basic_string< _CharT, _Traits, _Alloc >::push_back()`.

**5.424.3.5** `template<typename _CharT> long std::collate< _CharT >::hash (   
const _CharT * __lo, const _CharT * __hi ) const [inline,   
inherited]`

Return hash of a string.

This function computes and returns a hash on the input string. It does so by returning [collate::do\\_hash\(\)](#).

**Parameters**

*lo* Start of string.

*hi* End of string.

#### Returns

Hash value.

Definition at line 709 of file locale\_classes.h.

**5.424.3.6** `template<typename _CharT> string_type std::collate< _CharT  
>::transform ( const _CharT * __lo, const _CharT * __hi ) const  
[inline, inherited]`

Transform string to comparable form.

This function is a wrapper for strxfrm functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning [collate::do\\_transform\(\)](#).

#### Parameters

*lo* Start of string.

*hi* End of string.

#### Returns

Transformed string\_type.

Definition at line 695 of file locale\_classes.h.

Referenced by `std::regex_traits< _Ch_type >::transform()`.

### 5.424.4 Member Data Documentation

**5.424.4.1** `template<typename _CharT> locale::id std::collate< _CharT >::id  
[static, inherited]`

Numpunct facet id.

Definition at line 635 of file locale\_classes.h.

### 5.425.1 Detailed Description

`template<typename _Tp> struct std::complex< _Tp >`

Template to represent complex numbers.

Specializations for float, double, and long double are part of the library. Results with any other type are not guaranteed.

### Parameters

***`Tp`*** Type of real and imaginary values.

Definition at line 124 of file `complex`.

### 5.425.2 Member Typedef Documentation

#### 5.425.2.1 `template<typename _Tp> typedef _Tp std::complex<_Tp>::value_type`

Value typedef.

Definition at line 127 of file `complex`.

### 5.425.3 Constructor & Destructor Documentation

#### 5.425.3.1 `template<typename _Tp> constexpr std::complex<_Tp>::complex ( const _Tp & __r = _Tp(), const _Tp & __i = _Tp() ) [inline]`

Default constructor. First parameter is x, second parameter is y. /// Unspecified parameters default to 0.

Definition at line 131 of file `complex`.

#### 5.425.3.2 `template<typename _Tp> template<typename _Up> constexpr std::complex<_Tp>::complex ( const complex<_Up> & __z ) [inline]`

Copy constructor.

Definition at line 138 of file `complex`.

### 5.425.4 Member Function Documentation

#### 5.425.4.1 `template<typename _Tp> complex<_Tp>& std::complex<_Tp>::operator+=( const _Tp & __t ) [inline]`

Add *t* to this complex number.

Definition at line 181 of file `complex`.

#### 5.425.4.2 `template<typename _Tp> complex<_Tp>& std::complex<_Tp>::operator-=( const _Tp & __t ) [inline]`

Subtract  $t$  from this complex number.

Definition at line 190 of file `complex`.

### Friends

- class [locale::\\_Impl](#)

#### 5.433.1 Detailed Description

**template<typename \_CharT> class std::ctype<\_CharT>**

Primary class template ctype facet.

This template class defines classification and conversion functions for character sets. It wraps ctype functionality. Ctype gets used by streams for many I/O operations. This template provides the protected virtual functions the developer will have to replace in a derived class or specialization to make a working facet. The public functions that access them are defined in [\\_\\_ctype\\_abstract\\_base](#), to allow for implementation flexibility. See [ctype<wchar\\_t>](#) for an example. The functions are documented in [\\_\\_ctype\\_abstract\\_base](#).

Note: implementations are provided for all the protected virtual functions, but will likely not be useful.

Definition at line 606 of file locale\_facets.h.

#### 5.433.2 Member Typedef Documentation

**5.433.2.1 template<typename \_CharT> typedef \_CharT std::ctype<\_CharT>::char\_type**

Typedef for the template parameter.

Reimplemented from [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

Definition at line 610 of file locale\_facets.h.

### 5.433.3 Member Function Documentation

**5.433.3.1** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_is ( const char_type * __lo, const char_type * __hi, mask * __vec ) const [protected, virtual]`

Return a mask array.

This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

[do\\_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do\\_is\(\)](#) must always return the same result for the same input.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

#### Returns

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.433.3.2** `template<typename _CharT> virtual bool std::ctype<_CharT>::do_is ( mask __m, char_type __c ) const [protected, virtual]`

Test char\_type classification.

This function finds a mask M for *c* and compares it to mask *m*.

[do\\_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do\\_is\(\)](#) must always return the same result for the same input.

#### Parameters

- c* The char\_type to find the mask of.

*m* The mask to compare against.

### Returns

(M & m) != 0.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.433.3.3** `template<typename _CharT> virtual char std::ctype<_CharT>::do_narrow ( char_type, char __dfault ) const [protected, virtual]`

Narrow char\_type to char.

This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead.

[do\\_narrow\(\)](#) is a hook for a derived facet to change the behavior of narrowing. [do\\_narrow\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

### Parameters

*c* The char\_type to convert.

*dfault* Char to return if conversion fails.

### Returns

The converted char.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

Referenced by [std::ctype<char>::narrow\(\)](#).

**5.433.3.4** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_narrow ( const char_type * __lo, const char_type * __hi, char __dfault, char * __dest ) const [protected, virtual]`

Narrow char\_type array to char.

This virtual function converts each char\_type in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *dfault* is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

#### Returns

*hi*.

Implements `std::__ctype_abstract_base<_CharT>`.

**5.433.3.5** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_scan_is( mask __m, const char_type* __lo, const char_type* __hi ) const` `[protected, virtual]`

Find `char_type` matching mask.

This function searches for and returns the first `char_type` `c` in `[lo,hi)` for which `is(m,c)` is true.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

#### Parameters

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

#### Returns

Pointer to a matching `char_type` if found, else *hi*.

Implements `std::__ctype_abstract_base<_CharT>`.

**5.433.3.6** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_scan_not ( mask __m, const char_type * __lo, const char_type * __hi ) const [protected, virtual]`

Find char\_type not matching mask.

This function searches for and returns a pointer to the first char\_type c of [lo,hi) for which is(m,c) is false.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

#### Parameters

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

Pointer to a non-matching char\_type if found, else *hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.433.3.7** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_tolower ( char_type * __lo, const char_type * __hi ) const [protected, virtual]`

Convert array to lowercase.

This virtual function converts each char\_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

### 5.433.3.8 template<typename \_CharT> virtual char\_type std::ctype< \_CharT >::do\_tolower ( char\_type ) const [protected, virtual]

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

#### Parameters

*c* The char\_type to convert.

#### Returns

The lowercase char\_type if convertible, else *c*.

Implements [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >](#).

Referenced by [std::ctype< char >::tolower\(\)](#).

### 5.433.3.9 template<typename \_CharT> virtual const char\_type\* std::ctype< \_CharT >::do\_toupper ( char\_type \* \_\_lo, const char\_type \* \_\_hi ) const [protected, virtual]

Convert array to uppercase.

This virtual function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched.

[do\\_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do\\_toupper\(\)](#) must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >](#).

**5.433.3.10** `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_toupper ( char_type ) const [protected, virtual]`

Convert to uppercase.

This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

#### Parameters

*c* The `char_type` to convert.

#### Returns

The uppercase `char_type` if convertible, else *c*.

Implements `std::__ctype_abstract_base<_CharT>`.

Referenced by `std::ctype<char>::toupper()`.

**5.433.3.11** `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_widen ( char ) const [protected, virtual]`

Widen char.

This virtual function converts the `char` to `char_type` using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

*c* The `char` to convert.

#### Returns

The converted `char_type`

Implements `std::__ctype_abstract_base<_CharT>`.

Referenced by `std::ctype<char>::widen()`.

**5.433.3.12** `template<typename _CharT> virtual const char* std::ctype<_CharT>::do_widen ( const char * __lo, const char * __hi, char_type * __dest ) const [protected, virtual]`

Widen char array.

This function converts each char in the input to char\_type using the simplest reasonable transformation.

[do\\_widen\(\)](#) is a hook for a derived facet to change the behavior of widening. [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

#### Parameters

- lo* Pointer to start range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

#### Returns

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.433.3.13** `template<typename _CharT> bool std::__ctype_abstract_base<_CharT>::is ( mask __m, char_type __c ) const [inline, inherited]`

Test char\_type classification.

This function finds a mask M for c and compares it to mask m. It does so by returning the value of [ctype<char\\_type>::do\\_is\(\)](#).

#### Parameters

- c* The char\_type to compare the mask of.
- m* The mask to compare against.

#### Returns

(M & m) != 0.

Definition at line 163 of file locale\_facets.h.

Referenced by std::regex\_traits<\_Ch\_type>::isctype(), and std::basic\_istream<\_CharT, \_Traits>::sentry::sentry().

**5.433.3.14** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base<_CharT>::is ( const char_type *  
__lo, const char_type * __hi, mask * __vec ) const [inline,  
inherited]`

Return a mask array.

This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of `ctype<char_type>::do_is()`.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

#### Returns

*hi*.

Definition at line 180 of file locale\_facets.h.

**5.433.3.15** `template<typename _CharT> char std::__ctype_abstract_base<  
_CharT>::narrow ( char_type __c, char __dfault ) const  
[inline, inherited]`

Narrow char\_type to char.

This function converts the char\_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning `ctype<char_type>::do_narrow(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- c* The char\_type to convert.
- dfault* Char to return if conversion fails.

**Returns**

The converted char.

Definition at line 325 of file locale\_facets.h.

Referenced by std::time\_put<\_CharT, \_OutIter>::put().

**5.433.3.16** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base<_CharT>::narrow ( const char_type  
* __lo, const char_type * __hi, char __dfault, char * __to ) const  
[inline, inherited]`

Narrow array to char array.

This function converts each char\_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char\_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char\_type>::do\_narrow(lo, hi, dfault, to).

Note: this is not what you want for codepage conversions. See codecvt for that.

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*dfault* Char to use if conversion fails.

*to* Pointer to the destination array.

**Returns**

*hi*.

Definition at line 347 of file locale\_facets.h.

**5.433.3.17** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base<_CharT>::scan_is ( mask __m,  
const char_type * __lo, const char_type * __hi ) const [inline,  
inherited]`

Find char\_type matching a mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char\_type>::do\_scan\_is().

**Parameters**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns**

Pointer to matching char\_type if found, else *hi*.

Definition at line 196 of file locale\_facets.h.

```
5.433.3.18 template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::scan_not (mask __m,
const char_type * __lo, const char_type * __hi) const [inline,
inherited]
```

Find char\_type not matching a mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is false. It does so by returning [ctype<char\\_type>::do\\_scan\\_not\(\)](#).

**Parameters**

- m* The mask to compare against.
- lo* Pointer to first char in range.
- hi* Pointer to end of range.

**Returns**

Pointer to non-matching char if found, else *hi*.

Definition at line 212 of file locale\_facets.h.

```
5.433.3.19 template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::tolower (char_type *
__lo, const char_type * __hi) const [inline, inherited]
```

Convert array to lowercase.

This function converts each char\_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched. It does so by returning [ctype<char\\_type>::do\\_toupper\(lo, hi\)](#).

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns**

*hi*.

Definition at line 270 of file locale\_facets.h.

**5.433.3.20** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::tolower ( char_type __c ) const [inline, inherited]`

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char\_type>::do\_toupper(c).

**Parameters**

*c* The char\_type to convert.

**Returns**

The lowercase char\_type if convertible, else *c*.

Definition at line 255 of file locale\_facets.h.

**5.433.3.21** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::toupper ( char_type * __lo, const char_type * __hi ) const [inline, inherited]`

Convert array to uppercase.

This function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char\_type>::do\_toupper(lo, hi).

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Definition at line 241 of file `locale_facets.h`.

**5.433.3.22** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::toupper ( char_type __c ) const [inline, inherited]`

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

#### Parameters

*c* The `char_type` to convert.

#### Returns

The uppercase `char_type` if convertible, else *c*.

Definition at line 226 of file `locale_facets.h`.

**5.433.3.23** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::widen ( char __c ) const [inline, inherited]`

Widen `char` to `char_type`.

This function converts the `char` argument to `char_type` using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

*c* The `char` to convert.

#### Returns

The converted `char_type`.

Definition at line 287 of file locale\_facets.h.

Referenced by std::money\_get<\_CharT, \_InIter>::do\_get(), std::time\_put<\_CharT, \_OutIter>::do\_put(), std::money\_put<\_CharT, \_OutIter>::do\_put(), std::regex\_traits<\_Ch\_type>::isctype(), and std::operator<<().

**5.433.3.24** `template<typename _CharT> const char* std::__ctype_abstract_base<_CharT>::widen ( const char * __lo, const char * __hi, char_type * __to ) const [inline, inherited]`

Widen array to char\_type.

This function converts each char in the input to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 306 of file locale\_facets.h.

#### 5.433.4 Member Data Documentation

**5.433.4.1** `template<typename _CharT> locale::id std::ctype<_CharT>::id [static]`

The facet id for ctype<char\_type>

Definition at line 614 of file locale\_facets.h.

The documentation for this class was generated from the following file:

- [locale\\_facets.h](#)

### 5.434 `std::ctype< char >` Class Template Reference

The `ctype<char>` specialization.

This class defines classification and conversion functions for the `char` type. It gets used by `char` streams for many I/O operations. The `char` specialization provides a number of optimizations as well.

#### 5.434.1 Detailed Description

`template<> class std::ctype< char >`

The `ctype<char>` specialization.

This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.

Definition at line 675 of file `locale_facets.h`.

### 5.434.2 Member Typedef Documentation

#### 5.434.2.1 `typedef char std::ctype< char >::char_type`

Typedef for the template parameter `char`.

Definition at line 680 of file `locale_facets.h`.

### 5.434.3 Constructor & Destructor Documentation

#### 5.434.3.1 `std::ctype< char >::ctype ( const mask * __table = 0, bool __del = false, size_t __refs = 0 ) [explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

##### Parameters

*table* If non-zero, table is used as the per-char mask. Else [classic\\_table\(\)](#) is used.

*del* If true, passes ownership of table to this facet.

*refs* Passed to the base facet class.

#### 5.434.3.2 `std::ctype< char >::ctype ( __c_locale __cloc, const mask * __table = 0, bool __del = false, size_t __refs = 0 ) [explicit]`

Constructor performs static initialization.

This constructor is used to construct the initial C locale facet.

##### Parameters

*cloc* Handle to C locale data.

*table* If non-zero, table is used as the per-char mask.

*del* If true, passes ownership of table to this facet.

*refs* Passed to the base facet class.

### 5.434.3.3 virtual std::ctype< char >::~~ctype( ) [protected, virtual]

Destructor.

This function deletes [table\(\)](#) if *del* was true in the constructor.

### 5.434.4 Member Function Documentation

#### 5.434.4.1 static const mask\* std::ctype< char >::classic\_table( ) throw () [static]

Returns a pointer to the C locale mask table.

#### 5.434.4.2 virtual char std::ctype< char >::do\_narrow( char\_type \_\_c, char ) const [inline, protected, virtual]

Narrow char.

This virtual function converts the char to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an underived [ctype<char>](#) facet, *c* will be returned unchanged.

[do\\_narrow\(\)](#) is a hook for a derived facet to change the behavior of narrowing. [do\\_narrow\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See [codecvt](#) for that.

#### Parameters

*c* The char to convert.

*dfault* Char to return if conversion fails.

#### Returns

The converted char.

Definition at line 1125 of file [locale\\_facets.h](#).

#### 5.434.4.3 virtual const char\_type\* std::ctype< char >::do\_narrow( const char\_type \* \_\_lo, const char\_type \* \_\_hi, char, char \* \_\_dest ) const [inline, protected, virtual]

Narrow char array to char array.

This virtual function converts each char in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 1151 of file `locale_facets.h`.

**5.434.4.4** `virtual const char_type* std::ctype< char >::do_tolower ( char_type * __lo, const char_type * __hi ) const [protected, virtual]`

Convert array to lowercase.

This virtual function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

#### Parameters

- lo* Pointer to first char in range.
- hi* Pointer to end of range.

#### Returns

*hi*.

#### 5.434.4.5 virtual char\_type std::ctype< char >::do\_tolower ( char\_type ) const [protected, virtual]

Convert to lowercase.

This virtual function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

##### Parameters

*c* The char to convert.

##### Returns

The lowercase char if convertible, else *c*.

#### 5.434.4.6 virtual const char\_type\* std::ctype< char >::do\_toupper ( char\_type \* \_\_lo, const char\_type \* \_\_hi ) const [protected, virtual]

Convert array to uppercase.

This virtual function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

[do\\_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do\\_toupper\(\)](#) must always return the same result for the same input.

##### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

##### Returns

*hi*.

#### 5.434.4.7 virtual char\_type std::ctype< char >::do\_toupper ( char\_type ) const [protected, virtual]

Convert to uppercase.

This virtual function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

#### Parameters

*c* The char to convert.

#### Returns

The uppercase char if convertible, else *c*.

#### 5.434.4.8 `virtual char_type std::ctype< char >::do_widen ( char __c ) const [inline, protected, virtual]`

Widen char.

This virtual function converts the char to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be returned unchanged.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

*c* The char to convert.

#### Returns

The converted character.

Definition at line 1076 of file `locale_facets.h`.

#### 5.434.4.9 `virtual const char* std::ctype< char >::do_widen ( const char * __lo, const char * __hi, char_type * __dest ) const [inline, protected, virtual]`

Widen char array.

This function converts each char in the range [lo,hi) to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be copied unchanged.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 1099 of file `locale_facets.h`.

**5.434.4.10** `const char * std::ctype< char >::is ( const char * __lo, const char * __hi, mask * __vec ) const [inline]`

Return a mask array.

This function finds the mask for each char in the range [lo, hi) and successively writes it to vec. vec must have as many elements as the char array.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

#### Returns

*hi*.

Definition at line 48 of file `ctype_inline.h`.

**5.434.4.11** `bool std::ctype< char >::is ( mask __m, char __c ) const [inline]`

Test char classification.

This function compares the mask table[c] to *m*.

#### Parameters

*c* The char to compare the mask of.

*m* The mask to compare against.

#### Returns

True if m & table[c] is true, false otherwise.

Definition at line 43 of file ctype\_inline.h.

**5.434.4.12** `char std::ctype< char >::narrow ( char_type __c, char __dfault )  
const [inline]`

Narrow char.

This function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an undervied `ctype<char>` facet, *c* will be returned unchanged.

This function works as if it returns `ctype<char>::do_narrow(c)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

*c* The char to convert.

*dfault* Char to return if conversion fails.

#### Returns

The converted character.

Definition at line 924 of file locale\_facets.h.

References `std::ctype< _CharT >::do_narrow()`.

**5.434.4.13** `const char_type* std::ctype< char >::narrow ( const char_type *  
__lo, const char_type * __hi, char __dfault, char * __to ) const  
[inline]`

Narrow char array.

This function converts each char in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_narrow(lo, hi, dfault, to)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 957 of file `locale_facets.h`.

References `std::ctype<_CharT>::do_narrow()`.

**5.434.4.14** `const char * std::ctype< char >::scan_is ( mask __m, const char * __lo, const char * __hi ) const [inline]`

Find char matching a mask.

This function searches for and returns the first char in [lo,hi) for which `is(m,char)` is true.

#### Parameters

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

#### Returns

Pointer to a matching char if found, else *hi*.

Definition at line 57 of file `ctype_inline.h`.

**5.434.4.15** `const char * std::ctype< char >::scan_not ( mask __m, const char * __lo, const char * __hi ) const [inline]`

Find char not matching a mask.

This function searches for and returns a pointer to the first char in [lo,hi) for which is(m,char) is false.

#### Parameters

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

Pointer to a non-matching char if found, else *hi*.

Definition at line 67 of file ctype\_inline.h.

**5.434.4.16** `const mask* std::ctype< char >::table ( ) const throw () [inline]`

Returns a pointer to the mask table provided to the constructor, or /// the default from [classic\\_table\(\)](#) if none was provided.

Definition at line 975 of file locale\_facets.h.

**5.434.4.17** `char_type std::ctype< char >::tolower ( char_type __c ) const [inline]`

Convert to lowercase.

This function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[tolower\(\)](#) acts as if it returns ctype<char>::do\_tolower(c). [do\\_tolower\(\)](#) must always return the same result for the same input.

#### Parameters

*c* The char to convert.

**Returns**

The lowercase char if convertible, else *c*.

Definition at line 829 of file locale\_facets.h.

References std::ctype< \_CharT >::do\_tolower().

**5.434.4.18** `const char_type* std::ctype< char >::tolower ( char_type * __lo,  
const char_type * __hi ) const [inline]`

Convert array to lowercase.

This function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

`tolower()` acts as if it returns `ctype<char>:: do_tolower(lo, hi)`. `do_tolower()` must always return the same result for the same input.

**Parameters**

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

**Returns**

*hi*.

Definition at line 846 of file locale\_facets.h.

References std::ctype< \_CharT >::do\_tolower().

**5.434.4.19** `const char_type* std::ctype< char >::toupper ( char_type * __lo,  
const char_type * __hi ) const [inline]`

Convert array to uppercase.

This function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

`toupper()` acts as if it returns `ctype<char>:: do_toupper(lo, hi)`. `do_toupper()` must always return the same result for the same input.

**Parameters**

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

### Returns

*hi*.

Definition at line 813 of file locale\_facets.h.

References std::ctype< \_CharT >::do\_toupper().

#### 5.434.4.20 char\_type std::ctype< char >::toupper ( char\_type \_\_c ) const [inline]

Convert to uppercase.

This function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[toupper\(\)](#) acts as if it returns ctype<char>::do\_toupper(c). [do\\_toupper\(\)](#) must always return the same result for the same input.

### Parameters

*c* The char to convert.

### Returns

The uppercase char if convertible, else *c*.

Definition at line 796 of file locale\_facets.h.

References std::ctype< \_CharT >::do\_toupper().

#### 5.434.4.21 char\_type std::ctype< char >::widen ( char \_\_c ) const [inline]

Widen char.

This function converts the char to char\_type using the simplest reasonable transformation. For an undervived [ctype<char>](#) facet, the argument will be returned unchanged.

This function works as if it returns ctype<char>::do\_widen(c). [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

**Parameters**

*c* The char to convert.

**Returns**

The converted character.

Definition at line 866 of file locale\_facets.h.

References std::ctype< \_CharT >::do\_widen().

**5.434.4.22** `const char* std::ctype< char >::widen ( const char * __lo, const char * __hi, char_type * __to ) const [inline]`

Widen char array.

This function converts each char in the input to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters**

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

*to* Pointer to the destination array.

**Returns**

*hi*.

Definition at line 893 of file locale\_facets.h.

References std::ctype< \_CharT >::do\_widen().

**5.434.5 Member Data Documentation**

**5.434.5.1** `locale::id std::ctype< char >::id [static]`

The facet id for `ctype<char>`

Definition at line 697 of file locale\_facets.h.

#### 5.434.5.2 `const size_t std::ctype< char >::table_size` [static]

The size of the mask table. It is `SCHAR_MAX + 1`.

Definition at line 699 of file `locale_facets.h`.

The documentation for this class was generated from the following files:

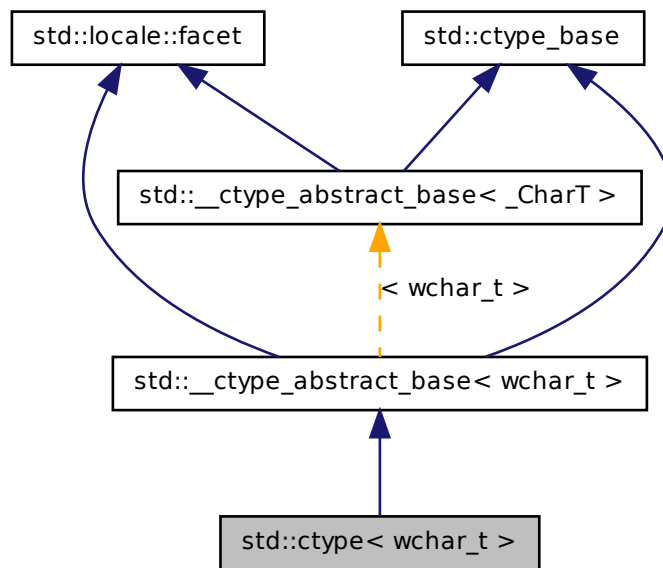

- [locale\\_facets.h](#)
- [ctype\\_inline.h](#)

### 5.435 `std::ctype< wchar_t >` Class Template Reference

The `ctype<wchar_t>` specialization.

This class defines classification and conversion functions for the `wchar_t` type. It gets used by `wchar_t` streams for many I/O operations. The `wchar_t` specialization provides a number of optimizations as well.

Inheritance diagram for `std::ctype< wchar_t >`:

### Public Types

- `typedef const int * __to_type`
- `typedef wctype_t __wmask_type`
- `typedef wchar_t char_type`
- `typedef unsigned short mask`

### Public Member Functions

### 5.435.1 Detailed Description

`template<> class std::ctype< wchar_t >`

The `ctype<wchar_t>` specialization.

This class defines classification and conversion functions for the `wchar_t` type. It gets used by `wchar_t` streams for many I/O operations. The `wchar_t` specialization provides a number of optimizations as well. `ctype<wchar_t>` inherits its public methods from `__ctype_abstract_base<wchar_t>`.

Definition at line 1176 of file `locale_facets.h`.

### 5.435.2 Member Typedef Documentation

#### 5.435.2.1 `typedef wchar_t std::ctype< wchar_t >::char_type`

Typedef for the template parameter `wchar_t`.

Reimplemented from `std::__ctype_abstract_base< wchar_t >`.

Definition at line 1181 of file `locale_facets.h`.

### 5.435.3 Constructor & Destructor Documentation

#### 5.435.3.1 `std::ctype< wchar_t >::ctype ( size_t __refs = 0 ) [explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

## Parameters

*refs* Passed to the base facet class.

### 5.435.3.2 std::ctype< wchar\_t >::ctype ( \_\_c\_locale \_\_cloc, size\_t \_\_refs = 0 ) [explicit]

Constructor performs static initialization.

This constructor is used to construct the initial C locale facet.

#### Parameters

*cloc* Handle to C locale data.

*refs* Passed to the base facet class.

### 5.435.3.3 virtual std::ctype< wchar\_t >::~~ctype ( ) [protected, virtual]

Destructor.

## 5.435.4 Member Function Documentation

### 5.435.4.1 virtual bool std::ctype< wchar\_t >::do\_is ( mask \_\_m, char\_type \_\_c ) const [protected, virtual]

Test wchar\_t classification.

This function finds a mask *M* for *c* and compares it to mask *m*.

[do\\_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do\\_is\(\)](#) must always return the same result for the same input.

#### Parameters

*c* The wchar\_t to find the mask of.

*m* The mask to compare against.

#### Returns

(*M* & *m*) != 0.

**5.435.4.2** `virtual bool std::__ctype_abstract_base< wchar_t >::do_is ( mask  
__m, char_type __c ) const [protected, pure virtual,  
inherited]`

Test char\_type classification.

This function finds a mask *M* for *c* and compares it to mask *m*.

do\_is() is a hook for a derived facet to change the behavior of classifying. do\_is() must always return the same result for the same input.

#### Parameters

*c* The char\_type to find the mask of.

*m* The mask to compare against.

#### Returns

(*M* & *m*) != 0.

**5.435.4.3** `virtual const char_type* std::ctype< wchar_t >::do_is ( const  
char_type * __lo, const char_type * __hi, mask * __vec ) const  
[protected, virtual]`

Return a mask array.

This function finds the mask for each wchar\_t in the range [*lo*,*hi*) and successively writes it to *vec*. *vec* must have as many elements as the input.

do\_is() is a hook for a derived facet to change the behavior of classifying. do\_is() must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*vec* Pointer to an array of mask storage.

#### Returns

*hi*.

**5.435.4.4** `virtual const char_type* std::__ctype_abstract_base< wchar_t >::do_is ( const char_type * __lo, const char_type * __hi, mask * __vec ) const` [protected, pure virtual, inherited]

Return a mask array.

This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

do\_is() is a hook for a derived facet to change the behavior of classifying. do\_is() must always return the same result for the same input.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

#### Returns

*hi*.

**5.435.4.5** `virtual char std::__ctype_abstract_base< wchar_t >::do_narrow ( char_type, char __dfault ) const` [protected, pure virtual, inherited]

Narrow char\_type to char.

This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead.

do\_narrow() is a hook for a derived facet to change the behavior of narrowing. do\_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

#### Parameters

- c* The char\_type to convert.
- dfault* Char to return if conversion fails.

#### Returns

The converted char.

**5.435.4.6** `virtual const char_type* std::__ctype_abstract_base< wchar_t >::do_narrow ( const char_type * __lo, const char_type * __hi, char __dfault, char * __dest ) const [protected, pure virtual, inherited]`

Narrow char\_type array to char.

This virtual function converts each char\_type in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *dfault* is used instead.

do\_narrow() is a hook for a derived facet to change the behavior of narrowing. do\_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

#### Returns

*hi*.

**5.435.4.7** `virtual char std::ctype< wchar_t >::do_narrow ( char_type, char __dfault ) const [protected, virtual]`

Narrow wchar\_t to char.

This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an underived `ctype<wchar_t>` facet, *c* will be cast to char and returned.

do\_narrow() is a hook for a derived facet to change the behavior of narrowing. do\_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

#### Parameters

- c* The wchar\_t to convert.
- dfault* Char to return if conversion fails.

**Returns**

The converted char.

**5.435.4.8** `virtual const char_type* std::ctype< wchar_t >::do_narrow ( const char_type * __lo, const char_type * __hi, char __dfault, char * __dest ) const` **[protected, virtual]**

Narrow wchar\_t array to char array.

This virtual function converts each wchar\_t in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any wchar\_t in the input that cannot be converted, *dfault* is used instead. For an underived `ctype<wchar_t>` facet, the argument will be copied, casting each element to char.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*dfault* Char to use if conversion fails.

*to* Pointer to the destination array.

**Returns**

*hi*.

**5.435.4.9** `virtual const char_type* std::ctype< wchar_t >::do_scan_is ( mask __m, const char_type * __lo, const char_type * __hi ) const` **[protected, virtual]**

Find wchar\_t matching mask.

This function searches for and returns the first wchar\_t c in [lo,hi) for which `is(m,c)` is true.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

**Parameters**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns**

Pointer to a matching wchar\_t if found, else *hi*.

**5.435.4.10** virtual const char\_type\* std::\_\_ctype\_abstract\_base< wchar\_t >::do\_scan\_is ( mask \_\_m, const char\_type \* \_\_lo, const char\_type \* \_\_hi ) const [protected, pure virtual, inherited]

Find char\_type matching mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true.

do\_scan\_is() is a hook for a derived facet to change the behavior of match searching. do\_is() must always return the same result for the same input.

**Parameters**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns**

Pointer to a matching char\_type if found, else *hi*.

**5.435.4.11** virtual const char\_type\* std::ctype< wchar\_t >::do\_scan\_not ( mask \_\_m, const char\_type \* \_\_lo, const char\_type \* \_\_hi ) const [protected, virtual]

Find wchar\_t not matching mask.

This function searches for and returns a pointer to the first wchar\_t c of [lo,hi) for which is(m,c) is false.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

**Parameters**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns**

Pointer to a non-matching `wchar_t` if found, else *hi*.

**5.435.4.12** `virtual const char_type* std::__ctype_abstract_base< wchar_t >::do_scan_not ( mask __m, const char_type * __lo, const char_type * __hi ) const` `[protected, pure virtual, inherited]`

Find `char_type` not matching mask.

This function searches for and returns a pointer to the first `char_type` *c* of [*lo*,*hi*) for which `is(m,c)` is false.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

**Parameters**

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

**Returns**

Pointer to a non-matching `char_type` if found, else *hi*.

**5.435.4.13** `virtual char_type std::ctype< wchar_t >::do_tolower ( char_type ) const` `[protected, virtual]`

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

**Parameters**

*c* The wchar\_t to convert.

**Returns**

The lowercase wchar\_t if convertible, else *c*.

**5.435.4.14** virtual char\_type std::\_\_ctype\_abstract\_base< wchar\_t  
>::do\_tolower ( char\_type ) const [protected, pure  
virtual, inherited]

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

do\_tolower() is a hook for a derived facet to change the behavior of lowercasing. do\_tolower() must always return the same result for the same input.

**Parameters**

*c* The char\_type to convert.

**Returns**

The lowercase char\_type if convertible, else *c*.

**5.435.4.15** virtual const char\_type\* std::\_\_ctype\_abstract\_base< wchar\_t  
>::do\_tolower ( char\_type \* \_\_lo, const char\_type \* \_\_hi ) const  
[protected, pure virtual, inherited]

Convert array to lowercase.

This virtual function converts each char\_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched.

do\_tolower() is a hook for a derived facet to change the behavior of lowercasing. do\_tolower() must always return the same result for the same input.

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns**

*hi*.

**5.435.4.16** `virtual const char_type* std::ctype< wchar_t >::do_tolower ( char_type * __lo, const char_type * __hi ) const [protected, virtual]`

Convert array to lowercase.

This virtual function converts each `wchar_t` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns**

*hi*.

**5.435.4.17** `virtual char_type std::__ctype_abstract_base< wchar_t >::do_toupper ( char_type ) const [protected, pure virtual, inherited]`

Convert to uppercase.

This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

**Parameters**

*c* The `char_type` to convert.

**Returns**

The uppercase `char_type` if convertible, else *c*.

**5.435.4.18** virtual char\_type std::ctype< wchar\_t >::do\_toupper ( char\_type ) const [protected, virtual]

Convert to uppercase.

This virtual function converts the wchar\_t argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

do\_toupper() is a hook for a derived facet to change the behavior of uppercasing. do\_toupper() must always return the same result for the same input.

#### Parameters

*c* The wchar\_t to convert.

#### Returns

The uppercase wchar\_t if convertible, else *c*.

**5.435.4.19** virtual const char\_type\* std::\_\_ctype\_abstract\_base< wchar\_t >::do\_toupper ( char\_type \* \_\_lo, const char\_type \* \_\_hi ) const [protected, pure virtual, inherited]

Convert array to uppercase.

This virtual function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched.

do\_toupper() is a hook for a derived facet to change the behavior of uppercasing. do\_toupper() must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

**5.435.4.20** virtual const char\_type\* std::ctype< wchar\_t >::do\_toupper ( char\_type \* \_\_lo, const char\_type \* \_\_hi ) const [protected, virtual]

Convert array to uppercase.

This virtual function converts each `wchar_t` in the range `[lo,hi)` to uppercase if possible. Other elements remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

#### 5.435.4.21 `virtual char_type std::ctype< wchar_t >::do_widen ( char ) const [protected, virtual]`

Widen char to `wchar_t`.

This virtual function converts the char to `wchar_t` using the simplest reasonable transformation. For an underived `ctype<wchar_t>` facet, the argument will be cast to `wchar_t`.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

*c* The char to convert.

#### Returns

The converted `wchar_t`.

Implements `std::__ctype_abstract_base< wchar_t >`.

#### 5.435.4.22 `virtual const char* std::ctype< wchar_t >::do_widen ( const char * __lo, const char * __hi, char_type * __dest ) const [protected, virtual]`

Widen char array to `wchar_t` array.

This function converts each char in the input to `wchar_t` using the simplest reasonable transformation. For an underived `ctype<wchar_t>` facet, the argument will be copied, casting each element to `wchar_t`.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

#### Returns

*hi*.

**5.435.4.23** `virtual const char* std::__ctype_abstract_base< wchar_t  
>::do_widen ( const char * __lo, const char * __hi, char_type *  
__dest ) const` [`protected`, `pure virtual`, `inherited`]

Widen char array.

This function converts each char in the input to `char_type` using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

#### Returns

*hi*.

**5.435.4.24** `const char_type* std::__ctype_abstract_base< wchar_t >::is ( const char_type * __lo, const char_type * __hi, mask * __vec ) const`  
`[inline, inherited]`

Return a mask array.

This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char\_type>::do\_is().

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*vec* Pointer to an array of mask storage.

#### Returns

*hi*.

Definition at line 180 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_is().

**5.435.4.25** `bool std::__ctype_abstract_base< wchar_t >::is ( mask __m, char_type __c ) const` `[inline, inherited]`

Test char\_type classification.

This function finds a mask M for c and compares it to mask m. It does so by returning the value of ctype<char\_type>::do\_is().

#### Parameters

*c* The char\_type to compare the mask of.

*m* The mask to compare against.

#### Returns

(M & m) != 0.

Definition at line 163 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_is().

**5.435.4.26** `const char_type* std::__ctype_abstract_base< wchar_t >::narrow (`  
`const char_type * __lo, const char_type * __hi, char __dfault,`  
`char * __to ) const [inline, inherited]`

Narrow array to char array.

This function converts each `char_type` in the input to `char` using the simplest reasonable transformation and writes the results to the destination array. For any `char_type` in the input that cannot be converted, *dfault* is used instead. It does so by returning `ctype<char_type>::do_narrow(lo, hi, dfault, to)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 347 of file `locale_facets.h`.

References `std::__ctype_abstract_base< _CharT >::do_narrow()`.

**5.435.4.27** `char std::__ctype_abstract_base< wchar_t >::narrow ( char_type`  
`__c, char __dfault ) const [inline, inherited]`

Narrow `char_type` to `char`.

This function converts the `char_type` to `char` using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. It does so by returning `ctype<char_type>::do_narrow(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- c* The `char_type` to convert.
- dfault* Char to return if conversion fails.

**Returns**

The converted char.

Definition at line 325 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_narrow().

**5.435.4.28** `const char_type* std::__ctype_abstract_base< wchar_t >::scan_is ( mask __m, const char_type * __lo, const char_type * __hi ) const [inline, inherited]`

Find char\_type matching a mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char\_type>::do\_scan\_is().

**Parameters**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns**

Pointer to matching char\_type if found, else *hi*.

Definition at line 196 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_scan\_is().

**5.435.4.29** `const char_type* std::__ctype_abstract_base< wchar_t >::scan_not ( mask __m, const char_type * __lo, const char_type * __hi ) const [inline, inherited]`

Find char\_type not matching a mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char\_type>::do\_scan\_not().

**Parameters**

*m* The mask to compare against.

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

### Returns

Pointer to non-matching char if found, else *hi*.

Definition at line 212 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_scan\_not().

**5.435.4.30** `const char_type* std::__ctype_abstract_base< wchar_t >::tolower (char_type * __lo, const char_type * __hi) const [inline, inherited]`

Convert array to lowercase.

This function converts each char\_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char\_type>::do\_toupper(lo, hi).

### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

### Returns

*hi*.

Definition at line 270 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_tolower().

**5.435.4.31** `char_type std::__ctype_abstract_base< wchar_t >::tolower (char_type __c) const [inline, inherited]`

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char\_type>::do\_tolower(c).

### Parameters

*c* The char\_type to convert.

**Returns**

The lowercase char\_type if convertible, else *c*.

Definition at line 255 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_tolower().

**5.435.4.32** `const char_type* std::__ctype_abstract_base< wchar_t >::toupper (char_type * __lo, const char_type * __hi) const [inline, inherited]`

Convert array to uppercase.

This function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char\_type>::do\_toupper(lo, hi).

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns**

*hi*.

Definition at line 241 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_toupper().

**5.435.4.33** `char_type std::__ctype_abstract_base< wchar_t >::toupper (char_type __c) const [inline, inherited]`

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char\_type>::do\_toupper().

**Parameters**

*c* The char\_type to convert.

**Returns**

The uppercase char\_type if convertible, else *c*.

Definition at line 226 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_toupper().

**5.435.4.34 char\_type std::\_\_ctype\_abstract\_base< wchar\_t >::widen ( char \_\_c ) const [inline, inherited]**

Widen char to char\_type.

This function converts the char argument to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

**Parameters**

*c* The char to convert.

**Returns**

The converted char\_type.

Definition at line 287 of file locale\_facets.h.

References std::\_\_ctype\_abstract\_base< \_CharT >::do\_widen().

**5.435.4.35 const char\* std::\_\_ctype\_abstract\_base< wchar\_t >::widen ( const char \* \_\_lo, const char \* \_\_hi, char\_type \* \_\_to ) const [inline, inherited]**

Widen array to char\_type.

This function converts each char in the input to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*to* Pointer to the destination array.

**Returns***hi.*

#### 5.437.1 Detailed Description

`template<typename _CharT> class std::ctype_byname<_CharT>`

class `ctype_byname` [22.2.1.2].

Definition at line 1468 of file `locale_facets.h`.

#### 5.437.2 Member Typedef Documentation

**5.437.2.1** `template<typename _CharT> typedef _CharT std::ctype<_CharT>::char_type [inherited]`

Typedef for the template parameter.

Reimplemented from `std::__ctype_abstract_base<_CharT>`.

Definition at line 610 of file `locale_facets.h`.

### 5.437.3 Member Function Documentation

**5.437.3.1** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_is ( const char_type * __lo, const char_type * __hi, mask * __vec ) const [protected, virtual, inherited]`

Return a mask array.

This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

[do\\_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do\\_is\(\)](#) must always return the same result for the same input.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

#### Returns

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.437.3.2** `template<typename _CharT> virtual bool std::ctype<_CharT>::do_is ( mask __m, char_type __c ) const [protected, virtual, inherited]`

Test char\_type classification.

This function finds a mask M for *c* and compares it to mask *m*.

[do\\_is\(\)](#) is a hook for a derived facet to change the behavior of classifying. [do\\_is\(\)](#) must always return the same result for the same input.

#### Parameters

- c* The char\_type to find the mask of.
- m* The mask to compare against.

#### Returns

(M & m) != 0.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

**5.437.3.3** `template<typename _CharT> virtual char std::ctype< _CharT  
>::do_narrow( char_type, char __dfault ) const [protected,  
virtual, inherited]`

Narrow `char_type` to `char`.

This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- c* The `char_type` to convert.
- dfault* Char to return if conversion fails.

#### Returns

The converted `char`.

Implements `std::__ctype_abstract_base< _CharT >`.

Referenced by `std::ctype< char >::narrow()`.

**5.437.3.4** `template<typename _CharT> virtual const char_type* std::ctype<  
_CharT >::do_narrow( const char_type * __lo, const char_type *  
__hi, char __dfault, char * __dest ) const [protected,  
virtual, inherited]`

Narrow `char_type` array to `char`.

This virtual function converts each `char_type` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, `dfault` is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.

*hi* Pointer to end of range.

*dfault* Char to use if conversion fails.

*to* Pointer to the destination array.

### Returns

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

```
5.437.3.5 template<typename _CharT> virtual const char_type* std::ctype<
 _CharT>::do_scan_is (mask __m, const char_type * __lo,
 const char_type * __hi) const [protected, virtual,
 inherited]
```

Find char\_type matching mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true.

[do\\_scan\\_is\(\)](#) is a hook for a derived facet to change the behavior of match searching. [do\\_is\(\)](#) must always return the same result for the same input.

### Parameters

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

### Returns

Pointer to a matching char\_type if found, else *hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>](#).

```
5.437.3.6 template<typename _CharT> virtual const char_type* std::ctype<
 _CharT>::do_scan_not (mask __m, const char_type * __lo,
 const char_type * __hi) const [protected, virtual,
 inherited]
```

Find char\_type not matching mask.

This function searches for and returns a pointer to the first `char_type` `c` of `[lo,hi)` for which `is(m,c)` is false.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

#### Parameters

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

Pointer to a non-matching `char_type` if found, else *hi*.

Implements `std::__ctype_abstract_base<_CharT>`.

**5.437.3.7** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_tolower ( char_type * __lo, const char_type * __hi ) const [protected, virtual, inherited]`

Convert array to lowercase.

This virtual function converts each `char_type` in the range `[lo,hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Implements `std::__ctype_abstract_base<_CharT>`.

**5.437.3.8** `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_tolower ( char_type ) const [protected, virtual, inherited]`

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

#### Parameters

*c* The char\_type to convert.

#### Returns

The lowercase char\_type if convertible, else *c*.

Implements [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >](#).

Referenced by [std::ctype< char >::tolower\(\)](#).

**5.437.3.9** `template<typename _CharT> virtual const char_type* std::ctype<_CharT>::do_toupper ( char_type * __lo, const char_type * __hi ) const [protected, virtual, inherited]`

Convert array to uppercase.

This virtual function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched.

[do\\_toupper\(\)](#) is a hook for a derived facet to change the behavior of uppercasing. [do\\_toupper\(\)](#) must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Implements [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >](#).

**5.437.3.10** `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_toupper ( char_type ) const [protected, virtual, inherited]`

Convert to uppercase.

This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[`do\_toupper\(\)`](#) is a hook for a derived facet to change the behavior of uppercasing. [`do\_toupper\(\)`](#) must always return the same result for the same input.

#### Parameters

*c* The `char_type` to convert.

#### Returns

The uppercase `char_type` if convertible, else *c*.

Implements [`std::\_\_ctype\_abstract\_base<\_CharT>`](#).

Referenced by `std::ctype<char>::toupper()`.

**5.437.3.11** `template<typename _CharT> virtual char_type std::ctype<_CharT>::do_widen( char ) const [protected, virtual, inherited]`

Widen char.

This virtual function converts the `char` to `char_type` using the simplest reasonable transformation.

[`do\_widen\(\)`](#) is a hook for a derived facet to change the behavior of widening. [`do\_widen\(\)`](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

*c* The `char` to convert.

#### Returns

The converted `char_type`

Implements [`std::\_\_ctype\_abstract\_base<\_CharT>`](#).

Referenced by `std::ctype<char>::widen()`.

**5.437.3.12** `template<typename _CharT> virtual const char* std::ctype<_CharT>::do_widen ( const char * __lo, const char * __hi, char_type * __dest ) const [protected, virtual, inherited]`

Widen char array.

This function converts each char in the input to char\_type using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

#### Returns

*hi*.

Implements `std::__ctype_abstract_base<_CharT>`.

**5.437.3.13** `template<typename _CharT> bool std::__ctype_abstract_base<_CharT>::is ( mask __m, char_type __c ) const [inline, inherited]`

Test char\_type classification.

This function finds a mask *M* for *c* and compares it to mask *m*. It does so by returning the value of `ctype<char_type>::do_is()`.

#### Parameters

- c* The char\_type to compare the mask of.
- m* The mask to compare against.

#### Returns

(*M* & *m*) != 0.

Definition at line 163 of file locale\_facets.h.

Referenced by std::regex\_traits<\_Ch\_type>::isctype(), and std::basic\_istream<\_CharT, \_Traits>::sentry::sentry().

**5.437.3.14** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base<_CharT>::is ( const char_type *  
__lo, const char_type * __hi, mask * __vec ) const [inline,  
inherited]`

Return a mask array.

This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of `ctype<char_type>::do_is()`.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

#### Returns

*hi*.

Definition at line 180 of file locale\_facets.h.

**5.437.3.15** `template<typename _CharT> char std::__ctype_abstract_base<  
_CharT>::narrow ( char_type __c, char __dfault ) const  
[inline, inherited]`

Narrow char\_type to char.

This function converts the char\_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning `ctype<char_type>::do_narrow(c)`.

Note: this is not what you want for codepage conversions. See `codecv` for that.

#### Parameters

- c* The char\_type to convert.
- dfault* Char to return if conversion fails.

**Returns**

The converted char.

Definition at line 325 of file locale\_facets.h.

Referenced by std::time\_put< \_CharT, \_OutIter >::put().

**5.437.3.16** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base< _CharT >::narrow ( const char_type  
* __lo, const char_type * __hi, char __dfault, char * __to ) const  
[inline, inherited]`

Narrow array to char array.

This function converts each char\_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char\_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char\_type>::do\_narrow(lo, hi, dfault, to).

Note: this is not what you want for codepage conversions. See codecvt for that.

**Parameters**

*lo* Pointer to start of range.

*hi* Pointer to end of range.

*dfault* Char to use if conversion fails.

*to* Pointer to the destination array.

**Returns**

*hi*.

Definition at line 347 of file locale\_facets.h.

**5.437.3.17** `template<typename _CharT> const char_type*  
std::__ctype_abstract_base< _CharT >::scan_is ( mask __m,  
const char_type * __lo, const char_type * __hi ) const [inline,  
inherited]`

Find char\_type matching a mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char\_type>::do\_scan\_is().

**Parameters**

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

**Returns**

Pointer to matching char\_type if found, else *hi*.

Definition at line 196 of file locale\_facets.h.

```
5.437.3.18 template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::scan_not (mask __m,
const char_type * __lo, const char_type * __hi) const [inline,
inherited]
```

Find char\_type not matching a mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is false. It does so by returning `ctype<char_type>::do_scan_not()`.

**Parameters**

*m* The mask to compare against.

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

**Returns**

Pointer to non-matching char if found, else *hi*.

Definition at line 212 of file locale\_facets.h.

```
5.437.3.19 template<typename _CharT> const char_type*
std::__ctype_abstract_base<_CharT>::tolower (char_type *
__lo, const char_type * __hi) const [inline, inherited]
```

Convert array to lowercase.

This function converts each char\_type in the range [lo,hi) to lowercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

**Parameters***lo* Pointer to start of range.*hi* Pointer to end of range.**Returns***hi*.

Definition at line 270 of file locale\_facets.h.

**5.437.3.20** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::tolower ( char_type __c ) const [inline, inherited]`

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char\_type>::do\_toupper(c).

**Parameters***c* The char\_type to convert.**Returns**The lowercase char\_type if convertible, else *c*.

Definition at line 255 of file locale\_facets.h.

**5.437.3.21** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::toupper ( char_type * __lo, const char_type * __hi ) const [inline, inherited]`

Convert array to uppercase.

This function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char\_type>::do\_toupper(lo, hi).

**Parameters***lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Definition at line 241 of file locale\_facets.h.

**5.437.3.22** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::toupper ( char_type __c ) const [inline, inherited]`

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

#### Parameters

*c* The char\_type to convert.

#### Returns

The uppercase char\_type if convertible, else *c*.

Definition at line 226 of file locale\_facets.h.

**5.437.3.23** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::widen ( char __c ) const [inline, inherited]`

Widen char to char\_type.

This function converts the char argument to char\_type using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

*c* The char to convert.

#### Returns

The converted char\_type.

Definition at line 287 of file locale\_facets.h.

Referenced by std::money\_get< \_CharT, \_InIter >::do\_get(), std::time\_put< \_CharT, \_OutIter >::do\_put(), std::money\_put< \_CharT, \_OutIter >::do\_put(), std::regex\_traits< \_Ch\_type >::isctype(), and std::operator<<().

**5.437.3.24** `template<typename _CharT> const char* std::__ctype_abstract_base< _CharT >::widen ( const char * __lo, const char * __hi, char_type * __to ) const [inline, inherited]`

Widen array to char\_type.

This function converts each char in the input to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 306 of file locale\_facets.h.

**5.438.1 Detailed Description**

**template<> class std::ctype\_byname< char >**

22.2.1.4 Class [ctype\\_byname](#) specializations.

Definition at line 1483 of file locale\_facets.h.

**5.438.2 Member Typedef Documentation****5.438.2.1 typedef char std::ctype< char >::char\_type [inherited]**

Typedef for the template parameter char.

Definition at line 680 of file locale\_facets.h.

### 5.438.3 Member Function Documentation

**5.438.3.1** `static const mask* std::ctype< char >::classic_table ( ) throw ()`  
`[static, inherited]`

Returns a pointer to the C locale mask table.

**5.438.3.2** `virtual char std::ctype< char >::do_narrow ( char_type __c, char`  
`) const [inline, protected, virtual, inherited]`

Narrow char.

This virtual function converts the char to char using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead. For an underived `ctype<char>` facet, `c` will be returned unchanged.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

*c* The char to convert.

*dfault* Char to return if conversion fails.

#### Returns

The converted char.

Definition at line 1125 of file `locale_facets.h`.

**5.438.3.3** `virtual const char_type* std::ctype< char >::do_narrow ( const`  
`char_type * __lo, const char_type * __hi, char, char * __dest )`  
`const [inline, protected, virtual, inherited]`

Narrow char array to char array.

This virtual function converts each char in the range `[lo,hi)` to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, `dfault` is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

[do\\_narrow\(\)](#) is a hook for a derived facet to change the behavior of narrowing. [do\\_narrow\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 1151 of file `locale_facets.h`.

**5.438.3.4** `virtual const char_type* std::ctype< char >::do_tolower ( char_type * __lo, const char_type * __hi ) const` `[protected, virtual, inherited]`

Convert array to lowercase.

This virtual function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

[do\\_tolower\(\)](#) is a hook for a derived facet to change the behavior of lowercasing. [do\\_tolower\(\)](#) must always return the same result for the same input.

#### Parameters

- lo* Pointer to first char in range.
- hi* Pointer to end of range.

#### Returns

*hi*.

**5.438.3.5** `virtual char_type std::ctype< char >::do_tolower ( char_type ) const` `[protected, virtual, inherited]`

Convert to lowercase.

This virtual function converts the `char` argument to lowercase if possible. If not possible (for example, `'2'`), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

#### Parameters

*c* The `char` to convert.

#### Returns

The lowercase `char` if convertible, else *c*.

**5.438.3.6** `virtual const char_type* std::ctype< char >::do_toupper ( char_type * __lo, const char_type * __hi ) const [protected, virtual, inherited]`

Convert array to uppercase.

This virtual function converts each `char` in the range `[lo,hi)` to uppercase if possible. Other `chars` remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

#### Parameters

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

*hi*.

**5.438.3.7** `virtual char_type std::ctype< char >::do_toupper ( char_type ) const [protected, virtual, inherited]`

Convert to uppercase.

This virtual function converts the `char` argument to uppercase if possible. If not possible (for example, `'2'`), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

#### Parameters

*c* The char to convert.

#### Returns

The uppercase char if convertible, else *c*.

#### 5.438.3.8 `virtual char_type std::ctype< char >::do_widen ( char __c ) const [inline, protected, virtual, inherited]`

Widen char.

This virtual function converts the char to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be returned unchanged.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

*c* The char to convert.

#### Returns

The converted character.

Definition at line 1076 of file `locale_facets.h`.

#### 5.438.3.9 `virtual const char* std::ctype< char >::do_widen ( const char * __lo, const char * __hi, char_type * __dest ) const [inline, protected, virtual, inherited]`

Widen char array.

This function converts each char in the range `[lo,hi)` to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be copied unchanged.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 1099 of file locale\_facets.h.

**5.438.3.10** `const char * std::ctype< char >::is ( const char * __lo, const char * __hi, mask * __vec ) const` **[inline, inherited]**

Return a mask array.

This function finds the mask for each char in the range [lo, hi) and successively writes it to vec. vec must have as many elements as the char array.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- vec* Pointer to an array of mask storage.

#### Returns

*hi*.

Definition at line 48 of file ctype\_inline.h.

**5.438.3.11** `bool std::ctype< char >::is ( mask __m, char __c ) const` **[inline, inherited]**

Test char classification.

This function compares the mask table[c] to *m*.

#### Parameters

- c* The char to compare the mask of.

*m* The mask to compare against.

### Returns

True if *m* & table[*c*] is true, false otherwise.

Definition at line 43 of file ctype\_inline.h.

**5.438.3.12** `char std::ctype< char >::narrow ( char_type __c, char __dfault )  
const [inline, inherited]`

Narrow char.

This function converts the char to char using the simplest reasonable transformation. If the conversion fails, *dfault* is returned instead. For an underived `ctype<char>` facet, *c* will be returned unchanged.

This function works as if it returns `ctype<char>::do_narrow(c)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecv` for that.

### Parameters

*c* The char to convert.

*dfault* Char to return if conversion fails.

### Returns

The converted character.

Definition at line 924 of file locale\_facets.h.

References `std::ctype< _CharT >::do_narrow()`.

**5.438.3.13** `const char_type* std::ctype< char >::narrow ( const char_type *  
__lo, const char_type * __hi, char __dfault, char * __to ) const  
[inline, inherited]`

Narrow char array.

This function converts each char in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_narrow(lo, hi, dfault, to)`. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to start of range.
- hi* Pointer to end of range.
- dfault* Char to use if conversion fails.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 957 of file `locale_facets.h`.

References `std::ctype<_CharT>::do_narrow()`.

**5.438.3.14** `const char * std::ctype< char >::scan_is ( mask __m, const char *  
__lo, const char * __hi ) const [inline, inherited]`

Find char matching a mask.

This function searches for and returns the first char in [lo,hi) for which `is(m,char)` is true.

#### Parameters

- m* The mask to compare against.
- lo* Pointer to start of range.
- hi* Pointer to end of range.

#### Returns

Pointer to a matching char if found, else *hi*.

Definition at line 57 of file `ctype_inline.h`.

**5.438.3.15** `const char * std::ctype< char >::scan_not ( mask __m, const char  
* __lo, const char * __hi ) const [inline, inherited]`

Find char not matching a mask.

This function searches for and returns a pointer to the first char in [lo,hi) for which `is(m,char)` is false.

#### Parameters

*m* The mask to compare against.

*lo* Pointer to start of range.

*hi* Pointer to end of range.

#### Returns

Pointer to a non-matching char if found, else *hi*.

Definition at line 67 of file `ctype_inline.h`.

**5.438.3.16** `const mask* std::ctype< char >::table ( ) const throw ()`  
[inline, inherited]

Returns a pointer to the mask table provided to the constructor, or /// the default from [classic\\_table\(\)](#) if none was provided.

Definition at line 975 of file `locale_facets.h`.

**5.438.3.17** `char_type std::ctype< char >::tolower ( char_type __c ) const`  
[inline, inherited]

Convert to lowercase.

This function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

[tolower\(\)](#) acts as if it returns `ctype<char>::do_tolower(c)`. [do\\_tolower\(\)](#) must always return the same result for the same input.

#### Parameters

*c* The char to convert.

#### Returns

The lowercase char if convertible, else *c*.

Definition at line 829 of file `locale_facets.h`.

References `std::ctype< _CharT >::do_tolower()`.

**5.438.3.18** `const char_type* std::ctype< char >::tolower ( char_type * __lo,  
const char_type * __hi ) const [inline, inherited]`

Convert array to lowercase.

This function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

`tolower()` acts as if it returns `ctype<char>::do_tolower(lo, hi)`. `do_tolower()` must always return the same result for the same input.

#### Parameters

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Definition at line 846 of file locale\_facets.h.

References `std::ctype< _CharT >::do_tolower()`.

**5.438.3.19** `const char_type* std::ctype< char >::toupper ( char_type * __lo,  
const char_type * __hi ) const [inline, inherited]`

Convert array to uppercase.

This function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

`toupper()` acts as if it returns `ctype<char>::do_toupper(lo, hi)`. `do_toupper()` must always return the same result for the same input.

#### Parameters

*lo* Pointer to first char in range.

*hi* Pointer to end of range.

#### Returns

*hi*.

Definition at line 813 of file locale\_facets.h.

References `std::ctype< _CharT >::do_toupper()`.

**5.438.3.20 char\_type std::ctype< char >::toupper ( char\_type \_\_c ) const  
[inline, inherited]**

Convert to uppercase.

This function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

[toupper\(\)](#) acts as if it returns ctype<char>::do\_toupper(c). [do\\_toupper\(\)](#) must always return the same result for the same input.

**Parameters**

*c* The char to convert.

**Returns**

The uppercase char if convertible, else *c*.

Definition at line 796 of file locale\_facets.h.

References std::ctype< \_CharT >::do\_toupper().

**5.438.3.21 char\_type std::ctype< char >::widen ( char \_\_c ) const  
[inline, inherited]**

Widen char.

This function converts the char to char\_type using the simplest reasonable transformation. For an underived [ctype<char>](#) facet, the argument will be returned unchanged.

This function works as if it returns ctype<char>::do\_widen(c). [do\\_widen\(\)](#) must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

**Parameters**

*c* The char to convert.

**Returns**

The converted character.

Definition at line 866 of file locale\_facets.h.

References std::ctype< \_CharT >::do\_widen().

**5.438.3.22** `const char* std::ctype< char >::widen ( const char * __lo, const char * __hi, char_type * __to ) const [inline, inherited]`

Widen char array.

This function converts each char in the input to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

- lo* Pointer to first char in range.
- hi* Pointer to end of range.
- to* Pointer to the destination array.

#### Returns

*hi*.

Definition at line 893 of file `locale_facets.h`.

References `std::ctype< _CharT >::do_widen()`.

### 5.438.4 Member Data Documentation

**5.438.4.1** `locale::id std::ctype< char >::id [static, inherited]`

The facet id for `ctype<char>`

Definition at line 697 of file `locale_facets.h`.

**5.438.4.2** `const size_t std::ctype< char >::table_size [static, inherited]`

The size of the mask table. It is `SCHAR_MAX + 1`.

Definition at line 699 of file `locale_facets.h`.

#### 5.446.1 Detailed Description

`template<typename _Tp, typename _Alloc = std::allocator<_Tp>> class std::deque<_Tp, _Alloc>`

A standard container using fixed-size memory allocation and constant-time manipulation of elements at either end. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#).

In previous HP/SGI versions of deque, there was an extra template parameter so users could control the node size. This extension turned out to violate the C++ standard (it can be detected using template template parameters), and it was removed.

Here's how a `deque<Tp>` manages memory. Each deque has 4 members:

- `Tp** _M_map`

- `size_t _M_map_size`
- `iterator _M_start, _M_finish`

`map_size` is at least 8. `map` is an array of `map_size` pointers-to-. (The name `map` has nothing to do with the `std::map` class, and **nodes** should not be confused with `std::list`'s usage of *node*.)

A *node* has no specific type name as such, but it is referred to as *node* in this file. It is a simple array-of-`Tp`. If `Tp` is very large, there will be one `Tp` element per node (i.e., an *array* of one). For non-huge `Tp`'s, node size is inversely related to `Tp` size: the larger the `Tp`, the fewer `Tp`'s will fit in a node. The goal here is to keep the total size of a node relatively small and constant over different `Tp`'s, to improve allocator efficiency.

Not every pointer in the `map` array will point to a node. If the initial number of elements in the deque is small, the /middle/ `map` pointers will be valid, and the ones at the edges will be unused. This same situation will arise as the `map` grows: available `map` pointers, if any, will be on the ends. As new nodes are created, only a subset of the `map`'s pointers need to be copied *outward*.

Class invariants:

- For any nonsingular iterator `i`:
  - `i.node` points to a member of the `map` array. (Yes, you read that correctly: `i.node` does not actually point to a node.) The member of the `map` array is what actually points to the node.
  - `i.first == *(i.node)` (This points to the node (first `Tp` element).)
  - `i.last == i.first + node_size`
  - `i.cur` is a pointer in the range `[i.first, i.last)`. NOTE: the implication of this is that `i.cur` is always a dereferenceable pointer, even if `i` is a past-the-end iterator.
- `Start` and `Finish` are always nonsingular iterators. NOTE: this means that an empty deque must have one node, a deque with  $<N$  elements (where  $N$  is the node buffer size) must have one node, a deque with  $N$  through  $(2N-1)$  elements must have two nodes, etc.
- For every node other than `start.node` and `finish.node`, every element in the node is an initialized object. If `start.node == finish.node`, then `[start.cur, finish.cur)` are initialized objects, and the elements outside that range are uninitialized storage. Otherwise, `[start.cur, start.last)` and `[finish.first, finish.cur)` are initialized objects, and `[start.first, start.cur)` and `[finish.cur, finish.last)` are uninitialized storage.
- `[map, map + map_size)` is a valid, non-empty range.
- `[start.node, finish.node]` is a valid range contained within `[map, map + map_size)`.

- A pointer in the range `[map, map + map_size)` points to an allocated node if and only if the pointer is in the range `[start.node, finish.node]`.

Here's the magic: nothing in `deque` is **aware** of the discontinuous storage!

The memory setup and layout occurs in the parent, `_Base`, and the iterator class is entirely responsible for *leaping* from one node to the next. All the implementation routines for `deque` itself work only through the start and finish iterators. This keeps the routines simple and sane, and we can use other standard algorithms as well.

### 5.446.2 Constructor & Destructor Documentation

#### 5.446.2.1 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::deque<_Tp, _Alloc>::deque ( ) [inline]`

Default constructor creates no elements.

Definition at line 771 of file `stl_deque.h`.

#### 5.446.2.2 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::deque<_Tp, _Alloc>::deque ( const allocator_type & __a ) [inline, explicit]`

Creates a deque with no elements.

##### Parameters

*a* An allocator object.

Definition at line 779 of file `stl_deque.h`.

#### 5.446.2.3 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::deque<_Tp, _Alloc>::deque ( size_type __n ) [inline, explicit]`

Creates a deque with default constructed elements.

##### Parameters

*n* The number of elements to initially create.

This constructor fills the deque with  $n$  default constructed elements.

Definition at line 791 of file stl\_deque.h.

```
5.446.2.4 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque<_Tp, _Alloc>::deque (size_type __n, const value_type
& __value, const allocator_type & __a = allocator_type())
[inline]
```

Creates a deque with copies of an exemplar element.

#### Parameters

*n* The number of elements to initially create.

*value* An element to copy.

*a* An allocator.

This constructor fills the deque with  $n$  copies of *value*.

Definition at line 803 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::\_M\_fill\_initialize().

```
5.446.2.5 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque<_Tp, _Alloc>::deque (const deque<_Tp, _Alloc> &
__x) [inline]
```

Deque copy constructor.

#### Parameters

*x* A deque of identical element and allocator types.

The newly-created deque uses a copy of the allocation object used by *x*.

Definition at line 830 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::begin(), and std::deque< \_Tp, \_Alloc >::end().

```
5.446.2.6 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
std::deque<_Tp, _Alloc>::deque (deque<_Tp, _Alloc> && __x
) [inline]
```

Deque move constructor.

### Parameters

*x* A deque of identical element and allocator types.

The newly-created deque contains the exact contents of *x*. The contents of *x* are a valid, but unspecified deque.

Definition at line 844 of file `stl_deque.h`.

```
5.446.2.7 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 std::deque<_Tp, _Alloc>::deque (initializer_list< value_type
 > __l, const allocator_type & __a = allocator_type())
 [inline]
```

Builds a deque from an initializer list.

### Parameters

*l* An [initializer\\_list](#).

*a* An allocator object.

Create a deque consisting of copies of the elements in the [initializer\\_list](#) *l*.

This will call the element type's copy constructor *N* times (where *N* is *l.size()*) and do no memory reallocation.

Definition at line 858 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::_M_range_initialize()`.

```
5.446.2.8 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 template<typename _InputIterator> std::deque<_Tp, _Alloc
 >::deque (_InputIterator __first, _InputIterator __last, const
 allocator_type & __a = allocator_type()) [inline]
```

Builds a deque from a range.

### Parameters

*first* An input iterator.

*last* An input iterator.

*a* An allocator object.

Create a deque consisting of copies of the elements from [first, last).

If the iterators are forward, bidirectional, or random-access, then this will call the elements' copy constructor *N* times (where *N* is `distance(first,last)`) and do no memory reallocation. But if only input iterators are used, then this will do at most *2N* calls to the copy constructor, and  $\log N$  memory reallocations.

Definition at line 883 of file `stl_deque.h`.

**5.446.2.9** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::deque<_Tp, _Alloc>::~~deque ( ) [inline]`

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 897 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::begin()`, and `std::deque<_Tp, _Alloc>::end()`.

### 5.446.3 Member Function Documentation

**5.446.3.1** `template<typename _Tp, typename _Alloc> void  
deque::_M_fill_initialize ( const value_type & __value )  
[protected]`

Fills the deque with copies of *value*.

#### Parameters

*value* Initial value.

#### Returns

Nothing.

#### Precondition

`_M_start` and `_M_finish` have already been initialized, but none of the deque's elements have yet been constructed.

This function is called only when the user provides an explicit size (with or without an explicit exemplar value).

Definition at line 333 of file `deque.tcc`.

References `std::_Destroy()`.

Referenced by `std::deque< _Tp, _Alloc >::deque()`.

**5.446.3.2** `template<typename _Tp , typename _Alloc > void  
std::_Deque_base< _Tp, _Alloc >::_M_initialize_map ( size_t  
__num_elements ) [protected, inherited]`

Layout storage.

#### Parameters

*num\_elements* The count of T's for which to allocate space at first.

#### Returns

Nothing.

The initial underlying memory layout is a bit complicated...

Definition at line 574 of file `stl_deque.h`.

References `std::max()`.

Referenced by `std::deque< _Tp, _Alloc >::_M_range_initialize()`.

**5.446.3.3** `template<typename _Tp , typename _Alloc > void  
deque::_M_new_elements_at_back ( size_type __new_elements )  
[protected]`

Memory-handling helpers for the previous internal insert functions.

Definition at line 827 of file `deque.tcc`.

References `std::deque< _Tp, _Alloc >::_M_reserve_map_at_back()`, `std::deque< _Tp, _Alloc >::max_size()`, and `std::deque< _Tp, _Alloc >::size()`.

Referenced by `std::deque< _Tp, _Alloc >::_M_reserve_elements_at_back()`.

**5.446.3.4** `template<typename _Tp , typename _Alloc > void  
deque::_M_new_elements_at_front ( size_type __new_elements )  
[protected]`

Memory-handling helpers for the previous internal insert functions.

Definition at line 802 of file `deque.tcc`.

References `std::deque<_Tp, _Alloc>::_M_reserve_map_at_front()`, `std::deque<_Tp, _Alloc>::max_size()`, and `std::deque<_Tp, _Alloc>::size()`.

Referenced by `std::deque<_Tp, _Alloc>::_M_reserve_elements_at_front()`.

#### 5.446.3.5 `template<typename _Tp, typename _Alloc> void deque::_M_pop_back_aux ( ) [protected]`

Helper functions for `push_*` and `pop_*`.

Definition at line 483 of file `deque.tcc`.

Referenced by `std::deque<_Tp, _Alloc>::pop_back()`.

#### 5.446.3.6 `template<typename _Tp, typename _Alloc> void deque::_M_pop_front_aux ( ) [protected]`

Helper functions for `push_*` and `pop_*`.

Definition at line 498 of file `deque.tcc`.

Referenced by `std::deque<_Tp, _Alloc>::pop_front()`.

#### 5.446.3.7 `template<typename _Tp, typename _Alloc> template<typename... _Args> void deque::_M_push_back_aux ( _Args &&... __args ) [protected]`

Helper functions for `push_*` and `pop_*`.

Definition at line 417 of file `deque.tcc`.

Referenced by `std::deque<_Tp, _Alloc>::push_back()`.

#### 5.446.3.8 `template<typename _Tp, typename _Alloc> template<typename... _Args> void deque::_M_push_front_aux ( _Args &&... __args ) [protected]`

Helper functions for `push_*` and `pop_*`.

Definition at line 451 of file `deque.tcc`.

Referenced by `std::deque< _Tp, _Alloc >::push_front()`.

```
5.446.3.9 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 void std::deque< _Tp, _Alloc >::_M_range_check (size_type __n)
 const [inline, protected]
```

Safety check used only from `at()`.

Definition at line 1237 of file `std_deque.h`.

References `std::deque< _Tp, _Alloc >::size()`.

Referenced by `std::deque< _Tp, _Alloc >::at()`.

```
5.446.3.10 template<typename _Tp , typename _Alloc > template<typename
 _InputIterator > void deque::_M_initialize (_InputIterator
 __first, _InputIterator __last, std::input_iterator_tag)
 [protected]
```

Fills the deque with whatever is in `[first,last)`.

#### Parameters

*first* An input iterator.

*last* An input iterator.

#### Returns

Nothing.

If the iterators are actually forward iterators (or better), then the memory layout can be done all at once. Else we move forward using `push_back` on each value from the iterator.

Definition at line 359 of file `deque.tcc`.

References `std::_Deque_base< _Tp, _Alloc >::_M_initialize_map()`, `std::deque< _Tp, _Alloc >::clear()`, and `std::deque< _Tp, _Alloc >::push_back()`.

Referenced by `std::deque< _Tp, _Alloc >::deque()`.

**5.446.3.11** `template<typename _Tp, typename _Alloc > template<typename  
_ForwardIterator > void deque::_M_range_initialize (  
_ForwardIterator __first, _ForwardIterator __last,  
std::forward_iterator_tag ) [protected]`

Fills the deque with whatever is in [first,last).

#### Parameters

*first* An input iterator.

*last* An input iterator.

#### Returns

Nothing.

If the iterators are actually forward iterators (or better), then the memory layout can be done all at once. Else we move forward using push\_back on each value from the iterator.

Definition at line 379 of file deque.tcc.

References std::\_Destroy(), std::\_Deque\_base< \_Tp, \_Alloc >::\_M\_initialize\_map(), std::advance(), and std::distance().

**5.446.3.12** `template<typename _Tp, typename _Alloc > void  
deque::_M_reallocate_map ( size_type __nodes_to_add, bool  
__add_at_front ) [protected]`

Memory-handling helpers for the major map.

Makes sure the \_M\_map has space for new nodes. Does not actually add the nodes. Can invalidate \_M\_map pointers. (And consequently, deque iterators.)

Definition at line 852 of file deque.tcc.

References std::max().

Referenced by std::deque< \_Tp, \_Alloc >::\_M\_reserve\_map\_at\_back(), and std::deque< \_Tp, \_Alloc >::\_M\_reserve\_map\_at\_front().

size_type __nodes_to_add = 1 ) [inline, protected]`

Memory-handling helpers for the major map.

Makes sure the \_M\_map has space for new nodes. Does not actually add the nodes.  
Can invalidate \_M\_map pointers. (And consequently, deque iterators.)

Definition at line 1884 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::\_M\_reallocate\_map().

Referenced by std::deque< \_Tp, \_Alloc >::\_M\_new\_elements\_at\_back().

**5.446.3.16** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::_M_reserve_map_at_front (   
size_type __nodes_to_add = 1 ) [inline, protected]`

Memory-handling helpers for the major map.

Makes sure the \_M\_map has space for new nodes. Does not actually add the nodes.  
Can invalidate \_M\_map pointers. (And consequently, deque iterators.)

Definition at line 1892 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::\_M\_reallocate\_map().

Referenced by std::deque< \_Tp, \_Alloc >::\_M\_new\_elements\_at\_front().

**5.446.3.17** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::assign ( size_type __n, const  
value_type & __val ) [inline]`

Assigns a given value to a deque.

#### Parameters

*n* Number of elements to be assigned.

*val* Value to be assigned.

This function fills a deque with *n* copies of the given value. Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 958 of file stl\_deque.h.

Referenced by std::deque< \_Tp, \_Alloc >::operator=().

**5.446.3.18** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename InputIterator > void std::deque< _Tp, _Alloc  
>::assign ( InputIterator __first, InputIterator __last )  
[inline]`

Assigns a range to a deque.

#### Parameters

*first* An input iterator.

*last* An input iterator.

This function fills a deque with copies of the elements in the range [first,last).

Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 975 of file stl\_deque.h.

**5.446.3.19** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::assign ( initializer_list<  
value_type > __l ) [inline]`

Assigns an initializer list to a deque.

**Parameters**

*l* An [initializer\\_list](#).

This function fills a deque with copies of the elements in the [initializer\\_list](#) *l*.

Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 994 of file `std_deque.h`.

References `std::deque< _Tp, _Alloc >::assign()`.

Referenced by `std::deque< _Tp, _Alloc >::assign()`.

**5.446.3.20** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::deque< _Tp, _Alloc >::at ( size_type __n )  
[inline]`

Provides access to the data contained in the deque.

**Parameters**

*n* The index of the element for which data should be accessed.

**Returns**

Read/write reference to data.

**Exceptions**

[std::out\\_of\\_range](#) If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the deque. The function throws [out\\_of\\_range](#) if the check fails.

Definition at line 1256 of file `std_deque.h`.

References `std::deque< _Tp, _Alloc >::_M_range_check()`.

**5.446.3.21** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::deque< _Tp, _Alloc >::at ( size_type __n )  
const [inline]`

Provides access to the data contained in the deque.

**Parameters**

*n* The index of the element for which data should be accessed.

**Returns**

Read-only (constant) reference to data.

**Exceptions**

*std::out\_of\_range* If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the deque. The function throws *out\_of\_range* if the check fails.

Definition at line 1274 of file `std_deque.h`.

References `std::deque< _Tp, _Alloc >::_M_range_check()`.

**5.446.3.22** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::deque< _Tp, _Alloc >::back ( ) const  
[inline]`

Returns a read-only (constant) reference to the data at the last element of the deque.

Definition at line 1313 of file `std_deque.h`.

References `std::deque< _Tp, _Alloc >::end()`.

**5.446.3.23** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::deque< _Tp, _Alloc >::back ( ) [inline]`

Returns a read/write reference to the data at the last element of the deque.

Definition at line 1301 of file `std_deque.h`.

References `std::deque< _Tp, _Alloc >::end()`.

**5.446.3.24** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::deque< _Tp, _Alloc >::begin ( ) [inline]`

Returns a read/write iterator that points to the first element in the deque. Iteration is done in ordinary element order.

Definition at line 1009 of file `std_deque.h`.

Referenced by `std::deque< _Tp, _Alloc >::clear()`, `std::deque< _Tp, _Alloc >::deque()`, `std::deque< _Tp, _Alloc >::erase()`, `std::deque< _Tp, _Alloc >::front()`, `std::deque< _Tp, _Alloc >::operator=()`, `std::operator==( )`, and `std::deque< _Tp, _Alloc >::~~deque()`.

**5.446.3.25** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::deque<_Tp, _Alloc>::begin ( ) const  
[inline]`

Returns a read-only (constant) iterator that points to the first element in the deque. Iteration is done in ordinary element order.

Definition at line 1017 of file `stl_deque.h`.

**5.446.3.26** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::deque<_Tp, _Alloc>::cbegin ( ) const  
[inline]`

Returns a read-only (constant) iterator that points to the first element in the deque. Iteration is done in ordinary element order.

Definition at line 1080 of file `stl_deque.h`.

**5.446.3.27** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::deque<_Tp, _Alloc>::cend ( ) const  
[inline]`

Returns a read-only (constant) iterator that points one past the last element in the deque. Iteration is done in ordinary element order.

Definition at line 1089 of file `stl_deque.h`.

**5.446.3.28** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque<_Tp, _Alloc>::clear ( ) [inline]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1579 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::begin()`.

Referenced by `std::deque<_Tp, _Alloc>::_M_range_initialize()`, `std::deque<_Tp, _Alloc>::erase()`, and `std::deque<_Tp, _Alloc>::operator=()`.

**5.446.3.29** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::deque< _Tp, _Alloc >::crbegin ( )  
const [inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1098 of file stl\_deque.h.

**5.446.3.30** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::deque< _Tp, _Alloc >::crend ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1107 of file stl\_deque.h.

**5.446.3.31** `template<typename _Tp, typename _Alloc > template<typename...  
_Args> deque< _Tp, _Alloc >::iterator deque::emplace ( iterator  
__position, _Args &&... __args )`

Inserts an object in deque before specified iterator.

#### Parameters

*position* An iterator into the deque.

*args* Arguments.

#### Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location.

Definition at line 174 of file deque.tcc.

References std::deque< \_Tp, \_Alloc >::push\_back(), and std::deque< \_Tp, \_Alloc >::push\_front().

Referenced by std::deque< \_Tp, \_Alloc >::insert().

**5.446.3.32** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
bool std::deque<_Tp, _Alloc>::empty ( ) const [inline]`

Returns true if the deque is empty. (Thus `begin()` would equal `end()`.)

Definition at line 1200 of file `stl_deque.h`.

**5.446.3.33** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::deque<_Tp, _Alloc>::end ( ) [inline]`

Returns a read/write iterator that points one past the last element in the deque. Iteration is done in ordinary element order.

Definition at line 1026 of file `stl_deque.h`.

Referenced by `std::deque<_Tp, _Alloc>::back()`, `std::deque<_Tp, _Alloc>::deque()`, `std::deque<_Tp, _Alloc>::erase()`, `std::deque<_Tp, _Alloc>::operator=()`, `std::operator==()`, and `std::deque<_Tp, _Alloc>::~~deque()`.

**5.446.3.34** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::deque<_Tp, _Alloc>::end ( ) const  
[inline]`

Returns a read-only (constant) iterator that points one past the last element in the deque. Iteration is done in ordinary element order.

Definition at line 1035 of file `stl_deque.h`.

**5.446.3.35** `template<typename _Tp, typename _Alloc> deque<_Tp, _Alloc>::iterator deque::erase ( iterator __position )`

Remove element at given position.

#### Parameters

*position* Iterator pointing to element to be erased.

#### Returns

An iterator pointing to the next element (or `end()`).

This function will erase the element at the given position and thus shorten the deque by one.

The user is cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 196 of file deque.tcc.

References `std::deque< _Tp, _Alloc >::begin()`, `std::deque< _Tp, _Alloc >::end()`, `std::deque< _Tp, _Alloc >::pop_back()`, `std::deque< _Tp, _Alloc >::pop_front()`, and `std::deque< _Tp, _Alloc >::size()`.

### 5.446.3.36 `template<typename _Tp, typename _Alloc > deque< _Tp, _Alloc >::iterator deque::erase ( iterator __first, iterator __last )`

Remove a range of elements.

#### Parameters

*first* Iterator pointing to the first element to be erased.

*last* Iterator pointing to one past the last element to be erased.

#### Returns

An iterator pointing to the element pointed to by *last* prior to erasing (or `end()`).

This function will erase the elements in the range `[first,last)` and shorten the deque accordingly.

The user is cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 219 of file deque.tcc.

References `std::deque< _Tp, _Alloc >::begin()`, `std::deque< _Tp, _Alloc >::clear()`, `std::deque< _Tp, _Alloc >::end()`, and `std::deque< _Tp, _Alloc >::size()`.

### 5.446.3.37 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::deque< _Tp, _Alloc >::front ( ) [inline]`

Returns a read/write reference to the data at the first element of the deque.

Definition at line 1285 of file stl\_deque.h.

References `std::deque< _Tp, _Alloc >::begin()`.

**5.446.3.38** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::deque< _Tp, _Alloc >::front ( ) const  
[inline]`

Returns a read-only (constant) reference to the data at the first element of the deque.

Definition at line 1293 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::begin().

**5.446.3.39** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
allocator_type std::deque< _Tp, _Alloc >::get_allocator ( ) const  
[inline]`

Get a copy of the memory allocation object.

Reimplemented from [std::\\_Deque\\_base< \\_Tp, \\_Alloc >](#).

Definition at line 1000 of file stl\_deque.h.

**5.446.3.40** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename _InputIterator > void std::deque< _Tp,  
_Alloc >::insert ( iterator __position, _InputIterator __first,  
_InputIterator __last ) [inline]`

Inserts a range into the deque.

#### Parameters

*position* An iterator into the deque.

*first* An input iterator.

*last* An input iterator.

This function will insert copies of the data in the range [first,last) into the deque before the location specified by *pos*. This is known as *range insert*.

Definition at line 1506 of file stl\_deque.h.

**5.446.3.41** `template<typename _Tp , typename _Alloc > deque< _Tp, _Alloc  
>::iterator deque::insert ( iterator __position, const value_type &  
__x )`

Inserts given value into deque before specified iterator.

### Parameters

- position* An iterator into the deque.
- x* Data to be inserted.

### Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location.

Definition at line 151 of file deque.tcc.

References std::deque< \_Tp, \_Alloc >::push\_back(), and std::deque< \_Tp, \_Alloc >::push\_front().

Referenced by std::deque< \_Tp, \_Alloc >::operator=(), and std::deque< \_Tp, \_Alloc >::resize().

**5.446.3.42** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::insert ( iterator __p,  
initializer_list< value_type > __l ) [inline]`

Inserts an initializer list into the deque.

### Parameters

- p* An iterator into the deque.
- l* An [initializer\\_list](#).

This function will insert copies of the data in the [initializer\\_list](#) *l* into the deque before the location specified by *p*. This is known as *list insert*.

Definition at line 1477 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::insert().

Referenced by std::deque< \_Tp, \_Alloc >::insert().

**5.446.3.43** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::deque< _Tp, _Alloc >::insert ( iterator __position,  
value_type && __x ) [inline]`

Inserts given rvalue into deque before specified iterator.

**Parameters**

*position* An iterator into the deque.  
*x* Data to be inserted.

**Returns**

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location.

Definition at line 1464 of file stl\_deque.h.

References std::deque< \_Tp, \_Alloc >::emplace().

```
5.446.3.44 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 void std::deque< _Tp, _Alloc >::insert (iterator __position,
 size_type __n, const value_type & __x) [inline]
```

Inserts a number of copies of given data into the deque.

**Parameters**

*position* An iterator into the deque.  
*n* Number of elements to be inserted.  
*x* Data to be inserted.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Definition at line 1491 of file stl\_deque.h.

```
5.446.3.45 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 size_type std::deque< _Tp, _Alloc >::max_size () const
 [inline]
```

Returns the [size\(\)](#) of the largest possible deque.

Definition at line 1119 of file stl\_deque.h.

Referenced by std::deque< \_Tp, \_Alloc >::\_M\_new\_elements\_at\_back(), and std::deque< \_Tp, \_Alloc >::\_M\_new\_elements\_at\_front().

```
5.446.3.46 template<typename _Tp, typename _Alloc > deque< _Tp, _Alloc
 > & deque::operator= (const deque< _Tp, _Alloc > & __x)
```

Deque assignment operator.

#### Parameters

*x* A deque of identical element and allocator types.

All the elements of *x* are copied, but unlike the copy constructor, the allocator object is not copied.

Definition at line 95 of file `deque.tcc`.

References `std::deque<_Tp, _Alloc>::begin()`, `std::deque<_Tp, _Alloc>::end()`, `std::deque<_Tp, _Alloc>::insert()`, and `std::deque<_Tp, _Alloc>::size()`.

**5.446.3.47** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
deque& std::deque<_Tp, _Alloc>::operator= ( initializer_list<  
value_type > __l ) [inline]`

Assigns an initializer list to a deque.

#### Parameters

*l* An [initializer\\_list](#).

This function fills a deque with copies of the elements in the [initializer\\_list](#) *l*.

Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 940 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::assign()`.

**5.446.3.48** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
deque& std::deque<_Tp, _Alloc>::operator= ( deque<_Tp,  
_Alloc> && __x ) [inline]`

Deque move assignment operator.

#### Parameters

*x* A deque of identical element and allocator types.

The contents of *x* are moved into this deque (without copying). *x* is a valid, but unspecified deque.

Definition at line 919 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::clear()`, and `std::deque<_Tp, _Alloc>::swap()`.

**5.446.3.49** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::deque<_Tp, _Alloc>::operator[] ( size_type __n )  
[inline]`

Subscript access to the data contained in the deque.

#### Parameters

*n* The index of the element for which data should be accessed.

#### Returns

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 1216 of file `stl_deque.h`.

**5.446.3.50** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::deque<_Tp, _Alloc>::operator[] ( size_type  
__n ) const [inline]`

Subscript access to the data contained in the deque.

#### Parameters

*n* The index of the element for which data should be accessed.

#### Returns

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 1231 of file `stl_deque.h`.

**5.446.3.51** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque<_Tp, _Alloc>::pop_back ( ) [inline]`

Removes last element.

This is a typical stack operation. It shrinks the deque by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before `pop_back()` is called.

Definition at line 1414 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::_M_pop_back_aux()`.

Referenced by `std::deque<_Tp, _Alloc>::erase()`.

**5.446.3.52** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque<_Tp, _Alloc>::pop_front ( ) [inline]`

Removes first element.

This is a typical stack operation. It shrinks the deque by one.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop_front()` is called.

Definition at line 1393 of file `stl_deque.h`.

References `std::deque<_Tp, _Alloc>::_M_pop_front_aux()`.

Referenced by `std::deque<_Tp, _Alloc>::erase()`.

**5.446.3.53** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque<_Tp, _Alloc>::push_back ( const value_type &  
__x ) [inline]`

Add data to the end of the deque.

#### Parameters

*x* Data to be added.

This is a typical stack operation. The function creates an element at the end of the deque and assigns the given data to it. Due to the nature of a deque this operation can be done in constant time.

Definition at line 1362 of file `stl_deque.h`.

References `std::deque< _Tp, _Alloc >::_M_push_back_aux()`.

Referenced by `std::deque< _Tp, _Alloc >::_M_range_initialize()`, `std::deque< _Tp, _Alloc >::emplace()`, and `std::deque< _Tp, _Alloc >::insert()`.

**5.446.3.54** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::push_front ( const value_type &  
__x ) [inline]`

Add data to the front of the deque.

#### Parameters

*x* Data to be added.

This is a typical stack operation. The function creates an element at the front of the deque and assigns the given data to it. Due to the nature of a deque this operation can be done in constant time.

Definition at line 1331 of file `stl_deque.h`.

References `std::deque< _Tp, _Alloc >::_M_push_front_aux()`.

Referenced by `std::deque< _Tp, _Alloc >::emplace()`, and `std::deque< _Tp, _Alloc >::insert()`.

**5.446.3.55** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::deque< _Tp, _Alloc >::rbegin ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1053 of file `stl_deque.h`.

**5.446.3.56** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::deque< _Tp, _Alloc >::rbegin ( )  
[inline]`

Returns a read/write reverse iterator that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1044 of file `stl_deque.h`.

**5.446.3.57** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::deque< _Tp, _Alloc >::rend ( ) [inline]`

Returns a read/write reverse iterator that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1062 of file stl\_deque.h.

**5.446.3.58** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::deque< _Tp, _Alloc >::rend ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1071 of file stl\_deque.h.

**5.446.3.59** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::resize ( size_type __new_size )  
[inline]`

Resizes the deque to the specified number of elements.

#### Parameters

*new\_size* Number of elements the deque should contain.

This function will resize the deque to the specified number of elements. If the number is smaller than the deque's current size the deque is truncated, otherwise default constructed elements are appended.

Definition at line 1133 of file stl\_deque.h.

References `std::deque< _Tp, _Alloc >::size()`.

**5.446.3.60** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::resize ( size_type __new_size,  
const value_type & __x ) [inline]`

Resizes the deque to the specified number of elements.

#### Parameters

*new\_size* Number of elements the deque should contain.

*x* Data with which new elements should be populated.

This function will resize the deque to the specified number of elements. If the number is smaller than the deque's current size the deque is truncated, otherwise the deque is extended and new elements are populated with given data.

Definition at line 1155 of file `stl_deque.h`.

References `std::deque< _Tp, _Alloc >::insert()`, and `std::deque< _Tp, _Alloc >::size()`.

**5.446.3.61** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::shrink_to_fit ( ) [inline]`

A non-binding request to reduce memory use.

Definition at line 1191 of file `stl_deque.h`.

**5.446.3.62** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
size_type std::deque< _Tp, _Alloc >::size ( ) const [inline]`

Returns the number of elements in the deque.

Definition at line 1114 of file `stl_deque.h`.

Referenced by `std::deque< _Tp, _Alloc >::_M_new_elements_at_back()`, `std::deque< _Tp, _Alloc >::_M_new_elements_at_front()`, `std::deque< _Tp, _Alloc >::_M_range_check()`, `std::deque< _Tp, _Alloc >::erase()`, `std::deque< _Tp, _Alloc >::operator=()`, `std::operator==( )`, and `std::deque< _Tp, _Alloc >::resize()`.

**5.446.3.63** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::deque< _Tp, _Alloc >::swap ( deque< _Tp, _Alloc > &  
__x ) [inline]`

Swaps data with another deque.

### Parameters

*x* A deque of the same element and allocator types.

This exchanges the elements between two deques in constant time. (Four pointers, so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(d1,d2)` will feed to this function.

Definition at line 1559 of file `stl_deque.h`.

### 5.447.1 Detailed Description

`template<typename _RandomNumberEngine, size_t __p, size_t __r> class std::discard_block_engine<_RandomNumberEngine, __p, __r>`

Produces random numbers from some base engine by discarding blocks of data.

`0 <= __r <= __p`

Definition at line 779 of file random.h.

### 5.447.2 Member Typedef Documentation

**5.447.2.1** `template<typename _RandomNumberEngine, size_t __p, size_t __r> typedef _RandomNumberEngine::result_type std::discard_block_engine<_RandomNumberEngine, __p, __r>::result_type`

The type of the generated random value.

Definition at line 786 of file random.h.

### 5.447.3 Constructor & Destructor Documentation

**5.447.3.1** `template<typename _RandomNumberEngine, size_t __p, size_t __r> std::discard_block_engine<_RandomNumberEngine, __p, __r>::discard_block_engine( ) [inline]`

Constructs a default discard\_block\_engine engine.

The underlying engine is default constructed as well.

Definition at line 797 of file `random.h`.

**5.447.3.2** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> std::discard_block_engine<_RandomNumberEngine, __p, __r  
>::discard_block_engine ( const _RandomNumberEngine & __rne )  
[inline, explicit]`

Copy constructs a `discard_block_engine` engine.

Copies an existing base class random number generator.

#### Parameters

*rng* An existing (base class) engine object.

Definition at line 807 of file `random.h`.

**5.447.3.3** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> std::discard_block_engine<_RandomNumberEngine, __p, __r  
>::discard_block_engine ( _RandomNumberEngine && __rne )  
[inline, explicit]`

Move constructs a `discard_block_engine` engine.

Copies an existing base class random number generator.

#### Parameters

*rng* An existing (base class) engine object.

Definition at line 817 of file `random.h`.

**5.447.3.4** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> std::discard_block_engine<_RandomNumberEngine, __p,  
__r>::discard_block_engine ( result_type __s ) [inline,  
explicit]`

Seed constructs a `discard_block_engine` engine.

Constructs the underlying generator engine seeded with `__s`.

#### Parameters

`__s` A seed value for the base class engine.

Definition at line 827 of file random.h.

**5.447.3.5** `template<typename _RandomNumberEngine, size_t __p,  
size_t __r> template<typename _Sseq, typename = typename  
std::enable_if<!std::is_same<_Sseq, discard_block_engine>::value  
&& !std::is_same<_Sseq, _RandomNumberEngine>::value>  
::type> std::discard_block_engine< _RandomNumberEngine,  
__p, __r >::discard_block_engine ( _Sseq & __q ) [inline,  
explicit]`

Generator construct a `discard_block_engine` engine.

#### Parameters

`__q` A seed sequence.

Definition at line 840 of file random.h.

#### 5.447.4 Member Function Documentation

**5.447.4.1** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> const _RandomNumberEngine& std::discard_block_engine<  
_RandomNumberEngine, __p, __r >::base ( ) const [inline]`

Gets a const reference to the underlying generator engine object.

Definition at line 884 of file random.h.

**5.447.4.2** `template<typename _RandomNumberEngine, size_t __p, size_t __r>  
void std::discard_block_engine< _RandomNumberEngine, __p, __r  
>::discard ( unsigned long long __z ) [inline]`

Discard a sequence of random numbers.

Definition at line 905 of file random.h.

**5.447.4.3** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> static constexpr result_type std::discard_block_engine<  
_RandomNumberEngine, __p, __r>::max ( ) [inline,  
static]`

Gets the maximum value in the generated random number range.

Definition at line 898 of file random.h.

**5.447.4.4** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> static constexpr result_type std::discard_block_engine<  
_RandomNumberEngine, __p, __r>::min ( ) [inline,  
static]`

Gets the minimum value in the generated random number range.

Definition at line 891 of file random.h.

**5.447.4.5** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> discard_block_engine<_RandomNumberEngine, __p, __r  
>::result_type std::discard_block_engine<_RandomNumberEngine,  
__p, __r>::operator() ( )`

Gets the next value in the generated random number sequence.

Definition at line 670 of file random.tcc.

**5.447.4.6** `template<typename _RandomNumberEngine, size_t __p, size_t  
__r> template<typename _Sseq > void std::discard_block_engine<  
_RandomNumberEngine, __p, __r>::seed ( _Sseq & __q )  
[inline]`

Reseeds the `discard_block_engine` object with the given seed sequence.

#### Parameters

`__q` A seed generator function.

Definition at line 873 of file random.h.

**5.447.4.7** `template<typename _RandomNumberEngine, size_t __p, size_t __r>  
void std::discard_block_engine<_RandomNumberEngine, __p, __r  
>::seed ( result_type __s ) [inline]`

Reseeds the `discard_block_engine` object with the default seed for the underlying base class generator engine.

Definition at line 860 of file `random.h`.

**5.447.4.8** `template<typename _RandomNumberEngine, size_t __p, size_t __r>  
void std::discard_block_engine<_RandomNumberEngine, __p, __r  
>::seed ( ) [inline]`

Reseeds the `discard_block_engine` object with the default seed for the underlying base class generator engine.

Definition at line 849 of file `random.h`.

## 5.447.5 Friends And Related Function Documentation

**5.447.5.1** `template<typename _RandomNumberEngine, size_t __p,  
size_t __r> template<typename _RandomNumberEngine1 ,  
size_t __p1, size_t __r1, typename _CharT , typename _Traits  
> std::basic_ostream<_CharT, _Traits>& operator<<  
( std::basic_ostream<_CharT, _Traits> & , const  
std::discard_block_engine<_RandomNumberEngine1, __p1, __r1 >  
& ) [friend]`

Inserts the current state of a `discard_block_engine` random number generator engine `__x` into the output stream `__os`.

### Parameters

`__os` An output stream.

`__x` A `discard_block_engine` random number generator engine.

### Returns

The output stream with the state of `__x` inserted or in an error state.

**5.447.5.2** `template<typename _RandomNumberEngine, size_t __p,  
size_t __r> bool operator==( const discard_block_engine<  
_RandomNumberEngine, __p, __r > & __lhs, const  
discard_block_engine< _RandomNumberEngine, __p, __r > &  
__rhs ) [friend]`

Compares two discard\_block\_engine random number generator objects of the same type for equality.

**Parameters**

`__lhs` A discard\_block\_engine random number generator object.

`__rhs` Another discard\_block\_engine random number generator object.

**Returns**

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 929 of file random.h.

**5.447.5.3** `template<typename _RandomNumberEngine, size_t __p,  
size_t __r> template<typename _RandomNumberEngine1  
, size_t __p1, size_t __r1, typename _CharT , typename  
_Traits > std::basic_istream<_CharT, _Traits>&  
operator>> ( std::basic_istream< _CharT, _Traits > & ,  
std::discard_block_engine< _RandomNumberEngine1, __p1, __r1 >  
& ) [friend]`

Extracts the current state of a % subtract\_with\_carry\_engine random number generator engine `__x` from the input stream `__is`.

**Parameters**

`__is` An input stream.

`__x` A discard\_block\_engine random number generator engine.

**Returns**

The input stream with the state of `__x` extracted or in an error state.

### 5.448.1 Detailed Description

**template<typename \_IntType = int> class std::discrete\_distribution< \_IntType >**

A [discrete\\_distribution](#) random number distribution. The formula for the discrete probability mass function is

Definition at line 4661 of file random.h.

### 5.448.2 Member Typedef Documentation

**5.448.2.1    template<typename \_IntType = int> typedef \_IntType  
              std::discrete\_distribution< \_IntType >::result\_type**

The type of the range of the distribution.

Definition at line 4668 of file random.h.

### 5.448.3 Member Function Documentation

**5.448.3.1    template<typename \_IntType = int> result\_type  
              std::discrete\_distribution< \_IntType >::max (    ) const    [inline]**

Returns the least upper bound value of the distribution.

Definition at line 4781 of file random.h.

References `std::vector< _Tp, _Alloc >::empty()`, and `std::vector< _Tp, _Alloc >::size()`.

**5.448.3.2    template<typename \_IntType = int> result\_type  
              std::discrete\_distribution< \_IntType >::min (    ) const    [inline]**

Returns the greatest lower bound value of the distribution.

Definition at line 4774 of file random.h.

**5.448.3.3** `template<typename _IntType = int> template<typename  
_UniformRandomNumberGenerator > result_type  
std::discrete_distribution< _IntType >::operator() (  
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 4792 of file random.h.

References `std::discrete_distribution< _IntType >::operator()()`, and `std::discrete_distribution< _IntType >::param()`.

Referenced by `std::discrete_distribution< _IntType >::operator()()`.

**5.448.3.4** `template<typename _IntType = int> void std::discrete_distribution<  
_IntType >::param ( const param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

`__param` The new parameter set of the distribution.

Definition at line 4767 of file random.h.

**5.448.3.5** `template<typename _IntType = int> param_type  
std::discrete_distribution< _IntType >::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 4759 of file random.h.

Referenced by `std::discrete_distribution< _IntType >::operator()()`, and `std::operator==( )`.

**5.448.3.6** `template<typename _IntType = int> std::vector<double>  
std::discrete_distribution< _IntType >::probabilities ( ) const  
[inline]`

Returns the probabilities of the distribution.

Definition at line 4749 of file random.h.

References std::vector<\_Tp, \_Alloc>::empty().

**5.448.3.7** `template<typename _IntType = int> void std::discrete_distribution<_IntType>::reset( ) [inline]`

Resets the distribution state.

Definition at line 4742 of file random.h.

#### **5.448.4 Friends And Related Function Documentation**

**5.448.4.1** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_ostream<_CharT,  
_Traits>& operator<<( std::basic_ostream<_CharT, _Traits> & ,  
const std::discrete_distribution<_IntType1> & ) [friend]`

Inserts a discrete\_distribution random number distribution `__x` into the output stream `__os`.

##### **Parameters**

`__os` An output stream.

`__x` A discrete\_distribution random number distribution.

##### **Returns**

The output stream with the state of `__x` inserted or in an error state.

**5.448.4.2** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_istream<_CharT,  
_Traits>& operator>>( std::basic_istream<_CharT, _Traits> & ,  
std::discrete_distribution<_IntType1> & ) [friend]`

Extracts a discrete\_distribution random number distribution `__x` from the input stream `__is`.

##### **Parameters**

`__is` An input stream.

## 5.449 `std::discrete_distribution< _IntType >::param_type` Struct Reference 2592

`__x` A `discrete_distribution` random number generator engine.

### Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.449 `std::discrete_distribution< _IntType >::param_type` Struct Reference

### Public Types

### 5.449.1 Detailed Description

`template<typename _IntType = int> struct std::discrete_distribution< _IntType >::param_type`

Parameter type.

Definition at line 4670 of file `random.h`.

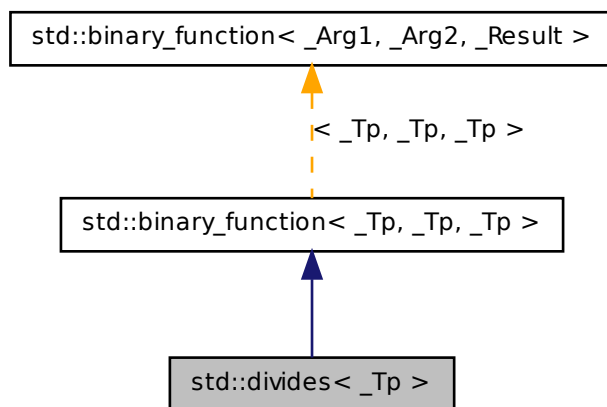

The documentation for this struct was generated from the following files:

- [random.h](#)
- [random.tcc](#)

### 5.450 `std::divides< _Tp >` Struct Template Reference

One of the [math functors](#).

Inheritance diagram for `std::divides< _Tp >`:

#### Public Types

- `typedef _Tp` [first\\_argument\\_type](#)
- `typedef _Tp` [result\\_type](#)
- `typedef _Tp` [second\\_argument\\_type](#)

#### Public Member Functions

- `_Tp operator() (const _Tp &__x, const _Tp &__y) const`

### 5.450.1 Detailed Description

`template<typename _Tp> struct std::divides<_Tp>`

One of the [math functors](#).

Definition at line 168 of file `stl_function.h`.

### 5.450.2 Member Typedef Documentation

**5.450.2.1** `typedef _Tp std::binary_function<_Tp, _Tp, _Tp  
>::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.450.2.2** `typedef _Tp std::binary_function<_Tp, _Tp, _Tp>::result_type  
[inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.450.2.3** `typedef _Tp std::binary_function<_Tp, _Tp, _Tp  
>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.451 `std::domain_error` Class Reference

Inheritance diagram for `std::domain_error`:

### Public Member Functions

- **`domain_error`** (const `string` &\_\_arg)
- virtual const char \* **`what`** () const throw ()

#### 5.451.1 Detailed Description

Thrown by the library, or by you, to report domain errors (domain in the mathematical sense).

Definition at line 75 of file `stdexcept`.

#### 5.451.2 Member Function Documentation

##### 5.451.2.1 virtual const char\* `std::logic_error::what` ( ) const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.452 `std::enable_if< bool, _Tp >` Struct Template Reference

[enable\\_if](#)

Inheritance diagram for `std::enable_if< bool, _Tp >`:

### 5.452.1 Detailed Description

`template<bool, typename _Tp = void> struct std::enable_if< bool, _Tp >`

[enable\\_if](#)

Definition at line 836 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.453 `std::enable_shared_from_this< _Tp >` Class Template Reference

Base class allowing use of member function `shared_from_this`.

**Public Member Functions**

- [shared\\_ptr](#)< \_Tp > [shared\\_from\\_this](#) ()
- [shared\\_ptr](#)< const \_Tp > [shared\\_from\\_this](#) () const

### 5.457.1 Detailed Description

[error\\_condition](#)

Definition at line 193 of file `system_error`.

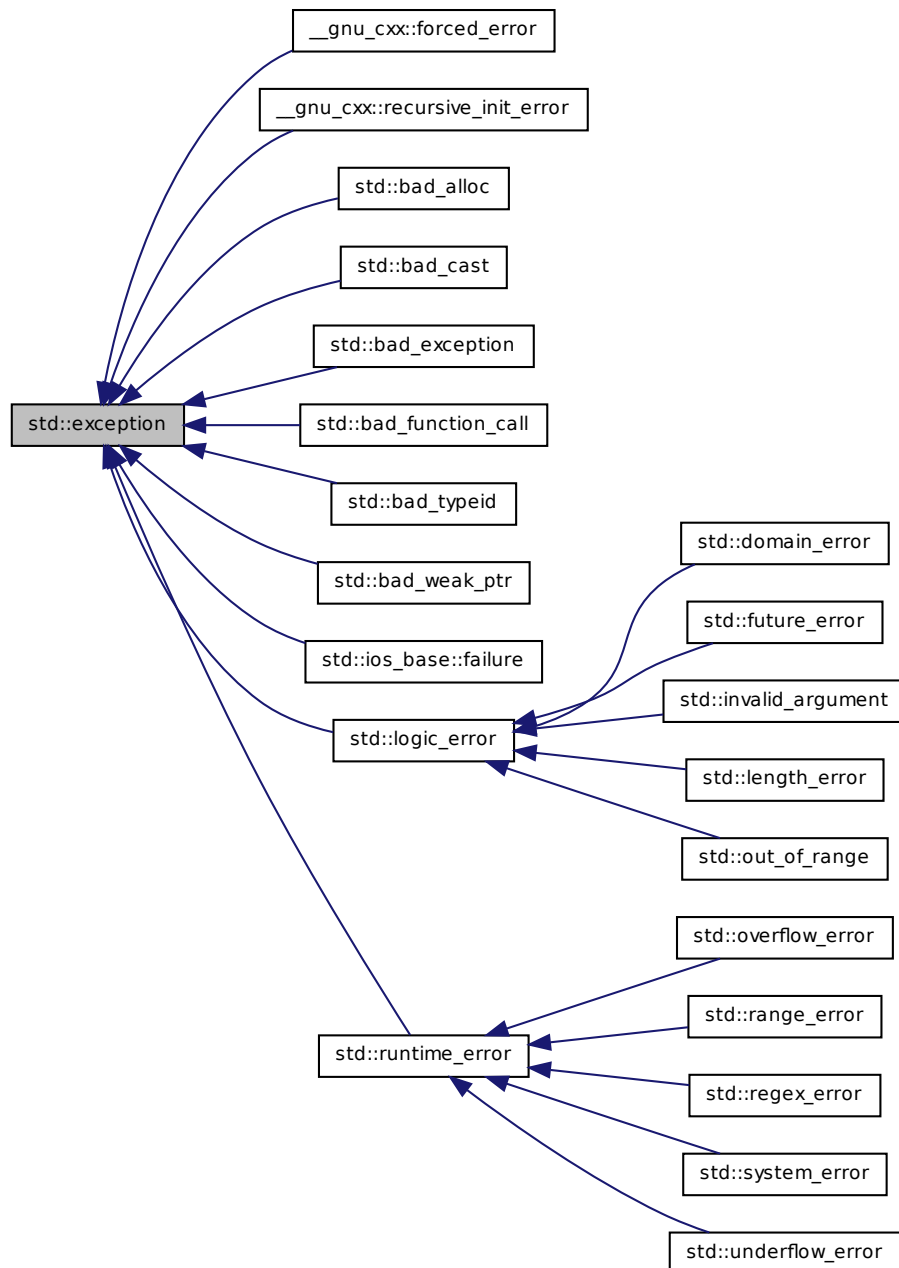

The documentation for this struct was generated from the following file:

- [system\\_error](#)

## 5.458 `std::exception` Class Reference

Base class for all library exceptions.

Inheritance diagram for `std::exception`:

**Public Member Functions**

- virtual const char \* [what](#) () const throw ()

**5.458.1 Detailed Description**

Base class for all library exceptions. This is the base class for all exceptions thrown by the standard library, and by certain language expressions. You are free to derive your own exception classes, or use a different hierarchy, or to throw non-class data (e.g., fundamental types).

Definition at line 61 of file `exception`.

**5.458.2 Member Function Documentation****5.458.2.1 `virtual const char* std::exception::what ( ) const throw ()`  
[[virtual](#)]**

Returns a C-style character string describing the general cause of the current error.

Reimplemented in [std::bad\\_exception](#), [std::bad\\_alloc](#), [std::bad\\_cast](#), [std::bad\\_typeid](#), [std::future\\_error](#), [std::logic\\_error](#), [std::runtime\\_error](#), [std::ios\\_base::failure](#), and [std::bad\\_weak\\_ptr](#).

The documentation for this class was generated from the following file:

- [exception](#)

**5.459 `std::exponential_distribution<_RealType>` Class Template Reference**

An exponential continuous distribution for random numbers.

**Classes**

- struct [param\\_type](#)

**Public Types**

- typedef `_RealType` [result\\_type](#)

### Public Member Functions

- `exponential_distribution` (const `result_type` &\_\_lambda=`result_type`(1))

- `param_type param` () const
- `void param` (const `param_type` &\_\_param)
- `void reset` ()

#### 5.459.1 Detailed Description

`template<typename _RealType = double> class std::exponential_distribution<_RealType>`

An exponential continuous distribution for random numbers. The formula for the exponential probability density function is  $p(x|\lambda) = \lambda e^{-\lambda x}$ .

|                    |                         |
|--------------------|-------------------------|
| Mean               | $\frac{1}{\lambda}$     |
| Median             | $\frac{\ln 2}{\lambda}$ |
| Mode               | <i>zero</i>             |
| Range              | $[0, \infty]$           |
| Standard Deviation | $\frac{1}{\lambda^2}$   |

Table 2: Distribution Statistics

Definition at line 4140 of file `random.h`.

#### 5.459.2 Member Typedef Documentation

**5.459.2.1** `template<typename _RealType = double> typedef _RealType std::exponential_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 4147 of file `random.h`.

### 5.459.3 Constructor & Destructor Documentation

**5.459.3.1** `template<typename _RealType = double> std::exponential_distribution<_RealType>::exponential_distribution ( const result_type & __lambda = result_type (1) ) [inline, explicit]`

Constructs an exponential distribution with inverse scale parameter  $\lambda$ .

Definition at line 4178 of file random.h.

### 5.459.4 Member Function Documentation

**5.459.4.1** `template<typename _RealType = double> _RealType std::exponential_distribution<_RealType>::lambda ( ) const [inline]`

Returns the inverse scale parameter of the distribution.

Definition at line 4199 of file random.h.

**5.459.4.2** `template<typename _RealType = double> result_type std::exponential_distribution<_RealType>::max ( ) const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 4228 of file random.h.

**5.459.4.3** `template<typename _RealType = double> result_type std::exponential_distribution<_RealType>::min ( ) const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4221 of file random.h.

**5.459.4.4** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator > result_type  
std::exponential_distribution<_RealType>::operator() (  
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 4236 of file random.h.

References `std::exponential_distribution<_RealType>::operator()()`, and  
`std::exponential_distribution<_RealType>::param()`.

Referenced by `std::exponential_distribution<_RealType>::operator()()`.

**5.459.4.5** `template<typename _RealType = double> param_type  
std::exponential_distribution<_RealType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 4206 of file random.h.

Referenced by `std::exponential_distribution<_RealType>::operator()()`,  
`std::operator==( )`, and `std::operator>>()`.

**5.459.4.6** `template<typename _RealType = double> void  
std::exponential_distribution<_RealType>::param ( const  
param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

***\_\_param*** The new parameter set of the distribution.

Definition at line 4214 of file random.h.

**5.459.4.7** `template<typename _RealType = double> void  
std::exponential_distribution<_RealType>::reset ( ) [inline]`

Resets the distribution state.

## 5.460 `std::exponential_distribution<_RealType>::param_type` Struct Reference

2607

Has no effect on exponential distributions.

Definition at line 4193 of file `random.h`.

The documentation for this class was generated from the following file:

- void **reset** ()

### 5.462.1 Detailed Description

**template<typename \_RealType = double> class std::extreme\_value\_distribution<\_RealType>**

A [extreme\\_value\\_distribution](#) random number distribution. The formula for the normal probability mass function is

$$p(x|a,b) = \frac{1}{b} \exp\left(\frac{a-x}{b} - \exp\left(\frac{a-x}{b}\right)\right)$$

Definition at line 4489 of file random.h.

### 5.462.2 Member Typedef Documentation

**5.462.2.1 template<typename \_RealType = double> typedef \_RealType  
std::extreme\_value\_distribution<\_RealType>::result\_type**

The type of the range of the distribution.

Definition at line 4496 of file random.h.

### 5.462.3 Member Function Documentation

**5.462.3.1 template<typename \_RealType = double> \_RealType  
std::extreme\_value\_distribution<\_RealType>::a ( ) const  
[inline]**

Return the  $a$  parameter of the distribution.

Definition at line 4547 of file random.h.

**5.462.3.2 template<typename \_RealType = double> \_RealType  
std::extreme\_value\_distribution<\_RealType>::b ( ) const  
[inline]**

Return the  $b$  parameter of the distribution.

Definition at line 4554 of file random.h.

**5.462.3.3** `template<typename _RealType = double> result_type  
std::extreme_value_distribution<_RealType>::max ( ) const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 4583 of file random.h.

**5.462.3.4** `template<typename _RealType = double> result_type  
std::extreme_value_distribution<_RealType>::min ( ) const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4576 of file random.h.

**5.462.3.5** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator> result_type  
std::extreme_value_distribution<_RealType>::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 4591 of file random.h.

References `std::extreme_value_distribution<_RealType>::operator()()`, and  
`std::extreme_value_distribution<_RealType>::param()`.

Referenced by `std::extreme_value_distribution<_RealType>::operator()()`.

**5.462.3.6** `template<typename _RealType = double> void  
std::extreme_value_distribution<_RealType>::param ( const  
param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

`__param` The new parameter set of the distribution.

Definition at line 4569 of file random.h.

**5.462.3.7** `template<typename _RealType = double> param_type  
std::extreme_value_distribution< _RealType >::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 4561 of file random.h.

Referenced by `std::extreme_value_distribution< _RealType >::operator()()`, `std::operator==( )`, and `std::operator>>()`.

**5.462.3.8** `template<typename _RealType = double> void  
std::extreme_value_distribution< _RealType >::reset ( )  
[inline]`

Resets the distribution state.

Definition at line 4540 of file random.h.

The documentation for this class was generated from the following files:

- [random.h](#)

### 5.464.1 Detailed Description

`template<typename _RealType = double> class std::fisher_f_distribution<_RealType>`

A [fisher\\_f\\_distribution](#) random number distribution. The formula for the normal probability mass function is

$$p(x|m, n) = \frac{\Gamma((m+n)/2)}{\Gamma(m/2)\Gamma(n/2)} \left(\frac{m}{n}\right)^{m/2} x^{(m/2)-1} \left(1 + \frac{mx}{n}\right)^{-(m+n)/2}$$

Definition at line 2854 of file random.h.

### 5.464.2 Member Typedef Documentation

**5.464.2.1** `template<typename _RealType = double> typedef _RealType std::fisher_f_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 2861 of file random.h.

### 5.464.3 Member Function Documentation

**5.464.3.1** `template<typename _RealType = double> result_type std::fisher_f_distribution<_RealType>::max( ) const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2948 of file random.h.

**5.464.3.2** `template<typename _RealType = double> result_type  
std::fisher_f_distribution<_RealType>::min ( ) const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2941 of file random.h.

**5.464.3.3** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator > result_type  
std::fisher_f_distribution<_RealType>::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 2956 of file random.h.

**5.464.3.4** `template<typename _RealType = double> void  
std::fisher_f_distribution<_RealType>::param ( const param_type  
& __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

`__param` The new parameter set of the distribution.

Definition at line 2934 of file random.h.

**5.464.3.5** `template<typename _RealType = double> param_type  
std::fisher_f_distribution<_RealType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 2926 of file random.h.

**5.464.3.6** `template<typename _RealType = double> void  
std::fisher_f_distribution<_RealType>::reset( ) [inline]`

Resets the distribution state.

Definition at line 2905 of file random.h.

References `std::gamma_distribution<_RealType>::reset()`.

#### **5.464.4 Friends And Related Function Documentation**

**5.464.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
( std::basic_ostream<_CharT, _Traits> & , const  
std::fisher_f_distribution<_RealType1> & ) [friend]`

Inserts a `fisher_f_distribution` random number distribution `__x` into the output stream `__os`.

##### **Parameters**

`__os` An output stream.

`__x` A `fisher_f_distribution` random number distribution.

##### **Returns**

The output stream with the state of `__x` inserted or in an error state.

**5.464.4.2** `template<typename _RealType = double> template<typename  
_RealType1 > bool operator==( const std::fisher_f_distribution<  
_RealType1 > & __d1, const std::fisher_f_distribution<_RealType1  
> & __d2 ) [friend]`

Return true if two Fisher f distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2977 of file random.h.

## 5.465 `std::fisher_f_distribution<_RealType>::param_type` Struct Reference 2617

5.464.4.3 `template<typename _RealType = double> template<typename  
_RealType1, typename _CharT, typename _Traits >  
std::basic_istream<_CharT, _Traits>& operator>>  
( std::basic_istream<_CharT, _Traits > & ,  
std::fisher_f_distribution<_RealType1 > & ) [friend]`

Extracts a `fisher_f_distribution` random number distribution `__x` from the input stream `__is`.

### Parameters

- `__is` An input stream.
- `__x` A `fisher_f_distribution` random number generator engine.

### Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following file:

#### 5.467.1 Detailed Description

`template<typename _Tp, typename _Alloc = allocator<_Tp>> class std::forward_list<_Tp, _Alloc>`

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence. Meets the requirements of a [container](#), a [sequence](#), including the [optional sequence requirements](#) with the exception of `at` and `operator[]`.

This is a *singly linked* list. Traversal up the list requires linear time, but adding and removing elements (or *nodes*) is done in constant time, regardless of where the change takes place. Unlike `std::vector` and `std::deque`, random-access iterators are not provided, so subscripting ( `[]` ) access is not allowed. For algorithms which only need sequential access, this lack makes no difference.

Also unlike the other standard containers, `std::forward_list` provides specialized algorithms unique to linked lists, such as splicing, sorting, and in-place reversal.

A couple points on memory allocation for `forward_list<Tp>`:

First, we never actually allocate a `Tp`, we allocate `Fwd_list_node<Tp>`'s and trust [20.1.5]/4 to DTRT. This is to ensure that after elements from `forward_list<X, Alloc1>` are spliced into `forward_list<X, Alloc2>`, destroying the memory of the second list is a valid operation, i.e., `Alloc1` giveth and `Alloc2` taketh away.

Definition at line 408 of file `forward_list.h`.

## 5.467.2 Constructor & Destructor Documentation

**5.467.2.1** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
std::forward_list<_Tp, _Alloc>::forward_list ( const _Alloc & __al  
= _Alloc() ) [inline, explicit]`

Creates a forward\_list with no elements.

### Parameters

*al* An allocator object.

Definition at line 437 of file forward\_list.h.

**5.467.2.2** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
std::forward_list<_Tp, _Alloc>::forward_list ( const forward_list<  
_Tp, _Alloc> & __list, const _Alloc & __al ) [inline]`

Copy constructor with allocator argument.

### Parameters

*list* Input list to copy.

*al* An allocator object.

Definition at line 446 of file forward\_list.h.

**5.467.2.3** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
std::forward_list<_Tp, _Alloc>::forward_list ( forward_list<_Tp,  
_Alloc> && __list, const _Alloc & __al ) [inline]`

Move constructor with allocator argument.

### Parameters

*list* Input list to move.

*al* An allocator object.

Definition at line 455 of file forward\_list.h.

**5.467.2.4** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
std::forward_list<_Tp, _Alloc>::forward_list ( size_type __n )  
[inline, explicit]`

Creates a forward\_list with default constructed elements.

#### Parameters

*n* The number of elements to initially create.

This constructor creates the forward\_list with *n* default constructed elements.

Definition at line 467 of file forward\_list.h.

**5.467.2.5** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
std::forward_list<_Tp, _Alloc>::forward_list ( size_type __n,  
const _Tp & __value, const _Alloc & __al = _Alloc() )  
[inline]`

Creates a forward\_list with copies of an exemplar element.

#### Parameters

*n* The number of elements to initially create.

*value* An element to copy.

*al* An allocator object.

This constructor fills the forward\_list with *n* copies of *value*.

Definition at line 480 of file forward\_list.h.

**5.467.2.6** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
template<typename _InputIterator> std::forward_list<_Tp, _Alloc>  
>::forward_list ( _InputIterator __first, _InputIterator __last,  
const _Alloc & __al = _Alloc() ) [inline]`

Builds a forward\_list from a range.

#### Parameters

*first* An input iterator.

*last* An input iterator.

*al* An allocator object.

Create a `forward_list` consisting of copies of the elements from `[first,last)`. This is linear in `N` (where `N` is `distance(first,last)`).

Definition at line 496 of file `forward_list.h`.

```
5.467.2.7 template<typename _Tp, typename _Alloc = allocator<_Tp>>
 std::forward_list<_Tp, _Alloc>::forward_list (const forward_list<
 _Tp, _Alloc> & __list) [inline]
```

The `forward_list` copy constructor.

#### Parameters

*list* A `forward_list` of identical element and allocator types.

The newly-created `forward_list` uses a copy of the allocation object used by *list*.

Definition at line 513 of file `forward_list.h`.

References `std::forward_list<_Tp, _Alloc>::begin()`, and `std::forward_list<_Tp, _Alloc>::end()`.

```
5.467.2.8 template<typename _Tp, typename _Alloc = allocator<_Tp>>
 std::forward_list<_Tp, _Alloc>::forward_list (forward_list<_Tp,
 _Alloc> && __list) [inline]
```

The `forward_list` move constructor.

#### Parameters

*list* A `forward_list` of identical element and allocator types.

The newly-created `forward_list` contains the exact contents of [\*forward\\_list\*](#). The contents of *list* are a valid, but unspecified `forward_list`.

Definition at line 526 of file `forward_list.h`.

**5.467.2.9** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
 std::forward_list<_Tp, _Alloc>::forward_list ( std::initializer_list<  
 _Tp> __il, const _Alloc & __al = _Alloc() ) [inline]`

Builds a forward\_list from an [initializer\\_list](#).

#### Parameters

*il* An [initializer\\_list](#) of value\_type.

*al* An allocator object.

Create a forward\_list consisting of copies of the elements in the [initializer\\_list](#) *il*. This is linear in *il.size()*.

Definition at line 537 of file forward\_list.h.

**5.467.2.10** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
 std::forward_list<_Tp, _Alloc>::~~forward_list ( ) [inline]`

The [forward\\_list](#) dtor.

Definition at line 545 of file forward\_list.h.

### 5.467.3 Member Function Documentation

**5.467.3.1** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
 template<typename _InputIterator> void std::forward_list<_Tp,  
 _Alloc>::assign ( _InputIterator __first, _InputIterator __last )  
 [inline]`

Assigns a range to a forward\_list.

#### Parameters

*first* An input iterator.

*last* An input iterator.

This function fills a forward\_list with copies of the elements in the range [*first*,*last*).

Note that the assignment completely changes the forward\_list and that the resulting forward\_list's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 607 of file `forward_list.h`.

References `std::forward_list<_Tp, _Alloc>::cbefore_begin()`, `std::forward_list<_Tp, _Alloc>::clear()`, and `std::forward_list<_Tp, _Alloc>::insert_after()`.

Referenced by `std::forward_list<_Tp, _Alloc>::operator=()`.

**5.467.3.2** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list<_Tp, _Alloc>::assign ( size_type __n, const_Tp  
& __val ) [inline]`

Assigns a given value to a `forward_list`.

#### Parameters

*n* Number of elements to be assigned.

*val* Value to be assigned.

This function fills a `forward_list` with *n* copies of the given value. Note that the assignment completely changes the `forward_list` and that the resulting `forward_list`'s size is the same as the number of elements assigned. Old data may be lost.

Definition at line 624 of file `forward_list.h`.

References `std::forward_list<_Tp, _Alloc>::cbefore_begin()`, `std::forward_list<_Tp, _Alloc>::clear()`, and `std::forward_list<_Tp, _Alloc>::insert_after()`.

**5.467.3.3** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list<_Tp, _Alloc>::assign ( std::initializer_list<_Tp  
> __il ) [inline]`

Assigns an [initializer\\_list](#) to a `forward_list`.

#### Parameters

*il* An [initializer\\_list](#) of `value_type`.

Replace the contents of the `forward_list` with copies of the elements in the [initializer\\_list](#) *il*. This is linear in *il.size()*.

Definition at line 639 of file `forward_list.h`.

References `std::forward_list<_Tp, _Alloc>::cbefore_begin()`, `std::forward_list<_Tp, _Alloc>::clear()`, and `std::forward_list<_Tp, _Alloc>::insert_after()`.

**5.467.3.4** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
iterator std::forward_list< _Tp, _Alloc >::before_begin ( )  
[inline]`

Returns a read/write iterator that points before the first element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 657 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::operator=(), and std::forward\_list< \_Tp, \_Alloc >::resize().

**5.467.3.5** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list< _Tp, _Alloc >::before_begin ( )  
const [inline]`

Returns a read-only (constant) iterator that points before the first element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 666 of file forward\_list.h.

**5.467.3.6** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
iterator std::forward_list< _Tp, _Alloc >::begin ( ) [inline]`

Returns a read/write iterator that points to the first element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 674 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::forward\_list(), std::forward\_list< \_Tp, \_Alloc >::operator=(), and std::forward\_list< \_Tp, \_Alloc >::unique().

**5.467.3.7** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list< _Tp, _Alloc >::begin ( ) const  
[inline]`

Returns a read-only (constant) iterator that points to the first element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 683 of file forward\_list.h.

**5.467.3.8** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list< _Tp, _Alloc >::cbefore_begin ( )  
const [inline]`

Returns a read-only (constant) iterator that points before the first element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 719 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::assign(), std::forward\_list< \_Tp, \_Alloc >::emplace\_front(), and std::forward\_list< \_Tp, \_Alloc >::push\_front().

**5.467.3.9** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list< _Tp, _Alloc >::cbegin ( ) const  
[inline]`

Returns a read-only (constant) iterator that points to the first element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 710 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::operator=(), and std::operator==( ).

**5.467.3.10** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list< _Tp, _Alloc >::cend ( ) const  
[inline]`

Returns a read-only (constant) iterator that points one past the last element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 728 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::operator=(), and std::operator==( ).

**5.467.3.11** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::clear ( ) [inline]`

Erases all the elements.

Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1024 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::assign(), and std::forward\_list< \_Tp, \_Alloc >::operator=().

**5.467.3.12** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
template<typename... _Args> iterator std::forward_list< _Tp,  
_Alloc >::emplace_after ( const_iterator __pos, _Args &&...  
__args ) [inline]`

Constructs object in forward\_list after the specified iterator.

#### Parameters

*pos* A const\_iterator into the forward\_list.

*args* Arguments.

#### Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) after the specified location. Due to the nature of a forward\_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 841 of file forward\_list.h.

**5.467.3.13** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
template<typename... _Args> void std::forward_list< _Tp, _Alloc  
>::emplace_front ( _Args &&... __args ) [inline]`

Constructs object in forward\_list at the front of the list.

#### Parameters

*args* Arguments.

This function will insert an object of type Tp constructed with Tp(std::forward<Args>(args)...) at the front of the list. Due to the nature of a forward\_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 785 of file forward\_list.h.

References std::forward\_list< \_Tp, \_Alloc >::cbefore\_begin().

**5.467.3.14** `template<typename _Tp, typename _Alloc = allocator<_Tp>> bool  
std::forward_list< _Tp, _Alloc >::empty ( ) const [inline]`

Returns true if the forward\_list is empty. (Thus `begin()` would equal `end()`.)

Definition at line 736 of file forward\_list.h.

Referenced by `std::forward_list< _Tp, _Alloc >::insert_after()`.

**5.467.3.15** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
iterator std::forward_list< _Tp, _Alloc >::end ( ) [inline]`

Returns a read/write iterator that points one past the last element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 692 of file forward\_list.h.

Referenced by `std::forward_list< _Tp, _Alloc >::forward_list()`, `std::forward_list< _Tp, _Alloc >::operator=()`, `std::forward_list< _Tp, _Alloc >::resize()`, and `std::forward_list< _Tp, _Alloc >::unique()`.

**5.467.3.16** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_iterator std::forward_list< _Tp, _Alloc >::end ( ) const  
[inline]`

Returns a read-only iterator that points one past the last element in the forward\_list. Iteration is done in ordinary element order.

Definition at line 701 of file forward\_list.h.

**5.467.3.17** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
iterator std::forward_list< _Tp, _Alloc >::erase_after (   
const_iterator __pos, const_iterator __last ) [inline]`

Remove a range of elements.

#### Parameters

*pos* Iterator pointing before the first element to be erased.

*last* Iterator pointing to one past the last element to be erased.

#### Returns

.

This function will erase the elements in the range (pos,last) and shorten the forward\_list accordingly.

This operation is linear time in the size of the range and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 965 of file forward\_list.h.

**5.467.3.18** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
iterator std::forward_list< _Tp, _Alloc >::erase_after (   
const_iterator __pos ) [inline]`

Removes the element pointed to by the iterator following pos.

#### Parameters

*pos* Iterator pointing before element to be erased.

#### Returns

An iterator pointing to the element following the one that was erased, or `end()` if no such element exists.

This function will erase the element at the given position and thus shorten the forward\_list by one.

Due to the nature of a forward\_list this operation can be done in constant time, and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 942 of file forward\_list.h.

Referenced by `std::forward_list< _Tp, _Alloc >::operator=()`, `std::forward_list< _Tp, _Alloc >::resize()`, and `std::forward_list< _Tp, _Alloc >::unique()`.

**5.467.3.19** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
reference std::forward_list< _Tp, _Alloc >::front ( ) [inline]`

Returns a read/write reference to the data at the first element of the forward\_list.

Definition at line 753 of file forward\_list.h.

**5.467.3.20** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
const_reference std::forward_list< _Tp, _Alloc >::front ( ) const  
[inline]`

Returns a read-only (constant) reference to the data at the first element of the forward\_list.

Definition at line 764 of file forward\_list.h.

**5.467.3.21** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
allocator_type std::forward_list< _Tp, _Alloc >::get_allocator ( )  
const [inline]`

Get a copy of the memory allocation object.

Definition at line 647 of file forward\_list.h.

**5.467.3.22** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
iterator std::forward_list< _Tp, _Alloc >::insert_after (   
const_iterator __pos, const _Tp & __val ) [inline]`

Inserts given value into forward\_list after specified iterator.

#### Parameters

*pos* An iterator into the forward\_list.

*val* Data to be inserted.

#### Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value after the specified location. Due to the nature of a forward\_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 858 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::assign(), std::forward\_list< \_Tp, \_Alloc >::operator=(), and std::forward\_list< \_Tp, \_Alloc >::resize().

**5.467.3.23** `template<typename _Tp, typename _Alloc > forward_list< _Tp, _Alloc >::iterator forward_list::insert_after ( const_iterator __pos, size_type __n, const _Tp & __val )`

Inserts a number of copies of given data into the forward\_list.

#### Parameters

*pos* An iterator into the forward\_list.

*n* Number of elements to be inserted.

*val* Data to be inserted.

#### Returns

An iterator pointing to the last inserted copy of *val* or *pos* if *n* == 0.

This function will insert a specified number of copies of the given data after the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 249 of file forward\_list.tcc.

**5.467.3.24** `template<typename _Tp, typename _Alloc > template<typename _InputIterator > forward_list< _Tp, _Alloc >::iterator forward_list::insert_after ( const_iterator __pos, _InputIterator __first, _InputIterator __last )`

Inserts a range into the forward\_list.

#### Parameters

*position* An iterator into the forward\_list.

*first* An input iterator.

*last* An input iterator.

#### Returns

An iterator pointing to the last inserted element or *pos* if *first* == *last*.

This function will insert copies of the data in the range [*first*,*last*) into the forward\_list after the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 264 of file forward\_list.tcc.

References std::forward\_list< \_Tp, \_Alloc >::empty().

**5.467.3.25** `template<typename _Tp, typename _Alloc > forward_list< _Tp, _Alloc >::iterator forward_list::insert_after ( const_iterator __pos, std::initializer_list< _Tp > __il )`

Inserts the contents of an [initializer\\_list](#) into forward\_list after the specified iterator.

#### Parameters

*pos* An iterator into the forward\_list.

*il* An [initializer\\_list](#) of value\_type.

#### Returns

An iterator pointing to the last inserted element or *pos* if *il* is empty.

This function will insert copies of the data in the [initializer\\_list](#) *il* into the forward\_list before the location specified by *pos*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 277 of file forward\_list.tcc.

**5.467.3.26** `template<typename _Tp, typename _Alloc = allocator<_Tp>> size_type std::forward_list< _Tp, _Alloc >::max_size ( ) const [inline]`

Returns the largest possible size of forward\_list.

Definition at line 743 of file forward\_list.h.

**5.467.3.27** `template<typename _Tp, typename _Alloc > template<typename _Comp > void forward_list::merge ( forward_list< _Tp, _Alloc > && __list, _Comp __comp )`

Merge sorted lists according to comparison function.

**Parameters**

*list* Sorted list to merge.

*comp* Comparison function defining sort order.

Assumes that both *list* and this list are sorted according to *comp*. Merges elements of *list* into this list in sorted order, leaving *list* empty when complete. Elements in this list precede elements in *list* that are equivalent according to *comp*().

Definition at line 357 of file forward\_list.tcc.

**5.467.3.28** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::merge ( forward_list< _Tp,  
_Alloc > && __list ) [inline]`

Merge sorted lists.

**Parameters**

*list* Sorted list to merge.

Assumes that both *list* and this list are sorted according to *operator<()*. Merges elements of *list* into this list in sorted order, leaving *list* empty when complete. Elements in this list precede elements in *list* that are equal.

Definition at line 1155 of file forward\_list.h.

References std::forward\_list< \_Tp, \_Alloc >::merge().

Referenced by std::forward\_list< \_Tp, \_Alloc >::merge().

**5.467.3.29** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
forward_list& std::forward_list< _Tp, _Alloc >::operator= (  
forward_list< _Tp, _Alloc > && __list ) [inline]`

The forward\_list move assignment operator.

**Parameters**

*list* A forward\_list of identical element and allocator types.

The contents of *list* are moved into this forward\_list (without copying). *list* is a valid, but unspecified forward\_list

Definition at line 569 of file forward\_list.h.

References std::forward\_list< \_Tp, \_Alloc >::clear(), and std::forward\_list< \_Tp, \_Alloc >::swap().

**5.467.3.30** `template<typename _Tp, typename _Alloc > forward_list< _Tp, _Alloc > & forward_list::operator= ( const forward_list< _Tp, _Alloc > & __list )`

The forward\_list assignment operator.

#### Parameters

*list* A forward\_list of identical element and allocator types.

All the elements of *list* are copied, but unlike the copy constructor, the allocator object is not copied.

Definition at line 145 of file forward\_list.tcc.

References std::forward\_list< \_Tp, \_Alloc >::before\_begin(), std::forward\_list< \_Tp, \_Alloc >::begin(), std::forward\_list< \_Tp, \_Alloc >::cbegin(), std::forward\_list< \_Tp, \_Alloc >::cend(), std::forward\_list< \_Tp, \_Alloc >::end(), std::forward\_list< \_Tp, \_Alloc >::erase\_after(), and std::forward\_list< \_Tp, \_Alloc >::insert\_after().

**5.467.3.31** `template<typename _Tp, typename _Alloc = allocator<_Tp>> forward_list& std::forward_list< _Tp, _Alloc >::operator= ( std::initializer_list< _Tp > __il ) [inline]`

The forward\_list initializer list assignment operator.

#### Parameters

*il* An [initializer\\_list](#) of value\_type.

Replace the contents of the forward\_list with copies of the elements in the [initializer\\_list](#) *il*. This is linear in *il.size()*.

Definition at line 587 of file forward\_list.h.

References std::forward\_list< \_Tp, \_Alloc >::assign().

**5.467.3.32** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void std::forward_list< _Tp, _Alloc >::pop_front ( ) [inline]`

Removes first element.

This is a typical stack operation. It shrinks the forward\_list by one. Due to the nature of a forward\_list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop_front()` is called.

Definition at line 823 of file forward\_list.h.

```
5.467.3.33 template<typename _Tp, typename _Alloc = allocator<_Tp>> void
 std::forward_list< _Tp, _Alloc >::push_front (const _Tp & __val
) [inline]
```

Add data to the front of the forward\_list.

#### Parameters

*val* Data to be added.

This is a typical stack operation. The function creates an element at the front of the forward\_list and assigns the given data to it. Due to the nature of a forward\_list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 800 of file forward\_list.h.

References `std::forward_list< _Tp, _Alloc >::cbefore_begin()`.

```
5.467.3.34 template<typename _Tp, typename _Alloc > void
 forward_list::remove (const _Tp & __val)
```

Remove all elements equal to value.

#### Parameters

*val* The value to remove.

Removes every element in the list equal to *value*. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 291 of file forward\_list.tcc.

**5.467.3.35** `template<typename _Tp, typename _Alloc> template<typename  
_Pred> void forward_list::remove_if ( _Pred __pred )`

Remove all elements satisfying a predicate.

**Parameters**

*pred* Unary predicate function or object.

Removes every element in the list for which the predicate returns true. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 320 of file `forward_list.tcc`.

**5.467.3.36** `template<typename _Tp, typename _Alloc> void  
forward_list::resize ( size_type __sz )`

Resizes the `forward_list` to the specified number of elements.

**Parameters**

*sz* Number of elements the `forward_list` should contain.

This function will resize the `forward_list` to the specified number of elements. If the number is smaller than the `forward_list`'s current size the `forward_list` is truncated, otherwise the `forward_list` is extended and the new elements are default constructed.

Definition at line 190 of file `forward_list.tcc`.

References `std::forward_list<_Tp, _Alloc>::before_begin()`, `std::forward_list<_Tp, _Alloc>::end()`, and `std::forward_list<_Tp, _Alloc>::erase_after()`.

**5.467.3.37** `template<typename _Tp, typename _Alloc> void  
forward_list::resize ( size_type __sz, const value_type & __val )`

Resizes the `forward_list` to the specified number of elements.

**Parameters**

*sz* Number of elements the `forward_list` should contain.

*val* Data with which new elements should be populated.

This function will resize the forward\_list to the specified number of elements. If the number is smaller than the forward\_list's current size the forward\_list is truncated, otherwise the forward\_list is extended and new elements are populated with given data.

Definition at line 209 of file forward\_list.tcc.

References std::forward\_list< \_Tp, \_Alloc >::before\_begin(), std::forward\_list< \_Tp, \_Alloc >::end(), std::forward\_list< \_Tp, \_Alloc >::erase\_after(), and std::forward\_list< \_Tp, \_Alloc >::insert\_after().

**5.467.3.38** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::reverse ( ) [inline]`

Reverse the elements in list.

Reverse the order of elements in the list in linear time.

Definition at line 1199 of file forward\_list.h.

**5.467.3.39** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::sort ( ) [inline]`

Sort the elements of the list.

Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.

Definition at line 1180 of file forward\_list.h.

References std::forward\_list< \_Tp, \_Alloc >::sort().

Referenced by std::forward\_list< \_Tp, \_Alloc >::sort().

**5.467.3.40** `template<typename _Tp, class _Alloc > template<typename  
_Comp > void forward_list::sort ( _Comp __comp )`

Sort the [forward\\_list](#) using a comparison function.

Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.

Definition at line 403 of file forward\_list.tcc.

**5.467.3.41** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::splice_after ( const_iterator  
__pos, forward_list< _Tp, _Alloc > && __list ) [inline]`

Insert contents of another forward\_list.

#### Parameters

*pos* Iterator referencing the element to insert after.

*list* Source list.

The elements of *list* are inserted in constant time after the element referenced by *pos*.  
*list* becomes an empty list.

Requires this != *x*.

Definition at line 1041 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::splice\_after().

**5.467.3.42** `template<typename _Tp , typename _Alloc > void  
forward_list::splice_after ( const_iterator __pos, forward_list<  
_Tp, _Alloc > && __list, const_iterator __before, const_iterator  
__last )`

Insert range from another forward\_list.

#### Parameters

*pos* Iterator referencing the element to insert after.

*list* Source list.

*before* Iterator referencing before the start of range in list.

*last* Iterator referencing the end of range in list.

Removes elements in the range (before,last) and inserts them after *pos* in constant time.

Undefined if *pos* is in (before,last).

Definition at line 238 of file forward\_list.tcc.

**5.467.3.43** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::splice_after ( const_iterator  
__pos, forward_list< _Tp, _Alloc > && __list, const_iterator __i  
) [inline]`

Insert element from another forward\_list.

#### Parameters

*pos* Iterator referencing the element to insert after.

*list* Source list.

*i* Iterator referencing the element before the element to move.

Removes the element in list *list* referenced by *i* and inserts it into the current list after *pos*.

Definition at line 1058 of file forward\_list.h.

References std::forward\_list< \_Tp, \_Alloc >::splice\_after().

**5.467.3.44** `template<typename _Tp, typename _Alloc = allocator<_Tp>>  
void std::forward_list< _Tp, _Alloc >::swap ( forward_list< _Tp,  
_Alloc > & __list ) [inline]`

Swaps data with another forward\_list.

#### Parameters

*list* A forward\_list of the same element and allocator types.

This exchanges the elements between two lists in constant time. Note that the global std::swap() function is specialized such that std::swap(l1,l2) will feed to this function.

Definition at line 982 of file forward\_list.h.

Referenced by std::forward\_list< \_Tp, \_Alloc >::operator=(), and std::swap().

**5.467.3.45** `template<typename _Tp, typename _Alloc = allocator<_Tp>> void  
std::forward_list< _Tp, _Alloc >::unique ( ) [inline]`

Remove consecutive duplicate elements.

For each consecutive set of elements with the same value, remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1126 of file `forward_list.h`.

References `std::forward_list<_Tp, _Alloc>::unique()`.

Referenced by `std::forward_list<_Tp, _Alloc>::unique()`.

### 5.467.3.46 `template<typename _Tp, typename _Alloc> template<typename _BinPred> void forward_list::unique ( _BinPred __binary_pred )`

Remove consecutive elements satisfying a predicate.

#### Parameters

*binary\_pred* Binary predicate function or object.

For each consecutive set of elements `[first,last)` that satisfy `predicate(first,i)` where `i` is an iterator in `[first,last)`, remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 336 of file `forward_list.tcc`.

References `std::forward_list<_Tp, _Alloc>::begin()`, `std::forward_list<_Tp, _Alloc>::end()`, and `std::forward_list<_Tp, _Alloc>::erase_after()`.

The documentation for this class was generated from the following files:

- `streamoff operator- (const fpos &__other) const`
- `fpos & operator-= (streamoff __off)`
- `void state (_StateT __st)`
- `_StateT state () const`

### 5.468.1 Detailed Description

`template<typename _StateT> class std::fpos<_StateT>`

Class representing stream positions. The standard places no requirements upon the template parameter `StateT`. In this implementation `StateT` must be `DefaultConstructible`, `CopyConstructible` and `Assignable`. The standard only requires that `fpos` should contain a member of type `StateT`. In this implementation it also contains an offset stored as a signed integer.

#### Parameters

*StateT* Type passed to and returned from `state()`.

Definition at line 114 of file `postypes.h`.

### 5.468.2 Constructor & Destructor Documentation

**5.468.2.1** `template<typename _StateT> std::fpos<_StateT>::fpos (streamoff __off) [inline]`

Construct position from offset.

Definition at line 135 of file `postypes.h`.

### 5.468.3 Member Function Documentation

**5.468.3.1** `template<typename _StateT> std::fpos<_StateT>::operator streamoff ( ) const [inline]`

Convert to `streamoff`.

Definition at line 139 of file `postypes.h`.

**5.468.3.2** `template<typename _StateT> fpos std::fpos<_StateT>::operator+  
( streamoff __off ) const [inline]`

Add position and offset.

Definition at line 180 of file postypes.h.

**5.468.3.3** `template<typename _StateT> fpos& std::fpos<_StateT>::operator+= ( streamoff __off ) [inline]`

Add offset to this position.

Definition at line 156 of file postypes.h.

**5.468.3.4** `template<typename _StateT> streamoff std::fpos<_StateT>::operator- ( const fpos<_StateT> & __other ) const [inline]`

Subtract position to return offset.

Definition at line 207 of file postypes.h.

**5.468.3.5** `template<typename _StateT> fpos std::fpos<_StateT>::operator- ( streamoff __off ) const [inline]`

Subtract offset from position.

Definition at line 194 of file postypes.h.

**5.468.3.6** `template<typename _StateT> fpos& std::fpos<_StateT>::operator-= ( streamoff __off ) [inline]`

Subtract offset from this position.

Definition at line 167 of file postypes.h.

## 5.469 `std::front_insert_iterator< _Container >` Class Template Reference 2646

**5.468.3.7** `template<typename _StateT> _StateT std::fpos< _StateT >::state ( ) const [inline]`

Return the last set value of *st*.

Definition at line 148 of file `postypes.h`.

**5.468.3.8** `template<typename _StateT> void std::fpos< _StateT >::state ( _StateT __st ) [inline]`

Remember the value of *st*.

Definition at line 143 of file `postypes.h`.

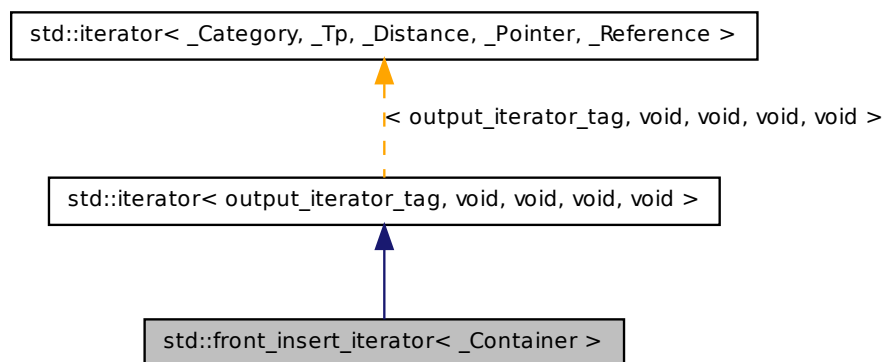

The documentation for this class was generated from the following file:

- `front_insert_iterator` & `operator++` ()
- `front_insert_iterator` `operator++` (int)
- `front_insert_iterator` & `operator=` (const typename `_Container::value_type` &\_\_value)
- `front_insert_iterator` & **`operator=`** (typename `_Container::value_type` &&\_\_value)

### Protected Attributes

- `_Container * container`

#### 5.469.1 Detailed Description

**template<typename \_Container> class `std::front_insert_iterator<_Container>`**

Turns assignment into insertion. These are output iterators, constructed from a container-of-T. Assigning a T to the iterator prepends it to the container using `push_front`.

Tip: Using the `front_inserter` function to create these iterators can save typing.

Definition at line 487 of file `stl_iterator.h`.

#### 5.469.2 Member Typedef Documentation

**5.469.2.1 `template<typename _Container> typedef _Container std::front_insert_iterator<_Container>::container_type`**

A nested typedef for the type of whatever container you used.

Definition at line 495 of file `stl_iterator.h`.

## **5.469 std::front\_insert\_iterator<\_Container> Class Template Reference 2648**

---

**5.469.2.2** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]`

Distance between iterators is represented as this type.

Definition at line 126 of file stl\_iterator\_base\_types.h.

**5.469.2.3** `typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 122 of file stl\_iterator\_base\_types.h.

**5.469.2.4** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 128 of file stl\_iterator\_base\_types.h.

**5.469.2.5** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 130 of file stl\_iterator\_base\_types.h.

**5.469.2.6** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 124 of file stl\_iterator\_base\_types.h.

### **5.469.3 Constructor & Destructor Documentation**

**5.469.3.1** `template<typename _Container> std::front_insert_iterator<_Container>::front_insert_iterator ( _Container & __x )  
[inline, explicit]`

The only way to create this iterator is with a container.

Definition at line 498 of file stl\_iterator.h.

### **5.469.4 Member Function Documentation**

**5.469.4.1** `template<typename _Container> front_insert_iterator& std::front_insert_iterator<_Container>::operator* ( )  
[inline]`

Simply returns \*this.

Definition at line 536 of file stl\_iterator.h.

**5.469.4.2** `template<typename _Container> front_insert_iterator std::front_insert_iterator<_Container>::operator++ ( int )  
[inline]`

Simply returns \*this. (This iterator does not *move*.).

Definition at line 546 of file stl\_iterator.h.

**5.469.4.3** `template<typename _Container> front_insert_iterator& std::front_insert_iterator<_Container>::operator++ ( )  
[inline]`

Simply returns \*this. (This iterator does not *move*.).

Definition at line 541 of file stl\_iterator.h.

**5.469.4.4** `template<typename _Container > front_insert_iterator&  
std::front_insert_iterator< _Container >::operator= ( const  
typename _Container::value_type & __value ) [inline]`

#### Parameters

*value* An instance of whatever type `container_type::const_reference` is; presumably a reference-to-const T for `container<T>`.

#### Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the front, if you like). Assigning a value to the iterator will always prepend the value to the front of the container.

Definition at line 520 of file `stl_iterator.h`.

The documentation for this class was generated from the following file:

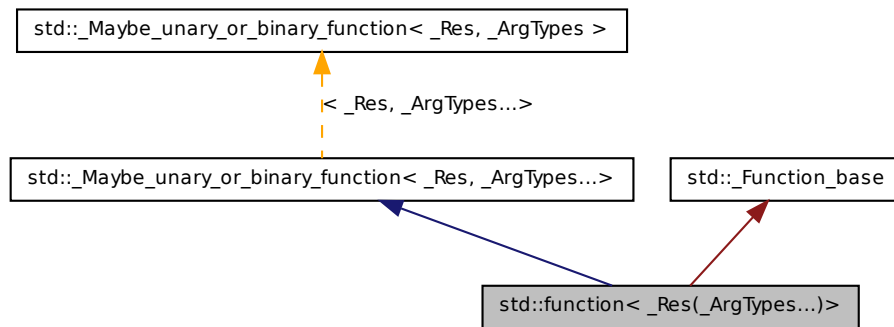

- [stl\\_iterator.h](#)

## 5.470 `std::function< _Res(_ArgTypes...)>` Class Template Reference

Primary class template for `std::function`.

Polymorphic function wrapper.

Inheritance diagram for `std::function<_Res(_ArgTypes...)>`:

## Public Types

#### 5.470.1 Detailed Description

`template<typename _Res, typename... _ArgTypes> class std::function<_Res(_ArgTypes...)>`

Primary class template for `std::function`.

Polymorphic function wrapper.

Definition at line 1868 of file `functional`.

#### 5.470.2 Constructor & Destructor Documentation

**5.470.2.1** `template<typename _Res , typename... _ArgTypes> std::function<_Res(_ArgTypes...)>::function ( ) [inline]`

Default construct creates an empty function call wrapper.

**Postcondition**

`!(bool)*this`

Definition at line 1885 of file functional.

**5.470.2.2** `template<typename _Res , typename... _ArgTypes> std::function<  
_Res(_ArgTypes...)>::function ( nullptr_t ) [inline]`

Creates an empty function call wrapper.

**Postcondition**

`!(bool)*this`

Definition at line 1891 of file functional.

**5.470.2.3** `template<typename _Res , typename... _ArgTypes>  
std::function<_Res(_ArgTypes...)>::function ( const function<  
_Res(_ArgTypes...)> & __x )`

Function copy constructor.

**Parameters**

*x* A function object with identical call signature.

**Postcondition**

`(bool)*this == (bool)x`

The newly-created function contains a copy of the target of *x* (if it has one).

Definition at line 2116 of file functional.

**5.470.2.4** `template<typename _Res , typename... _ArgTypes> std::function<  
_Res(_ArgTypes...)>::function ( function<_Res(_ArgTypes...)> &&  
__x ) [inline]`

Function move constructor.

**Parameters**

*x* A function object rvalue with identical call signature.

The newly-created function contains the target of *x* (if it has one).

Definition at line 1910 of file functional.

```
5.470.2.5 template<typename _Res , typename... _ArgTypes>
 template<typename _Functor > std::function<
 _Res(_ArgTypes...)>::function (_Functor __f, typename enable_if<
 !is_integral< _Functor >::value, _Useless >::type = _Useless ())
```

Builds a function that targets a copy of the incoming function object.

**Parameters**

*f* A function object that is callable with parameters of type T1, T2, ..., TN and returns a value convertible to *Res*.

The newly-created function object will target a copy of *f*. If *f* is `reference_wrapper<F>`, then this function object will contain a reference to the function object `f.get()`. If *f* is a NULL function pointer or NULL pointer-to-member, the newly-created object will be empty.

If *f* is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.

Definition at line 2130 of file functional.

**5.470.3 Member Function Documentation**

```
5.470.3.1 template<typename _Res , typename... _ArgTypes> std::function<
 _Res(_ArgTypes...)>::operator bool () const [inline,
 explicit]
```

Determine if the function wrapper has a target.

**Returns**

`true` when this function object contains a target, or `false` when it is empty.

This function will not throw an exception.

Definition at line 2065 of file functional.

**5.470.3.2** `template<typename _Res , typename... _ArgTypes> _Res  
std::function<_Res(_ArgTypes...)>::operator() ( _ArgTypes...  
__args ) const`

Invokes the function targeted by `*this`.

#### Returns

the result of the target.

#### Exceptions

*bad\_function\_call* when `!(bool)*this`

The function call operator invokes the target function object stored by `this`.

Definition at line 2148 of file `functional`.

**5.470.3.3** `template<typename _Res , typename... _ArgTypes> function&  
std::function<_Res(_ArgTypes...)>::operator= ( function<  
_Res(_ArgTypes...)> && __x ) [inline]`

Function move-assignment operator.

#### Parameters

`x` A function rvalue with identical call signature.

#### Returns

`*this`

The target of `x` is moved to `*this`. If `x` has no target, then `*this` will be empty.

If `x` targets a function pointer or a reference to a function object, then this operation will not throw an exception.

Definition at line 1970 of file `functional`.

**5.470.3.4** `template<typename _Res , typename... _ArgTypes>  
template<typename _Functor > enable_if<!is_integral<_  
_Functor>::value, function&>::type std::function<  
_Res(_ArgTypes...)>::operator= ( _Functor && __f ) [inline]`

Function assignment to a new target.

#### Parameters

*f* A function object that is callable with parameters of type *T1*, *T2*, ..., *TN* and returns a value convertible to *Res*.

#### Returns

`*this`

This function object wrapper will target a copy of *f*. If *f* is `reference_wrapper<F>`, then this function object will contain a reference to the function object `f.get()`. If *f* is a NULL function pointer or NULL pointer-to-member, `this` object will be empty.

If *f* is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.

Definition at line 2013 of file `functional`.

```
5.470.3.5 template<typename _Res, typename... _ArgTypes>
 template<typename _Functor > enable_if<!is_integral<_
 Functor>::value, function<>::type> std::function<
 _Res(_ArgTypes...)>::operator= (reference_wrapper< _Functor >
 __f) [inline]
```

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2022 of file `functional`.

```
5.470.3.6 template<typename _Res, typename... _ArgTypes> function&
 std::function< _Res(_ArgTypes...)>::operator= (nullptr_t)
 [inline]
```

Function assignment to zero.

#### Postcondition

`!(bool)*this`

#### Returns

`*this`

The target of `*this` is deallocated, leaving it empty.

Definition at line 1984 of file `functional`.

**5.470.3.7** `template<typename _Res , typename... _ArgTypes> function&  
std::function<_Res(_ArgTypes...)>::operator= ( const function<  
_Res(_ArgTypes...)> & __x ) [inline]`

Function assignment operator.

#### Parameters

*x* A function with identical call signature.

#### Postcondition

`(bool)*this == (bool)x`

#### Returns

`*this`

The target of *x* is copied to `*this`. If *x* has no target, then `*this` will be empty.

If *x* targets a function pointer or a reference to a function object, then this operation will not throw an exception.

Definition at line 1952 of file `functional`.

**5.470.3.8** `template<typename _Res , typename... _ArgTypes> void  
std::function<_Res(_ArgTypes...)>::swap ( function<  
_Res(_ArgTypes...)> & __x ) [inline]`

Swap the targets of two function objects.

#### Parameters

*f* A function with identical call signature.

Swap the targets of `this` function object and *f*. This function will not throw an exception.

Definition at line 2037 of file `functional`.

**5.470.3.9** `template<typename _Res , typename... _ArgTypes>`  
`template<typename _Functor > _Functor * std::function<`  
`_Res(_ArgTypes...)>::target ( )`

Access the stored target function object.

#### Returns

Returns a pointer to the stored target function object, if `typeid(Functor).equals(target_type())`; otherwise, a NULL pointer.

This function will not throw an exception.

Definition at line 2175 of file functional.

**5.470.3.10** `template<typename _Res , typename... _ArgTypes>`  
`template<typename _Functor > const _Functor * std::function<`  
`_Res(_ArgTypes...)>::target ( ) const`

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2194 of file functional.

**5.470.3.11** `template<typename _Res , typename... _ArgTypes> const type_info`  
`& std::function<_Res(_ArgTypes...)>::target_type ( ) const`

Determine the type of the target of this function object wrapper.

#### Returns

the type identifier of the target function object, or `typeid(void)` if `!(bool)*this`.

This function will not throw an exception.

Definition at line 2159 of file functional.

    std::basic_istream< _CharT, _Traits > & operator>> (std::basic_istream< _CharT, _Traits > &, std::gamma_distribution< _RealType1 > &)`

### 5.475.1 Detailed Description

`template<typename _RealType = double> class std::gamma_distribution< _RealType >`

A gamma continuous distribution for random numbers. The formula for the gamma probability density function is:

$$p(x|\alpha, \beta) = \frac{1}{\beta\Gamma(\alpha)} (x/\beta)^{\alpha-1} e^{-x/\beta}$$

Definition at line 2327 of file random.h.

### 5.475.2 Member Typedef Documentation

**5.475.2.1** `template<typename _RealType = double> typedef _RealType  
std::gamma_distribution< _RealType >::result_type`

The type of the range of the distribution.

Definition at line 2334 of file random.h.

### **5.475.3 Constructor & Destructor Documentation**

**5.475.3.1** `template<typename _RealType = double> std::gamma_distribution<_RealType>::gamma_distribution ( _RealType __alpha_val  
= _RealType(1), _RealType __beta_val = _RealType(1) )  
[inline, explicit]`

Constructs a gamma distribution with parameters  $\alpha$  and  $\beta$ .

Definition at line 2379 of file random.h.

### **5.475.4 Member Function Documentation**

**5.475.4.1** `template<typename _RealType = double> _RealType  
std::gamma_distribution<_RealType>::alpha ( ) const  
[inline]`

Returns the  $\alpha$  of the distribution.

Definition at line 2400 of file random.h.

**5.475.4.2** `template<typename _RealType = double> _RealType  
std::gamma_distribution<_RealType>::beta ( ) const [inline]`

Returns the  $\beta$  of the distribution.

Definition at line 2407 of file random.h.

**5.475.4.3** `template<typename _RealType = double> result_type  
std::gamma_distribution<_RealType>::max ( ) const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 2436 of file random.h.

Referenced by `std::gamma_distribution<result_type>::max()`.

**5.475.4.4** `template<typename _RealType = double> result_type  
std::gamma_distribution<_RealType>::min ( ) const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2429 of file random.h.

**5.475.4.5** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator > result_type  
std::gamma_distribution<_RealType>::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 2444 of file random.h.

Referenced by `std::gamma_distribution<result_type>::operator()()`.

**5.475.4.6** `template<typename _RealType > template<typename  
_UniformRandomNumberGenerator > gamma_distribution<  
_RealType>::result_type std::gamma_distribution<_RealType  
>::operator() ( _UniformRandomNumberGenerator & __urng,  
const param_type & __param )`

Marsaglia, G. and Tsang, W. W. "A Simple Method for Generating Gamma Variables" ACM Transactions on Mathematical Software, 26, 3, 363-372, 2000.

Definition at line 2017 of file random.tcc.

References `std::log()`, and `std::pow()`.

**5.475.4.7** `template<typename _RealType = double> void  
std::gamma_distribution<_RealType>::param ( const param_type  
& __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

***\_\_param*** The new parameter set of the distribution.

Definition at line 2422 of file random.h.

**5.475.4.8** `template<typename _RealType = double> param_type  
std::gamma_distribution<_RealType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 2414 of file random.h.

Referenced by `std::gamma_distribution<result_type>::operator()()`.

**5.475.4.9** `template<typename _RealType = double> void  
std::gamma_distribution<_RealType>::reset ( ) [inline]`

Resets the distribution state.

Definition at line 2393 of file random.h.

Referenced by `std::negative_binomial_distribution<_IntType>::reset()`, `std::student_t_distribution<_RealType>::reset()`, `std::fisher_f_distribution<_RealType>::reset()`, and `std::chi_squared_distribution<_RealType>::reset()`.

## 5.475.5 Friends And Related Function Documentation

**5.475.5.1** `template<typename _RealType = double> template<typename  
_RealType1, typename _CharT, typename _Traits>  
std::basic_ostream<_CharT, _Traits>& operator<<  
( std::basic_ostream<_CharT, _Traits> &, const  
std::gamma_distribution<_RealType1> & ) [friend]`

Inserts a `gamma_distribution` random number distribution `__x` into the output stream `__os`.

### Parameters

`__os` An output stream.

`__x` A `gamma_distribution` random number distribution.

### Returns

The output stream with the state of `__x` inserted or in an error state.

## 5.476 `std::gamma_distribution<_RealType>::param_type` Struct Reference 2674

**5.475.5.2** `template<typename _RealType = double> template<typename  
_RealType1 > bool operator==( const std::gamma_distribution<  
_RealType1 > & __d1, const std::gamma_distribution< _RealType1  
> & __d2 ) [friend]`

Return true if two gamma distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2459 of file random.h.

**5.475.5.3** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_istream<_CharT, _Traits>& operator>>  
( std::basic_istream< _CharT, _Traits > & ,  
std::gamma_distribution< _RealType1 > & ) [friend]`

Extracts a gamma\_distribution random number distribution \_\_x from the input stream \_\_is.

### Parameters

`__is` An input stream.

`__x` A gamma\_distribution random number generator engine.

### Returns

The input stream with \_\_x extracted or in an error state.

**5.477.1 Detailed Description**

**template<typename \_IntType = int> class std::geometric\_distribution< \_IntType >**

A discrete geometric random number distribution. The formula for the geometric probability density function is  $p(i|p) = p(1 - p)^i$  where  $p$  is the parameter of the distribution.

Definition at line 3596 of file random.h.

**5.477.2 Member Typedef Documentation**

**5.477.2.1** template<typename \_IntType = int> typedef \_IntType  
std::geometric\_distribution< \_IntType >::result\_type

The type of the range of the distribution.

Definition at line 3603 of file random.h.

**5.477.3 Member Function Documentation**

**5.477.3.1** template<typename \_IntType = int> result\_type  
std::geometric\_distribution< \_IntType >::max ( ) const  
[inline]

Returns the least upper bound value of the distribution.

## 5.477 `std::geometric_distribution<_IntType>` Class Template Reference 2677

---

Definition at line 3689 of file random.h.

**5.477.3.2** `template<typename _IntType = int> result_type  
std::geometric_distribution<_IntType>::min ( ) const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3682 of file random.h.

**5.477.3.3** `template<typename _IntType = int> template<typename  
_UniformRandomNumberGenerator > result_type  
std::geometric_distribution<_IntType>::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 3697 of file random.h.

References `std::geometric_distribution<_IntType>::operator()()`, and  
`std::geometric_distribution<_IntType>::param()`.

Referenced by `std::geometric_distribution<_IntType>::operator()()`.

**5.477.3.4** `template<typename _IntType = int> double  
std::geometric_distribution<_IntType>::p ( ) const [inline]`

Returns the distribution parameter `p`.

Definition at line 3660 of file random.h.

**5.477.3.5** `template<typename _IntType = int> void std::geometric_  
distribution<_IntType>::param ( const param_type & __param )  
[inline]`

Sets the parameter set of the distribution.

### Parameters

**`__param`** The new parameter set of the distribution.

## 5.478 `std::geometric_distribution< _IntType >::param_type` Struct Reference 2678

Definition at line 3675 of file random.h.

```
5.477.3.6 template<typename _IntType = int> param_type
 std::geometric_distribution< _IntType >::param () const
 [inline]
```

Returns the parameter set of the distribution.

Definition at line 3667 of file random.h.

Referenced by `std::geometric_distribution< _IntType >::operator()()`, `std::operator==( )`, and `std::operator>>()`.

```
5.477.3.7 template<typename _IntType = int> void
 std::geometric_distribution< _IntType >::reset () [inline]
```

Resets the distribution state.

Does nothing for the geometric distribution.

Definition at line 3654 of file random.h.

- [valarray](#)< size\_t > [stride](#) () const

**Friends**

- class `valarray`

**5.481.1 Detailed Description**

Class defining multi-dimensional subset of an array. The slice class represents a multi-dimensional subset of an array, specified by three parameter sets: start offset, size array, and stride array. The start offset is the index of the first element of the array that is part of the subset. The size and stride array describe each dimension of the slice. Size is the number of elements in that dimension, and stride is the distance in the array between successive elements in that dimension. Each dimension's size and stride is taken to begin at an array element described by the previous dimension. The size array and stride array must be the same size.

For example, if you have `offset==3`, `stride[0]==11`, `size[1]==3`, `stride[1]==3`, then `slice[0,0]==array[3]`, `slice[0,1]==array[6]`, `slice[0,2]==array[9]`, `slice[1,0]==array[14]`, `slice[1,1]==array[17]`, `slice[1,2]==array[20]`.

Definition at line 65 of file `gslice.h`.

## Friends

- class `valarray<_Tp>`

### 5.482.1 Detailed Description

`template<typename _Tp> class std::gslice_array<_Tp>`

Reference to multi-dimensional subset of an array. A `gslice_array` is a reference to the actual elements of an array specified by a `gslice`. The way to get a `gslice_array` is to call `operator[](gslice)` on a `valarray`. The returned `gslice_array` then permits carrying operations out on the referenced subset of elements in the original `valarray`. For example, `operator+=(valarray)` will add values to the subset of elements in the underlying `valarray` this `gslice_array` refers to.

**Parameters**

*Tp* Element type.

Definition at line 61 of file `gslice_array.h`.

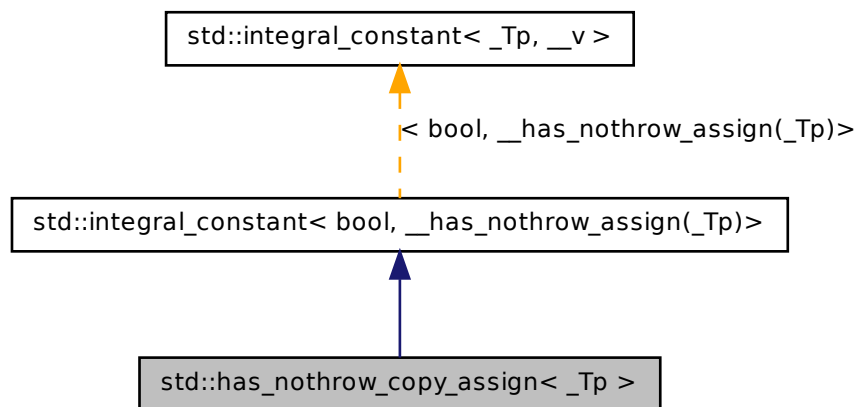

The documentation for this class was generated from the following file:

- [gslice\\_array.h](#)
