## 5.498 `std::hash< __gnu_cxx::throw_value_limit >` Struct Template Reference

Inheritance diagram for `std::hash< __gnu_cxx::throw_value_limit >`:

### Public Types

- typedef `__gnu_cxx::throw_value_limit` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator() (const __gnu_cxx::throw_value_limit &__val) const`

#### 5.498.1 Detailed Description

**template<> struct `std::hash< __gnu_cxx::throw_value_limit >`**

Explicit specialization of `std::hash` for `__gnu_cxx::throw_value_limit`.

Definition at line 737 of file `throw_allocator.h`.

## 5.498.2 Member Typedef Documentation

**5.498.2.1** `typedef __gnu_cxx::throw_value_limit std::unary_function< __gnu_cxx::throw_value_limit, size_t >::argument_type [inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.498.2.2** `typedef size_t std::unary_function< __gnu_cxx::throw_value_limit, size_t >::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

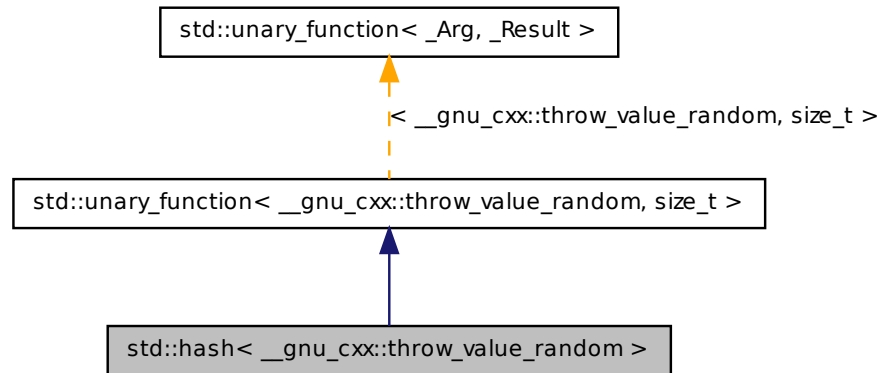

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

## 5.499 `std::hash< __gnu_cxx::throw_value_random >` Struct Template Reference

Explicit specialization of [std::hash](#) for `__gnu_cxx::throw_value_limit`.

Inheritance diagram for `std::hash< __gnu_cxx::throw_value_random >`:

## Public Types

- typedef `__gnu_cxx::throw_value_random` `argument_type`
- typedef `size_t` `result_type`

## Public Member Functions

- `size_t operator() (const __gnu_cxx::throw_value_random &__val) const`

### 5.499.1 Detailed Description

**template<> struct `std::hash< __gnu_cxx::throw_value_random >`**

Explicit specialization of `std::hash` for `__gnu_cxx::throw_value_limit`.

Definition at line 751 of file `throw_allocator.h`.

## 5.499.2 Member Typedef Documentation

**5.499.2.1** `typedef __gnu_cxx::throw_value_random std::unary_function<  
__gnu_cxx::throw_value_random , size_t >::argument_type  
[inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.499.2.2** `typedef size_t std::unary_function< __gnu_-  
cxx::throw_value_random , size_t >::result_type  
[inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

## 5.500 `std::hash< __profile::bitset< _Nb > >` Struct Template Reference

[std::hash](#) specialization for `bitset`.

Inherits `std::__hash_base< size_t, __profile::bitset< _Nb > >`.

### Public Types

- `typedef _Arg argument_type`
- `typedef _Result result_type`

### Public Member Functions

- `size_t operator() (const \_\_profile::bitset< _Nb > &__b) const`

#### **5.500.1 Detailed Description**

**template<size\_t \_Nb> struct std::hash< \_\_profile::bitset< \_Nb > >**

[std::hash](#) specialization for `bitset`.

Definition at line 366 of file `profile/bitset`.

The documentation for this struct was generated from the following file:

- [profile/bitset](#)

### **5.501 `std::hash< __profile::vector< bool, _Alloc > >` Struct Template Reference**

[std::hash](#) specialization for `vector<bool>`.

Inherits `std::__hash_base< size_t, __profile::vector< bool, _Alloc > >`.

#### **Public Types**

- typedef `_Arg` **argument\_type**
- typedef `_Result` **result\_type**

#### **Public Member Functions**

- `size_t operator() (const __profile::vector< bool, _Alloc > &__b) const`

#### **5.501.1 Detailed Description**

**template<typename \_Alloc> struct std::hash< \_\_profile::vector< bool, \_Alloc > >**

[std::hash](#) specialization for `vector<bool>`.

Definition at line 507 of file `profile/vector`.

The documentation for this struct was generated from the following file:

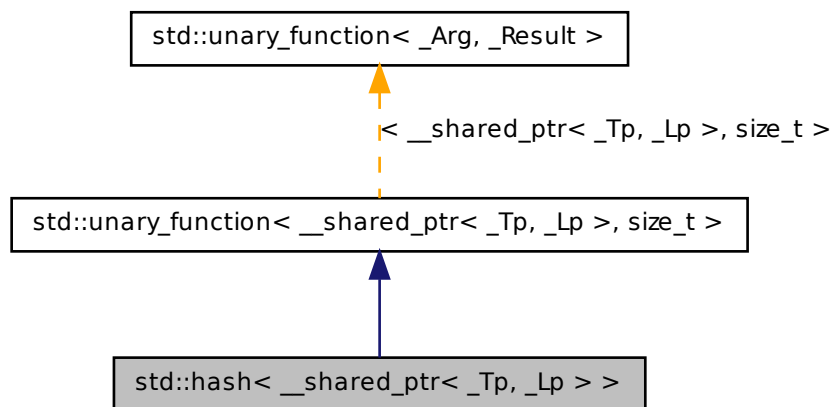

- [profile/vector](#)

### **5.502 `std::hash< __shared_ptr< _Tp, _Lp > >` Struct Template Reference**

[std::hash](#) specialization for `__shared_ptr`.

## 5.502 `std::hash< __shared_ptr< _Tp, _Lp > >` Struct Template Reference

Inheritance diagram for `std::hash< __shared_ptr< _Tp, _Lp > >`:

### Public Types

- typedef `__shared_ptr< _Tp, _Lp >` [argument\\_type](#)
- typedef `size_t` [result\\_type](#)

### Public Member Functions

- `size_t operator() (const __shared_ptr< _Tp, _Lp > &__s) const`

#### 5.502.1 Detailed Description

**template<typename \_Tp, \_Lock\_policy \_Lp> struct `std::hash< __shared_ptr< _Tp, _Lp > >`**

[std::hash](#) specialization for `__shared_ptr`.

Definition at line 1374 of file `shared_ptr_base.h`.

### 5.502.2 Member Typedef Documentation

**5.502.2.1** `typedef __shared_ptr< _Tp, _Lp > std::unary_function< __shared_ptr< _Tp, _Lp > , size_t >::argument_type [inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.502.2.2** `typedef size_t std::unary_function< __shared_ptr< _Tp, _Lp > , size_t >::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [shared\\_ptr\\_base.h](#)

## 5.503 `std::hash< _Tp * >` Struct Template Reference

Partial specializations for pointer types.

Inherits `std::__hash_base< size_t, _Tp * >`.

### Public Types

- `typedef _Arg argument_type`
- `typedef _Result result_type`

### Public Member Functions

- `size_t operator() (_Tp *__p) const`

### 5.503.1 Detailed Description

`template<typename _Tp> struct std::hash< _Tp * >`

Partial specializations for pointer types.

Definition at line 66 of file `functional_hash.h`.

The documentation for this struct was generated from the following file:

- [functional\\_hash.h](#)

## 5.504 `std::hash< error_code >` Struct Template Reference

`std::hash` specialization for `error_code`.

Inherits `std::__hash_base< size_t, error_code >`.

### Public Types

- typedef `_Arg` **argument\_type**
- typedef `_Result` **result\_type**

### Public Member Functions

- `size_t operator() (const error\_code &__e) const`

#### 5.504.1 Detailed Description

**template<> struct `std::hash< error_code >`**

`std::hash` specialization for `error_code`.

Definition at line 358 of file `system_error`.

The documentation for this struct was generated from the following file:

- [system\\_error](#)

## 5.505 `std::hash< shared_ptr< _Tp > >` Struct Template Reference

`std::hash` specialization for `shared_ptr`.

Inheritance diagram for `std::hash< shared_ptr< _Tp > >`:

### Public Types

- typedef `shared_ptr< _Tp >` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator() (const shared_ptr< _Tp > &__s) const`

#### 5.505.1 Detailed Description

`template<typename _Tp> struct std::hash< shared_ptr< _Tp > >`

`std::hash` specialization for `shared_ptr`.

Definition at line 552 of file `shared_ptr.h`.

### 5.505.2 Member Typedef Documentation

**5.505.2.1** `typedef shared_ptr< _Tp > std::unary_function< shared_ptr< _Tp >, size_t >::argument_type [inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.505.2.2** `typedef size_t std::unary_function< shared_ptr< _Tp >, size_t >::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [shared\\_ptr.h](#)

## 5.506 `std::hash< string >` Struct Template Reference

[std::hash](#) specialization for string.

Inherits `std::__hash_base< size_t, string >`.

### Public Types

- `typedef _Arg argument_type`
- `typedef _Result result_type`

### Public Member Functions

- `size_t operator() (const string &__s) const`

### 5.506.1 Detailed Description

`template<> struct std::hash< string >`

[std::hash](#) specialization for string.

Definition at line 2985 of file `basic_string.h`.

The documentation for this struct was generated from the following file:

- [basic\\_string.h](#)

## 5.507 `std::hash< thread::id >` Struct Template Reference

[std::hash](#) specialization for [thread::id](#).

Inherits `std::__hash_base< size_t, thread::id >`.

### Public Types

- typedef `_Arg` **argument\_type**
- typedef `_Result` **result\_type**

### Public Member Functions

- `size_t operator()` (const [thread::id](#) &\_\_id) const

#### 5.507.1 Detailed Description

**template<> struct `std::hash< thread::id >`**

[std::hash](#) specialization for [thread::id](#).

Definition at line 223 of file `thread`.

The documentation for this struct was generated from the following file:

- [thread](#)

## 5.508 `std::hash< type_index >` Struct Template Reference

[std::hash](#) specialization for [type\\_index](#).

### Public Types

- typedef [type\\_index](#) **argument\_type**
- typedef `size_t` **result\_type**

### Public Member Functions

- `size_t operator()` (const [type\\_index](#) &\_\_ti) const

### 5.508.1 Detailed Description

`template<> struct std::hash< type_index >`

[std::hash](#) specialization for [type\\_index](#).

Definition at line 94 of file `typeindex`.

The documentation for this struct was generated from the following file:

- [typeindex](#)

## 5.509 `std::hash< u16string >` Struct Template Reference

[std::hash](#) specialization for `u16string`.

Inherits `std::__hash_base< size_t, u16string >`.

### Public Types

- typedef `_Arg` **argument\_type**
- typedef `_Result` **result\_type**

### Public Member Functions

- `size_t operator() (const u16string &__s) const`

### 5.509.1 Detailed Description

`template<> struct std::hash< u16string >`

[std::hash](#) specialization for `u16string`.

Definition at line 3010 of file `basic_string.h`.

The documentation for this struct was generated from the following file:

- [basic\\_string.h](#)

## 5.510 `std::hash< u32string >` Struct Template Reference

[std::hash](#) specialization for `u32string`.

Inherits `std::__hash_base< size_t, u32string >`.

## 5.511 `std::hash< unique_ptr< _Tp, _Dp > >` Struct Template Reference 2714

---

### Public Types

- typedef `_Arg` **argument\_type**
- typedef `_Result` **result\_type**

### Public Member Functions

- `size_t operator() (const u32string &__s) const`

#### 5.510.1 Detailed Description

`template<> struct std::hash< u32string >`

[std::hash](#) specialization for `u32string`.

Definition at line 3021 of file `basic_string.h`.

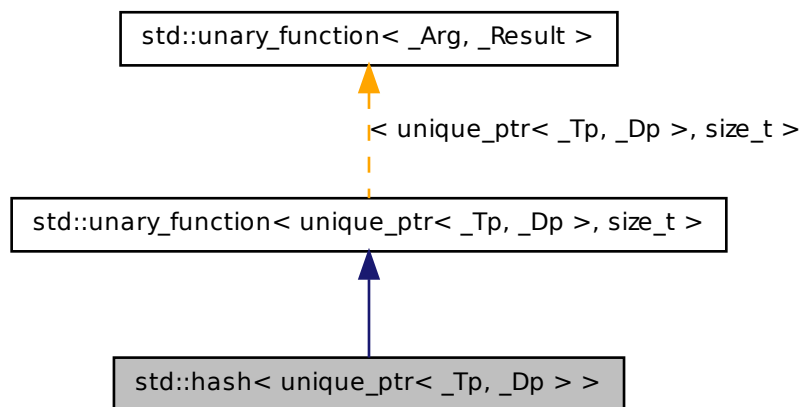

The documentation for this struct was generated from the following file:

- [basic\\_string.h](#)

## 5.511 `std::hash< unique_ptr< _Tp, _Dp > >` Struct Template Reference

[std::hash](#) specialization for [unique\\_ptr](#).

Inheritance diagram for `std::hash< unique_ptr< _Tp, _Dp > >`:

### Public Types

- typedef `unique_ptr< _Tp, _Dp >` `argument_type`
- typedef `size_t` `result_type`

### Public Member Functions

- `size_t operator() (const unique_ptr< _Tp, _Dp > &__u) const`

#### 5.511.1 Detailed Description

`template<typename _Tp, typename _Dp> struct std::hash< unique_ptr< _Tp, _Dp > >`

`std::hash` specialization for `unique_ptr`.

Definition at line 493 of file `unique_ptr.h`.

### 5.511.2 Member Typedef Documentation

**5.511.2.1** `typedef unique_ptr< _Tp, _Dp > std::unary_function< unique_ptr< _Tp, _Dp >, size_t >::argument_type [inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.511.2.2** `typedef size_t std::unary_function< unique_ptr< _Tp, _Dp >, size_t >::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [unique\\_ptr.h](#)

## 5.512 `std::hash< wstring >` Struct Template Reference

[std::hash](#) specialization for `wstring`.

Inherits `std::__hash_base< size_t, wstring >`.

### Public Types

- `typedef _Arg argument_type`
- `typedef _Result result_type`

### Public Member Functions

- `size_t operator() (const wstring &__s) const`

### 5.512.1 Detailed Description

`template<> struct std::hash< wstring >`

[std::hash](#) specialization for `wstring`.

Definition at line 2996 of file `basic_string.h`.

The documentation for this struct was generated from the following file:

- [basic\\_string.h](#)

### 5.513 `std::hash<::bitset< _Nb > >` Struct Template Reference

[std::hash](#) specialization for `bitset`.

Inherits `std::__hash_base< size_t,::bitset< _Nb > >`.

#### Public Types

- typedef `_Arg` **argument\_type**
- typedef `_Result` **result\_type**

#### Public Member Functions

- `size_t operator() (const ::bitset< _Nb > &__b) const`

#### 5.513.1 Detailed Description

`template<size_t _Nb> struct std::hash<::bitset< _Nb > >`

[std::hash](#) specialization for `bitset`.

Definition at line 1524 of file `bitset`.

The documentation for this struct was generated from the following file:

- [bitset](#)

### 5.514 `std::hash<::vector< bool, _Alloc > >` Struct Template Reference

[std::hash](#) specialization for `vector<bool>`.

Inherits `std::__hash_base< size_t,::vector< bool, _Alloc > >`.

#### Public Types

- typedef `_Arg` **argument\_type**
- typedef `_Result` **result\_type**

## Public Member Functions

- `size_t operator() (const ::vector< bool, _Alloc > &__b) const`

### 5.514.1 Detailed Description

**template<typename \_Alloc> struct std::hash<::vector< bool, \_Alloc > >**

[std::hash](#) specialization for `vector<bool>`.

Definition at line 1048 of file `stl_bvector.h`.

The documentation for this struct was generated from the following files:

- [stl\\_bvector.h](#)
- [vector.tcc](#)

## **5.515 std::independent\_bits\_engine< \_RandomNumberEngine, \_\_w, \_UIntType > Class Template Reference**

### Public Types

- `typedef _UIntType result\_type`

### Public Member Functions

- [independent\\_bits\\_engine](#) ()
- [independent\\_bits\\_engine](#) (const \_RandomNumberEngine &\_\_rne)
- [independent\\_bits\\_engine](#) ([result\\_type](#) \_\_s)

- `const _RandomNumberEngine & base () const`
- `void discard (unsigned long long __z)`
- [result\\_type operator\(\)](#) ()
- `void seed ()`
- `template<typename _Sseq >`  
`void seed (_Sseq &__q)`
- `void seed (result\_type __s)`

### Static Public Member Functions

- static constexpr `result_type` `max` ()
- static constexpr `result_type` `min` ()

### Friends

- bool `operator==` (const `independent_bits_engine` &\_\_lhs, const `independent_bits_engine` &\_\_rhs)
- template<typename \_CharT, typename \_Traits >  
`std::basic_istream< _CharT, _Traits > & operator>>` (`std::basic_istream< _CharT, _Traits > &__is`, `std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType> &__x`)

#### 5.515.1 Detailed Description

template<typename \_RandomNumberEngine, size\_t \_\_w, typename \_UIntType>  
class `std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType>`  
>

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits \_\_w.

Definition at line 999 of file random.h.

#### 5.515.2 Member Typedef Documentation

5.515.2.1 template<typename \_RandomNumberEngine, size\_t \_\_w, typename \_UIntType> typedef \_UIntType `std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType>::result_type`

The type of the generated random value.

Definition at line 1008 of file random.h.

#### 5.515.3 Constructor & Destructor Documentation

5.515.3.1 template<typename \_RandomNumberEngine, size\_t \_\_w, typename \_UIntType> `std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType>::independent_bits_engine`  
( ) [`inline`]

Constructs a default `independent_bits_engine` engine.

The underlying engine is default constructed as well.

Definition at line 1015 of file `random.h`.

**5.515.3.2** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::independent_bits_engine ( const _RandomNumberEngine & __rne ) [inline, explicit]`

Copy constructs a `independent_bits_engine` engine.

Copies an existing base class random number generator.

#### Parameters

*rng* An existing (base class) engine object.

Definition at line 1025 of file `random.h`.

**5.515.3.3** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::independent_bits_engine ( _RandomNumberEngine && __rne ) [inline, explicit]`

Move constructs a `independent_bits_engine` engine.

Copies an existing base class random number generator.

#### Parameters

*rng* An existing (base class) engine object.

Definition at line 1035 of file `random.h`.

**5.515.3.4** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::independent_bits_engine ( result_type __s ) [inline, explicit]`

Seed constructs a `independent_bits_engine` engine.

Constructs the underlying generator engine seeded with `__s`.

#### Parameters

`__s` A seed value for the base class engine.

Definition at line 1045 of file `random.h`.

**5.515.3.5** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> template<typename _Sseq, typename = typename std::enable_if<!std::is_same<_Sseq, independent_bits_engine>::value && !std::is_same<_Sseq, _RandomNumberEngine>::value> ::type> std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::independent_bits_engine ( _Sseq & __q ) [inline, explicit]`

Generator construct a `independent_bits_engine` engine.

#### Parameters

`__q` A seed sequence.

Definition at line 1058 of file `random.h`.

### 5.515.4 Member Function Documentation

**5.515.4.1** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> const _RandomNumberEngine& std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::base ( ) const [inline]`

Gets a const reference to the underlying generator engine object.

Definition at line 1093 of file `random.h`.

**5.515.4.2** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> void std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::discard ( unsigned long long __z ) [inline]`

Discard a sequence of random numbers.

Definition at line 1114 of file random.h.

**5.515.4.3** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> static constexpr result_type std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::max( ) [inline, static]`

Gets the maximum value in the generated random number range.

Definition at line 1107 of file random.h.

**5.515.4.4** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> static constexpr result_type std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::min( ) [inline, static]`

Gets the minimum value in the generated random number range.

Definition at line 1100 of file random.h.

**5.515.4.5** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::result_type std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::operator()( )`

Gets the next value in the generated random number sequence.

Definition at line 727 of file random.tcc.

References std::log().

**5.515.4.6** `template<typename _RandomNumberEngine, size_t __w, typename _UIntType> template<typename _Sseq> void std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::seed( _Sseq & __q ) [inline]`

Reseeds the independent\_bits\_engine object with the given seed sequence.

### Parameters

**\_\_q** A seed generator function.

Definition at line 1085 of file random.h.

```
5.515.4.7 template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> void std::independent_bits_engine<
_RandomNumberEngine, __w, _UIntType >::seed (result_type __s
) [inline]
```

Reseeds the independent\_bits\_engine object with the default seed for the underlying base class generator engine.

Definition at line 1075 of file random.h.

```
5.515.4.8 template<typename _RandomNumberEngine, size_t __w,
typename _UIntType> void std::independent_bits_engine<
_RandomNumberEngine, __w, _UIntType >::seed () [inline]
```

Reseeds the independent\_bits\_engine object with the default seed for the underlying base class generator engine.

Definition at line 1067 of file random.h.

### 5.515.5 Friends And Related Function Documentation

```
5.515.5.1 template<typename _RandomNumberEngine, size_t __w, typename
_UIntType> bool operator== (const independent_bits_engine<
_RandomNumberEngine, __w, _UIntType > & __lhs, const
independent_bits_engine<_RandomNumberEngine, __w, _UIntType
> & __rhs) [friend]
```

Compares two independent\_bits\_engine random number generator objects of the same type for equality.

### Parameters

**\_\_lhs** A independent\_bits\_engine random number generator object.

**\_\_rhs** Another independent\_bits\_engine random number generator object.

**Returns**

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 1139 of file random.h.

**5.515.5.2** `template<typename _RandomNumberEngine, size_t __w,  
typename _UIntType> template<typename _CharT ,  
typename _Traits > std::basic_istream<_CharT, _Traits>&  
operator>> ( std::basic_istream<_CharT, _Traits> & __is,  
std::independent_bits_engine<_RandomNumberEngine, __w,  
_UIntType> & __x ) [friend]`

Extracts the current state of a % subtract\_with\_carry\_engine random number generator engine \_\_x from the input stream \_\_is.

**Parameters**

`__is` An input stream.

`__x` A independent\_bits\_engine random number generator engine.

**Returns**

The input stream with the state of \_\_x extracted or in an error state.

Definition at line 1157 of file random.h.

- class [valarray](#)< \_Tp >

### 5.516.1 Detailed Description

**template<class \_Tp> class std::indirect\_array< \_Tp >**

Reference to arbitrary subset of an array. An [indirect\\_array](#) is a reference to the actual elements of an array specified by an ordered array of indices. The way to get an [indirect\\_array](#) is to call operator[](valarray<size\_t>) on a valarray. The returned [indirect\\_array](#) then permits carrying operations out on the referenced subset of elements in the original valarray.

For example, if an [indirect\\_array](#) is obtained using the array (4,2,0) as an argument, and then assigned to an array containing (1,2,3), then the underlying array will have array[0]==3, array[2]==2, and array[4]==1.

#### Parameters

*Tp* Element type.

Definition at line 63 of file indirect\_array.h.

### 5.516.2 Member Function Documentation

**5.516.2.1    template<class \_Tp> void std::indirect\_array< \_Tp >::operator%=(  
                  ( const valarray< \_Tp > & ) const**

Modulo slice elements by corresponding elements of *v*.

**5.516.2.2    template<class \_Tp> void std::indirect\_array< \_Tp >::operator&=(  
                  ( const valarray< \_Tp > & ) const**

Logical and slice elements with corresponding elements of *v*.

**5.516.2.3    template<class \_Tp> void std::indirect\_array< \_Tp >::operator\*=(  
                  const valarray< \_Tp > & ) const**

Multiply slice elements by corresponding elements of *v*.

**5.516.2.4** `template<class _Tp> void std::indirect_array< _Tp >::operator+=(  
const valarray< _Tp > & ) const`

Add corresponding elements of *v* to slice elements.

**5.516.2.5** `template<class _Tp> void std::indirect_array< _Tp >::operator-=(  
const valarray< _Tp > & ) const`

Subtract corresponding elements of *v* from slice elements.

**5.516.2.6** `template<class _Tp> void std::indirect_array< _Tp >::operator/=(  
const valarray< _Tp > & ) const`

Divide slice elements by corresponding elements of *v*.

**5.516.2.7** `template<class _Tp> void std::indirect_array< _Tp  
>::operator<<=( const valarray< _Tp > & ) const`

Left shift slice elements by corresponding elements of *v*.

**5.516.2.8** `template<class _Tp> void std::indirect_array< _Tp  
>::operator>>=( const valarray< _Tp > & ) const`

Right shift slice elements by corresponding elements of *v*.

**5.516.2.9** `template<class _Tp> void std::indirect_array< _Tp >::operator^=(  
const valarray< _Tp > & ) const`

Logical xor slice elements with corresponding elements of *v*.

**5.516.2.10** `template<class _Tp> void std::indirect_array<_Tp>::operator|=`  
`( const valarray<_Tp> & ) const`

Logical or slice elements with corresponding elements of *v*.

The documentation for this class was generated from the following file:

- `insert_iterator & operator* ()`
- `insert_iterator & operator++ ()`
- `insert_iterator & operator++ (int)`
- `insert_iterator & operator= (const typename _Container::value_type &__value)`
- `insert_iterator & operator= (typename _Container::value_type &&__value)`

### Protected Attributes

- `_Container * container`
- `_Container::iterator iter`

### 5.519.1 Detailed Description

**template<typename \_Container> class std::insert\_iterator< \_Container >**

Turns assignment into insertion. These are output iterators, constructed from a container-of-T. Assigning a T to the iterator inserts it in the container at the iterator's position, rather than overwriting the value at that position.

(Sequences will actually insert a *copy* of the value before the iterator's position.)

Tip: Using the `inserter` function to create these iterators can save typing.

Definition at line 581 of file `stl_iterator.h`.

### 5.519.2 Member Typedef Documentation

**5.519.2.1** **template<typename \_Container> typedef \_Container  
std::insert\_iterator< \_Container >::container\_type**

A nested typedef for the type of whatever container you used.

Definition at line 590 of file `stl_iterator.h`.

**5.519.2.2** **typedef void std::iterator< output\_iterator\_tag , void , void , void ,  
void >::difference\_type [inherited]**

Distance between iterators is represented as this type.

Definition at line 126 of file `stl_iterator_base_types.h`.

**5.519.2.3** **typedef output\_iterator\_tag std::iterator< output\_iterator\_tag , void  
, void , void , void >::iterator\_category [inherited]**

One of the [tag types](#).

Definition at line 122 of file `stl_iterator_base_types.h`.

**5.519.2.4** **typedef void std::iterator< output\_iterator\_tag , void , void , void ,  
void >::pointer [inherited]**

This type represents a pointer-to-value\_type.

Definition at line 128 of file stl\_iterator\_base\_types.h.

**5.519.2.5** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 130 of file stl\_iterator\_base\_types.h.

**5.519.2.6** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 124 of file stl\_iterator\_base\_types.h.

### **5.519.3 Constructor & Destructor Documentation**

**5.519.3.1** `template<typename _Container> std::insert_iterator<  
_Container >::insert_iterator ( _Container & __x, typename  
_Container::iterator __i ) [inline]`

The only way to create this iterator is with a container and an initial position (a normal iterator into the container).

Definition at line 596 of file stl\_iterator.h.

### **5.519.4 Member Function Documentation**

**5.519.4.1** `template<typename _Container> insert_iterator&  
std::insert_iterator< _Container >::operator*( ) [inline]`

Simply returns \*this.

Definition at line 650 of file stl\_iterator.h.

**5.519.4.2** `template<typename _Container> insert_iterator&  
std::insert_iterator< _Container >::operator++( int ) [inline]`

Simply returns \*this. (This iterator does not *move*.).

Definition at line 660 of file stl\_iterator.h.

**5.519.4.3** `template<typename _Container> insert_iterator&  
std::insert_iterator< _Container >::operator++( ) [inline]`

Simply returns \*this. (This iterator does not *move*.).

Definition at line 655 of file stl\_iterator.h.

**5.519.4.4** `template<typename _Container> insert_iterator&  
std::insert_iterator< _Container >::operator=( const typename  
_Container::value_type & __value ) [inline]`

#### Parameters

**value** An instance of whatever type `container_type::const_reference` is; presumably a reference-to-const T for `container<T>`.

#### Returns

This iterator, for chained operations.

This kind of iterator maintains its own position in the container. Assigning a value to the iterator will insert the value into the container at the place before the iterator.

The position is maintained such that subsequent assignments will insert values immediately after one another. For example,

```
// vector v contains A and Z

insert_iterator i (v, ++v.begin());
i = 1;
i = 2;
i = 3;

// vector v contains A, 1, 2, 3, and Z
```

Definition at line 632 of file stl\_iterator.h.

#### 5.522.1 Detailed Description

The base of the I/O class hierarchy.

This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` when they need to specify the full name of the various I/O flags (e.g., the openmodes).

Definition at line 201 of file `ios_base.h`.

#### 5.522.2 Member Typedef Documentation

##### 5.522.2.1 `typedef void(* std::ios_base::event_callback)(event, ios_base &, int)`

The type of an event callback function.

### Parameters

- event* One of the members of the event enum.
- ios\_base* Reference to the `ios_base` object.
- int* The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 438 of file `ios_base.h`.

### 5.522.2.2 `typedef _Ios_Fmtflags std::ios_base::fmtflags`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 257 of file `ios_base.h`.

### 5.522.2.3 typedef \_Ios\_Iostate std::ios\_base::iostate

This is a bitmask type.

*\_Ios\_Iostate* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *iostate* are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 332 of file *ios\_base.h*.

### 5.522.2.4 typedef \_Ios\_Openmode std::ios\_base::openmode

This is a bitmask type.

*\_Ios\_Openmode* is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type *openmode* are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 363 of file *ios\_base.h*.

### 5.522.2.5 typedef \_Ios\_Seekdir std::ios\_base::seekdir

This is an enumerated type.

*\_Ios\_Seekdir* is implementation-defined. Defined values of type *seekdir* are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 395 of file `ios_base.h`.

### 5.522.3 Member Enumeration Documentation

#### 5.522.3.1 enum std::ios\_base::event

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 421 of file `ios_base.h`.

### 5.522.4 Constructor & Destructor Documentation

#### 5.522.4.1 virtual std::ios\_base::~ios\_base ( ) [virtual]

Invokes each callback with `erase_event`. Destroys local storage.

Note that the `ios_base` object for the standard streams never gets destroyed. As a result, any callbacks registered with the standard streams will not get invoked with `erase_event` (unless `copyfmt` is used).

### 5.522.5 Member Function Documentation

#### 5.522.5.1 const locale& std::ios\_base::\_M\_getloc ( ) const [inline]

Locale access.

#### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 708 of file `ios_base.h`.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<`

`_CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

#### 5.522.5.2 fmtflags std::ios\_base::flags ( ) const [inline]

Access to format flags.

##### Returns

The format control flags for both input and output.

Definition at line 553 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 5.522.5.3 fmtflags std::ios\_base::flags ( fmtflags \_\_fmtfl ) [inline]

Setting new format flags all at once.

##### Parameters

*\_\_fmtfl* The new flags to set.

##### Returns

The previous format control flags.

This function overwrites all the format flags with *\_\_fmtfl*.

Definition at line 564 of file `ios_base.h`.

#### 5.522.5.4 locale std::ios\_base::getloc ( ) const [inline]

Locale access.

##### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 697 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::operator>>()`, and `std::ws()`.

#### 5.522.5.5 locale std::ios\_base::imbue ( const locale & \_\_loc ) throw ()

Setting a new locale.

##### Parameters

*loc* The new locale.

##### Returns

The previous locale.

Sets the new locale for this stream, and then invokes each callback with `imbue_event`.

Reimplemented in [std::basic\\_ios<\\_CharT, \\_Traits>](#), and [std::basic\\_ios<char, \\_Traits>](#).

#### 5.522.5.6 long& std::ios\_base::iword ( int \_\_ix ) [inline]

Access to integer array.

##### Parameters

*\_\_ix* Index into the array.

##### Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 743 of file `ios_base.h`.

**5.522.5.7 streamsize std::ios\_base::precision ( ) const [inline]**

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 623 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::operator<<().

**5.522.5.8 streamsize std::ios\_base::precision ( streamsize \_\_prec ) [inline]**

Changing flags.

**Parameters**

*prec* The new precision value.

**Returns**

The previous value of [precision\(\)](#).

Definition at line 632 of file ios\_base.h.

**5.522.5.9 void\*& std::ios\_base::pword ( int \_\_ix ) [inline]**

Access to void pointer array.

**Parameters**

*\_\_ix* Index into the array.

**Returns**

A reference to a void\* associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 764 of file `ios_base.h`.

#### 5.522.5.10 void std::ios\_base::register\_callback ( event\_callback \_\_fn, int \_\_index )

Add the callback `__fn` with parameter `__index`.

##### Parameters

`__fn` The function to add.

`__index` The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

#### 5.522.5.11 fmtflags std::ios\_base::setf ( fmtflags \_\_fmtfl, fmtflags \_\_mask ) [inline]

Setting new format flags.

##### Parameters

`__fmtfl` Additional flags to set.

`__mask` The flags mask for `__fmtfl`.

##### Returns

The previous format control flags.

This function clears `__mask` in the format flags, then sets `__fmtfl & __mask`. An example mask is `ios_base::adjustfield`.

Definition at line 597 of file `ios_base.h`.

**5.522.5.12** `fmtflags std::ios_base::setf ( fmtflags __fmtfl ) [inline]`

Setting new format flags.

**Parameters**

*fmtfl* Additional flags to set.

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 580 of file ios\_base.h.

Referenced by `std::dec()`, `std::fixed()`, `std::hex()`, `std::left()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.522.5.13** `static bool std::ios_base::sync_with_stdio ( bool __sync = true ) [static]`

Interaction with the standard C I/O objects.

**Parameters**

*sync* Whether to synchronize or not.

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch28s02.html>

**5.522.5.14** `void std::ios_base::unsetf ( fmtflags __mask ) [inline]`

Clearing format flags.

**Parameters**

*mask* The flags to unset.

This function clears *mask* in the format flags.

Definition at line 612 of file ios\_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

**5.522.5.15 streamsize std::ios\_base::width ( ) const [inline]**

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 646 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_put< \_CharT, \_OutIter >::do\_put(), and std::operator>>().

**5.522.5.16 streamsize std::ios\_base::width ( streamsize \_\_wide ) [inline]**

Changing flags.

**Parameters**

*wide* The new width value.

**Returns**

The previous value of [width\(\)](#).

Definition at line 655 of file ios\_base.h.

**5.522.5.17 static int std::ios\_base::xalloc ( ) throw () [static]**

Access to unique indices.

### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iwor` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iwor` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iwor` and `pword` arrays.

### 5.522.6 Member Data Documentation

#### 5.522.6.1 `const fmtflags std::ios_base::adjustfield` **[static]**

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 312 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

#### 5.522.6.2 `const openmode std::ios_base::app` **[static]**

Seek to end before each write.

Definition at line 366 of file `ios_base.h`.

#### 5.522.6.3 `const openmode std::ios_base::ate` **[static]**

Open and seek to end immediately after opening.

Definition at line 369 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

#### 5.522.6.4 `const iostate std::ios_base::badbit` **[static]**

Indicates a loss of integrity in an input or output sequence (such /// as an irrecoverable read error from a file).

Definition at line 336 of file ios\_base.h.

Referenced by std::basic\_ostream< char >::\_M\_write(), std::basic\_ios< char, \_Traits >::bad(), std::basic\_ios< \_CharT, \_Traits >::clear(), std::basic\_ios< char, \_Traits >::fail(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::basic\_ios< \_CharT, \_Traits >::init(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unset(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry().

#### 5.522.6.5 const fmtflags std::ios\_base::basefield [static]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 315 of file ios\_base.h.

Referenced by std::dec(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::hex(), std::oct(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

#### 5.522.6.6 const seekdir std::ios\_base::beg [static]

Request a seek relative to the beginning of the stream.

Definition at line 398 of file ios\_base.h.

#### 5.522.6.7 const openmode std::ios\_base::binary [static]

Perform input and output in binary mode (as opposed to text mode). /// This is probably not what you think it is; see /// <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html>.

Definition at line 374 of file ios\_base.h.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

#### 5.522.6.8 `const fmtflags std::ios_base::boolalpha [static]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 260 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

#### 5.522.6.9 `const seekdir std::ios_base::cur [static]`

Request a seek relative to the current position within the sequence.

Definition at line 401 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

#### 5.522.6.10 `const fmtflags std::ios_base::dec [static]`

Converts integer input or generates integer output in decimal base.

Definition at line 263 of file `ios_base.h`.

Referenced by `std::dec()`.

#### 5.522.6.11 `const seekdir std::ios_base::end [static]`

Request a seek relative to the current end of the sequence.

Definition at line 404 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

#### 5.522.6.12 `const iostate std::ios_base::eofbit [static]`

Indicates that an input operation reached the end of an input sequence.

Definition at line 339 of file ios\_base.h.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::eof()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

#### 5.522.6.13 const iostate std::ios\_base::failbit [static]

Indicates that an input operation failed to read the expected /// characters, or that an output operation failed to generate the /// desired characters.

Definition at line 344 of file ios\_base.h.

Referenced by `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, _Traits >::fail()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 5.522.6.14 const fmtflags std::ios\_base::fixed [static]

Generate floating-point output in fixed-point notation.

Definition at line 266 of file ios\_base.h.

Referenced by `std::fixed()`.

**5.522.6.15 const fmtflags std::ios\_base::floatfield [static]**

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 318 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::scientific()`.

**5.522.6.16 const iostate std::ios\_base::goodbit [static]**

Indicates all is well.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ios< _CharT, _Traits >::init()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.522.6.17 const fmtflags std::ios\_base::hex [static]**

Converts integer input or generates integer output in hexadecimal base.

Definition at line 269 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

**5.522.6.18 const openmode std::ios\_base::in [static]**

Open for input. Default for `ifstream` and `fstream`.

Definition at line 377 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::underflow()`.

#### 5.522.6.19 const fmtflags std::ios\_base::internal [static]

Adds fill characters at a designated internal point in certain `///` generated output, or identical to `right` if no such point is `///` designated.

Definition at line 274 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 5.522.6.20 const fmtflags std::ios\_base::left [static]

Adds fill characters on the right (final positions) of certain `///` generated output. (I.e., the thing you print is flush left.).

Definition at line 278 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

#### 5.522.6.21 const fmtflags std::ios\_base::oct [static]

Converts integer input or generates integer output in octal base.

Definition at line 281 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.522.6.22 const openmode std::ios\_base::out [static]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 380 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

#### 5.522.6.23 `const fmtflags std::ios_base::right` `[static]`

Adds fill characters on the left (initial positions) of certain `///` generated output. (I.e., the thing you print is flush right.).

Definition at line 285 of file `ios_base.h`.

Referenced by `std::right()`.

#### 5.522.6.24 `const fmtflags std::ios_base::scientific` `[static]`

Generates floating-point output in scientific notation.

Definition at line 288 of file `ios_base.h`.

Referenced by `std::scientific()`.

#### 5.522.6.25 `const fmtflags std::ios_base::showbase` `[static]`

Generates a prefix indicating the numeric base of generated integer `///` output.

Definition at line 292 of file `ios_base.h`.

Referenced by `std::noshowbase()`, and `std::showbase()`.

#### 5.522.6.26 `const fmtflags std::ios_base::showpoint` `[static]`

Generates a decimal-point character unconditionally in generated `///` floating-point output.

Definition at line 296 of file `ios_base.h`.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

#### 5.522.6.27 `const fmtflags std::ios_base::showpos` `[static]`

Generates a + sign in non-negative generated numeric output.

Definition at line 299 of file ios\_base.h.

Referenced by std::noshowpos(), and std::showpos().

#### 5.522.6.28 const fmtflags std::ios\_base::skipws [static]

Skips leading white space before certain input operations.

Definition at line 302 of file ios\_base.h.

Referenced by std::noskipws(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), and std::skipws().

#### 5.522.6.29 const openmode std::ios\_base::trunc [static]

Open for input. Default for ofstream.

Definition at line 383 of file ios\_base.h.

#### 5.522.6.30 const fmtflags std::ios\_base::unitbuf [static]

Flushes output after each output operation.

Definition at line 305 of file ios\_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry().

#### 5.522.6.31 const fmtflags std::ios\_base::uppercase [static]

Replaces certain lowercase letters with their uppercase equivalents /// in generated output.

Definition at line 309 of file ios\_base.h.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following file:

- [ios\\_base.h](#)

## 5.523 std::ios\_base::failure Class Reference

These are thrown to indicate problems with io.

27.4.2.1.1 Class [ios\\_base::failure](#).

Inheritance diagram for std::ios\_base::failure:

### Public Member Functions

- **failure** (const [string](#) &\_\_str) throw ()
- virtual const char \* **what** () const throw ()

#### 5.523.1 Detailed Description

These are thrown to indicate problems with io.

27.4.2.1.1 Class [ios\\_base::failure](#).

Definition at line 211 of file ios\_base.h.

#### 5.523.2 Member Function Documentation

##### 5.523.2.1 virtual const char\* std::ios\_base::failure::what ( ) const throw () [virtual]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

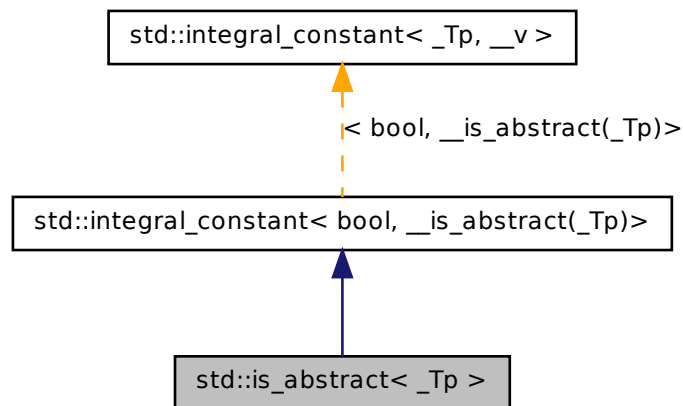

The documentation for this class was generated from the following file:

- [ios\\_base.h](#)

## 5.524 std::is\_abstract< \_Tp > Struct Template Reference

[is\\_abstract](#)

Inheritance diagram for std::is\_abstract< \_Tp >:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**

## 5.539 `std::is_error_code_enum< future_errc >` Struct Template Reference 2776

### 5.538.1 Detailed Description

`template<typename _Tp> struct std::is_error_code_enum< _Tp >`

[is\\_error\\_code\\_enum](#)

Definition at line 54 of file `system_error`.

The documentation for this struct was generated from the following file:

- [system\\_error](#)

## 5.539 `std::is_error_code_enum< future_errc >` Struct Template Reference

Specialization.

Inheritance diagram for `std::is_error_code_enum< future_errc >`:

### Public Types

- typedef [integral\\_constant](#)< `_Tp`, `__v` > **type**
- typedef `_Tp` **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

## Static Public Attributes

- static constexpr `_Tp` value

### 5.539.1 Detailed Description

`template<> struct std::is_error_code_enum< future_errc >`

Specialization.

Definition at line 71 of file future.

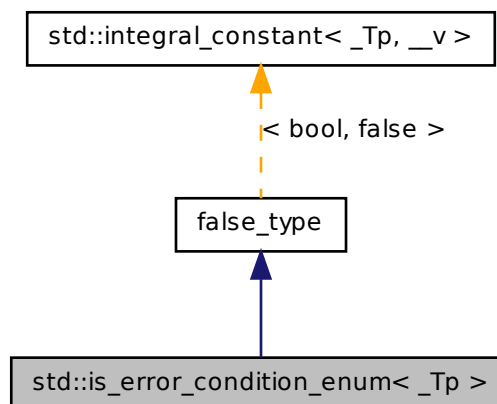

The documentation for this struct was generated from the following file:

- [future](#)

## 5.540 `std::is_error_condition_enum< _Tp >` Struct Template Reference

[is\\_error\\_condition\\_enum](#)

Inheritance diagram for `std::is_error_condition_enum< _Tp >`:

## 5.541 `std::is_explicitly_convertible< _From, _To >` Struct Template Reference 2778

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr bool **value**

#### 5.540.1 Detailed Description

template<typename \_Tp> struct std::is\_error\_condition\_enum< \_Tp >

[is\\_error\\_condition\\_enum](#)

Definition at line 58 of file system\_error.

The documentation for this struct was generated from the following file:

- [system\\_error](#)

## 5.541 `std::is_explicitly_convertible< _From, _To >` Struct Template Reference

[is\\_explicitly\\_convertible](#)

Inheritance diagram for `std::is_explicitly_convertible< _From, _To >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

**5.541.1 Detailed Description**

template<typename \_From, typename \_To> struct std::is\_explicitly\_convertible< \_From, \_To >

[is\\_explicitly\\_convertible](#)

Definition at line 796 of file type\_traits.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.542 std::is\_floating\_point< \_Tp > Struct Template Reference**

[is\\_floating\\_point](#)

Inheritance diagram for std::is\_floating\_point< \_Tp >:

**Public Types**

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

#### 5.542.1 Detailed Description

`template<typename _Tp> struct std::is_floating_point< _Tp >`

[is\\_floating\\_point](#)

Definition at line 144 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

#### 5.543 `std::is_function< typename >` Struct Template Reference

[is\\_function](#)

Inheritance diagram for `std::is_function< typename >`:

#### Public Types

- typedef [integral\\_constant](#)< \_Tp, \_\_v > **type**
- typedef \_Tp **value\_type**

#### Public Member Functions

- constexpr **operator value\_type** ()

#### Static Public Attributes

- static constexpr \_Tp **value**

### 5.543.1 Detailed Description

`template<typename> struct std::is_function< typename >`

[is\\_function](#)

Definition at line 228 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.544 `std::is_fundamental< _Tp >` Struct Template Reference

[is\\_fundamental](#)

Inheritance diagram for `std::is_fundamental< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr bool **value**

### 5.544.1 Detailed Description

`template<typename _Tp> struct std::is_fundamental< _Tp >`

[is\\_fundamental](#)

Definition at line 278 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.545 `std::is_integral< _Tp >` Struct Template Reference

### [is\\_integral](#)

Inheritance diagram for `std::is_integral< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr bool **value**

#### 5.545.1 Detailed Description

**template<typename \_Tp> struct `std::is_integral< _Tp >`**

### [is\\_integral](#)

Definition at line 130 of file `type_traits`.

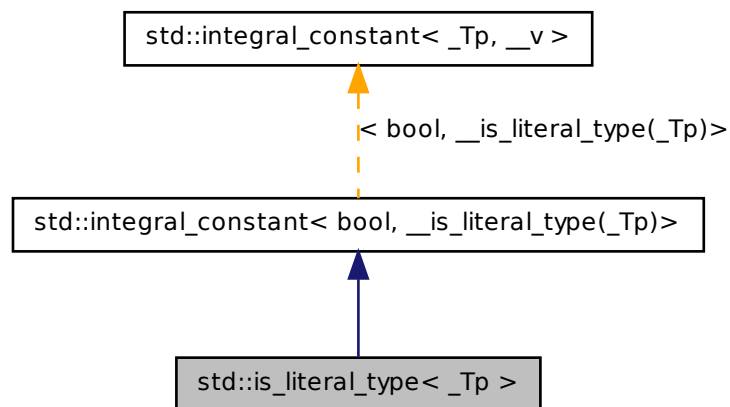

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.546 `std::is_literal_type< _Tp >` Struct Template Reference

### [is\\_literal\\_type](#)

Inheritance diagram for std::is\_literal\_type< \_Tp >:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr `bool` **value**

#### 5.546.1 Detailed Description

`template<typename _Tp> struct std::is_literal_type< _Tp >`

`is_literal_type`

Definition at line 643 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## **5.547** `std::is_lvalue_reference< typename >` Struct Template Reference

[is\\_lvalue\\_reference](#)

Inheritance diagram for `std::is_lvalue_reference< typename >`:

### **Public Types**

- typedef [integral\\_constant](#)< `_Tp`, `__v` > **type**
- typedef `_Tp` **value\_type**

### **Public Member Functions**

- constexpr **operator value\_type** ()

### **Static Public Attributes**

- static constexpr `_Tp` **value**

## 5.548 `std::is_member_function_pointer< _Tp >` Struct Template Reference 2785

### 5.547.1 Detailed Description

`template<typename> struct std::is_lvalue_reference< typename >`

[is\\_lvalue\\_reference](#)

Definition at line 515 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.548 `std::is_member_function_pointer< _Tp >` Struct Template Reference

[is\\_member\\_function\\_pointer](#)

Inheritance diagram for `std::is_member_function_pointer< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr bool **value**

### 5.548.1 Detailed Description

`template<typename _Tp> struct std::is_member_function_pointer< _Tp >`

[is\\_member\\_function\\_pointer](#)

Definition at line 203 of file `type_traits`.

The documentation for this struct was generated from the following file:

## 5.549 `std::is_member_object_pointer< _Tp >` Struct Template Reference 2786

- [type\\_traits](#)

### 5.549 `std::is_member_object_pointer< _Tp >` Struct Template Reference

[is\\_member\\_object\\_pointer](#)

Inheritance diagram for `std::is_member_object_pointer< _Tp >`:

#### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

#### Public Member Functions

- constexpr **operator value\_type** ()

#### Static Public Attributes

- static constexpr bool **value**

#### 5.549.1 Detailed Description

`template<typename _Tp> struct std::is_member_object_pointer< _Tp >`

[is\\_member\\_object\\_pointer](#)

Definition at line 190 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

### 5.550 `std::is_nothrow_constructible< _Tp, _Args >` Struct Template Reference

[is\\_nothrow\\_constructible](#)

Inheritance diagram for `std::is_nothrow_constructible<_Tp, _Args>`:

### Public Types

- typedef `integral_constant<bool, __v>` **type**
- typedef `bool` **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr `bool` **value**

#### 5.550.1 Detailed Description

template<typename **\_Tp**, typename... **\_Args**> struct `std::is_nothrow_constructible<_Tp, _Args>`

`is_nothrow_constructible`

Definition at line 705 of file `type_traits`.

The documentation for this struct was generated from the following file:

- `type_traits`

### 5.551 `std::is_object<_Tp>` Struct Template Reference

`is_object`

Inheritance diagram for `std::is_object<_Tp>`:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr bool **value**

#### 5.551.1 Detailed Description

**template<typename \_Tp> struct std::is\_object<\_Tp>**

[is\\_object](#)

Definition at line 285 of file `type_traits`.

The documentation for this struct was generated from the following file:

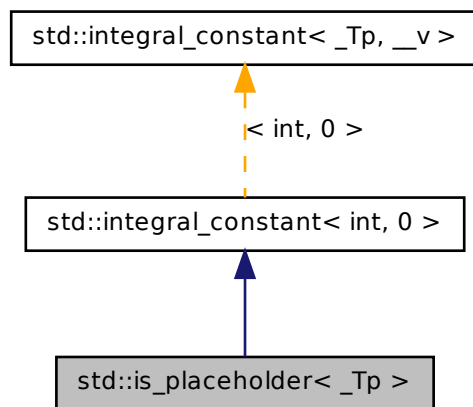

- [type\\_traits](#)

#### 5.552 `std::is_placeholder<_Tp>` Struct Template Reference

Determines if the given type `_Tp` is a placeholder in a [bind\(\)](#) expression and, if so, which placeholder it is. [TR1 3.6.2].

Inheritance diagram for std::is\_placeholder< \_Tp >:

### Public Types

- typedef `integral_constant< int, __v >` **type**
- typedef `int` **value\_type**

### Public Member Functions

- `constexpr operator value_type ()`

### Static Public Attributes

- `static constexpr int` **value**

#### 5.552.1 Detailed Description

**template<typename \_Tp> struct std::is\_placeholder< \_Tp >**

Determines if the given type `_Tp` is a placeholder in a `bind()` expression and, if so, which placeholder it is. [TR1 3.6.2].

Definition at line 833 of file functional.

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.553 `std::is_placeholder<_Placeholder<_Num>>` Struct Template Reference

Inheritance diagram for `std::is_placeholder<_Placeholder<_Num>>`:

### Public Types

- typedef [integral\\_constant](#)<int, \_\_v> **type**
- typedef int **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr int **value**

## 5.553.1 Detailed Description

```
template<int _Num> struct std::is_placeholder< _Placeholder< _Num > >
```

Partial specialization of [is\\_placeholder](#) that provides the placeholder number for the placeholder objects defined by libstdc++.

Definition at line 893 of file functional.

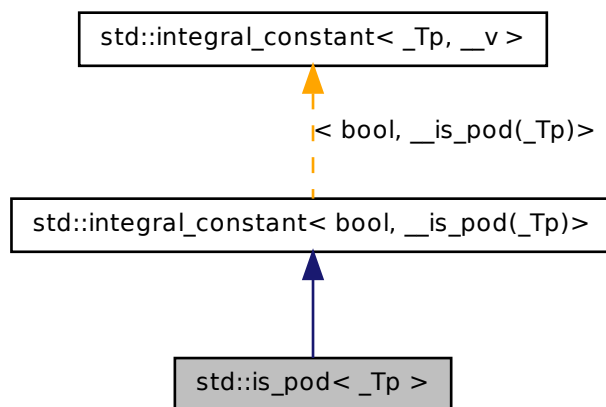

The documentation for this struct was generated from the following file:

- [functional](#)

## 5.554 std::is\_pod&lt; \_Tp &gt; Struct Template Reference

[is\\_pod](#)

Inheritance diagram for std::is\_pod< \_Tp >:

## Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

**5.554.1 Detailed Description**

template<typename `_Tp`> struct `std::is_pod< _Tp >`

[is\\_pod](#)

Definition at line 637 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.555 `std::is_pointer< _Tp >` Struct Template Reference**

[is\\_pointer](#)

Inheritance diagram for `std::is_pointer< _Tp >`:

**Public Types**

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

## 5.555.1 Detailed Description

```
template<typename _Tp> struct std::is_pointer< _Tp >
```

[is\\_pointer](#)

Definition at line 169 of file type\_traits.

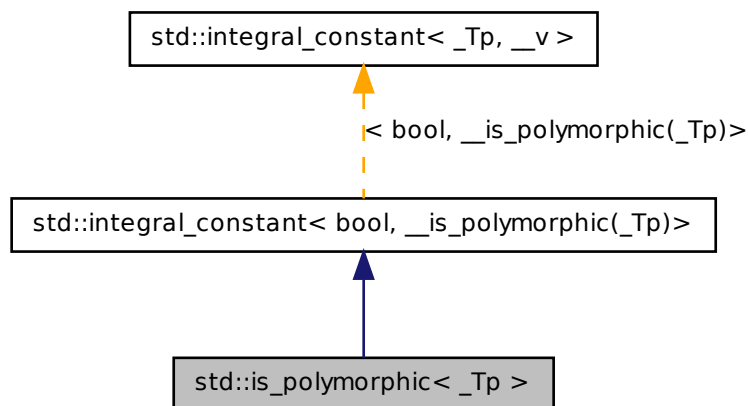

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.556 std::is\_polymorphic&lt; \_Tp &gt; Struct Template Reference

[is\\_polymorphic](#)

Inheritance diagram for std::is\_polymorphic< \_Tp >:

## Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

**5.556.1 Detailed Description**

template<typename \_Tp> struct std::is\_polymorphic< \_Tp >

[is\\_polymorphic](#)

Definition at line 349 of file type\_traits.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.557 `std::is_reference< _Tp >` Struct Template Reference**

[is\\_reference](#)

Inheritance diagram for `std::is_reference< _Tp >`:

**Public Types**

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

### 5.557.1 Detailed Description

`template<typename _Tp> struct std::is_reference< _Tp >`

[is\\_reference](#)

Definition at line 535 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.558 `std::is_rvalue_reference< typename >` Struct Template Reference

[is\\_rvalue\\_reference](#)

Inheritance diagram for `std::is_rvalue_reference< typename >`:

### Public Types

- typedef [integral\\_constant< \\_Tp, \\_\\_v >](#) **type**
- typedef `_Tp` **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

## Static Public Attributes

- `static constexpr _Tp value`

### 5.558.1 Detailed Description

`template<typename> struct std::is_rvalue_reference< typename >`

[is\\_rvalue\\_reference](#)

Definition at line 524 of file `type_traits`.

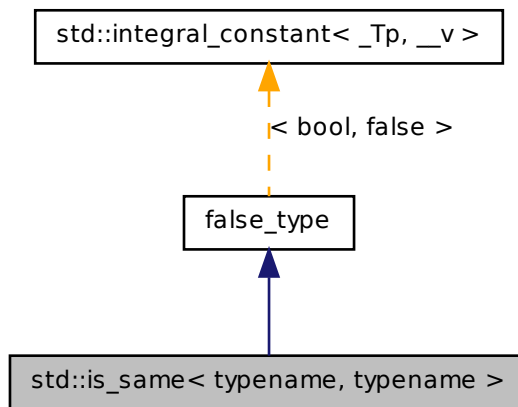

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.559 `std::is_same< typename, typename >` Struct Template Reference

[is\\_same](#)

Inheritance diagram for `std::is_same< typename, typename >`:

**Public Types**

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

**5.559.1 Detailed Description**

**template<typename, typename> struct std::is\_same< typename, typename >**

[is\\_same](#)

Definition at line 406 of file type\_traits.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.560 std::is\_scalar< \_Tp > Struct Template Reference**

[is\\_scalar](#)

Inheritance diagram for std::is\_scalar< \_Tp >:

**Public Types**

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

**5.560.1 Detailed Description**

template<typename \_Tp> struct std::is\_scalar< \_Tp >

[is\\_scalar](#)

Definition at line 297 of file type\_traits.

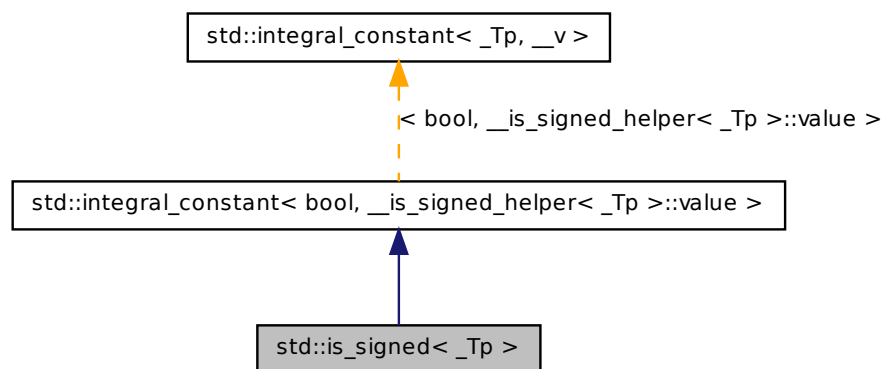

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.561 std::is\_signed< \_Tp > Struct Template Reference**

[is\\_signed](#)

Inheritance diagram for std::is\_signed< \_Tp >:

**Public Types**

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- `constexpr operator value_type ()`

**Static Public Attributes**

- `static constexpr bool value`

**5.561.1 Detailed Description**

`template<typename _Tp> struct std::is_signed< _Tp >`

[is\\_signed](#)

Definition at line 609 of file `type_traits`.

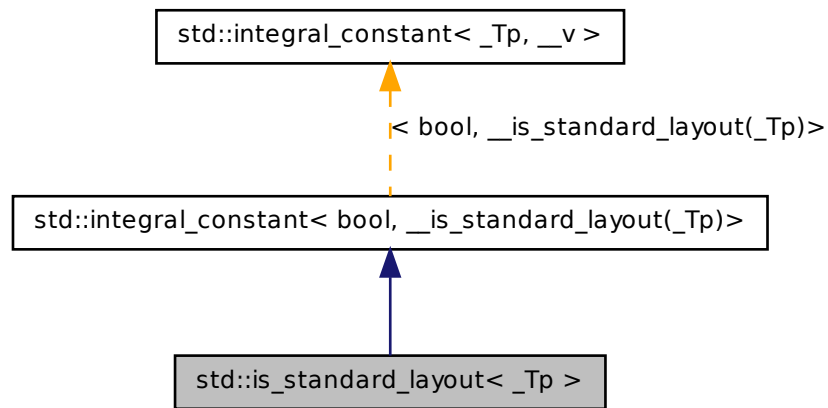

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.562 `std::is_standard_layout< _Tp >` Struct Template Reference**

[is\\_standard\\_layout](#)

Inheritance diagram for `std::is_standard_layout< _Tp >`:

### Public Types

- typedef `integral_constant< bool, __v >` **type**
- typedef `bool` **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr `bool` **value**

#### 5.562.1 Detailed Description

`template<typename _Tp> struct std::is_standard_layout< _Tp >`

`is_standard_layout`

Definition at line 630 of file `type_traits`.

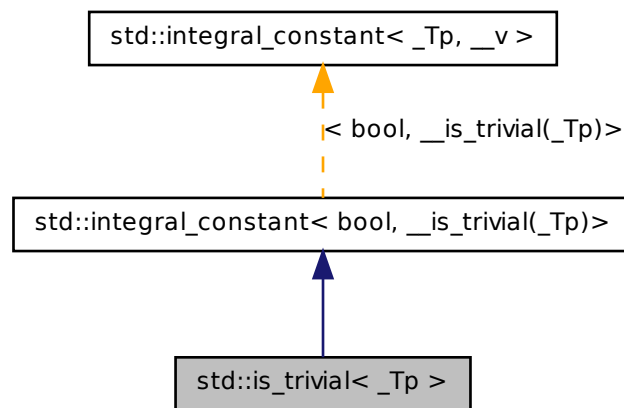

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.563 std::is\_trivial< \_Tp > Struct Template Reference

[is\\_trivial](#)

Inheritance diagram for std::is\_trivial< \_Tp >:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr bool **value**

## 5.563.1 Detailed Description

```
template<typename _Tp> struct std::is_trivial< _Tp >
```

[is\\_trivial](#)

Definition at line 624 of file type\_traits.

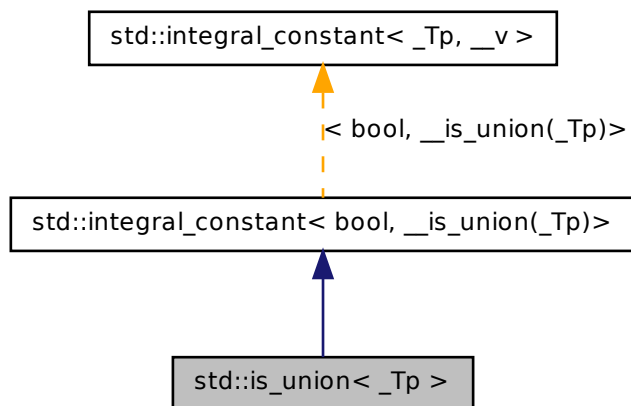

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.564 std::is\_union&lt; \_Tp &gt; Struct Template Reference

[is\\_union](#)

Inheritance diagram for std::is\_union< \_Tp >:

## Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

**5.564.1 Detailed Description**

template<typename \_Tp> struct std::is\_union< \_Tp >

[is\\_union](#)

Definition at line 216 of file type\_traits.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**5.565 std::is\_unsigned< \_Tp > Struct Template Reference**

[is\\_unsigned](#)

Inheritance diagram for std::is\_unsigned< \_Tp >:

**Public Types**

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

**Public Member Functions**

- constexpr **operator value\_type** ()

**Static Public Attributes**

- static constexpr bool **value**

### 5.565.1 Detailed Description

**template<typename \_Tp> struct std::is\_unsigned< \_Tp >**

[is\\_unsigned](#)

Definition at line 615 of file type\_traits.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.566 std::is\_void< \_Tp > Struct Template Reference

[is\\_void](#)

Inheritance diagram for std::is\_void< \_Tp >:

### Public Types

- typedef [integral\\_constant](#)< bool, \_\_v > **type**
- typedef bool **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr bool **value**

### 5.566.1 Detailed Description

**template<typename \_Tp> struct std::is\_void< \_Tp >**

[is\\_void](#)

Definition at line 102 of file type\_traits.

The documentation for this struct was generated from the following file:

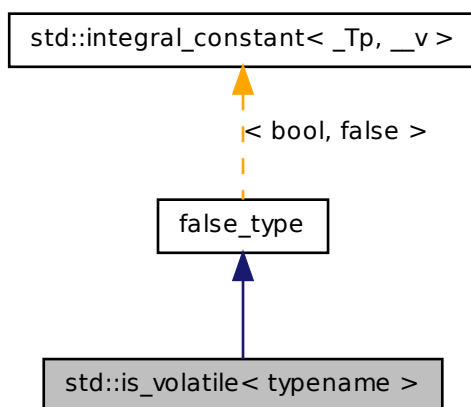

- [type\\_traits](#)

## 5.567 `std::is_volatile< typename >` Struct Template Reference

### [is\\_volatile](#)

Inheritance diagram for `std::is_volatile< typename >`:

### Public Types

- typedef [integral\\_constant](#)`< bool, __v >` **type**
- typedef bool **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr bool **value**

### 5.567.1 Detailed Description

`template<typename> struct std::is_volatile< typename >`

[is\\_volatile](#)

Definition at line 334 of file `type_traits`.

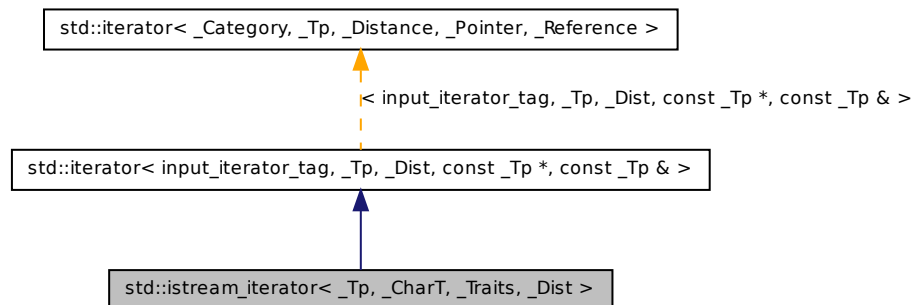

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.568 `std::istream_iterator< _Tp, _CharT, _Traits, _Dist >` Class Template Reference

Provides input iterator semantics for streams.

Inheritance diagram for `std::istream_iterator< _Tp, _CharT, _Traits, _Dist >`:

### Public Types

- typedef `_CharT` **char\_type**
- typedef `_Dist` [difference\\_type](#)
- typedef [basic\\_istream< \\_CharT, \\_Traits >](#) **istream\_type**
- typedef [input\\_iterator\\_tag](#) [iterator\\_category](#)
- typedef `const _Tp *` [pointer](#)
- typedef `const _Tp &` [reference](#)
- typedef `_Traits` **traits\_type**
- typedef `_Tp` [value\\_type](#)

## Public Member Functions

- `constexpr istream_iterator()`
- `istream_iterator(istream_type &__s)`
- `istream_iterator(const istream_iterator &__obj)`
- `bool _M_equal(const istream_iterator &__x) const`
- `const _Tp & operator*() const`
- `istream_iterator & operator++()`
- `istream_iterator operator++(int)`
- `const _Tp * operator->() const`

### 5.568.1 Detailed Description

`template<typename _Tp, typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> class std::istream_iterator<_Tp, _CharT, _Traits, _Dist>`

Provides input iterator semantics for streams.

Definition at line 49 of file `stream_iterator.h`.

### 5.568.2 Member Typedef Documentation

5.568.2.1 `typedef _Dist std::iterator<input_iterator_tag, _Tp, _Dist, const _Tp*, const _Tp &>::difference_type` [inherited]

Distance between iterators is represented as this type.

Definition at line 126 of file `stl_iterator_base_types.h`.

5.568.2.2 `typedef input_iterator_tag std::iterator<input_iterator_tag, _Tp, _Dist, const _Tp*, const _Tp &>::iterator_category` [inherited]

One of the [tag types](#).

Definition at line 122 of file `stl_iterator_base_types.h`.

5.568.2.3 `typedef const _Tp* std::iterator<input_iterator_tag, _Tp, _Dist, const _Tp*, const _Tp &>::pointer` [inherited]

This type represents a pointer-to-value\_type.

Definition at line 128 of file stl\_iterator\_base\_types.h.

**5.568.2.4** `typedef const _Tp & std::iterator< input_iterator_tag, _Tp, _Dist, const _Tp *, const _Tp & >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 130 of file stl\_iterator\_base\_types.h.

**5.568.2.5** `typedef _Tp std::iterator< input_iterator_tag, _Tp, _Dist, const _Tp *, const _Tp & >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 124 of file stl\_iterator\_base\_types.h.

### **5.568.3 Constructor & Destructor Documentation**

**5.568.3.1** `template<typename _Tp, typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> constexpr std::istream_iterator< _Tp, _CharT, _Traits, _Dist >::istream_iterator ( ) [inline]`

Construct end of input stream iterator.

Definition at line 64 of file stream\_iterator.h.

**5.568.3.2** `template<typename _Tp, typename _CharT = char, typename _Traits = char_traits<_CharT>, typename _Dist = ptrdiff_t> std::istream_iterator< _Tp, _CharT, _Traits, _Dist >::istream_iterator ( istream_type & __s ) [inline]`

Construct start of input stream iterator.

Definition at line 68 of file stream\_iterator.h.

The documentation for this class was generated from the following file:

- [stream\\_iterator.h](#)

## 5.569 `std::istreambuf_iterator< _CharT, _Traits >` Class Template Reference

Provides input iterator semantics for streambufs.

Inheritance diagram for `std::istreambuf_iterator< _CharT, _Traits >`:

### Public Types

- typedef `_Traits::off_type` [difference\\_type](#)
- typedef [input\\_iterator\\_tag](#) `iterator_category`
- typedef `_CharT *` [pointer](#)
- typedef `_CharT &` [reference](#)
- typedef `_CharT` [value\\_type](#)
- typedef `_CharT` [char\\_type](#)
- typedef `_Traits` [traits\\_type](#)
- typedef `_Traits::int_type` [int\\_type](#)
- typedef `basic_streambuf< _CharT, _Traits >` [streambuf\\_type](#)
- typedef `basic_istream< _CharT, _Traits >` [istream\\_type](#)

### Public Member Functions

- constexpr [istreambuf\\_iterator](#) () throw ()
- [istreambuf\\_iterator](#) ([istream\\_type](#) &\_\_s) throw ()
- [istreambuf\\_iterator](#) ([streambuf\\_type](#) \*\_\_s) throw ()
- bool [equal](#) (const [istreambuf\\_iterator](#) &\_\_b) const
- [char\\_type](#) [operator\\*](#) () const
- [istreambuf\\_iterator](#) [operator++](#) (int)
- [istreambuf\\_iterator](#) & [operator++](#) ()

### Friends

- template<bool \_\_IsMove, typename \_\_CharT2 >  
[\\_\\_gnu\\_cxx::\\_\\_enable\\_if< \\_\\_is\\_char< \\_CharT2 >::\\_\\_value, \\_CharT2 \\* >::\\_\\_-](#)  
[type \\_\\_copy\\_move\\_a2](#) ([istreambuf\\_iterator](#)< \_\_CharT2 >, [istreambuf\\_iterator](#)< \_\_CharT2 >, \_\_CharT2 \*)

## 5.569 std::istreambuf\_iterator< \_CharT, \_Traits > Class Template Reference 2810

---

- template<typename \_CharT2 >  
\_\_gnu\_cxx::\_\_enable\_if< \_\_is\_char< \_CharT2 >::\_\_value, ostreambuf\_iterator< \_CharT2 > >::\_\_type **copy** (istreambuf\_iterator< \_CharT2 >, istreambuf\_iterator< \_CharT2 >, ostreambuf\_iterator< \_CharT2 >)
- template<typename \_CharT2 >  
\_\_gnu\_cxx::\_\_enable\_if< \_\_is\_char< \_CharT2 >::\_\_value, istreambuf\_iterator< \_CharT2 > >::\_\_type **find** (istreambuf\_iterator< \_CharT2 >, istreambuf\_iterator< \_CharT2 >, const \_CharT2 &)

### 5.569.1 Detailed Description

template<typename \_CharT, typename \_Traits> class std::istreambuf\_iterator< \_CharT, \_Traits >

Provides input iterator semantics for streambufs.

Definition at line 52 of file streambuf\_iterator.h.

### 5.569.2 Member Typedef Documentation

**5.569.2.1** template<typename \_CharT, typename \_Traits > typedef \_CharT  
std::istreambuf\_iterator< \_CharT, \_Traits >::char\_type

Public typedefs.

Definition at line 60 of file streambuf\_iterator.h.

**5.569.2.2** typedef \_Traits::off\_type std::iterator< input\_iterator\_tag, \_CharT  
, \_Traits::off\_type, \_CharT \*, \_CharT & >::difference\_type  
[inherited]

Distance between iterators is represented as this type.

Definition at line 126 of file stl\_iterator\_base\_types.h.

**5.569.2.3** template<typename \_CharT, typename \_Traits > typedef  
\_Traits::int\_type std::istreambuf\_iterator< \_CharT, \_Traits  
>::int\_type

Public typedefs.

## **5.569 std::istreambuf\_iterator< \_CharT, \_Traits > Class Template Reference**

Definition at line 62 of file streambuf\_iterator.h.

**5.569.2.4** `template<typename _CharT , typename _Traits > typedef  
basic_istream<_CharT, _Traits> std::istreambuf_iterator< _CharT,  
_Traits >::istream_type`

Public typedefs.

Definition at line 64 of file streambuf\_iterator.h.

**5.569.2.5** `typedef input_iterator_tag std::iterator< input_iterator_tag , _CharT  
, _Traits::off_type , _CharT * , _CharT & >::iterator_category  
[inherited]`

One of the [tag types](#).

Definition at line 122 of file stl\_iterator\_base\_types.h.

**5.569.2.6** `typedef _CharT * std::iterator< input_iterator_tag , _CharT ,  
_Traits::off_type , _CharT * , _CharT & >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 128 of file stl\_iterator\_base\_types.h.

**5.569.2.7** `typedef _CharT & std::iterator< input_iterator_tag , _CharT  
, _Traits::off_type , _CharT * , _CharT & >::reference  
[inherited]`

This type represents a reference-to-value\_type.

Definition at line 130 of file stl\_iterator\_base\_types.h.

**5.569.2.8** `template<typename _CharT , typename _Traits > typedef  
basic_streambuf<_CharT, _Traits> std::istreambuf_iterator<  
_CharT, _Traits >::streambuf_type`

## **5.569 std::istreambuf\_iterator< \_CharT, \_Traits > Class Template Reference**

---

Public typedefs.

Definition at line 63 of file streambuf\_iterator.h.

**5.569.2.9** `template<typename _CharT, typename _Traits > typedef _Traits  
std::istreambuf_iterator< _CharT, _Traits >::traits_type`

Public typedefs.

Definition at line 61 of file streambuf\_iterator.h.

**5.569.2.10** `typedef _CharT std::iterator< input_iterator_tag, _CharT  
, _Traits::off_type, _CharT *, _CharT & >::value_type  
[inherited]`

The type "pointed to" by the iterator.

Definition at line 124 of file stl\_iterator\_base\_types.h.

### **5.569.3 Constructor & Destructor Documentation**

**5.569.3.1** `template<typename _CharT, typename _Traits > constexpr  
std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator (  
) throw () [inline]`

Construct end of input stream iterator.

Definition at line 98 of file streambuf\_iterator.h.

**5.569.3.2** `template<typename _CharT, typename _Traits >  
std::istreambuf_iterator< _CharT, _Traits >::istreambuf_iterator (  
istream_type & __s ) throw () [inline]`

Construct start of input stream iterator.

Definition at line 102 of file streambuf\_iterator.h.

## 5.569 `std::istreambuf_iterator<_CharT, _Traits>` Class Template Reference 2813

**5.569.3.3** `template<typename _CharT, typename _Traits>  
std::istreambuf_iterator<_CharT, _Traits>::istreambuf_iterator (  
streambuf_type * __s ) throw () [inline]`

Construct start of streambuf iterator.

Definition at line 106 of file `streambuf_iterator.h`.

### 5.569.4 Member Function Documentation

**5.569.4.1** `template<typename _CharT, typename _Traits> bool  
std::istreambuf_iterator<_CharT, _Traits>::equal ( const  
istreambuf_iterator<_CharT, _Traits> & __b ) const [inline]`

Return true both iterators are end or both are not end.

Definition at line 162 of file `streambuf_iterator.h`.

**5.569.4.2** `template<typename _CharT, typename _Traits> char_type  
std::istreambuf_iterator<_CharT, _Traits>::operator* ( ) const  
[inline]`

Return the current character pointed to by iterator. This returns `/// streambuf.sgetc()`. It cannot be assigned. NB: The result of `/// operator*()` on an end of stream is undefined.

Definition at line 113 of file `streambuf_iterator.h`.

**5.569.4.3** `template<typename _CharT, typename _Traits>  
istreambuf_iterator std::istreambuf_iterator<_CharT, _Traits  
>::operator++ ( int ) [inline]`

Advance the iterator. Calls `streambuf.sbumpc()`.

Definition at line 142 of file `streambuf_iterator.h`.

References `std::basic_streambuf<_CharT, _Traits>::sbumpc()`.

## 5.570 `std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference>` Struct Template Reference 2814

5.569.4.4 `template<typename _CharT, typename _Traits>`  
`istreambuf_iterator& std::istreambuf_iterator<_CharT, _Traits`  
`>::operator++( ) [inline]`

Advance the iterator. Calls [streambuf.sbumpc\(\)](#).

Definition at line 127 of file `streambuf_iterator.h`.

References `std::basic_streambuf<_CharT, _Traits>::sbumpc()`.

The documentation for this class was generated from the following file:

- [streambuf\\_iterator.h](#)

## 5.570 `std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference>` Struct Template Reference

Common iterator class.

Inheritance diagram for `std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference>`:

### Public Types

- typedef `_Distance` [difference\\_type](#)
- typedef `_Category` [iterator\\_category](#)
- typedef `_Pointer` [pointer](#)
- typedef `_Reference` [reference](#)
- typedef `_Tp` [value\\_type](#)

### 5.570.1 Detailed Description

```
template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t,
typename _Pointer = _Tp*, typename _Reference = _Tp&> struct std::iterator<
_Category, _Tp, _Distance, _Pointer, _Reference >
```

Common iterator class. This class does nothing but define nested typedefs. Iterator classes can inherit from this class to save some work. The typedefs are then used in specializations and overloading.

In particular, there are no default implementations of requirements such as `operator++` and the like. (How could there be?)

Definition at line 119 of file `stl_iterator_base_types.h`.

### 5.570.2 Member Typedef Documentation

**5.570.2.1** `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Distance std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference>::difference_type`

Distance between iterators is represented as this type.

Reimplemented in [std::reverse\\_iterator<\\_Iterator>](#).

Definition at line 126 of file `stl_iterator_base_types.h`.

**5.570.2.2** `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Category std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference>::iterator_category`

One of the [tag types](#).

Definition at line 122 of file `stl_iterator_base_types.h`.

**5.570.2.3** `template<typename _Category, typename _Tp, typename _Distance = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference = _Tp&> typedef _Pointer std::iterator<_Category, _Tp, _Distance, _Pointer, _Reference>::pointer`

This type represents a pointer-to-value\_type.

Reimplemented in [std::reverse\\_iterator<\\_Iterator >](#).

Definition at line 128 of file `stl_iterator_base_types.h`.

```
5.570.2.4 template<typename _Category, typename _Tp, typename _Distance
 = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference =
 _Tp&> typedef _Reference std::iterator<_Category, _Tp, _Distance,
 _Pointer, _Reference >::reference
```

This type represents a reference-to-value\_type.

Reimplemented in [std::reverse\\_iterator<\\_Iterator >](#).

Definition at line 130 of file `stl_iterator_base_types.h`.

```
5.570.2.5 template<typename _Category, typename _Tp, typename _Distance
 = ptrdiff_t, typename _Pointer = _Tp*, typename _Reference =
 _Tp&> typedef _Tp std::iterator<_Category, _Tp, _Distance,
 _Pointer, _Reference >::value_type
```

The type "pointed to" by the iterator.

Definition at line 124 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.571 `std::iterator_traits<_Tp * >` Struct Template Reference

Partial specialization for pointer types.

### Public Types

- typedef ptrdiff\_t **difference\_type**
- typedef [random\\_access\\_iterator\\_tag](#) **iterator\_category**
- typedef \_Tp \* **pointer**
- typedef \_Tp & **reference**
- typedef \_Tp **value\_type**

### 5.571.1 Detailed Description

**template<typename \_Tp> struct std::iterator\_traits< \_Tp \* >**

Partial specialization for pointer types.

Definition at line 176 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.572 `std::iterator_traits< const _Tp * >` Struct Template Reference

Partial specialization for const pointer types.

### Public Types

- typedef `ptrdiff_t` **difference\_type**
- typedef [random\\_access\\_iterator\\_tag](#) **iterator\_category**
- typedef `const _Tp *` **pointer**
- typedef `const _Tp &` **reference**
- typedef `_Tp` **value\_type**

### 5.572.1 Detailed Description

**template<typename \_Tp> struct std::iterator\_traits< const \_Tp \* >**

Partial specialization for const pointer types.

Definition at line 187 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.573 `std::length_error` Class Reference

Inheritance diagram for `std::length_error`:

### Public Member Functions

- **`length_error`** (const [string](#) &\_\_arg)
- virtual const char \* **`what`** () const throw ()

#### 5.573.1 Detailed Description

Thrown when an object is constructed that would exceed its maximum permitted size (e.g., a [basic\\_string](#) instance).

Definition at line 92 of file `stdexcept`.

#### 5.573.2 Member Function Documentation

##### 5.573.2.1 virtual const char\* `std::logic_error::what` ( ) const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

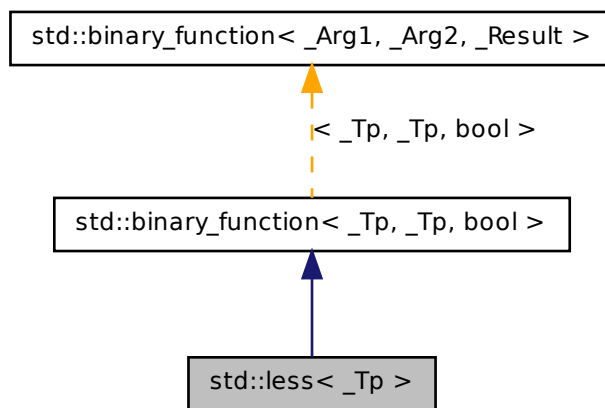

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.574 std::less< \_Tp > Struct Template Reference

One of the [comparison functions](#).

Inheritance diagram for std::less< \_Tp >:

### Public Types

- typedef `_Tp` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_Tp` [second\\_argument\\_type](#)

### Public Member Functions

- `bool operator() (const _Tp &__x, const _Tp &__y) const`

### 5.574.1 Detailed Description

`template<typename _Tp> struct std::less< _Tp >`

One of the [comparison functions](#).

Definition at line 232 of file `stl_function.h`.

### 5.574.2 Member Typedef Documentation

**5.574.2.1** `typedef _Tp std::binary_function< _Tp , _Tp , bool  
>::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.574.2.2** `typedef bool std::binary_function< _Tp , _Tp , bool >::result_type  
[inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.574.2.3** `typedef _Tp std::binary_function< _Tp , _Tp , bool  
>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

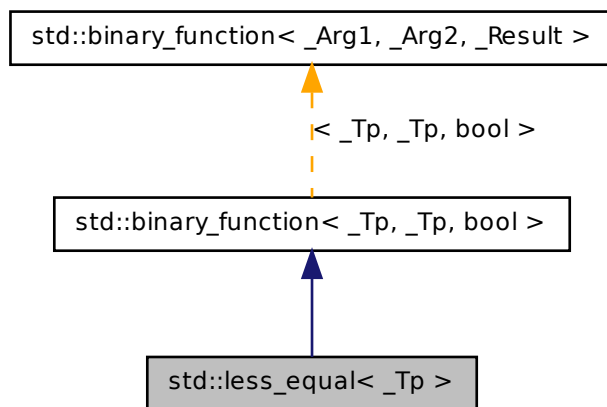

- [stl\\_function.h](#)

## 5.575 `std::less_equal< _Tp >` Struct Template Reference

One of the [comparison functions](#).

Inheritance diagram for std::less\_equal< \_Tp >:

### Public Types

- typedef `_Tp` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_Tp` [second\\_argument\\_type](#)

### Public Member Functions

- `bool operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.575.1 Detailed Description

**template<typename \_Tp> struct std::less\_equal< \_Tp >**

One of the [comparison functors](#).

Definition at line 250 of file `stl_function.h`.

### 5.575.2 Member Typedef Documentation

**5.575.2.1** `typedef _Tp std::binary_function< _Tp, _Tp, bool  
>::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.575.2.2** `typedef bool std::binary_function< _Tp, _Tp, bool >::result_type  
[inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.575.2.3** `typedef _Tp std::binary_function< _Tp, _Tp, bool  
>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## **5.576 std::linear\_congruential\_engine< \_UIntType, \_\_a, \_\_c, \_\_m > Class Template Reference**

A model of a linear congruential random number generator.

### Public Types

- `typedef _UIntType` [result\\_type](#)

### Public Member Functions

- [linear\\_congruential\\_engine](#) ([result\\_type](#) \_\_s=default\_seed)

- `template<typename _Sseq, typename = typename std::enable_if<!std::is_same<_Sseq, linear_congruential_engine>::value>::type>`  
`linear_congruential_engine` (`_Sseq &__q`)
- `void discard` (`unsigned long long __z`)
- `result_type operator()` ()
- `template<typename _Sseq>`  
`std::enable_if<std::is_class<_Sseq>::value>::type seed` (`_Sseq &__q`)
- `void seed` (`result_type __s=default_seed`)

### Static Public Member Functions

- `static constexpr result_type max` ()
- `static constexpr result_type min` ()

### Static Public Attributes

- `static constexpr result_type default_seed`
- `static constexpr result_type increment`
- `static constexpr result_type modulus`
- `static constexpr result_type multiplier`

### Friends

- `template<typename _UIntType1, _UIntType1 __a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT, typename _Traits>`  
`std::basic_ostream<_CharT, _Traits> & operator<<` (`std::basic_ostream<_CharT, _Traits> &`, `const std::linear_congruential_engine<_UIntType1, __a1, __c1, __m1> &`)
- `bool operator==` (`const linear_congruential_engine &__lhs`, `const linear_congruential_engine &__rhs`)

`std::basic_istream<_CharT, _Traits> & operator>>` (`std::basic_istream<_CharT, _Traits> &`, `std::linear_congruential_engine<_UIntType1, __a1, __c1, __m1> &`)

### 5.576.1 Detailed Description

```
template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m>
class std::linear_congruential_engine< _UIntType, __a, __c, __m >
```

A model of a linear congruential random number generator. A random number generator that produces pseudorandom numbers via linear function:

$$x_{i+1} \leftarrow (ax_i + c) \bmod m$$

The template parameter `_UIntType` must be an unsigned integral type large enough to store values up to  $(\text{__m}-1)$ . If the template parameter `__m` is 0, the modulus `__m` used is `std::numeric_limits<_UIntType>::max()` plus 1. Otherwise, the template parameters `__a` and `__c` must be less than `__m`.

The size of the state is 1.

Definition at line 170 of file random.h.

### 5.576.2 Member Typedef Documentation

**5.576.2.1** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> typedef _UIntType std::linear_congruential_engine< _UIntType, __a, __c, __m >::result_type`

The type of the generated random value.

Definition at line 179 of file random.h.

### 5.576.3 Constructor & Destructor Documentation

**5.576.3.1** `template<typename _UIntType, _UIntType __a, _UIntType __c, _UIntType __m> std::linear_congruential_engine< _UIntType, __a, __c, __m >::linear_congruential_engine ( result_type __s = default_seed ) [inline, explicit]`

Constructs a `linear_congruential_engine` random number generator engine with seed `__s`. The default seed value is 1.

#### Parameters

`__s` The initial seed value.

Definition at line 197 of file random.h.

References `std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed()`.

**5.576.3.2** `template<typename _UIntType, _UIntType __a, _UIntType  
__c, _UIntType __m> template<typename _Sseq, typename =  
typename std::enable_if<!std::is_same<_Sseq, linear_congruential_  
engine>::value> ::type> std::linear_congruential_engine<  
_UIntType, __a, __c, __m >::linear_congruential_engine ( _Sseq &  
__q ) [inline, explicit]`

Constructs a `linear_congruential_engine` random number generator engine seeded from the seed sequence `__q`.

#### Parameters

`__q` the seed sequence.

Definition at line 210 of file `random.h`.

References `std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed()`.

### 5.576.4 Member Function Documentation

**5.576.4.1** `template<typename _UIntType, _UIntType __a, _UIntType __c,  
_UIntType __m> void std::linear_congruential_engine< _UIntType,  
__a, __c, __m >::discard ( unsigned long long __z ) [inline]`

Discard a sequence of random numbers.

Definition at line 254 of file `random.h`.

**5.576.4.2** `template<typename _UIntType, _UIntType __a, _UIntType  
__c, _UIntType __m> static constexpr result_type  
std::linear_congruential_engine< _UIntType, __a, __c, __m >::max ( ) [inline, static]`

Gets the largest possible value in the output range.

Definition at line 247 of file `random.h`.

**5.576.4.3** `template<typename _UIntType, _UIntType __a, _UIntType  
__c, _UIntType __m> static constexpr result_type  
std::linear_congruential_engine< _UIntType, __a, __c, __m >::min ( )  
[inline, static]`

Gets the smallest possible value in the output range.

The minimum depends on the \_\_c parameter: if it is zero, the minimum generated must be > 0, otherwise 0 is allowed.

Definition at line 240 of file random.h.

**5.576.4.4** `template<typename _UIntType, _UIntType __a, _UIntType __c,  
_UIntType __m> result_type std::linear_congruential_engine<  
_UIntType, __a, __c, __m >::operator() ( ) [inline]`

Gets the next random number in the sequence.

Definition at line 264 of file random.h.

**5.576.4.5** `template<typename _UIntType , _UIntType __a, _UIntType  
__c, _UIntType __m> template<typename _Sseq >  
std::enable_if< std::is_class< _Sseq >::value >::type  
std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed (   
_Sseq & __q )`

Reseeds the linear\_congruential\_engine random number generator engine sequence using values from the seed sequence \_\_q.

#### Parameters

\_\_q the seed sequence.

Seeds the LCR engine with a value generated by \_\_q.

Definition at line 150 of file random.tcc.

References std::\_\_lg(), and std::linear\_congruential\_engine< \_UIntType, \_\_a, \_\_c, \_\_m >::seed().

**5.576.4.6** `template<typename _UIntType, _UIntType __a, _UIntType __c,  
_UIntType __m> void std::linear_congruential_engine< _UIntType,  
__a, __c, __m >::seed ( result_type __s = default_seed )`

Reseeds the linear\_congruential\_engine random number generator engine sequence to the seed \_\_s.

#### Parameters

\_\_s The new seed.

Seeds the LCR with integral value \_\_s, adjusted so that the ring identity is never a member of the convergence set.

Definition at line 134 of file random.tcc.

Referenced by std::linear\_congruential\_engine< \_UIntType, \_\_a, \_\_c, \_\_m >::linear\_congruential\_engine(), and std::linear\_congruential\_engine< \_UIntType, \_\_a, \_\_c, \_\_m >::seed().

### 5.576.5 Friends And Related Function Documentation

**5.576.5.1** `template<typename _UIntType, _UIntType __a, _UIntType __c,  
_UIntType __m> template<typename _UIntType1, _UIntType1  
__a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT  
, typename _Traits > std::basic_ostream< _CharT, _Traits>&  
operator<< ( std::basic_ostream< _CharT, _Traits> &, const  
std::linear_congruential_engine< _UIntType1, __a1, __c1, __m1 > &  
) [friend]`

Writes the textual representation of the state x(i) of x to \_\_os.

#### Parameters

\_\_os The output stream.

\_\_lcr A % [linear\\_congruential\\_engine](#) random number generator.

#### Returns

\_\_os.

**5.576.5.2** `template<typename _UIntType, _UIntType __a,  
 _UIntType __c, _UIntType __m> bool operator==( const  
 linear_congruential_engine< _UIntType, __a, __c, __m > & __lhs,  
 const linear_congruential_engine< _UIntType, __a, __c, __m > &  
 __rhs ) [friend]`

Compares two linear congruential random number generator objects of the same type for equality.

#### Parameters

`__lhs` A linear congruential random number generator object.  
`__rhs` Another linear congruential random number generator object.

#### Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 282 of file random.h.

**5.576.5.3** `template<typename _UIntType, _UIntType __a, _UIntType __c,  
 _UIntType __m> template<typename _UIntType1, _UIntType1  
 __a1, _UIntType1 __c1, _UIntType1 __m1, typename _CharT  
 , typename _Traits > std::basic_istream<_CharT, _Traits>&  
 operator>> ( std::basic_istream<_CharT, _Traits > & ,  
 std::linear_congruential_engine< _UIntType1, __a1, __c1, __m1 > &  
 ) [friend]`

Sets the state of the engine by reading its textual representation from `__is`.

The textual representation must have been previously written using an output stream whose imbued locale and whose type's template specialization arguments `_CharT` and `_Traits` were the same as those of `__is`.

#### Parameters

`__is` The input stream.  
`__lcr` A % [linear\\_congruential\\_engine](#) random number generator.

#### Returns

`__is`.

### 5.576.6 Member Data Documentation

**5.576.6.1** `template<typename _UIntType, _UIntType __a,  
_UIntType __c, _UIntType __m> constexpr _UIntType  
std::linear_congruential_engine<_UIntType, __a, __c, __m  
>::increment [static]`

An increment.

Definition at line 184 of file `random.h`.

**5.576.6.2** `template<typename _UIntType, _UIntType __a,  
_UIntType __c, _UIntType __m> constexpr _UIntType  
std::linear_congruential_engine<_UIntType, __a, __c, __m  
>::modulus [static]`

The modulus.

Definition at line 186 of file `random.h`.

**5.576.6.3** `template<typename _UIntType, _UIntType __a,  
_UIntType __c, _UIntType __m> constexpr _UIntType  
std::linear_congruential_engine<_UIntType, __a, __c, __m  
>::multiplier [static]`

The multiplier.

Definition at line 182 of file `random.h`.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.577 `std::list<_Tp, _Alloc>` Class Template Reference

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.

Inheritance diagram for `std::list< _Tp, _Alloc >`:

### Public Types

- typedef `_Alloc` **allocator\_type**
- typedef `_List_const_iterator< _Tp >` **const\_iterator**
- typedef `_Tp_alloc_type::const_pointer` **const\_pointer**
- typedef `_Tp_alloc_type::const_reference` **const\_reference**
- typedef `std::reverse_iterator< const_iterator >` **const\_reverse\_iterator**
- typedef `ptrdiff_t` **difference\_type**
- typedef `_List_iterator< _Tp >` **iterator**
- typedef `_Tp_alloc_type::pointer` **pointer**
- typedef `_Tp_alloc_type::reference` **reference**
- typedef `std::reverse_iterator< iterator >` **reverse\_iterator**
- typedef `size_t` **size\_type**
- typedef `_Tp` **value\_type**

### Public Member Functions

**5.577.1 Detailed Description**

`template<typename _Tp, typename _Alloc = std::allocator<_Tp>> class std::list<_Tp, _Alloc>`

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence. Meets the requirements of a [container](#),

a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#) with the exception of `at` and `operator[]`.

This is a *doubly linked* list. Traversal up and down the list requires linear time, but adding and removing elements (or *nodes*) is done in constant time, regardless of where the change takes place. Unlike [std::vector](#) and [std::deque](#), random-access iterators are not provided, so subscripting ( `[]` ) access is not allowed. For algorithms which only need sequential access, this lack makes no difference.

Also unlike the other standard containers, [std::list](#) provides specialized algorithms unique to linked lists, such as splicing, sorting, and in-place reversal.

A couple points on memory allocation for `list<Tp>`:

First, we never actually allocate a `Tp`, we allocate `List_node<Tp>`'s and trust [20.1.5]/4 to DTRT. This is to ensure that after elements from `list<X, Alloc1>` are spliced into `list<X, Alloc2>`, destroying the memory of the second list is a valid operation, i.e., `Alloc1` giveth and `Alloc2` taketh away.

Second, a list conceptually represented as

```
A <----> B <----> C <----> D
```

is actually circular; a link exists between A and D. The list class holds (as its only data member) a private `list::iterator` pointing to *D*, not to *A*! To get to the head of the list, we start at the tail and move forward by one. When this member iterator's `next/previous` pointers refer to itself, the list is empty.

Definition at line 429 of file `stl_list.h`.

## 5.577.2 Constructor & Destructor Documentation

**5.577.2.1** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::list<_Tp, _Alloc>::list ( ) [inline]`

Default constructor creates no elements.

Definition at line 512 of file `stl_list.h`.

**5.577.2.2** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::list<_Tp, _Alloc>::list ( const allocator_type & __a )  
[inline, explicit]`

Creates a list with no elements.

**Parameters**

*a* An allocator object.

Definition at line 520 of file `stl_list.h`.

**5.577.2.3** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::list<_Tp, _Alloc>::list ( size_type __n ) [inline,  
explicit]`

Creates a list with default constructed elements.

**Parameters**

*n* The number of elements to initially create.

This constructor fills the list with *n* default constructed elements.

Definition at line 532 of file `stl_list.h`.

**5.577.2.4** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::list<_Tp, _Alloc>::list ( size_type __n, const value_type &  
__value, const allocator_type & __a = allocator_type() )  
[inline]`

Creates a list with copies of an exemplar element.

**Parameters**

*n* The number of elements to initially create.

*value* An element to copy.

*a* An allocator object.

This constructor fills the list with *n* copies of *value*.

Definition at line 544 of file `stl_list.h`.

**5.577.2.5** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::list<_Tp, _Alloc>::list ( const list<_Tp, _Alloc> & __x )  
[inline]`

List copy constructor.

**Parameters**

*x* A list of identical element and allocator types.

The newly-created list uses a copy of the allocation object used by *x*.

Definition at line 571 of file `stl_list.h`.

References `std::list<_Tp, _Alloc>::begin()`, and `std::list<_Tp, _Alloc>::end()`.

**5.577.2.6** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::list<_Tp, _Alloc>::list ( list<_Tp, _Alloc> && __x )  
[inline]`

List move constructor.

**Parameters**

*x* A list of identical element and allocator types.

The newly-created list contains the exact contents of *x*. The contents of *x* are a valid, but unspecified list.

Definition at line 583 of file `stl_list.h`.

**5.577.2.7** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::list<_Tp, _Alloc>::list ( initializer_list<value_type> __l,  
const allocator_type & __a = allocator_type() ) [inline]`

Builds a list from an [initializer\\_list](#).

**Parameters**

*l* An [initializer\\_list](#) of `value_type`.

*a* An allocator object.

Create a list consisting of copies of the elements in the [initializer\\_list](#) *l*. This is linear in `l.size()`.

Definition at line 594 of file `stl_list.h`.

**5.577.2.8** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
 template<typename _InputIterator > std::list< _Tp, _Alloc >::list (  
 _InputIterator __first, _InputIterator __last, const allocator_type &  
 __a = allocator_type() ) [inline]`

Builds a list from a range.

#### Parameters

*first* An input iterator.

*last* An input iterator.

*a* An allocator object.

Create a list consisting of copies of the elements from [*first*,*last*). This is linear in N (where N is distance(*first*,*last*)).

Definition at line 611 of file stl\_list.h.

### 5.577.3 Member Function Documentation

**5.577.3.1** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
 template<typename... _Args> _Node* std::list< _Tp, _Alloc  
 >::M_create_node ( _Args &&... __args ) [inline,  
 protected]`

#### Parameters

*x* An instance of user data.

Allocates space for a new node and constructs a copy of *x* in it.

Definition at line 489 of file stl\_list.h.

Referenced by std::list< \_Tp, \_Alloc >::emplace(), and std::list< \_Tp, \_Alloc >::insert().

**5.577.3.2** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
 void std::list< _Tp, _Alloc >::assign ( size_type __n, const  
 value_type & __val ) [inline]`

Assigns a given value to a list.

**Parameters**

*n* Number of elements to be assigned.

*val* Value to be assigned.

This function fills a list with *n* copies of the given value. Note that the assignment completely changes the list and that the resulting list's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 682 of file stl\_list.h.

Referenced by std::list< \_Tp, \_Alloc >::operator=().

```
5.577.3.3 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator > void std::list< _Tp, _Alloc
>::assign (_InputIterator __first, _InputIterator __last)
[inline]
```

Assigns a range to a list.

**Parameters**

*first* An input iterator.

*last* An input iterator.

This function fills a list with copies of the elements in the range [*first*,*last*).

Note that the assignment completely changes the list and that the resulting list's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 699 of file stl\_list.h.

```
5.577.3.4 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
void std::list< _Tp, _Alloc >::assign (initializer_list< value_type >
__l) [inline]
```

Assigns an [initializer\\_list](#) to a list.

**Parameters**

*l* An [initializer\\_list](#) of value\_type.

Replace the contents of the list with copies of the elements in the [initializer\\_list](#) *l*. This is linear in *l.size()*.

Definition at line 715 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::assign().

Referenced by std::list< \_Tp, \_Alloc >::assign().

#### 5.577.3.5 **template<typename \_Tp, typename \_Alloc = std::allocator<\_Tp>> reference std::list< \_Tp, \_Alloc >::back ( ) [inline]**

Returns a read/write reference to the data at the last element of the list.

Definition at line 915 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::end().

#### 5.577.3.6 **template<typename \_Tp, typename \_Alloc = std::allocator<\_Tp>> const\_reference std::list< \_Tp, \_Alloc >::back ( ) const [inline]**

Returns a read-only (constant) reference to the data at the last element of the list.

Definition at line 927 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::end().

#### 5.577.3.7 **template<typename \_Tp, typename \_Alloc = std::allocator<\_Tp>> iterator std::list< \_Tp, \_Alloc >::begin ( ) [inline]**

Returns a read/write iterator that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 730 of file stl\_list.h.

Referenced by std::list< \_Tp, \_Alloc >::crend(), std::list< \_Tp, \_Alloc >::front(), std::list< \_Tp, \_Alloc >::list(), std::list< \_Tp, \_Alloc >::merge(), std::list< \_Tp, \_Alloc >::operator=(), std::operator==(std::list< \_Tp, \_Alloc >), std::list< \_Tp, \_Alloc >::pop\_front(), std::list< \_Tp, \_Alloc >::push\_front(), std::list< \_Tp, \_Alloc >::remove\_if(), std::list< \_Tp, \_Alloc >::rend(), std::list< \_Tp, \_Alloc >::resize(), std::list< \_Tp, \_Alloc >::size(), std::list< \_Tp, \_Alloc >::sort(), std::list< \_Tp, \_Alloc >::splice(), and std::list< \_Tp, \_Alloc >::unique().

#### 5.577.3.8 **template<typename \_Tp, typename \_Alloc = std::allocator<\_Tp>> const\_iterator std::list< \_Tp, \_Alloc >::begin ( ) const [inline]**

Returns a read-only (constant) iterator that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 739 of file stl\_list.h.

**5.577.3.9** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::list<_Tp, _Alloc>::cbegin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first element in the list. Iteration is done in ordinary element order.

Definition at line 803 of file `stl_list.h`.

**5.577.3.10** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::list<_Tp, _Alloc>::cend ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 812 of file `stl_list.h`.

**5.577.3.11** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list<_Tp, _Alloc>::clear ( ) [inline]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1195 of file `stl_list.h`.

Referenced by `std::list<_Tp, _Alloc>::operator=()`.

**5.577.3.12** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::list<_Tp, _Alloc>::crbegin ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 821 of file `stl_list.h`.

References `std::list<_Tp, _Alloc>::end()`.

**5.577.3.13** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::list<_Tp, _Alloc>::crend ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 830 of file `stl_list.h`.

References std::list< \_Tp, \_Alloc >::begin().

**5.577.3.14** `template<typename _Tp, typename _Alloc > template<typename...  
_Args> list< _Tp, _Alloc >::iterator list::emplace ( iterator  
_position, _Args &&... _args )`

Constructs object in list before specified iterator.

#### Parameters

*position* A const\_iterator into the list.

*args* Arguments.

#### Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 89 of file list.tcc.

References std::list< \_Tp, \_Alloc >::\_M\_create\_node().

Referenced by std::list< \_Tp, \_Alloc >::insert().

**5.577.3.15** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
bool std::list< _Tp, _Alloc >::empty ( ) const [inline]`

Returns true if the list is empty. (Thus [begin\(\)](#) would equal [end\(\)](#).)

Definition at line 840 of file stl\_list.h.

Referenced by std::list< \_Tp, \_Alloc >::sort(), and std::list< \_Tp, \_Alloc >::splice().

**5.577.3.16** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::list< _Tp, _Alloc >::end ( ) [inline]`

Returns a read/write iterator that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 748 of file stl\_list.h.

Referenced by std::list< \_Tp, \_Alloc >::back(), std::list< \_Tp, \_Alloc >::cbegin(), std::list< \_Tp, \_Alloc >::list(), std::list< \_Tp, \_Alloc >::merge(), std::list< \_Tp, \_Alloc >::operator=(), std::operator==( ), std::list< \_Tp, \_Alloc >::push\_back(), std::list< \_Tp, \_Alloc >::rbegin(), std::list< \_Tp, \_Alloc >::remove\_if(), std::list< \_Tp, \_Alloc >::resize(), std::list< \_Tp, \_Alloc >::size(), std::list< \_Tp, \_Alloc >::splice(), and std::list< \_Tp, \_Alloc >::unique().

### 5.577.3.17 template<typename \_Tp, typename \_Alloc = std::allocator<\_Tp>> const\_iterator std::list< \_Tp, \_Alloc >::end ( ) const [inline]

Returns a read-only (constant) iterator that points one past the last element in the list. Iteration is done in ordinary element order.

Definition at line 757 of file stl\_list.h.

### 5.577.3.18 template<typename \_Tp , typename \_Alloc > list< \_Tp, \_Alloc >::iterator list::erase ( iterator \_\_position )

Remove element at given position.

#### Parameters

*position* Iterator pointing to element to be erased.

#### Returns

An iterator pointing to the next element (or [end\(\)](#)).

This function will erase the element at the given position and thus shorten the list by one.

Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 110 of file list.tcc.

Referenced by std::list< \_Tp, \_Alloc >::erase(), std::list< \_Tp, \_Alloc >::operator=(), and std::list< \_Tp, \_Alloc >::resize().

**5.577.3.19** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::list< _Tp, _Alloc >::erase ( iterator __first, iterator  
__last ) [inline]`

Remove a range of elements.

#### Parameters

*first* Iterator pointing to the first element to be erased.

*last* Iterator pointing to one past the last element to be erased.

#### Returns

An iterator pointing to the element pointed to by *last* prior to erasing (or `end()`).

This function will erase the elements in the range [first,last) and shorten the list accordingly.

This operation is linear time in the size of the range and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1160 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::erase()`.

**5.577.3.20** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::list< _Tp, _Alloc >::front ( ) [inline]`

Returns a read/write reference to the data at the first element of the list.

Definition at line 899 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::begin()`.

**5.577.3.21** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::list< _Tp, _Alloc >::front ( ) const  
[inline]`

Returns a read-only (constant) reference to the data at the first element of the list.

Definition at line 907 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::begin()`.

**5.577.3.22** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
allocator_type std::list< _Tp, _Alloc >::get_allocator ( ) const  
[inline]`

Get a copy of the memory allocation object.

Reimplemented from [std::\\_List\\_base< \\_Tp, \\_Alloc >](#).

Definition at line 721 of file `stl_list.h`.

**5.577.3.23** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::list< _Tp, _Alloc >::insert ( iterator __position,  
value_type && __x ) [inline]`

Inserts given rvalue into list before specified iterator.

#### Parameters

*position* An iterator into the list.

*x* Data to be inserted.

#### Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 1061 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::emplace()`.

**5.577.3.24** `template<typename _Tp , typename _Alloc > list< _Tp, _Alloc  
>::iterator list::insert ( iterator __position, const value_type &  
__x )`

Inserts given value into list before specified iterator.

#### Parameters

*position* An iterator into the list.

*x* Data to be inserted.

**Returns**

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 100 of file list.tcc.

References std::list< \_Tp, \_Alloc >::\_M\_create\_node().

Referenced by std::list< \_Tp, \_Alloc >::operator=(), and std::list< \_Tp, \_Alloc >::resize().

**5.577.3.25** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::insert ( iterator __p, initializer_list<  
value_type > __l ) [inline]`

Inserts the contents of an [initializer\\_list](#) into list before specified iterator.

**Parameters**

*p* An iterator into the list.

*l* An [initializer\\_list](#) of value\_type.

This function will insert copies of the data in the [initializer\\_list](#) *l* into the list before the location specified by *p*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 1078 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::insert().

Referenced by std::list< \_Tp, \_Alloc >::insert().

**5.577.3.26** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::insert ( iterator __position, size_type  
__n, const value_type & __x ) [inline]`

Inserts a number of copies of given data into the list.

**Parameters**

*position* An iterator into the list.

*n* Number of elements to be inserted.

*x* Data to be inserted.

This function will insert a specified number of copies of the given data before the location specified by *position*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 1095 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::splice().

```
5.577.3.27 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator > void std::list< _Tp,
_Alloc >::insert (iterator __position, _InputIterator __first,
_InputIterator __last) [inline]
```

Inserts a range into the list.

#### Parameters

*position* An iterator into the list.

*first* An input iterator.

*last* An input iterator.

This function will insert copies of the data in the range [*first*,*last*) into the list before the location specified by *position*.

This operation is linear in the number of elements inserted and does not invalidate iterators and references.

Definition at line 1116 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::splice().

```
5.577.3.28 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
size_type std::list< _Tp, _Alloc >::max_size () const [inline]
```

Returns the [size\(\)](#) of the largest possible list.

Definition at line 850 of file stl\_list.h.

**5.577.3.29** `template<typename _Tp, typename _Alloc > void list::merge (`  
`list< _Tp, _Alloc > && __x )`

Merge sorted lists.

#### Parameters

*x* Sorted list to merge.

Assumes that both *x* and this list are sorted according to operator<(). Merges elements of *x* into this list in sorted order, leaving *x* empty when complete. Elements in this list precede elements in *x* that are equal.

Definition at line 289 of file list.tcc.

References std::list< \_Tp, \_Alloc >::begin(), std::begin(), std::list< \_Tp, \_Alloc >::end(), and std::end().

Referenced by std::list< \_Tp, \_Alloc >::sort().

**5.577.3.30** `template<typename _Tp, typename _Alloc > template<typename`  
`_StrictWeakOrdering > void list::merge ( list< _Tp, _Alloc > &&`  
`__x, _StrictWeakOrdering __comp )`

Merge sorted lists according to comparison function.

#### Parameters

*x* Sorted list to merge.

*StrictWeakOrdering* Comparison function defining sort order.

Assumes that both *x* and this list are sorted according to StrictWeakOrdering. Merges elements of *x* into this list in sorted order, leaving *x* empty when complete. Elements in this list precede elements in *x* that are equivalent according to StrictWeakOrdering().

Definition at line 323 of file list.tcc.

References std::list< \_Tp, \_Alloc >::begin(), std::begin(), std::list< \_Tp, \_Alloc >::end(), and std::end().

**5.577.3.31** `template<typename _Tp, typename _Alloc > list< _Tp, _Alloc > &`  
`list::operator= ( const list< _Tp, _Alloc > & __x )`

List assignment operator.

No explicit dtor needed as the `_Base` dtor takes care of things. The `_Base` dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

#### Parameters

*x* A list of identical element and allocator types.

All the elements of *x* are copied, but unlike the copy constructor, the allocator object is not copied.

Definition at line 186 of file `list.tcc`.

References `std::list< _Tp, _Alloc >::begin()`, `std::list< _Tp, _Alloc >::end()`, `std::list< _Tp, _Alloc >::erase()`, and `std::list< _Tp, _Alloc >::insert()`.

**5.577.3.32** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
list& std::list< _Tp, _Alloc >::operator= ( initializer_list<  
value_type > __l ) [inline]`

List initializer list assignment operator.

#### Parameters

*l* An [initializer\\_list](#) of `value_type`.

Replace the contents of the list with copies of the elements in the [initializer\\_list](#) *l*. This is linear in `l.size()`.

Definition at line 664 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::assign()`.

**5.577.3.33** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
list& std::list< _Tp, _Alloc >::operator= ( list< _Tp, _Alloc > &&  
__x ) [inline]`

List move assignment operator.

#### Parameters

*x* A list of identical element and allocator types.

The contents of *x* are moved into this list (without copying). *x* is a valid, but unspecified list

Definition at line 647 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::clear()`, and `std::list< _Tp, _Alloc >::swap()`.

**5.577.3.34** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::pop_back ( ) [inline]`

Removes last element.

This is a typical stack operation. It shrinks the list by one. Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before `pop_back()` is called.

Definition at line 1013 of file `stl_list.h`.

**5.577.3.35** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::pop_front ( ) [inline]`

Removes first element.

This is a typical stack operation. It shrinks the list by one. Due to the nature of a list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop_front()` is called.

Definition at line 973 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::begin()`.

**5.577.3.36** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::push_back ( const value_type & __x  
) [inline]`

Add data to the end of the list.

**Parameters**

*x* Data to be added.

This is a typical stack operation. The function creates an element at the end of the list and assigns the given data to it. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 987 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::end().

```
5.577.3.37 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 void std::list< _Tp, _Alloc >::push_front (const value_type & __x
) [inline]
```

Add data to the front of the list.

**Parameters**

*x* Data to be added.

This is a typical stack operation. The function creates an element at the front of the list and assigns the given data to it. Due to the nature of a list this operation can be done in constant time, and does not invalidate iterators and references.

Definition at line 946 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::begin().

```
5.577.3.38 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 reverse_iterator std::list< _Tp, _Alloc >::rbegin () [inline]
```

Returns a read/write reverse iterator that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 766 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::end().

```
5.577.3.39 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 const_reverse_iterator std::list< _Tp, _Alloc >::rbegin () const
 [inline]
```

Returns a read-only (constant) reverse iterator that points to the last element in the list. Iteration is done in reverse element order.

Definition at line 775 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::end().

**5.577.3.40** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::remove ( const _Tp & __value )`

Remove all elements equal to value.

#### Parameters

*value* The value to remove.

Removes every element in the list equal to *value*. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

**5.577.3.41** `template<typename _Tp , typename _Alloc > template<typename  
_Predicate > void list::remove_if ( _Predicate __pred )`

Remove all elements satisfying a predicate.

#### Parameters

*Predicate* Unary predicate function or object.

Removes every element in the list for which the predicate returns true. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 393 of file list.tcc.

References std::list< \_Tp, \_Alloc >::begin(), and std::list< \_Tp, \_Alloc >::end().

**5.577.3.42** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::list< _Tp, _Alloc >::rend ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 793 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::begin().

**5.577.3.43** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::list< _Tp, _Alloc >::rend ( ) [inline]`

Returns a read/write reverse iterator that points to one before the first element in the list. Iteration is done in reverse element order.

Definition at line 784 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::begin().

**5.577.3.44** `template<typename _Tp , typename _Alloc > void list::resize (   
size_type __new_size, const value_type & __x )`

Resizes the list to the specified number of elements.

#### Parameters

*new\_size* Number of elements the list should contain.

*x* Data with which new elements should be populated.

This function will resize the list to the specified number of elements. If the number is smaller than the list's current size the list is truncated, otherwise the list is extended and new elements are populated with given data.

Definition at line 155 of file list.tcc.

References std::list< \_Tp, \_Alloc >::begin(), std::list< \_Tp, \_Alloc >::end(), std::list< \_Tp, \_Alloc >::erase(), and std::list< \_Tp, \_Alloc >::insert().

**5.577.3.45** `template<typename _Tp , typename _Alloc > void list::resize (   
size_type __new_size )`

Resizes the list to the specified number of elements.

#### Parameters

*new\_size* Number of elements the list should contain.

This function will resize the list to the specified number of elements. If the number is smaller than the list's current size the list is truncated, otherwise default constructed elements are appended.

Definition at line 140 of file `list.tcc`.

References `std::list< _Tp, _Alloc >::begin()`, `std::list< _Tp, _Alloc >::end()`, and `std::list< _Tp, _Alloc >::erase()`.

**5.577.3.46** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::reverse ( ) [inline]`

Reverse the elements in list.

Reverse the order of elements in the list in linear time.

Definition at line 1415 of file `stl_list.h`.

**5.577.3.47** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
size_type std::list< _Tp, _Alloc >::size ( ) const [inline]`

Returns the number of elements in the list.

Definition at line 845 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::begin()`, `std::distance()`, and `std::list< _Tp, _Alloc >::end()`.

**5.577.3.48** `template<typename _Tp, typename _Alloc > void list::sort ( )`

Sort the elements.

Sorts the elements of this list in  $N\log N$  time. Equivalent elements remain in list order.

Definition at line 355 of file `list.tcc`.

References `std::list< _Tp, _Alloc >::begin()`, `std::list< _Tp, _Alloc >::empty()`, `std::list< _Tp, _Alloc >::merge()`, `std::list< _Tp, _Alloc >::splice()`, and `std::list< _Tp, _Alloc >::swap()`.

**5.577.3.49** `template<typename _Tp, typename _Alloc > template<typename  
_StrictWeakOrdering > void list::sort ( _StrictWeakOrdering  
__comp )`

Sort the elements according to comparison function.

Sorts the elements of this list in  $N\log N$  time. Equivalent elements remain in list order.

Definition at line 432 of file list.tcc.

References std::list< \_Tp, \_Alloc >::begin(), std::list< \_Tp, \_Alloc >::empty(), std::list< \_Tp, \_Alloc >::merge(), std::list< \_Tp, \_Alloc >::splice(), and std::list< \_Tp, \_Alloc >::swap().

```
5.577.3.50 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 void std::list< _Tp, _Alloc >::splice (iterator __position, list<
 _Tp, _Alloc > && __x, iterator __first, iterator __last)
 [inline]
```

Insert range from another list.

#### Parameters

*position* Iterator referencing the element to insert before.

*x* Source list.

*first* Iterator referencing the start of range in *x*.

*last* Iterator referencing the end of range in *x*.

Removes elements in the range [first,last) and inserts them before *position* in constant time.

Undefined if *position* is in [first,last).

Definition at line 1281 of file stl\_list.h.

```
5.577.3.51 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 void std::list< _Tp, _Alloc >::splice (iterator __position, list<
 _Tp, _Alloc > && __x, iterator __i) [inline]
```

Insert element from another list.

#### Parameters

*position* Iterator referencing the element to insert before.

*x* Source list.

*i* Iterator referencing the element to move.

Removes the element in list *x* referenced by *i* and inserts it into the current list before *position*.

Definition at line 1245 of file stl\_list.h.

**5.577.3.52** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::splice ( iterator __position, list<  
_Tp, _Alloc > && __x ) [inline]`

Insert contents of another list.

#### Parameters

*position* Iterator referencing the element to insert before.

*x* Source list.

The elements of *x* are inserted in constant time in front of the element referenced by *position*. *x* becomes an empty list.

Requires this != *x*.

Definition at line 1215 of file stl\_list.h.

References std::list< \_Tp, \_Alloc >::begin(), std::list< \_Tp, \_Alloc >::empty(), and std::list< \_Tp, \_Alloc >::end().

Referenced by std::list< \_Tp, \_Alloc >::insert(), and std::list< \_Tp, \_Alloc >::sort().

**5.577.3.53** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::list< _Tp, _Alloc >::swap ( list< _Tp, _Alloc > & __x )  
[inline]`

Swaps data with another list.

#### Parameters

*x* A list of the same element and allocator types.

This exchanges the elements between two lists in constant time. Note that the global std::swap() function is specialized such that std::swap(l1,l2) will feed to this function.

Definition at line 1177 of file stl\_list.h.

Referenced by std::list< \_Tp, \_Alloc >::operator=(), std::list< \_Tp, \_Alloc >::sort(), and std::swap().

**5.577.3.54** `template<typename _Tp , typename _Alloc > void list::unique ( )`

Remove consecutive duplicate elements.

For each consecutive set of elements with the same value, remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 268 of file list.tcc.

References `std::list< _Tp, _Alloc >::begin()`, and `std::list< _Tp, _Alloc >::end()`.

**5.577.3.55** `template<typename _Tp, typename _Alloc> template<typename  
_BinaryPredicate> void list::unique ( _BinaryPredicate  
__binary_pred )`

Remove consecutive elements satisfying a predicate.

#### Parameters

*BinaryPredicate* Binary predicate function or object.

For each consecutive set of elements [first,last) that satisfy predicate(first,i) where i is an iterator in [first,last), remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 411 of file list.tcc.

References `std::list< _Tp, _Alloc >::begin()`, and `std::list< _Tp, _Alloc >::end()`.

## 5.578 std::locale Class Reference

Container class for localization functionality.

The locale class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A locale is a collection of facets that implement various localization features such as money, time, and number printing.

#### Classes

- class [facet](#)

*Localization functionality base class.*

*The facet class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management.*

- class `id`

*Facet ID class.*

*The ID class provides facets with an index used to identify them. Every facet class must define a public static member `locale::id`, or be derived from a facet that provides this member, otherwise the facet cannot be used in a locale. The `locale::id` ensures that each class type gets a unique identifier.*

## Public Types

- typedef int `category`

## Public Member Functions

#### 5.578.1 Detailed Description

Container class for localization functionality.

The locale class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A locale is a collection of facets that implement various localization features such as money, time, and number printing. Constructing C++ locales does not change the C library locale.

This library supports efficient construction and copying of locales through a reference counting implementation of the locale class.

Definition at line 64 of file locale\_classes.h.

#### 5.578.2 Member Typedef Documentation

##### 5.578.2.1 typedef int std::locale::category

Definition of [locale::category](#).

Definition at line 69 of file locale\_classes.h.

### 5.578.3 Constructor & Destructor Documentation

#### 5.578.3.1 std::locale::locale ( ) throw ()

Default constructor.

Constructs a copy of the global locale. If no locale has been explicitly set, this is the C locale.

Referenced by combine().

#### 5.578.3.2 std::locale::locale ( const locale & \_\_other ) throw ()

Copy constructor.

Constructs a copy of *other*.

##### Parameters

*other* The locale to copy.

#### 5.578.3.3 std::locale::locale ( const char \* \_\_s ) [explicit]

Named locale constructor.

Constructs a copy of the named C library locale.

##### Parameters

*s* Name of the locale to construct.

##### Exceptions

[\*std::runtime\\_error\*](#) if *s* is null or an undefined locale.

#### 5.578.3.4 std::locale::locale ( const locale & \_\_base, const char \* \_\_s, category \_\_cat )

Construct locale with facets from another locale.

Constructs a copy of the locale *base*. The facets specified by *cat* are replaced with those from the locale named by *s*. If *base* is named, this locale instance will also be named.

**Parameters**

- base* The locale to copy.
- s* Name of the locale to use facets from.
- cat* Set of categories defining the facets to use from *s*.

**Exceptions**

- [\*std::runtime\\_error\*](#) if *s* is null or an undefined locale.

**5.578.3.5 std::locale::locale ( const locale & \_\_base, const locale & \_\_add, category \_\_cat )**

Construct locale with facets from another locale.

Constructs a copy of the locale *base*. The facets specified by *cat* are replaced with those from the locale *add*. If *base* and *add* are named, this locale instance will also be named.

**Parameters**

- base* The locale to copy.
- add* The locale to use facets from.
- cat* Set of categories defining the facets to use from *add*.

**5.578.3.6 template<typename \_Facet > std::locale::locale ( const locale & \_\_other, \_Facet \* \_\_f )**

Construct locale with another facet.

Constructs a copy of the locale *other*. The facet is added to , replacing an existing facet of type *Facet* if there is one. If is null, this locale is a copy of *other*.

**Parameters**

- other* The locale to copy.
- f* The facet to add in.

Definition at line 45 of file locale\_classes.tcc.

### 5.578.3.7 std::locale::~~locale ( ) throw ()

Locale destructor.

## 5.578.4 Member Function Documentation

### 5.578.4.1 static const locale& std::locale::classic ( ) [static]

Return reference to the C locale.

### 5.578.4.2 template<typename \_Facet > locale std::locale::combine ( const locale & \_\_other ) const

Construct locale with another facet.

Constructs and returns a new copy of this locale. Adds or replaces an existing facet of type *Facet* from the locale *other* into the new locale.

#### Parameters

*Facet* The facet type to copy from other

*other* The locale to copy from.

#### Returns

Newly constructed locale.

#### Exceptions

[\*std::runtime\\_error\*](#) if other has no facet of type *Facet*.

Definition at line 63 of file locale\_classes.tcc.

References locale().

### 5.578.4.3 static locale std::locale::global ( const locale & ) [static]

Set global locale.

This function sets the global locale to the argument and returns a copy of the previous global locale. If the argument has a name, it will also call `std::setlocale(LC_ALL, loc.name())`.

**Parameters**

*locale* The new locale to make global.

**Returns**

Copy of the old global locale.

**5.578.4.4 string std::locale::name ( ) const**

Return locale name.

**Returns**

Locale name or "\*" if unnamed.

**5.578.4.5 bool std::locale::operator!=( const locale & \_\_other ) const throw ()  
[inline]**

Locale inequality.

**Parameters**

*other* The locale to compare against.

**Returns**

! (\*this == other)

Definition at line 236 of file locale\_classes.h.

References `operator==( )`.

**5.578.4.6 template<typename \_Char , typename \_Traits , typename \_Alloc >  
bool std::locale::operator() ( const basic\_string< \_Char, \_Traits,  
\_Alloc > & \_\_s1, const basic\_string< \_Char, \_Traits, \_Alloc > &  
\_\_s2 ) const**

Compare two strings according to collate.

Template operator to compare two strings using the compare function of the collate facet in this locale. One use is to provide the locale to the sort function. For example, a vector *v* of strings could be sorted according to locale *loc* by doing:

```
std::sort(v.begin(), v.end(), loc);
```

#### Parameters

- s1* First string to compare.
- s2* Second string to compare.

#### Returns

True if collate<Char> facet compares *s1* < *s2*, else false.

#### 5.578.4.7 const locale& std::locale::operator= ( const locale & \_\_other ) throw ()

Assignment operator.

Set this locale to be a copy of *other*.

#### Parameters

- other* The locale to copy.

#### Returns

A reference to this locale.

#### 5.578.4.8 bool std::locale::operator== ( const locale & \_\_other ) const throw ()

Locale equality.

#### Parameters

- other* The locale to compare against.

#### Returns

True if *other* and this refer to the same locale instance, are copies, or have the same name. False otherwise.

Referenced by operator!=().

### 5.578.5 Friends And Related Function Documentation

#### 5.578.5.1 `template<typename _Facet > bool has_facet ( const locale & ) throw () [friend]`

Test for the presence of a facet.

`has_facet` tests the locale argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

##### Parameters

*Facet* The facet type to test the presence of.

*locale* The locale to test.

##### Returns

true if locale contains a facet of type `Facet`, else false.

#### 5.578.5.2 `template<typename _Facet > const _Facet& use_facet ( const locale & ) [friend]`

Return a facet.

`use_facet` looks for and returns a reference to a facet of type `Facet` where `Facet` is the template parameter. If `has_facet(locale)` is true, there is a suitable facet to return. It throws [std::bad\\_cast](#) if the locale doesn't contain a facet of type `Facet`.

##### Parameters

*Facet* The facet type to access.

*locale* The locale to use.

##### Returns

Reference to facet of type `Facet`.

##### Exceptions

[std::bad\\_cast](#) if locale doesn't contain a facet of type `Facet`.

## 5.578.6 Member Data Documentation

### 5.578.6.1 `const category std::locale::all` `[static]`

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 107 of file `locale_classes.h`.

### 5.578.6.2 `const category std::locale::collate` `[static]`

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 103 of file `locale_classes.h`.

### 5.578.6.3 `const category std::locale::ctype` `[static]`

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 101 of file `locale_classes.h`.

### 5.578.6.4 `const category std::locale::messages` `[static]`

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match \_S\_facet\_categories definition in locale.cc

Definition at line 106 of file locale\_classes.h.

#### 5.578.6.5 const category std::locale::monetary [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match \_S\_facet\_categories definition in locale.cc

Definition at line 105 of file locale\_classes.h.

#### 5.578.6.6 const category std::locale::none [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match \_S\_facet\_categories definition in locale.cc

Definition at line 100 of file locale\_classes.h.

#### 5.578.6.7 const category std::locale::numeric [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match \_S\_facet\_categories definition in locale.cc

Definition at line 102 of file locale\_classes.h.

## 5.578.6.8 const category std::locale::time [static]

Category values.

The standard category values are none, ctype, numeric, collate, time, monetary, and messages. They form a bitmask that supports union and intersection. The category all is the union of these values.

NB: Order must match `_S_facet_categories` definition in `locale.cc`

Definition at line 104 of file `locale_classes.h`.

The documentation for this class was generated from the following files:

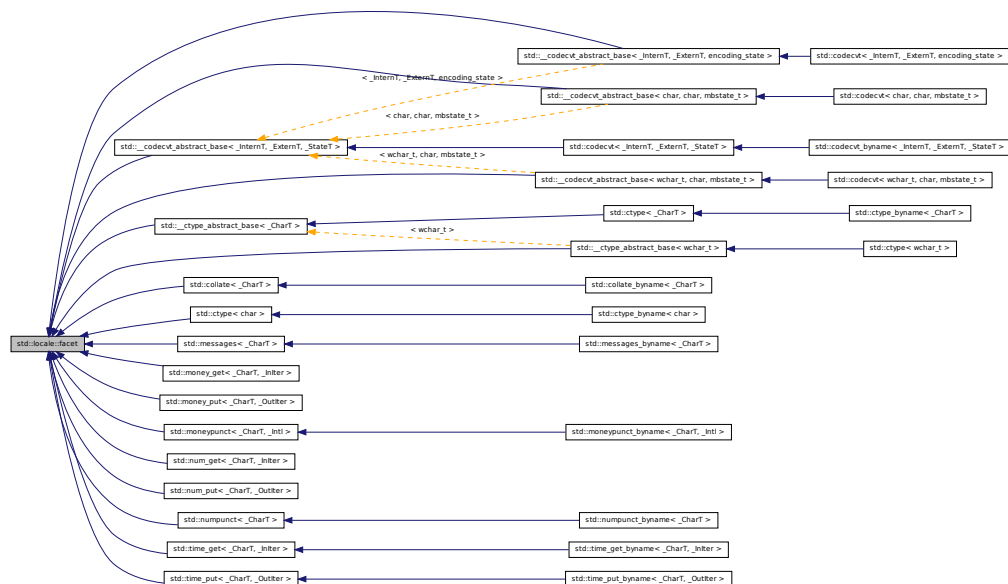

- [locale\\_classes.h](#)
- [locale\\_classes.tcc](#)

## 5.579 std::locale::facet Class Reference

Localization functionality base class.

The facet class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management.

Inheritance diagram for `std::locale::facet`:

### Protected Member Functions

- [facet](#) (size\_t \_\_refs=0) throw ()
- virtual [~facet](#) ()

### Static Protected Member Functions

- static \_\_c\_locale [\\_S\\_clone\\_c\\_locale](#) (\_\_c\_locale &\_\_cloc) throw ()
- static void [\\_S\\_create\\_c\\_locale](#) (\_\_c\_locale &\_\_cloc, const char \*\_\_s, \_\_c\_locale \_\_old=0)
- static void [\\_S\\_destroy\\_c\\_locale](#) (\_\_c\_locale &\_\_cloc)
- static \_\_c\_locale [\\_S\\_get\\_c\\_locale](#) ()
- static const char \* [\\_S\\_get\\_c\\_name](#) () throw ()
- static \_\_c\_locale [\\_S\\_lc\\_ctype\\_c\\_locale](#) (\_\_c\_locale \_\_cloc, const char \*\_\_s)

### Friends

- class **locale**
- class **locale::\_Impl**

#### 5.579.1 Detailed Description

Localization functionality base class.

The facet class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management. Facets may not be copied or assigned.

Definition at line 339 of file locale\_classes.h.

#### 5.579.2 Constructor & Destructor Documentation

##### 5.579.2.1 std::locale::facet::facet ( size\_t \_\_refs = 0 ) throw () [inline, explicit, protected]

Facet constructor.

This is the constructor provided by the standard. If refs is 0, the facet is destroyed when the last referencing locale is destroyed. Otherwise the facet will never be destroyed.

### Parameters

*refs* The initial value for reference count.

Definition at line 371 of file `locale_classes.h`.

#### 5.579.2.2 `virtual std::locale::facet::~~facet ( ) [protected, virtual]`

Facet destructor.

The documentation for this class was generated from the following file:

- [locale\\_classes.h](#)

### 5.580 `std::locale::id` Class Reference

Facet ID class.

The ID class provides facets with an index used to identify them. Every facet class must define a public static member `locale::id`, or be derived from a facet that provides this member, otherwise the facet cannot be used in a locale. The `locale::id` ensures that each class type gets a unique identifier.

#### Public Member Functions

- `id ( )`
- `size_t _M_id ( ) const throw ( )`

#### Friends

- `template<typename _Facet >`  
`bool has_facet (const locale &) throw ( )`
- `class locale`
- `class locale::_Impl`
- `template<typename _Facet >`  
`const _Facet & use_facet (const locale &)`

#### 5.580.1 Detailed Description

Facet ID class.

The ID class provides facets with an index used to identify them. Every facet class must define a public static member `locale::id`, or be derived from a facet that provides this member, otherwise the facet cannot be used in a locale. The `locale::id` ensures that each class type gets a unique identifier.

Definition at line 437 of file `locale_classes.h`.

## 5.580.2 Constructor & Destructor Documentation

### 5.580.2.1 std::locale::id::id ( ) [inline]

Constructor.

Definition at line 468 of file locale\_classes.h.

## 5.580.3 Friends And Related Function Documentation

### 5.580.3.1 template<typename \_Facet > bool has\_facet ( const locale & ) throw () [friend]

Test for the presence of a facet.

has\_facet tests the locale argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

#### Parameters

*Facet* The facet type to test the presence of.

*locale* The locale to test.

#### Returns

true if locale contains a facet of type Facet, else false.

### 5.580.3.2 template<typename \_Facet > const \_Facet& use\_facet ( const locale & ) [friend]

Return a facet.

use\_facet looks for and returns a reference to a facet of type Facet where Facet is the template parameter. If has\_facet(locale) is true, there is a suitable facet to return. It throws [std::bad\\_cast](#) if the locale doesn't contain a facet of type Facet.

#### Parameters

*Facet* The facet type to access.

*locale* The locale to use.

**Returns**

Reference to facet of type Facet.

**Exceptions**

[\*std::bad\\_cast\*](#) if locale doesn't contain a facet of type Facet.

The documentation for this class was generated from the following file:

- [locale\\_classes.h](#)

**5.581 `std::lock_guard< _Mutex >` Class Template Reference**

Scoped lock idiom.

**Public Types**

- typedef `_Mutex` **mutex\_type**

**Public Member Functions**

- **lock\_guard** (mutex\_type &\_\_m)
- **lock\_guard** (mutex\_type &\_\_m, [adopt\\_lock\\_t](#))

Scoped lock idiom.

Definition at line 439 of file mutex.

The documentation for this class was generated from the following file:

- [mutex](#)

**5.582 `std::logic_error` Class Reference**

One of two subclasses of exception.

Inheritance diagram for std::logic\_error:

### Public Member Functions

- `logic_error` (const `string` & \_\_arg)
- virtual const char \* `what` () const throw ()

#### 5.582.1 Detailed Description

One of two subclasses of exception. Logic errors represent problems in the internal logic of a program; in theory, these are preventable, and even detectable before the program runs (e.g., violations of class invariants).

Definition at line 56 of file `stdexcept`.

#### 5.582.2 Constructor & Destructor Documentation

##### 5.582.2.1 `std::logic_error::logic_error ( const string & __arg )` **[explicit]**

Takes a character string describing the error.

### 5.582.3 Member Function Documentation

#### 5.582.3.1 `virtual const char* std::logic_error::what ( ) const throw ()` [`virtual`]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

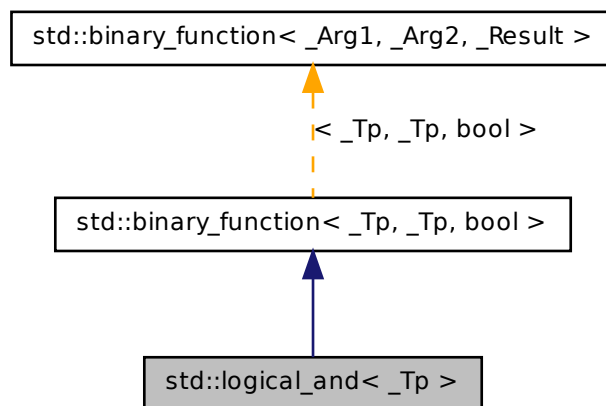

The documentation for this class was generated from the following file:

- [stdexcept](#)

`std::basic_istream<_CharT, _Traits> & operator>>` (`std::basic_istream<_CharT, _Traits> &`, `std::lognormal_distribution<_RealType1>` &)

### 5.586.1 Detailed Description

`template<typename _RealType = double> class std::lognormal_distribution<_RealType>`

A `lognormal_distribution` random number distribution. The formula for the normal probability mass function is

$$p(x|m, s) = \frac{1}{sx\sqrt{2\pi}} \exp - \frac{(\ln x - m)^2}{2s^2}$$

Definition at line 2151 of file random.h.

## **5.586.2 Member Typedef Documentation**

**5.586.2.1** `template<typename _RealType = double> typedef _RealType  
std::lognormal_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 2158 of file random.h.

## **5.586.3 Member Function Documentation**

**5.586.3.1** `template<typename _RealType = double> result_type  
std::lognormal_distribution<_RealType>::max ( ) const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 2242 of file random.h.

**5.586.3.2** `template<typename _RealType = double> result_type  
std::lognormal_distribution<_RealType>::min ( ) const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 2235 of file random.h.

**5.586.3.3** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator> result_type  
std::lognormal_distribution<_RealType>::operator() (  
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 2250 of file random.h.

References `std::lognormal_distribution<_RealType>::operator()()`, and  
`std::lognormal_distribution<_RealType>::param()`.

Referenced by `std::lognormal_distribution<_RealType>::operator()()`.

**5.586.3.4** `template<typename _RealType = double> void  
std::lognormal_distribution<_RealType>::param ( const  
param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

`__param` The new parameter set of the distribution.

Definition at line 2228 of file random.h.

**5.586.3.5** `template<typename _RealType = double> param_type  
std::lognormal_distribution<_RealType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 2220 of file random.h.

Referenced by `std::lognormal_distribution<_RealType>::operator()()`.

**5.586.3.6** `template<typename _RealType = double> void  
std::lognormal_distribution<_RealType>::reset ( ) [inline]`

Resets the distribution state.

Definition at line 2202 of file random.h.

References `std::normal_distribution<_RealType>::reset()`.

#### 5.586.4 Friends And Related Function Documentation

**5.586.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
( std::basic_ostream<_CharT, _Traits> & , const  
std::lognormal_distribution<_RealType1> & ) [friend]`

Inserts a `lognormal_distribution` random number distribution `__x` into the output stream `__os`.

**Parameters**

- `__os` An output stream.
- `__x` A lognormal\_distribution random number distribution.

**Returns**

The output stream with the state of `__x` inserted or in an error state.

**5.586.4.2** `template<typename _RealType = double> template<typename  
_RealType1 > bool operator==( const std::lognormal_distribution<  
_RealType1 > & __d1, const std::lognormal_distribution<  
_RealType1 > & __d2 ) [friend]`

Return true if two lognormal distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2266 of file random.h.

**5.586.4.3** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_istream<_CharT, _Traits>& operator>>  
( std::basic_istream<_CharT, _Traits > & ,  
std::lognormal_distribution<_RealType1 > & ) [friend]`

Extracts a lognormal\_distribution random number distribution `__x` from the input stream `__is`.

**Parameters**

- `__is` An input stream.
- `__x` A lognormal\_distribution random number generator engine.

**Returns**

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following file:

- [random.h](#)

## 5.587 `std::lognormal_distribution< _RealType >::param_type` Struct Reference

`bool operator== (const map< _K1, _T1, _C1, _A1 > &, const map< _K1, _T1, _C1, _A1 > &)`

### 5.590.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> class
std::map< _Key, _Tp, _Compare, _Alloc >
```

A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time. Meets the requirements of a [container](#), a [reversible container](#), and an [associative container](#) (using unique keys). For a `map<Key, T>` the `key_type` is `Key`, the `mapped_type` is `T`, and the `value_type` is `std::pair<const Key, T>`.

Maps support bidirectional iterators.

The private tree data is declared exactly the same way for `map` and `multimap`; the distinction is made entirely in how the tree functions are called (`*_unique` versus `*_equal`, same as the standard).

Definition at line 88 of file `stl_map.h`.

### 5.590.2 Constructor & Destructor Documentation

```
5.590.2.1 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> std::map< _Key, _Tp, _Compare, _Alloc >::map (
) [inline]
```

Default constructor creates no elements.

Definition at line 152 of file `stl_map.h`.

```
5.590.2.2 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> std::map< _Key, _Tp, _Compare, _Alloc >::map
(const _Compare & __comp, const allocator_type & __a =
allocator_type()) [inline, explicit]
```

Creates a map with no elements.

#### Parameters

*comp* A comparison object.

*a* An allocator object.

## 5.590 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2888

---

Definition at line 161 of file stl\_map.h.

**5.590.2.3** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> std::map< _Key, _Tp, _Compare, _Alloc >::map (  
const map< _Key, _Tp, _Compare, _Alloc > & __x ) [inline]`

Map copy constructor.

### Parameters

*x* A map of identical element and allocator types.

The newly-created map uses a copy of the allocation object used by *x*.

Definition at line 172 of file stl\_map.h.

**5.590.2.4** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> std::map< _Key, _Tp, _Compare, _Alloc >::map (  
map< _Key, _Tp, _Compare, _Alloc > && __x ) [inline]`

Map move constructor.

### Parameters

*x* A map of identical element and allocator types.

The newly-created map contains the exact contents of *x*. The contents of *x* are a valid, but unspecified map.

Definition at line 183 of file stl\_map.h.

**5.590.2.5** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> std::map< _Key, _Tp, _Compare, _Alloc >::map (  
initializer_list< value_type > __l, const _Compare & __c =  
_Compare(), const allocator_type & __a = allocator_type()  
) [inline]`

Builds a map from an [initializer\\_list](#).

## 5.590 `std::map<_Key, _Tp, _Compare, _Alloc>` Class Template Reference 2889

### Parameters

- l* An [initializer\\_list](#).
- comp* A comparison object.
- a* An allocator object.

Create a map consisting of copies of the elements in the [initializer\\_list](#) *l*. This is linear in N if the range is already sorted, and NlogN otherwise (where N is *l.size()*).

Definition at line 197 of file `stl_map.h`.

```
5.590.2.6 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> template<typename _InputIterator> std::map<
_Key, _Tp, _Compare, _Alloc>::map (_InputIterator __first,
_InputIterator __last) [inline]
```

Builds a map from a range.

### Parameters

- first* An input iterator.
- last* An input iterator.

Create a map consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is `distance(first,last)`).

Definition at line 214 of file `stl_map.h`.

```
5.590.2.7 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> template<typename _InputIterator> std::map<
_Key, _Tp, _Compare, _Alloc>::map (_InputIterator __first,
_InputIterator __last, const _Compare & __comp, const
allocator_type & __a = allocator_type()) [inline]
```

Builds a map from a range.

### Parameters

- first* An input iterator.
- last* An input iterator.

## 5.590 `std::map<_Key, _Tp, _Compare, _Alloc>` Class Template Reference 2890

---

*comp* A comparison functor.

*a* An allocator object.

Create a map consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 230 of file `stl_map.h`.

### 5.590.3 Member Function Documentation

**5.590.3.1** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> mapped_type& std::map<_Key, _Tp, _Compare, _Alloc>::at( const key_type & __k ) [inline]`

Access to map data.

#### Parameters

*k* The key for which data should be retrieved.

#### Returns

A reference to the data whose key is equivalent to *k*, if such a data is present in the map.

#### Exceptions

*std::out\_of\_range* If no such data is present.

Definition at line 482 of file `stl_map.h`.

References `std::map<_Key, _Tp, _Compare, _Alloc>::end()`, `std::map<_Key, _Tp, _Compare, _Alloc>::key_comp()`, and `std::map<_Key, _Tp, _Compare, _Alloc>::lower_bound()`.

**5.590.3.2** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> iterator std::map<_Key, _Tp, _Compare, _Alloc>::begin( ) [inline]`

Returns a read/write iterator that points to the first pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 309 of file `stl_map.h`.

**5.590.3.3** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> const_iterator std::map< _Key, _Tp, _Compare,  
_Alloc >::begin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 318 of file `stl_map.h`.

**5.590.3.4** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> const_iterator std::map< _Key, _Tp, _Compare,  
_Alloc >::cbegin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 382 of file `stl_map.h`.

**5.590.3.5** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> const_iterator std::map< _Key, _Tp, _Compare,  
_Alloc >::cend ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 391 of file `stl_map.h`.

**5.590.3.6** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> void std::map< _Key, _Tp, _Compare, _Alloc  
>::clear ( ) [inline]`

Erases all elements in a map. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 703 of file `stl_map.h`.

Referenced by `std::map< _Key, _Tp, _Compare, _Alloc >::operator=()`.

## **5.590    `std::map<_Key, _Tp, _Compare, _Alloc>` Class Template Reference**

**5.590.3.7**    `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> size_type std::map<_Key, _Tp, _Compare, _Alloc  
>::count ( const key_type & __x ) const    [inline]`

Finds the number of elements with given key.

### **Parameters**

*x*    Key of (key, value) pairs to be located.

### **Returns**

Number of elements with specified key.

This function only makes sense for multimaps; for map the result will either be 0 (not present) or 1 (present).

Definition at line 763 of file `stl_map.h`.

**5.590.3.8**    `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> const_reverse_iterator std::map<_Key, _Tp,  
_Compare, _Alloc>::crbegin ( ) const    [inline]`

Returns a read-only (constant) reverse iterator that points to the last pair in the map. Iteration is done in descending order according to the keys.

Definition at line 400 of file `stl_map.h`.

**5.590.3.9**    `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> const_reverse_iterator std::map<_Key, _Tp,  
_Compare, _Alloc>::crend ( ) const    [inline]`

Returns a read-only (constant) reverse iterator that points to one before the first pair in the map. Iteration is done in descending order according to the keys.

Definition at line 409 of file `stl_map.h`.

## 5.590 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2893

**5.590.3.10** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> bool std::map< _Key, _Tp, _Compare, _Alloc  
>::empty ( ) const [inline]`

Returns true if the map is empty. (Thus `begin()` would equal `end()`.)

Definition at line 418 of file `stl_map.h`.

**5.590.3.11** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_iterator std::map< _Key, _Tp, _Compare,  
_Alloc >::end ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 336 of file `stl_map.h`.

**5.590.3.12** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc  
>::end ( ) [inline]`

Returns a read/write iterator that points one past the last pair in the map. Iteration is done in ascending order according to the keys.

Definition at line 327 of file `stl_map.h`.

Referenced by `std::map< _Key, _Tp, _Compare, _Alloc >::at()`, and `std::map< _Key, _Tp, _Compare, _Alloc >::operator[]()`.

**5.590.3.13** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> std::pair<const_iterator, const_iterator>  
std::map< _Key, _Tp, _Compare, _Alloc >::equal_range ( const  
key_type & __x ) const [inline]`

Finds a subsequence matching given key.

### Parameters

*x* Key of (key, value) pairs to be located.

## **5.590 `std::map<_Key, _Tp, _Compare, _Alloc>` Class Template Reference**2894

### **Returns**

Pair of read-only (constant) iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multimaps.

Definition at line 851 of file `stl_map.h`.

```
5.590.3.14 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> std::pair<iterator, iterator> std::map<_Key,
_Tp, _Compare, _Alloc>::equal_range (const key_type & __x)
[inline]
```

Finds a subsequence matching given key.

### **Parameters**

*x* Key of (key, value) pairs to be located.

### **Returns**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multimaps.

Definition at line 832 of file `stl_map.h`.

**5.590.3.15** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> iterator std::map< _Key, _Tp, _Compare,  
_Alloc >::erase ( const_iterator __first, const_iterator __last )  
[inline]`

Erases a [first,last) range of elements from a map.

#### Parameters

*first* Iterator pointing to the start of the range to be erased.

*last* Iterator pointing to the end of the range to be erased.

#### Returns

The iterator *last*.

This function erases a sequence of elements from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 662 of file stl\_map.h.

**5.590.3.16** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> iterator std::map< _Key, _Tp, _Compare, _Alloc  
>::erase ( const_iterator __position ) [inline]`

Erases an element from a map.

#### Parameters

*position* An iterator pointing to the element to be erased.

#### Returns

An iterator pointing to the element immediately following *position* prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 613 of file stl\_map.h.

**5.590.3.17** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> size_type std::map<_Key, _Tp, _Compare, _Alloc  
>::erase ( const key_type & __x ) [inline]`

Erases elements according to the provided key.

#### Parameters

*x* Key of element to be erased.

#### Returns

The number of elements erased.

This function erases all the elements located by the given key from a map. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 643 of file `stl_map.h`.

**5.590.3.18** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> iterator std::map<_Key, _Tp, _Compare, _Alloc  
>::find ( const key_type & __x ) [inline]`

Tries to locate an element in a map.

#### Parameters

*x* Key of (key, value) pair to be located.

#### Returns

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 736 of file `stl_map.h`.

## 5.590 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2897

**5.590.3.19** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> const_iterator std::map< _Key, _Tp, _Compare,  
_Alloc >::find ( const key_type & __x ) const [inline]`

Tries to locate an element in a map.

### Parameters

*x* Key of (key, value) pair to be located.

### Returns

Read-only (constant) iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns a constant iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 751 of file `stl_map.h`.

**5.590.3.20** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> allocator_type std::map< _Key, _Tp, _Compare,  
_Alloc >::get_allocator ( ) const [inline]`

Get a copy of the memory allocation object.

Definition at line 299 of file `stl_map.h`.

**5.590.3.21** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> iterator std::map< _Key, _Tp, _Compare, _Alloc  
>::insert ( const_iterator __position, const value_type & __x )  
[inline]`

Attempts to insert a `std::pair` into the map.

### Parameters

*position* An iterator that serves as a hint as to where the pair should be inserted.

## 5.590 `std::map< _Key, _Tp, _Compare, _Alloc >` Class Template Reference 2898

*x* Pair to be inserted (see [std::make\\_pair](#) for easy creation of pairs).

### Returns

An iterator that points to the element with key of *x* (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument [insert\(\)](#) does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt07ch17.html> for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 567 of file `stl_map.h`.

```
5.590.3.22 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> std::pair<iterator, bool> std::map<_Key,
_Tp, _Compare, _Alloc >::insert (const value_type & __x)
[inline]
```

Attempts to insert a [std::pair](#) into the map.

### Parameters

*x* Pair to be inserted (see [std::make\\_pair](#) for easy creation of pairs).

### Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the map. A map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the map.

Insertion requires logarithmic time.

Definition at line 517 of file `stl_map.h`.

Referenced by `std::map< _Key, _Tp, _Compare, _Alloc >::operator=()`, and `std::map< _Key, _Tp, _Compare, _Alloc >::operator[]()`.

**5.590.3.23** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> void std::map< _Key, _Tp, _Compare, _Alloc  
>::insert ( std::initializer_list< value_type > __list ) [inline]`

Attempts to insert a list of std::pairs into the map.

#### Parameters

*list* A std::initializer\_list<value\_type> of pairs to be inserted.

Complexity similar to that of the range constructor.

Definition at line 538 of file stl\_map.h.

References std::map< \_Key, \_Tp, \_Compare, \_Alloc >::insert().

Referenced by std::map< \_Key, \_Tp, \_Compare, \_Alloc >::insert().

**5.590.3.24** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> template<typename _InputIterator > void  
std::map< _Key, _Tp, _Compare, _Alloc >::insert ( _InputIterator  
__first, _InputIterator __last ) [inline]`

Template function that attempts to insert a range of elements.

#### Parameters

*first* Iterator pointing to the start of the range to be inserted.

*last* Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 593 of file stl\_map.h.

**5.590.3.25** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> key_compare std::map< _Key, _Tp, _Compare,  
_Alloc >::key_comp ( ) const [inline]`

Returns the key comparison object out of which the map was constructed.

Definition at line 712 of file stl\_map.h.

## **5.590 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2900**

Referenced by `std::map< _Key, _Tp, _Compare, _Alloc >::at()`, and `std::map< _Key, _Tp, _Compare, _Alloc >::operator[]()`.

**5.590.3.26** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> iterator std::map< _Key, _Tp, _Compare, _Alloc  
>::lower_bound ( const key_type & __x ) [inline]`

Finds the beginning of a subsequence matching given key.

### **Parameters**

*x* Key of (key, value) pair to be located.

### **Returns**

Iterator pointing to first element equal to or greater than key, or `end()`.

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or `end()` if no such element exists.

Definition at line 778 of file `stl_map.h`.

Referenced by `std::map< _Key, _Tp, _Compare, _Alloc >::at()`, and `std::map< _Key, _Tp, _Compare, _Alloc >::operator[]()`.

**5.590.3.27** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_iterator std::map< _Key, _Tp, _Compare,  
_Alloc >::lower_bound ( const key_type & __x ) const [inline]`

Finds the beginning of a subsequence matching given key.

### **Parameters**

*x* Key of (key, value) pair to be located.

### **Returns**

Read-only (constant) iterator pointing to first element equal to or greater than key, or `end()`.

## 5.590 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2901

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or [end\(\)](#) if no such element exists.

Definition at line 793 of file `stl_map.h`.

**5.590.3.28** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> size_type std::map< _Key, _Tp, _Compare, _Alloc  
>::max_size ( ) const [inline]`

Returns the maximum size of the map.

Definition at line 428 of file `stl_map.h`.

**5.590.3.29** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> map& std::map< _Key, _Tp, _Compare, _Alloc  
>::operator= ( initializer_list< value_type > __l ) [inline]`

Map list assignment operator.

### Parameters

*l* An [initializer\\_list](#).

This function fills a map with copies of the elements in the initializer list *l*.

Note that the assignment completely changes the map and that the resulting map's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 289 of file `stl_map.h`.

References `std::map< _Key, _Tp, _Compare, _Alloc >::clear()`, and `std::map< _Key, _Tp, _Compare, _Alloc >::insert()`.

**5.590.3.30** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> map& std::map< _Key, _Tp, _Compare, _Alloc  
>::operator= ( map< _Key, _Tp, _Compare, _Alloc > && __x )  
[inline]`

Map move assignment operator.

## 5.590 `std::map<_Key, _Tp, _Compare, _Alloc>` Class Template Reference 2902

---

### Parameters

*x* A map of identical element and allocator types.

The contents of *x* are moved into this map (without copying). *x* is a valid, but unspecified map.

Definition at line 268 of file `stl_map.h`.

References `std::map<_Key, _Tp, _Compare, _Alloc>::clear()`, and `std::map<_Key, _Tp, _Compare, _Alloc>::swap()`.

```
5.590.3.31 template<typename _Key, typename _Tp, typename _Compare =
 std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
 _Key, _Tp>>> map& std::map<_Key, _Tp, _Compare, _Alloc
 >::operator= (const map<_Key, _Tp, _Compare, _Alloc> & __x
) [inline]
```

Map assignment operator.

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

### Parameters

*x* A map of identical element and allocator types.

All the elements of *x* are copied, but unlike the copy constructor, the allocator object is not copied.

Definition at line 253 of file `stl_map.h`.

```
5.590.3.32 template<typename _Key, typename _Tp, typename _Compare =
 std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
 _Key, _Tp>>> mapped_type& std::map<_Key, _Tp, _Compare,
 _Alloc>::operator[] (const key_type & __k) [inline]
```

Subscript ( `[]` ) access to map data.

### Parameters

*k* The key for which data should be retrieved.

### Returns

A reference to the data of the (key,data) pair.

## 5.590 `std::map<_Key, _Tp, _Compare, _Alloc>` Class Template Reference 2903

Allows for easy lookup with the subscript ( `[]` ) operator. Returns data associated with the key specified in subscript. If the key does not exist, a pair with that key is created using default values, which is then returned.

Lookup requires logarithmic time.

Definition at line 445 of file `stl_map.h`.

References `std::map<_Key, _Tp, _Compare, _Alloc>::end()`, `std::map<_Key, _Tp, _Compare, _Alloc>::insert()`, `std::map<_Key, _Tp, _Compare, _Alloc>::key_comp()`, and `std::map<_Key, _Tp, _Compare, _Alloc>::lower_bound()`.

**5.590.3.33** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> reverse_iterator std::map<_Key, _Tp, _Compare, _Alloc>::rbegin ( ) [inline]`

Returns a read/write reverse iterator that points to the last pair in the map. Iteration is done in descending order according to the keys.

Definition at line 345 of file `stl_map.h`.

**5.590.3.34** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> const_reverse_iterator std::map<_Key, _Tp, _Compare, _Alloc>::rbegin ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to the last pair in the map. Iteration is done in descending order according to the keys.

Definition at line 354 of file `stl_map.h`.

**5.590.3.35** `template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> reverse_iterator std::map<_Key, _Tp, _Compare, _Alloc>::rend ( ) [inline]`

Returns a read/write reverse iterator that points to one before the first pair in the map. Iteration is done in descending order according to the keys.

Definition at line 363 of file `stl_map.h`.

## **5.590 std::map< \_Key, \_Tp, \_Compare, \_Alloc > Class Template Reference 2904**

**5.590.3.36** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_reverse_iterator std::map< _Key, _Tp,  
_Compare, _Alloc >::rend ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to one before the first pair in the map. Iteration is done in descending order according to the keys.

Definition at line 372 of file stl\_map.h.

**5.590.3.37** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> size_type std::map< _Key, _Tp, _Compare, _Alloc  
>::size ( ) const [inline]`

Returns the size of the map.

Definition at line 423 of file stl\_map.h.

**5.590.3.38** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> void std::map< _Key, _Tp, _Compare, _Alloc  
>::swap ( map< _Key, _Tp, _Compare, _Alloc > & __x )  
[inline]`

Swaps data with another map.

### **Parameters**

*x* A map of the same element and allocator types.

This exchanges the elements between two maps in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(m1,m2)` will feed to this function.

Definition at line 693 of file stl\_map.h.

Referenced by `std::map< _Key, _Tp, _Compare, _Alloc >::operator=()`, and `std::swap()`.

**5.590.3.39** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> iterator std::map< _Key, _Tp, _Compare, _Alloc  
>::upper_bound ( const key_type & __x ) [inline]`

Finds the end of a subsequence matching given key.

#### Parameters

*x* Key of (key, value) pair to be located.

#### Returns

Iterator pointing to the first element greater than key, or `end()`.

Definition at line 803 of file `stl_map.h`.

**5.590.3.40** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> const_iterator std::map< _Key, _Tp, _Compare,  
_Alloc >::upper_bound ( const key_type & __x ) const  
[inline]`

Finds the end of a subsequence matching given key.

#### Parameters

*x* Key of (key, value) pair to be located.

#### Returns

Read-only (constant) iterator pointing to first iterator greater than key, or `end()`.

Definition at line 813 of file `stl_map.h`.

**5.590.3.41** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> value_compare std::map< _Key, _Tp, _Compare,  
_Alloc >::value_comp ( ) const [inline]`

Returns a value comparison object, built from the key comparison object out of which the map was constructed.

Definition at line 720 of file stl\_map.h.

### 5.591.1 Detailed Description

template<class \_Tp> class std::mask\_array< \_Tp >

Reference to selected subset of an array. A [mask\\_array](#) is a reference to the actual elements of an array specified by a bitmask in the form of an array of bool. The way to get a [mask\\_array](#) is to call operator[] (valarray<bool>) on a valarray. The returned [mask\\_array](#) then permits carrying operations out on the referenced subset of elements in the original valarray.

For example, if a [mask\\_array](#) is obtained using the array (false, true, false, true) as an argument, the mask array has two elements referring to array[1] and array[3] in the underlying array.

## Parameters

*Tp* Element type.

Definition at line 63 of file mask\_array.h.

### 5.591.2 Member Function Documentation

**5.591.2.1** template<class \_Tp> void std::mask\_array< \_Tp >::operator%= (const valarray< \_Tp > & ) const

Modulo slice elements by corresponding elements of v.

**5.591.2.2** `template<class _Tp> void std::mask_array< _Tp >::operator&= (const valarray< _Tp > & ) const`

Logical and slice elements with corresponding elements of *v*.

**5.591.2.3** `template<class _Tp> void std::mask_array< _Tp >::operator*= (const valarray< _Tp > & ) const`

Multiply slice elements by corresponding elements of *v*.

**5.591.2.4** `template<class _Tp> void std::mask_array< _Tp >::operator+= (const valarray< _Tp > & ) const`

Add corresponding elements of *v* to slice elements.

**5.591.2.5** `template<class _Tp> void std::mask_array< _Tp >::operator-= (const valarray< _Tp > & ) const`

Subtract corresponding elements of *v* from slice elements.

**5.591.2.6** `template<class _Tp> void std::mask_array< _Tp >::operator/= (const valarray< _Tp > & ) const`

Divide slice elements by corresponding elements of *v*.

**5.591.2.7** `template<class _Tp> void std::mask_array< _Tp >::operator<<= (const valarray< _Tp > & ) const`

Left shift slice elements by corresponding elements of *v*.

## **5.592 `std::match_results<_Bi_iter, _Allocator>` Class Template Reference**

**5.591.2.8** `template<class _Tp> void std::mask_array<_Tp>::operator>>= (const valarray<_Tp> & ) const`

Right shift slice elements by corresponding elements of *v*.

**5.591.2.9** `template<class _Tp> void std::mask_array<_Tp>::operator^= (const valarray<_Tp> & ) const`

Logical xor slice elements with corresponding elements of *v*.

**5.591.2.10** `template<class _Tp> void std::mask_array<_Tp>::operator|= (const valarray<_Tp> & ) const`

Logical or slice elements with corresponding elements of *v*.

The documentation for this class was generated from the following file:

`__flags=regex\_constants::format\_default) const`

## 10.5 Allocator

- `allocator_type get\_allocator () const`

## 10.6 Swap

- `void swap (match\_results &__that)`

### 5.592.1 Detailed Description

`template<typename _Bi_iter, typename _Allocator = allocator<sub\_match<_  
Bi\_iter> >> class std::match\_results<_Bi_iter, _Allocator>`

The results of a match or search operation. A collection of character sequences representing the result of a regular expression match. Storage for the collection is allocated and freed as necessary by the member functions of class template [match\\_results](#).

This class satisfies the Sequence requirements, with the exception that only the operations defined for a const-qualified Sequence are supported.

The [sub\\_match](#) object stored at index 0 represents sub-expression 0, i.e. the whole match. In this case the `sub_match` member `matched` is always true. The [sub\\_match](#) object stored at index `n` denotes what matched the marked sub-expression `n` within the

## 5.592 `std::match_results<_Bi_iter, _Allocator>` Class Template Reference 2915

matched expression. If the sub-expression `n` participated in a regular expression match then the `sub_match` member `matched` evaluates to true, and members `first` and `second` denote the range of characters `[first, second)` which formed that match. Otherwise `matched` is false, and members `first` and `second` point to the end of the sequence that was searched.

Definition at line 1461 of file `regex.h`.

### 5.592.2 Constructor & Destructor Documentation

**5.592.2.1** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> std::match_results<_Bi_iter, _Allocator>::match_results ( const _Allocator & __a = _Allocator() ) [inline, explicit]`

Constructs a default `match_results` container.

#### Postcondition

`size()` returns 0 and `str()` returns an empty string.

Definition at line 1509 of file `regex.h`.

Referenced by `std::match_results<_FwdIterT, _Alloc>::operator=()`.

**5.592.2.2** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> std::match_results<_Bi_iter, _Allocator>::match_results ( const match_results<_Bi_iter, _Allocator> & __rhs ) [inline]`

Copy constructs a `match_results`.

Definition at line 1516 of file `regex.h`.

**5.592.2.3** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> std::match_results<_Bi_iter, _Allocator>::match_results ( match_results<_Bi_iter, _Allocator> && __rhs ) [inline]`

Move constructs a `match_results`.

Definition at line 1523 of file `regex.h`.

## 5.592 `std::match_results<_Bi_iter, _Allocator>` Class Template Reference 2916

**5.592.2.4** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> std::match_results<_Bi_iter, _Allocator>::~~match_results ( ) [inline]`

Destroys a `match_results` object.

Definition at line 1550 of file `regex.h`.

### 5.592.3 Member Function Documentation

**5.592.3.1** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> const_iterator std::match_results<_Bi_iter, _Allocator>::begin ( ) const [inline]`

Gets an iterator to the start of the `sub_match` collection.

Reimplemented from `std::vector< sub_match< _Bi_iter >, _Allocator >`.

Definition at line 1706 of file `regex.h`.

Referenced by `std::operator==( )`.

**5.592.3.2** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> const_iterator std::match_results<_Bi_iter, _Allocator>::cbegin ( ) const [inline]`

Gets an iterator to the start of the `sub_match` collection.

Reimplemented from `std::vector< sub_match< _Bi_iter >, _Allocator >`.

Definition at line 1713 of file `regex.h`.

**5.592.3.3** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> const_iterator std::match_results<_Bi_iter, _Allocator>::cend ( ) const [inline]`

Gets an iterator to one-past-the-end of the collection.

## 5.592 std::match\_results< \_Bi\_iter, \_Allocator > Class Template Reference 2917

Reimplemented from [std::vector< sub\\_match< \\_Bi\\_iter >, \\_Allocator >](#).

Definition at line 1727 of file regex.h.

```
5.592.3.4 template<typename _Bi_iter, typename _Allocator =
 allocator<sub_match<_Bi_iter> >> bool std::match_results<
 _Bi_iter, _Allocator >::empty () const [inline]
```

Indicates if the match\_results contains no results.

### Return values

*true* The match\_results object is empty.

*false* The match\_results object is not empty.

Reimplemented from [std::vector< sub\\_match< \\_Bi\\_iter >, \\_Allocator >](#).

Definition at line 1594 of file regex.h.

Referenced by `std::match_results< _FwdIterT, _Alloc >::end()`, `std::operator==(, std::match_results< _FwdIterT, _Alloc >::prefix(),` and `std::match_results< _FwdIterT, _Alloc >::suffix()`.

```
5.592.3.5 template<typename _Bi_iter, typename _Allocator =
 allocator<sub_match<_Bi_iter> >> const_iterator
std::match_results< _Bi_iter, _Allocator >::end () const
[inline]
```

Gets an iterator to one-past-the-end of the collection.

Reimplemented from [std::vector< sub\\_match< \\_Bi\\_iter >, \\_Allocator >](#).

Definition at line 1720 of file regex.h.

Referenced by `std::match_results< _FwdIterT, _Alloc >::cend()`, and `std::operator==(,)`.

```
5.592.3.6 template<typename _Bi_iter, typename _Allocator =
 allocator<sub_match<_Bi_iter> >> template<typename _Out_iter
 > _Out_iter std::match_results< _Bi_iter, _Allocator >::format (
 _Out_iter __out, const char_type * __fmt_first, const char_type
 * __fmt_last, regex_constants::match_flag_type __flags =
 regex_constants::format_default) const [inline]
```

## 5.592 std::match\_results<\_Bi\_iter, \_Allocator > Class Template Reference 2918

### Precondition

`ready() == true`

### Todo

Implement this function.

Definition at line 1748 of file regex.h.

Referenced by std::match\_results<\_FwdIterT, \_Alloc >::format().

```
5.592.3.7 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> template<typename
_Out_iter , typename _St , typename _Sa > _Out_iter
std::match_results< _Bi_iter, _Allocator >::format (
_Out_iter __out, const basic_string< char_type, _St, _Sa >
& __fmt, regex_constants::match_flag_type __flags =
regex_constants::format_default) const [inline]
```

### Precondition

`ready() == true`

Definition at line 1759 of file regex.h.

```
5.592.3.8 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> template<typename _Out_iter
, typename _St , typename _Sa > basic_string<char_type,
_St, _Sa> std::match_results< _Bi_iter, _Allocator
>::format (const basic_string< char_type, _St, _Sa >
& __fmt, regex_constants::match_flag_type __flags =
regex_constants::format_default) const [inline]
```

### Precondition

`ready() == true`

Definition at line 1772 of file regex.h.

**5.592.3.9** `template<typename _Bi_iter, typename _Allocator  
= allocator<sub_match<_Bi_iter>>> string_type  
std::match_results<_Bi_iter, _Allocator>::format ( const  
char_type * __fmt, regex_constants::match_flag_type __flags =  
regex_constants::format_default ) const [inline]`

#### Precondition

`ready() == true`

Definition at line 1785 of file regex.h.

**5.592.3.10** `template<typename _Bi_iter, typename _Allocator =  
allocator<sub_match<_Bi_iter>>> allocator_type  
std::match_results<_Bi_iter, _Allocator>::get_allocator ( ) const  
[inline]`

Gets a copy of the allocator.

Reimplemented from `std::_Vector_base< sub_match<_Bi_iter>, _Allocator >`.

Definition at line 1807 of file regex.h.

**5.592.3.11** `template<typename _Bi_iter, typename _Allocator =  
allocator<sub_match<_Bi_iter>>> difference_type  
std::match_results<_Bi_iter, _Allocator>::length ( size_type  
__sub = 0 ) const [inline]`

Gets the length of the indicated submatch.

#### Parameters

*sub* indicates the submatch.

#### Precondition

`ready() == true`

This function returns the length of the indicated submatch, or the length of the entire match if *sub* is zero (the default).

Definition at line 1613 of file regex.h.

## 5.592 `std::match_results<_Bi_iter, _Allocator>` Class Template Reference 2920

---

**5.592.3.12** `template<typename _Bi_iter, typename _Allocator =  
allocator<sub_match<_Bi_iter>>> size_type std::match_results<  
_Bi_iter, _Allocator>::max_size ( ) const [inline]`

Gets the number of matches and submatches.

The number of matches for a given regular expression will be either 0 if there was no match or `mark_count()` + 1 if a match was successful. Some matches may be empty.

### Returns

the number of matches found.

Reimplemented from `std::vector< sub_match< _Bi_iter >, _Allocator >`.

Definition at line 1585 of file `regex.h`.

**5.592.3.13** `template<typename _Bi_iter, typename _Allocator =  
allocator<sub_match<_Bi_iter>>> match_results&  
std::match_results<_Bi_iter, _Allocator>::operator= ( const  
match_results<_Bi_iter, _Allocator> & __rhs ) [inline]`

Assigns `rhs` to `*this`.

Definition at line 1531 of file `regex.h`.

**5.592.3.14** `template<typename _Bi_iter, typename _Allocator =  
allocator<sub_match<_Bi_iter>>> match_results&  
std::match_results<_Bi_iter, _Allocator>::operator= (   
match_results<_Bi_iter, _Allocator> && __rhs ) [inline]`

Move-assigns `rhs` to `*this`.

Definition at line 1541 of file `regex.h`.

**5.592.3.15** `template<typename _Bi_iter, typename _Allocator =  
allocator<sub_match<_Bi_iter>>> const_reference  
std::match_results<_Bi_iter, _Allocator>::operator[] ( size_type  
__sub ) const [inline]`

## 5.592 `std::match_results<_Bi_iter, _Allocator>` Class Template Reference 2921

---

Gets a `sub_match` reference for the match or submatch.

### Parameters

*sub* indicates the submatch.

### Precondition

`ready() == true`

This function gets a reference to the indicated submatch, or the entire match if `sub` is zero.

If `sub >= size()` then this function returns a `sub_match` with a special value indicating no submatch.

Definition at line 1660 of file `regex.h`.

```
5.592.3.16 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> difference_type
std::match_results<_Bi_iter, _Allocator >::position (size_type
__sub = 0) const [inline]
```

Gets the offset of the beginning of the indicated submatch.

### Parameters

*sub* indicates the submatch.

### Precondition

`ready() == true`

This function returns the offset from the beginning of the target sequence to the beginning of the submatch, unless the value of `sub` is zero (the default), in which case this function returns the offset from the beginning of the target sequence to the beginning of the match.

Returns -1 if `sub` is out of range.

Definition at line 1630 of file `regex.h`.

```
5.592.3.17 template<typename _Bi_iter, typename _Allocator =
allocator<sub_match<_Bi_iter> >> const_reference
std::match_results<_Bi_iter, _Allocator >::prefix () const
[inline]
```

## 5.592 `std::match_results<_Bi_iter, _Allocator>` Class Template Reference 2922

Gets a `sub_match` representing the match prefix.

### Precondition

`ready() == true`

This function gets a reference to a `sub_match` object representing the part of the target range between the start of the target range and the start of the match.

Definition at line 1677 of file `regex.h`.

Referenced by `std::operator==(, and std::match_results<_FwdIterT, _Alloc>::position().`

**5.592.3.18** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> bool std::match_results<_Bi_iter, _Allocator>::ready ( ) const [inline]`

Indicates if the `match_results` is ready.

### Return values

*true* The object has a fully-established result state.

*false* The object is not ready.

Definition at line 1561 of file `regex.h`.

Referenced by `std::operator==(, std::match_results<_FwdIterT, _Alloc>::operator[](), std::match_results<_FwdIterT, _Alloc>::prefix(), and std::match_results<_FwdIterT, _Alloc>::suffix().`

**5.592.3.19** `template<typename _Bi_iter, typename _Allocator = allocator<sub_match<_Bi_iter>>> size_type std::match_results<_Bi_iter, _Allocator>::size ( ) const [inline]`

Gets the number of matches and submatches.

The number of matches for a given regular expression will be either 0 if there was no match or `mark_count() + 1` if a match was successful. Some matches may be empty.

### Returns

the number of matches found.

## 5.592 `std::match_results<_Bi_iter, _Allocator>` Class Template Reference 2923

Reimplemented from `std::vector< sub_match<_Bi_iter>, _Allocator>`.

Definition at line 1578 of file `regex.h`.

Referenced by `std::match_results<_FwdIterT, _Alloc>::empty()`, `std::operator==(, std::match_results<_FwdIterT, _Alloc>::operator[]()`, and `std::match_results<_FwdIterT, _Alloc>::position()`.

```
5.592.3.20 template<typename _Bi_iter, typename _Allocator
 = allocator<sub_match<_Bi_iter>>> string_type
 std::match_results<_Bi_iter, _Allocator>::str (size_type __sub =
 0) const [inline]
```

Gets the match or submatch converted to a string type.

### Parameters

*sub* indicates the submatch.

### Precondition

`ready() == true`

This function gets the submatch (or match, if *sub* is zero) extracted from the target range and converted to the associated string type.

Definition at line 1645 of file `regex.h`.

```
5.592.3.21 template<typename _Bi_iter, typename _Allocator =
 allocator<sub_match<_Bi_iter>>> const_reference
 std::match_results<_Bi_iter, _Allocator>::suffix () const
 [inline]
```

Gets a `sub_match` representing the match suffix.

### Precondition

`ready() == true`

This function gets a reference to a `sub_match` object representing the part of the target range between the end of the match and the end of the target range.

Definition at line 1694 of file `regex.h`.

Referenced by `std::operator==(,)`.

## 5.593 std::mem\_fun1\_ref\_t< \_Ret, \_Tp, \_Arg > Class Template Reference 2924

5.592.3.22 `template<typename _Bi_iter, typename _Allocator =  
allocator<sub_match<_Bi_iter> >> void std::match_results<  
_Bi_iter, _Allocator >::swap ( match_results< _Bi_iter, _Allocator  
> & __that ) [inline]`

Swaps the contents of two [match\\_results](#).

Definition at line 1821 of file `regex.h`.

Referenced by `std::swap()`.

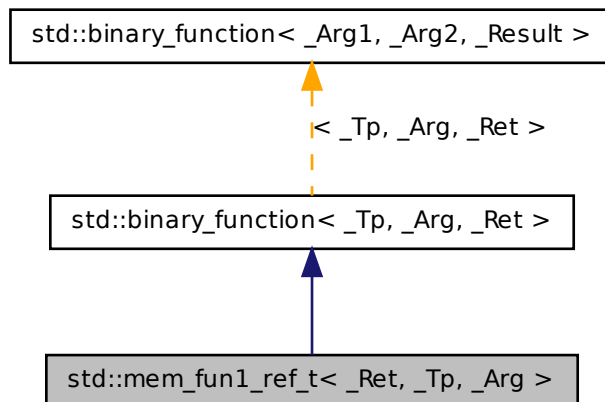

The documentation for this class was generated from the following file:

- [regex.h](#)

## 5.593 std::mem\_fun1\_ref\_t< \_Ret, \_Tp, \_Arg > Class Template Reference

One of the [adaptors for member /// pointers](#).

Inheritance diagram for `std::mem_fun1_ref_t< _Ret, _Tp, _Arg >`:

## Public Types

- `typedef _Tp first_argument_type`
- `typedef _Ret result_type`
- `typedef _Arg second_argument_type`

## Public Member Functions

- `mem_fun1_ref_t(_Ret(_Tp::*__pf)(_Arg))`
- `_Ret operator()(_Tp &__r, _Arg __x) const`

### 5.593.1 Detailed Description

`template<typename _Ret, typename _Tp, typename _Arg> class std::mem_fun1_ref_t<_Ret, _Tp, _Arg>`

One of the [adaptors for member /// pointers](#).

Definition at line 650 of file `stl_function.h`.

### 5.593.2 Member Typedef Documentation

**5.593.2.1** `typedef _Tp std::binary_function<_Tp, _Arg, _Ret>::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.593.2.2** `typedef _Ret std::binary_function<_Tp, _Arg, _Ret>::result_type [inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.593.2.3** `typedef _Arg std::binary_function<_Tp, _Arg, _Ret>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

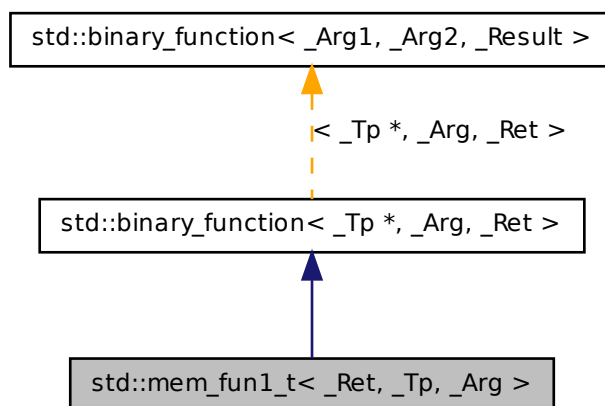

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 5.594 `std::mem_fun1_t< _Ret, _Tp, _Arg >` Class Template Reference

One of the [adaptors for member /// pointers](#).

Inheritance diagram for `std::mem_fun1_t< _Ret, _Tp, _Arg >`:

### Public Types

- typedef `_Tp *` [first\\_argument\\_type](#)
- typedef `_Ret` [result\\_type](#)
- typedef `_Arg` [second\\_argument\\_type](#)

### Public Member Functions

- `mem_fun1_t(_Ret(_Tp::*__pf)(_Arg))`

- `_Ret operator() (_Tp *__p, _Arg __x) const`

#### 5.594.1 Detailed Description

`template<typename _Ret, typename _Tp, typename _Arg> class std::mem_fun1_t<_Ret, _Tp, _Arg>`

One of the [adaptors for member /// pointers](#).

Definition at line 614 of file `stl_function.h`.

#### 5.594.2 Member Typedef Documentation

**5.594.2.1** `typedef _Tp * std::binary_function<_Tp *, _Arg, _Ret>::first_argument_type` [*inherited*]

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.594.2.2** `typedef _Ret std::binary_function<_Tp *, _Arg, _Ret>::result_type` [*inherited*]

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.594.2.3** `typedef _Arg std::binary_function<_Tp *, _Arg, _Ret>::second_argument_type` [*inherited*]

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

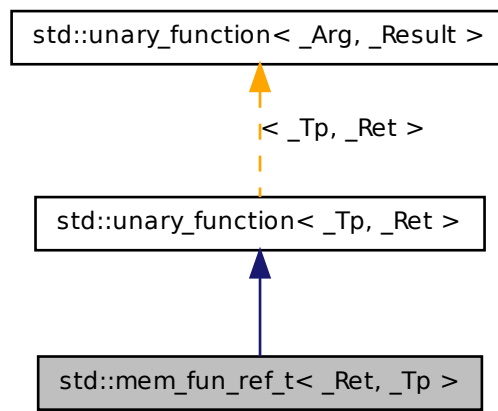

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

### 5.595 std::mem\_fun\_ref\_t< \_Ret, \_Tp > Class Template Reference

One of the [adaptors for member /// pointers](#).

Inheritance diagram for std::mem\_fun\_ref\_t< \_Ret, \_Tp >:

#### Public Types

- typedef `_Tp` [argument\\_type](#)
- typedef `_Ret` [result\\_type](#)

#### Public Member Functions

- `mem_fun_ref_t` (`_Ret` (`_Tp::*`\_\_pf)())
- `_Ret operator()` (`_Tp &__r`) const

#### 5.595.1 Detailed Description

```
template<typename _Ret, typename _Tp> class std::mem_fun_ref_t< _Ret, _Tp >
```

One of the [adaptors for member /// pointers](#).

Definition at line 578 of file stl\_function.h.

### **5.595.2 Member Typedef Documentation**

#### **5.595.2.1 typedef \_Tp std::unary\_function< \_Tp , \_Ret >::argument\_type [inherited]**

argument\_type is the type of the argument

Definition at line 105 of file stl\_function.h.

#### **5.595.2.2 typedef \_Ret std::unary\_function< \_Tp , \_Ret >::result\_type [inherited]**

result\_type is the return type

Definition at line 108 of file stl\_function.h.

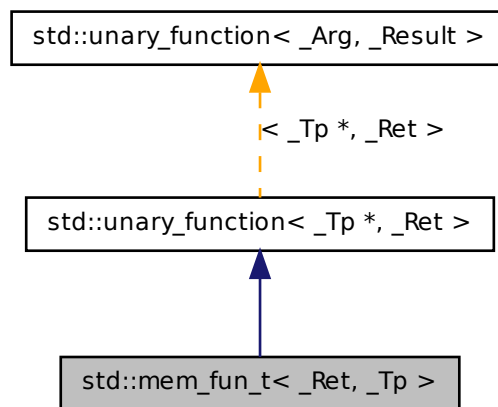

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

### **5.596 std::mem\_fun\_t< \_Ret, \_Tp > Class Template Reference**

One of the [adaptors for member /// pointers](#).

Inheritance diagram for std::mem\_fun\_t< \_Ret, \_Tp >:

### Public Types

- typedef `_Tp *` [argument\\_type](#)
- typedef `_Ret` [result\\_type](#)

### Public Member Functions

- `mem_fun_t` (`_Ret`(`_Tp::*_pf`)())
- `_Ret operator()` (`_Tp *_p`) const

#### 5.596.1 Detailed Description

**template**<typename `_Ret`, typename `_Tp`> class `std::mem_fun_t`< `_Ret`, `_Tp` >

One of the [adaptors for member /// pointers](#).

Definition at line 542 of file `stl_function.h`.

### 5.596.2 Member Typedef Documentation

#### 5.596.2.1 `typedef _Tp * std::unary_function<_Tp *, _Ret>::argument_type` [`inherited`]

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

#### 5.596.2.2 `typedef _Ret std::unary_function<_Tp *, _Ret>::result_type` [`inherited`]

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this class was generated from the following file:

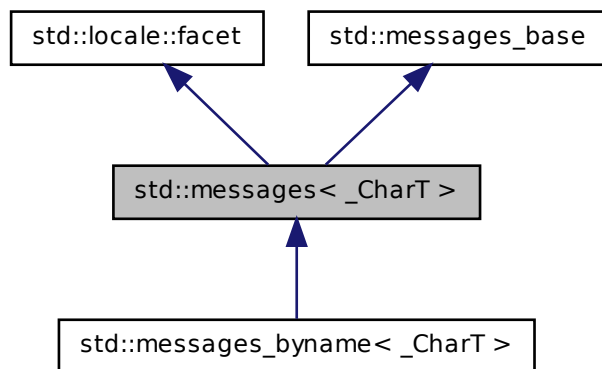

- [stl\\_function.h](#)

## 5.597 `std::messages<_CharT>` Class Template Reference

Primary class template messages.

This facet encapsulates the code to retrieve messages from message catalogs. The only thing defined by the standard for this facet is the interface. All underlying functionality is implementation-defined.

Inheritance diagram for std::messages<\_CharT>:

### Public Types

- typedef int **catalog**
- typedef `_CharT` **char\_type**
- typedef `basic_string<_CharT>` **string\_type**

### Public Member Functions

- **messages** (size\_t \_\_refs=0)
- **messages** (\_\_c\_locale \_\_cloc, const char \*\_\_s, size\_t \_\_refs=0)
- void **close** (catalog \_\_c) const
- **string\_type** **get** (catalog \_\_c, int \_\_set, int \_\_msgid, const **string\_type** &\_\_s) const
- catalog **open** (const **basic\_string**< char > &\_\_s, const **locale** &\_\_loc) const
- catalog **open** (const **basic\_string**< char > &, const **locale** &, const char \*) const

### Static Public Attributes

- static **locale::id** **id**

### Protected Member Functions

- virtual `~messages()`
- `string_type _M_convert_from_char` (char \*) const
- char \* `_M_convert_to_char` (const `string_type` &\_\_msg) const
- virtual void `do_close` (catalog) const
- template<>  
  `string do_get` (catalog, int, int, const `string` &) const
- template<>  
  `wstring do_get` (catalog, int, int, const `wstring` &) const
- virtual `string_type do_get` (catalog, int, int, const `string_type` &\_\_dfault) const
- virtual catalog `do_open` (const `basic_string`< char > &, const `locale` &) const

### Static Protected Member Functions

- static `__c_locale _S_clone_c_locale` (\_\_c\_locale &\_\_cloc) throw ()
- static void `_S_create_c_locale` (\_\_c\_locale &\_\_cloc, const char \*\_\_s, \_\_c\_locale \_\_old=0)
- static void `_S_destroy_c_locale` (\_\_c\_locale &\_\_cloc)
- static `__c_locale _S_get_c_locale` ()
- static const char \* `_S_get_c_name` () throw ()
- static `__c_locale _S_lc_ctype_c_locale` (\_\_c\_locale \_\_cloc, const char \*\_\_s)

### Protected Attributes

- `__c_locale _M_c_locale_messages`
- const char \* `_M_name_messages`

### Friends

- class `locale::Impl`

#### 5.597.1 Detailed Description

**template<typename \_CharT> class std::messages<\_CharT>**

Primary class template messages.

This facet encapsulates the code to retrieve messages from message catalogs. The only thing defined by the standard for this facet is the interface. All underlying functionality is implementation-defined. This library currently implements 3 versions of the message facet. The first version (gnu) is a wrapper around gettext, provided by libintl. The second version (ieee) is a wrapper around catgets. The final version (default) does

no actual translation. These implementations are only provided for `char` and `wchar_t` instantiations.

The messages template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the messages facet.

Definition at line 1695 of file `locale_facets_nonio.h`.

### 5.597.2 Member Typedef Documentation

#### 5.597.2.1 `template<typename _CharT> typedef _CharT std::messages<_CharT>::char_type`

Public typedefs.

Reimplemented in [std::messages\\_byname<\\_CharT>](#).

Definition at line 1701 of file `locale_facets_nonio.h`.

#### 5.597.2.2 `template<typename _CharT> typedef basic_string<_CharT> std::messages<_CharT>::string_type`

Public typedefs.

Reimplemented in [std::messages\\_byname<\\_CharT>](#).

Definition at line 1702 of file `locale_facets_nonio.h`.

### 5.597.3 Constructor & Destructor Documentation

#### 5.597.3.1 `template<typename _CharT> std::messages<_CharT>::messages ( size_t __refs = 0 ) [explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

#### Parameters

*refs* Passed to the base facet class.

Definition at line 45 of file `messages_members.h`.

**5.597.3.2** `template<typename _CharT > std::messages< _CharT >::messages  
( __c_locale __cloc, const char * __s, size_t __refs = 0 )  
[explicit]`

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

#### Parameters

*cloc* The C locale.

*s* The name of a locale.

*refs* Refcount to pass to the base class.

Definition at line 51 of file messages\_members.h.

**5.597.3.3** `template<typename _CharT > std::messages< _CharT  
>::~messages ( ) [protected, virtual]`

Destructor.

Definition at line 80 of file messages\_members.h.

#### 5.597.4 Member Data Documentation

**5.597.4.1** `template<typename _CharT > locale::id std::messages< _CharT  
>::id [static]`

Numpunct facet id.

Definition at line 1713 of file locale\_facets\_nonio.h.

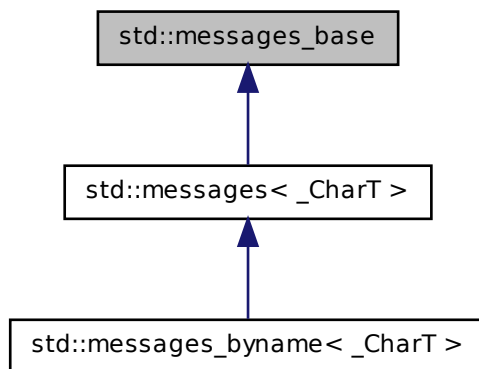

The documentation for this class was generated from the following files:

- [locale\\_facets\\_nonio.h](#)
- [messages\\_members.h](#)

## 5.598 std::messages\_base Struct Reference

Messages facet base class providing catalog typedef.

Inheritance diagram for `std::messages_base`:

### Public Types

- typedef int **catalog**

#### 5.598.1 Detailed Description

Messages facet base class providing catalog typedef.

Definition at line 1668 of file `locale_facets_nonio.h`.

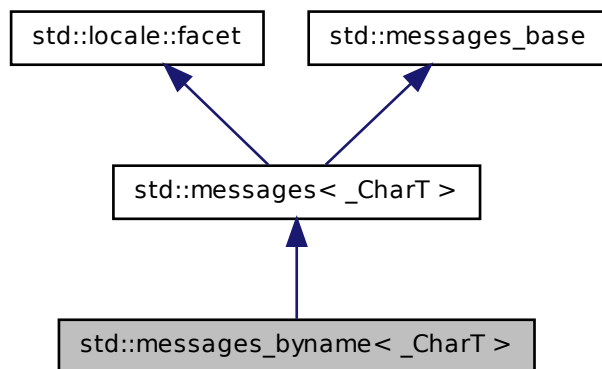

The documentation for this struct was generated from the following file:

- [locale\\_facets\\_nonio.h](#)

### 5.599 `std::messages_byname<_CharT>` Class Template Reference

class [messages\\_byname](#) [22.2.7.2].

Inheritance diagram for std::messages\_byname<\_CharT>:

### Public Types

- typedef int **catalog**
- typedef `_CharT` **char\_type**
- typedef `basic_string<_CharT>` **string\_type**

### Public Member Functions

- **messages\_byname** (const char \*\_\_s, size\_t \_\_refs=0)

### Friends

- class **locale::Impl**

#### 5.599.1 Detailed Description

template<typename \_CharT> class std::messages\_byname<\_CharT>

class [messages\\_byname](#) [22.2.7.2].

Definition at line 1912 of file locale\_facets\_nonio.h.

### 5.599.2 Member Typedef Documentation

#### 5.599.2.1 `template<typename _CharT> typedef _CharT std::messages_byname<_CharT>::char_type`

Public typedefs.

Reimplemented from [std::messages<\\_CharT>](#).

Definition at line 1915 of file `locale_facets_nonio.h`.

#### 5.599.2.2 `template<typename _CharT> typedef basic_string<_CharT> std::messages_byname<_CharT>::string_type`

Public typedefs.

Reimplemented from [std::messages<\\_CharT>](#).

Definition at line 1916 of file `locale_facets_nonio.h`.

### 5.599.3 Member Data Documentation

#### 5.599.3.1 `template<typename _CharT> locale::id std::messages<_CharT> >::id [static, inherited]`

Numpunct facet id.

Definition at line 1713 of file `locale_facets_nonio.h`.

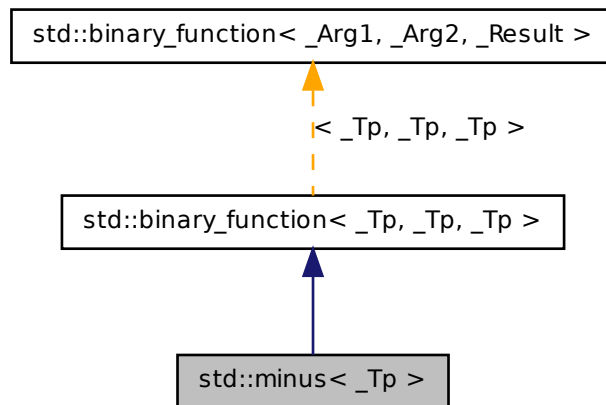

The documentation for this class was generated from the following files:

- [locale\\_facets\\_nonio.h](#)
- [messages\\_members.h](#)

## 5.600 `std::minus<_Tp>` Struct Template Reference

One of the [math functors](#).

Inheritance diagram for `std::minus< _Tp >`:

### Public Types

- `typedef _Tp first_argument_type`
- `typedef _Tp result_type`
- `typedef _Tp second_argument_type`

### Public Member Functions

- `_Tp operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.600.1 Detailed Description

**template<typename \_Tp> struct `std::minus< _Tp >`**

One of the [math functors](#).

Definition at line 150 of file `stl_function.h`.

### 5.600.2 Member Typedef Documentation

**5.600.2.1** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp  
>::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.600.2.2** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp >::result_type  
[inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.600.2.3** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp  
>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

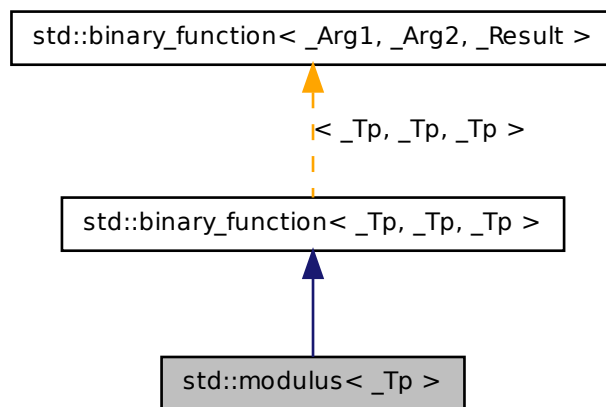

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.601 `std::modulus<_Tp>` Struct Template Reference

One of the [math functors](#).

Inheritance diagram for `std::modulus<_Tp>`:

### Public Types

- typedef `_Tp` `first_argument_type`
- typedef `_Tp` `result_type`
- typedef `_Tp` `second_argument_type`

### Public Member Functions

- `_Tp operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.601.1 Detailed Description

**template<typename `_Tp`> struct `std::modulus<_Tp>`**

One of the [math functors](#).

Definition at line 177 of file `stl_function.h`.

### 5.601.2 Member Typedef Documentation

**5.601.2.1** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp  
>::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.601.2.2** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp >::result_type  
[inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.601.2.3** `typedef _Tp std::binary_function< _Tp , _Tp , _Tp  
>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

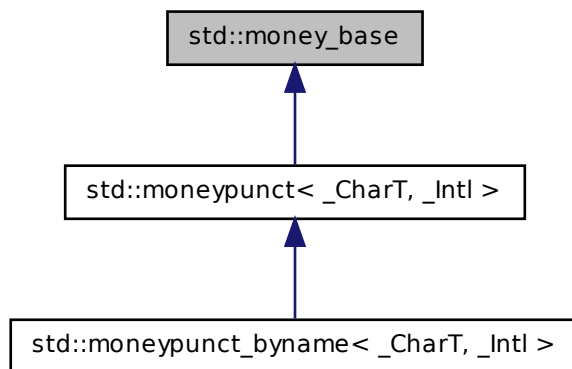

- [stl\\_function.h](#)

## 5.602 std::money\_base Class Reference

Money format ordering data.

This class contains an ordered array of 4 fields to represent the pattern for formatting a money amount. Each field may contain one entry from the `part` enum. `symbol`, `sign`, and `value` must be present and the remaining field must contain either none or space.

Inheritance diagram for std::money\_base:

### Public Types

- enum { **\_S\_minus**, **\_S\_zero**, **\_S\_end** }
- enum **part** {  
    **none**, **space**, **symbol**, **sign**,  
    **value** }

### Static Public Member Functions

- static pattern **\_S\_construct\_pattern** (char \_\_precedes, char \_\_space, char \_\_posn) throw ()

### Static Public Attributes

- static const char \* **\_S\_atoms**
- static const pattern **\_S\_default\_pattern**

#### 5.602.1 Detailed Description

Money format ordering data.

This class contains an ordered array of 4 fields to represent the pattern for formatting a money amount. Each field may contain one entry from the part enum. symbol, sign, and value must be present and the remaining field must contain either none or space.

**See also**

[moneypunct::pos\\_format\(\)](#) and [moneypunct::neg\\_format\(\)](#) for details of how these fields are interpreted.

Definition at line 840 of file `locale_facets_nonio.h`.

The documentation for this class was generated from the following file:

- [locale\\_facets\\_nonio.h](#)

## 5.603 `std::money_get< _CharT, _InIter >` Class Template Reference

Primary class template [money\\_get](#).

This facet encapsulates the code to parse and return a monetary amount from a string.

Inheritance diagram for `std::money_get< _CharT, _InIter >`:

**Public Types**

- typedef `_CharT` [char\\_type](#)
- typedef `_InIter` [iter\\_type](#)
- typedef [basic\\_string< \\_CharT >](#) [string\\_type](#)

### Public Member Functions

- `money_get` (`size_t __refs=0`)
- `iter_type get` (`iter_type __s, iter_type __end, bool __intl, ios_base &__io, ios_base::iostate &__err, string_type &__digits`) const
- `iter_type get` (`iter_type __s, iter_type __end, bool __intl, ios_base &__io, ios_base::iostate &__err, long double &__units`) const

### Static Public Attributes

- static `locale::id id`

### Protected Member Functions

- virtual `~money_get` ()
- `template<bool _Intl>`  
`iter_type _M_extract` (`iter_type __s, iter_type __end, ios_base &__io, ios_base::iostate &__err, string &__digits`) const
- virtual `iter_type do_get` (`iter_type __s, iter_type __end, bool __intl, ios_base &__io, ios_base::iostate &__err, string_type &__digits`) const
- virtual `iter_type do_get` (`iter_type __s, iter_type __end, bool __intl, ios_base &__io, ios_base::iostate &__err, long double &__units`) const

### Static Protected Member Functions

- static `__c_locale _S_clone_c_locale` (`__c_locale &__cloc`) throw ()
- static void `_S_create_c_locale` (`__c_locale &__cloc, const char *__s, __c_locale __old=0`)
- static void `_S_destroy_c_locale` (`__c_locale &__cloc`)

- static `__c_locale _S_lc_ctype_c_locale` (`__c_locale __cloc, const char *__s`)

### Friends

- class `locale::Impl`

#### 5.603.1 Detailed Description

`template<typename _CharT, typename _InIter> class std::money_get<_CharT, _InIter>`

Primary class template `money_get`.

This facet encapsulates the code to parse and return a monetary amount from a string. The `money_get` template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the `money_get` facet.

Definition at line 1370 of file `locale_facets_nonio.h`.

### 5.603.2 Member Typedef Documentation

#### 5.603.2.1 `template<typename _CharT, typename _InIter> typedef _CharT std::money_get<_CharT, _InIter>::char_type`

Public typedefs.

Definition at line 1376 of file `locale_facets_nonio.h`.

#### 5.603.2.2 `template<typename _CharT, typename _InIter> typedef _InIter std::money_get<_CharT, _InIter>::iter_type`

Public typedefs.

Definition at line 1377 of file `locale_facets_nonio.h`.

#### 5.603.2.3 `template<typename _CharT, typename _InIter> typedef basic_string<_CharT> std::money_get<_CharT, _InIter> >::string_type`

Public typedefs.

Definition at line 1378 of file `locale_facets_nonio.h`.

### 5.603.3 Constructor & Destructor Documentation

#### 5.603.3.1 `template<typename _CharT, typename _InIter> std::money_get< _CharT, _InIter>::money_get( size_t __refs = 0 ) [inline, explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

#### Parameters

*refs* Passed to the base facet class.

Definition at line 1392 of file locale\_facets\_nonio.h.

**5.603.3.2** `template<typename _CharT, typename _InIter> virtual  
std::money_get<_CharT, _InIter>::~~money_get( ) [inline,  
protected, virtual]`

Destructor.

Definition at line 1460 of file locale\_facets\_nonio.h.

#### 5.603.4 Member Function Documentation

**5.603.4.1** `template<typename _CharT, typename _InIter> _InIter  
std::money_get<_CharT, _InIter>::do_get( iter_type __s,  
iter_type __end, bool __intl, ios_base & __io, ios_base::iostate &  
__err, long double & __units ) const [protected, virtual]`

Read and parse a monetary value.

This function reads and parses characters representing a monetary value. This function is a hook for derived classes to change the value returned.

#### See also

[get\(\)](#) for details.

Definition at line 365 of file locale\_facets\_nonio.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc>::c_str()`.

Referenced by `std::money_get<_CharT, _InIter>::get()`.

**5.603.4.2** `template<typename _CharT, typename _InIter> _InIter  
std::money_get<_CharT, _InIter>::do_get( iter_type __s,  
iter_type __end, bool __intl, ios_base & __io, ios_base::iostate &  
__err, string_type & __digits ) const [protected, virtual]`

Read and parse a monetary value.

This function reads and parses characters representing a monetary value. This function is a hook for derived classes to change the value returned.

#### See also

[get\(\)](#) for details.

Definition at line 378 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, `std::basic_string<_CharT, _Traits, _Alloc>::resize()`, and `std::__ctype_abstract_base<_CharT>::widen()`.

**5.603.4.3** `template<typename _CharT, typename _InIter> iter_type  
std::money_get<_CharT, _InIter>::get ( iter_type __s, iter_type  
__end, bool __intl, ios_base & __io, ios_base::iostate & __err,  
string_type & __digits ) const [inline]`

Read and parse a monetary value.

This function reads characters from *s*, interprets them as a monetary value according to `moneypunct` and `ctype` facets retrieved from `io.getloc()`, and returns the result in *digits*. For example, the string \$10.01 in a US locale would store 1001 in *digits*.

Any characters not part of a valid money amount are not consumed.

If a money value cannot be parsed from the input stream, sets `err=(err|io.failbit)`. If the stream is consumed before finishing parsing, sets `err=(err|io.failbit|io.eofbit)`.

This function works by returning the result of [do\\_get\(\)](#).

#### Parameters

*s* Start of characters to parse.

*end* End of characters to parse.

*intl* Parameter to use `_facet<moneypunct<CharT,intl>>`.

*io* Source of facets and io state.

*err* Error field to set if parsing fails.

*digits* Place to store result of parsing.

#### Returns

Iterator referencing first character beyond valid money amount.

Definition at line 1453 of file `locale_facets_nonio.h`.

References `std::money_get<_CharT, _InIter>::do_get()`.

**5.603.4.4** `template<typename _CharT, typename _InIter> iter_type  
std::money_get<_CharT, _InIter>::get ( iter_type __s, iter_type  
__end, bool __intl, ios_base & __io, ios_base::iostate & __err, long  
double & __units ) const [inline]`

Read and parse a monetary value.

This function reads characters from *s*, interprets them as a monetary value according to moneypunct and ctype facets retrieved from io.getloc(), and returns the result in *units* as an integral value `money_punct::frac_digits()` \* the actual amount. For example, the string \$10.01 in a US locale would store 1001 in *units*.

Any characters not part of a valid money amount are not consumed.

If a money value cannot be parsed from the input stream, sets *err*=(*err*|io.failbit). If the stream is consumed before finishing parsing, sets *err*=(*err*|io.failbit|io.eofbit). *units* is unchanged if parsing fails.

This function works by returning the result of `do_get()`.

#### Parameters

- s* Start of characters to parse.
- end* End of characters to parse.
- intl* Parameter to use `facet<money_punct<CharT,intl>>`.
- io* Source of facets and io state.
- err* Error field to set if parsing fails.
- units* Place to store result of parsing.

#### Returns

Iterator referencing first character beyond valid money amount.

Definition at line 1422 of file locale\_facets\_nonio.h.

References `std::money_get<_CharT, _InIter>::do_get()`.

### 5.603.5 Member Data Documentation

**5.603.5.1** `template<typename _CharT, typename _InIter> locale::id  
std::money_get<_CharT, _InIter>::id [static]`

Numpunct facet id.

**5.604.1 Detailed Description**

`template<typename _CharT, typename _OutIter> class std::money_put< _`  
`CharT, _OutIter >`

Primary class template `money_put`.

This facet encapsulates the code to format and output a monetary amount. The `money_`  
`put` template uses protected virtual functions to provide the actual results. The public  
 accessors forward the call to the virtual functions. These virtual functions are hooks  
 for developers to implement the behavior they require from the `money_put` facet.

Definition at line 1521 of file `locale_facets_nonio.h`.

### **5.604.2 Member Typedef Documentation**

**5.604.2.1** `template<typename _CharT, typename _OutIter> typedef _CharT  
std::money_put<_CharT, _OutIter>::char_type`

Public typedefs.

Definition at line 1526 of file `locale_facets_nonio.h`.

**5.604.2.2** `template<typename _CharT, typename _OutIter> typedef _OutIter  
std::money_put<_CharT, _OutIter>::iter_type`

Public typedefs.

Definition at line 1527 of file `locale_facets_nonio.h`.

**5.604.2.3** `template<typename _CharT, typename _OutIter> typedef  
basic_string<_CharT> std::money_put<_CharT, _OutIter>  
>::string_type`

Public typedefs.

Definition at line 1528 of file `locale_facets_nonio.h`.

### **5.604.3 Constructor & Destructor Documentation**

**5.604.3.1** `template<typename _CharT, typename _OutIter>  
std::money_put<_CharT, _OutIter>::money_put ( size_t __refs =  
0 ) [inline, explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

#### **Parameters**

*refs* Passed to the base facet class.

Definition at line 1542 of file `locale_facets_nonio.h`.

**5.604.3.2** `template<typename _CharT, typename _OutIter > virtual  
std::money_put< _CharT, _OutIter >::~~money_put ( )  
[inline, protected, virtual]`

Destructor.

Definition at line 1592 of file locale\_facets\_nonio.h.

#### 5.604.4 Member Function Documentation

**5.604.4.1** `template<typename _CharT, typename _OutIter > _OutIter  
std::money_put< _CharT, _OutIter >::do_put ( iter_type __s, bool  
__intl, ios_base & __io, char_type __fill, long double __units )  
const [protected, virtual]`

Format and output a monetary value.

This function formats *units* as a monetary value according to moneypunct and ctype facets retrieved from io.getloc(), and writes the resulting characters to *s*. For example, the value 1001 in a US locale would write \$10.01 to *s*.

This function is a hook for derived classes to change the value returned.

#### See also

[put\(\)](#).

#### Parameters

*s* The stream to write to.

*intl* Parameter to use\_facet<moneypunct<CharT,intl> >.

*io* Source of facets and io state.

*fill* char\_type to use for padding.

*units* Place to store result of parsing.

#### Returns

Iterator after writing.

Definition at line 570 of file locale\_facets\_nonio.tcc.

References `std::ios_base::getloc()`, and `std::__ctype_abstract_base< _CharT >::widen()`.

Referenced by `std::money_put< _CharT, _OutIter >::put()`.

**5.604.4.2** `template<typename _CharT, typename _OutIter> _OutIter  
std::money_put<_CharT, _OutIter>::do_put( iter_type __s, bool  
__intl, ios_base & __io, char_type __fill, const string_type &  
__digits ) const [protected, virtual]`

Format and output a monetary value.

This function formats *digits* as a monetary value according to `moneypunct` and `ctype` facets retrieved from `io.getloc()`, and writes the resulting characters to *s*. For example, the string `1001` in a US locale would write `$10.01` to *s*.

This function is a hook for derived classes to change the value returned.

**See also**

[put\(\)](#).

**Parameters**

*s* The stream to write to.

*intl* Parameter to use `_facet<moneypunct<CharT,intl>>`.

*io* Source of facets and io state.

*fill* `char_type` to use for padding.

*units* Place to store result of parsing.

**Returns**

Iterator after writing.

Definition at line 608 of file `locale_facets_nonio.tcc`.

**5.604.4.3** `template<typename _CharT, typename _OutIter> iter_type  
std::money_put<_CharT, _OutIter>::put( iter_type __s, bool  
__intl, ios_base & __io, char_type __fill, const string_type &  
__digits ) const [inline]`

Format and output a monetary value.

This function formats *digits* as a monetary value according to `moneypunct` and `ctype` facets retrieved from `io.getloc()`, and writes the resulting characters to *s*. For example, the string `1001` in a US locale would write `$10.01` to *s*.

This function works by returning the result of [do\\_put\(\)](#).

**Parameters**

- s* The stream to write to.
- intl* Parameter to use `_facet<moneypunct<CharT,intl>>`.
- io* Source of facets and io state.
- fill* `char_type` to use for padding.
- units* Place to store result of parsing.

**Returns**

Iterator after writing.

Definition at line 1585 of file `locale_facets_nonio.h`.

References `std::money_put<_CharT, _OutIter>::do_put()`.

```
5.604.4.4 template<typename _CharT, typename _OutIter> iter_type
std::money_put<_CharT, _OutIter>::put (iter_type __s, bool
__intl, ios_base & __io, char_type __fill, long double __units)
const [inline]
```

Format and output a monetary value.

This function formats *units* as a monetary value according to `moneypunct` and `ctype` facets retrieved from `io.getloc()`, and writes the resulting characters to *s*. For example, the value 1001 in a US locale would write \$10.01 to *s*.

This function works by returning the result of [do\\_put\(\)](#).

#### 5.605.1 Detailed Description

template<typename \_CharT, bool \_Intl> class std::money\_punct< \_CharT, \_Intl >

Primary class template money\_punct.

This facet encapsulates the punctuation, grouping and other formatting features of money amount string representations.

Definition at line 934 of file `locale_facets_nonio.h`.

## 5.605.2 Member Typedef Documentation

### 5.605.2.1 `template<typename _CharT, bool _Intl> typedef _CharT std::moneypunct<_CharT, _Intl>::char_type`

Public typedefs.

Reimplemented in `std::moneypunct_byname<_CharT, _Intl>`.

Definition at line 940 of file `locale_facets_nonio.h`.

### 5.605.2.2 `template<typename _CharT, bool _Intl> typedef basic_string<_CharT> std::moneypunct<_CharT, _Intl>::string_type`

Public typedefs.

Reimplemented in `std::moneypunct_byname<_CharT, _Intl>`.

Definition at line 941 of file `locale_facets_nonio.h`.

## 5.605.3 Constructor & Destructor Documentation

### 5.605.3.1 `template<typename _CharT, bool _Intl> std::moneypunct<_CharT, _Intl>::moneypunct ( size_t __refs = 0 ) [inline, explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

#### Parameters

*refs* Passed to the base facet class.

Definition at line 963 of file `locale_facets_nonio.h`.

**5.605.3.2** `template<typename _CharT, bool _Intl> std::moneypunct<  
_CharT, _Intl>::moneypunct ( __cache_type * __cache, size_t  
__refs = 0 ) [inline, explicit]`

Constructor performs initialization.

This is an internal constructor.

#### Parameters

*cache* Cache for optimization.

*refs* Passed to the base facet class.

Definition at line 976 of file locale\_facets\_nonio.h.

**5.605.3.3** `template<typename _CharT, bool _Intl> std::moneypunct<  
_CharT, _Intl>::moneypunct ( __c_locale __cloc, const char * __s,  
size_t __refs = 0 ) [inline, explicit]`

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

#### Parameters

*cloc* The C locale.

*s* The name of a locale.

*refs* Passed to the base facet class.

Definition at line 991 of file locale\_facets\_nonio.h.

**5.605.3.4** `template<typename _CharT, bool _Intl> virtual std::moneypunct<  
_CharT, _Intl>::~~moneypunct ( ) [protected, virtual]`

Destructor.

#### 5.605.4 Member Function Documentation

**5.605.4.1** `template<typename _CharT, bool _Intl> string_type  
std::moneypunct<_CharT, _Intl>::curr_symbol ( ) const  
[inline]`

Return currency symbol string.

This function returns a `string_type` to use as a currency symbol. It does so by returning returning `moneypunct<char_type>::do_curr_symbol()`.

##### Returns

*string\_type* representing a currency symbol.

Definition at line 1061 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl>::do_curr_symbol()`.

**5.605.4.2** `template<typename _CharT, bool _Intl> char_type  
std::moneypunct<_CharT, _Intl>::decimal_point ( ) const  
[inline]`

Return decimal point character.

This function returns a `char_type` to use as a decimal point. It does so by returning returning `moneypunct<char_type>::do_decimal_point()`.

##### Returns

*char\_type* representing a decimal point.

Definition at line 1005 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl>::do_decimal_point()`.

**5.605.4.3** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct<_CharT, _Intl>::do_curr_symbol ( ) const  
[inline, protected, virtual]`

Return currency symbol string.

This function returns a `string_type` to use as a currency symbol. This function is a hook for derived classes to change the value returned.

**See also**

[`curr\_symbol\(\)`](#) for details.

**Returns**

*string\_type* representing a currency symbol.

Definition at line 1207 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct<_CharT, _Intl>::curr_symbol()`.

**5.605.4.4** `template<typename _CharT, bool _Intl> virtual char_type  
std::moneypunct<_CharT, _Intl>::do_decimal_point ( ) const  
[inline, protected, virtual]`

Return decimal point character.

Returns a `char_type` to use as a decimal point. This function is a hook for derived classes to change the value returned.

**Returns**

*char\_type* representing a decimal point.

Definition at line 1169 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct<_CharT, _Intl>::decimal_point()`.

**5.605.4.5** `template<typename _CharT, bool _Intl> virtual int  
std::moneypunct<_CharT, _Intl>::do_frac_digits ( ) const  
[inline, protected, virtual]`

Return number of digits in fraction.

This function returns the exact number of digits that make up the fractional part of a money amount. This function is a hook for derived classes to change the value returned.

**See also**

[`frac\_digits\(\)`](#) for details.

**Returns**

Number of digits in amount fraction.

Definition at line 1247 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct<\_CharT, \_Intl>::frac\_digits().

**5.605.4.6** `template<typename _CharT, bool _Intl> virtual string  
std::moneypunct<_CharT, _Intl>::do_grouping ( ) const  
[inline, protected, virtual]`

Return grouping specification.

Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

**See also**

[grouping\(\)](#) for details.

**Returns**

String representing grouping specification.

Definition at line 1194 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct<\_CharT, \_Intl>::grouping().

**5.605.4.7** `template<typename _CharT, bool _Intl> virtual pattern  
std::moneypunct<_CharT, _Intl>::do_neg_format ( ) const  
[inline, protected, virtual]`

Return pattern for money values.

This function returns a pattern describing the formatting of a negative valued money amount. This function is a hook for derived classes to change the value returned.

**See also**

[neg\\_format\(\)](#) for details.

**Returns**

Pattern for money values.

Definition at line 1275 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct<\_CharT, \_Intl>::neg\_format().

**5.605.4.8** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct<_CharT, _Intl>::do_negative_sign ( ) const  
[inline, protected, virtual]`

Return negative sign string.

This function returns a `string_type` to use as a sign for negative amounts. This function is a hook for derived classes to change the value returned.

**See also**

[negative\\_sign\(\)](#) for details.

**Returns**

*string\_type* representing a negative sign.

Definition at line 1233 of file `locale_facets_nonio.h`.

**5.605.4.9** `template<typename _CharT, bool _Intl> virtual pattern  
std::moneypunct<_CharT, _Intl>::do_pos_format ( ) const  
[inline, protected, virtual]`

Return pattern for money values.

This function returns a pattern describing the formatting of a positive valued money amount. This function is a hook for derived classes to change the value returned.

**See also**

[pos\\_format\(\)](#) for details.

**Returns**

Pattern for money values.

Definition at line 1261 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct<_CharT, _Intl>::pos_format()`.

**5.605.4.10** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct<_CharT, _Intl>::do_positive_sign ( ) const  
[inline, protected, virtual]`

Return positive sign string.

This function returns a `string_type` to use as a sign for positive amounts. This function is a hook for derived classes to change the value returned.

**See also**

[`positive\_sign\(\)`](#) for details.

**Returns**

*string\_type* representing a positive sign.

Definition at line 1220 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct<_CharT, _Intl>::positive_sign()`.

**5.605.4.11** `template<typename _CharT, bool _Intl> virtual char_type  
std::moneypunct<_CharT, _Intl>::do_thousands_sep ( ) const  
[inline, protected, virtual]`

Return thousands separator character.

Returns a `char_type` to use as a thousands separator. This function is a hook for derived classes to change the value returned.

**Returns**

*char\_type* representing a thousands separator.

Definition at line 1181 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct<_CharT, _Intl>::thousands_sep()`.

**5.605.4.12** `template<typename _CharT, bool _Intl> int std::moneypunct<  
_CharT, _Intl>::frac_digits ( ) const [inline]`

Return number of digits in fraction.

This function returns the exact number of digits that make up the fractional part of a money amount. It does so by returning `moneypunct<char_type>::do_frac_digits()`.

The fractional part of a money amount is optional. But if it is present, there must be `frac_digits()` digits.

**Returns**

Number of digits in amount fraction.

Definition at line 1111 of file locale\_facets\_nonio.h.

References `std::moneypunct<_CharT, _Intl>::do_frac_digits()`.

**5.605.4.13** `template<typename _CharT, bool _Intl> string std::moneypunct<_CharT, _Intl>::grouping ( ) const [inline]`

Return grouping specification.

This function returns a string representing groupings for the integer part of an amount. Groupings indicate where thousands separators should be inserted.

Each char in the return string is interpreted as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the `grouping()` returns `32` and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was `32`, this would put more than 50 digits into the least significant group if the character set is ASCII.

The string is returned by calling `moneypunct<char_type>::do_grouping()`.

**Returns**

string representing grouping specification.

Definition at line 1048 of file locale\_facets\_nonio.h.

References `std::moneypunct<_CharT, _Intl>::do_grouping()`.

**5.605.4.14** `template<typename _CharT, bool _Intl> pattern std::moneypunct<_CharT, _Intl>::neg_format ( ) const [inline]`

Return pattern for money values.

This function returns a pattern describing the formatting of a positive or negative valued money amount. It does so by returning `moneypunct<char_type>::do_pos_format()` or `moneypunct<char_type>::do_neg_format()`.

The pattern has 4 fields describing the ordering of symbol, sign, value, and none or space. There must be one of each in the pattern. The none and space enums may not appear in the first field and space may not appear in the final field.

The parts of a money string must appear in the order indicated by the fields of the pattern. The symbol field indicates that the value of `curr_symbol()` may be present. The sign field indicates that the value of `positive_sign()` or `negative_sign()` must be present. The value field indicates that the absolute value of the money amount is present. none indicates 0 or more whitespace characters, except at the end, where it permits no whitespace. space indicates that 1 or more whitespace characters must be present.

For example, for the US locale and `pos_format()` pattern {symbol,sign,value,none}, `curr_symbol() == '$'` `positive_sign() == '+'`, and value 10.01, and options set to force the symbol, the corresponding string is `$+10.01`.

### Returns

Pattern for money values.

Definition at line 1151 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl>::do_neg_format()`.

**5.605.4.15** `template<typename _CharT, bool _Intl> string_type  
std::moneypunct<_CharT, _Intl>::negative_sign ( ) const  
[inline]`

Return negative sign string.

This function returns a `string_type` to use as a sign for negative amounts. It does so by returning `moneypunct<char_type>::do_negative_sign()`.

If the return value contains more than one character, the first character appears in the position indicated by `neg_format()` and the remainder appear at the end of the formatted string.

### Returns

*string\_type* representing a negative sign.

Definition at line 1095 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl>::do_negative_sign()`.

**5.605.4.16** `template<typename _CharT, bool _Intl> pattern  
std::moneypunct<_CharT, _Intl>::pos_format ( ) const  
[inline]`

Return pattern for money values.

This function returns a pattern describing the formatting of a positive or negative valued money amount. It does so by returning [moneypunct<char\\_type>::do\\_pos\\_format\(\)](#) or [moneypunct<char\\_type>::do\\_neg\\_format\(\)](#).

The pattern has 4 fields describing the ordering of symbol, sign, value, and none or space. There must be one of each in the pattern. The none and space enums may not appear in the first field and space may not appear in the final field.

The parts of a money string must appear in the order indicated by the fields of the pattern. The symbol field indicates that the value of [curr\\_symbol\(\)](#) may be present. The sign field indicates that the value of [positive\\_sign\(\)](#) or [negative\\_sign\(\)](#) must be present. The value field indicates that the absolute value of the money amount is present. none indicates 0 or more whitespace characters, except at the end, where it permits no whitespace. space indicates that 1 or more whitespace characters must be present.

For example, for the US locale and [pos\\_format\(\)](#) pattern {symbol,sign,value,none}, [curr\\_symbol\(\)](#) == '\$' [positive\\_sign\(\)](#) == '+', and value 10.01, and options set to force the symbol, the corresponding string is \$+10.01.

#### Returns

Pattern for money values.

Definition at line 1147 of file locale\_facets\_nonio.h.

References [std::moneypunct<\\_CharT, \\_Intl>::do\\_pos\\_format\(\)](#).

**5.605.4.17** `template<typename _CharT, bool _Intl> string_type  
std::moneypunct<_CharT, _Intl>::positive_sign ( ) const  
[inline]`

Return positive sign string.

This function returns a `string_type` to use as a sign for positive amounts. It does so by returning [moneypunct<char\\_type>::do\\_positive\\_sign\(\)](#).

If the return value contains more than one character, the first character appears in the position indicated by [pos\\_format\(\)](#) and the remainder appear at the end of the formatted string.

**Returns**

*string\_type* representing a positive sign.

Definition at line 1078 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl>::do_positive_sign()`.

**5.605.4.18** `template<typename _CharT, bool _Intl> char_type  
std::moneypunct<_CharT, _Intl>::thousands_sep ( ) const  
[inline]`

Return thousands separator character.

This function returns a `char_type` to use as a thousands separator. It does so by returning returning `moneypunct<char_type>::do_thousands_sep()`.

**Returns**

`char_type` representing a thousands separator.

Definition at line 1018 of file `locale_facets_nonio.h`.

References `std::moneypunct<_CharT, _Intl>::do_thousands_sep()`.

### 5.606.3 Member Function Documentation

**5.606.3.1** `template<typename _CharT, bool _Intl> string_type  
std::moneypunct< _CharT, _Intl >::curr_symbol ( ) const  
[inline, inherited]`

Return currency symbol string.

This function returns a `string_type` to use as a currency symbol. It does so by returning returning `moneypunct<char_type>::do_curr_symbol()`.

#### Returns

*string\_type* representing a currency symbol.

Definition at line 1061 of file `locale_facets_nonio.h`.

References `std::moneypunct< _CharT, _Intl >::do_curr_symbol()`.

**5.606.3.2** `template<typename _CharT, bool _Intl> char_type  
std::moneypunct< _CharT, _Intl >::decimal_point ( ) const  
[inline, inherited]`

Return decimal point character.

This function returns a `char_type` to use as a decimal point. It does so by returning returning `moneypunct<char_type>::do_decimal_point()`.

#### Returns

*char\_type* representing a decimal point.

Definition at line 1005 of file `locale_facets_nonio.h`.

References `std::moneypunct< _CharT, _Intl >::do_decimal_point()`.

**5.606.3.3** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct< _CharT, _Intl >::do_curr_symbol ( ) const  
[inline, protected, virtual, inherited]`

Return currency symbol string.

This function returns a `string_type` to use as a currency symbol. This function is a hook for derived classes to change the value returned.

**See also**

[curr\\_symbol\(\)](#) for details.

**Returns**

*string\_type* representing a currency symbol.

Definition at line 1207 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct< \_CharT, \_Intl >::curr\_symbol().

**5.606.3.4** `template<typename _CharT, bool _Intl> virtual char_type  
std::moneypunct< _CharT, _Intl >::do_decimal_point ( ) const  
[inline, protected, virtual, inherited]`

Return decimal point character.

Returns a char\_type to use as a decimal point. This function is a hook for derived classes to change the value returned.

**Returns**

*char\_type* representing a decimal point.

Definition at line 1169 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct< \_CharT, \_Intl >::decimal\_point().

**5.606.3.5** `template<typename _CharT, bool _Intl> virtual int  
std::moneypunct< _CharT, _Intl >::do_frac_digits ( ) const  
[inline, protected, virtual, inherited]`

Return number of digits in fraction.

This function returns the exact number of digits that make up the fractional part of a money amount. This function is a hook for derived classes to change the value returned.

**See also**

[frac\\_digits\(\)](#) for details.

**Returns**

Number of digits in amount fraction.

Definition at line 1247 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct< \_CharT, \_Intl >::frac\_digits().

**5.606.3.6** `template<typename _CharT, bool _Intl> virtual string  
std::moneypunct< _CharT, _Intl >::do_grouping ( ) const  
[inline, protected, virtual, inherited]`

Return grouping specification.

Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

**See also**

[grouping\(\)](#) for details.

**Returns**

String representing grouping specification.

Definition at line 1194 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct< \_CharT, \_Intl >::grouping().

**5.606.3.7** `template<typename _CharT, bool _Intl> virtual pattern  
std::moneypunct< _CharT, _Intl >::do_neg_format ( ) const  
[inline, protected, virtual, inherited]`

Return pattern for money values.

This function returns a pattern describing the formatting of a negative valued money amount. This function is a hook for derived classes to change the value returned.

**See also**

[neg\\_format\(\)](#) for details.

**Returns**

Pattern for money values.

Definition at line 1275 of file locale\_facets\_nonio.h.

Referenced by std::moneypunct< \_CharT, \_Intl >::neg\_format().

**5.606.3.8** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct< _CharT, _Intl >::do_negative_sign ( ) const  
[inline, protected, virtual, inherited]`

Return negative sign string.

This function returns a `string_type` to use as a sign for negative amounts. This function is a hook for derived classes to change the value returned.

**See also**

[negative\\_sign\(\)](#) for details.

**Returns**

*string\_type* representing a negative sign.

Definition at line 1233 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct< _CharT, _Intl >::negative_sign()`.

**5.606.3.9** `template<typename _CharT, bool _Intl> virtual pattern  
std::moneypunct< _CharT, _Intl >::do_pos_format ( ) const  
[inline, protected, virtual, inherited]`

Return pattern for money values.

This function returns a pattern describing the formatting of a positive valued money amount. This function is a hook for derived classes to change the value returned.

**See also**

[pos\\_format\(\)](#) for details.

**Returns**

Pattern for money values.

Definition at line 1261 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct< _CharT, _Intl >::pos_format()`.

**5.606.3.10** `template<typename _CharT, bool _Intl> virtual string_type  
std::moneypunct< _CharT, _Intl >::do_positive_sign ( ) const  
[inline, protected, virtual, inherited]`

Return positive sign string.

This function returns a `string_type` to use as a sign for positive amounts. This function is a hook for derived classes to change the value returned.

#### See also

[`positive\_sign\(\)`](#) for details.

#### Returns

*string\_type* representing a positive sign.

Definition at line 1220 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct<_CharT, _Intl>::positive_sign()`.

**5.606.3.11** `template<typename _CharT, bool _Intl> virtual char_type  
std::moneypunct<_CharT, _Intl>::do_thousands_sep ( ) const  
[inline, protected, virtual, inherited]`

Return thousands separator character.

Returns a `char_type` to use as a thousands separator. This function is a hook for derived classes to change the value returned.

#### Returns

*char\_type* representing a thousands separator.

Definition at line 1181 of file `locale_facets_nonio.h`.

Referenced by `std::moneypunct<_CharT, _Intl>::thousands_sep()`.

**5.606.3.12** `template<typename _CharT, bool _Intl> int std::moneypunct<  
_CharT, _Intl>::frac_digits ( ) const [inline, inherited]`

Return number of digits in fraction.

This function returns the exact number of digits that make up the fractional part of a money amount. It does so by returning `moneypunct<char_type>::do_frac_digits()`.

The fractional part of a money amount is optional. But if it is present, there must be `frac_digits()` digits.

**Returns**

Number of digits in amount fraction.

Definition at line 1111 of file locale\_facets\_nonio.h.

References `std::moneypunct< _CharT, _Intl >::do_frac_digits()`.

**5.606.3.13** `template<typename _CharT, bool _Intl> string std::moneypunct< _CharT, _Intl >::grouping( ) const [inline, inherited]`

Return grouping specification.

This function returns a string representing groupings for the integer part of an amount. Groupings indicate where thousands separators should be inserted.

Each char in the return string is interpreted as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the `grouping()` returns `32` and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was `32`, this would put more than 50 digits into the least significant group if the character set is ASCII.

The string is returned by calling `moneypunct<char_type>::do_grouping()`.

**Returns**

string representing grouping specification.

Definition at line 1048 of file locale\_facets\_nonio.h.

References `std::moneypunct< _CharT, _Intl >::do_grouping()`.

**5.606.3.14** `template<typename _CharT, bool _Intl> pattern std::moneypunct< _CharT, _Intl >::neg_format( ) const [inline, inherited]`

Return pattern for money values.

This function returns a pattern describing the formatting of a positive or negative valued money amount. It does so by returning `moneypunct<char_type>::do_pos_format()` or `moneypunct<char_type>::do_neg_format()`.

The pattern has 4 fields describing the ordering of symbol, sign, value, and none or space. There must be one of each in the pattern. The none and space enums may not appear in the first field and space may not appear in the final field.

The parts of a money string must appear in the order indicated by the fields of the pattern. The symbol field indicates that the value of `curr_symbol()` may be present. The sign field indicates that the value of `positive_sign()` or `negative_sign()` must be present. The value field indicates that the absolute value of the money amount is present. none indicates 0 or more whitespace characters, except at the end, where it permits no whitespace. space indicates that 1 or more whitespace characters must be present.

For example, for the US locale and `pos_format()` pattern {symbol,sign,value,none}, `curr_symbol() == '$'` `positive_sign() == '+'`, and value 10.01, and options set to force the symbol, the corresponding string is `$+10.01`.

### Returns

Pattern for money values.

### 5.607.1 Detailed Description

`template<typename _Iterator> class std::move_iterator<_Iterator>`

Class template `move_iterator` is an iterator adapter with the same behavior as the underlying iterator except that its dereference operator implicitly converts the value returned by the underlying iterator's dereference operator to an rvalue reference. Some generic algorithms can be called with move iterators to replace copying with moving.

Definition at line 924 of file `stl_iterator.h`.

The documentation for this class was generated from the following file:

#### 5.608.1 Detailed Description

`template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<std::pair<const _Key, _Tp>>> class std::multimap<_Key, _Tp, _Compare, _Alloc>`

A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time. Meets the requirements of a [container](#), a [reversible container](#), and an [associative container](#) (using equivalent keys). For a `multimap<Key, T>` the `key_type` is `Key`, the `mapped_type` is `T`, and the `value_type` is `std::pair<const Key,T>`.

Multimaps support bidirectional iterators.

The private tree data is declared exactly the same way for `map` and `multimap`; the distinction is made entirely in how the tree functions are called (`*_unique` versus `*_equal`, same as the standard).

Definition at line 88 of file `stl_multimap.h`.

## 5.608.2 Constructor & Destructor Documentation

**5.608.2.1** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> std::multimap< _Key, _Tp, _Compare, _Alloc  
>::multimap ( ) [inline]`

Default constructor creates no elements.

Definition at line 150 of file stl\_multimap.h.

**5.608.2.2** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> std::multimap< _Key, _Tp, _Compare, _Alloc  
>::multimap ( const _Compare & __comp, const allocator_type &  
__a = allocator_type() ) [inline, explicit]`

Creates a multimap with no elements.

### Parameters

*comp* A comparison object.

*a* An allocator object.

Definition at line 159 of file stl\_multimap.h.

**5.608.2.3** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> std::multimap< _Key, _Tp, _Compare, _Alloc  
>::multimap ( const multimap< _Key, _Tp, _Compare, _Alloc > &  
__x ) [inline]`

Multimap copy constructor.

### Parameters

*x* A multimap of identical element and allocator types.

The newly-created multimap uses a copy of the allocation object used by *x*.

Definition at line 170 of file stl\_multimap.h.

**5.608.2.4** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> std::multimap< _Key, _Tp, _Compare, _Alloc  
>::multimap ( multimap< _Key, _Tp, _Compare, _Alloc > && __x  
) [inline]`

Multimap move constructor.

#### Parameters

*x* A multimap of identical element and allocator types.

The newly-created multimap contains the exact contents of *x*. The contents of *x* are a valid, but unspecified multimap.

Definition at line 181 of file `std_multimap.h`.

**5.608.2.5** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> std::multimap< _Key, _Tp, _Compare, _Alloc  
>::multimap ( initializer_list< value_type > __l, const _Compare  
& __comp = _Compare(), const allocator_type & __a =  
allocator_type() ) [inline]`

Builds a multimap from an [initializer\\_list](#).

#### Parameters

*l* An [initializer\\_list](#).

*comp* A comparison functor.

*a* An allocator object.

Create a multimap consisting of copies of the elements from the [initializer\\_list](#). This is linear in *N* if the list is already sorted, and *N*log*N* otherwise (where *N* is `__l.size()`).

Definition at line 194 of file `std_multimap.h`.

**5.608.2.6** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> template<typename _InputIterator >  
std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (   
_InputIterator __first, _InputIterator __last ) [inline]`

Builds a multimap from a range.

#### Parameters

*first* An input iterator.

*last* An input iterator.

Create a multimap consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 211 of file stl\_multimap.h.

```
5.608.2.7 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp> >> template<typename _InputIterator >
std::multimap< _Key, _Tp, _Compare, _Alloc >::multimap (
_InputIterator __first, _InputIterator __last, const _Compare &
__comp, const allocator_type & __a = allocator_type())
[inline]
```

Builds a multimap from a range.

#### Parameters

*first* An input iterator.

*last* An input iterator.

*comp* A comparison functor.

*a* An allocator object.

Create a multimap consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 227 of file stl\_multimap.h.

### 5.608.3 Member Function Documentation

```
5.608.3.1 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp> >> iterator std::multimap< _Key, _Tp, _Compare,
_Alloc >::begin () [inline]
```

Returns a read/write iterator that points to the first pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 306 of file stl\_multimap.h.

**5.608.3.2** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::begin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 315 of file stl\_multimap.h.

**5.608.3.3** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::cbegin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 379 of file stl\_multimap.h.

**5.608.3.4** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::cend ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 388 of file stl\_multimap.h.

**5.608.3.5** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> void std::multimap< _Key, _Tp, _Compare, _Alloc  
>::clear ( ) [inline]`

Erases all elements in a multimap. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 628 of file stl\_multimap.h.

Referenced by `std::multimap< _Key, _Tp, _Compare, _Alloc >::operator=()`.

**5.608.3.6** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> size_type std::multimap< _Key, _Tp, _Compare,  
_Alloc >::count ( const key_type & __x ) const [inline]`

Finds the number of elements with given key.

**Parameters**

*x* Key of (key, value) pairs to be located.

**Returns**

Number of elements with specified key.

Definition at line 685 of file `stl_multimap.h`.

**5.608.3.7** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_reverse_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::crbegin ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to the last pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 397 of file `stl_multimap.h`.

**5.608.3.8** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_reverse_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::crend ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to one before the first pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 406 of file `stl_multimap.h`.

**5.608.3.9** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> bool std::multimap< _Key, _Tp, _Compare, _Alloc  
>::empty ( ) const [inline]`

Returns true if the multimap is empty.

Definition at line 413 of file `stl_multimap.h`.

**5.608.3.10** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_iterator std::multimap<_Key, _Tp,  
_Compare, _Alloc >::end ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 333 of file `stl_multimap.h`.

**5.608.3.11** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> iterator std::multimap<_Key, _Tp, _Compare,  
_Alloc >::end ( ) [inline]`

Returns a read/write iterator that points one past the last pair in the multimap. Iteration is done in ascending order according to the keys.

Definition at line 324 of file `stl_multimap.h`.

**5.608.3.12** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> std::pair<iterator, iterator> std::multimap<_Key,  
_Tp, _Compare, _Alloc >::equal_range ( const key_type & __x )  
[inline]`

Finds a subsequence matching given key.

#### Parameters

*x* Key of (key, value) pairs to be located.

#### Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

Definition at line 752 of file `stl_multimap.h`.

**5.608.3.13** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> std::pair<const_iterator, const_iterator>  
std::multimap< _Key, _Tp, _Compare, _Alloc >::equal_range (  
const key_type & __x ) const [inline]`

Finds a subsequence matching given key.

#### Parameters

*x* Key of (key, value) pairs to be located.

#### Returns

Pair of read-only (constant) iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

Definition at line 769 of file stl\_multimap.h.

**5.608.3.14** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> iterator std::multimap< _Key, _Tp, _Compare,  
_Alloc >::erase ( const_iterator __position ) [inline]`

Erases an element from a multimap.

#### Parameters

*position* An iterator pointing to the element to be erased.

#### Returns

An iterator pointing to the element immediately following *position* prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from a multimap. Note that this function only erases the element, and that if the element is itself a pointer,

the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 534 of file stl\_multimap.h.

**5.608.3.15** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> size_type std::multimap< _Key, _Tp, _Compare,  
_Alloc >::erase ( const key_type & __x ) [inline]`

Erases elements according to the provided key.

#### Parameters

*x* Key of element to be erased.

#### Returns

The number of elements erased.

This function erases all elements located by the given key from a multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 564 of file stl\_multimap.h.

**5.608.3.16** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> iterator std::multimap< _Key, _Tp, _Compare,  
_Alloc >::erase ( const_iterator __first, const_iterator __last )  
[inline]`

Erases a [first,last) range of elements from a multimap.

#### Parameters

*first* Iterator pointing to the start of the range to be erased.

*last* Iterator pointing to the end of the range to be erased.

#### Returns

The iterator *last*.

This function erases a sequence of elements from a multimap. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 584 of file stl\_multimap.h.

**5.608.3.17** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> iterator std::multimap< _Key, _Tp, _Compare,  
_Alloc >::find ( const key_type & __x ) [inline]`

Tries to locate an element in a multimap.

#### Parameters

*x* Key of (key, value) pair to be located.

#### Returns

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 661 of file stl\_multimap.h.

**5.608.3.18** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::find ( const key_type & __x ) const  
[inline]`

Tries to locate an element in a multimap.

#### Parameters

*x* Key of (key, value) pair to be located.

#### Returns

Read-only (constant) iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns a constant iterator pointing to the sought after pair. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 676 of file `stl_multimap.h`.

**5.608.3.19** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> allocator_type std::multimap< _Key, _Tp,  
_Compare, _Alloc >::get_allocator ( ) const [inline]`

Get a copy of the memory allocation object.

Definition at line 296 of file `stl_multimap.h`.

**5.608.3.20** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> iterator std::multimap< _Key, _Tp, _Compare,  
_Alloc >::insert ( const value_type & __x ) [inline]`

Inserts a [std::pair](#) into the multimap.

#### Parameters

*x* Pair to be inserted (see [std::make\\_pair](#) for easy creation of pairs).

#### Returns

An iterator that points to the inserted (key,value) pair.

This function inserts a (key, value) pair into the multimap. Contrary to a [std::map](#) the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted.

Insertion requires logarithmic time.

Definition at line 440 of file `stl_multimap.h`.

Referenced by `std::multimap< _Key, _Tp, _Compare, _Alloc >::operator=()`.

**5.608.3.21** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> iterator std::multimap< _Key, _Tp, _Compare,  
_Alloc >::insert ( const_iterator __position, const value_type &  
__x ) [inline]`

Inserts a `std::pair` into the multimap.

#### Parameters

- position* An iterator that serves as a hint as to where the pair should be inserted.  
*x* Pair to be inserted (see `std::make_pair` for easy creation of pairs).

#### Returns

An iterator that points to the inserted (key,value) pair.

This function inserts a (key, value) pair into the multimap. Contrary to a `std::map` the multimap does not rely on unique keys and thus multiple pairs with the same key can be inserted. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt07ch17.htm>

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 474 of file `stl_multimap.h`.

**5.608.3.22** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> template<typename _InputIterator > void  
std::multimap< _Key, _Tp, _Compare, _Alloc >::insert (  
_InputIterator __first, _InputIterator __last ) [inline]`

A template function that attempts to insert a range of elements.

#### Parameters

- first* Iterator pointing to the start of the range to be inserted.  
*last* Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 501 of file `stl_multimap.h`.

**5.608.3.23** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> void std::multimap< _Key, _Tp, _Compare, _Alloc  
>::insert ( initializer_list< value_type > __l ) [inline]`

Attempts to insert a list of std::pairs into the multimap.

#### Parameters

*list* A std::initializer\_list<value\_type> of pairs to be inserted.

Complexity similar to that of the range constructor.

Definition at line 513 of file stl\_multimap.h.

References std::multimap< \_Key, \_Tp, \_Compare, \_Alloc >::insert().

Referenced by std::multimap< \_Key, \_Tp, \_Compare, \_Alloc >::insert().

**5.608.3.24** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> key_compare std::multimap< _Key, _Tp,  
_Compare, _Alloc >::key_comp ( ) const [inline]`

Returns the key comparison object out of which the multimap was constructed.

Definition at line 637 of file stl\_multimap.h.

**5.608.3.25** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> iterator std::multimap< _Key, _Tp, _Compare,  
_Alloc >::lower_bound ( const key_type & __x ) [inline]`

Finds the beginning of a subsequence matching given key.

#### Parameters

*x* Key of (key, value) pair to be located.

#### Returns

Iterator pointing to first element equal to or greater than key, or [end\(\)](#).

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or [end\(\)](#) if no such element exists.

Definition at line 700 of file stl\_multimap.h.

**5.608.3.26** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::lower_bound ( const key_type & __x ) const  
[inline]`

Finds the beginning of a subsequence matching given key.

#### Parameters

*x* Key of (key, value) pair to be located.

#### Returns

Read-only (constant) iterator pointing to first element equal to or greater than key,  
or `end()`.

This function returns the first element of a subsequence of elements that matches the  
given key. If unsuccessful the iterator will point to the next greatest element or, if no  
such greater element exists, to `end()`.

Definition at line 715 of file stl\_multimap.h.

**5.608.3.27** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> size_type std::multimap< _Key, _Tp, _Compare,  
_Alloc >::max_size ( ) const [inline]`

Returns the maximum size of the multimap.

Definition at line 423 of file stl\_multimap.h.

**5.608.3.28** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> multimap& std::multimap< _Key, _Tp, _Compare,  
_Alloc >::operator= ( initializer_list< value_type > __l )  
[inline]`

Multimap list assignment operator.

**Parameters**

*l* An [initializer\\_list](#).

This function fills a multimap with copies of the elements in the initializer list *l*.

Note that the assignment completely changes the multimap and that the resulting multimap's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 286 of file `std_multimap.h`.

References `std::multimap< _Key, _Tp, _Compare, _Alloc >::clear()`, and `std::multimap< _Key, _Tp, _Compare, _Alloc >::insert()`.

**5.608.3.29** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> multimap& std::multimap< _Key, _Tp, _Compare,  
_Alloc >::operator= ( multimap< _Key, _Tp, _Compare, _Alloc >  
&& __x ) [inline]`

Multimap move assignment operator.

**Parameters**

*x* A multimap of identical element and allocator types.

The contents of *x* are moved into this multimap (without copying). *x* is a valid, but unspecified multimap.

Definition at line 265 of file `std_multimap.h`.

References `std::multimap< _Key, _Tp, _Compare, _Alloc >::clear()`, and `std::multimap< _Key, _Tp, _Compare, _Alloc >::swap()`.

**5.608.3.30** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp>>> multimap& std::multimap< _Key, _Tp, _Compare,  
_Alloc >::operator= ( const multimap< _Key, _Tp, _Compare,  
_Alloc > & __x ) [inline]`

Multimap assignment operator.

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

**Parameters**

*x* A multimap of identical element and allocator types.

All the elements of *x* are copied, but unlike the copy constructor, the allocator object is not copied.

Definition at line 250 of file stl\_multimap.h.

**5.608.3.31** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> reverse_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::rbegin ( ) [inline]`

Returns a read/write reverse iterator that points to the last pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 342 of file stl\_multimap.h.

**5.608.3.32** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_reverse_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::rbegin ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to the last pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 351 of file stl\_multimap.h.

**5.608.3.33** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> reverse_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::rend ( ) [inline]`

Returns a read/write reverse iterator that points to one before the first pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 360 of file stl\_multimap.h.

**5.608.3.34** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> const_reverse_iterator std::multimap< _Key, _Tp,  
_Compare, _Alloc >::rend ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to one before the first pair in the multimap. Iteration is done in descending order according to the keys.

Definition at line 369 of file stl\_multimap.h.

**5.608.3.35** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> size_type std::multimap< _Key, _Tp, _Compare,  
_Alloc >::size ( ) const [inline]`

Returns the size of the multimap.

Definition at line 418 of file stl\_multimap.h.

**5.608.3.36** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> void std::multimap< _Key, _Tp, _Compare, _Alloc  
>::swap ( multimap< _Key, _Tp, _Compare, _Alloc > & __x )  
[inline]`

Swaps data with another multimap.

#### Parameters

*x* A multimap of the same element and allocator types.

This exchanges the elements between two multimaps in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(m1,m2)` will feed to this function.

Definition at line 618 of file stl\_multimap.h.

Referenced by `std::multimap< _Key, _Tp, _Compare, _Alloc >::operator=()`, and `std::swap()`.

**5.608.3.37** `template<typename _Key, typename _Tp, typename _Compare =  
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const  
_Key, _Tp> >> iterator std::multimap< _Key, _Tp, _Compare,  
_Alloc >::upper_bound ( const key_type & __x ) [inline]`

Finds the end of a subsequence matching given key.

#### Parameters

*x* Key of (key, value) pair to be located.

**Returns**

Iterator pointing to the first element greater than key, or [end\(\)](#).

Definition at line 725 of file `stl_multimap.h`.

```
5.608.3.38 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> const_iterator std::multimap<_Key, _Tp,
_Compare, _Alloc>::upper_bound (const key_type & __x) const
[inline]
```

Finds the end of a subsequence matching given key.

**Parameters**

*x* Key of (key, value) pair to be located.

**Returns**

Read-only (constant) iterator pointing to first iterator greater than key, or [end\(\)](#).

Definition at line 735 of file `stl_multimap.h`.

```
5.608.3.39 template<typename _Key, typename _Tp, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<std::pair<const
_Key, _Tp>>> value_compare std::multimap<_Key, _Tp,
_Compare, _Alloc>::value_comp () const [inline]
```

Returns a value comparison object, built from the key comparison object out of which the multimap was constructed.

Definition at line 645 of file `stl_multimap.h`.

### 5.610.1 Detailed Description

**template<typename \_Key, typename \_Compare = std::less<\_Key>, typename \_Alloc = std::allocator<\_Key>> class std::multiset<\_Key, \_Compare, \_Alloc>**

A standard container made up of elements, which can be retrieved in logarithmic time. Meets the requirements of a [container](#), a [reversible container](#), and an [associative container](#) (using equivalent keys). For a multiset<Key> the key\_type and value\_type are Key.

Multisets support bidirectional iterators.

## 5.610 `std::multiset<_Key, _Compare, _Alloc >` Class Template Reference 3008

---

The private tree data is declared exactly the same way for set and multiset; the distinction is made entirely in how the tree functions are called (\*\_unique versus \*\_equal, same as the standard).

Definition at line 86 of file `stl_multiset.h`.

### 5.610.2 Constructor & Destructor Documentation

**5.610.2.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::multiset<_Key,  
_Compare, _Alloc>::multiset ( ) [inline]`

Default constructor creates no elements.

Definition at line 131 of file `stl_multiset.h`.

**5.610.2.2** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::multiset<_Key,  
_Compare, _Alloc>::multiset ( const _Compare & __comp, const  
allocator_type & __a = allocator_type() ) [inline,  
explicit]`

Creates a multiset with no elements.

#### Parameters

*comp* Comparator to use.

*a* An allocator object.

Definition at line 140 of file `stl_multiset.h`.

**5.610.2.3** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_InputIterator > std::multiset<_Key, _Compare, _Alloc>::multiset  
( _InputIterator __first, _InputIterator __last ) [inline]`

Builds a multiset from a range.

#### Parameters

*first* An input iterator.

## 5.610 std::multiset<\_Key, \_Compare, \_Alloc> Class Template Reference 3009

---

*last* An input iterator.

Create a multiset consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 154 of file stl\_multiset.h.

```
5.610.2.4 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> template<typename
_InputIterator > std::multiset<_Key, _Compare, _Alloc>::multiset
(_InputIterator __first, _InputIterator __last, const _Compare &
__comp, const allocator_type & __a = allocator_type())
[inline]
```

Builds a multiset from a range.

### Parameters

*first* An input iterator.

*last* An input iterator.

*comp* A comparison functor.

*a* An allocator object.

Create a multiset consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 170 of file stl\_multiset.h.

```
5.610.2.5 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> std::multiset<_Key,
_Compare, _Alloc>::multiset (const multiset<_Key, _Compare,
_Alloc> & __x) [inline]
```

Multiset copy constructor.

### Parameters

*x* A multiset of identical element and allocator types.

The newly-created multiset uses a copy of the allocation object used by *x*.

Definition at line 183 of file stl\_multiset.h.

## 5.610 std::multiset<\_Key, \_Compare, \_Alloc> Class Template Reference 3010

**5.610.2.6** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::multiset<_Key,  
_Compare, _Alloc>::multiset ( multiset<_Key, _Compare, _Alloc>  
&& __x ) [inline]`

Multiset move constructor.

### Parameters

*x* A multiset of identical element and allocator types.

The newly-created multiset contains the exact contents of *x*. The contents of *x* are a valid, but unspecified multiset.

Definition at line 194 of file `stl_multiset.h`.

**5.610.2.7** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::multiset<_Key,  
_Compare, _Alloc>::multiset ( initializer_list<value_type> __l,  
const _Compare & __comp = _Compare(), const allocator_type &  
__a = allocator_type() ) [inline]`

Builds a multiset from an [initializer\\_list](#).

### Parameters

*l* An [initializer\\_list](#).

*comp* A comparison functor.

*a* An allocator object.

Create a multiset consisting of copies of the elements from the list. This is linear in *N* if the list is already sorted, and *NlogN* otherwise (where *N* is *l.size()*).

Definition at line 207 of file `stl_multiset.h`.

## 5.610.3 Member Function Documentation

**5.610.3.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc>::begin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first element in the multiset. Iteration is done in ascending order according to the keys.

## **5.610 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 3011**

Definition at line 287 of file stl\_multiset.h.

**5.610.3.2** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::cbegin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 324 of file stl\_multiset.h.

**5.610.3.3** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::cend ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 333 of file stl\_multiset.h.

**5.610.3.4** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::multiset< _Key,  
_Compare, _Alloc >::clear ( ) [inline]`

Erases all elements in a multiset. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 557 of file stl\_multiset.h.

Referenced by std::multiset< \_Key, \_Compare, \_Alloc >::operator=().

**5.610.3.5** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::multiset<  
_Key, _Compare, _Alloc >::count ( const key_type & __x ) const  
[inline]`

Finds the number of elements with given key.

### **Parameters**

*x* Key of elements to be located.

## **5.610 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 3012**

---

### **Returns**

Number of elements with specified key.

Definition at line 568 of file stl\_multiset.h.

**5.610.3.6** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::multiset< _Key, _Compare, _Alloc >::crbegin ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 342 of file stl\_multiset.h.

**5.610.3.7** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::multiset< _Key, _Compare, _Alloc >::crend ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 351 of file stl\_multiset.h.

**5.610.3.8** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> bool std::multiset< _Key,  
_Compare, _Alloc >::empty ( ) const [inline]`

Returns true if the set is empty.

Definition at line 357 of file stl\_multiset.h.

**5.610.3.9** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::end ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last element in the multiset. Iteration is done in ascending order according to the keys.

Definition at line 296 of file stl\_multiset.h.

**5.610.3.10** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::pair<iterator,  
iterator> std::multiset<_Key, _Compare, _Alloc>::equal_range(  
const key_type & __x ) [inline]`

Finds a subsequence matching given key.

**Parameters**

*x* Key to be located.

**Returns**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 648 of file stl\_multiset.h.

**5.610.3.11** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::pair<const_iterator,  
const_iterator> std::multiset<_Key, _Compare, _Alloc  
>::equal_range( const key_type & __x ) const [inline]`

Finds a subsequence matching given key.

**Parameters**

*x* Key to be located.

**Returns**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

## 5.610 std::multiset<\_Key, \_Compare, \_Alloc > Class Template Reference 3014

---

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 652 of file stl\_multiset.h.

**5.610.3.12** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::erase ( const_iterator __position )  
[inline]`

Erases an element from a multiset.

### Parameters

*position* An iterator pointing to the element to be erased.

### Returns

An iterator pointing to the element immediately following *position* prior to the element being erased. If no such element exists, [end\(\)](#) is returned.

This function erases an element, pointed to by the given iterator, from a multiset. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 480 of file stl\_multiset.h.

**5.610.3.13** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::multiset<  
_Key, _Compare, _Alloc >::erase ( const key_type & __x )  
[inline]`

Erases elements according to the provided key.

### Parameters

*x* Key of element to be erased.

### Returns

The number of elements erased.

## 5.610 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 3015

This function erases all elements located by the given key from a multiset. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 510 of file stl\_multiset.h.

```
5.610.3.14 template<typename _Key, typename _Compare = std::less<_Key>,
 typename _Alloc = std::allocator<_Key>> iterator std::multiset<
 _Key, _Compare, _Alloc >::erase (const_iterator __first,
 const_iterator __last) [inline]
```

Erases a [first,last) range of elements from a multiset.

### Parameters

*first* Iterator pointing to the start of the range to be erased.

*last* Iterator pointing to the end of the range to be erased.

### Returns

The iterator *last*.

This function erases a sequence of elements from a multiset. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 530 of file stl\_multiset.h.

```
5.610.3.15 template<typename _Key, typename _Compare = std::less<_Key>,
 typename _Alloc = std::allocator<_Key>> iterator std::multiset<
 _Key, _Compare, _Alloc >::find (const key_type & __x)
 [inline]
```

Tries to locate an element in a set.

### Parameters

*x* Element to be located.

### Returns

Iterator pointing to sought-after element, or [end\(\)](#) if not found.

## 5.610 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 3016

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 586 of file `stl_multiset.h`.

```
5.610.3.16 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> const_iterator
std::multiset< _Key, _Compare, _Alloc >::find (const key_type &
__x) const [inline]
```

Tries to locate an element in a set.

### Parameters

`x` Element to be located.

### Returns

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 590 of file `stl_multiset.h`.

```
5.610.3.17 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> allocator_type
std::multiset< _Key, _Compare, _Alloc >::get_allocator () const
[inline]
```

Returns the memory allocation object.

Definition at line 278 of file `stl_multiset.h`.

```
5.610.3.18 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> iterator std::multiset<
_Key, _Compare, _Alloc >::insert (const value_type & __x)
[inline]
```

Inserts an element into the multiset.

## 5.610 `std::multiset<_Key, _Compare, _Alloc>` Class Template Reference 3017

---

### Parameters

*x* Element to be inserted.

### Returns

An iterator that points to the inserted element.

This function inserts an element into the multiset. Contrary to a [std::set](#) the multiset does not rely on unique keys and thus multiple copies of the same element can be inserted.

Insertion requires logarithmic time.

Definition at line 398 of file `stl_multiset.h`.

Referenced by `std::multiset<_Key, _Compare, _Alloc>::operator=()`.

```
5.610.3.19 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> iterator std::multiset<
_Key, _Compare, _Alloc>::insert (const_iterator __position, const
value_type & __x) [inline]
```

Inserts an element into the multiset.

### Parameters

*position* An iterator that serves as a hint as to where the element should be inserted.

*x* Element to be inserted.

### Returns

An iterator that points to the inserted element.

This function inserts an element into the multiset. Contrary to a [std::set](#) the multiset does not rely on unique keys and thus multiple copies of the same element can be inserted.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt07ch17.html> for more on *hinting*.

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 428 of file `stl_multiset.h`.

**5.610.3.20** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_InputIterator > void std::multiset<_Key, _Compare, _Alloc  
>::insert ( _InputIterator __first, _InputIterator __last )  
[inline]`

A template function that tries to insert a range of elements.

#### Parameters

*first* Iterator pointing to the start of the range to be inserted.

*last* Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 447 of file stl\_multiset.h.

**5.610.3.21** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::multiset<  
_Key, _Compare, _Alloc>::insert ( initializer_list< value_type >  
__l ) [inline]`

Attempts to insert a list of elements into the multiset.

#### Parameters

*list* A std::initializer\_list<value\_type> of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 459 of file stl\_multiset.h.

References std::multiset<\_Key, \_Compare, \_Alloc>::insert().

Referenced by std::multiset<\_Key, \_Compare, \_Alloc>::insert().

**5.610.3.22** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> key_compare  
std::multiset<_Key, _Compare, _Alloc>::key_comp ( ) const  
[inline]`

Returns the comparison object.

Definition at line 270 of file stl\_multiset.h.

**5.610.3.23** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::lower_bound ( const key_type & __x )  
[inline]`

Finds the beginning of a subsequence matching given key.

**Parameters**

*x* Key to be located.

**Returns**

Iterator pointing to first element equal to or greater than key, or `end()`.

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or `end()` if no such element exists.

Definition at line 607 of file `stl_multiset.h`.

**5.610.3.24** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> const_iterator  
std::multiset< _Key, _Compare, _Alloc >::lower_bound ( const  
key_type & __x ) const [inline]`

Finds the beginning of a subsequence matching given key.

**Parameters**

*x* Key to be located.

**Returns**

Iterator pointing to first element equal to or greater than key, or `end()`.

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or `end()` if no such element exists.

Definition at line 611 of file `stl_multiset.h`.

## 5.610 `std::multiset<_Key, _Compare, _Alloc>` Class Template Reference 3020

**5.610.3.25** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::multiset<  
_Key, _Compare, _Alloc>::max_size ( ) const [inline]`

Returns the maximum size of the set.

Definition at line 367 of file `stl_multiset.h`.

**5.610.3.26** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> multiset&  
std::multiset<_Key, _Compare, _Alloc>::operator= ( multiset<  
_Key, _Compare, _Alloc> && __x ) [inline]`

Multiset move assignment operator.

### Parameters

*x* A multiset of identical element and allocator types.

The contents of *x* are moved into this multiset (without copying). *x* is a valid, but unspecified multiset.

Definition at line 237 of file `stl_multiset.h`.

References `std::multiset<_Key, _Compare, _Alloc>::clear()`, and `std::multiset<_Key, _Compare, _Alloc>::swap()`.

**5.610.3.27** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> multiset&  
std::multiset<_Key, _Compare, _Alloc>::operator= ( const  
multiset<_Key, _Compare, _Alloc> & __x ) [inline]`

Multiset assignment operator.

### Parameters

*x* A multiset of identical element and allocator types.

All the elements of *x* are copied, but unlike the copy constructor, the allocator object is not copied.

Definition at line 222 of file `stl_multiset.h`.

**5.610.3.28** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> multiset&  
std::multiset< _Key, _Compare, _Alloc >::operator= (  
initializer_list< value_type > __l ) [inline]`

Multiset list assignment operator.

**Parameters**

*l* An [initializer\\_list](#).

This function fills a multiset with copies of the elements in the initializer list *l*.

Note that the assignment completely changes the multiset and that the resulting multiset's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 258 of file `stl_multiset.h`.

References `std::multiset< _Key, _Compare, _Alloc >::clear()`, and `std::multiset< _Key, _Compare, _Alloc >::insert()`.

**5.610.3.29** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::multiset< _Key, _Compare, _Alloc >::rbegin ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 305 of file `stl_multiset.h`.

**5.610.3.30** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::multiset< _Key, _Compare, _Alloc >::rend ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the multiset. Iteration is done in descending order according to the keys.

Definition at line 314 of file `stl_multiset.h`.

**5.610.3.31** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::multiset<  
_Key, _Compare, _Alloc >::size ( ) const [inline]`

## 5.610 std::multiset< \_Key, \_Compare, \_Alloc > Class Template Reference 3022

Returns the size of the set.

Definition at line 362 of file stl\_multiset.h.

```
5.610.3.32 template<typename _Key, typename _Compare = std::less<_Key>,
 typename _Alloc = std::allocator<_Key>> void std::multiset<
 _Key, _Compare, _Alloc >::swap (multiset< _Key, _Compare,
 _Alloc > & __x) [inline]
```

Swaps data with another multiset.

### Parameters

*x* A multiset of the same element and allocator types.

This exchanges the elements between two multisets in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(s1,s2)` will feed to this function.

Definition at line 382 of file stl\_multiset.h.

Referenced by `std::multiset< _Key, _Compare, _Alloc >::operator=()`, and `std::swap()`.

```
5.610.3.33 template<typename _Key, typename _Compare = std::less<_Key>,
 typename _Alloc = std::allocator<_Key>> const_iterator
 std::multiset< _Key, _Compare, _Alloc >::upper_bound (const
 key_type & __x) const [inline]
```

Finds the end of a subsequence matching given key.

### Parameters

*x* Key to be located.

### Returns

Iterator pointing to the first element greater than key, or `end()`.

Definition at line 627 of file stl\_multiset.h.

## 5.610 std::multiset<\_Key, \_Compare, \_Alloc > Class Template Reference 3023

---

**5.610.3.34** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::multiset<  
_Key, _Compare, _Alloc >::upper_bound ( const key_type & __x )  
[inline]`

Finds the end of a subsequence matching given key.

### Parameters

*x* Key to be located.

### Returns

Iterator pointing to the first element greater than key, or [end\(\)](#).

Definition at line 623 of file stl\_multiset.h.

**5.610.3.35** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> value_compare  
std::multiset<_Key, _Compare, _Alloc >::value_comp ( ) const  
[inline]`

Returns the comparison object.

Definition at line 274 of file stl\_multiset.h.

## 5.610.4 Friends And Related Function Documentation

**5.610.4.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename _K1  
, typename _C1, typename _A1 > bool operator< ( const multiset<  
_K1, _C1, _A1 > &, const multiset<_K1, _C1, _A1 > & )  
[friend]`

Finds a subsequence matching given key.

### Parameters

*x* Key to be located.

### Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

**5.610.4.2** `template<typename _Key, typename _Compare = std::less<_Key>,`  
`typename _Alloc = std::allocator<_Key>> template<typename`  
`_K1, typename _C1, typename _A1 > bool operator==( const`  
`multiset<_K1, _C1, _A1 > &, const multiset<_K1, _C1, _A1 > &`  
`) [friend]`

Finds a subsequence matching given key.

#### Parameters

*x* Key to be located.

#### Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

### 5.613.1 Detailed Description

`template<typename _IntType = int> class std::negative_binomial_distribution<_IntType>`

A [negative\\_binomial\\_distribution](#) random number distribution. The formula for the negative binomial probability mass function is  $p(i) = \binom{n}{i} p^i (1-p)^{t-i}$  where  $t$  and  $p$  are the parameters of the distribution.

Definition at line 3769 of file random.h.

### 5.613.2 Member Typedef Documentation

5.613.2.1 `template<typename _IntType = int> typedef _IntType  
std::negative_binomial_distribution<_IntType>::result_type`

The type of the range of the distribution.

Definition at line 3776 of file random.h.

### 5.613.3 Member Function Documentation

5.613.3.1 `template<typename _IntType = int> _IntType  
std::negative_binomial_distribution<_IntType>::k ( ) const  
[inline]`

Return the  $k$  parameter of the distribution.

Definition at line 3827 of file random.h.

5.613.3.2 `template<typename _IntType = int> result_type  
std::negative_binomial_distribution<_IntType>::max ( ) const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 3863 of file random.h.

**5.613.3.3** `template<typename _IntType = int> result_type  
std::negative_binomial_distribution<_IntType>::min ( ) const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3856 of file random.h.

**5.613.3.4** `template<typename _IntType> template<typename  
_UniformRandomNumberGenerator> negative_  
binomial_distribution<_IntType>::result_type  
std::negative_binomial_distribution<_IntType>::operator() (  
_UniformRandomNumberGenerator & __urng )`

Generating functions.

Definition at line 1083 of file random.tcc.

**5.613.3.5** `template<typename _IntType = int> double  
std::negative_binomial_distribution<_IntType>::p ( ) const  
[inline]`

Return the  $p$  parameter of the distribution.

Definition at line 3834 of file random.h.

**5.613.3.6** `template<typename _IntType = int> param_type  
std::negative_binomial_distribution<_IntType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 3841 of file random.h.

**5.613.3.7** `template<typename _IntType = int> void std::negative_binomial_  
distribution<_IntType>::param ( const param_type & __param )  
[inline]`

Sets the parameter set of the distribution.

**Parameters**

***\_\_param*** The new parameter set of the distribution.

Definition at line 3849 of file random.h.

**5.613.3.8** `template<typename _IntType = int> void  
std::negative_binomial_distribution< _IntType >::reset ( )  
[inline]`

Resets the distribution state.

Definition at line 3820 of file random.h.

References std::gamma\_distribution< \_RealType >::reset().

**5.613.4 Friends And Related Function Documentation**

**5.613.4.1** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_ostream<_CharT,  
_Traits>& operator<< ( std::basic_ostream< _CharT, _Traits > &  
, const std::negative_binomial_distribution< _IntType1 > & )  
[friend]`

Inserts a negative\_binomial\_distribution random number distribution `__x` into the output stream `__os`.

**Parameters**

***\_\_os*** An output stream.

***\_\_x*** A negative\_binomial\_distribution random number distribution.

**Returns**

The output stream with the state of `__x` inserted or in an error state.

5.613.4.2 `template<typename _IntType = int> template<typename _IntType1  
> bool operator==( const std::negative_binomial_distribution<  
_IntType1 > & __d1, const std::negative_binomial_distribution<  
_IntType1 > & __d2 ) [friend]`

Return true if two negative binomial distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 3885 of file `random.h`.

5.613.4.3 `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_istream<_CharT,  
_Traits>& operator>> ( std::basic_istream<_CharT, _Traits > & ,  
std::negative_binomial_distribution<_IntType1 > & ) [friend]`

Extracts a `negative_binomial_distribution` random number distribution `__x` from the input stream `__is`.

#### Parameters

- `__is` An input stream.
- `__x` A `negative_binomial_distribution` random number generator engine.

#### Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

- [random.h](#)

- `template<typename _RealType1>`  
`bool operator==(const std::normal_distribution<_RealType1> &__d1, const std::normal_distribution<_RealType1> &__d2)`
- `template<typename _RealType1, typename _CharT, typename _Traits>`  
`std::basic_istream<_CharT, _Traits> & operator>> (std::basic_istream<_CharT, _Traits> &, std::normal_distribution<_RealType1> &)`

#### 5.616.1 Detailed Description

`template<typename _RealType = double> class std::normal_distribution<_RealType>`

A normal continuous distribution for random numbers. The formula for the normal probability density function is

$$p(x|\mu, \sigma) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{x-\mu}{2\sigma^2}}$$

Definition at line 1967 of file random.h.

#### 5.616.2 Member Typedef Documentation

**5.616.2.1** `template<typename _RealType = double> typedef _RealType std::normal_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 1974 of file random.h.

### 5.616.3 Constructor & Destructor Documentation

**5.616.3.1** `template<typename _RealType = double> std::normal_distribution<_RealType>::normal_distribution ( result_type __mean = result_type (0), result_type __stddev = result_type (1) )  
[inline, explicit]`

Constructs a normal distribution with parameters *mean* and standard deviation.  
Definition at line 2012 of file random.h.

### 5.616.4 Member Function Documentation

**5.616.4.1** `template<typename _RealType = double> result_type  
std::normal_distribution<_RealType>::max ( ) const [inline]`

Returns the least upper bound value of the distribution.  
Definition at line 2069 of file random.h.  
Referenced by std::normal\_distribution< result\_type >::max().

**5.616.4.2** `template<typename _RealType = double> _RealType  
std::normal_distribution<_RealType>::mean ( ) const  
[inline]`

Returns the mean of the distribution.  
Definition at line 2033 of file random.h.

**5.616.4.3** `template<typename _RealType = double> result_type  
std::normal_distribution<_RealType>::min ( ) const [inline]`

Returns the greatest lower bound value of the distribution.  
Definition at line 2062 of file random.h.  
Referenced by std::normal\_distribution< result\_type >::min().

**5.616.4.4** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator > result_type  
std::normal_distribution<_RealType>::operator() (  
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 2077 of file `random.h`.

Referenced by `std::normal_distribution<result_type>::operator()()`.

**5.616.4.5** `template<typename _RealType > template<typename  
_UniformRandomNumberGenerator > normal_distribution<  
_RealType>::result_type std::normal_distribution<_RealType  
>::operator() ( _UniformRandomNumberGenerator & __urng,  
const param_type & __param )`

Polar method due to Marsaglia.

Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. V, Sect. 4.4.

Definition at line 1649 of file `random.tcc`.

References `std::log()`, and `std::sqrt()`.

**5.616.4.6** `template<typename _RealType = double> void  
std::normal_distribution<_RealType>::param ( const param_type  
& __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

`__param` The new parameter set of the distribution.

Definition at line 2055 of file `random.h`.

**5.616.4.7** `template<typename _RealType = double> param_type  
std::normal_distribution<_RealType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 2047 of file random.h.

Referenced by `std::normal_distribution< result_type >::operator()()`.

**5.616.4.8** `template<typename _RealType = double> void  
std::normal_distribution< _RealType >::reset ( ) [inline]`

Resets the distribution state.

Definition at line 2026 of file random.h.

Referenced by `std::poisson_distribution< _IntType >::reset()`, `std::binomial_distribution< _IntType >::reset()`, `std::student_t_distribution< _RealType >::reset()`, `std::gamma_distribution< result_type >::reset()`, and `std::lognormal_distribution< _RealType >::reset()`.

**5.616.4.9** `template<typename _RealType = double> _RealType  
std::normal_distribution< _RealType >::stddev ( ) const  
[inline]`

Returns the standard deviation of the distribution.

Definition at line 2040 of file random.h.

## **5.616.5 Friends And Related Function Documentation**

**5.616.5.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream< _CharT, _Traits>& operator<<  
( std::basic_ostream< _CharT, _Traits > & , const  
std::normal_distribution< _RealType1 > & ) [friend]`

Inserts a `normal_distribution` random number distribution `__x` into the output stream `__os`.

### **Parameters**

`__os` An output stream.

`__x` A `normal_distribution` random number distribution.

### Returns

The output stream with the state of `__x` inserted or in an error state.

**5.616.5.2** `template<typename _RealType = double> template<typename  
_RealType1 > bool operator==( const std::normal_distribution<  
_RealType1 > & __d1, const std::normal_distribution< _RealType1  
> & __d2 ) [friend]`

Return true if two normal distributions have the same parameters and the sequences that would be generated are equal.

**5.616.5.3** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_istream<_CharT, _Traits>& operator>>  
( std::basic_istream< _CharT, _Traits > & ,  
std::normal_distribution< _RealType1 > & ) [friend]`

Extracts a `normal_distribution` random number distribution `__x` from the input stream `__is`.

### Parameters

`__is` An input stream.

`__x` A `normal_distribution` random number generator engine.

### Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.617 `std::normal_distribution<_RealType>::param_type` Struct Reference

### Public Types

- typedef [normal\\_distribution<\\_RealType>](#) `distribution_type`

**Public Member Functions**

- **param\_type** (`_RealType __mean=_RealType(0), _RealType __stddev=_RealType(1)`)
- `_RealType` **mean** () const
- `_RealType` **stddev** () const

**Friends**

- `bool` **operator==** (const [param\\_type](#) &\_\_p1, const [param\\_type](#) &\_\_p2)

**5.617.1 Detailed Description**

**template<typename \_RealType = double> struct `std::normal_distribution<_RealType>::param_type`**

Parameter type.

Definition at line 1976 of file `random.h`.

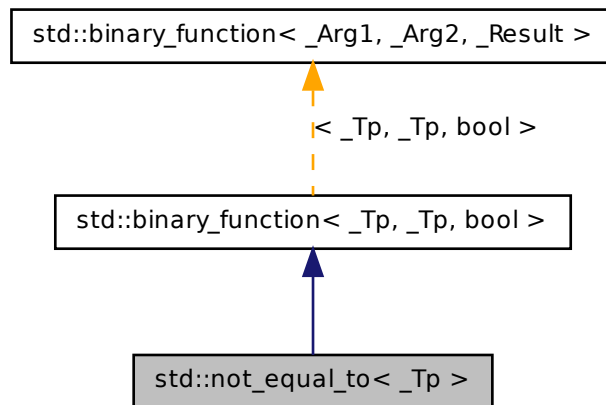

The documentation for this struct was generated from the following file:

- [random.h](#)

**5.618 `std::not_equal_to<_Tp>` Struct Template Reference**

One of the [comparison functors](#).

Inheritance diagram for `std::not_equal_to< _Tp >`:

### Public Types

- typedef `_Tp` `first_argument_type`
- typedef `bool` `result_type`
- typedef `_Tp` `second_argument_type`

### Public Member Functions

- `bool operator() (const _Tp &__x, const _Tp &__y) const`

#### 5.618.1 Detailed Description

**template<typename \_Tp> struct `std::not_equal_to< _Tp >`**

One of the [comparison functions](#).

Definition at line 214 of file `stl_function.h`.

### 5.618.2 Member Typedef Documentation

**5.618.2.1** `typedef _Tp std::binary_function<_Tp, _Tp, bool>::first_argument_type` [inherited]

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.618.2.2** `typedef bool std::binary_function<_Tp, _Tp, bool>::result_type` [inherited]

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.618.2.3** `typedef _Tp std::binary_function<_Tp, _Tp, bool>::second_argument_type` [inherited]

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.619 `std::num_get<_CharT, _InIter>` Class Template Reference

Primary class template [num\\_get](#).

This facet encapsulates the code to parse and return a number from a string. It is used by the `istream` numeric extraction operators.

Inheritance diagram for std::num\_get< \_CharT, \_InIter >:

### Public Types

#### 5.619.1 Detailed Description

**template<typename \_CharT, typename \_InIter> class std::num\_get< \_CharT, \_InIter >**

Primary class template [num\\_get](#).

This facet encapsulates the code to parse and return a number from a string. It is used by the istream numeric extraction operators. The [num\\_get](#) template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the [num\\_get](#) facet.

Definition at line 1916 of file locale\_facets.h.

#### 5.619.2 Member Typedef Documentation

**5.619.2.1 template<typename \_CharT, typename \_InIter > typedef \_CharT std::num\_get< \_CharT, \_InIter >::char\_type**

Public typedefs.

Definition at line 1922 of file locale\_facets.h.

### 5.619.2.2 template<typename \_CharT, typename \_InIter > typedef \_InIter std::num\_get< \_CharT, \_InIter >::iter\_type

Public typedefs.

Definition at line 1923 of file locale\_facets.h.

### 5.619.3 Constructor & Destructor Documentation

#### 5.619.3.1 template<typename \_CharT, typename \_InIter > std::num\_get< \_CharT, \_InIter >::num\_get ( size\_t \_\_refs = 0 ) [inline, explicit]

Constructor performs initialization.

This is the constructor provided by the standard.

#### Parameters

*refs* Passed to the base facet class.

Definition at line 1937 of file locale\_facets.h.

#### 5.619.3.2 template<typename \_CharT, typename \_InIter > virtual std::num\_get< \_CharT, \_InIter >::~~num\_get ( ) [inline, protected, virtual]

Destructor.

Definition at line 2106 of file locale\_facets.h.

### 5.619.4 Member Function Documentation

#### 5.619.4.1 template<typename \_CharT, typename \_InIter > \_InIter std::num\_get< \_CharT, \_InIter >::do\_get ( iter\_type \_\_beg, iter\_type \_\_end, ios\_base & \_\_io, ios\_base::iostate & \_\_err, float & \_\_v ) const [protected, virtual]

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

**See also**

[get\(\)](#) for more details.

**Parameters**

*in* Start of input stream.  
*end* End of input stream.  
*io* Source of locale and flags.  
*err* Error flags to set.  
*v* Value to format and insert.

**Returns**

Iterator after reading.

Definition at line 688 of file `locale_facets.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::c_str()`, `std::ios_base::eofbit`, and `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`.

**5.619.4.2** `template<typename _CharT, typename _InIter> _InIter  
std::num_get<_CharT, _InIter>::do_get ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, bool &  
__v ) const [protected, virtual]`

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

**See also**

[get\(\)](#) for more details.

**Parameters**

*in* Start of input stream.  
*end* End of input stream.  
*io* Source of locale and flags.  
*err* Error flags to set.

*v* Value to format and insert.

### Returns

Iterator after reading.

Definition at line 592 of file `locale_facets.tcc`.

References `std::ios_base::_M_getloc()`, `std::ios_base::boolalpha`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::flags()`, and `std::ios_base::goodbit`.

Referenced by `std::num_get< _CharT, _InIter >::get()`.

**5.619.4.3** `template<typename _CharT, typename _InIter > virtual iter_type  
std::num_get< _CharT, _InIter >::do_get ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, long &  
__v ) const [inline, protected, virtual]`

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

### See also

[get\(\)](#) for more details.

### Parameters

*in* Start of input stream.  
*end* End of input stream.  
*io* Source of locale and flags.  
*err* Error flags to set.  
*v* Value to format and insert.

### Returns

Iterator after reading.

Definition at line 2174 of file `locale_facets.h`.

**5.619.4.4** `template<typename _CharT, typename _InIter > virtual iter_type  
std::num_get< _CharT, _InIter >::do_get ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err,  
unsigned short & __v ) const [inline, protected,  
virtual]`

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

#### See also

[get\(\)](#) for more details.

#### Parameters

- in* Start of input stream.
- end* End of input stream.
- io* Source of locale and flags.
- err* Error flags to set.
- v* Value to format and insert.

#### Returns

Iterator after reading.

Definition at line 2179 of file locale\_facets.h.

**5.619.4.5** `template<typename _CharT, typename _InIter > virtual iter_type  
std::num_get< _CharT, _InIter >::do_get ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err,  
unsigned int & __v ) const [inline, protected, virtual]`

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

#### See also

[get\(\)](#) for more details.

**Parameters**

- in* Start of input stream.
- end* End of input stream.
- io* Source of locale and flags.
- err* Error flags to set.
- v* Value to format and insert.

**Returns**

Iterator after reading.

Definition at line 2184 of file `locale_facets.h`.

```
5.619.4.6 template<typename _CharT, typename _InIter > virtual iter_type
std::num_get<_CharT, _InIter >::do_get (iter_type __beg,
iter_type __end, ios_base & __io, ios_base::iostate & __err,
unsigned long & __v) const [inline, protected, virtual]
```

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

**See also**

[get\(\)](#) for more details.

**Parameters**

- in* Start of input stream.
- end* End of input stream.
- io* Source of locale and flags.
- err* Error flags to set.
- v* Value to format and insert.

**Returns**

Iterator after reading.

Definition at line 2189 of file `locale_facets.h`.

**5.619.4.7** `template<typename _CharT, typename _InIter > virtual iter_type  
std::num_get< _CharT, _InIter >::do_get ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, long  
long & __v ) const [inline, protected, virtual]`

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

#### See also

[get\(\)](#) for more details.

#### Parameters

- in* Start of input stream.
- end* End of input stream.
- io* Source of locale and flags.
- err* Error flags to set.
- v* Value to format and insert.

#### Returns

Iterator after reading.

Definition at line 2195 of file locale\_facets.h.

**5.619.4.8** `template<typename _CharT, typename _InIter > virtual iter_type  
std::num_get< _CharT, _InIter >::do_get ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err,  
unsigned long long & __v ) const [inline, protected,  
virtual]`

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

#### See also

[get\(\)](#) for more details.

**Parameters**

*in* Start of input stream.  
*end* End of input stream.  
*io* Source of locale and flags.  
*err* Error flags to set.  
*v* Value to format and insert.

**Returns**

Iterator after reading.

Definition at line 2200 of file `locale_facets.h`.

```
5.619.4.9 template<typename _CharT, typename _InIter> _InIter
std::num_get<_CharT, _InIter>::do_get (iter_type __beg,
iter_type __end, ios_base & __io, ios_base::iostate & __err, long
double & __v) const [protected, virtual]
```

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

**See also**

[get\(\)](#) for more details.

**Parameters**

*in* Start of input stream.  
*end* End of input stream.  
*io* Source of locale and flags.  
*err* Error flags to set.  
*v* Value to format and insert.

**Returns**

Iterator after reading.

Definition at line 735 of file `locale_facets.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::c_str()`, `std::ios_base::eofbit`, and `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`.

**5.619.4.10** `template<typename _CharT, typename _InIter > _InIter  
std::num_get< _CharT, _InIter >::do_get ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err,  
double & __v ) const [protected, virtual]`

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

#### See also

[get\(\)](#) for more details.

#### Parameters

- in* Start of input stream.
- end* End of input stream.
- io* Source of locale and flags.
- err* Error flags to set.
- v* Value to format and insert.

#### Returns

Iterator after reading.

Definition at line 703 of file locale\_facets.tcc.

References `std::basic_string< _CharT, _Traits, _Alloc >::c_str()`, `std::ios_base::eofbit`, and `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`.

**5.619.4.11** `template<typename _CharT, typename _InIter > _InIter  
std::num_get< _CharT, _InIter >::do_get ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, void  
*& __v ) const [protected, virtual]`

Numeric parsing.

Parses the input stream into the variable *v*. This function is a hook for derived classes to change the value returned.

#### See also

[get\(\)](#) for more details.

**Parameters**

- in* Start of input stream.
- end* End of input stream.
- io* Source of locale and flags.
- err* Error flags to set.
- v* Value to format and insert.

**Returns**

Iterator after reading.

Definition at line 750 of file `locale_facets.tcc`.

References `std::ios_base::basefield`, `std::ios_base::flags()`, and `std::ios_base::hex`.

```
5.619.4.12 template<typename _CharT, typename _InIter > iter_type
std::num_get<_CharT, _InIter >::get (iter_type __in, iter_type
__end, ios_base & __io, ios_base::iostate & __err, long & __v)
const [inline]
```

Numeric parsing.

Parses the input stream into the integral variable *v*. It does so by calling `num_get::do_get()`.

Parsing is affected by the flag settings in *io*.

The basic parse is affected by the value of `io.flags()` & `ios_base::basefield`. If equal to `ios_base::oct`, parses like the `scanf` `o` specifier. Else if equal to `ios_base::hex`, parses like `X` specifier. Else if `basefield` equal to 0, parses like the `i` specifier. Otherwise, parses like `d` for signed and `u` for unsigned types. The matching type length modifier is also used.

Digit grouping is interpreted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. If the pattern of digit groups isn't consistent, sets `err` to `ios_base::failbit`.

If parsing the string yields a valid value for *v*, *v* is set. Otherwise, sets `err` to `ios_base::failbit` and leaves *v* unaltered. Sets `err` to `ios_base::eofbit` if the stream is emptied.

**Parameters**

- in* Start of input stream.
- end* End of input stream.
- io* Source of locale and flags.

*err* Error flags to set.

*v* Value to format and insert.

### Returns

Iterator after reading.

Definition at line 1999 of file locale\_facets.h.

References `std::num_get< _CharT, _InIter >::do_get()`.

```
5.619.4.13 template<typename _CharT , typename _InIter > iter_type
std::num_get< _CharT, _InIter >::get (iter_type __in, iter_type
__end, ios_base & __io, ios_base::iostate & __err, double & __v)
const [inline]
```

Numeric parsing.

Parses the input stream into the integral variable *v*. It does so by calling `num_get::do_get()`.

The input characters are parsed like the scanf g specifier. The matching type length modifier is also used.

The decimal point character used is `num_punct::decimal_point()`. Digit grouping is interpreted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. If the pattern of digit groups isn't consistent, sets *err* to `ios_base::failbit`.

If parsing the string yields a valid value for *v*, *v* is set. Otherwise, sets *err* to `ios_base::failbit` and leaves *v* unaltered. Sets *err* to `ios_base::eofbit` if the stream is emptied.

### Parameters

*in* Start of input stream.

*end* End of input stream.

*io* Source of locale and flags.

*err* Error flags to set.

*v* Value to format and insert.

### Returns

Iterator after reading.

Definition at line 2063 of file locale\_facets.h.

References `std::num_get< _CharT, _InIter >::do_get()`.

**5.619.4.14** `template<typename _CharT, typename _InIter > iter_type  
std::num_get< _CharT, _InIter >::get ( iter_type __in, iter_type  
__end, ios_base & __io, ios_base::iostate & __err, void *& __v )  
const [inline]`

Numeric parsing.

Parses the input stream into the pointer variable *v*. It does so by calling `num_get::do_get()`.

The input characters are parsed like the `scanf` *p* specifier.

Digit grouping is interpreted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. If the pattern of digit groups isn't consistent, sets err to `ios_base::failbit`.

Note that the digit grouping effect for pointers is a bit ambiguous in the standard and shouldn't be relied on. See DR 344.

If parsing the string yields a valid value for *v*, *v* is set. Otherwise, sets err to `ios_base::failbit` and leaves *v* unaltered. Sets err to `ios_base::eofbit` if the stream is emptied.

#### Parameters

- in* Start of input stream.
- end* End of input stream.
- io* Source of locale and flags.
- err* Error flags to set.
- v* Value to format and insert.

#### Returns

Iterator after reading.

Definition at line 2100 of file `locale_facets.h`.

References `std::num_get< _CharT, _InIter >::do_get()`.

**5.619.4.15** `template<typename _CharT, typename _InIter > iter_type  
std::num_get< _CharT, _InIter >::get ( iter_type __in, iter_type  
__end, ios_base & __io, ios_base::iostate & __err, unsigned long  
& __v ) const [inline]`

Numeric parsing.

Parses the input stream into the integral variable *v*. It does so by calling `num_get::do_get()`.

Parsing is affected by the flag settings in *io*.

The basic parse is affected by the value of `io.flags()` & `ios_base::basefield`. If equal to `ios_base::oct`, parses like the `scanf` `o` specifier. Else if equal to `ios_base::hex`, parses like `X` specifier. Else if `basefield` equal to 0, parses like the `i` specifier. Otherwise, parses like `d` for signed and `u` for unsigned types. The matching type length modifier is also used.

Digit grouping is interpreted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. If the pattern of digit groups isn't consistent, sets `err` to `ios_base::failbit`.

If parsing the string yields a valid value for *v*, *v* is set. Otherwise, sets `err` to `ios_base::failbit` and leaves *v* unaltered. Sets `err` to `ios_base::eofbit` if the stream is emptied.

### Parameters

- in* Start of input stream.
- end* End of input stream.
- io* Source of locale and flags.
- err* Error flags to set.
- v* Value to format and insert.

### Returns

Iterator after reading.

Definition at line 2014 of file `locale_facets.h`.

References `std::num_get< _CharT, _InIter >::do_get()`.

```
5.619.4.16 template<typename _CharT, typename _InIter > iter_type
std::num_get< _CharT, _InIter >::get (iter_type __in, iter_type
__end, ios_base & __io, ios_base::iostate & __err, bool & __v)
const [inline]
```

Numeric parsing.

Parses the input stream into the bool *v*. It does so by calling `num_get::do_get()`.

If `ios_base::boolalpha` is set, attempts to read `ctype<CharT>::trunename()` or `ctype<CharT>::falsename()`. Sets *v* to true or false if successful. Sets `err` to `ios_base::failbit` if reading the string fails. Sets `err` to `ios_base::eofbit` if the stream is emptied.

If `ios_base::boolalpha` is not set, proceeds as with reading a long, except if the value is 1, sets `v` to true, if the value is 0, sets `v` to false, and otherwise set `err` to `ios_base::failbit`.

#### Parameters

*in* Start of input stream.  
*end* End of input stream.  
*io* Source of locale and flags.  
*err* Error flags to set.  
*v* Value to format and insert.

#### Returns

Iterator after reading.

Definition at line 1963 of file `locale_facets.h`.

References `std::num_get< _CharT, _InIter >::do_get()`.

Referenced by `std::basic_istream< _CharT, _Traits >::operator>>()`.

```

std::num_get< _CharT, _InIter >::get (iter_type __in, iter_type
__end, ios_base & __io, ios_base::iostate & __err, unsigned long
long & __v) const [inline]
```

Numeric parsing.

Parses the input stream into the integral variable `v`. It does so by calling `num_get::do_get()`.

Parsing is affected by the flag settings in `io`.

The basic parse is affected by the value of `io.flags() & ios_base::basefield`. If equal to `ios_base::oct`, parses like the `scanf` `o` specifier. Else if equal to `ios_base::hex`, parses like `X` specifier. Else if `basefield` equal to 0, parses like the `i` specifier. Otherwise, parses like `d` for signed and `u` for unsigned types. The matching type length modifier is also used.

Digit grouping is interpreted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. If the pattern of digit groups isn't consistent, sets `err` to `ios_base::failbit`.

If parsing the string yields a valid value for `v`, `v` is set. Otherwise, sets `err` to `ios_base::failbit` and leaves `v` unaltered. Sets `err` to `ios_base::eofbit` if the stream is emptied.

#### Parameters

*in* Start of input stream.

*end* End of input stream.  
*io* Source of locale and flags.  
*err* Error flags to set.  
*v* Value to format and insert.

**Returns**

Iterator after reading.

Definition at line 2025 of file `locale_facets.h`.

References `std::num_get< _CharT, _InIter >::do_get()`.

**5.619.4.18** `template<typename _CharT, typename _InIter> iter_type  
std::num_get< _CharT, _InIter >::get ( iter_type __in, iter_type  
__end, ios_base & __io, ios_base::iostate & __err, float & __v )  
const [inline]`

Numeric parsing.

Parses the input stream into the integral variable *v*. It does so by calling `num_get::do_get()`.

The input characters are parsed like the `scanf g` specifier. The matching type length modifier is also used.

The decimal point character used is `num_punct::decimal_point()`. Digit grouping is interpreted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. If the pattern of digit groups isn't consistent, sets *err* to `ios_base::failbit`.

If parsing the string yields a valid value for *v*, *v* is set. Otherwise, sets *err* to `ios_base::failbit` and leaves *v* unaltered. Sets *err* to `ios_base::eofbit` if the stream is emptied.

**Parameters**

*in* Start of input stream.  
*end* End of input stream.  
*io* Source of locale and flags.  
*err* Error flags to set.  
*v* Value to format and insert.

**Returns**

Iterator after reading.

Definition at line 2058 of file `locale_facets.h`.

### 5.620.1 Detailed Description

`template<typename _CharT, typename _OutIter> class std::num_put<_CharT, _OutIter>`

Primary class template [num\\_put](#).

This facet encapsulates the code to convert a number to a string. It is used by the ostream numeric insertion operators. The [num\\_put](#) template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the [num\\_put](#) facet.

Definition at line 2254 of file `locale_facets.h`.

### 5.620.2 Member Typedef Documentation

**5.620.2.1** `template<typename _CharT, typename _OutIter> typedef _CharT std::num_put<_CharT, _OutIter>::char_type`

Public typedefs.

Definition at line 2260 of file `locale_facets.h`.

**5.620.2.2** `template<typename _CharT, typename _OutIter> typedef _OutIter std::num_put<_CharT, _OutIter>::iter_type`

Public typedefs.

Definition at line 2261 of file `locale_facets.h`.

### 5.620.3 Constructor & Destructor Documentation

**5.620.3.1** `template<typename _CharT, typename _OutIter> std::num_put<_CharT, _OutIter>::num_put ( size_t __refs = 0 ) [inline, explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

#### Parameters

*refs* Passed to the base facet class.

Definition at line 2275 of file `locale_facets.h`.

**5.620.3.2** `template<typename _CharT, typename _OutIter> virtual std::num_put<_CharT, _OutIter>::~~num_put ( ) [inline, protected, virtual]`

Destructor.

Definition at line 2454 of file `locale_facets.h`.

### 5.620.4 Member Function Documentation

**5.620.4.1** `template<typename _CharT, typename _OutIter> virtual iter_type std::num_put<_CharT, _OutIter>::do_put ( iter_type __s, ios_base & __io, char_type __fill, unsigned long __v ) const [inline, protected, virtual]`

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

#### Parameters

*s* Stream to write to.

*io* Source of locale and flags.

*fill* Char\_type to use for filling.

*v* Value to format and insert.

### Returns

Iterator after writing.

Definition at line 2478 of file `locale_facets.h`.

**5.620.4.2** `template<typename _CharT, typename _OutIter> virtual  
iter_type std::num_put<_CharT, _OutIter>::do_put ( iter_type  
__s, ios_base & __io, char_type __fill, long long __v ) const  
[inline, protected, virtual]`

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

### Parameters

*s* Stream to write to.  
*io* Source of locale and flags.  
*fill* `Char_type` to use for filling.  
*v* Value to format and insert.

### Returns

Iterator after writing.

Definition at line 2484 of file `locale_facets.h`.

**5.620.4.3** `template<typename _CharT, typename _OutIter> virtual iter_type  
std::num_put<_CharT, _OutIter>::do_put ( iter_type __s,  
ios_base & __io, char_type __fill, long __v ) const [inline,  
protected, virtual]`

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

### Parameters

*s* Stream to write to.

*io* Source of locale and flags.  
*fill* Char\_type to use for filling.  
*v* Value to format and insert.

### Returns

Iterator after writing.

Definition at line 2474 of file locale\_facets.h.

**5.620.4.4** `template<typename _CharT, typename _OutIter> virtual iter_type  
std::num_put<_CharT, _OutIter>::do_put ( iter_type __s,  
ios_base & __io, char_type __fill, unsigned long long __v ) const  
[inline, protected, virtual]`

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

### Parameters

*s* Stream to write to.  
*io* Source of locale and flags.  
*fill* Char\_type to use for filling.  
*v* Value to format and insert.

### Returns

Iterator after writing.

Definition at line 2489 of file locale\_facets.h.

**5.620.4.5** `template<typename _CharT, typename _OutIter> _OutIter  
std::num_put<_CharT, _OutIter>::do_put ( iter_type __s,  
ios_base & __io, char_type __fill, bool __v ) const [protected,  
virtual]`

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

**Parameters**

- s* Stream to write to.
- io* Source of locale and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

**Returns**

Iterator after writing.

Definition at line 1091 of file locale\_facets.tcc.

References `std::ios_base::_M_getloc()`, `std::ios_base::adjustfield`, `std::ios_base::boolalpha`, `std::ios_base::flags()`, `std::ios_base::left`, and `std::ios_base::width()`.

Referenced by `std::num_put<_CharT, _OutIter>::put()`.

**5.620.4.6** `template<typename _CharT, typename _OutIter> _OutIter  
std::num_put<_CharT, _OutIter>::do_put ( iter_type __s,  
ios_base & __io, char_type __fill, long double __v ) const  
[protected, virtual]`

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

**Parameters**

- s* Stream to write to.
- io* Source of locale and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

**Returns**

Iterator after writing.

Definition at line 1157 of file locale\_facets.tcc.

**5.620.4.7** `template<typename _CharT, typename _OutIter> _OutIter  
std::num_put<_CharT, _OutIter>::do_put ( iter_type  
__s, ios_base & __io, char_type __fill, double __v ) const  
[protected, virtual]`

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

#### Parameters

- s* Stream to write to.
- io* Source of locale and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

#### Returns

Iterator after writing.

Definition at line 1143 of file locale\_facets.tcc.

```
5.620.4.8 template<typename _CharT, typename _OutIter> _OutIter
std::num_put<_CharT, _OutIter>::do_put (iter_type __s,
ios_base & __io, char_type __fill, const void * __v) const
[protected, virtual]
```

Numeric formatting.

These functions do the work of formatting numeric values and inserting them into a stream. This function is a hook for derived classes to change the value returned.

#### Parameters

- s* Stream to write to.
- io* Source of locale and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

#### Returns

Iterator after writing.

Definition at line 1164 of file locale\_facets.tcc.

References `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::uppercase`.

**5.620.4.9** `template<typename _CharT, typename _OutIter> iter_type  
std::num_put<_CharT, _OutIter>::put( iter_type __s, ios_base &  
__f, char_type __fill, long __v ) const [inline]`

Numeric formatting.

Formats the integral value *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of `io.flags()` & `ios_base::basefield`. If equal to `ios_base::oct`, formats like the `printf o` specifier. Else if equal to `ios_base::hex`, formats like `x` or `X` with `ios_base::uppercase` unset or set respectively. Otherwise, formats like `d`, `ld`, `lld` for signed and `u`, `lu`, `llu` for unsigned values. Note that if both `oct` and `hex` are set, neither will take effect.

If `ios_base::showpos` is set, `'+'` is output before positive values. If `ios_base::showbase` is set, `'0'` precedes octal values (except 0) and `'0[xX]'` precedes hex values.

Thousands separators are inserted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. The decimal point character used is `num_punct::decimal_point()`.

If `io.width()` is non-zero, enough *fill* characters are inserted to make the result at least that wide. If `(io.flags() & ios_base::adjustfield) == ios_base::left`, result is padded at the end. If `ios_base::internal`, then padding occurs immediately after either a `'+'` or `'-'` or after `'0x'` or `'0X'`. Otherwise, padding occurs at the beginning.

### Parameters

- s* Stream to write to.
- io* Source of locale and flags.
- fill* `Char_type` to use for filling.
- v* Value to format and insert.

### Returns

Iterator after writing.

Definition at line 2335 of file `locale_facets.h`.

References `std::num_put<_CharT, _OutIter>::do_put()`.

**5.620.4.10** `template<typename _CharT, typename _OutIter> iter_type  
std::num_put<_CharT, _OutIter>::put ( iter_type __s, ios_base

Numeric formatting.

Formats the integral value *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of `io.flags()` & `ios_base::basefield`. If equal to `ios_base::oct`, formats like the `printf` `o` specifier. Else if equal to `ios_base::hex`, formats like `x` or `X` with `ios_base::uppercase` unset or set respectively. Otherwise, formats like `d`, `ld`, `lld` for signed and `u`, `lu`, `llu` for unsigned values. Note that if both `oct` and `hex` are set, neither will take effect.

If `ios_base::showpos` is set, `'+'` is output before positive values. If `ios_base::showbase` is set, `'0'` precedes octal values (except 0) and `'0[xX]'` precedes hex values.

Thousands separators are inserted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. The decimal point character used is `num_punct::decimal_point()`.

If `io.width()` is non-zero, enough *fill* characters are inserted to make the result at least that wide. If `(io.flags() & ios_base::adjustfield) == ios_base::left`, result is padded at the end. If `ios_base::internal`, then padding occurs immediately after either a `'+'` or `'-'` or after `'0x'` or `'0X'`. Otherwise, padding occurs at the beginning.

### Parameters

- s* Stream to write to.
- io* Source of locale and flags.
- fill* `Char_type` to use for filling.
- v* Value to format and insert.

### Returns

Iterator after writing.

Definition at line 2339 of file `locale_facets.h`.

References `std::num_put<_CharT, _OutIter>::do_put()`.

**5.620.4.12** `template<typename _CharT, typename _OutIter > iter_type  
std::num_put< _CharT, _OutIter >::put ( iter_type __s, ios_base  
& __f, char_type __fill, bool __v ) const [inline]`

Numeric formatting.

Formats the boolean *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

If `ios_base::boolalpha` is set, writes `ctype<CharT>::truenam()` or `ctype<CharT>::falsenam()`. Otherwise formats *v* as an int.

#### Parameters

- s* Stream to write to.
- io* Source of locale and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

#### Returns

Iterator after writing.

Definition at line 2293 of file locale\_facets.h.

References `std::num_put< _CharT, _OutIter >::do_put()`.

**5.620.4.13** `template<typename _CharT, typename _OutIter > iter_type  
std::num_put< _CharT, _OutIter >::put ( iter_type __s, ios_base  
& __f, char_type __fill, long double __v ) const [inline]`

Numeric formatting.

Formats the floating point value *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of `io.flags() & ios_base::floatfield`. If equal to `ios_base::fixed`, formats like the printf *f* specifier. Else if equal to `ios_base::scientific`, formats like *e* or *E* with `ios_base::uppercase` unset or set respectively. Otherwise, formats like *g* or *G* depending on uppercase. Note that if both fixed and scientific are set, the effect will also be like *g* or *G*.

The output precision is given by `io.precision()`. This precision is capped at `numeric_limits::digits10 + 2` (different for double and long double). The default precision is 6.

If `ios_base::showpos` is set, '+' is output before positive values. If `ios_base::showpoint` is set, a decimal point will always be output.

Thousands separators are inserted according to `num_punct::grouping()` and `num_punct::thousands_sep()`. The decimal point character used is `num_punct::decimal_point()`.

If `io.width()` is non-zero, enough *fill* characters are inserted to make the result at least that wide. If `(io.flags() & ios_base::adjustfield) == ios_base::left`, result is padded at the end. If `ios_base::internal`, then padding occurs immediately after either a '+' or '-' or after '0x' or '0X'. Otherwise, padding occurs at the beginning.

### Parameters

- s* Stream to write to.
- io* Source of locale and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

### Returns

Iterator after writing.

Definition at line 2402 of file locale\_facets.h.

References `std::num_put< _CharT, _OutIter >::do_put()`.

```
5.620.4.14 template<typename _CharT, typename _OutIter > iter_type
std::num_put< _CharT, _OutIter >::put(iter_type __s, ios_base
& __f, char_type __fill, const void * __v) const [inline]
```

Numeric formatting.

Formats the pointer value *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

This function formats *v* as an unsigned long with `ios_base::hex` and `ios_base::showbase` set.

### Parameters

- s* Stream to write to.
- io* Source of locale and flags.
- fill* Char\_type to use for filling.
- v* Value to format and insert.

### Returns

Iterator after writing.

Definition at line 2423 of file locale\_facets.h.

References `std::num_put< _CharT, _OutIter >::do_put()`.

```
5.620.4.15 template<typename _CharT, typename _OutIter > iter_type
std::num_put< _CharT, _OutIter >::put (iter_type __s, ios_base
& __f, char_type __fill, unsigned long long __v) const
[inline]
```

Numeric formatting.

Formats the integral value *v* and inserts it into a stream. It does so by calling `num_put::do_put()`.

Formatting is affected by the flag settings in *io*.

The basic format is affected by the value of `io.flags()` & `ios_base::basefield`. If equal to `ios_base::oct`, formats like the `printf` `o` specifier. Else if equal to `ios_base::hex`, formats like `x` or `X` with `ios_base::uppercase` unset or set respectively. Otherwise, formats like `d`, `ld`, `lld` for signed and `u`, `lu`, `llu` for unsigned values. Note that if both `oct` and `hex` are set, neither will take effect.

#### 5.621.1 Detailed Description

**template<typename `_Tp`> struct `std::numeric_limits<_Tp>`**

Properties of fundamental types. This class allows a program to obtain information about the representation of a fundamental type on a given platform. For non-fundamental types, the functions will return 0 and the data members will all be `false`.

\_GLIBCXX\_RESOLVE\_LIB\_DEFECTS: DRs 201 and 184 (hi Gaby!) are noted, but not incorporated in this documented (yet).

Definition at line 304 of file limits.

### 5.621.2 Member Function Documentation

**5.621.2.1** `template<typename _Tp> static constexpr _Tp  
std::numeric_limits<_Tp>::denorm_min ( ) throw () [inline,  
static]`

The minimum positive denormalized value. For types where `has_denorm` is false, this is the minimum positive normalized value.

Definition at line 349 of file limits.

**5.621.2.2** `template<typename _Tp> static constexpr _Tp  
std::numeric_limits<_Tp>::epsilon ( ) throw () [inline,  
static]`

The *machine epsilon*: the difference between 1 and the least value greater than 1 that is representable.

Definition at line 325 of file limits.

**5.621.2.3** `template<typename _Tp> static constexpr _Tp  
std::numeric_limits<_Tp>::infinity ( ) throw () [inline,  
static]`

The representation of positive infinity, if `has_infinity`.

Definition at line 333 of file limits.

**5.621.2.4** `template<typename _Tp> static constexpr _Tp  
std::numeric_limits<_Tp>::lowest ( ) throw () [inline,  
static]`

A finite value `x` such that there is no other finite value `y` where `y < x`.

Definition at line 319 of file limits.

**5.621.2.5** `template<typename _Tp > static constexpr _Tp  
std::numeric_limits< _Tp >::max ( ) throw () [inline,  
static]`

The maximum finite value.

Definition at line 313 of file limits.

**5.621.2.6** `template<typename _Tp > static constexpr _Tp  
std::numeric_limits< _Tp >::min ( ) throw () [inline,  
static]`

The minimum finite value, or for floating types with denormalization, the minimum positive normalized value.

Definition at line 309 of file limits.

**5.621.2.7** `template<typename _Tp > static constexpr _Tp  
std::numeric_limits< _Tp >::quiet_NaN ( ) throw () [inline,  
static]`

The representation of a quiet *Not a Number*, if has\_quiet\_NaN.

Definition at line 338 of file limits.

**5.621.2.8** `template<typename _Tp > static constexpr _Tp  
std::numeric_limits< _Tp >::round_error ( ) throw () [inline,  
static]`

The maximum rounding error measurement (see LIA-1).

Definition at line 329 of file limits.

**5.621.2.9** `template<typename _Tp > static constexpr _Tp  
std::numeric_limits< _Tp >::signaling_NaN ( ) throw ()  
[inline, static]`

The representation of a signaling *Not a Number*, if has\_signaling\_NaN.

Definition at line 343 of file limits.

### 5.621.3 Member Data Documentation

#### 5.621.3.1 constexpr int std::\_\_numeric\_limits\_base::digits [static, inherited]

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

Definition at line 201 of file limits.

#### 5.621.3.2 constexpr int std::\_\_numeric\_limits\_base::digits10 [static, inherited]

The number of base 10 digits that can be represented without change.

Definition at line 204 of file limits.

#### 5.621.3.3 constexpr float\_denorm\_style std::\_\_numeric\_limits\_base::has\_denorm [static, inherited]

See [std::float\\_denorm\\_style](#) for more information.

Definition at line 258 of file limits.

#### 5.621.3.4 constexpr bool std::\_\_numeric\_limits\_base::has\_denorm\_loss [static, inherited]

*True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result. [18.2.1.2]/42*

Definition at line 262 of file limits.

#### 5.621.3.5 constexpr bool std::\_\_numeric\_limits\_base::has\_infinity [static, inherited]

True if the type has a representation for positive infinity.

Definition at line 247 of file limits.

#### 5.621.3.6 constexpr bool std::\_\_numeric\_limits\_base::has\_quiet\_NaN [static, inherited]

True if the type has a representation for a quiet (non-signaling) *Not a Number*.

Definition at line 251 of file limits.

**5.621.3.7 constexpr bool std::\_\_numeric\_limits\_base::has\_signaling\_NaN  
[static, inherited]**

True if the type has a representation for a signaling *Not a Number*.

Definition at line 255 of file limits.

**5.621.3.8 constexpr bool std::\_\_numeric\_limits\_base::is\_bounded [static,  
inherited]**

*True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types. [18.2.1.2]/54*

Definition at line 271 of file limits.

**5.621.3.9 constexpr bool std::\_\_numeric\_limits\_base::is\_exact [static,  
inherited]**

True if the type uses an exact representation. *All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer. [18.2.1.2]/15*

Definition at line 223 of file limits.

**5.621.3.10 constexpr bool std::\_\_numeric\_limits\_base::is\_iec559 [static,  
inherited]**

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

Definition at line 266 of file limits.

**5.621.3.11 constexpr bool std::\_\_numeric\_limits\_base::is\_integer [static,  
inherited]**

True if the type is integer. Is this supposed to be *if the type is integral*?

Definition at line 217 of file limits.

**5.621.3.12** `constexpr bool std::__numeric_limits_base::is_modulo` [`static`, `inherited`]

True if the type is *modulo*, that is, if it is possible to add two positive numbers and have a result that wraps around to a third number that is less. Typically false for floating types, true for unsigned integers, and true for signed integers.

Definition at line 277 of file limits.

**5.621.3.13** `constexpr bool std::__numeric_limits_base::is_signed` [`static`, `inherited`]

True if the type is signed.

Definition at line 213 of file limits.

**5.621.3.14** `constexpr bool std::__numeric_limits_base::is_specialized` [`static`, `inherited`]

This will be true for all fundamental types (which have specializations), and false for everything else.

Definition at line 196 of file limits.

**5.621.3.15** `constexpr int std::__numeric_limits_base::max_digits10` [`static`, `inherited`]

The number of base 10 digits required to ensure that values which differ are always differentiated.

Definition at line 209 of file limits.

**5.621.3.16** `constexpr int std::__numeric_limits_base::max_exponent` [`static`, `inherited`]

The maximum positive integer such that `radix` raised to the power of (one less than that integer) is a representable finite floating point number.

Definition at line 240 of file limits.

**5.621.3.17** `constexpr int std::__numeric_limits_base::max_exponent10` [`static`, `inherited`]

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

Definition at line 244 of file limits.

**5.621.3.18** `constexpr int std::__numeric_limits_base::min_exponent`  
`[static, inherited]`

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

Definition at line 231 of file limits.

**5.621.3.19** `constexpr int std::__numeric_limits_base::min_exponent10`  
`[static, inherited]`

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

Definition at line 235 of file limits.

**5.621.3.20** `constexpr int std::__numeric_limits_base::radix` `[static, inherited]`

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

Definition at line 227 of file limits.

**5.621.3.21** `constexpr float_round_style std::__numeric_limits_base::round_style` `[static, inherited]`

See [std::float\\_round\\_style](#) for more information. This is only meaningful for floating types; integer types will all be `round_toward_zero`.

Definition at line 288 of file limits.

**5.621.3.22** `constexpr bool std::__numeric_limits_base::tinyness_before`  
`[static, inherited]`

True if tininess is detected before rounding. (see IEC 559)

Definition at line 283 of file limits.

### 5.621.3.23 `constexpr bool std::__numeric_limits_base::traps` [`static`, `inherited`]

True if trapping is implemented for this type.

Definition at line 280 of file `limits`.

The documentation for this struct was generated from the following file:

- [limits](#)

## 5.622 `std::numeric_limits< bool >` Struct Template Reference

#### 5.640.1 Detailed Description

`template<typename _CharT> class std::numpunct<_CharT>`

Primary class template `numpunct`.

This facet stores several pieces of information related to printing and scanning numbers, such as the decimal point character. It takes a template parameter specifying the char type. The `numpunct` facet is used by streams for many I/O operations involving numbers. The `numpunct` template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from a `numpunct` facet.

Definition at line 1642 of file `locale_facets.h`.

#### 5.640.2 Member Typedef Documentation

**5.640.2.1** `template<typename _CharT> typedef _CharT std::numpunct<_CharT>::char_type`

Public typedefs.

Reimplemented in `std::numpunct_byname<_CharT>`.

Definition at line 1648 of file `locale_facets.h`.

**5.640.2.2** `template<typename _CharT> typedef basic_string<_CharT> std::numpunct<_CharT>::string_type`

Public typedefs.

Reimplemented in `std::numpunct_byname<_CharT>`.

Definition at line 1649 of file `locale_facets.h`.

### 5.640.3 Constructor & Destructor Documentation

**5.640.3.1** `template<typename _CharT> std::numpunct<_CharT>  
>::numpunct( size_t __refs = 0 ) [inline, explicit]`

Numpunct constructor.

#### Parameters

*refs* Refcount to pass to the base class.

Definition at line 1666 of file locale\_facets.h.

**5.640.3.2** `template<typename _CharT> std::numpunct<_CharT>  
>::numpunct( __cache_type * __cache, size_t __refs = 0 )  
[inline, explicit]`

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up the predefined locale facets.

#### Parameters

*cache* \_\_numpunct\_cache object.

*refs* Refcount to pass to the base class.

Definition at line 1680 of file locale\_facets.h.

**5.640.3.3** `template<typename _CharT> std::numpunct<_CharT>  
>::numpunct( __c_locale __cloc, size_t __refs = 0 ) [inline,  
explicit]`

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

#### Parameters

*cloc* The C locale.

*refs* Refcount to pass to the base class.

Definition at line 1694 of file locale\_facets.h.

#### 5.640.3.4 template<typename \_CharT> virtual std::num\_punct<\_CharT>::~num\_punct( ) [protected, virtual]

Destructor.

#### 5.640.4 Member Function Documentation

##### 5.640.4.1 template<typename \_CharT> char\_type std::num\_punct<\_CharT>::decimal\_point( ) const [inline]

Return decimal point character.

This function returns a `char_type` to use as a decimal point. It does so by returning returning [num\\_punct<char\\_type>::do\\_decimal\\_point\(\)](#).

#### Returns

*char\_type* representing a decimal point.

Definition at line 1708 of file `locale_facets.h`.

References `std::num_punct<_CharT>::do_decimal_point()`.

##### 5.640.4.2 template<typename \_CharT> virtual char\_type std::num\_punct<\_CharT>::do\_decimal\_point( ) const [inline, protected, virtual]

Return decimal point character.

Returns a `char_type` to use as a decimal point. This function is a hook for derived classes to change the value returned.

#### Returns

*char\_type* representing a decimal point.

Definition at line 1795 of file `locale_facets.h`.

Referenced by `std::num_punct<_CharT>::decimal_point()`.

**5.640.4.3** `template<typename _CharT > virtual string_type std::numpunct<_CharT >::do_falsename ( ) const [inline, protected, virtual]`

Return string representation of bool false.

Returns a string\_type containing the text representation for false bool variables. This function is a hook for derived classes to change the value returned.

#### Returns

string\_type representing printed form of false.

Definition at line 1846 of file locale\_facets.h.

Referenced by std::numpunct<\_CharT>::falsename().

**5.640.4.4** `template<typename _CharT > virtual string std::numpunct<_CharT >::do_grouping ( ) const [inline, protected, virtual]`

Return grouping specification.

Returns a string representing groupings for the integer part of a number. This function is a hook for derived classes to change the value returned.

#### See also

[grouping\(\)](#) for details.

#### Returns

String representing grouping specification.

Definition at line 1820 of file locale\_facets.h.

Referenced by std::numpunct<\_CharT>::grouping().

**5.640.4.5** `template<typename _CharT > virtual char_type std::numpunct<_CharT >::do_thousands_sep ( ) const [inline, protected, virtual]`

Return thousands separator character.

Returns a `char_type` to use as a thousands separator. This function is a hook for derived classes to change the value returned.

**Returns**

*char\_type* representing a thousands separator.

Definition at line 1807 of file `locale_facets.h`.

Referenced by `std::num_punct<_CharT>::thousands_sep()`.

**5.640.4.6 `template<typename _CharT> virtual string_type std::num_punct<_CharT>::do_truename( ) const [inline, protected, virtual]`**

Return string representation of bool true.

Returns a `string_type` containing the text representation for true bool variables. This function is a hook for derived classes to change the value returned.

**Returns**

`string_type` representing printed form of true.

Definition at line 1833 of file `locale_facets.h`.

Referenced by `std::num_punct<_CharT>::truename()`.

**5.640.4.7 `template<typename _CharT> string_type std::num_punct<_CharT>::falsename( ) const [inline]`**

Return string representation of bool false.

This function returns a `string_type` containing the text representation for false bool variables. It does so by calling `num_punct<char_type>::do_falsename()`.

**Returns**

`string_type` representing printed form of false.

Definition at line 1778 of file `locale_facets.h`.

References `std::num_punct<_CharT>::do_falsename()`.

#### 5.640.4.8 template<typename \_CharT> string std::num\_punct<\_CharT>::grouping( ) const [inline]

Return grouping specification.

This function returns a string representing groupings for the integer part of a number. Groupings indicate where thousands separators should be inserted in the integer part of a number.

Each char in the return string is interpreted as an integer rather than a character. These numbers represent the number of digits in a group. The first char in the string represents the number of digits in the least significant group. If a char is negative, it indicates an unlimited number of digits for the group. If more chars from the string are required to group a number, the last char is used repeatedly.

For example, if the [grouping\(\)](#) returns "\003\002" and is applied to the number 123456789, this corresponds to 12,34,56,789. Note that if the string was "32", this would put more than 50 digits into the least significant group if the character set is ASCII.

The string is returned by calling [num\\_punct<char\\_type>::do\\_grouping\(\)](#).

#### Returns

string representing grouping specification.

Definition at line 1752 of file locale\_facets.h.

References [std::num\\_punct<\\_CharT>::do\\_grouping\(\)](#).

#### 5.640.4.9 template<typename \_CharT> char\_type std::num\_punct<\_CharT>::thousands\_sep( ) const [inline]

Return thousands separator character.

This function returns a char\_type to use as a thousands separator. It does so by returning [num\\_punct<char\\_type>::do\\_thousands\\_sep\(\)](#).

#### Returns

char\_type representing a thousands separator.

Definition at line 1721 of file locale\_facets.h.

References [std::num\\_punct<\\_CharT>::do\\_thousands\\_sep\(\)](#).

**5.640.4.10** `template<typename _CharT> string_type std::numpunct<_CharT>::truename( ) const [inline]`

Return string representation of bool true.

This function returns a `string_type` containing the text representation for true bool variables. It does so by calling `numpunct<char_type>::do_truename()`.

#### Returns

`string_type` representing printed form of true.

Definition at line 1765 of file `locale_facets.h`.

References `std::numpunct<_CharT>::do_truename()`.

### 5.640.5 Member Data Documentation

**5.640.5.1** `template<typename _CharT> locale::id std::numpunct<_CharT>::id [static]`

Numpunct facet id.

Definition at line 1658 of file `locale_facets.h`.

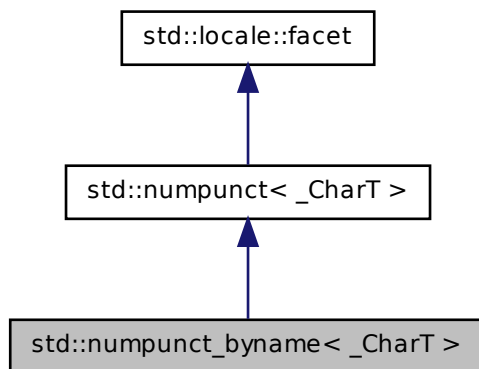

The documentation for this class was generated from the following file:

Public typedef.

Definition at line 160 of file stream\_iterator.h.

**5.643.2.2 typedef void std::iterator< output\_iterator\_tag , void , void , void , void >::difference\_type [inherited]**

Distance between iterators is represented as this type.

Definition at line 126 of file stl\_iterator\_base\_types.h.

**5.643.2.3 typedef output\_iterator\_tag std::iterator< output\_iterator\_tag , void , void , void , void >::iterator\_category [inherited]**

One of the [tag types](#).

Definition at line 122 of file stl\_iterator\_base\_types.h.

**5.643.2.4** `template<typename _Tp , typename _CharT = char, typename  
_Traits = char_traits<_CharT>> typedef basic_ostream<_CharT,  
_Traits> std::ostream_iterator< _Tp, _CharT, _Traits  
>::ostream_type`

Public typedef.

Definition at line 162 of file stream\_iterator.h.

**5.643.2.5** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 128 of file stl\_iterator\_base\_types.h.

**5.643.2.6** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 130 of file stl\_iterator\_base\_types.h.

**5.643.2.7** `template<typename _Tp , typename _CharT = char,  
typename _Traits = char_traits<_CharT>> typedef _Traits  
std::ostream_iterator< _Tp, _CharT, _Traits >::traits_type`

Public typedef.

Definition at line 161 of file stream\_iterator.h.

**5.643.2.8** `typedef void std::iterator< output_iterator_tag , void , void , void ,  
void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 124 of file stl\_iterator\_base\_types.h.

### 5.643.3 Constructor & Destructor Documentation

**5.643.3.1** `template<typename _Tp , typename _CharT = char, typename  
_Traits = char_traits<_CharT>> std::ostream_iterator< _Tp,  
_CharT, _Traits >::ostream_iterator ( ostream_type & __s )  
[inline]`

Construct from an ostream.

Definition at line 171 of file `stream_iterator.h`.

**5.643.3.2** `template<typename _Tp , typename _CharT = char, typename  
_Traits = char_traits<_CharT>> std::ostream_iterator< _Tp,  
_CharT, _Traits >::ostream_iterator ( ostream_type & __s, const  
_CharT* __c ) [inline]`

Construct from an ostream.

The delimiter string *c* is written to the stream after every *Tp* written to the stream. The delimiter is not copied, and thus must not be destroyed while this iterator is in use.

#### Parameters

*s* Underlying ostream to write to.

*c* *CharT* delimiter string to insert.

Definition at line 183 of file `stream_iterator.h`.

**5.643.3.3** `template<typename _Tp , typename _CharT = char, typename  
_Traits = char_traits<_CharT>> std::ostream_iterator< _Tp,  
_CharT, _Traits >::ostream_iterator ( const ostream_iterator< _Tp,  
_CharT, _Traits > & __obj ) [inline]`

Copy constructor.

Definition at line 187 of file `stream_iterator.h`.

## 5.644 std::ostreambuf\_iterator< \_CharT, \_Traits > Class Template Reference

### 5.643.4 Member Function Documentation

**5.643.4.1** `template<typename _Tp , typename _CharT = char, typename _Traits = char_traits<_CharT>> ostream_iterator& std::ostream_iterator< _Tp, _CharT, _Traits >::operator= ( const _Tp & __value ) [inline]`

Writes *value* to underlying ostream using operator<<. If /// constructed with delimiter string, writes delimiter to ostream.

Definition at line 193 of file stream\_iterator.h.

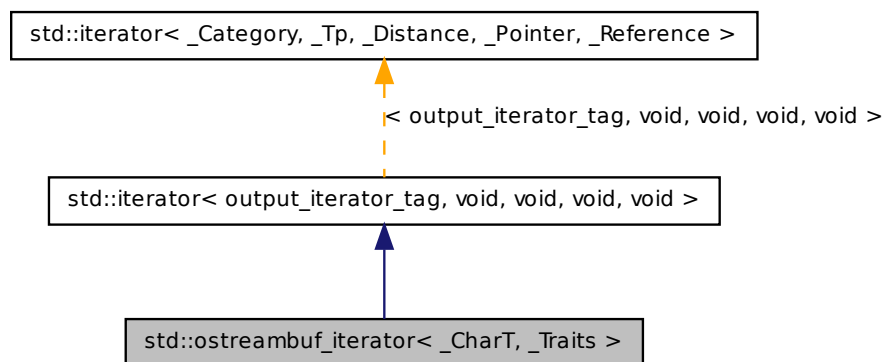

The documentation for this class was generated from the following file:

- [stream\\_iterator.h](#)

## 5.644 std::ostreambuf\_iterator< \_CharT, \_Traits > Class Template Reference

Provides output iterator semantics for streambufs.

Inheritance diagram for std::ostreambuf\_iterator< \_CharT, \_Traits >:

**Public Types**

- typedef void `difference_type`
- typedef `output_iterator_tag` `iterator_category`
- typedef void `pointer`
- typedef void `reference`
- typedef void `value_type`
  
- typedef `_CharT` `char_type`
- typedef `_Traits` `traits_type`
- typedef `basic_streambuf< _CharT, _Traits >` `streambuf_type`
- typedef `basic_ostream< _CharT, _Traits >` `ostream_type`

**Public Member Functions**

- `ostreambuf_iterator` (`ostream_type` &\_\_s) throw ()
- `ostreambuf_iterator` (`streambuf_type` \*\_\_s) throw ()
- `ostreambuf_iterator` & `_M_put` (const `_CharT` \*\_\_ws, `streamsize` \_\_len)
- bool `failed` () const throw ()
- `ostreambuf_iterator` & `operator*` ()
- `ostreambuf_iterator` & `operator++` ()
- `ostreambuf_iterator` & `operator++` (int)
- `ostreambuf_iterator` & `operator=` (`_CharT` \_\_c)

**Friends**

**5.644.1 Detailed Description**

`template<typename _CharT, typename _Traits> class std::ostreambuf_iterator< _CharT, _Traits >`

Provides output iterator semantics for streambufs.

Definition at line 206 of file `streambuf_iterator.h`.

### 5.644 `std::ostreambuf_iterator< _CharT, _Traits >` Class Template Reference

#### 5.644.2 Member Typedef Documentation

**5.644.2.1** `template<typename _CharT, typename _Traits > typedef _CharT  
std::ostreambuf_iterator< _CharT, _Traits >::char_type`

Public typedefs.

Definition at line 213 of file `streambuf_iterator.h`.

**5.644.2.2** `typedef void std::iterator< output_iterator_tag, void, void, void,  
void >::difference_type [inherited]`

Distance between iterators is represented as this type.

Definition at line 126 of file `stl_iterator_base_types.h`.

**5.644.2.3** `typedef output_iterator_tag std::iterator< output_iterator_tag, void  
, void, void, void >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 122 of file `stl_iterator_base_types.h`.

**5.644.2.4** `template<typename _CharT, typename _Traits > typedef  
basic_ostream< _CharT, _Traits> std::ostreambuf_iterator<  
_CharT, _Traits >::ostream_type`

Public typedefs.

Definition at line 216 of file `streambuf_iterator.h`.

**5.644.2.5** `typedef void std::iterator< output_iterator_tag, void, void, void,  
void >::pointer [inherited]`

This type represents a pointer-to-value\_type.

Definition at line 128 of file `stl_iterator_base_types.h`.

## **5.644 std::ostreambuf\_iterator< \_CharT, \_Traits > Class Template Reference**

**5.644.2.6** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]`

This type represents a reference-to-value\_type.

Definition at line 130 of file stl\_iterator\_base\_types.h.

**5.644.2.7** `template<typename _CharT , typename _Traits > typedef basic_streambuf<_CharT, _Traits> std::ostreambuf_iterator<_CharT, _Traits >::streambuf_type`

Public typedefs.

Definition at line 215 of file streambuf\_iterator.h.

**5.644.2.8** `template<typename _CharT , typename _Traits > typedef _Traits std::ostreambuf_iterator< _CharT, _Traits >::traits_type`

Public typedefs.

Definition at line 214 of file streambuf\_iterator.h.

**5.644.2.9** `typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]`

The type "pointed to" by the iterator.

Definition at line 124 of file stl\_iterator\_base\_types.h.

### **5.644.3 Constructor & Destructor Documentation**

**5.644.3.1** `template<typename _CharT , typename _Traits > std::ostreambuf_iterator< _CharT, _Traits >::ostreambuf_iterator ( ostream_type & __s ) throw () [inline]`

Construct output iterator from ostream.

Definition at line 231 of file streambuf\_iterator.h.

## 5.644 std::ostreambuf\_iterator< \_CharT, \_Traits > Class Template Reference

**5.644.3.2** `template<typename _CharT , typename _Traits >  
std::ostreambuf_iterator< _CharT, _Traits >::ostreambuf_iterator (   
streambuf_type * __s ) throw () [inline]`

Construct output iterator from streambuf.

Definition at line 235 of file streambuf\_iterator.h.

### 5.644.4 Member Function Documentation

**5.644.4.1** `template<typename _CharT , typename _Traits > bool  
std::ostreambuf_iterator< _CharT, _Traits >::failed ( ) const throw  
() [inline]`

Return true if previous `operator=()` failed.

Definition at line 265 of file streambuf\_iterator.h.

**5.644.4.2** `template<typename _CharT , typename _Traits >  
ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits  
>::operator* ( ) [inline]`

Return `*this`.

Definition at line 250 of file streambuf\_iterator.h.

**5.644.4.3** `template<typename _CharT , typename _Traits >  
ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits  
>::operator++ ( ) [inline]`

Return `*this`.

Definition at line 260 of file streambuf\_iterator.h.

**5.644.4.4** `template<typename _CharT , typename _Traits >  
ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits  
>::operator++ ( int ) [inline]`

Return \*this.

Definition at line 255 of file streambuf\_iterator.h.

```
5.644.4.5 template<typename _CharT , typename _Traits >
 ostreambuf_iterator& std::ostreambuf_iterator< _CharT, _Traits
 >::operator= (_CharT __c) [inline]
```

Write character to streambuf. Calls [streambuf.sputc\(\)](#).

Definition at line 240 of file streambuf\_iterator.h.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputc\(\)](#).

The documentation for this class was generated from the following file:

- [streambuf\\_iterator.h](#)

## 5.645 std::out\_of\_range Class Reference

Inheritance diagram for std::out\_of\_range:

## Public Member Functions

- **out\_of\_range** (const [string](#) &\_\_arg)
- virtual const char \* **what** () const throw ()

### 5.645.1 Detailed Description

This represents an argument whose value is not within the expected range (e.g., boundary checks in [basic\\_string](#)).

Definition at line 101 of file `stdexcept`.

### 5.645.2 Member Function Documentation

#### 5.645.2.1 virtual const char\* `std::logic_error::what` ( ) const throw () [[virtual](#), [inherited](#)]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.646 `std::output_iterator_tag` Struct Reference

Marking output iterators.

### 5.646.1 Detailed Description

Marking output iterators.

Definition at line 93 of file `stl_iterator_base_types.h`.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.647 `std::overflow_error` Class Reference

Inheritance diagram for `std::overflow_error`:

### Public Member Functions

- **`overflow_error`** (const [string](#) &\_\_arg)
- virtual const char \* **`what`** () const throw ()

#### 5.647.1 Detailed Description

Thrown to indicate arithmetic overflow.

Definition at line 139 of file `stdexcept`.

#### 5.647.2 Member Function Documentation

##### 5.647.2.1 virtual const char\* `std::runtime_error::what` ( ) const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

## 5.648 `std::owner_less< shared_ptr< _Tp > >` Struct Template Reference 3139

The documentation for this class was generated from the following file:

- [stdexcept](#)

### 5.648 `std::owner_less< shared_ptr< _Tp > >` Struct Template Reference

Partial specialization of `owner_less` for [shared\\_ptr](#).

Inherits `std::_Sp_owner_less< shared_ptr< _Tp >, weak_ptr< _Tp > >`.

#### Public Types

- typedef `_Tp` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_Tp` [second\\_argument\\_type](#)

#### Public Member Functions

- `bool operator()` (`const _Tp &__lhs, const _Tp &__rhs`) `const`
- `bool operator()` (`const _Tp1 &__lhs, const _Tp &__rhs`) `const`
- `bool operator()` (`const _Tp &__lhs, const _Tp1 &__rhs`) `const`

#### 5.648.1 Detailed Description

`template<typename _Tp> struct std::owner_less< shared_ptr< _Tp > >`

Partial specialization of `owner_less` for [shared\\_ptr](#).

Definition at line 460 of file `shared_ptr.h`.

#### 5.648.2 Member Typedef Documentation

**5.648.2.1** `typedef _Tp std::binary_function< _Tp , _Tp , bool >::first_argument_type` `[inherited]`

`first_argument_type` is the type of the first argument

Definition at line 118 of file `stl_function.h`.

**5.648.2.2** `typedef bool std::binary_function< _Tp , _Tp , bool >::result_type  
[inherited]`

`result_type` is the return type

Definition at line 124 of file `stl_function.h`.

**5.648.2.3** `typedef _Tp std::binary_function< _Tp , _Tp , bool  
>::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument

Definition at line 121 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [shared\\_ptr.h](#)

## **5.649 std::owner\_less< weak\_ptr< \_Tp > > Struct Template Reference**

Partial specialization of `owner_less` for [weak\\_ptr](#).

Inherits `std::_Sp_owner_less< weak_ptr< _Tp >, shared_ptr< _Tp > >`.

### **Public Types**

- `typedef _Tp` [first\\_argument\\_type](#)
- `typedef bool` [result\\_type](#)
- `typedef _Tp` [second\\_argument\\_type](#)

### **Public Member Functions**

- `bool operator()` (`const _Tp &__lhs, const _Tp &__rhs`) `const`
- `bool operator()` (`const _Tp1 &__lhs, const _Tp &__rhs`) `const`
- `bool operator()` (`const _Tp &__lhs, const _Tp1 &__rhs`) `const`

### **5.649.1 Detailed Description**

`template<typename _Tp> struct std::owner_less< weak_ptr< _Tp > >`

Partial specialization of `owner_less` for [weak\\_ptr](#).

## **5.650 std::packaged\_task< \_Res(\_ArgTypes...)> Class Template Reference**3141

Definition at line 466 of file shared\_ptr.h.

### **5.649.2 Member Typedef Documentation**

#### **5.649.2.1 typedef \_Tp std::binary\_function< \_Tp , \_Tp , bool >::first\_argument\_type [inherited]**

`first_argument_type` is the type of the first argument

Definition at line 118 of file stl\_function.h.

#### **5.649.2.2 typedef bool std::binary\_function< \_Tp , \_Tp , bool >::result\_type [inherited]**

`result_type` is the return type

Definition at line 124 of file stl\_function.h.

#### **5.649.2.3 typedef \_Tp std::binary\_function< \_Tp , \_Tp , bool >::second\_argument\_type [inherited]**

`second_argument_type` is the type of the second argument

Definition at line 121 of file stl\_function.h.

The documentation for this struct was generated from the following file:

- [shared\\_ptr.h](#)

## **5.650 std::packaged\_task< \_Res(\_ArgTypes...)> Class Template Reference**

`packaged_task`

### **Public Types**

- typedef \_Res **result\_type**

**Public Member Functions**

- `template<typename _Fn >`  
`packaged_task` (`const _Fn &__fn`)
- `packaged_task` (`_Res(*__fn)(_ArgTypes...)`)

- template<class `_U1` , class `_U2` >  
`pair` & `operator=` (const `pair`< `_U1`, `_U2` > &\_\_p)
- template<class `_U1` , class `_U2` >  
`pair` & `operator=` (`pair`< `_U1`, `_U2` > &&\_\_p)
- void `swap` (`pair` &\_\_p)

**Public Attributes**

- `_T1` `first`
- `_T2` `second`

### 5.651.1 Detailed Description

**template<class \_T1, class \_T2> struct std::pair<\_T1, \_T2>**

Struct holding two objects of arbitrary type.

Definition at line 87 of file `stl_pair.h`.

### 5.651.2 Member Typedef Documentation

**5.651.2.1    template<class \_T1, class \_T2> typedef \_T2 std::pair<\_T1, \_T2>::second\_type**

`first_type` is the first bound type

Definition at line 90 of file `stl_pair.h`.

### 5.651.3 Constructor & Destructor Documentation

**5.651.3.1    template<class \_T1, class \_T2> constexpr std::pair<\_T1, \_T2>::pair ( ) [inline]**

`second` is a copy of the second object

The default constructor creates `first` and `second` using their respective default constructors.

Definition at line 99 of file `stl_pair.h`.

**5.651.3.2    template<class \_T1, class \_T2> constexpr std::pair<\_T1, \_T2>::pair ( const \_T1 & \_\_a, const \_T2 & \_\_b ) [inline]**

Two objects may be passed to a `pair` constructor to be copied.

Definition at line 103 of file `stl_pair.h`.

**5.651.3.3    template<class \_T1, class \_T2> template<class \_U1, class \_U2> constexpr std::pair<\_T1, \_T2>::pair ( const pair<\_U1, \_U2> & \_\_p ) [inline]**

There is also a templated copy ctor for the `pair` class itself.

Definition at line 108 of file `stl_pair.h`.

#### **5.651.4 Member Data Documentation**

##### **5.651.4.1 `template<class _T1, class _T2> _T1 std::pair<_T1, _T2>::first`**

`second_type` is the second bound type

Definition at line 92 of file `stl_pair.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp>::_Temporary_buffer()`, `std::set<_StateIdT>::insert()`, and `std::operator==()`.

##### **5.651.4.2 `template<class _T1, class _T2> _T2 std::pair<_T1, _T2>::second`**

`first` is a copy of the first object

Definition at line 93 of file `stl_pair.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp>::_Temporary_buffer()`, `std::set<_StateIdT>::insert()`, and `std::operator==()`.

The documentation for this struct was generated from the following files:

### 5.652.1 Detailed Description

`template<typename _RealType = double> class std::piecewise_constant_distribution<_RealType>`

A `piecewise_constant_distribution` random number distribution. The formula for the piecewise constant probability mass function is

Definition at line 4863 of file `random.h`.

### **5.652.2 Member Typedef Documentation**

**5.652.2.1** `template<typename _RealType = double> typedef _RealType  
std::piecewise_constant_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 4870 of file random.h.

### **5.652.3 Member Function Documentation**

**5.652.3.1** `template<typename _RealType = double> std::vector<double>  
std::piecewise_constant_distribution<_RealType>::densities ( )  
const [inline]`

Returns a vector of the probability densities.

Definition at line 4984 of file random.h.

References `std::vector<_Tp, _Alloc>::empty()`.

**5.652.3.2** `template<typename _RealType = double> std::vector<_RealType>  
std::piecewise_constant_distribution<_RealType>::intervals ( )  
const [inline]`

Returns a vector of the intervals.

Definition at line 4968 of file random.h.

References `std::vector<_Tp, _Alloc>::empty()`.

**5.652.3.3** `template<typename _RealType = double> result_type  
std::piecewise_constant_distribution<_RealType>::max ( ) const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 5019 of file random.h.

References `std::vector<_Tp, _Alloc>::back()`, and `std::vector<_Tp, _Alloc>::empty()`.

**5.652.3.4** `template<typename _RealType = double> result_type  
std::piecewise_constant_distribution<_RealType>::min ( ) const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 5009 of file random.h.

References `std::vector<_Tp, _Alloc>::empty()`, and `std::vector<_Tp, _Alloc>::front()`.

**5.652.3.5** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator> result_type  
std::piecewise_constant_distribution<_RealType>::operator() (  
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 5030 of file random.h.

References `std::piecewise_constant_distribution<_RealType>::operator()()`, and `std::piecewise_constant_distribution<_RealType>::param()`.

Referenced by `std::piecewise_constant_distribution<_RealType>::operator()()`.

**5.652.3.6** `template<typename _RealType = double> void  
std::piecewise_constant_distribution<_RealType>::param ( const  
param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

**`__param`** The new parameter set of the distribution.

Definition at line 5002 of file random.h.

**5.652.3.7** `template<typename _RealType = double> param_type  
std::piecewise_constant_distribution<_RealType>::param ( )  
const [inline]`

Returns the parameter set of the distribution.

Definition at line 4994 of file random.h.

Referenced by std::piecewise\_constant\_distribution<\_RealType>::operator()(), and std::operator==().

**5.652.3.8** `template<typename _RealType = double> void  
std::piecewise_constant_distribution<_RealType>::reset ( )  
[inline]`

Resets the distribution state.

Definition at line 4961 of file random.h.

#### **5.652.4 Friends And Related Function Documentation**

**5.652.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
( std::basic_ostream<_CharT, _Traits> & , const  
std::piecewise_constant_distribution<_RealType1> & )  
[friend]`

Inserts a piecewise\_constant\_distribution random number distribution `__x` into the output stream `__os`.

##### **Parameters**

`__os` An output stream.

`__x` A piecewise\_constant\_distribution random number distribution.

##### **Returns**

The output stream with the state of `__x` inserted or in an error state.

**5.652.4.2** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits > std::basic_  
istream<_CharT, _Traits>& operator>> ( std::basic_istream<  
_CharT, _Traits> & , std::piecewise_constant_distribution<  
_RealType1> & ) [friend]`

### 5.653 `std::piecewise_constant_distribution<_RealType>::param_type` Struct Reference 3150

---

Extracts a `piecewise_constant_distribution` random number distribution `__x` from the input stream `__is`.

#### Parameters

- `__is` An input stream.
- `__x` A `piecewise_constant_distribution` random number generator engine.

#### Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following files:

### 5.655.1 Detailed Description

`template<typename _RealType = double> class std::piecewise_linear_distribution<_RealType>`

A `piecewise_linear_distribution` random number distribution. The formula for the piecewise linear probability mass function is

Definition at line 5102 of file `random.h`.

## **5.655.2 Member Typedef Documentation**

**5.655.2.1** `template<typename _RealType = double> typedef _RealType  
std::piecewise_linear_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 5109 of file random.h.

## **5.655.3 Member Function Documentation**

**5.655.3.1** `template<typename _RealType = double> std::vector<double>  
std::piecewise_linear_distribution<_RealType>::densities ( ) const  
[inline]`

Return a vector of the probability densities of the distribution.

Definition at line 5226 of file random.h.

References `std::vector<_Tp, _Alloc>::empty()`.

**5.655.3.2** `template<typename _RealType = double> std::vector<_RealType>  
std::piecewise_linear_distribution<_RealType>::intervals ( ) const  
[inline]`

Return the intervals of the distribution.

Definition at line 5209 of file random.h.

References `std::vector<_Tp, _Alloc>::empty()`.

**5.655.3.3** `template<typename _RealType = double> result_type  
std::piecewise_linear_distribution<_RealType>::max ( ) const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 5261 of file random.h.

References `std::vector<_Tp, _Alloc>::back()`, and `std::vector<_Tp, _Alloc>::empty()`.

**5.655.3.4** `template<typename _RealType = double> result_type  
std::piecewise_linear_distribution<_RealType>::min ( ) const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 5251 of file random.h.

References `std::vector<_Tp, _Alloc>::empty()`, and `std::vector<_Tp, _Alloc>::front()`.

**5.655.3.5** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator> result_type  
std::piecewise_linear_distribution<_RealType>::operator() (  
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 5272 of file random.h.

References `std::piecewise_linear_distribution<_RealType>::operator()()`, and `std::piecewise_linear_distribution<_RealType>::param()`.

Referenced by `std::piecewise_linear_distribution<_RealType>::operator()()`.

**5.655.3.6** `template<typename _RealType = double> void  
std::piecewise_linear_distribution<_RealType>::param ( const  
param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

`__param` The new parameter set of the distribution.

Definition at line 5244 of file random.h.

**5.655.3.7** `template<typename _RealType = double> param_type  
std::piecewise_linear_distribution<_RealType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 5236 of file random.h.

Referenced by `std::piecewise_linear_distribution<_RealType>::operator()()`, and `std::operator==( )`.

**5.655.3.8** `template<typename _RealType = double> void  
std::piecewise_linear_distribution<_RealType>::reset ( )  
[inline]`

Resets the distribution state.

Definition at line 5202 of file random.h.

#### **5.655.4 Friends And Related Function Documentation**

**5.655.4.1** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_ostream<_CharT, _Traits>& operator<<  
( std::basic_ostream<_CharT, _Traits> & , const  
std::piecewise_linear_distribution<_RealType1> & ) [friend]`

Inserts a `std::piecewise_linear_distribution` random number distribution `__x` into the output stream `__os`.

##### **Parameters**

`__os` An output stream.

`__x` A `std::piecewise_linear_distribution` random number distribution.

##### **Returns**

The output stream with the state of `__x` inserted or in an error state.

**5.655.4.2** `template<typename _RealType = double> template<typename  
_RealType1 , typename _CharT , typename _Traits >  
std::basic_istream<_CharT, _Traits>& operator>>  
( std::basic_istream<_CharT, _Traits> & ,  
std::piecewise_linear_distribution<_RealType1> & ) [friend]`

Extracts a `std::piecewise_linear_distribution` random number distribution `__x` from the input stream `__is`.

### Parameters

- `__is` An input stream.
- `__x` A `piecewise_linear_distribution` random number generator engine.

### Returns

The input stream with `__x` extracted or in an error state.

### 5.660.1 Detailed Description

`template<typename _IntType = int> class std::poisson_distribution< _IntType >`

A discrete Poisson random number distribution. The formula for the Poisson probability density function is  $p(i|\mu) = \frac{\mu^i}{i!} e^{-\mu}$  where  $\mu$  is the parameter of the distribution.

Definition at line 3952 of file random.h.

### 5.660.2 Member Typedef Documentation

**5.660.2.1** `template<typename _IntType = int> typedef _IntType  
std::poisson_distribution< _IntType >::result_type`

The type of the range of the distribution.

Definition at line 3959 of file random.h.

### 5.660.3 Member Function Documentation

**5.660.3.1** `template<typename _IntType = int> result_type  
std::poisson_distribution<_IntType>::max ( ) const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 4046 of file `random.h`.

Referenced by `std::poisson_distribution<_IntType>::operator()()`.

**5.660.3.2** `template<typename _IntType = int> double  
std::poisson_distribution<_IntType>::mean ( ) const [inline]`

Returns the distribution parameter `mean`.

Definition at line 4017 of file `random.h`.

**5.660.3.3** `template<typename _IntType = int> result_type  
std::poisson_distribution<_IntType>::min ( ) const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4039 of file `random.h`.

**5.660.3.4** `template<typename _IntType> template<typename  
_UniformRandomNumberGenerator> poisson_distribution<  
_IntType>::result_type std::poisson_distribution<_IntType  
>::operator() ( _UniformRandomNumberGenerator & __urng,  
const param_type & __param )`

A rejection algorithm when `mean >= 12` and a simple method based upon the multiplication of uniform random variates otherwise. NB: The former is available only if `_GLIBCXX_USE_C99_MATH_TR1` is defined.

Reference: Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. X, Sects. 3.3 & 3.4 (+ Errata!).

Definition at line 1200 of file `random.tcc`.

_UniformRandomNumberGenerator > result_type  
std::poisson_distribution< _IntType >::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 4054 of file random.h.

References `std::poisson_distribution< _IntType >::operator()()`, and `std::poisson_distribution< _IntType >::param()`.

Referenced by `std::poisson_distribution< _IntType >::operator()()`.

**5.660.3.6** `template<typename _IntType = int> param_type  
std::poisson_distribution< _IntType >::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 4024 of file random.h.

Referenced by `std::poisson_distribution< _IntType >::operator()()`.

**5.660.3.7** `template<typename _IntType = int> void std::poisson_distribution<  
_IntType >::param ( const param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

`__param` The new parameter set of the distribution.

Definition at line 4032 of file random.h.

**5.660.3.8** `template<typename _IntType = int> void std::poisson_distribution<  
_IntType >::reset ( ) [inline]`

Resets the distribution state.

Definition at line 4010 of file random.h.

References `std::normal_distribution<_RealType>::reset()`.

#### 5.660.4 Friends And Related Function Documentation

**5.660.4.1** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_ostream<_CharT,  
_Traits>& operator<< ( std::basic_ostream<_CharT, _Traits > & ,  
const std::poisson_distribution<_IntType1 > & ) [friend]`

Inserts a `poisson_distribution` random number distribution `__x` into the output stream `__os`.

##### Parameters

`__os` An output stream.  
`__x` A `poisson_distribution` random number distribution.

##### Returns

The output stream with the state of `__x` inserted or in an error state.

**5.660.4.2** `template<typename _IntType = int> template<typename _IntType1  
> bool operator==( const std::poisson_distribution<_IntType1 >  
& __d1, const std::poisson_distribution<_IntType1 > & __d2 )  
[friend]`

Return true if two Poisson distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 4069 of file `random.h`.

**5.660.4.3** `template<typename _IntType = int> template<typename _IntType1 ,  
typename _CharT , typename _Traits > std::basic_istream<_CharT,  
_Traits>& operator>> ( std::basic_istream<_CharT, _Traits > & ,  
std::poisson_distribution<_IntType1 > & ) [friend]`

Extracts a `poisson_distribution` random number distribution `__x` from the input stream `__is`.

## 5.661 `std::poisson_distribution< _IntType >::param_type` Struct Reference 3167

### Parameters

- `__is` An input stream.
- `__x` A `poisson_distribution` random number generator engine.

### Returns

The input stream with `__x` extracted or in an error state.

### 5.662.1 Detailed Description

```
template<typename _Tp, typename _Sequence = vector<_Tp>, typename _
Compare = less<typename _Sequence::value_type>> class std::priority_queue<
_Tp, _Sequence, _Compare >
```

A standard container automatically sorting its contents. This is not a true container, but an *adaptor*. It holds another container, and provides a wrapper interface to that container. The wrapper is what enforces priority-based sorting and queue behavior. Very few of the standard container/sequence interface requirements are met (e.g., iterators).

The second template parameter defines the type of the underlying sequence/container. It defaults to `std::vector`, but it can be any type that supports `front()`, `push_back`, `pop_back`, and random-access iterators, such as `std::deque` or an appropriate user-defined type.

The third template parameter supplies the means of making priority comparisons. It defaults to `less<value_type>` but can be anything defining a strict weak ordering.

Members not found in *normal* containers are `container_type`, which is a typedef for the second Sequence parameter, and `push`, `pop`, and `top`, which are standard queue operations.

#### Note

No equality/comparison operators are provided for `priority_queue`. Sorting of the elements takes place as they are added to, and removed from, the `priority_queue` using the `priority_queue`'s member functions. If you access the elements by other means, and change their data such that the sorting order would be different, the `priority_queue` will not re-sort the elements for you. (How could it know to do so?)

Definition at line 359 of file `stl_queue.h`.

### 5.662.2 Constructor & Destructor Documentation

```
5.662.2.1 template<typename _Tp, typename _Sequence = vector<_Tp>,
typename _Compare = less<typename _Sequence::value_type>>
std::priority_queue<_Tp, _Sequence, _Compare>::priority_queue(
const _Compare & __x, const _Sequence & __s) [inline,
explicit]
```

Default constructor creates no elements.

Definition at line 394 of file `stl_queue.h`.

References `std::make_heap()`.

```
5.662.2.2 template<typename _Tp, typename _Sequence = vector<_Tp>,
 typename _Compare = less<typename _Sequence::value_type>>
 template<typename _InputIterator > std::priority_queue<_Tp,
 _Sequence, _Compare>::priority_queue (_InputIterator __first,
 _InputIterator __last, const _Compare & __x, const _Sequence &
 __s) [inline]
```

Builds a queue from a range.

#### Parameters

- first* An input iterator.
- last* An input iterator.
- x* A comparison functor describing a strict weak ordering.
- s* An initial sequence with which to start.

Begins by copying *s*, inserting a copy of the elements from `[first,last)` into the copy of *s*, then ordering the copy according to *x*.

For more information on function objects, see the documentation on [functor base classes](#).

Definition at line 434 of file `stl_queue.h`.

References `std::make_heap()`.

#### 5.662.3 Member Function Documentation

```
5.662.3.1 template<typename _Tp, typename _Sequence = vector<_Tp>,
 typename _Compare = less<typename _Sequence::value_type>>
 bool std::priority_queue<_Tp, _Sequence, _Compare>::empty ()
 const [inline]
```

Returns true if the queue is empty.

Definition at line 460 of file `stl_queue.h`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

**5.662.3.2** `template<typename _Tp, typename _Sequence = vector<_Tp>,  
typename _Compare = less<typename _Sequence::value_type>>  
void std::priority_queue<_Tp, _Sequence, _Compare >::pop ( )  
[inline]`

Removes first element.

This is a typical queue operation. It shrinks the queue by one. The time complexity of the operation depends on the underlying sequence.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop()` is called.

Definition at line 523 of file `stl_queue.h`.

References `std::pop_heap()`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

**5.662.3.3** `template<typename _Tp, typename _Sequence = vector<_Tp>,  
typename _Compare = less<typename _Sequence::value_type>>  
void std::priority_queue<_Tp, _Sequence, _Compare >::push (  
const value_type & __x ) [inline]`

Add data to the queue.

#### Parameters

*x* Data to be added.

This is a typical queue operation. The time complexity of the operation depends on the underlying sequence.

Definition at line 488 of file `stl_queue.h`.

References `std::push_heap()`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

**5.662.3.4** `template<typename _Tp, typename _Sequence = vector<_Tp>,  
 typename _Compare = less<typename _Sequence::value_type>>  
 size_type std::priority_queue<_Tp, _Sequence, _Compare>::size(  
 ) const [inline]`

Returns the number of elements in the queue.

Definition at line 465 of file `stl_queue.h`.

**5.662.3.5** `template<typename _Tp, typename _Sequence = vector<_Tp>,  
 typename _Compare = less<typename _Sequence::value_type>>  
 const_reference std::priority_queue<_Tp, _Sequence, _Compare>::top(  
 ) const [inline]`

Returns a read-only (constant) reference to the data at the first element of the queue.

Definition at line 473 of file `stl_queue.h`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

### 5.666.1 Detailed Description

**template<typename \_Tp, typename \_Sequence = deque<\_Tp>> class std::queue< \_Tp, \_Sequence >**

A standard container giving FIFO behavior. Meets many of the requirements of a [container](#), but does not define anything to do with iterators. Very few of the other standard container interfaces are defined.

This is not a true container, but an *adaptor*. It holds another container, and provides a wrapper interface to that container. The wrapper is what enforces strict first-in-first-out queue behavior.

The second template parameter defines the type of the underlying sequence/container. It defaults to [std::deque](#), but it can be any type that supports `front`, `back`, `push_back`, and `pop_front`, such as [std::list](#) or an appropriate user-defined type.

Members not found in *normal* containers are `container_type`, which is a typedef for the second Sequence parameter, and `push` and `pop`, which are standard queue/FIFO operations.

Definition at line 92 of file `stl_queue.h`.

### 5.666.2 Constructor & Destructor Documentation

**5.666.2.1 template<typename \_Tp, typename \_Sequence = deque<\_Tp>> std::queue< \_Tp, \_Sequence >::queue ( const \_Sequence & \_\_c ) [inline, explicit]**

Default constructor creates no elements.

Definition at line 137 of file `stl_queue.h`.

### 5.666.3 Member Function Documentation

**5.666.3.1 template<typename \_Tp, typename \_Sequence = deque<\_Tp>> reference std::queue< \_Tp, \_Sequence >::back ( ) [inline]**

Returns a read/write reference to the data at the last element of the queue.

Definition at line 184 of file `stl_queue.h`.

References `std::queue< _Tp, _Sequence >::c`.

**5.666.3.2** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
const_reference std::queue<_Tp, _Sequence>::back ( ) const  
[inline]`

Returns a read-only (constant) reference to the data at the last element of the queue.

Definition at line 195 of file `std_queue.h`.

References `std::queue<_Tp, _Sequence>::c`.

**5.666.3.3** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
bool std::queue<_Tp, _Sequence>::empty ( ) const [inline]`

Returns true if the queue is empty.

Definition at line 149 of file `std_queue.h`.

References `std::queue<_Tp, _Sequence>::c`.

**5.666.3.4** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
const_reference std::queue<_Tp, _Sequence>::front ( ) const  
[inline]`

Returns a read-only (constant) reference to the data at the first element of the queue.

Definition at line 173 of file `std_queue.h`.

References `std::queue<_Tp, _Sequence>::c`.

**5.666.3.5** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
reference std::queue<_Tp, _Sequence>::front ( ) [inline]`

Returns a read/write reference to the data at the first element of the queue.

Definition at line 162 of file `std_queue.h`.

References `std::queue<_Tp, _Sequence>::c`.

**5.666.3.6** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
void std::queue<_Tp, _Sequence>::pop ( ) [inline]`

Removes first element.

This is a typical queue operation. It shrinks the queue by one. The time complexity of the operation depends on the underlying sequence.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop()` is called.

Definition at line 237 of file `std_queue.h`.

References `std::queue< _Tp, _Sequence >::c`.

**5.666.3.7** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
void std::queue< _Tp, _Sequence >::push ( const value_type & __x  
) [inline]`

Add data to the end of the queue.

#### Parameters

*x* Data to be added.

This is a typical queue operation. The function creates an element at the end of the queue and assigns the given data to it. The time complexity of the operation depends on the underlying sequence.

Definition at line 211 of file `std_queue.h`.

References `std::queue< _Tp, _Sequence >::c`.

**5.666.3.8** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
size_type std::queue< _Tp, _Sequence >::size ( ) const [inline]`

Returns the number of elements in the queue.

Definition at line 154 of file `std_queue.h`.

References `std::queue< _Tp, _Sequence >::c`.

#### 5.666.4 Member Data Documentation

**5.666.4.1** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
_Sequence std::queue< _Tp, _Sequence >::c [protected]`

'c' is the underlying container. Maintainers wondering why this isn't uglified as per style guidelines should note that this name is specified in the standard, [23.2.3.1]. (Why? Presumably for the same reason that it's protected instead of private: to allow derivation. But none of the other containers allow for derivation. Odd.)

Definition at line 125 of file `std_queue.h`.

Referenced by `std::queue< _Tp, _Sequence >::back()`, `std::queue< _Tp, _Sequence >::empty()`, `std::queue< _Tp, _Sequence >::front()`, `std::operator==(, std::queue< _Tp, _Sequence >::pop())`, `std::queue< _Tp, _Sequence >::push()`, and `std::queue< _Tp, _Sequence >::size()`.

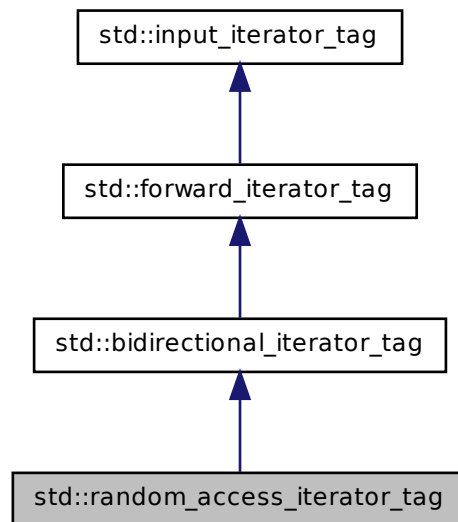

The documentation for this class was generated from the following file:

#### 5.668.1 Detailed Description

A standard interface to a platform-specific non-deterministic random number generator (if any are available).

Definition at line 1498 of file `random.h`.

#### 5.668.2 Member Typedef Documentation

##### 5.668.2.1 typedef unsigned int `std::random_device::result_type`

The type of the generated random value.

Definition at line 1502 of file `random.h`.

The documentation for this class was generated from the following file:

- [random.h](#)

## 5.669 `std::range_error` Class Reference

Inheritance diagram for `std::range_error`:

### Public Member Functions

- **`range_error`** (const [string](#) &\_\_arg)
- virtual const char \* **`what`** () const throw ()

#### 5.669.1 Detailed Description

Thrown to indicate range errors in internal computations.

Definition at line 131 of file `stdexcept`.

#### 5.669.2 Member Function Documentation

##### 5.669.2.1 virtual const char\* `std::runtime_error::what` ( ) const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

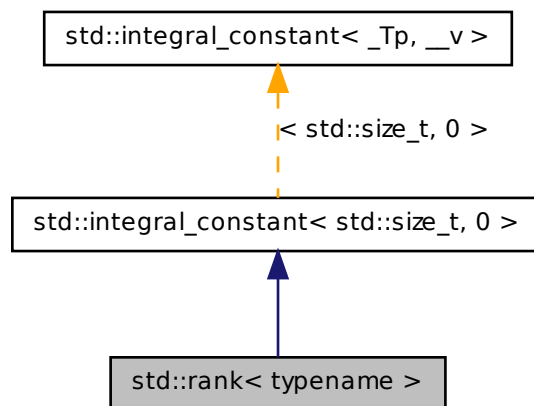

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.670 `std::rank< typename >` Struct Template Reference

`rank`

Inheritance diagram for `std::rank< typename >`:

### Public Types

- typedef [integral\\_constant](#)< `std::size_t`, `__v` > **type**
- typedef `std::size_t` **value\_type**

### Public Member Functions

- constexpr **operator value\_type** ()

### Static Public Attributes

- static constexpr `std::size_t` **value**

### 5.670.1 Detailed Description

**template<typename> struct std::rank< typename >**

rank

Definition at line 372 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 5.671 `std::ratio< _Num, _Den >` Struct Template Reference

Provides compile-time rational arithmetic.

### Public Types

- typedef [ratio](#)< num, den > **type**

### Public Member Functions

- **static\_assert** (\_Den!=0,"denominator cannot be zero")
- **static\_assert** (\_Num >= \_\_INTMAX\_MAX\_\_ && \_Den >= \_\_INTMAX\_MAX\_\_, "out of range")

### Static Public Attributes

- static constexpr intmax\_t **den**
- static constexpr intmax\_t **num**

### 5.671.1 Detailed Description

**template<intmax\_t \_Num, intmax\_t \_Den = 1> struct std::ratio< \_Num, \_Den >**

Provides compile-time rational arithmetic. This class template represents any finite rational number with a numerator and denominator representable by compile-time constants of type `intmax_t`. The ratio is simplified when instantiated.

For example:

```
std::ratio<7,-21>::num == -1;
std::ratio<7,-21>::den == 3;
```

Definition at line 153 of file `ratio`.

The documentation for this struct was generated from the following file:

- [ratio](#)

## 5.672 `std::ratio_add<_R1, _R2>` Struct Template Reference

## 5.682 `std::regex_error` Class Reference

A regular expression exception class.

The regular expression library throws objects of this class on error.

Inheritance diagram for `std::regex_error`:

### Public Member Functions

- [regex\\_error](#) ([regex\\_constants::error\\_type](#) \_\_ecode)
- [regex\\_constants::error\\_type](#) code () const
- virtual const char \* [what](#) () const throw ()

#### 5.682.1 Detailed Description

A regular expression exception class.

The regular expression library throws objects of this class on error.

Definition at line 131 of file `regex_error.h`.

### 5.682.2 Constructor & Destructor Documentation

**5.682.2.1** `std::regex_error::regex_error ( regex_constants::error_type __ecode ) [explicit]`

Constructs a `regex_error` object.

#### Parameters

*ecode* the regex error code.

### 5.682.3 Member Function Documentation

**5.682.3.1** `regex_constants::error_type std::regex_error::code ( ) const [inline]`

Gets the regex error code.

#### Returns

the regex error code.

Definition at line 152 of file `regex_error.h`.

**5.682.3.2** `virtual const char* std::runtime_error::what ( ) const throw () [virtual, inherited]`

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from `std::exception`.

The documentation for this class was generated from the following file:

- `regex_error.h`

## 5.683 `std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >` Class Template Reference

### Public Types

- typedef `std::ptrdiff_t` **difference\_type**
- typedef `std::forward_iterator_tag` **iterator\_category**
- typedef `const value_type *` **pointer**
- typedef `const value_type &` **reference**
- typedef `basic_regex< _Ch_type, _Rx_traits >` **regex\_type**
- typedef `match_results< _Bi_iter >` **value\_type**

### Public Member Functions

- `regex_iterator` ()
- `regex_iterator` (`_Bi_iter` \_\_a, `_Bi_iter` \_\_b, `const regex_type &` \_\_re, `regex_constants::match_flag_type` \_\_m=`regex_constants::match_default`)
- `regex_iterator` (`const regex_iterator &` \_\_rhs)
- `bool operator!=` (`const regex_iterator &` \_\_rhs)

- `const value_type * operator->` ()
- `regex_iterator & operator=` (`const regex_iterator &` \_\_rhs)
- `bool operator==` (`const regex_iterator &` \_\_rhs)

#### 5.683.1 Detailed Description

`template<typename _Bi_iter, typename _Ch_type = typename iterator_traits< _Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> class std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >`

An iterator adaptor that will provide repeated calls of `regex_search` over a range until no more matches remain.

Definition at line 2238 of file `regex.h`.

## 5.683.2 Constructor & Destructor Documentation

**5.683.2.1** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator ( )`

Provides a singular iterator, useful for indicating one-past-the-end of a range.

### Todo

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

**5.683.2.2** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator ( _Bi_iter __a, _Bi_iter __b, const regex_type & __re, regex_constants::match_flag_type __m = regex_constants::match_default )`

Constructs a regex\_iterator...

### Parameters

*a* [IN] The start of a text range to search.

*b* [IN] One-past-the-end of the text range to search.

*re* [IN] The regular expression to match.

*m* [IN] Policy flags for match rules.

### Todo

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

**5.683.2.3** `template<typename _Bi_iter , typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator ( const regex_iterator< _Bi_iter, _Ch_type, _Rx_traits > & __rhs )`

Copy constructs a regex\_iterator.

#### Todo

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

### 5.683.3 Member Function Documentation

**5.683.3.1** `template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> bool std::regex_iterator<_Bi_iter, _Ch_type, _Rx_traits>::operator!=( const regex_iterator<_Bi_iter, _Ch_type, _Rx_traits> & __rhs )`

#### Todo

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

**5.683.3.2** `template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> const value_type& std::regex_iterator<_Bi_iter, _Ch_type, _Rx_traits>::operator* ( )`

#### Todo

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

**5.683.3.3** `template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> regex_iterator std::regex_iterator<_Bi_iter, _Ch_type, _Rx_traits>::operator++ ( int )`

#### Todo

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

**5.683.3.4** `template<typename _Bi_iter, typename _Ch_type = typename  
iterator_traits<_Bi_iter>::value_type, typename _Rx_traits =

- `bool operator== (const regex\_token\_iterator &__rhs)`

#### 5.684.1 Detailed Description

```
template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> class
std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits>
```

Iterates over submatches in a range (or *splits* a text string).

The purpose of this iterator is to enumerate all, or all specified, matches of a regular expression within a text range. The dereferenced value of an iterator of this class is a [std::sub\\_match](#) object.

Definition at line 2353 of file `regex.h`.

#### 5.684.2 Constructor & Destructor Documentation

**5.684.2.1** `template<typename _Bi_iter, typename _Ch_type = typename iterator_traits<_Bi_iter>::value_type, typename _Rx_traits = regex_traits<_Ch_type>> std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits>::regex_token_iterator ( )`

Default constructs a `regex_token_iterator`.

#### Todo

Implement this function.

A default-constructed `regex_token_iterator` is a singular iterator that will compare equal to the one-past-the-end value for any iterator of the same type.

5.684.2.2 `template<typename _Bi_iter, typename _Ch_type = typename  
iterator_traits<_Bi_iter>::value_type, typename _Rx_traits  
= regex_traits<_Ch_type>> std::regex_token_iterator<  
_Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (   
_Bi_iter __a, _Bi_iter __b, const regex_type & __re, int  
__submatch = 0, regex_constants::match_flag_type __m =  
regex_constants::match_default )`

Constructs a regex\_token\_iterator...

#### Parameters

*a* [IN] The start of the text to search.

*b* [IN] One-past-the-end of the text to search.

*re* [IN] The regular expression to search for.

*submatch* [IN] Which submatch to return. There are some special values for this parameter:

- -1 each enumerated subexpression does NOT match the regular expression (aka field splitting)
- 0 the entire string matching the subexpression is returned for each match within the text.
- >0 enumerates only the indicated subexpression from a match within the text.

*m* [IN] Policy flags for match rules.

#### Todo

Implement this function.

Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

5.684.2.3 `template<typename _Bi_iter, typename _Ch_type = typename  
iterator_traits<_Bi_iter>::value_type, typename _Rx_traits =  
regex_traits<_Ch_type>> std::regex_token_iterator< _Bi_iter,  
_Ch_type, _Rx_traits >::regex_token_iterator ( _Bi_iter __a,  
_Bi_iter __b, const regex_type & __re, const std::vector< int  
> & __submatches, regex_constants::match_flag_type __m =  
regex_constants::match_default )`

Constructs a regex\_token\_iterator...

#### Parameters

*a* [IN] The start of the text to search.

*b* [IN] One-past-the-end of the text to search.  
*re* [IN] The regular expression to search for.  
*submatches* [IN] A list of subexpressions to return for each regular expression match within the text.  
*m* [IN] Policy flags for match rules.

#### Todo

Implement this function.  
Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

5.684.2.4 `template<typename _Bi_iter , typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> template<std::size_t  
_Nm> std::regex_token_iterator< _Bi_iter, _Ch_type,  
_Rx_traits >::regex_token_iterator ( _Bi_iter __a,  
_Bi_iter __b, const regex_type & __re, const int(&  
__submatches[_Nm], regex_constants::match_flag_type __m =  
regex_constants::match_default )`

Constructs a `regex_token_iterator`...

#### Parameters

*a* [IN] The start of the text to search.  
*b* [IN] One-past-the-end of the text to search.  
*re* [IN] The regular expression to search for.  
*submatches* [IN] A list of subexpressions to return for each regular expression match within the text.  
*m* [IN] Policy flags for match rules.

#### Todo

Implement this function.  
Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html)

5.684.2.5 `template<typename _Bi_iter , typename _Ch_type = typename  
iterator_traits<_Bi_iter>::value_type, typename _Rx_traits  
= regex_traits<_Ch_type>> std::regex_token_iterator<  
_Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator ( const  
regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits > & __rhs )`

Copy constructs a `regex_token_iterator`.

#### Parameters

*rhs* [IN] A `regex_token_iterator` to copy.

#### Todo

Implement this function.

### 5.684.3 Member Function Documentation

**5.684.3.1** `template<typename _Bi_iter, typename _Ch_type = typename  
iterator_traits<_Bi_iter>::value_type, typename _Rx_traits =  
regex_traits<_Ch_type>> bool std::regex_token_iterator< _Bi_iter,  
_Ch_type, _Rx_traits >::operator!=( const regex_token_iterator<  
_Bi_iter, _Ch_type, _Rx_traits > & __rhs )`

Compares a `regex_token_iterator` to another for inequality.

#### Todo

Implement this function.

**5.684.3.2** `template<typename _Bi_iter, typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> const value_type&  
std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits  
>::operator* ( )`

Dereferences a `regex_token_iterator`.

#### Todo

Implement this function.

**5.684.3.3** `template<typename _Bi_iter, typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> regex_token_iterator  
std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits  
>::operator++ ( int )`

Postincrements a `regex_token_iterator`.

**Todo**

Implement this function.

**5.684.3.4** `template<typename _Bi_iter, typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> regex_token_iterator&  
std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits  
>::operator++ ( )`

Increments a `regex_token_iterator`.

**Todo**

Implement this function.

**5.684.3.5** `template<typename _Bi_iter, typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> const value_type*  
std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits  
>::operator-> ( )`

Selects a `regex_token_iterator` member.

**Todo**

Implement this function.

**5.684.3.6** `template<typename _Bi_iter, typename _Ch_type =  
typename iterator_traits<_Bi_iter>::value_type, typename  
_Rx_traits = regex_traits<_Ch_type>> regex_token_iterator&  
std::regex_token_iterator<_Bi_iter, _Ch_type, _Rx_traits  
>::operator= ( const regex_token_iterator<_Bi_iter, _Ch_type,  
_Rx_traits> & __rhs )`

Assigns a `regex_token_iterator` to another.

**Parameters**

*rhs* [IN] A `regex_token_iterator` to copy.

**Todo**

Implement this function.

```
5.684.3.7 template<typename _Bi_iter , typename _Ch_type = typename
iterator_traits<_Bi_iter>::value_type, typename _Rx_traits =
regex_traits<_Ch_type>> bool std::regex_token_iterator< _Bi_iter,
_Ch_type, _Rx_traits >::operator==(const regex_token_iterator<
_Bi_iter, _Ch_type, _Rx_traits > & __rhs)
```

Compares a `regex_token_iterator` to another for equality.

**Todo**

Implement this function.

The documentation for this class was generated from the following file:

## 5.685.1 Detailed Description

**template<typename \_Ch\_type> struct std::regex\_traits< \_Ch\_type >**

Describes aspects of a regular expression. A regular expression traits class that satisfies the requirements of section [28.7].

The class regex is parameterized around a set of related types and functions used to complete the definition of its semantics. This class satisfies the requirements of such a traits class.

Definition at line 53 of file regex.h.

## 5.685.2 Constructor & Destructor Documentation

**5.685.2.1 template<typename \_Ch\_type > std::regex\_traits< \_Ch\_type >::regex\_traits ( ) [inline]**

Constructs a default traits object.

Definition at line 65 of file regex.h.

### 5.685.3 Member Function Documentation

**5.685.3.1** `template<typename _Ch_type > locale_type std::regex_traits< _Ch_type >::getloc ( ) const [inline]`

Gets a copy of the current locale in use by the [regex\\_traits](#) object.

Definition at line 274 of file regex.h.

**5.685.3.2** `template<typename _Ch_type > locale_type std::regex_traits< _Ch_type >::imbue ( locale_type __loc ) [inline]`

Imbues the [regex\\_traits](#) object with a copy of a new locale.

#### Parameters

*loc* A locale.

#### Returns

a copy of the previous locale in use by the [regex\\_traits](#) object.

#### Note

Calling imbue with a different locale than the one currently in use invalidates all cached data held by \*this.

Definition at line 263 of file regex.h.

**5.685.3.3** `template<typename _Ch_type > static std::size_t std::regex_traits< _Ch_type >::length ( const char_type * __p ) [inline, static]`

Gives the length of a C-style string starting at \_\_p.

#### Parameters

*\_\_p* a pointer to the start of a character sequence.

#### Returns

the number of characters between \*\_\_p and the first default-initialized value of type char\_type. In other words, uses the C-string algorithm for determining the length of a sequence of characters.

Definition at line 79 of file `regex.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::length()`.

**5.685.3.4** `template<typename _Ch_type> template<typename _Fwd_iter>  
char_class_type std::regex_traits<_Ch_type>::lookup_classname(  
_Fwd_iter __first, _Fwd_iter __last, bool __icase = false) const  
[inline]`

Maps one or more characters to a named character classification.

#### Parameters

- first* beginning of the character sequence.
- last* one-past-the-end of the character sequence.
- icase* ignores the case of the classification name.

#### Returns

an unspecified value that represents the character classification named by the character sequence designated by the iterator range `[first, last)`. If `icase` is true, the returned mask identifies the classification regardless of the case of the characters to be matched (for example, `[[:lower:]]` is the same as `[[:alpha:]]`), otherwise a case-dependant classification is returned. The value returned shall be independent of the case of the characters in the character sequence. If the name is not recognized then returns a value that compares equal to 0.

At least the following names (or their wide-character equivalent) are supported.

- `d`
- `w`
- `s`
- `alnum`
- `alpha`
- `blank`
- `cntrl`
- `digit`
- `graph`

- lower
- print
- punct
- space
- upper
- xdigit

#### Todo

Implement this function.

Definition at line 219 of file `regex.h`.

Referenced by `std::regex_traits<_Ch_type>::isctype()`.

**5.685.3.5** `template<typename _Ch_type> template<typename _Fwd_iter>  
string_type std::regex_traits<_Ch_type>::lookup_collatename (  
_Fwd_iter __first, _Fwd_iter __last ) const [inline]`

Gets a collation element by name.

#### Parameters

*first* beginning of the collation element name.

*last* one-past-the-end of the collation element name.

#### Returns

a sequence of one or more characters that represents the collating element consisting of the character sequence designated by the iterator range `[first, last)`. Returns an empty string if the character sequence is not a valid collating element.

#### Todo

Implement this function.

Definition at line 176 of file `regex.h`.

**5.685.3.6** `template<typename _Ch_type> template<typename _Fwd_iter>  
string_type std::regex_traits<_Ch_type>::transform ( _Fwd_iter  
__first, _Fwd_iter __last ) const [inline]`

Gets a sort key for a character sequence.

#### Parameters

*first* beginning of the character sequence.

*last* one-past-the-end of the character sequence.

Returns a sort key for the character sequence designated by the iterator range [F1, F2) such that if the character sequence [G1, G2) sorts before the character sequence [H1, H2) then `v.transform(G1, G2) < v.transform(H1, H2)`.

What this really does is provide a more efficient way to compare a string to multiple other strings in locales with fancy collation rules and equivalence classes.

#### Returns

a locale-specific sort key equivalent to the input range.

#### Exceptions

[`std::bad\_cast`](#) if the current locale does not have a collate facet.

Definition at line 132 of file `regex.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::basic_string<_CharT, _Traits, _Alloc>::size()`, `std::collate<_CharT>::transform()`, and `std::use_facet()`.

**5.685.3.7** `template<typename _Ch_type> template<typename _Fwd_iter>  
string_type std::regex_traits<_Ch_type>::transform_primary ( _Fwd_iter  
__first, _Fwd_iter __last ) const [inline]`

Gets a sort key for a character sequence, independant of case.

#### Parameters

*first* beginning of the character sequence.

*last* one-past-the-end of the character sequence.

Effects: if typeid(use\_facet<collate<\_Ch\_type>>) == typeid(collate\_byname<\_Ch\_type>) and the form of the sort key returned by collate\_byname<\_Ch\_type>::transform(first, last) is known and can be converted into a primary sort key then returns that key, otherwise returns an empty string.

#### Todo

Implement this function.

Definition at line 158 of file regex.h.

**5.685.3.8** `template<typename _Ch_type> char_type std::regex_traits<_Ch_type>::translate ( char_type __c ) const [inline]`

Performs the identity translation.

#### Parameters

*c* A character to the locale-specific character set.

#### Returns

*c*.

Definition at line 90 of file regex.h.

**5.685.3.9** `template<typename _Ch_type> char_type std::regex_traits<_Ch_type>::translate_nocase ( char_type __c ) const [inline]`

Translates a character into a case-insensitive equivalent.

#### Parameters

*c* A character to the locale-specific character set.

#### Returns

the locale-specific lower-case equivalent of *c*.

#### Exceptions

[\*std::bad\\_cast\*](#) if the imbued locale does not support the ctype facet.

Definition at line 103 of file regex.h.

References [std::tolower\(\)](#).

#### 5.693.1 Detailed Description

`template<typename _Iterator> class std::reverse_iterator<_Iterator>`

Bidirectional and random access iterators have corresponding reverse iterator adaptors that iterate through the data structure in the opposite direction. They have the same signatures as the corresponding iterators. The fundamental relation between a reverse iterator and its corresponding iterator `i` is established by the identity:

```
&*(reverse_iterator(i)) == &*(i - 1)
```

*This mapping is dictated by the fact that while there is always a pointer past the end of an array, there might not be a valid pointer before the beginning of an array.* [24.4.1]/1,2

Reverse iterators can be tricky and surprising at first. Their semantics make sense, however, and the trickiness is a side effect of the requirement that the iterators must be safe.

Definition at line 97 of file `stl_iterator.h`.

## 5.693.2 Member Typedef Documentation

**5.693.2.1** `template<typename _Iterator> typedef __traits_difference_type std::reverse_iterator< _Iterator >::difference_type`

Distance between iterators is represented as this type.

Reimplemented from [std::iterator< iterator\\_traits< \\_Iterator >::iterator\\_category, iterator\\_traits< \\_Iterator >::value\\_type, iterator\\_traits< \\_Iterator >::difference\\_type, iterator\\_traits< \\_Iterator >::pointer, iterator\\_traits< \\_Iterator >::reference >](#).

Definition at line 111 of file `stl_iterator.h`.

**5.693.2.2** `typedef iterator_traits< _Iterator >::iterator_category std::iterator< iterator_traits< _Iterator >::iterator_category, iterator_traits< _Iterator >::value_type, iterator_traits< _Iterator >::difference_type, iterator_traits< _Iterator >::pointer, iterator_traits< _Iterator >::reference >::iterator_category [inherited]`

One of the [tag types](#).

Definition at line 122 of file `stl_iterator_base_types.h`.

**5.693.2.3** `template<typename _Iterator> typedef __traits_type::pointer std::reverse_iterator< _Iterator >::pointer`

This type represents a pointer-to-value\_type.

Reimplemented from [std::iterator< iterator\\_traits< \\_Iterator >::iterator\\_category, iterator\\_traits< \\_Iterator >::value\\_type, iterator\\_traits< \\_Iterator >::difference\\_type, iterator\\_traits< \\_Iterator >::pointer, iterator\\_traits< \\_Iterator >::reference >](#).

Definition at line 112 of file `stl_iterator.h`.

**5.693.2.4** `template<typename _Iterator> typedef __traits_type::reference std::reverse_iterator< _Iterator >::reference`

This type represents a reference-to-value\_type.

Reimplemented from [std::iterator< iterator\\_traits< \\_Iterator >::iterator\\_category, iterator\\_traits< \\_Iterator >::value\\_type, iterator\\_traits< \\_Iterator >::difference\\_type, iterator\\_traits< \\_Iterator >::pointer, iterator\\_traits< \\_Iterator >::reference >](#).

Definition at line 113 of file stl\_iterator.h.

```
5.693.2.5 typedef iterator_traits< _Iterator >::value_type std::iterator<
 iterator_traits< _Iterator >::iterator_category , iterator_traits<
 _Iterator >::value_type , iterator_traits< _Iterator
 >::difference_type , iterator_traits< _Iterator >::pointer
 , iterator_traits< _Iterator >::reference >::value_type
 [inherited]
```

The type "pointed to" by the iterator.

Definition at line 124 of file stl\_iterator\_base\_types.h.

### 5.693.3 Constructor & Destructor Documentation

```
5.693.3.1 template<typename _Iterator> std::reverse_iterator< _Iterator
 >::reverse_iterator () [inline]
```

The default constructor default-initializes member `current`. If it is a pointer, that means it is zero-initialized.

Definition at line 121 of file stl\_iterator.h.

Referenced by `std::reverse_iterator< _Iterator >::operator+()`, and `std::reverse_iterator< _Iterator >::operator-()`.

```
5.693.3.2 template<typename _Iterator> std::reverse_iterator< _Iterator
 >::reverse_iterator (iterator_type __x) [inline, explicit]
```

This iterator will move in the opposite direction that `x` does.

Definition at line 127 of file stl\_iterator.h.

```
5.693.3.3 template<typename _Iterator> std::reverse_iterator< _Iterator
 >::reverse_iterator (const reverse_iterator< _Iterator > & __x)
 [inline]
```

The copy constructor is normal.

Definition at line 132 of file stl\_iterator.h.

**5.693.3.4** `template<typename _Iterator> template<typename _Iter >  
std::reverse_iterator< _Iterator >::reverse_iterator ( const  
reverse_iterator< _Iter > & __x ) [inline]`

A [reverse\\_iterator](#) across other types can be copied in the normal fashion.

Definition at line 140 of file stl\_iterator.h.

## 5.694 std::runtime\_error Class Reference

One of two subclasses of exception.

Inheritance diagram for std::runtime\_error:

## Public Member Functions

- `runtime_error` (const `string` &\_\_arg)
- virtual const char \* `what` () const throw ()

### 5.694.1 Detailed Description

One of two subclasses of exception. Runtime errors represent problems outside the scope of a program; they cannot be easily predicted and can generally only be caught as the program executes.

Definition at line 113 of file `stdexcept`.

### 5.694.2 Constructor & Destructor Documentation

#### 5.694.2.1 `std::runtime_error::runtime_error ( const string & __arg )` [`explicit`]

Takes a character string describing the error.

### 5.694.3 Member Function Documentation

#### 5.694.3.1 `virtual const char* std::runtime_error::what ( ) const throw ()` [`virtual`]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from `std::exception`.

The documentation for this class was generated from the following file:

- `stdexcept`

## 5.695 `std::seed_seq` Class Reference

The `seed_seq` class generates sequences of seeds for random number generators.

## Public Types

- typedef uint\_least32\_t `result_type`

## Public Member Functions

### 5.696.1 Detailed Description

`template<typename _Key, typename _Compare = std::less<_Key>, typename _Alloc = std::allocator<_Key>> class std::set<_Key, _Compare, _Alloc>`

A standard container made up of unique keys, which can be retrieved in logarithmic time. Meets the requirements of a `container`, a `reversible container`, and an `associative container` (using unique keys).

Sets support bidirectional iterators.

## Parameters

**Key** Type of key objects.

**Compare** Comparison function object type, defaults to `less<Key>`.

**Alloc** Allocator type, defaults to `allocator<Key>`.

The private tree data is declared exactly the same way for set and multiset; the distinction is made entirely in how the tree functions are called (`*_unique` versus `*_equal`, same as the standard).

Definition at line 89 of file `stl_set.h`.

## 5.696.2 Member Typedef Documentation

**5.696.2.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> typedef _Alloc std::set<  
_Key, _Compare, _Alloc >::allocator_type`

Public typedefs.

### 5.696.3 Constructor & Destructor Documentation

**5.696.3.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::set<_Key,  
_Compare, _Alloc>::set( ) [inline]`

Default constructor creates no elements.

Definition at line 138 of file stl\_set.h.

**5.696.3.2** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::set<_Key,  
_Compare, _Alloc>::set ( const _Compare & __comp, const  
allocator_type & __a = allocator_type () ) [inline,  
explicit]`

Creates a set with no elements.

#### Parameters

*comp* Comparator to use.

*a* An allocator object.

Definition at line 147 of file stl\_set.h.

**5.696.3.3** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_InputIterator> std::set<_Key, _Compare, _Alloc>::set (  
_InputIterator __first, _InputIterator __last ) [inline]`

Builds a set from a range.

#### Parameters

*first* An input iterator.

*last* An input iterator.

Create a set consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 161 of file stl\_set.h.

**5.696.3.4** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> template<typename  
_InputIterator> std::set<_Key, _Compare, _Alloc>::set (  
_InputIterator __first, _InputIterator __last, const _Compare  
& __comp, const allocator_type & __a = allocator_type () )  
[inline]`

Builds a set from a range.

**Parameters**

- first* An input iterator.  
*last* An input iterator.  
*comp* A comparison functor.  
*a* An allocator object.

Create a set consisting of copies of the elements from [first,last). This is linear in N if the range is already sorted, and NlogN otherwise (where N is distance(first,last)).

Definition at line 177 of file `stl_set.h`.

**5.696.3.5** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::set<_Key,  
_Compare, _Alloc>::set ( const set<_Key, _Compare, _Alloc> &  
__x ) [inline]`

Set copy constructor.

**Parameters**

- x* A set of identical element and allocator types.

The newly-created set uses a copy of the allocation object used by *x*.

Definition at line 190 of file `stl_set.h`.

**5.696.3.6** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::set<_Key,  
_Compare, _Alloc>::set ( set<_Key, _Compare, _Alloc> && __x  
) [inline]`

Set move constructor

**Parameters**

- x* A set of identical element and allocator types.

The newly-created set contains the exact contents of *x*. The contents of *x* are a valid, but unspecified set.

Definition at line 201 of file `stl_set.h`.

**5.696.3.7** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::set<_Key,  
_Compare, _Alloc>::set ( initializer_list< value_type > __l, const  
_Compare & __comp = _Compare(), const allocator_type & __a =  
allocator_type() ) [inline]`

Builds a set from an [initializer\\_list](#).

#### Parameters

- l* An [initializer\\_list](#).
- comp* A comparison functor.
- a* An allocator object.

Create a set consisting of copies of the elements in the list. This is linear in N if the list is already sorted, and NlogN otherwise (where N is *l.size()*).

Definition at line 214 of file stl\_set.h.

### 5.696.4 Member Function Documentation

**5.696.4.1** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc>::begin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first element in the set. Iteration is done in ascending order according to the keys.

Definition at line 294 of file stl\_set.h.

**5.696.4.2** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc>::cbegin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first element in the set. Iteration is done in ascending order according to the keys.

Definition at line 331 of file stl\_set.h.

**5.696.4.3** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set< _Key,  
_Compare, _Alloc >::end ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last element in the set. Iteration is done in ascending order according to the keys.

Definition at line 340 of file stl\_set.h.

**5.696.4.4** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::set< _Key,  
_Compare, _Alloc >::clear ( ) [inline]`

Erases all elements in a set. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 572 of file stl\_set.h.

Referenced by `std::set< _StateIdT >::operator=()`.

**5.696.4.5** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::set<  
_Key, _Compare, _Alloc >::count ( const key_type & __x ) const  
[inline]`

Finds the number of elements.

#### Parameters

*x* Element to located.

#### Returns

Number of elements with specified key.

This function only makes sense for multisets; for set the result will either be 0 (not present) or 1 (present).

Definition at line 586 of file stl\_set.h.

**5.696.4.6** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator std::set<  
_Key, _Compare, _Alloc>::crbegin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the last element in the set. Iteration is done in descending order according to the keys.

Definition at line 349 of file stl\_set.h.

**5.696.4.7** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator std::set<  
_Key, _Compare, _Alloc>::crend ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to the last pair in the set. Iteration is done in descending order according to the keys.

Definition at line 358 of file stl\_set.h.

**5.696.4.8** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> bool std::set<_Key,  
_Compare, _Alloc>::empty ( ) const [inline]`

Returns true if the set is empty.

Definition at line 364 of file stl\_set.h.

**5.696.4.9** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc>::end ( ) const [inline]`

Returns a read-only (constant) iterator that points one past the last element in the set. Iteration is done in ascending order according to the keys.

Definition at line 303 of file stl\_set.h.

**5.696.4.10** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::pair<iterator,  
iterator> std::set<_Key, _Compare, _Alloc>::equal_range ( const  
key_type & __x ) [inline]`

Finds a subsequence matching given key.

**Parameters**

*x* Key to be located.

**Returns**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 666 of file `stl_set.h`.

```
5.696.4.11 template<typename _Key, typename _Compare =
std::less<_Key>, typename _Alloc = std::allocator<_Key>>
std::pair<const_iterator, const_iterator> std::set<_Key,
_Compare, _Alloc>::equal_range (const key_type & __x) const
[inline]
```

Finds a subsequence matching given key.

**Parameters**

*x* Key to be located.

**Returns**

Pair of iterators that possibly points to the subsequence matching given key.

This function is equivalent to

```
std::make_pair(c.lower_bound(val),
 c.upper_bound(val))
```

(but is faster than making the calls separately).

This function probably only makes sense for multisets.

Definition at line 670 of file `stl_set.h`.

**5.696.4.12** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<  
_Key, _Compare, _Alloc>::erase ( const_iterator __position )  
[inline]`

Erases an element from a set.

#### Parameters

*position* An iterator pointing to the element to be erased.

#### Returns

An iterator pointing to the element immediately following *position* prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from a set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 497 of file `stl_set.h`.

**5.696.4.13** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::set<_Key,  
_Compare, _Alloc>::erase ( const key_type & __x ) [inline]`

Erases elements according to the provided key.

#### Parameters

*x* Key of element to be erased.

#### Returns

The number of elements erased.

This function erases all the elements located by the given key from a set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 527 of file `stl_set.h`.

**5.696.4.14** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc>::erase ( const_iterator __first, const_iterator  
__last ) [inline]`

Erases a [first,last) range of elements from a set.

#### Parameters

*first* Iterator pointing to the start of the range to be erased.

*last* Iterator pointing to the end of the range to be erased.

#### Returns

The iterator *last*.

This function erases a sequence of elements from a set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 546 of file stl\_set.h.

**5.696.4.15** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc>::find ( const key_type & __x ) [inline]`

Tries to locate an element in a set.

#### Parameters

*x* Element to be located.

#### Returns

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 604 of file stl\_set.h.

**5.696.4.16** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> const_iterator std::set<  
_Key, _Compare, _Alloc >::find ( const key_type & __x ) const  
[inline]`

Tries to locate an element in a set.

#### Parameters

*x* Element to be located.

#### Returns

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( `end()` ) iterator.

Definition at line 608 of file `stl_set.h`.

**5.696.4.17** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> allocator_type std::set<  
_Key, _Compare, _Alloc >::get_allocator ( ) const [inline]`

Returns the allocator object with which the set was constructed.

Definition at line 285 of file `stl_set.h`.

**5.696.4.18** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> std::pair<iterator,  
bool> std::set<_Key, _Compare, _Alloc >::insert ( const  
value_type & __x ) [inline]`

Attempts to insert an element into the set.

#### Parameters

*x* Element to be inserted.

#### Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to insert an element into the set. A set relies on unique keys and thus an element is only inserted if it is not already present in the set.

Insertion requires logarithmic time.

Definition at line 407 of file stl\_set.h.

Referenced by std::set< \_StateIdT >::operator=().

```
5.696.4.19 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> iterator std::set< _Key,
_Compare, _Alloc >::insert (const_iterator __position, const
value_type & __x) [inline]
```

Attempts to insert an element into the set.

#### Parameters

*position* An iterator that serves as a hint as to where the element should be inserted.

*x* Element to be inserted.

#### Returns

An iterator that points to the element with key of *x* (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument [insert\(\)](#) does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt07ch17.htm>

Insertion requires logarithmic time (if the hint is not taken).

Definition at line 444 of file stl\_set.h.

```
5.696.4.20 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> template<typename
_InputIterator > void std::set< _Key, _Compare, _Alloc >::insert (
_InputIterator __first, _InputIterator __last) [inline]
```

A template function that attempts to insert a range of elements.

**Parameters**

*first* Iterator pointing to the start of the range to be inserted.

*last* Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 464 of file `stl_set.h`.

**5.696.4.21** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::set<_Key,  
_Compare, _Alloc>::insert ( initializer_list< value_type > __l )  
[inline]`

Attempts to insert a list of elements into the set.

**Parameters**

*list* A `std::initializer_list<value_type>` of elements to be inserted.

Complexity similar to that of the range constructor.

Definition at line 476 of file `stl_set.h`.

Referenced by `std::set<_StateIdT>::insert()`.

**5.696.4.22** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> key_compare std::set<  
_Key, _Compare, _Alloc>::key_comp ( ) const [inline]`

Returns the comparison object with which the set was constructed.

Definition at line 277 of file `stl_set.h`.

**5.696.4.23** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc>::lower_bound ( const key_type & __x )  
[inline]`

Finds the beginning of a subsequence matching given key.

**Parameters**

*x* Key to be located.

**Returns**

Iterator pointing to first element equal to or greater than key, or `end()`.

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or `end()` if no such element exists.

Definition at line 625 of file `stl_set.h`.

```
5.696.4.24 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> const_iterator std::set<
_Key, _Compare, _Alloc>::lower_bound (const key_type & __x)
const [inline]
```

Finds the beginning of a subsequence matching given key.

**Parameters**

*x* Key to be located.

**Returns**

Iterator pointing to first element equal to or greater than key, or `end()`.

This function returns the first element of a subsequence of elements that matches the given key. If unsuccessful it returns an iterator pointing to the first element that has a greater value than given key or `end()` if no such element exists.

Definition at line 629 of file `stl_set.h`.

```
5.696.4.25 template<typename _Key, typename _Compare = std::less<_Key>,
typename _Alloc = std::allocator<_Key>> size_type std::set<
_Key, _Compare, _Alloc>::max_size () const [inline]
```

Returns the maximum size of the set.

Definition at line 374 of file `stl_set.h`.

**5.696.4.26** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> set& std::set< _Key,  
_Compare, _Alloc >::operator= ( set< _Key, _Compare, _Alloc >  
&& __x ) [inline]`

Set move assignment operator.

#### Parameters

*x* A set of identical element and allocator types.

The contents of *x* are moved into this set (without copying). *x* is a valid, but unspecified set.

Definition at line 244 of file stl\_set.h.

**5.696.4.27** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> set& std::set< _Key,  
_Compare, _Alloc >::operator= ( const set< _Key, _Compare,  
_Alloc > & __x ) [inline]`

Set assignment operator.

#### Parameters

*x* A set of identical element and allocator types.

All the elements of *x* are copied, but unlike the copy constructor, the allocator object is not copied.

Definition at line 229 of file stl\_set.h.

**5.696.4.28** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> set& std::set< _Key,  
_Compare, _Alloc >::operator= ( initializer_list< value_type > __l  
) [inline]`

Set list assignment operator.

#### Parameters

*l* An [initializer\\_list](#).

This function fills a set with copies of the elements in the initializer list *l*.

Note that the assignment completely changes the set and that the resulting set's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 265 of file stl\_set.h.

**5.696.4.29** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::set< _Key, _Compare, _Alloc >::rbegin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the last element in the set. Iteration is done in descending order according to the keys.

Definition at line 312 of file stl\_set.h.

**5.696.4.30** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> reverse_iterator  
std::set< _Key, _Compare, _Alloc >::rend ( ) const [inline]`

Returns a read-only (constant) reverse iterator that points to the last pair in the set. Iteration is done in descending order according to the keys.

Definition at line 321 of file stl\_set.h.

**5.696.4.31** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> size_type std::set<  
_Key, _Compare, _Alloc >::size ( ) const [inline]`

Returns the size of the set.

Definition at line 369 of file stl\_set.h.

**5.696.4.32** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> void std::set< _Key,  
_Compare, _Alloc >::swap ( set< _Key, _Compare, _Alloc > & __x  
) [inline]`

Swaps data with another set.

#### Parameters

*x* A set of the same element and allocator types.

This exchanges the elements between two sets in constant time. (It is only swapping a pointer, an integer, and an instance of the `Compare` type (which itself is often stateless and empty), so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(s1,s2)` will feed to this function.

Definition at line 389 of file `stl_set.h`.

Referenced by `std::set<_StateIdT>::operator=()`, and `std::swap()`.

**5.696.4.33** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> const_iterator std::set<  
_Key, _Compare, _Alloc>::upper_bound ( const key_type & __x )  
const [inline]`

Finds the end of a subsequence matching given key.

#### Parameters

*x* Key to be located.

#### Returns

Iterator pointing to the first element greater than key, or `end()`.

Definition at line 645 of file `stl_set.h`.

**5.696.4.34** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> iterator std::set<_Key,  
_Compare, _Alloc>::upper_bound ( const key_type & __x )  
[inline]`

Finds the end of a subsequence matching given key.

#### Parameters

*x* Key to be located.

#### Returns

Iterator pointing to the first element greater than key, or `end()`.

Definition at line 641 of file `stl_set.h`.

**5.696.4.35** `template<typename _Key, typename _Compare = std::less<_Key>,  
typename _Alloc = std::allocator<_Key>> value_compare std::set<  
_Key, _Compare, _Alloc>::value_comp ( ) const [inline]`

Returns the comparison object with which the set was constructed.

Definition at line 281 of file `stl_set.h`.

The documentation for this class was generated from the following file:

#### 5.697.1 Detailed Description

`template<typename _Res> class std::shared_future< _Res >`

Primary template for `shared_future`.

Definition at line 708 of file `future`.

#### 5.697.2 Constructor & Destructor Documentation

**5.697.2.1** `template<typename _Res > std::shared_future< _Res`  
`>::shared_future ( const shared_future< _Res > & __sf )`  
`[inline]`

Copy constructor.

Definition at line 716 of file `future`.

**5.697.2.2** `template<typename _Res> std::shared_future<_Res>::shared_future ( future<_Res> && __uf ) [inline]`

Construct from a future rvalue.

Definition at line 719 of file `future`.

### 5.700.1 Detailed Description

**template<typename \_Tp> class std::shared\_ptr<\_Tp>**

A smart pointer with reference-counted copy semantics. The object pointed to is deleted when the last [shared\\_ptr](#) pointing to it is destroyed or reset.

Definition at line 93 of file shared\_ptr.h.

### 5.700.2 Constructor & Destructor Documentation

**5.700.2.1** **template<typename \_Tp> constexpr std::shared\_ptr<\_Tp>  
>::shared\_ptr( ) [inline]**

Construct an empty shared\_ptr.

#### Postcondition

use\_count()==0 && get()==0

Definition at line 100 of file shared\_ptr.h.

**5.700.2.2** **template<typename \_Tp> template<typename \_Tp1>  
std::shared\_ptr<\_Tp>::shared\_ptr( \_Tp1 \* \_\_p ) [inline,  
explicit]**

Construct a shared\_ptr that owns the pointer *\_\_p*.

#### Parameters

*\_\_p* A pointer that is convertible to element\_type\*.

#### Postcondition

use\_count() == 1 && get() == *\_\_p*

#### Exceptions

[std::bad\\_alloc](#), in which case delete *\_\_p* is called.

Definition at line 110 of file shared\_ptr.h.

**5.700.2.3** `template<typename _Tp> template<typename _Tp1, typename  
_Deleter > std::shared_ptr<_Tp>::shared_ptr ( _Tp1 * __p,  
_Deleter __d ) [inline]`

Construct a shared\_ptr that owns the pointer `__p` and the deleter `__d`.

#### Parameters

`__p` A pointer.

`__d` A deleter.

#### Postcondition

`use_count() == 1 && get() == __p`

#### Exceptions

*std::bad\_alloc*, in which case `__d(__p)` is called.

Requirements: `_Deleter`'s copy constructor and destructor must not throw

`__shared_ptr` will release `__p` by calling `__d(__p)`

Definition at line 127 of file `shared_ptr.h`.

**5.700.2.4** `template<typename _Tp> template<typename _Deleter >  
std::shared_ptr<_Tp>::shared_ptr ( nullptr_t __p, _Deleter __d  
) [inline]`

Construct a shared\_ptr that owns a null pointer and the deleter `__d`.

#### Parameters

`__p` A null pointer constant.

`__d` A deleter.

#### Postcondition

`use_count() == 1 && get() == __p`

#### Exceptions

*std::bad\_alloc*, in which case `__d(__p)` is called.

Requirements: \_Deleter's copy constructor and destructor must not throw

The last owner will call \_\_d(\_\_p)

Definition at line 144 of file shared\_ptr.h.

**5.700.2.5** `template<typename _Tp> template<typename _Tp1, typename  
_Deleter, typename _Alloc> std::shared_ptr<_Tp>::shared_ptr(  
_Tp1 * __p, _Deleter __d, _Alloc __a) [inline]`

Construct a shared\_ptr that owns the pointer \_\_p and the deleter \_\_d.

#### Parameters

**\_\_p** A pointer.

**\_\_d** A deleter.

**\_\_a** An allocator.

#### Postcondition

use\_count() == 1 && get() == \_\_p

#### Exceptions

*std::bad\_alloc*, in which case \_\_d(\_\_p) is called.

Requirements: \_Deleter's copy constructor and destructor must not throw \_Alloc's copy constructor and destructor must not throw.

\_\_shared\_ptr will release \_\_p by calling \_\_d(\_\_p)

Definition at line 163 of file shared\_ptr.h.

**5.700.2.6** `template<typename _Tp> template<typename _Deleter, typename  
_Alloc> std::shared_ptr<_Tp>::shared_ptr( nullptr_t __p,  
_Deleter __d, _Alloc __a) [inline]`

Construct a shared\_ptr that owns a null pointer and the deleter \_\_d.

#### Parameters

**\_\_p** A null pointer constant.

**\_\_d** A deleter.

**\_\_a** An allocator.

**Postcondition**

use\_count() == 1 && get() == \_\_p

**Exceptions**

*std::bad\_alloc*, in which case `__d(__p)` is called.

Requirements: `_Deleter`'s copy constructor and destructor must not throw `_Alloc`'s copy constructor and destructor must not throw.

The last owner will call `__d(__p)`

Definition at line 182 of file `shared_ptr.h`.

**5.700.2.7** `template<typename _Tp> template<typename _Tp1 >  
std::shared_ptr<_Tp>::shared_ptr ( const shared_ptr<_Tp1 > &  
__r, _Tp * __p ) [inline]`

Constructs a `shared_ptr` instance that stores `__p` and shares ownership with `__r`.

**Parameters**

`__r` A `shared_ptr`.

`__p` A pointer that will remain valid while `*__r` is valid.

**Postcondition**

get() == \_\_p && use\_count() == \_\_r.use\_count()

This can be used to construct a `shared_ptr` to a sub-object of an object managed by an existing `shared_ptr`.

```
shared_ptr< pair<int,int> > pii(new pair<int,int>());
shared_ptr<int> pi(pii, &pii->first);
assert(pii.use_count() == 2);
```

Definition at line 204 of file `shared_ptr.h`.

**5.700.2.8** `template<typename _Tp> template<typename _Tp1, typename  
= typename std::enable_if<std::is_convertible<_Tp1*,  
_Tp*>::value>::type> std::shared_ptr<_Tp>::shared_ptr ( const  
shared_ptr<_Tp1 > & __r ) [inline]`

If `__r` is empty, constructs an empty `shared_ptr`; otherwise construct a `shared_ptr` that shares ownership with `__r`.

**Parameters**

`__r` A `shared_ptr`.

**Postcondition**

`get() == __r.get() && use_count() == __r.use_count()`

Definition at line 216 of file `shared_ptr.h`.

**5.700.2.9** `template<typename _Tp> std::shared_ptr<_Tp>::shared_ptr (`  
`shared_ptr<_Tp> && __r ) [inline]`

Move-constructs a `shared_ptr` instance from `__r`.

**Parameters**

`__r` A `shared_ptr` rvalue.

**Postcondition**

\*this contains the old value of `__r`, `__r` is empty.

Definition at line 224 of file `shared_ptr.h`.

**5.700.2.10** `template<typename _Tp> template<typename _Tp1, typename`  
`= typename std::enable_if<std::is_convertible<_Tp1*,`  
`_Tp*>::value>::type> std::shared_ptr<_Tp>::shared_ptr (`  
`shared_ptr<_Tp1> && __r ) [inline]`

Move-constructs a `shared_ptr` instance from `__r`.

**Parameters**

`__r` A `shared_ptr` rvalue.

**Postcondition**

\*this contains the old value of `__r`, `__r` is empty.

Definition at line 234 of file `shared_ptr.h`.

**5.700.2.11** `template<typename _Tp> template<typename _Tp1 >  
std::shared_ptr<_Tp>::shared_ptr ( const weak_ptr<_Tp1> &  
__r ) [inline, explicit]`

Constructs a shared\_ptr that shares ownership with \_\_r and stores a copy of the pointer stored in \_\_r.

#### Parameters

`__r` A [weak\\_ptr](#).

#### Postcondition

`use_count() == __r.use_count()`

#### Exceptions

[bad\\_weak\\_ptr](#) when \_\_r.expired(), in which case the constructor has no effect.

Definition at line 246 of file shared\_ptr.h.

**5.700.2.12** `template<typename _Tp> constexpr std::shared_ptr<_Tp>  
>::shared_ptr ( nullptr_t __p ) [inline]`

Construct an empty shared\_ptr.

#### Parameters

`__p` A null pointer constant.

#### Postcondition

`use_count() == 0 && get() == nullptr`

Definition at line 264 of file shared\_ptr.h.

### 5.700.3 Friends And Related Function Documentation

**5.700.3.1** `template<typename _Tp> template<typename _Tp1 , typename  
_Alloc , typename... _Args> shared_ptr<_Tp1> allocate_shared (   
const _Alloc & __a, _Args &&... __args ) [friend]`

Create an object that is owned by a [shared\\_ptr](#).

**Parameters**

- `__a` An allocator.
- `__args` Arguments for the `_Tp` object's constructor.

**Returns**

A [shared\\_ptr](#) that owns the newly created object.

**Exceptions**

An exception thrown from `_Alloc::allocate` or from the constructor of `_Tp`.

A copy of `__a` will be used to allocate memory for the [shared\\_ptr](#) and the new object.

Definition at line 528 of file `shared_ptr.h`.

The documentation for this class was generated from the following file:

- [shared\\_ptr.h](#)

**5.701 std::shuffle\_order\_engine< \_RandomNumberEngine, \_\_k  
> Class Template Reference**

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits `__w`.

**Public Types**

- typedef `_RandomNumberEngine::result_type` [result\\_type](#)

#### 5.701.1 Detailed Description

`template<typename _RandomNumberEngine, size_t __k> class std::shuffle_order_engine<_RandomNumberEngine, __k>`

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits `__w`.

Definition at line 1217 of file `random.h`.

#### 5.701.2 Member Typedef Documentation

**5.701.2.1** `template<typename _RandomNumberEngine, size_t __k> typedef`  
    `_RandomNumberEngine::result_type std::shuffle_order_engine<`  
    `_RandomNumberEngine, __k >::result_type`

The type of the generated random value.

Definition at line 1224 of file `random.h`.

### 5.701.3 Constructor & Destructor Documentation

**5.701.3.1** `template<typename _RandomNumberEngine, size_t __k>  
std::shuffle_order_engine< _RandomNumberEngine, __k  
>::shuffle_order_engine ( ) [inline]`

Constructs a default `shuffle_order_engine` engine.

The underlying engine is default constructed as well.

Definition at line 1233 of file `random.h`.

**5.701.3.2** `template<typename _RandomNumberEngine, size_t __k>  
std::shuffle_order_engine< _RandomNumberEngine, __k  
>::shuffle_order_engine ( const _RandomNumberEngine & __rne )  
[inline, explicit]`

Copy constructs a `shuffle_order_engine` engine.

Copies an existing base class random number generator.

#### Parameters

*rne* An existing (base class) engine object.

Definition at line 1244 of file `random.h`.

**5.701.3.3** `template<typename _RandomNumberEngine, size_t __k>  
std::shuffle_order_engine< _RandomNumberEngine, __k  
>::shuffle_order_engine ( _RandomNumberEngine && __rne )  
[inline, explicit]`

Move constructs a `shuffle_order_engine` engine.

Copies an existing base class random number generator.

#### Parameters

*rne* An existing (base class) engine object.

Definition at line 1255 of file `random.h`.

**5.701.3.4** `template<typename _RandomNumberEngine, size_t __k>  
std::shuffle_order_engine< _RandomNumberEngine, __k  
>::shuffle_order_engine ( result_type __s ) [inline,  
explicit]`

Seed constructs a shuffle\_order\_engine engine.

Constructs the underlying generator engine seeded with \_\_s.

#### Parameters

`__s` A seed value for the base class engine.

Definition at line 1266 of file random.h.

**5.701.3.5** `template<typename _RandomNumberEngine, size_t  
__k> template<typename _Sseq , typename = typename  
std::enable_if<!std::is_same<_Sseq, shuffle_order_engine>::value  
&& !std::is_same<_Sseq, _RandomNumberEngine>::value>  
::type> std::shuffle_order_engine< _RandomNumberEngine, __k  
>::shuffle_order_engine ( _Sseq & __q ) [inline, explicit]`

Generator construct a shuffle\_order\_engine engine.

#### Parameters

`__q` A seed sequence.

Definition at line 1280 of file random.h.

### 5.701.4 Member Function Documentation

**5.701.4.1** `template<typename _RandomNumberEngine, size_t __k>  
const _RandomNumberEngine& std::shuffle_order_engine<  
_RandomNumberEngine, __k >::base ( ) const [inline]`

Gets a const reference to the underlying generator engine object.

Definition at line 1323 of file random.h.

**5.701.4.2** `template<typename _RandomNumberEngine, size_t __k> void  
std::shuffle_order_engine<_RandomNumberEngine, __k>::discard  
( unsigned long long __z ) [inline]`

Discard a sequence of random numbers.

Definition at line 1344 of file random.h.

**5.701.4.3** `template<typename _RandomNumberEngine, size_t __k>  
static constexpr result_type std::shuffle_order_engine<  
_RandomNumberEngine, __k>::max( ) [inline, static]`

Gets the maximum value in the generated random number range.

Definition at line 1337 of file random.h.

**5.701.4.4** `template<typename _RandomNumberEngine, size_t __k>  
static constexpr result_type std::shuffle_order_engine<  
_RandomNumberEngine, __k>::min( ) [inline, static]`

Gets the minimum value in the generated random number range.

Definition at line 1330 of file random.h.

**5.701.4.5** `template<typename _RandomNumberEngine, size_t __k>  
shuffle_order_engine<_RandomNumberEngine, __k>::result_type  
std::shuffle_order_engine<_RandomNumberEngine, __k  
>::operator()( )`

Gets the next value in the generated random number sequence.

Definition at line 775 of file random.tcc.

**5.701.4.6** `template<typename _RandomNumberEngine, size_t __k>  
template<typename _Sseq> void std::shuffle_order_engine<  
_RandomNumberEngine, __k>::seed( _Sseq & __q ) [inline]`

Reseeds the `shuffle_order_engine` object with the given seed sequence.

#### Parameters

`__q` A seed generator function.

Definition at line 1313 of file random.h.

**5.701.4.7** `template<typename _RandomNumberEngine, size_t __k> void  
std::shuffle_order_engine< _RandomNumberEngine, __k >::seed (  
result_type __s ) [inline]`

Reseeds the shuffle\_order\_engine object with the default seed for the underlying base class generator engine.

Definition at line 1300 of file random.h.

**5.701.4.8** `template<typename _RandomNumberEngine, size_t __k> void  
std::shuffle_order_engine< _RandomNumberEngine, __k >::seed (  
) [inline]`

Reseeds the shuffle\_order\_engine object with the default seed for the underlying base class generator engine.

Definition at line 1289 of file random.h.

## 5.701.5 Friends And Related Function Documentation

**5.701.5.1** `template<typename _RandomNumberEngine, size_t __k>  
template<typename _RandomNumberEngine1 , size_t __k1,  
typename _CharT , typename _Traits > std::basic_ostream< _CharT,  
_Traits>& operator<< ( std::basic_ostream< _CharT, _Traits > & ,  
const std::shuffle_order_engine< _RandomNumberEngine1, __k1 >  
& ) [friend]`

Inserts the current state of a shuffle\_order\_engine random number generator engine \_\_x into the output stream \_\_os.

### Parameters

`__os` An output stream.

`__x` A shuffle\_order\_engine random number generator engine.

### Returns

The output stream with the state of \_\_x inserted or in an error state.

**5.701.5.2** `template<typename _RandomNumberEngine, size_t __k> bool  
operator==( const shuffle_order_engine< _RandomNumberEngine,  
__k > & __lhs, const shuffle_order_engine<  
_RandomNumberEngine, __k > & __rhs ) [friend]`

Compares two shuffle\_order\_engine random number generator objects of the same type for equality.

#### Parameters

`__lhs` A shuffle\_order\_engine random number generator object.

`__rhs` Another shuffle\_order\_engine random number generator object.

#### Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 1368 of file random.h.

**5.701.5.3** `template<typename _RandomNumberEngine, size_t __k>  
template<typename _RandomNumberEngine1, size_t __k1,  
typename _CharT, typename _Traits > std::basic_istream<_CharT,  
_Traits>& operator>> ( std::basic_istream<_CharT, _Traits > & ,  
std::shuffle_order_engine< _RandomNumberEngine1, __k1 > & )  
[friend]`

Extracts the current state of a % subtract\_with\_carry\_engine random number generator engine `__x` from the input stream `__is`.

#### Parameters

`__is` An input stream.

`__x` A shuffle\_order\_engine random number generator engine.

#### Returns

The input stream with the state of `__x` extracted or in an error state.

## 5.702 `std::slice` Class Reference

Class defining one-dimensional subset of an array.

### Public Member Functions

- [slice](#) ()
- [slice](#) (size\_t, size\_t, size\_t)
- size\_t [size](#) () const
- size\_t [start](#) () const
- size\_t [stride](#) () const

### 5.702.1 Detailed Description

Class defining one-dimensional subset of an array. The slice class represents a one-dimensional subset of an array, specified by three parameters: start offset, size, and stride. The start offset is the index of the first element of the array that is part of the subset. The size is the total number of elements in the subset. Stride is the distance between each successive array element to include in the subset.

For example, with an array of size 10, and a slice with offset 1, size 3 and stride 2, the subset consists of array elements 1, 3, and 5.

Definition at line 60 of file `slice_array.h`.

The documentation for this class was generated from the following file:

- [slice\\_array.h](#)

## 5.703 `std::slice_array<_Tp>` Class Template Reference

Reference to one-dimensional subset of an array.

### Public Types

## Friends

- class [valarray](#)< \_Tp >

### 5.703.1 Detailed Description

**template<typename \_Tp> class std::slice\_array< \_Tp >**

Reference to one-dimensional subset of an array. A [slice\\_array](#) is a reference to the actual elements of an array specified by a slice. The way to get a [slice\\_array](#) is to call

`operator[]`(`slice`) on a valarray. The returned `slice_array` then permits carrying operations out on the referenced subset of elements in the original valarray. For example, `operator+=(valarray)` will add values to the subset of elements in the underlying valarray this `slice_array` refers to.

### Parameters

*Tp* Element type.

Definition at line 124 of file `slice_array.h`.

## 5.703.2 Member Function Documentation

**5.703.2.1** `template<typename _Tp> void std::slice_array<_Tp>::operator%=( const valarray<_Tp> & ) const`

Modulo slice elements by corresponding elements of *v*.

**5.703.2.2** `template<typename _Tp> void std::slice_array<_Tp>::operator&=( const valarray<_Tp> & ) const`

Logical and slice elements with corresponding elements of *v*.

**5.703.2.3** `template<typename _Tp> void std::slice_array<_Tp>::operator*=( const valarray<_Tp> & ) const`

Multiply slice elements by corresponding elements of *v*.

**5.703.2.4** `template<typename _Tp> void std::slice_array<_Tp>::operator+=( const valarray<_Tp> & ) const`

Add corresponding elements of *v* to slice elements.

**5.703.2.5** `template<typename _Tp> void std::slice_array<_Tp>::operator-=( const valarray<_Tp> & ) const`

Subtract corresponding elements of  $v$  from slice elements.

**5.703.2.6** `template<typename _Tp> void std::slice_array<_Tp>::operator/=`  
`( const valarray<_Tp> & ) const`

Divide slice elements by corresponding elements of  $v$ .

**5.703.2.7** `template<typename _Tp> void std::slice_array<_Tp>`  
`>::operator<<= ( const valarray<_Tp> & ) const`

Left shift slice elements by corresponding elements of  $v$ .

**5.703.2.8** `template<typename _Tp> void std::slice_array<_Tp>`  
`>::operator>>= ( const valarray<_Tp> & ) const`

Right shift slice elements by corresponding elements of  $v$ .

**5.703.2.9** `template<typename _Tp> void std::slice_array<_Tp>::operator^=`  
`( const valarray<_Tp> & ) const`

Logical xor slice elements with corresponding elements of  $v$ .

**5.703.2.10** `template<typename _Tp> void std::slice_array<_Tp>`  
`>::operator|= ( const valarray<_Tp> & ) const`

Logical or slice elements with corresponding elements of  $v$ .

The documentation for this class was generated from the following file:

- [slice\\_array.h](#)

## 5.704 `std::stack<_Tp, _Sequence>` Class Template Reference

A standard container giving FILO behavior.

- `template<typename _Tp1, typename _Seq1 >`  
`bool operator== (const stack<_Tp1, _Seq1> &, const stack<_Tp1, _Seq1> &)`

**5.704.1 Detailed Description**

`template<typename _Tp, typename _Sequence = deque<_Tp>> class std::stack<_Tp, _Sequence>`

A standard container giving FILO behavior. Meets many of the requirements of a [container](#), but does not define anything to do with iterators. Very few of the other standard container interfaces are defined.

This is not a true container, but an *adaptor*. It holds another container, and provides a wrapper interface to that container. The wrapper is what enforces strict first-in-last-out stack behavior.

The second template parameter defines the type of the underlying sequence/container. It defaults to [std::deque](#), but it can be any type that supports `back`, `push_back`, and `pop_front`, such as [std::list](#), [std::vector](#), or an appropriate user-defined type.

Members not found in *normal* containers are `container_type`, which is a typedef for the second Sequence parameter, and `push`, `pop`, and `top`, which are standard stack/FILO operations.

Definition at line 95 of file `stl_stack.h`.

**5.704.2 Constructor & Destructor Documentation**

**5.704.2.1** `template<typename _Tp, typename _Sequence = deque<_Tp>>`  
`std::stack<_Tp, _Sequence>::stack ( const _Sequence & __c )`  
`[inline, explicit]`

Default constructor creates no elements.

Definition at line 133 of file `stl_stack.h`.

### 5.704.3 Member Function Documentation

**5.704.3.1** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
bool std::stack<_Tp, _Sequence>::empty ( ) const [inline]`

Returns true if the stack is empty.

Definition at line 145 of file stl\_stack.h.

**5.704.3.2** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
void std::stack<_Tp, _Sequence>::pop ( ) [inline]`

Removes first element.

This is a typical stack operation. It shrinks the stack by one. The time complexity of the operation depends on the underlying sequence.

Note that no data is returned, and if the first element's data is needed, it should be retrieved before `pop()` is called.

Definition at line 211 of file stl\_stack.h.

**5.704.3.3** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
void std::stack<_Tp, _Sequence>::push ( const value_type & __x )  
[inline]`

Add data to the top of the stack.

#### Parameters

*x* Data to be added.

This is a typical stack operation. The function creates an element at the top of the stack and assigns the given data to it. The time complexity of the operation depends on the underlying sequence.

Definition at line 185 of file stl\_stack.h.

**5.704.3.4** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
size_type std::stack<_Tp, _Sequence>::size ( ) const [inline]`

Returns the number of elements in the stack.

Definition at line 150 of file stl\_stack.h.

## 5.705 `std::student_t_distribution<_RealType>` Class Template Reference 3280

**5.704.3.5** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
reference std::stack<_Tp, _Sequence>::top ( ) [inline]`

Returns a read/write reference to the data at the first element of the stack.

Definition at line 158 of file `stl_stack.h`.

**5.704.3.6** `template<typename _Tp, typename _Sequence = deque<_Tp>>  
const_reference std::stack<_Tp, _Sequence>::top ( ) const  
[inline]`

Returns a read-only (constant) reference to the data at the first element of the stack.

Definition at line 169 of file `stl_stack.h`.

The documentation for this class was generated from the following file:

- [stl\\_stack.h](#)

### 5.705.1 Detailed Description

**template<typename \_RealType = double> class `std::student_t_distribution<_RealType>`**

A `student_t_distribution` random number distribution. The formula for the normal probability mass function is:

$$p(x|n) = \frac{1}{\sqrt{(n\pi)}} \frac{\Gamma((n+1)/2)}{\Gamma(n/2)} \left(1 + \frac{x^2}{n}\right)^{-(n+1)/2}$$

Definition at line 3038 of file random.h.

### 5.705.2 Member Typedef Documentation

**5.705.2.1 template<typename \_RealType = double> typedef `_RealType std::student_t_distribution<_RealType>::result_type`**

The type of the range of the distribution.

Definition at line 3045 of file random.h.

### **5.705.3 Member Function Documentation**

**5.705.3.1** `template<typename _RealType = double> result_type  
std::student_t_distribution<_RealType>::max ( ) const  
[inline]`

Returns the least upper bound value of the distribution.

Definition at line 3121 of file random.h.

**5.705.3.2** `template<typename _RealType = double> result_type  
std::student_t_distribution<_RealType>::min ( ) const  
[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3114 of file random.h.

**5.705.3.3** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator> result_type  
std::student_t_distribution<_RealType>::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 3129 of file random.h.

References std::sqrt().

**5.705.3.4** `template<typename _RealType = double> param_type  
std::student_t_distribution<_RealType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 3099 of file random.h.

## 5.705 `std::student_t_distribution<_RealType>` Class Template Reference 3283

**5.705.3.5** `template<typename _RealType = double> void  
std::student_t_distribution<_RealType>::param ( const  
param_type & __param ) [inline]`

Sets the parameter set of the distribution.

### Parameters

`__param` The new parameter set of the distribution.

Definition at line 3107 of file random.h.

**5.705.3.6** `template<typename _RealType = double> void  
std::student_t_distribution<_RealType>::reset ( ) [inline]`

Resets the distribution state.

Definition at line 3082 of file random.h.

References `std::gamma_distribution<_RealType>::reset()`, and `std::normal_distribution<_RealType>::reset()`.

## 5.705.4 Friends And Related Function Documentation

**5.705.4.1** `template<typename _RealType = double> template<typename  
_RealType1, typename _CharT, typename _Traits>  
std::basic_ostream<_CharT, _Traits>& operator<<  
( std::basic_ostream<_CharT, _Traits> &, const  
std::student_t_distribution<_RealType1> & ) [friend]`

Inserts a `student_t_distribution` random number distribution `__x` into the output stream `__os`.

### Parameters

`__os` An output stream.

`__x` A `student_t_distribution` random number distribution.

### Returns

The output stream with the state of `__x` inserted or in an error state.

## 5.706 `std::student_t_distribution<_RealType>::param_type` Struct Reference 3284

**5.705.4.2** `template<typename _RealType = double> template<typename _RealType1 > bool operator==( const std::student_t_distribution<_RealType1 > & __d1, const std::student_t_distribution<_RealType1 > & __d2 ) [friend]`

Return true if two Student t distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 3151 of file random.h.

**5.705.4.3** `template<typename _RealType = double> template<typename _RealType1, typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits>& operator>>( std::basic_istream<_CharT, _Traits> & , std::student_t_distribution<_RealType1> & ) [friend]`

Extracts a `student_t_distribution` random number distribution `__x` from the input stream `__is`.

### Parameters

- `__is` An input stream.
- `__x` A `student_t_distribution` random number generator engine.

### Returns

The input stream with `__x` extracted or in an error state.

The documentation for this class was generated from the following file:

### Public Attributes

- [\\_BiIter](#) [first](#)
- bool [matched](#)
- [\\_BiIter](#) [second](#)

### 5.707.1 Detailed Description

**template<typename \_BiIter> class std::sub\_match<\_BiIter>**

A sequence of characters matched by a particular marked sub-expression.

An object of this class is essentially a pair of iterators marking a matched subexpression within a regular expression pattern match. Such objects can be converted to and compared with [std::basic\\_string](#) objects of a similar base character type as the pattern matched by the regular expression.

The iterators that make up the pair are the usual half-open interval referencing the actual original pattern matched.

Definition at line 757 of file `regex.h`.

### 5.707.2 Member Typedef Documentation

**5.707.2.1 typedef [\\_BiIter](#) std::pair<\_BiIter, \_BiIter>::second\_type**  
**[[inherited](#)]**

`first_type` is the first bound type

Definition at line 90 of file `stl_pair.h`.

### 5.707.3 Member Function Documentation

**5.707.3.1 template<typename \_BiIter> int std::sub\_match<\_BiIter>::compare ( const sub\_match<\_BiIter> & \_\_s ) const**  
**[[inline](#)]**

Compares this and another matched sequence.

#### Parameters

*s* Another matched sequence to compare to this one.

#### Return values

$<0$  this matched sequence will collate before *s*.

$=0$  this matched sequence is equivalent to *s*.

$>0$  this matched sequence will collate after *s*.

Definition at line 818 of file regex.h.

Referenced by std::operator!=(), std::operator<(), std::operator==(), std::operator>(), and std::operator>=().

**5.707.3.2** `template<typename _Bilter> int std::sub_match<_Bilter>::compare ( const string_type & __s ) const [inline]`

Compares this [sub\\_match](#) to a string.

#### Parameters

*s* A string to compare to this [sub\\_match](#).

#### Return values

$<0$  this matched sequence will collate before *s*.

$=0$  this matched sequence is equivalent to *s*.

$<0$  this matched sequence will collate after *s*.

Definition at line 831 of file regex.h.

**5.707.3.3** `template<typename _Bilter> int std::sub_match<_Bilter>::compare ( const value_type * __s ) const [inline]`

Compares this [sub\\_match](#) to a C-style string.

#### Parameters

*s* A C-style string to compare to this [sub\\_match](#).

**Return values**

<0 this matched sequence will collate before *s*.

=0 this matched sequence is equivalent to *s*.

>0 this matched sequence will collate after *s*.

Definition at line 844 of file regex.h.

**5.707.3.4** `template<typename _Bilter> difference_type std::sub_match<_Bilter>::length ( ) const [inline]`

Gets the length of the matching sequence.

Definition at line 775 of file regex.h.

**5.707.3.5** `template<typename _Bilter> std::sub_match<_Bilter>::operator string_type ( ) const [inline]`

Gets the matching sequence as a string.

**Returns**

the matching sequence as a string.

This is the implicit conversion operator. It is identical to the [str\(\)](#) member function except that it will want to pop up in unexpected places and cause a great deal of confusion and cursing from the unwary.

Definition at line 788 of file regex.h.

**5.707.3.6** `template<typename _Bilter> string_type std::sub_match<_Bilter>::str ( ) const [inline]`

Gets the matching sequence as a string.

**Returns**

the matching sequence as a string.

Definition at line 801 of file regex.h.

Referenced by `std::sub_match<_Bi_iter>::compare()`.

#### 5.707.4 Member Data Documentation

##### 5.707.4.1 `_Biliter std::pair<_Biliter, _Biliter>::first` [inherited]

`second_type` is the second bound type

#### 5.712.1 Detailed Description

`template<typename _CharT, typename _InIter> class std::time_get< _CharT, _InIter >`

Primary class template [time\\_get](#).

This facet encapsulates the code to parse and return a date or time from a string. It is used by the istream numeric extraction operators. The [time\\_get](#) template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the [time\\_get](#) facet.

Definition at line 368 of file `locale_facets_nonio.h`.

#### 5.712.2 Member Typedef Documentation

**5.712.2.1** `template<typename _CharT, typename _InIter> typedef _CharT std::time_get< _CharT, _InIter >::char_type`

Public typedefs.

Reimplemented in [std::time\\_get\\_byname< \\_CharT, \\_InIter >](#).

Definition at line 374 of file `locale_facets_nonio.h`.

### 5.712.2.2 `template<typename _CharT, typename _InIter> typedef _InIter std::time_get<_CharT, _InIter>::iter_type`

Public typedefs.

Reimplemented in [std::time\\_get\\_byname<\\_CharT, \\_InIter>](#).

Definition at line 375 of file `locale_facets_nonio.h`.

### 5.712.3 Constructor & Destructor Documentation

#### 5.712.3.1 `template<typename _CharT, typename _InIter> std::time_get< _CharT, _InIter>::time_get ( size_t __refs = 0 ) [inline, explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

#### Parameters

*refs* Passed to the base facet class.

Definition at line 390 of file `locale_facets_nonio.h`.

#### 5.712.3.2 `template<typename _CharT, typename _InIter> virtual std::time_get<_CharT, _InIter>::~~time_get ( ) [inline, protected, virtual]`

Destructor.

Definition at line 546 of file `locale_facets_nonio.h`.

### 5.712.4 Member Function Documentation

#### 5.712.4.1 `template<typename _CharT, typename _InIter> dateorder std::time_get<_CharT, _InIter>::date_order ( ) const [inline]`

Return preferred order of month, day, and year.

This function returns an enum from `timebase::dateorder` giving the preferred ordering if the format *x* given to `time_put::put()` only uses month, day, and year. If the format *x* for the associated locale uses other fields, this function returns `timebase::dateorder::noorder`.

NOTE: The library always returns `noorder` at the moment.

### Returns

A member of `timebase::dateorder`.

Definition at line 407 of file `locale_facets_nonio.h`.

References `std::time_get< _CharT, _InIter >::do_date_order()`.

**5.712.4.2** `template<typename _CharT, typename _InIter >  
time_base::dateorder std::time_get< _CharT, _InIter  
>::do_date_order ( ) const [protected, virtual]`

Return preferred order of month, day, and year.

This function returns an enum from `timebase::dateorder` giving the preferred ordering if the format *x* given to `time_put::put()` only uses month, day, and year. This function is a hook for derived classes to change the value returned.

### Returns

A member of `timebase::dateorder`.

Definition at line 620 of file `locale_facets_nonio.tcc`.

Referenced by `std::time_get< _CharT, _InIter >::date_order()`.

**5.712.4.3** `template<typename _CharT, typename _InIter > _InIter  
std::time_get< _CharT, _InIter >::do_get_date ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [protected, virtual]`

Parse input date string.

This function parses a date according to the format *X* and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

**See also**

[get\\_date\(\)](#) for details.

**Parameters**

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

**Returns**

Iterator to first char beyond date string.

Definition at line 1047 of file locale\_facets\_nonio.tcc.

References std::ios\_base::\_M\_getloc(), and std::ios\_base::eofbit.

Referenced by std::time\_get< \_CharT, \_InIter >::get\_date().

**5.712.4.4** `template<typename _CharT, typename _InIter> _InIter  
std::time_get< _CharT, _InIter >::do_get_monthname ( iter_type  
__beg, iter_type __end, ios_base & __io, ios_base::iostate & __err,  
tm * __tm ) const [protected, virtual]`

Parse input month string.

This function parses a month name and puts the results into a user-supplied struct tm.  
This function is a hook for derived classes to change the value returned.

**See also**

[get\\_monthname\(\)](#) for details.

**Parameters**

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

**Returns**

Iterator to first char beyond month name.

Definition at line 1092 of file locale\_facets\_nonio.tcc.

References std::ios\_base::\_M\_getloc(), std::ios\_base::eofbit, std::ios\_base::failbit, and std::ios\_base::goodbit.

Referenced by std::time\_get< \_CharT, \_InIter >::get\_monthname().

**5.712.4.5** `template<typename _CharT, typename _InIter > _InIter  
std::time_get< _CharT, _InIter >::do_get_time ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [protected, virtual]`

Parse input time string.

This function parses a time according to the format *x* and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

**See also**

[get\\_time\(\)](#) for details.

#### Parameters

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

#### Returns

Iterator to first char beyond time string.

Definition at line 1030 of file locale\_facets\_nonio.tcc.

References std::ios\_base::\_M\_getloc(), and std::ios\_base::eofbit.

Referenced by std::time\_get< \_CharT, \_InIter >::get\_time().

**5.712.4.6** `template<typename _CharT, typename _InIter > _InIter  
std::time_get< _CharT, _InIter >::do_get_weekday ( iter_type  
__beg, iter_type __end, ios_base & __io, ios_base::iostate & __err,  
tm * __tm ) const [protected, virtual]`

Parse input weekday string.

This function parses a weekday name and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

**See also**

[`get\_weekday\(\)`](#) for details.

**Parameters**

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the locale.

*err* Error flags to set.

*tm* Pointer to struct `tm` to fill in.

**Returns**

Iterator to first char beyond weekday name.

Definition at line 1064 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

Referenced by `std::time_get< _CharT, _InIter >::get_weekday()`.

**5.712.4.7** `template<typename _CharT, typename _InIter > _InIter  
std::time_get< _CharT, _InIter >::do_get_year ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [protected, virtual]`

Parse input year string.

This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

**See also**

[`get\_year\(\)`](#) for details.

**Parameters**

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

### Returns

Iterator to first char beyond year.

Definition at line 1120 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

Referenced by `std::time_get< _CharT, _InIter >::get_year()`.

**5.712.4.8** `template<typename _CharT, typename _InIter> iter_type  
std::time_get< _CharT, _InIter >::get_date ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [inline]`

Parse input date string.

This function parses a date according to the format *x* and puts the results into a user-supplied struct tm. The result is returned by calling `time_get::do_get_date()`.

If there is a valid date string according to format *x*, *tm* will be filled in accordingly and the returned iterator will point to the first character beyond the date string. If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

### Parameters

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

### Returns

Iterator to first char beyond date string.

Definition at line 456 of file locale\_facets\_nonio.h.

References `std::time_get< _CharT, _InIter >::do_get_date()`.

**5.712.4.9** `template<typename _CharT, typename _InIter > iter_type  
std::time_get< _CharT, _InIter >::get_monthname ( iter_type  
__beg, iter_type __end, ios_base & __io, ios_base::iostate & __err,  
tm * __tm ) const [inline]`

Parse input month string.

This function parses a month name and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_monthname\(\)](#).

Parsing starts by parsing an abbreviated month name. If a valid abbreviation is followed by a character that would lead to the full month name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, err |= [ios\\_base::failbit](#). If parsing reads all the characters, err |= [ios\\_base::eofbit](#).

#### Parameters

- beg* Start of string to parse.
- end* End of string to parse.
- io* Source of the locale.
- err* Error flags to set.
- tm* Pointer to struct tm to fill in.

#### Returns

Iterator to first char beyond month name.

Definition at line 513 of file locale\_facets\_nonio.h.

References [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#).

**5.712.4.10** `template<typename _CharT, typename _InIter > iter_type  
std::time_get< _CharT, _InIter >::get_time ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [inline]`

Parse input time string.

This function parses a time according to the format *X* and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_time\(\)](#).

If there is a valid time string according to format *X*, *tm* will be filled in accordingly and the returned iterator will point to the first character beyond the time string. If an error occurs before the end, err |= [ios\\_base::failbit](#). If parsing reads all the characters, err |= [ios\\_base::eofbit](#).

#### Parameters

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

#### Returns

Iterator to first char beyond time string.

Definition at line 431 of file locale\_facets\_nonio.h.

References [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_time\(\)](#).

**5.712.4.11** `template<typename _CharT, typename _InIter> iter_type  
 std::time_get< _CharT, _InIter >::get_weekday ( iter_type __beg,  
 iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
 __tm ) const [inline]`

Parse input weekday string.

This function parses a weekday name and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_weekday\(\)](#).

Parsing starts by parsing an abbreviated weekday name. If a valid abbreviation is followed by a character that would lead to the full weekday name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, err |= [ios\\_base::failbit](#). If parsing reads all the characters, err |= [ios\\_base::eofbit](#).

#### Parameters

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.

*tm* Pointer to struct tm to fill in.

### Returns

Iterator to first char beyond weekday name.

Definition at line 484 of file locale\_facets\_nonio.h.

References std::time\_get< \_CharT, \_InIter >::do\_get\_weekday().

```
5.712.4.12 template<typename _CharT, typename _InIter > iter_type
std::time_get< _CharT, _InIter >::get_year (iter_type __beg,
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *
__tm) const [inline]
```

Parse input year string.

This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_year\(\)](#).

4 consecutive digits are interpreted as a full year. If there are exactly 2 consecutive digits, the library interprets this as the number of years since 1900.

If an error occurs before the end, err |= [ios\\_base::failbit](#). If parsing reads all the characters, err |= [ios\\_base::eofbit](#).

### Parameters

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the locale.

*err* Error flags to set.

*tm* Pointer to struct tm to fill in.

### Returns

Iterator to first char beyond year.

Definition at line 539 of file locale\_facets\_nonio.h.

References std::time\_get< \_CharT, \_InIter >::do\_get\_year().

#### 5.713.1 Detailed Description

`template<typename _CharT, typename _InIter> class std::time_get_byname<_CharT, _InIter>`

class `time_get_byname` [22.2.5.2].

Definition at line 686 of file `locale_facets_nonio.h`.

#### 5.713.2 Member Typedef Documentation

**5.713.2.1** `template<typename _CharT, typename _InIter> typedef _CharT std::time_get_byname<_CharT, _InIter>::char_type`

Public typedefs.

Reimplemented from `std::time_get<_CharT, _InIter>`.

Definition at line 690 of file `locale_facets_nonio.h`.

### 5.713 `std::time_get_byname<_CharT, _InIter>` Class Template Reference 3310

#### 5.713.2.2 `template<typename _CharT, typename _InIter> typedef _InIter std::time_get_byname<_CharT, _InIter>::iter_type`

Public typedefs.

Reimplemented from `std::time_get<_CharT, _InIter>`.

Definition at line 691 of file `locale_facets_nonio.h`.

#### 5.713.3 Member Function Documentation

##### 5.713.3.1 `template<typename _CharT, typename _InIter> dateorder std::time_get<_CharT, _InIter>::date_order ( ) const [inline, inherited]`

Return preferred order of month, day, and year.

This function returns an enum from `timebase::dateorder` giving the preferred ordering if the format *x* given to `time_put::put()` only uses month, day, and year. If the format *x* for the associated locale uses other fields, this function returns `timebase::dateorder::noorder`.

NOTE: The library always returns `noorder` at the moment.

#### Returns

A member of `timebase::dateorder`.

Definition at line 407 of file `locale_facets_nonio.h`.

References `std::time_get<_CharT, _InIter>::do_date_order()`.

##### 5.713.3.2 `template<typename _CharT, typename _InIter> time_base::dateorder std::time_get<_CharT, _InIter >::do_date_order ( ) const [protected, virtual, inherited]`

Return preferred order of month, day, and year.

This function returns an enum from `timebase::dateorder` giving the preferred ordering if the format *x* given to `time_put::put()` only uses month, day, and year. This function is a hook for derived classes to change the value returned.

### 5.713 std::time\_get\_byname<\_CharT, \_InIter> Class Template Reference 3311

#### Returns

A member of timebase::dateorder.

Definition at line 620 of file locale\_facets\_nonio.tcc.

Referenced by std::time\_get<\_CharT, \_InIter>::date\_order().

**5.713.3.3** `template<typename _CharT, typename _InIter> _InIter  
std::time_get<_CharT, _InIter>::do_get_date ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [protected, virtual, inherited]`

Parse input date string.

This function parses a date according to the format *X* and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

#### See also

[get\\_date\(\)](#) for details.

#### Parameters

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

#### Returns

Iterator to first char beyond date string.

Definition at line 1047 of file locale\_facets\_nonio.tcc.

References std::ios\_base::\_M\_getloc(), and std::ios\_base::eofbit.

Referenced by std::time\_get<\_CharT, \_InIter>::get\_date().

**5.713.3.4** `template<typename _CharT, typename _InIter> _InIter  
std::time_get<_CharT, _InIter>::do_get_monthname ( iter_type  
__beg, iter_type __end, ios_base & __io, ios_base::iostate & __err,  
tm * __tm ) const [protected, virtual, inherited]`

### 5.713 `std::time_get_byname<_CharT, _InIter>` Class Template Reference 3312

Parse input month string.

This function parses a month name and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

#### See also

[`get\_monthname\(\)`](#) for details.

#### Parameters

- beg* Start of string to parse.
- end* End of string to parse.
- io* Source of the locale.
- err* Error flags to set.
- tm* Pointer to struct `tm` to fill in.

#### Returns

Iterator to first char beyond month name.

Definition at line 1092 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

Referenced by `std::time_get<_CharT, _InIter>::get_monthname()`.

```
5.713.3.5 template<typename _CharT, typename _InIter> _InIter
std::time_get<_CharT, _InIter>::do_get_time (iter_type __beg,
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *
__tm) const [protected, virtual, inherited]
```

Parse input time string.

This function parses a time according to the format *x* and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

#### See also

[`get\_time\(\)`](#) for details.

#### Parameters

- beg* Start of string to parse.
- end* End of string to parse.

### 5.713 `std::time_get_byname<_CharT, _InIter>` Class Template Reference 313

---

*io* Source of the locale.

*err* Error flags to set.

*tm* Pointer to struct tm to fill in.

#### Returns

Iterator to first char beyond time string.

Definition at line 1030 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, and `std::ios_base::eofbit`.

Referenced by `std::time_get<_CharT, _InIter>::get_time()`.

**5.713.3.6** `template<typename _CharT, typename _InIter> _InIter  
std::time_get<_CharT, _InIter>::do_get_weekday ( iter_type  
__beg, iter_type __end, ios_base & __io, ios_base::iostate & __err,  
tm * __tm ) const [protected, virtual, inherited]`

Parse input weekday string.

This function parses a weekday name and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

#### See also

[get\\_weekday\(\)](#) for details.

#### Parameters

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the locale.

*err* Error flags to set.

*tm* Pointer to struct tm to fill in.

#### Returns

Iterator to first char beyond weekday name.

Definition at line 1064 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

Referenced by `std::time_get<_CharT, _InIter>::get_weekday()`.

## 5.713 std::time\_get\_byname<\_CharT, \_InIter> Class Template Reference 3314

**5.713.3.7** `template<typename _CharT, typename _InIter> _InIter  
std::time_get<_CharT, _InIter>::do_get_year ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [protected, virtual, inherited]`

Parse input year string.

This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

### See also

[get\\_year\(\)](#) for details.

### Parameters

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

### Returns

Iterator to first char beyond year.

Definition at line 1120 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

Referenced by `std::time_get<_CharT, _InIter>::get_year()`.

**5.713.3.8** `template<typename _CharT, typename _InIter> iter_type  
std::time_get<_CharT, _InIter>::get_date ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [inline, inherited]`

Parse input date string.

This function parses a date according to the format *x* and puts the results into a user-supplied struct tm. The result is returned by calling [time\\_get::do\\_get\\_date\(\)](#).

If there is a valid date string according to format *x*, *tm* will be filled in accordingly and the returned iterator will point to the first character beyond the date string. If an error

### 5.713 `std::time_get_byname<_CharT, _InIter >` Class Template Reference 3315

occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

#### Parameters

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

#### Returns

Iterator to first char beyond date string.

Definition at line 456 of file `locale_facets_nonio.h`.

References `std::time_get<_CharT, _InIter >::do_get_date()`.

**5.713.3.9** `template<typename _CharT, typename _InIter > iter_type  
std::time_get<_CharT, _InIter >::get_monthname ( iter_type  
__beg, iter_type __end, ios_base & __io, ios_base::iostate & __err,  
tm * __tm ) const [inline, inherited]`

Parse input month string.

This function parses a month name and puts the results into a user-supplied struct tm. The result is returned by calling `time_get::do_get_monthname()`.

Parsing starts by parsing an abbreviated month name. If a valid abbreviation is followed by a character that would lead to the full month name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

#### Parameters

*beg* Start of string to parse.  
*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

**Returns**

Iterator to first char beyond month name.

Definition at line 513 of file locale\_facets\_nonio.h.

References std::time\_get<\_CharT, \_InIter>::do\_get\_monthname().

**5.713.3.10** `template<typename _CharT, typename _InIter> iter_type  
std::time_get<_CharT, _InIter>::get_time ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [inline, inherited]`

Parse input time string.

This function parses a time according to the format *X* and puts the results into a user-supplied struct *tm*. The result is returned by calling `time_get::do_get_time()`.

If there is a valid time string according to format *X*, *tm* will be filled in accordingly and the returned iterator will point to the first character beyond the time string. If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

**Parameters**

*beg* Start of string to parse.

*end* End of string to parse.

*io* Source of the locale.

*err* Error flags to set.

*tm* Pointer to struct *tm* to fill in.

**Returns**

Iterator to first char beyond time string.

Definition at line 431 of file locale\_facets\_nonio.h.

References std::time\_get<\_CharT, \_InIter>::do\_get\_time().

**5.713.3.11** `template<typename _CharT, typename _InIter> iter_type  
std::time_get<_CharT, _InIter>::get_weekday ( iter_type __beg,  
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *  
__tm ) const [inline, inherited]`

### 5.713 `std::time_get_byname<_CharT, _InIter>` Class Template Reference 3317

Parse input weekday string.

This function parses a weekday name and puts the results into a user-supplied struct `tm`. The result is returned by calling `time_get::do_get_weekday()`.

Parsing starts by parsing an abbreviated weekday name. If a valid abbreviation is followed by a character that would lead to the full weekday name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

#### Parameters

- beg* Start of string to parse.
- end* End of string to parse.
- io* Source of the locale.
- err* Error flags to set.
- tm* Pointer to struct `tm` to fill in.

#### Returns

Iterator to first char beyond weekday name.

Definition at line 484 of file `locale_facets_nonio.h`.

References `std::time_get<_CharT, _InIter>::do_get_weekday()`.

```
5.713.3.12 template<typename _CharT, typename _InIter> iter_type
std::time_get<_CharT, _InIter>::get_year (iter_type __beg,
iter_type __end, ios_base & __io, ios_base::iostate & __err, tm *
__tm) const [inline, inherited]
```

Parse input year string.

This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct `tm`. The result is returned by calling `time_get::do_get_year()`.

4 consecutive digits are interpreted as a full year. If there are exactly 2 consecutive digits, the library interprets this as the number of years since 1900.

If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

#### Parameters

- beg* Start of string to parse.

*end* End of string to parse.  
*io* Source of the locale.  
*err* Error flags to set.  
*tm* Pointer to struct tm to fill in.

### Returns

Iterator to first char beyond year.

Definition at line 539 of file `locale_facets_nonio.h`.

References `std::time_get<_CharT, _InIter >::do_get_year()`.

### 5.713.4 Member Data Documentation

#### 5.713.4.1 `template<typename _CharT, typename _InIter > locale::id` `std::time_get<_CharT, _InIter >::id` [`static`, `inherited`]

Numpunct facet id.

Definition at line 380 of file `locale_facets_nonio.h`.

The documentation for this class was generated from the following file:

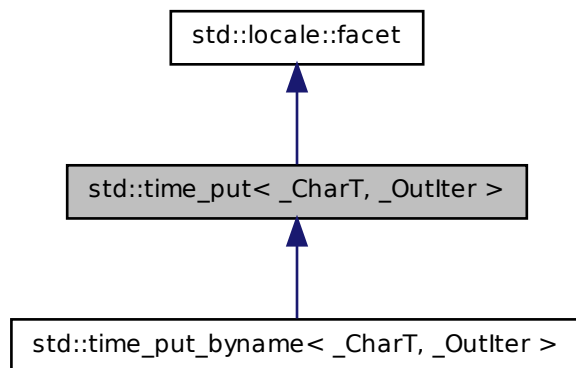

- [locale\\_facets\\_nonio.h](#)

### 5.714 `std::time_put<_CharT, _OutIter >` Class Template Reference

Primary class template [time\\_put](#).

This facet encapsulates the code to format and output dates and times according to formats used by `strftime()`.

Inheritance diagram for `std::time_put<_CharT, _OutIter >`:

### Public Types

- typedef `_CharT` `char_type`
- typedef `_OutIter` `iter_type`

### Public Member Functions

- `time_put` (`size_t __refs=0`)
- `iter_type put` (`iter_type __s`, `ios_base &__io`, `char_type __fill`, `const tm *__tm`, `char __format`, `char __mod=0`) `const`
- `iter_type put` (`iter_type __s`, `ios_base &__io`, `char_type __fill`, `const tm *__tm`, `const _CharT *__beg`, `const _CharT *__end`) `const`

### Static Public Attributes

- static `locale::id` `id`

### Protected Member Functions

### Friends

- class `locale::_Impl`

#### 5.714.1 Detailed Description

`template<typename _CharT, typename _OutIter> class std::time_put<_CharT, _OutIter>`

Primary class template [time\\_put](#).

This facet encapsulates the code to format and output dates and times according to formats used by `strftime()`. The [time\\_put](#) template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the [time\\_put](#) facet.

Definition at line 715 of file `locale_facets_nonio.h`.

#### 5.714.2 Member Typedef Documentation

**5.714.2.1** `template<typename _CharT, typename _OutIter> typedef _CharT std::time_put<_CharT, _OutIter>::char_type`

Public typedefs.

Reimplemented in [std::time\\_put\\_byname<\\_CharT, \\_OutIter>](#).

Definition at line 721 of file `locale_facets_nonio.h`.

**5.714.2.2** `template<typename _CharT, typename _OutIter> typedef _OutIter std::time_put<_CharT, _OutIter>::iter_type`

Public typedefs.

Reimplemented in [std::time\\_put\\_byname< \\_CharT, \\_OutIter >](#).

Definition at line 722 of file locale\_facets\_nonio.h.

### 5.714.3 Constructor & Destructor Documentation

**5.714.3.1** `template<typename _CharT, typename _OutIter > std::time_put< _CharT, _OutIter >::time_put ( size_t __refs = 0 ) [inline, explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

#### Parameters

*refs* Passed to the base facet class.

Definition at line 736 of file locale\_facets\_nonio.h.

**5.714.3.2** `template<typename _CharT, typename _OutIter > virtual std::time_put< _CharT, _OutIter >::~~time_put ( ) [inline, protected, virtual]`

Destructor.

Definition at line 782 of file locale\_facets\_nonio.h.

### 5.714.4 Member Function Documentation

**5.714.4.1** `template<typename _CharT, typename _OutIter > _OutIter std::time_put< _CharT, _OutIter >::do_put ( iter_type __s, ios_base & __io, char_type __fill, const tm * __tm, char __format, char __mod ) const [protected, virtual]`

Format and output a time or date.

This function formats the data in struct tm according to the provided format char and optional modifier. This function is a hook for derived classes to change the value returned.

**See also**

[put\(\)](#) for more details.

**Parameters**

- s* The stream to write to.
- io* Source of locale.
- fill* `char_type` to use for padding.
- tm* Struct `tm` with date and time info to format.
- format* Format char.
- mod* Optional modifier char.

**Returns**

Iterator after writing.

Definition at line 1178 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, and `std::__ctype_abstract_base<_CharT >::widen()`.

Referenced by `std::time_put<_CharT, _OutIter >::put()`.

**5.714.4.2** `template<typename _CharT, typename _OutIter > _OutIter  
std::time_put<_CharT, _OutIter >::put ( iter_type __s, ios_base &  
__io, char_type __fill, const tm * __tm, const _CharT * __beg,  
const _CharT * __end ) const`

Format and output a time or date.

This function formats the data in struct `tm` according to the provided format string. The format string is interpreted as by `strftime()`.

**Parameters**

- s* The stream to write to.
- io* Source of locale.
- fill* `char_type` to use for padding.
- tm* Struct `tm` with date and time info to format.
- beg* Start of format string.
- end* End of format string.

### Returns

Iterator after writing.

Definition at line 1143 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, `std::time_put< _CharT, _OutIter >::do_put()`, and `std::__ctype_abstract_base< _CharT >::narrow()`.

**5.714.4.3** `template<typename _CharT, typename _OutIter> iter_type  
std::time_put< _CharT, _OutIter >::put ( iter_type __s, ios_base  
& __io, char_type __fill, const tm * __tm, char __format, char  
__mod = 0 ) const [inline]`

Format and output a time or date.

This function formats the data in struct tm according to the provided format char and optional modifier. The format and modifier are interpreted as by `strftime()`. It does so by returning `time_put::do_put()`.

### Parameters

- s* The stream to write to.
- io* Source of locale.
- fill* `char_type` to use for padding.
- tm* Struct tm with date and time info to format.
- format* Format char.
- mod* Optional modifier char.

### Returns

Iterator after writing.

Definition at line 775 of file locale\_facets\_nonio.h.

References `std::time_put< _CharT, _OutIter >::do_put()`.

## 5.714.5 Member Data Documentation

**5.714.5.1** `template<typename _CharT, typename _OutIter> locale::id

const _CharT * __end ) const [inherited]`

Format and output a time or date.

This function formats the data in struct tm according to the provided format string. The format string is interpreted as by strftime().

### Parameters

- s* The stream to write to.
- io* Source of locale.
- fill* char\_type to use for padding.
- tm* Struct tm with date and time info to format.
- beg* Start of format string.
- end* End of format string.

### Returns

- Iterator after writing.

Definition at line 1143 of file locale\_facets\_nonio.tcc.

References std::ios\_base::\_M\_getloc(), std::time\_put<\_CharT, \_OutIter>::do\_put(), and std::\_\_ctype\_abstract\_base<\_CharT>::narrow().

**5.715.3.3** `template<typename _CharT, typename _OutIter> iter_type  
std::time_put<_CharT, _OutIter>::put ( iter_type __s, ios_base  
& __io, char_type __fill, const tm * __tm, char __format, char  
__mod = 0 ) const [inline, inherited]`

Format and output a time or date.

This function formats the data in struct tm according to the provided format char and optional modifier. The format and modifier are interpreted as by strftime(). It does so by returning [time\\_put::do\\_put\(\)](#).

### Parameters

- s* The stream to write to.
- io* Source of locale.
- fill* char\_type to use for padding.
- tm* Struct tm with date and time info to format.
- format* Format char.
- mod* Optional modifier char.

### Returns

Iterator after writing.

Definition at line 775 of file locale\_facets\_nonio.h.

References [std::time\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#).

## 5.715.4 Member Data Documentation

### 5.715.4.1 `template<typename _CharT, typename _OutIter> locale::id std::time_put<_CharT, _OutIter>::id [static, inherited]`

Numpunct facet id.

Definition at line 726 of file locale\_facets\_nonio.h.

The documentation for this class was generated from the following file:

- [locale\\_facets\\_nonio.h](#)

## 5.716 std::timed\_mutex Class Reference

[timed\\_mutex](#)

### Public Types

[tuple](#) & **operator=** ([pair](#)< \_U1, \_U2 > &&\_\_in)
- void **swap** ([tuple](#) &\_\_in)

**5.720.1 Detailed Description**

**template<typename \_T1, typename \_T2> class `std::tuple<_T1, _T2>`**

tuple (2-element), with construction and assignment from a pair.

Definition at line 315 of file tuple.

The documentation for this class was generated from the following file:

- [tuple](#)

## 5.721 `std::tuple_element< 0, tuple< _Head, _Tail...> >` Struct Template Reference

### Public Types

- `typedef _Head type`

#### 5.721.1 Detailed Description

`template<typename _Head, typename... _Tail> struct std::tuple_element< 0, tuple< _Head, _Tail...> >`

Basis case for `tuple_element`: The first element is the one we're seeking.

Definition at line 496 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.722 `std::tuple_element< __i, tuple< _Head, _Tail...> >` Struct Template Reference

Inherits `tuple_element< __i-1, tuple< _Tail...> >`.

#### 5.722.1 Detailed Description

`template<std::size_t __i, typename _Head, typename... _Tail> struct std::tuple_element< __i, tuple< _Head, _Tail...> >`

Recursive case for `tuple_element`: strip off the first element in the tuple and retrieve the (i-1)th element of the remaining tuple.

Definition at line 489 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.723 `std::tuple_size< tuple< _Elements...> >` Struct Template Reference

`class tuple_size`

**Static Public Attributes**

- static const `std::size_t` **value**

**5.723.1 Detailed Description**

```
template<typename... _Elements> struct std::tuple_size< tuple< _Elements...>
>
```

```
class tuple_size
```

Definition at line 507 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

**5.724 `std::type_index` Struct Reference**

The class [type\\_index](#) provides a simple wrapper for [type\\_info](#) which can be used as an index type in associative containers (23.6) and in unordered associative containers (23.7).

**Public Member Functions**

- **type\_index** (const [type\\_info](#) &\_\_rhs)
- `size_t` **hash\_code** () const
- const char \* **name** () const
- bool **operator!=** (const [type\\_index](#) &\_\_rhs) const
- bool **operator<** (const [type\\_index](#) &\_\_rhs) const
- bool **operator<=** (const [type\\_index](#) &\_\_rhs) const
- bool **operator==** (const [type\\_index](#) &\_\_rhs) const
- bool **operator>** (const [type\\_index](#) &\_\_rhs) const
- bool **operator>=** (const [type\\_index](#) &\_\_rhs) const

**5.724.1 Detailed Description**

The class [type\\_index](#) provides a simple wrapper for [type\\_info](#) which can be used as an index type in associative containers (23.6) and in unordered associative containers (23.7).

Definition at line 49 of file `typeidindex`.

The documentation for this struct was generated from the following file:

- [typeid](#)

## 5.725 std::type\_info Class Reference

Part of RTTI.

Inherited by `__cxxabiv1::__array_type_info`, `__cxxabiv1::__class_type_info`, `__cxxabiv1::__enum_type_info`, `__cxxabiv1::__function_type_info`, `__cxxabiv1::__fundamental_type_info`, and `__cxxabiv1::__pbase_type_info`.

### Public Member Functions

- virtual `~type_info()`
- virtual `bool __do_catch (const type_info * __thr_type, void ** __thr_obj, unsigned __outer) const`
- virtual `bool __do_upcast (const __cxxabiv1::__class_type_info * __target, void ** __obj_ptr) const`
- virtual `bool __is_function_p () const`
- virtual `bool __is_pointer_p () const`
- `bool before (const type_info & __arg) const`
- `size_t hash_code () const throw ()`
- `const char * name () const`
- `bool operator!= (const type_info & __arg) const`
- `bool operator== (const type_info & __arg) const`

### Protected Member Functions

- `type_info (const char * __n)`

### Protected Attributes

- `const char * __name`

#### 5.725.1 Detailed Description

Part of RTTI. The `type_info` class describes type information generated by an implementation.

Definition at line 91 of file `typeinfo`.

## 5.725.2 Constructor & Destructor Documentation

### 5.725.2.1 virtual std::type\_info::~~type\_info ( ) [virtual]

Destructor first. Being the first non-inline virtual function, this controls in which translation unit the vtable is emitted. The compiler makes use of that information to know where to emit the runtime-mandated [type\\_info](#) structures in the new-abi.

## 5.725.3 Member Function Documentation

### 5.725.3.1 const char\* std::type\_info::name ( ) const [inline]

Returns an *implementation-defined* byte string; this is not portable between compilers!

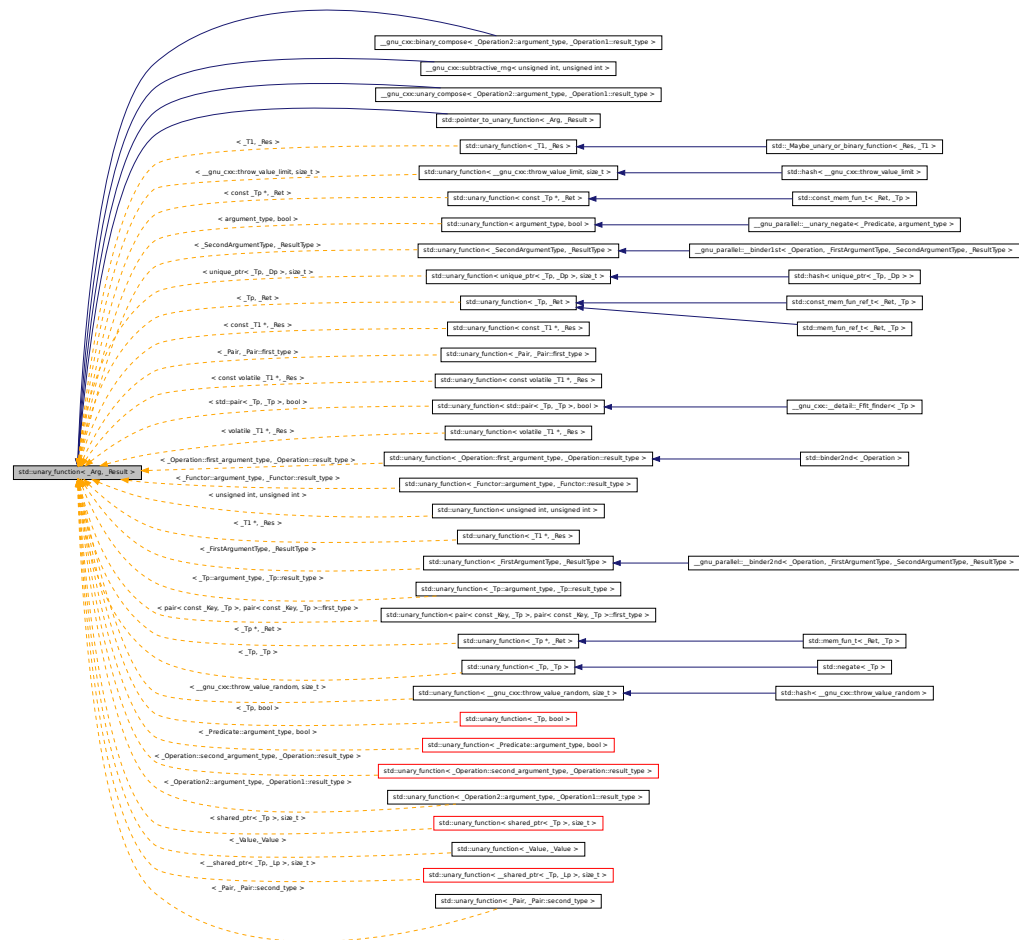

Definition at line 102 of file typeidinfo.

The documentation for this class was generated from the following file:

- [typeidinfo](#)

## 5.726 std::unary\_function< \_Arg, \_Result > Struct Template Reference

Inheritance diagram for std::unary\_function< \_Arg, \_Result >:

### Public Types

- typedef `_Arg` `argument_type`
- typedef `_Result` `result_type`

### 5.726.1 Detailed Description

**template<typename \_Arg, typename \_Result> struct std::unary\_function< \_Arg, \_Result >**

This is one of the [functor base classes](#).

Definition at line 102 of file stl\_function.h.

### 5.726.2 Member Typedef Documentation

**5.726.2.1 template<typename \_Arg, typename \_Result> typedef \_Arg  
std::unary\_function< \_Arg, \_Result >::argument\_type**

argument\_type is the type of the argument

Definition at line 105 of file stl\_function.h.

**5.726.2.2 template<typename \_Arg, typename \_Result> typedef \_Result  
std::unary\_function< \_Arg, \_Result >::result\_type**

result\_type is the return type

Definition at line 108 of file stl\_function.h.

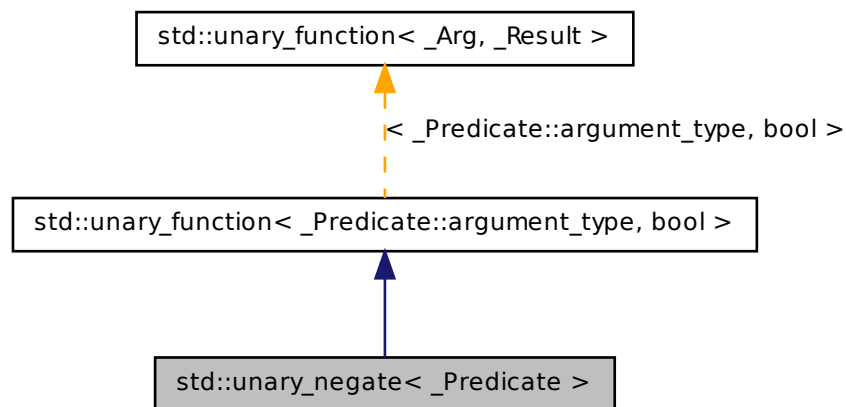

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.727 std::unary\_negate<\_Predicate> Class Template Reference

One of the [negation functors](#).

Inheritance diagram for std::unary\_negate< \_Predicate >:

### Public Types

- typedef `_Predicate::argument_type` [argument\\_type](#)
- typedef `bool` [result\\_type](#)

### Public Member Functions

- **unary\_negate** (`const _Predicate &__x`)
- **operator()** (`const typename _Predicate::argument_type &__x`) `const`

### Protected Attributes

- `_Predicate _M_pred`

#### 5.727.1 Detailed Description

**template<typename \_Predicate> class std::unary\_negate< \_Predicate >**

One of the [negation functors](#).

Definition at line 352 of file `stl_function.h`.

### 5.727.2 Member Typedef Documentation

**5.727.2.1** `typedef _Predicate::argument_type std::unary_function<  
_Predicate::argument_type , bool >::argument_type  
[inherited]`

`argument_type` is the type of the argument

Definition at line 105 of file `stl_function.h`.

**5.727.2.2** `typedef bool std::unary_function< _Predicate::argument_type , bool  
>::result_type [inherited]`

`result_type` is the return type

Definition at line 108 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 5.728 `std::underflow_error` Class Reference

Inheritance diagram for `std::underflow_error`:

### Public Member Functions

- **`underflow_error`** (const [string](#) &\_\_arg)
- virtual const char \* **`what`** () const throw ()

#### 5.728.1 Detailed Description

Thrown to indicate arithmetic underflow.

Definition at line 147 of file `stdexcept`.

#### 5.728.2 Member Function Documentation

##### 5.728.2.1 virtual const char\* `std::runtime_error::what` ( ) const throw () [virtual, inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

## 5.729 `std::uniform_int_distribution<_IntType>` Class Template Reference 3342

The documentation for this class was generated from the following file:

- [stdexcept](#)

### 5.729 `std::uniform_int_distribution<_IntType>` Class Template Reference

Uniform discrete distribution for random numbers. A discrete random distribution on the range  $[min, max]$  with equal probability throughout the range.

#### Classes

- struct [param\\_type](#)

#### Public Types

- typedef `_IntType` [result\\_type](#)

#### Public Member Functions

- void [param](#) (const [param\\_type](#) &\_\_param)
- [param\\_type param](#) () const
- void [reset](#) ()

#### Public Attributes

- [param\\_type \\_M\\_param](#)

### 5.729.1 Detailed Description

**template<typename \_IntType = int> class std::uniform\_int\_distribution< \_IntType >**

Uniform discrete distribution for random numbers. A discrete random distribution on the range  $[min, max]$  with equal probability throughout the range.

Definition at line 1605 of file random.h.

### 5.729.2 Member Typedef Documentation

**5.729.2.1 template<typename \_IntType = int> typedef \_IntType  
std::uniform\_int\_distribution< \_IntType >::result\_type**

The type of the range of the distribution.

Definition at line 1612 of file random.h.

### 5.729.3 Constructor & Destructor Documentation

**5.729.3.1 template<typename \_IntType = int> std::uniform\_int\_distribution<  
\_IntType >::uniform\_int\_distribution ( \_IntType \_\_a = 0, \_IntType  
\_\_b = std::numeric\_limits<\_IntType>::max() ) [inline,  
explicit]**

Constructs a uniform distribution object.

Definition at line 1648 of file random.h.

### 5.729.4 Member Function Documentation

**5.729.4.1 template<typename \_IntType = int> result\_type  
std::uniform\_int\_distribution< \_IntType >::max ( ) const  
[inline]**

Returns the inclusive upper bound of the distribution range.

Definition at line 1700 of file random.h.

## 5.729 `std::uniform_int_distribution<_IntType>` Class Template Reference 3344

**5.729.4.2** `template<typename _IntType = int> result_type  
std::uniform_int_distribution<_IntType>::min ( ) const  
[inline]`

Returns the inclusive lower bound of the distribution range.

Definition at line 1693 of file random.h.

**5.729.4.3** `template<typename _IntType = int> template<typename  
_UniformRandomNumberGenerator> result_type  
std::uniform_int_distribution<_IntType>::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 1708 of file random.h.

References `std::uniform_int_distribution<_IntType>::operator()()`, and  
`std::uniform_int_distribution<_IntType>::param()`.

Referenced by `std::uniform_int_distribution<_IntType>::operator()()`.

**5.729.4.4** `template<typename _IntType = int> void std::uniform_int_  
distribution<_IntType>::param ( const param_type & __param )  
[inline]`

Sets the parameter set of the distribution.

### Parameters

**`__param`** The new parameter set of the distribution.

Definition at line 1686 of file random.h.

**5.729.4.5** `template<typename _IntType = int> param_type  
std::uniform_int_distribution<_IntType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 1678 of file random.h.

## 5.730 `std::uniform_int_distribution< _IntType >::param_type` Struct Reference 3345

---

Referenced by `std::uniform_int_distribution< _IntType >::operator()()`, `std::operator==( )`, and `std::operator>>()`.

**5.729.4.6** `template<typename _IntType = int> void  
std::uniform_int_distribution< _IntType >::reset ( ) [inline]`

Resets the distribution state.

Does nothing for the uniform integer distribution.

Definition at line 1664 of file `random.h`.

The documentation for this class was generated from the following files:

- [random.h](#)
- [random.tcc](#)

## 5.730 `std::uniform_int_distribution< _IntType >::param_type` Struct Reference

### Public Types

- typedef [uniform\\_int\\_distribution< \\_IntType >](#) **distribution\_type**

### Public Member Functions

- **param\_type** (`_IntType __a=0`, `_IntType __b=std::numeric_limits< _IntType >::max()`)

- void [reset](#) ()

#### 5.731.1 Detailed Description

`template<typename _RealType = double> class std::uniform_real_distribution<_RealType>`

Uniform continuous distribution for random numbers. A continuous random distribution on the range [min, max) with equal probability throughout the range. The URNG should be real-valued and deliver number in the range [0, 1).

## 5.731 `std::uniform_real_distribution<_RealType>` Class Template Reference

Definition at line 1777 of file `random.h`.

### 5.731.2 Member Typedef Documentation

**5.731.2.1** `template<typename _RealType = double> typedef _RealType  
std::uniform_real_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 1784 of file `random.h`.

### 5.731.3 Constructor & Destructor Documentation

**5.731.3.1** `template<typename _RealType = double> std::uniform_real_-  
distribution<_RealType>::uniform_real_distribution ( _RealType  
__a = _RealType(0), _RealType __b = _RealType(1) )  
[inline, explicit]`

Constructs a `uniform_real_distribution` object.

#### Parameters

`__min` [IN] The lower bound of the distribution.  
`__max` [IN] The upper bound of the distribution.

Definition at line 1823 of file `random.h`.

### 5.731.4 Member Function Documentation

**5.731.4.1** `template<typename _RealType = double> result_type  
std::uniform_real_distribution<_RealType>::max ( ) const  
[inline]`

Returns the inclusive upper bound of the distribution range.

Definition at line 1875 of file `random.h`.

**5.731.4.2** `template<typename _RealType = double> result_type  
std::uniform_real_distribution<_RealType>::min ( ) const  
[inline]`

### 5.731 `std::uniform_real_distribution<_RealType>` Class Template Reference

Returns the inclusive lower bound of the distribution range.

Definition at line 1868 of file random.h.

```
5.731.4.3 template<typename _RealType = double> template<typename
 _UniformRandomNumberGenerator > result_type
 std::uniform_real_distribution<_RealType>::operator() (
 _UniformRandomNumberGenerator & __urng) [inline]
```

Generating functions.

Definition at line 1883 of file random.h.

References `std::uniform_real_distribution<_RealType>::operator()`, and `std::uniform_real_distribution<_RealType>::param()`.

Referenced by `std::uniform_real_distribution<_RealType>::operator()`.

```
5.731.4.4 template<typename _RealType = double> void
 std::uniform_real_distribution<_RealType>::param (const
 param_type & __param) [inline]
```

Sets the parameter set of the distribution.

#### Parameters

`__param` The new parameter set of the distribution.

Definition at line 1861 of file random.h.

```
5.731.4.5 template<typename _RealType = double> param_type
 std::uniform_real_distribution<_RealType>::param () const
 [inline]
```

Returns the parameter set of the distribution.

Definition at line 1853 of file random.h.

Referenced by `std::uniform_real_distribution<_RealType>::operator()`, `std::operator==( )`, and `std::operator>>()`.

5.731.4.6 `template<typename _RealType = double> void  
std::uniform_real_distribution<_RealType>::reset ( )  
[inline]`

Resets the distribution state.

Does nothing for the uniform real distribution.

Definition at line 1839 of file `random.h`.

The documentation for this class was generated from the following file:

- [random.h](#)

## 5.732 `std::uniform_real_distribution<_RealType>::param_type` Struct Reference

### Public Types

- typedef `uniform_real_distribution<_RealType>` `distribution_type`

### Public Member Functions

- `param_type` (`_RealType __a=_RealType(0), _RealType __b=_RealType(1)`)
- `result_type a` () const
- `result_type b` () const

### Friends

- bool `operator==` (const `param_type` &\_\_p1, const `param_type` &\_\_p2)

### 5.732.1 Detailed Description

`template<typename _RealType = double> struct std::uniform_real_distribution<_RealType>::param_type`

Parameter type.

### 5.736.1 Detailed Description

```
template<class _Key, class _Tp, class _Hash = hash<_Key>, class _Pred =
std::equal_to<_Key>, class _Alloc = std::allocator<std::pair<const _Key, _Tp>
>> class std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >
```

A standard container composed of unique keys (containing at most one of each key value) that associates values of another type with the keys. Meets the requirements of a [container](#), and [unordered associative container](#)

## Parameters

- Key* Type of key objects.
- Tp* Type of mapped objects.
- Hash* Hashing function object type, defaults to `hash<Value>`.
- Pred* Predicate function object type, defaults to `equal_to<Value>`.
- Alloc* Allocator type, defaults to `allocator<Key>`.

The resulting value type of the container is `std::pair<const Key, Tp>`.

Definition at line 256 of file `unordered_map.h`.

The documentation for this class was generated from the following file:

- [unordered\\_map.h](#)

### 5.737 `std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _- Alloc >` Class Template Reference

A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys.

Inherits `std::__unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >`.

## Public Types

### 5.739.1 Detailed Description

`template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> class std::unordered_set<_Value, _Hash, _Pred, _Alloc>`

A standard container composed of unique keys (containing at most one of each key value) in which the elements' keys are the elements themselves. Meets the requirements of a [container](#), and [unordered associative container](#)

## Parameters

- Value** Type of key objects.
- Hash** Hashing function object type, defaults to `hash<Value>`.
- Pred** Predicate function object type, defaults to `equal_to<Value>`.
- Alloc** Allocator type, defaults to `allocator<Key>`.

Definition at line 249 of file `unordered_set.h`.

### 5.741.1 Detailed Description

**template<class \_Tp> class std::valarray< \_Tp >**

Smart array designed to support numeric processing. A valarray is an array that provides constraints intended to allow for effective optimization of numeric array processing by reducing the aliasing that can result from pointer representations. It represents a one-dimensional array from which different multidimensional subsets can be accessed and modified.

#### Parameters

*Tp* Type of object in the array.

Definition at line 116 of file valarray.

### 5.741.2 Constructor & Destructor Documentation

**5.741.2.1** **template<class \_Tp> std::valarray< \_Tp >::valarray ( const \_Tp \* \_\_restrict\_\_, size\_t )**

Construct an array initialized to the first *n* elements of *t*.

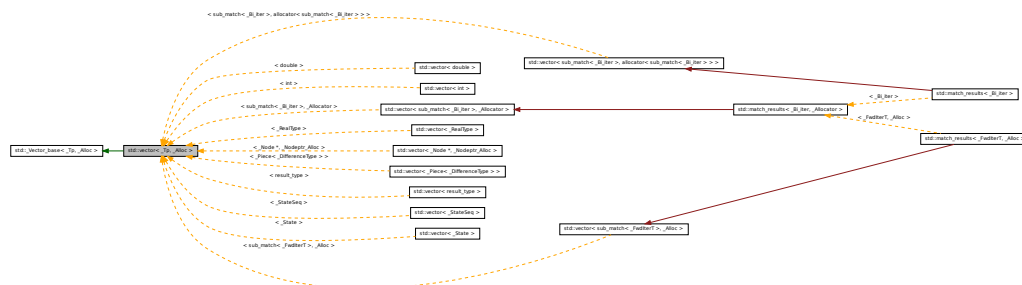

The documentation for this class was generated from the following file:

- [valarray](#)

#### 5.742.1 Detailed Description

`template<typename _Tp, typename _Alloc = std::allocator<_Tp>> class std::vector<_Tp, _Alloc>`

A standard container which offers fixed time access to individual elements in any order. Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#) with the exception of `push_front` and `pop_front`.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ( `[]` ) access is also provided as with C-style arrays.

Definition at line 180 of file `stl_vector.h`.

#### 5.742.2 Constructor & Destructor Documentation

**5.742.2.1** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>`  
`std::vector<_Tp, _Alloc>::vector ( ) [inline]`

Default constructor creates no elements.

Definition at line 217 of file `stl_vector.h`.

**5.742.2.2** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector ( const allocator_type & __a )  
[inline, explicit]`

Creates a vector with no elements.

#### Parameters

*a* An allocator object.

Definition at line 225 of file `stl_vector.h`.

**5.742.2.3** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector ( size_type __n ) [inline,  
explicit]`

Creates a vector with default constructed elements.

#### Parameters

*n* The number of elements to initially create.

This constructor fills the vector with *n* default constructed elements.

Definition at line 237 of file `stl_vector.h`.

**5.742.2.4** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector ( size_type __n, const value_type  
& __value, const allocator_type & __a = allocator_type() )  
[inline]`

Creates a vector with copies of an exemplar element.

#### Parameters

*n* The number of elements to initially create.

*value* An element to copy.

*a* An allocator.

This constructor fills the vector with *n* copies of *value*.

Definition at line 249 of file `stl_vector.h`.

**5.742.2.5** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector ( const vector<_Tp, _Alloc> &  
__x ) [inline]`

Vector copy constructor.

#### Parameters

*x* A vector of identical element and allocator types.

The newly-created vector uses a copy of the allocation object used by *x*. All the elements of *x* are copied, but any extra memory in *x* (for fast expansion) will not be copied.

Definition at line 278 of file `stl_vector.h`.

**5.742.2.6** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector ( vector<_Tp, _Alloc> && __x  
) [inline]`

Vector move constructor.

#### Parameters

*x* A vector of identical element and allocator types.

The newly-created vector contains the exact contents of *x*. The contents of *x* are a valid, but unspecified vector.

Definition at line 294 of file `stl_vector.h`.

**5.742.2.7** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
std::vector<_Tp, _Alloc>::vector ( initializer_list<value_type  
> __l, const allocator_type & __a = allocator_type() )  
[inline]`

Builds a vector from an initializer list.

#### Parameters

*l* An [initializer\\_list](#).

*a* An allocator.

Create a vector consisting of copies of the elements in the [initializer\\_list](#) *l*.

This will call the element type's copy constructor *N* times (where *N* is *l.size()*) and do no memory reallocation.

Definition at line 308 of file `stl_vector.h`.

```
5.742.2.8 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 template<typename _InputIterator > std::vector< _Tp, _Alloc
 >::vector (_InputIterator __first, _InputIterator __last, const
 allocator_type & __a = allocator_type()) [inline]
```

Builds a vector from a range.

#### Parameters

*first* An input iterator.

*last* An input iterator.

*a* An allocator.

Create a vector consisting of copies of the elements from [*first*,*last*).

If the iterators are forward, bidirectional, or random-access, then this will call the elements' copy constructor *N* times (where *N* is `distance(first,last)`) and do no memory reallocation. But if only input iterators are used, then this will do at most *2N* calls to the copy constructor, and  $\log N$  memory reallocations.

Definition at line 334 of file `stl_vector.h`.

```
5.742.2.9 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 std::vector< _Tp, _Alloc >::~~vector () [inline]
```

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 349 of file `stl_vector.h`.

### 5.742.3 Member Function Documentation

**5.742.3.1** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename _ForwardIterator > pointer std::vector< _Tp,  
_Alloc >::_M_allocate_and_copy ( size_type __n, _ForwardIterator  
__first, _ForwardIterator __last ) [inline, protected]`

Memory expansion handler. Uses the member allocation function to obtain *n* bytes of memory, and then copies [first,last) into it.

Definition at line 1049 of file stl\_vector.h.

Referenced by std::vector< \_Tp, \_Alloc >::operator=(), and std::vector< \_Tp, \_Alloc >::reserve().

**5.742.3.2** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector< _Tp, _Alloc >::_M_range_check ( size_type __n )  
const [inline, protected]`

Safety check used only from [at\(\)](#).

Definition at line 716 of file stl\_vector.h.

Referenced by std::vector< sub\_match< \_Bi\_iter >, allocator< sub\_match< \_Bi\_iter > >::at().

**5.742.3.3** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename _InputIterator > void std::vector< _Tp,  
_Alloc >::assign ( _InputIterator __first, _InputIterator __last )  
[inline]`

Assigns a range to a vector.

#### Parameters

*first* An input iterator.

*last* An input iterator.

This function fills a vector with copies of the elements in the range [first,last).

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 429 of file stl\_vector.h.

**5.742.3.4** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector< _Tp, _Alloc >::assign ( size_type __n, const  
value_type & __val ) [inline]`

Assigns a given value to a vector.

#### Parameters

*n* Number of elements to be assigned.

*val* Value to be assigned.

This function fills a vector with *n* copies of the given value. Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 412 of file `stl_vector.h`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::operator=()`.

**5.742.3.5** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector< _Tp, _Alloc >::assign ( initializer_list< value_type  
> __l ) [inline]`

Assigns an initializer list to a vector.

#### Parameters

*l* An [initializer\\_list](#).

This function fills a vector with copies of the elements in the initializer list *l*.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 449 of file `stl_vector.h`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::assign()`.

**5.742.3.6** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::vector< _Tp, _Alloc >::at ( size_type __n )  
[inline]`

Provides access to the data contained in the vector.

**Parameters**

*n* The index of the element for which data should be accessed.

**Returns**

Read/write reference to data.

**Exceptions**

*std::out\_of\_range* If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws *out\_of\_range* if the check fails.

Definition at line 735 of file `stl_vector.h`.

```
5.742.3.7 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 const_reference std::vector<_Tp, _Alloc>::at (size_type __n)
 const [inline]
```

Provides access to the data contained in the vector.

**Parameters**

*n* The index of the element for which data should be accessed.

**Returns**

Read-only (constant) reference to data.

**Exceptions**

*std::out\_of\_range* If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws *out\_of\_range* if the check fails.

Definition at line 753 of file `stl_vector.h`.

```
5.742.3.8 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 const_reference std::vector<_Tp, _Alloc>::back () const
 [inline]
```

Returns a read-only (constant) reference to the data at the last element of the vector.

Definition at line 788 of file `stl_vector.h`.

### 5.742.3.9 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector<_Tp, _Alloc>::back ( ) [inline]`

Returns a read/write reference to the data at the last element of the vector.

Definition at line 780 of file `stl_vector.h`.

Referenced by `std::piecewise_linear_distribution<_RealType>::max()`, and `std::piecewise_constant_distribution<_RealType>::max()`.

### 5.742.3.10 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector<_Tp, _Alloc>::begin ( ) const [inline]`

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Reimplemented in `std::match_results<_Bi_iter, _Allocator>`, `std::match_results<_Bi_iter>`, and `std::match_results<_FwdIterT, _Alloc>`.

Definition at line 472 of file `stl_vector.h`.

### 5.742.3.11 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::begin ( ) [inline]`

Returns a read/write iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 463 of file `stl_vector.h`.

Referenced by `std::vector< sub_match<_Bi_iter>, allocator< sub_match<_Bi_iter>>>::crend()`, `std::vector<_Tp, _Alloc>::emplace()`, `std::vector< sub_match<_Bi_iter>, allocator< sub_match<_Bi_iter>>>::empty()`, `std::vector< sub_match<_Bi_iter>, allocator< sub_match<_Bi_iter>>>::front()`, `std::vector<_Tp, _Alloc>::insert()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::multiway_merge_exact_splitting()`, `std::vector<_Tp, _Alloc>::operator=()`, `std::operator==()`, `std::vector< sub_match<_Bi_iter>, allocator< sub_match<_Bi_iter>>>::rend()`, and `std::vector< sub_match<_Bi_iter>, allocator< sub_match<_Bi_iter>>>::vector()`.

### 5.742.3.12 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector<_Tp, _Alloc>::capacity ( ) const [inline]`

Returns the total number of elements that the vector can hold before needing to allocate more memory.

Definition at line 650 of file `stl_vector.h`.

Referenced by `std::vector< _Tp, _Alloc >::operator=()`, and `std::vector< _Tp, _Alloc >::reserve()`.

**5.742.3.13** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::vector< _Tp, _Alloc >::cbegin ( ) const  
[inline]`

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Reimplemented in `std::match_results< _Bi_iter, _Allocator >`, `std::match_results< _Bi_iter >`, and `std::match_results< _FwdIterT, _Alloc >`.

Definition at line 536 of file `stl_vector.h`.

**5.742.3.14** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::vector< _Tp, _Alloc >::cend ( ) const  
[inline]`

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Reimplemented in `std::match_results< _Bi_iter, _Allocator >`, `std::match_results< _Bi_iter >`, and `std::match_results< _FwdIterT, _Alloc >`.

Definition at line 545 of file `stl_vector.h`.

**5.742.3.15** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector< _Tp, _Alloc >::clear ( ) [inline]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1039 of file `stl_vector.h`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::operator=()`.

**5.742.3.16** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::vector< _Tp, _Alloc >::crbegin ( )  
const [inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 554 of file stl\_vector.h.

**5.742.3.17** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::vector< _Tp, _Alloc >::crend ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 563 of file stl\_vector.h.

**5.742.3.18** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
_Tp* std::vector< _Tp, _Alloc >::data ( ) [inline]`

Returns a pointer such that [[data\(\)](#), [data\(\)](#) + [size\(\)](#)) is a valid range. For a non-empty vector, [data\(\)](#) == [&front\(\)](#).

Definition at line 803 of file stl\_vector.h.

**5.742.3.19** `template<typename _Tp , typename _Alloc > template<typename...  
_Args> vector< _Tp, _Alloc >::iterator vector::emplace ( iterator  
_position, _Args &&... _args )`

Inserts an object in vector before specified iterator.

#### Parameters

*position* An iterator into the vector.

*args* Arguments.

#### Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 274 of file vector.tcc.

References [std::vector< \\_Tp, \\_Alloc >::begin\(\)](#), and [std::vector< \\_Tp, \\_Alloc >::end\(\)](#).

Referenced by [std::vector< sub\\_match< \\_Bi\\_iter >, allocator< sub\\_match< \\_Bi\\_iter > > >::insert\(\)](#).

**5.742.3.20** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
bool std::vector< _Tp, _Alloc >::empty ( ) const [inline]`

Returns true if the vector is empty. (Thus `begin()` would equal `end()`.)

Reimplemented in `std::match_results< _Bi_iter, _Allocator >`, `std::match_results< _Bi_iter >`, and `std::match_results< _FwdIterT, _Alloc >`.

Definition at line 659 of file `stl_vector.h`.

Referenced by `std::piecewise_linear_distribution< _RealType >::densities()`, `std::piecewise_constant_distribution< _RealType >::densities()`, `std::piecewise_linear_distribution< _RealType >::intervals()`, `std::piecewise_constant_distribution< _RealType >::intervals()`, `std::piecewise_linear_distribution< _RealType >::max()`, `std::piecewise_constant_distribution< _RealType >::max()`, `std::discrete_distribution< _IntType >::max()`, `std::piecewise_linear_distribution< _RealType >::min()`, `std::piecewise_constant_distribution< _RealType >::min()`, and `std::discrete_distribution< _IntType >::probabilities()`.

**5.742.3.21** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
iterator std::vector< _Tp, _Alloc >::end ( ) [inline]`

Returns a read/write iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 481 of file `stl_vector.h`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > >::back()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > >::cbegin()`, `std::vector< _Tp, _Alloc >::emplace()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > >::empty()`, `std::vector< _Tp, _Alloc >::erase()`, `std::vector< _Tp, _Alloc >::insert()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::multiway_merge_exact_splitting()`, `std::vector< _Tp, _Alloc >::operator=()`, `std::operator==()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > >::push_back()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > >::rbegin()`, `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > >::resize()`, and `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > >::vector()`.

**5.742.3.22** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_iterator std::vector< _Tp, _Alloc >::end ( ) const  
[inline]`

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Reimplemented in `std::match_results<_Bi_iter, _Allocator>`, `std::match_results<_Bi_iter>`, and `std::match_results<_FwdIterT, _Alloc>`.

Definition at line 490 of file `stl_vector.h`.

### 5.742.3.23 `template<typename _Tp, typename _Alloc> vector<_Tp, _Alloc>::iterator vector::erase ( iterator __position )`

Remove element at given position.

#### Parameters

*position* Iterator pointing to element to be erased.

#### Returns

An iterator pointing to the next element (or `end()`).

This function will erase the element at the given position and thus shorten the vector by one.

Note This operation could be expensive and if it is frequently used the user should consider using `std::list`. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 136 of file `vector.tcc`.

References `std::vector<_Tp, _Alloc>::end()`.

### 5.742.3.24 `template<typename _Tp, typename _Alloc> vector<_Tp, _Alloc>::iterator vector::erase ( iterator __first, iterator __last )`

Remove a range of elements.

#### Parameters

*first* Iterator pointing to the first element to be erased.

*last* Iterator pointing to one past the last element to be erased.

#### Returns

An iterator pointing to the element pointed to by *last* prior to erasing (or `end()`).

This function will erase the elements in the range `[first,last)` and shorten the vector accordingly.

Note This operation could be expensive and if it is frequently used the user should consider using [std::list](#). The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 148 of file `vector.tcc`.

References `std::vector<_Tp, _Alloc>::end()`.

**5.742.3.25** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::vector<_Tp, _Alloc>::front ( ) [inline]`

Returns a read/write reference to the data at the first element of the vector.

Definition at line 764 of file `stl_vector.h`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > >::data()`, `std::piecewise_linear_distribution< _RealType >::min()`, and `std::piecewise_constant_distribution< _RealType >::min()`.

**5.742.3.26** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::vector<_Tp, _Alloc>::front ( ) const  
[inline]`

Returns a read-only (constant) reference to the data at the first element of the vector.

Definition at line 772 of file `stl_vector.h`.

**5.742.3.27** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
template<typename _InputIterator > void std::vector<_Tp,  
_Alloc>::insert ( iterator __position, _InputIterator __first,  
_InputIterator __last ) [inline]`

Inserts a range into the vector.

#### Parameters

*position* An iterator into the vector.

*first* An input iterator.

*last* An input iterator.

This function will insert copies of the data in the range `[first,last)` into the vector before the location specified by *pos*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 962 of file stl\_vector.h.

```
5.742.3.28 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 iterator std::vector< _Tp, _Alloc >::insert (iterator __position,
 value_type && __x) [inline]
```

Inserts given rvalue into vector before specified iterator.

#### Parameters

*position* An iterator into the vector.

*x* Data to be inserted.

#### Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 908 of file stl\_vector.h.

```
5.742.3.29 template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
 void std::vector< _Tp, _Alloc >::insert (iterator __position,
 initializer_list< value_type > __l) [inline]
```

Inserts an [initializer\\_list](#) into the vector.

#### Parameters

*position* An iterator into the vector.

*l* An [initializer\\_list](#).

This function will insert copies of the data in the [initializer\\_list](#) *l* into the vector before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 925 of file stl\_vector.h.

Referenced by std::vector< sub\_match< \_Bi\_iter >, allocator< sub\_match< \_Bi\_iter > >::insert().

**5.742.3.30** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector< _Tp, _Alloc >::insert ( iterator __position,  
size_type __n, const value_type & __x ) [inline]`

Inserts a number of copies of given data into the vector.

#### Parameters

- position* An iterator into the vector.
- n* Number of elements to be inserted.
- x* Data to be inserted.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 943 of file stl\_vector.h.

**5.742.3.31** `template<typename _Tp , typename _Alloc > vector< _Tp, _Alloc  
>::iterator vector::insert ( iterator __position, const value_type &  
__x )`

Inserts given value into vector before specified iterator.

#### Parameters

- position* An iterator into the vector.
- x* Data to be inserted.

#### Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using [std::list](#).

Definition at line 109 of file vector.tcc.

References `std::vector< _Tp, _Alloc >::begin()`, and `std::vector< _Tp, _Alloc >::end()`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::resize()`.

**5.742.3.32** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
size_type std::vector< _Tp, _Alloc >::max_size ( ) const  
[inline]`

Returns the [size\(\)](#) of the largest possible vector.

Reimplemented in `std::match_results< _Bi_iter, _Allocator >`, `std::match_results< _Bi_iter >`, and `std::match_results< _FwdIterT, _Alloc >`.

Definition at line 575 of file `std_vector.h`.

Referenced by `std::vector< _Tp, _Alloc >::reserve()`.

**5.742.3.33** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
vector& std::vector< _Tp, _Alloc >::operator= ( vector< _Tp,  
_Alloc > && __x ) [inline]`

Vector move assignment operator.

#### Parameters

*x* A vector of identical element and allocator types.

The contents of *x* are moved into this vector (without copying). *x* is a valid, but unspecified vector.

Definition at line 373 of file `std_vector.h`.

**5.742.3.34** `template<typename _Tp , typename _Alloc > vector< _Tp, _Alloc  
> & vector::operator= ( const vector< _Tp, _Alloc > & __x )`

Vector assignment operator.

#### Parameters

*x* A vector of identical element and allocator types.

All the elements of  $x$  are copied, but any extra memory in  $x$  (for fast expansion) will not be copied. Unlike the copy constructor, the allocator object is not copied.

Definition at line 159 of file `vector.tcc`.

References `std::_Destroy()`, `std::vector<_Tp, _Alloc>::_M_allocate_and_copy()`, `std::vector<_Tp, _Alloc>::begin()`, `std::vector<_Tp, _Alloc>::capacity()`, `std::vector<_Tp, _Alloc>::end()`, and `std::vector<_Tp, _Alloc>::size()`.

**5.742.3.35** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
vector& std::vector<_Tp, _Alloc>::operator= ( initializer_list<  
value_type > __l ) [inline]`

Vector list assignment operator.

#### Parameters

$l$  An [initializer\\_list](#).

This function fills a vector with copies of the elements in the initializer list  $l$ .

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 394 of file `stl_vector.h`.

**5.742.3.36** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reference std::vector<_Tp, _Alloc>::operator[] ( size_type  
__n ) const [inline]`

Subscript access to the data contained in the vector.

#### Parameters

$n$  The index of the element for which data should be accessed.

#### Returns

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 710 of file `stl_vector.h`.

**5.742.3.37** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reference std::vector<_Tp, _Alloc>::operator[] ( size_type __n )  
[inline]`

Subscript access to the data contained in the vector.

#### Parameters

*n* The index of the element for which data should be accessed.

#### Returns

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and [out\\_of\\_range](#) lookups are not defined. (For checked lookups see [at\(\)](#).)

Definition at line 695 of file `std_vector.h`.

**5.742.3.38** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::pop_back ( ) [inline]`

Removes last element.

This is a typical stack operation. It shrinks the vector by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before [pop\\_back\(\)](#) is called.

Definition at line 857 of file `std_vector.h`.

**5.742.3.39** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::push_back ( const value_type &  
__x ) [inline]`

Add data to the end of the vector.

#### Parameters

*x* Data to be added.

This is a typical stack operation. The function creates an element at the end of the vector and assigns the given data to it. Due to the nature of a vector this operation can be done in constant time if the vector has preallocated space available.

Definition at line 826 of file stl\_vector.h.

Referenced by \_\_gnu\_parallel::multiseq\_partition(), and \_\_gnu\_parallel::multiseq\_selection().

**5.742.3.40** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::vector< _Tp, _Alloc >::rbegin ( )  
[inline]`

Returns a read/write reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 499 of file stl\_vector.h.

**5.742.3.41** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::vector< _Tp, _Alloc >::rbegin ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 508 of file stl\_vector.h.

**5.742.3.42** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
reverse_iterator std::vector< _Tp, _Alloc >::rend ( ) [inline]`

Returns a read/write reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 517 of file stl\_vector.h.

**5.742.3.43** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
const_reverse_iterator std::vector< _Tp, _Alloc >::rend ( ) const  
[inline]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 526 of file stl\_vector.h.

**5.742.3.44** `template<typename _Tp, typename _Alloc > void vector::reserve (   
size_type __n )`

Attempt to preallocate enough memory for specified number of elements.

#### Parameters

*n* Number of elements required.

#### Exceptions

*std::length\_error* If *n* exceeds `max_size()`.

This function attempts to reserve enough memory for the vector to hold the specified number of elements. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the number of elements that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of vector data.

Definition at line 67 of file `vector.tcc`.

References `std::_Destroy()`, `std::vector<_Tp, _Alloc>::_M_allocate_and_copy()`, `std::vector<_Tp, _Alloc>::capacity()`, `std::vector<_Tp, _Alloc>::max_size()`, and `std::vector<_Tp, _Alloc>::size()`.

**5.742.3.45** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::resize ( size_type __new_size,  
const value_type & __x ) [inline]`

Resizes the vector to the specified number of elements.

#### Parameters

*new\_size* Number of elements the vector should contain.

*x* Data with which new elements should be populated.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise the vector is extended and new elements are populated with given data.

Definition at line 609 of file `stl_vector.h`.

**5.742.3.46** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::resize ( size_type __new_size )  
[inline]`

Resizes the vector to the specified number of elements.

#### Parameters

*new\_size* Number of elements the vector should contain.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise default constructed elements are appended.

Definition at line 589 of file `stl_vector.h`.

Referenced by `__gnu_parallel::__shrink_and_double()`, `__gnu_parallel::multiway_merge_exact_splitting()`, and `__gnu_parallel::parallel_sort_mwms()`.

**5.742.3.47** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::shrink_to_fit( ) [inline]`

A non-binding request to reduce [capacity\(\)](#) to [size\(\)](#).

Definition at line 641 of file `stl_vector.h`.

**5.742.3.48** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
size_type std::vector<_Tp, _Alloc>::size( ) const [inline]`

Returns the number of elements in the vector.

Reimplemented in `std::match_results<_Bi_iter, _Allocator>`, `std::match_results<_Bi_iter>`, and `std::match_results<_FwdIterT, _Alloc>`.

Definition at line 570 of file `stl_vector.h`.

Referenced by `__gnu_parallel::__shrink()`, `__gnu_parallel::__shrink_and_double()`, `std::vector<sub_match<_Bi_iter>, allocator<sub_match<_Bi_iter>>>::__M_range_check()`, `__gnu_parallel::list_partition()`, `std::discrete_distribution<_IntType>::max()`, `std::vector<_Tp, _Alloc>::operator=()`, `std::operator==( )`, `std::vector<_Tp, _Alloc>::reserve()`, and `std::vector<sub_match<_Bi_iter>, allocator<sub_match<_Bi_iter>>>::resize()`.

**5.742.3.49** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>>  
void std::vector<_Tp, _Alloc>::swap( vector<_Tp, _Alloc> &  
__x ) [inline]`

Swaps data with another vector.

**Parameters**

- x* A vector of the same element and allocator types.

This exchanges the elements between two vectors in constant time. (Three pointers, so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(v1,v2)` will feed to this function.

Definition at line 1019 of file `stl_vector.h`.

Referenced by `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::operator=()`, `std::swap()`, and `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::swap()`.

The documentation for this class was generated from the following files:

#### 5.743.1 Detailed Description

`template<typename _Alloc> class std::vector< bool, _Alloc >`

A specialization of `vector` for booleans which offers fixed time access to individual elements in any order. Note that `vector<bool>` does not actually meet the requirements

for being a container. This is because the reference and pointer types are not really references and pointers to `bool`. See DR96 for details.

#### See also

[vector](#) for function documentation.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ( `[]` ) access is also provided as with C-style arrays.

Definition at line 479 of file `std_bvector.h`.

The documentation for this class was generated from the following files:

- [std\\_bvector.h](#)
- [vector.tcc](#)

### 5.744 `std::weak_ptr<_Tp>` Class Template Reference

A smart pointer with weak semantics.

Inherits `std::__weak_ptr<_Tp>`.

### 5.745.1 Detailed Description

`template<typename _RealType = double> class std::weibull_distribution< _RealType >`

A `weibull_distribution` random number distribution. The formula for the normal probability density function is:

$$p(x|\alpha, \beta) = \frac{\alpha}{\beta} \left(\frac{x}{\beta}\right)^{\alpha-1} \exp\left(-\left(\frac{x}{\beta}\right)^\alpha\right)$$

Definition at line 4314 of file `random.h`.

### 5.745.2 Member Typedef Documentation

**5.745.2.1** `template<typename _RealType = double> typedef _RealType  
std::weibull_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 4321 of file `random.h`.

### 5.745.3 Member Function Documentation

**5.745.3.1** `template<typename _RealType = double> _RealType  
std::weibull_distribution<_RealType>::a ( ) const [inline]`

Return the  $a$  parameter of the distribution.

Definition at line 4372 of file `random.h`.

**5.745.3.2** `template<typename _RealType = double> _RealType  
std::weibull_distribution< _RealType >::b ( ) const [inline]`

Return the  $b$  parameter of the distribution.

Definition at line 4379 of file random.h.

**5.745.3.3** `template<typename _RealType = double> result_type  
std::weibull_distribution< _RealType >::max ( ) const [inline]`

Returns the least upper bound value of the distribution.

Definition at line 4408 of file random.h.

**5.745.3.4** `template<typename _RealType = double> result_type  
std::weibull_distribution< _RealType >::min ( ) const [inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4401 of file random.h.

**5.745.3.5** `template<typename _RealType = double> template<typename  
_UniformRandomNumberGenerator > result_type  
std::weibull_distribution< _RealType >::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 4416 of file random.h.

References `std::weibull_distribution< _RealType >::operator()()`, and `std::weibull_distribution< _RealType >::param()`.

Referenced by `std::weibull_distribution< _RealType >::operator()()`.

**5.745.3.6** `template<typename _RealType = double> void  
std::weibull_distribution< _RealType >::param ( const param_type  
& __param ) [inline]`

## 5.746 `std::weibull_distribution<_RealType>::param_type` Struct Reference 3402

Sets the parameter set of the distribution.

### Parameters

`__param` The new parameter set of the distribution.

Definition at line 4394 of file random.h.

**5.745.3.7** `template<typename _RealType = double> param_type  
std::weibull_distribution<_RealType>::param ( ) const  
[inline]`

Returns the parameter set of the distribution.

Definition at line 4386 of file random.h.

Referenced by `std::weibull_distribution<_RealType>::operator()()`, `std::operator==( )`, and `std::operator>>()`.

**5.745.3.8** `template<typename _RealType = double> void  
std::weibull_distribution<_RealType>::reset ( ) [inline]`

Resets the distribution state.

Definition at line 4365 of file random.h.

6.1.1 Detailed Description

Parallel STL function calls corresponding to the [stl_algo.h](#) header. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [algo.h](#).

6.2 `algbase.h` File Reference

Parallel STL function calls corresponding to the [stl_algbase.h](#) header. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

6.7.1 Detailed Description

This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [parallel/algorithmfwd.h](#).

6.8 allocator.h File Reference

Classes

- class `std::allocator< _Tp >`
The standard allocator, as per [20.4].
Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt04ch11.html>.
- class `std::allocator< void >`
`allocator<void>` specialization.
- struct `std::allocator_arg_t`
[`allocator.tag`]
- struct `std::uses_allocator< _Tp, _Alloc >`
[`allocator.uses.trait`]

Namespaces

- namespace `std`

Functions

- `template<typename _T1, typename _T2 >`
`bool std::operator!= (const allocator< _T1 > &, const allocator< _T2 > &)`
- `template<typename _Tp >`
`bool std::operator!= (const allocator< _Tp > &, const allocator< _Tp > &)`
- `template<typename _T1, typename _T2 >`
`bool std::operator== (const allocator< _T1 > &, const allocator< _T2 > &)`
- `template<typename _Tp >`
`bool std::operator== (const allocator< _Tp > &, const allocator< _Tp > &)`

Variables

- `constexpr allocator_arg_t std::allocator_arg`

6.8.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<memory>`.

Definition in file [allocator.h](#).

6.9 array File Reference

Classes

- struct [std::array< _Tp, _Nm >](#)
A standard container for storing a fixed size sequence of elements.

Namespaces

- namespace [std](#)

Functions

- `template<std::size_t _Int, typename _Tp, std::size_t _Nm>
_Tp & std::get (array< _Tp, _Nm > &__arr)`
- `template<std::size_t _Int, typename _Tp, std::size_t _Nm>
const _Tp & std::get (const array< _Tp, _Nm > &__arr)`
- `template<typename _Tp, std::size_t _Nm>
bool std::operator!= (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>
bool std::operator< (const array< _Tp, _Nm > &__a, const array< _Tp, _Nm > &__b)`
- `template<typename _Tp, std::size_t _Nm>
bool std::operator<= (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>
bool std::operator== (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>
bool std::operator> (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>
bool std::operator>= (const array< _Tp, _Nm > &__one, const array< _Tp, _Nm > &__two)`
- `template<typename _Tp, std::size_t _Nm>
void std::swap (array< _Tp, _Nm > &__one, array< _Tp, _Nm > &__two)`

6.9.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [array](#).

6.10 array_allocator.h File Reference

Classes

- class [__gnu_cxx::array_allocator< _Tp, _Array >](#)
An allocator that uses previously allocated memory. This memory can be externally, globally, or otherwise allocated.
- class [__gnu_cxx::array_allocator_base< _Tp >](#)
Base class.

Namespaces

- namespace [__gnu_cxx](#)

Functions

- [template<typename _Tp, typename _Array >](#)
[bool __gnu_cxx::operator!=](#) (const [array_allocator< _Tp, _Array >](#) &, const [array_allocator< _Tp, _Array >](#) &)
- [template<typename _Tp, typename _Array >](#)
[bool __gnu_cxx::operator==](#) (const [array_allocator< _Tp, _Array >](#) &, const [array_allocator< _Tp, _Array >](#) &)

6.10.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [array_allocator.h](#).

6.11 assoc_container.hpp File Reference

Classes

- class [__gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, Allocator >](#)
An abstract basic hash-based associative container.
- class [__gnu_pbds::basic_tree< Key, Mapped, Tag, Node_Update, Policy_Tl, Allocator >](#)
An abstract basic tree-like (tree, trie) associative container.

- class `__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, Allocator >`
A concrete collision-chaining hash-based associative container.
- class `__gnu_pbds::container_base< Key, Mapped, Tag, Policy_Tl, Allocator >`
An abstract basic associative container.
- class `__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, Allocator >`
A concrete general-probing hash-based associative container.
- class `__gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, Allocator >`
A list-update based associative container.
- class `__gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, Allocator >`
A concrete basic tree-based associative container.
- class `__gnu_pbds::trie< Key, Mapped, E_Access_Traits, Tag, Node_Update, Allocator >`
A concrete basic trie-based associative container.

Namespaces

- namespace `__gnu_pbds`

Defines

- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`
- `#define PB_DS_BASE_C_DEC`

- `#define PB_DS_CLASS_NAME`
- `#define PB_DS_TREE_NODE_AND_IT_TRAITS_C_DEC`
- `#define PB_DS_TRIE_NODE_AND_ITS_TRAITS`

6.11.1 Detailed Description

Contains associative containers.

Definition in file [assoc_container.hpp](#).

6.12 atomic File Reference

Classes

- struct [std::atomic< _Tp >](#)
atomic /// 29.4.3, Generic atomic type, primary class template.
- struct [std::atomic< _Tp * >](#)
Partial specialization for pointer types.
- struct [std::atomic< bool >](#)
Explicit specialization for bool.
- struct [std::atomic< char >](#)
Explicit specialization for char.
- struct [std::atomic< char16_t >](#)
Explicit specialization for char16_t.
- struct [std::atomic< char32_t >](#)
Explicit specialization for char32_t.
- struct [std::atomic< int >](#)
Explicit specialization for int.
- struct [std::atomic< long >](#)
Explicit specialization for long.
- struct [std::atomic< long long >](#)
Explicit specialization for long long.
- struct [std::atomic< short >](#)
Explicit specialization for short.
- struct [std::atomic< signed char >](#)
Explicit specialization for signed char.

- struct `std::atomic< unsigned char >`
Explicit specialization for unsigned char.
- struct `std::atomic< unsigned int >`
Explicit specialization for unsigned int.
- struct `std::atomic< unsigned long >`
Explicit specialization for unsigned long.
- struct `std::atomic< unsigned long long >`
Explicit specialization for unsigned long long.
- struct `std::atomic< unsigned short >`
Explicit specialization for unsigned short.
- struct `std::atomic< wchar_t >`
Explicit specialization for wchar_t.
- struct `std::atomic_bool`
atomic_bool

Namespaces

- namespace `std`

Functions

6.17.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [atomicity.h](#).

6.18 `auto_ptr.h` File Reference

Classes

- class `std::auto_ptr<_Tp>`
A simple smart pointer providing strict ownership semantics.
- struct `std::auto_ptr_ref<_Tp1>`

Namespaces

- namespace `std`

6.18.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<memory>`.

Definition in file `auto_ptr.h`.

6.19 `backward_warning.h` File Reference

6.19.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iosfwd>`.

Definition in file `backward_warning.h`.

6.20 `balanced_quicksort.h` File Reference

Implementation of a dynamically load-balanced parallel quicksort.

Classes

- struct `__gnu_parallel::QSBThreadLocal<_RAIter>`
Information local to one thread in the parallel quicksort run.

Namespaces

- namespace `__gnu_parallel`

Functions

- `template<typename _RAIter, typename _Compare >`
`void __gnu_parallel::__parallel_sort_qsb (_RAIter __begin, _RAIter __end, _-`
`Compare __comp, _ThreadIndex __num_threads)`
- `template<typename _RAIter, typename _Compare >`
`void __gnu_parallel::__qsb_conquer (_QSBThreadLocal< _RAIter > *__tls,`
`_RAIter __begin, _RAIter __end, _Compare __comp, _ThreadIndex __iam, _-`
`ThreadIndex __num_threads, bool __parent_wait)`
- `template<typename _RAIter, typename _Compare >`
`std::iterator_traits< _RAIter >::difference_type __gnu_parallel::__qsb_divide`
`(_RAIter __begin, _RAIter __end, _Compare __comp, _ThreadIndex __num_`
`threads)`
- `template<typename _RAIter, typename _Compare >`
`void __gnu_parallel::__qsb_local_sort_with_helping (_QSBThreadLocal< _-`
`RAIter > *__tls, _Compare &__comp, _ThreadIndex __iam, bool __wait)`

6.20.1 Detailed Description

Implementation of a dynamically load-balanced parallel quicksort. It works in-place and needs only logarithmic extra memory. The algorithm is similar to the one proposed in

P. Tsigas and Y. Zhang. A simple, fast parallel implementation of quicksort and its performance evaluation on SUN enterprise 10000. In 11th Euromicro Conference on Parallel, Distributed and Network-Based Processing, page 372, 2003.

This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [balanced_quicksort.h](#).

6.21 base.h File Reference

Sequential helper functions. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- `class __gnu_parallel::__binder1st< _Operation, _FirstArgumentType, _-`
`SecondArgumentType, _ResultType >`
Similar to `std::binder1st`, but giving the argument types explicitly.
- `class __gnu_parallel::__binder2nd< _Operation, _FirstArgumentType, _-`
`SecondArgumentType, _ResultType >`
Similar to `std::binder2nd`, but giving the argument types explicitly.

- class `__gnu_parallel::__unary_negate<_Predicate, argument_type>`
Similar to `std::unary_negate`, but giving the argument types explicitly.
- class `__gnu_parallel::__EqualFromLess<_T1, _T2, _Compare>`
Constructs predicate for equality from strict weak ordering predicate.
- struct `__gnu_parallel::__EqualTo<_T1, _T2>`
Similar to `std::equal_to`, but allows two different types.
- struct `__gnu_parallel::__Less<_T1, _T2>`
Similar to `std::less`, but allows two different types.
- struct `__gnu_parallel::__Multiplies<_Tp1, _Tp2, _Result>`
Similar to `std::multiplies`, but allows two different types.
- struct `__gnu_parallel::__Plus<_Tp1, _Tp2, _Result>`
Similar to `std::plus`, but allows two different types.
- class `__gnu_parallel::__PseudoSequence<_Tp, _DifferenceTp>`
Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.
- class `__gnu_parallel::__PseudoSequenceIterator<_Tp, _DifferenceTp>`
_Iterator associated with `__gnu_parallel::__PseudoSequence`. If features the usual random-access iterator functionality.

Namespaces

- namespace `__gnu_parallel`
- namespace `__gnu_sequential`
- namespace `std`
- namespace `std::__parallel`

Defines

- `#define _GLIBCXX_PARALLEL_ASSERT(_Condition)`

Functions

- void [__gnu_parallel::__decode2](#) (_CASable __x, int &__a, int &__b)
- _CASable [__gnu_parallel::__encode2](#) (int __a, int __b)
- _ThreadIndex [__gnu_parallel::__get_max_threads](#) ()
- bool [__gnu_parallel::__is_parallel](#) (const _Parallelism __p)
- template<typename _RAIter, typename _Compare >
_RAIter [__gnu_parallel::__median_of_three_iterators](#) (_RAIter __a, _RAIter __b, _RAIter __c, _Compare __comp)
- template<typename _Size >
_Size [__gnu_parallel::__rd_log2](#) (_Size __n)
- template<typename _Tp >
const _Tp & [__gnu_parallel::max](#) (const _Tp &__a, const _Tp &__b)
- template<typename _Tp >
const _Tp & [__gnu_parallel::min](#) (const _Tp &__a, const _Tp &__b)

6.21.1 Detailed Description

Sequential helper functions. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [parallel/base.h](#).

6.22 base.h File Reference

Sequential helper functions. This file is a GNU profile extension to the Standard C++ Library.

Namespaces

- namespace [__gnu_profile](#)
- namespace [std](#)
- namespace [std::__profile](#)

6.22.1 Detailed Description

Sequential helper functions. This file is a GNU profile extension to the Standard C++ Library.

Definition in file [profile/base.h](#).

6.23 `basic_file.h` File Reference

Namespaces

- namespace `std`

6.23.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ios>`.

Definition in file `basic_file.h`.

6.24 `basic_ios.h` File Reference

Classes

- class `std::basic_ios<_CharT, _Traits>`
*Virtual base class for all stream classes.
Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.*

Namespaces

- namespace `std`

Functions

- `template<typename _Facet>`
`const _Facet & std::__check_facet (const _Facet *__f)`

6.24.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ios>`.

Definition in file `basic_ios.h`.

6.25 `basic_ios.tcc` File Reference

Namespaces

- namespace `std`

6.25.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ios>`.

Definition in file `basic_ios.tcc`.

6.26 `basic_iterator.h` File Reference

Includes the original header files concerned with iterators except for stream iterators. This file is a GNU parallel extension to the Standard C++ Library.

6.26.1 Detailed Description

Includes the original header files concerned with iterators except for stream iterators. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file `basic_iterator.h`.

6.27 `basic_string.h` File Reference

Classes

- class `std::basic_string<_CharT, _Traits, _Alloc>`
Managing sequences of characters and character-like objects.
- struct `std::hash<string>`
`std::hash` specialization for `string`.
- struct `std::hash<u16string>`
`std::hash` specialization for `u16string`.
- struct `std::hash<u32string>`
`std::hash` specialization for `u32string`.
- struct `std::hash<wstring>`
`std::hash` specialization for `wstring`.

Namespaces

- namespace `std`

Functions

- `template<typename _CharT, typename _Traits, typename _Alloc >`
`basic_istream< _CharT, _Traits > & std::getline (basic_istream< _CharT, _Traits > &__is, basic_string< _CharT, _Traits, _Alloc > &__str, _CharT __delim)`

6.30.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<functional>`.

Definition in file [binders.h](#).

6.31 bitmap_allocator.h File Reference

Classes

- class [__gnu_cxx::__detail::__mini_vector< _Tp >](#)
[__mini_vector<>](#) is a stripped down version of the full-fledged [std::vector<>](#).
- class [__gnu_cxx::__detail::Bitmap_counter< _Tp >](#)
The bitmap counter which acts as the bitmap manipulator, and manages the bit-manipulation functions and the searching and identification functions on the bit-map.
- class [__gnu_cxx::__detail::Ffit_finder< _Tp >](#)

The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.

- class `__gnu_cxx::bitmap_allocator< _Tp >`
Bitmap Allocator, primary template.
- class `__gnu_cxx::free_list`
The free list class for managing chunks of memory to be given to and returned by the `bitmap_allocator`.

Namespaces

- namespace `__gnu_cxx`
- namespace `__gnu_cxx::__detail`

Defines

- `#define _BALLOC_ALIGN_BYTES`

Enumerations

- enum { `bits_per_byte`, `bits_per_block` }

Functions

- void `__gnu_cxx::__detail::__bit_allocate` (size_t * __pmap, size_t __pos) throw ()
- void `__gnu_cxx::__detail::__bit_free` (size_t * __pmap, size_t __pos) throw ()

6.43.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ext/pointer.h>`.

Definition in file [cast.h](#).

6.44 ccomplex File Reference

6.44.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ccomplex](#).

6.45 ccomplex File Reference

6.45.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ccomplex](#).

6.46 ctype File Reference

Namespaces

- namespace [std](#)

6.46.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `cctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cctype](#).

6.47 `cctype` File Reference

6.47.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cctype](#).

6.48 `cerrno` File Reference

Defines

- `#define errno`

6.48.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `errno.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cerrno](#).

6.49 `cfenv` File Reference

6.49.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cfenv](#).

6.50 `cfenv` File Reference

6.50.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cfenv](#).

6.51 `cfloat` File Reference

Defines

- `#define DECIMAL_DIG`
- `#define FLT_EVAL_METHOD`

6.51.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `float.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cfloat](#).

6.52 `cfloat` File Reference

Defines

- `#define DECIMAL_DIG`
- `#define FLT_EVAL_METHOD`

6.52.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cfloat](#).

6.53 `char_traits.h` File Reference

Classes

- struct [__gnu_cxx::_Char_types<_CharT>](#)

Mapping from character type to associated types.

- struct [__gnu_cxx::char_traits<_CharT>](#)
Base class used to implement [std::char_traits](#).
- struct [std::char_traits<_CharT>](#)
Basis for explicit traits specializations.
- struct [std::char_traits<char>](#)
21.1.3.1 [char_traits](#) specializations
- struct [std::char_traits<wchar_t>](#)
21.1.3.2 [char_traits](#) specializations

Namespaces

- namespace [__gnu_cxx](#)
- namespace [std](#)

6.53.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<string>`.

Definition in file [char_traits.h](#).

6.54 checkers.h File Reference

Routines for checking the correctness of algorithm results. This file is a GNU parallel extension to the Standard C++ Library.

Namespaces

- namespace [__gnu_parallel](#)

Functions

- template<typename [_Iter](#) , typename [_Compare](#) >
bool [__gnu_parallel::__is_sorted](#) ([_Iter](#) __begin, [_Iter](#) __end, [_Compare](#) __comp)

6.54.1 Detailed Description

Routines for checking the correctness of algorithm results. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [checkers.h](#).

6.55 chrono File Reference

Classes

6.63.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cmath](#).

6.64 codecvt.h File Reference

Classes

- class **std::__codecvt_abstract_base**< _InternT, _ExternT, _StateT >
Common base for codecvt functions.
- class **std::codecvt**< _InternT, _ExternT, _StateT >
Primary class template codecvt.
NB: Generic, mostly useless implementation.
- class **std::codecvt**< char, char, mbstate_t >
class [codecvt<char, char, mbstate_t>](#) specialization.
- class **std::codecvt**< wchar_t, char, mbstate_t >
class [codecvt<wchar_t, char, mbstate_t>](#) specialization.
- class **std::codecvt_base**
Empty base class for codecvt facet [22.2.1.5].
- class **std::codecvt_byname**< _InternT, _ExternT, _StateT >
class [codecvt_byname](#) [22.2.1.6].

Namespaces

- namespace [std](#)

6.64.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

Definition in file [codecvt.h](#).

6.65 `codecvt_specializations.h` File Reference

Classes

- struct [__gnu_cxx::encoding_char_traits<_CharT>](#)
encoding_char_traits
- class [__gnu_cxx::encoding_state](#)
Extension to use iconv for dealing with character encodings.
- class [std::codecvt<_InternT, _ExternT, encoding_state>](#)
codecvt<InternT, _ExternT, encoding_state> specialization.

Namespaces

- namespace [__gnu_cxx](#)
- namespace [std](#)

Functions

- template<typename _Tp>
size_t **std::__iconv_adaptor** (size_t(*__func)(iconv_t, _Tp, size_t *, char **, size_t *), iconv_t __cd, char **__inbuf, size_t *__inbytes, char **__outbuf, size_t *__outbytes)

6.65.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [codecvt_specializations.h](#).

6.66 compatibility.h File Reference

6.66.1 Detailed Description

This is an internal header file, included by other library sources. You should not attempt to use it directly.

Definition in file [x86_64-unknown-linux-gnu/bits/compatibility.h](#).

6.67 compatibility.h File Reference

Compatibility layer, mostly concerned with atomic operations. This file is a GNU parallel extension to the Standard C++ Library.

Namespaces

- namespace [__gnu_parallel](#)

Functions

- `template<typename _Tp >
bool __gnu_parallel::__compare_and_swap (volatile _Tp *__ptr, _Tp __comparand, _Tp __replacement)`
- `bool __gnu_parallel::__compare_and_swap_32 (volatile int32_t *__ptr, int32_t __comparand, int32_t __replacement)`
- `bool __gnu_parallel::__compare_and_swap_64 (volatile int64_t *__ptr, int64_t __comparand, int64_t __replacement)`

_Tp __gnu_parallel::__fetch_and_add (volatile _Tp *__ptr, _Tp __addend)`
- `int32_t __gnu_parallel::__fetch_and_add_32 (volatile int32_t *__ptr, int32_t __addend)`
- `int64_t __gnu_parallel::__fetch_and_add_64 (volatile int64_t *__ptr, int64_t __addend)`
- `void __gnu_parallel::__yield ()`

6.67.1 Detailed Description

Compatibility layer, mostly concerned with atomic operations. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [parallel/compatibility.h](#).

6.68 compiletime_settings.h File Reference

Defines on options concerning debugging and performance, at compile-time. This file is a GNU parallel extension to the Standard C++ Library.

Defines

- [#define _GLIBCXX_ASSERTIONS](#)
- [#define _GLIBCXX_CALL\(__n\)](#)
- [#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1](#)
- [#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB](#)
- [#define _GLIBCXX_SCALE_DOWN_FPU](#)
- [#define _GLIBCXX_VERBOSE_LEVEL](#)

6.68.1 Detailed Description

Defines on options concerning debugging and performance, at compile-time. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [compiletime_settings.h](#).

6.68.2 Define Documentation

6.68.2.1 #define _GLIBCXX_ASSERTIONS

Switch on many `_GLIBCXX_PARALLEL_ASSERTIONS` in parallel code. Should be switched on only locally.

Definition at line 61 of file `compiletime_settings.h`.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

6.68.2.2 #define _GLIBCXX_CALL(__n)

Macro to produce log message when entering a function.

Parameters

`__n` Input size.

See also

[_GLIBCXX_VERBOSE_LEVEL](#)

Definition at line 44 of file compiletime_settings.h.

Referenced by `__gnu_parallel::__find_template()`, `__gnu_parallel::__for_each_template_random_access_workstealing()`, `__gnu_parallel::__merge_advance()`, `__gnu_parallel::__parallel_nth_element()`, `__gnu_parallel::__parallel_partial_sum()`, `__gnu_parallel::__parallel_partition()`, `__gnu_parallel::__parallel_random_shuffle_drs()`, `__gnu_parallel::__parallel_sort()`, `__gnu_parallel::__parallel_sort_qs()`, `__gnu_parallel::__parallel_sort_qsb()`, `__gnu_parallel::__parallel_unique_copy()`, `__gnu_parallel::__search_template()`, `__gnu_parallel::__sequential_multiway_merge()`, `__gnu_parallel::__multiseq_partition()`, `__gnu_parallel::__multiseq_selection()`, `__gnu_parallel::multiway_merge()`, `__gnu_parallel::multiway_merge_3_variant()`, `__gnu_parallel::multiway_merge_4_variant()`, `__gnu_parallel::multiway_merge_loser_tree()`, `__gnu_parallel::multiway_merge_loser_tree_sentinel()`, `__gnu_parallel::multiway_merge_loser_tree_unguarded()`, `__gnu_parallel::multiway_merge_sentinels()`, `__gnu_parallel::parallel_multiway_merge()`, and `__gnu_parallel::parallel_sort_mwms()`.

6.68.2.3 `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the L1 cache for `gnu_parallel::__parallel_random_shuffle()`.

Definition at line 68 of file compiletime_settings.h.

6.68.2.4 `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the TLB for `gnu_parallel::__parallel_random_shuffle()`.

Definition at line 74 of file compiletime_settings.h.

6.68.2.5 `#define _GLIBCXX_SCALE_DOWN_FPU`

Use floating-point scaling instead of modulo for mapping random numbers to a range. This can be faster on certain CPUs.

Definition at line 55 of file compiletime_settings.h.

6.68.2.6 `#define _GLIBCXX_VERBOSE_LEVEL`

Determine verbosity level of the parallel mode. Level 1 prints a message each time a parallel-mode function is entered.

Definition at line 37 of file `completime_settings.h`.

6.76.1 Detailed Description

Contains constructors_destructor_fn_imps applicable to different containers.

Definition in file [constructors_destructor_fn_imps.hpp](#).

6.77 container_base_dispatch.hpp File Reference

Namespaces

- namespace [__gnu_pbds](#)

6.77.1 Detailed Description

Contains an associative container dispatching base.

Definition in file [container_base_dispatch.hpp](#).

6.78 cpp_type_traits.h File Reference

Namespaces

- namespace [__gnu_cxx](#)
- namespace [std](#)

6.78.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ext/type_traits>`.

Definition in file [cpp_type_traits.h](#).

6.79 `cpu_defines.h` File Reference

6.79.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iosfwd>`.

Definition in file [cpu_defines.h](#).

6.80 `csetjmp` File Reference

Namespaces

- namespace [std](#)

Defines

- `#define setjmp(env)`

6.80.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `setjmp.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [csetjmp](#).

6.81 `csignal` File Reference

Namespaces

- namespace [std](#)

6.81.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `signal.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [csignal](#).

6.82 cstdarg File Reference

Namespaces

- namespace [std](#)

Defines

- `#define va_end(ap)`

6.82.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdarg.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cstdarg](#).

6.83 cstdarg File Reference

6.83.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdarg](#).

6.84 cstdlib File Reference

6.84.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cstdlib](#).

6.85 `cstdbool` File Reference

6.85.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdbool](#).

6.86 `cstddef` File Reference

6.86.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stddef.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cstddef](#).

6.87 `cstdint` File Reference

Namespaces

- namespace [std](#)

6.87.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cstdint](#).

6.88 `cstdint` File Reference

Namespaces

- namespace [std](#)
- namespace [std::tr1](#)

6.88.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdint](#).

6.89 `cstdio` File Reference

Namespaces

- namespace [std](#)

6.89.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdio.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cstdio](#).

6.90 `cstdio` File Reference

6.90.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdio](#).

6.91 `cstdlib` File Reference

Namespaces

- namespace [std](#)

Defines

- `#define EXIT_FAILURE`
- `#define EXIT_SUCCESS`

Functions

- void **`std::abort`** (void) throw ()
- int **`std::atexit`** (void(*)()) throw ()
- void **`std::exit`** (int) throw ()

6.91.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdlib.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cstdlib](#).

6.92 `cstdlib` File Reference

6.92.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdlib](#).

6.93 `cstring` File Reference

Namespaces

- namespace [std](#)

Functions

- `void * std::memchr (void *__s, int __c, size_t __n)`
- `char * std::strchr (char *__s, int __n)`
- `char * std::strpbrk (char *__s1, const char *__s2)`
- `char * std::strrchr (char *__s, int __n)`
- `char * std::strstr (char *__s1, const char *__s2)`

6.93.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `string.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cstring](#).

6.94 `ctgmath` File Reference

6.94.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ctgmath](#).

6.95 `ctgmath` File Reference

6.95.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ctgmath](#).

6.96 `ctime` File Reference

Namespaces

- namespace [std](#)

6.96.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `time.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [ctime](#).

6.97 `ctime` File Reference

6.97.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ctime](#).

6.98 ctype_base.h File Reference

Classes

- struct [std::ctype_base](#)
Base class for ctype.

Namespaces

- namespace [std](#)

6.98.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

Definition in file [ctype_base.h](#).

6.99 ctype_inline.h File Reference

Namespaces

- namespace [std](#)

6.99.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

Definition in file [ctype_inline.h](#).

6.100 ctype_noninline.h File Reference

6.100.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

Definition in file [ctype_noninline.h](#).

6.101 `cwchar` File Reference

Namespaces

- namespace [std](#)

Functions

- `wchar_t * std::wcschr` (`wchar_t *__p`, `wchar_t __c`)
- `wchar_t * std::wespbrk` (`wchar_t *__s1`, `const wchar_t *__s2`)
- `wchar_t * std::wcsrchr` (`wchar_t *__p`, `wchar_t __c`)
- `wchar_t * std::wcsstr` (`wchar_t *__s1`, `const wchar_t *__s2`)
- `wchar_t * std::wmemchr` (`wchar_t *__p`, `wchar_t __c`, `size_t __n`)

6.101.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wchar.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cwchar](#).

6.102 `cwchar` File Reference

Namespaces

- namespace [std](#)
- namespace [std::tr1](#)

6.102.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cwchar](#).

6.103 `cwctype` File Reference

Namespaces

- namespace [std](#)

Defines

- `#define _GLIBCXX_CWCTYPE`

6.103.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cwctype](#).

6.104 `cwctype` File Reference

Namespaces

- namespace [std](#)
- namespace [std::tr1](#)

6.104.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cwctype](#).

6.105 `cxxabi.h` File Reference

Classes

- class [__gnu_cxx::recursive_init_error](#)
*Exception thrown by `__cxa_guard_acquire`.
6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.*

Namespaces

- namespace [__gnu_cxx](#)
- namespace [abi](#)

Typedefs

- typedef __cxa_cdtor_return_type(* __cxxabiv1::__cxa_cdtor_type)(void *)

Functions

6.105.1 Detailed Description

The header provides an interface to the C++ ABI.

Definition in file [cxxabi.h](#).

6.106 cxxabi_forced.h File Reference

Classes

- class [__cxxabiv1::__forced_unwind](#)
*Thrown as part of forced unwinding.
A magic placeholder class that can be caught by reference to recognize forced unwinding.*

6.106.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<cxxabi.h>`.

Definition in file [cxxabi_forced.h](#).

6.107 cxxabi_tweaks.h File Reference

Defines

- `#define _GLIBCXX_CXA_VEC_CTOR_RETURN(x)`
- `#define _GLIBCXX_GUARD_BIT`
- `#define _GLIBCXX_GUARD_PENDING_BIT`
- `#define _GLIBCXX_GUARD_SET(x)`
- `#define _GLIBCXX_GUARD_TEST(x)`
- `#define _GLIBCXX_GUARD_WAITING_BIT`

Typedefs

- typedef void `__cxxabiv1::__cxa_cdtor_return_type`
- typedef void `__cxxabiv1::__cxa_vec_ctor_return_type`

Functions

- `__extension__` typedef int `__guard __cxxabiv1::__attribute__` ((mode(__DI_ - _)))

6.107.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<cxxabi.h>`.

Definition in file `cxxabi_tweaks.h`.

6.108 debug.h File Reference

Namespaces

- namespace `__gnu_debug`

6.108.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

Definition in file [debug.h](#).

6.109 `debug_allocator.h` File Reference

Classes

- class [__gnu_cxx::debug_allocator< _Alloc >](#)
*A meta-allocator with debugging bits, as per [20.4].
This is precisely the allocator defined in the C++ Standard.*
 - all allocation calls operator `new`
 - all deallocation calls operator `delete`.

Namespaces

- namespace [__gnu_cxx](#)

6.109.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [debug_allocator.h](#).

6.110 `debug_map_base.hpp` File Reference

6.110.1 Detailed Description

Contains a debug-mode base for all maps.

Definition in file [debug_map_base.hpp](#).

6.111 decimal File Reference

Classes

- class [std::decimal::decimal128](#)
3.2.4 Class [decimal128](#).

6.118.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<system_error>`.

Definition in file [error_constants.h](#).

6.119 exception File Reference

Classes

- class [std::bad_exception](#)
- class [std::exception](#)
Base class for all library exceptions.

Namespaces

- namespace [__gnu_cxx](#)
- namespace [std](#)

Typedefs

- typedef void(* [std::terminate_handler](#))()
- typedef void(* [std::unexpected_handler](#))()

Functions

- void [__gnu_cxx::__verbose_terminate_handler](#) ()
- terminate_handler [std::set_terminate](#) (terminate_handler) throw ()
- unexpected_handler [std::set_unexpected](#) (unexpected_handler) throw ()
- void [std::terminate](#) () __attribute__((__noreturn__)) throw ()
- bool [std::uncaught_exception](#) () __attribute__((__pure__)) throw ()
- void [std::unexpected](#) () __attribute__((__noreturn__))

6.119.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [exception](#).

6.120 exception.hpp File Reference

Namespaces

- namespace [__gnu_pbds](#)

Functions

- `void __gnu_pbds::__throw_container_error (void)`
- `void __gnu_pbds::__throw_insert_error (void)`
- `void __gnu_pbds::__throw_join_error (void)`
- `void __gnu_pbds::__throw_resize_error (void)`

6.120.1 Detailed Description

Contains exception classes.

Definition in file [exception.hpp](#).

6.121 `exception_defines.h` File Reference

Defines

- `#define __catch(X)`
- `#define __throw_exception_again`
- `#define __try`

6.121.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `.`

Definition in file [exception_defines.h](#).

6.122 `exception_ptr.h` File Reference

Classes

- class [std::__exception_ptr::exception_ptr](#)
An opaque pointer to an arbitrary exception.

Namespaces

- namespace [std](#)

Functions

- `template<typename _Ex >`
`exception_ptr std::copy_exception (_Ex __ex) throw ()`
- `exception_ptr std::current_exception () throw ()`
- `template<typename _Ex >`
`exception_ptr std::make_exception_ptr (_Ex __ex) throw ()`

- `void std::rethrow_exception (exception_ptr) __attribute__((__noreturn__))`
- `void std::__exception_ptr::swap (exception_ptr &__lhs, exception_ptr &__rhs)`

6.122.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `.`

Definition in file [exception_ptr.h](#).

6.123 extc++.h File Reference

6.123.1 Detailed Description

This is an implementation file for a precompiled header.

Definition in file [extc++.h](#).

6.124 extptr_allocator.h File Reference

Classes

- class [__gnu_cxx::_ExtPtr_allocator< _Tp >](#)
*An example allocator which uses a non-standard pointer type.
This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See [ext/pointer.h](#)) Memory allocation in this example is still performed using [std::allocator](#).*

Namespaces

- namespace [__gnu_cxx](#)

Functions

- `template<typename _Tp >`
`void __gnu_cxx::swap (_ExtPtr_allocator< _Tp > &__larg, _ExtPtr_allocator< _Tp > &__rarg)`

6.124.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Author

Bob Walters

An example allocator which uses an alternative pointer type from `bits/pointer.h`. Supports test cases which confirm container support for alternative pointers.

Definition in file [extptr_allocator.h](#).

6.125 features.h File Reference

Defines on whether to include algorithm variants.

Defines

- `#define _GLIBCXX_BAL_QUICKSORT`
- `#define _GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS`
- `#define _GLIBCXX_FIND_EQUAL_SPLIT`
- `#define _GLIBCXX_FIND_GROWING_BLOCKS`
- `#define _GLIBCXX_MERGESORT`
- `#define _GLIBCXX_QUICKSORT`
- `#define _GLIBCXX_TREE_DYNAMIC_BALANCING`
- `#define _GLIBCXX_TREE_FULL_COPY`
- `#define _GLIBCXX_TREE_INITIAL_SPLITTING`

6.125.1 Detailed Description

Defines on whether to include algorithm variants. Less variants reduce executable size and compile time. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [features.h](#).

6.125.2 Define Documentation

6.125.2.1 #define _GLIBCXX_BAL_QUICKSORT

Include parallel dynamically load-balanced quicksort.

See also

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 55 of file features.h.

6.125.2.2 #define _GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS

Include the equal-sized blocks variant for `std::find`.

See also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 67 of file features.h.

6.125.2.3 #define _GLIBCXX_FIND_EQUAL_SPLIT

Include the equal splitting variant for `std::find`.

See also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 74 of file features.h.

6.125.2.4 #define _GLIBCXX_FIND_GROWING_BLOCKS

Include the growing blocks variant for `std::find`.

See also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 61 of file features.h.

6.125.2.5 #define _GLIBCXX_MERGESORT

Include parallel multi-way mergesort.

See also

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 41 of file features.h.

6.125.2.6 #define _GLIBCXX_QUICKSORT

Include parallel unbalanced quicksort.

See also

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 48 of file features.h.

6.125.2.7 #define _GLIBCXX_TREE_DYNAMIC_BALANCING

Include the dynamic balancing variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

See also

`__gnu_parallel::_Rb_tree`

Definition at line 91 of file features.h.

6.125.2.8 #define _GLIBCXX_TREE_FULL_COPY

In order to sort the input sequence of `_Rb_tree::insert_unique(_Iter beg, _Iter __end)` a full copy of the input elements is done.

See also

`__gnu_parallel::_Rb_tree`

Definition at line 100 of file features.h.

6.125.2.9 #define _GLIBCXX_TREE_INITIAL_SPLITTING

Include the initial splitting variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

See also

`__gnu_parallel::_Rb_tree`

Definition at line 83 of file `features.h`.

6.126 fenv.h File Reference

6.126.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [fenv.h](#).

6.127 find.h File Reference

Parallel implementation base for `std::find()`, `std::equal()` and related functions. This file is a GNU parallel extension to the Standard C++ Library.

Namespaces

- namespace [__gnu_parallel](#)

Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector >`
[std::pair](#)< [_RAIter1](#), [_RAIter2](#) > [__gnu_parallel::__find_template](#) ([_RAIter1](#) [__begin1](#), [_RAIter1](#) [__end1](#), [_RAIter2](#) [__begin2](#), [_Pred](#) [__pred](#), [_Selector](#) [__selector](#))
- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector >`
[std::pair](#)< [_RAIter1](#), [_RAIter2](#) > [__gnu_parallel::__find_template](#) ([_RAIter1](#) [__begin1](#), [_RAIter1](#) [__end1](#), [_RAIter2](#) [__begin2](#), [_Pred](#) [__pred](#), [_Selector](#) [__selector](#), [constant_size_blocks_tag](#))

[std::pair](#)< [_RAIter1](#), [_RAIter2](#) > [__gnu_parallel::__find_template](#) ([_RAIter1](#) [__begin1](#), [_RAIter1](#) [__end1](#), [_RAIter2](#) [__begin2](#), [_Pred](#) [__pred](#), [_Selector](#) [__selector](#), [growing_blocks_tag](#))

- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector >`
`std::pair< _RAIter1, _RAIter2 > __gnu_parallel::__find_template (_RAIter1`
`__begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __`
`selector, equal_split_tag)`

6.127.1 Detailed Description

Parallel implementation base for `std::find()`, `std::equal()` and related functions. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [find.h](#).

6.128 find_selectors.h File Reference

_Function objects representing different tasks to be plugged into the parallel find algorithm. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- struct [__gnu_parallel::__adjacent_find_selector](#)
Test predicate on two adjacent elements.
- struct [__gnu_parallel::__find_first_of_selector< _FIterator >](#)
Test predicate on several elements.
- struct [__gnu_parallel::__find_if_selector](#)
Test predicate on a single element, used for `std::find()` and `std::find_if()`.
- struct [__gnu_parallel::__generic_find_selector](#)
Base class of all [__gnu_parallel::__find_template](#) selectors.
- struct [__gnu_parallel::__mismatch_selector](#)
Test inverted predicate on a single element.

Namespaces

- namespace [__gnu_parallel](#)

6.128.1 Detailed Description

`_Function` objects representing different tasks to be plugged into the parallel find algorithm. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [find_selectors.h](#).

6.129 `for_each.h` File Reference

Main interface for embarrassingly parallel functions.

Namespaces

- namespace [__gnu_parallel](#)

Functions

- `template<typename _Iter, typename _UserOp, typename _Functionality, typename _Red, typename _Result >`
`_UserOp __gnu_parallel::__for_each_template_random_access (_Iter __begin,`
`_Iter __end, _UserOp __user_op, _Functionality &__functionality, _`
`Red __reduction, _Result __reduction_start, _Result &__output, typename`
`std::iterator_traits< _Iter >::difference_type __bound, _Parallelism __`
`parallelism_tag)`

6.129.1 Detailed Description

Main interface for embarrassingly parallel functions. The explicit implementation are in other header files, like [workstealing.h](#), [par_loop.h](#), [omp_loop.h](#), and [omp_loop_static.h](#). This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [for_each.h](#).

6.130 `for_each_selectors.h` File Reference

Functors representing different tasks to be plugged into the generic parallelization methods for embarrassingly parallel functions. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- struct [__gnu_parallel::__accumulate_binop_reduct](#)< `_BinOp` >

General reduction, using a binary operator.

- struct `__gnu_parallel::__accumulate_selector< _It >`
`std::accumulate()` selector.
- struct `__gnu_parallel::__adjacent_difference_selector< _It >`
Selector that returns the difference between two adjacent `__elements`.
- struct `__gnu_parallel::__count_if_selector< _It, _Diff >`
`std::count_if()` selector.
- struct `__gnu_parallel::__count_selector< _It, _Diff >`
`std::count()` selector.
- struct `__gnu_parallel::__fill_selector< _It >`
`std::fill()` selector.
- struct `__gnu_parallel::__for_each_selector< _It >`
`std::for_each()` selector.
- struct `__gnu_parallel::__generate_selector< _It >`
`std::generate()` selector.
- struct `__gnu_parallel::__generic_for_each_selector< _It >`
Generic `__selector` for embarrassingly parallel functions.
- struct `__gnu_parallel::__identity_selector< _It >`
Selector that just returns the passed iterator.
- struct `__gnu_parallel::__inner_product_selector< _It, _It2, _Tp >`
`std::inner_product()` selector.
- struct `__gnu_parallel::__max_element_reduct< _Compare, _It >`
Reduction for finding the maximum element, using a comparator.
- struct `__gnu_parallel::__min_element_reduct< _Compare, _It >`
Reduction for finding the maximum element, using a comparator.
- struct `__gnu_parallel::__replace_if_selector< _It, _Op, _Tp >`
`std::replace()` selector.
- struct `__gnu_parallel::__replace_selector< _It, _Tp >`

std::replace() selector.

- struct [__gnu_parallel::__transform1_selector<_It>](#)
std::transform() __selector, one input sequence variant.
- struct [__gnu_parallel::__transform2_selector<_It>](#)
std::transform() __selector, two input sequences variant.
- struct [__gnu_parallel::_DummyReduct](#)
Reduction function doing nothing.
- struct [__gnu_parallel::_Nothing](#)
Functor doing nothing.

Namespaces

- namespace [__gnu_parallel](#)

6.130.1 Detailed Description

Functors representing different tasks to be plugged into the generic parallelization methods for embarrassingly parallel functions. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [for_each_selectors.h](#).

6.134.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

Definition in file [profile/forward_list](#).

6.135 forward_list.h File Reference

Classes

- struct [std::_Fwd_list_base< _Tp, _Alloc >](#)

Base class for forward_list.

- struct `std::_Fwd_list_const_iterator< _Tp >`
A forward_list::const_iterator.
- struct `std::_Fwd_list_iterator< _Tp >`
A forward_list::iterator.
- struct `std::_Fwd_list_node< _Tp >`
A helper node class for forward_list. This is just a linked list with a data value in each node. There is a sorting utility method.
- struct `std::_Fwd_list_node_base`
A helper basic node class for forward_list. This is just a linked list with nothing inside it. There are purely list shuffling utility methods here.
- class `std::forward_list< _Tp, _Alloc >`
A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.

Namespaces

- namespace `std`

Functions

- template<typename _Tp >
bool `std::operator!=` (const _Fwd_list_iterator< _Tp > &__x, const _Fwd_list_const_iterator< _Tp > &__y)
- template<typename _Tp, typename _Alloc >
bool `std::operator!=` (const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly)
- template<typename _Tp, typename _Alloc >
bool `std::operator<` (const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly)
- template<typename _Tp, typename _Alloc >
bool `std::operator<=` (const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly)
- template<typename _Tp >
bool `std::operator==` (const _Fwd_list_iterator< _Tp > &__x, const _Fwd_list_const_iterator< _Tp > &__y)

- `template<typename _Tp, typename _Alloc >`
`bool std::operator== (const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly)`
- `template<typename _Tp, typename _Alloc >`
`bool std::operator> (const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly)`
- `template<typename _Tp, typename _Alloc >`
`bool std::operator>= (const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly)`
- `template<typename _Tp, typename _Alloc >`
`void std::swap (forward_list< _Tp, _Alloc > &__lx, forward_list< _Tp, _Alloc > &__ly)`

6.135.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<forward_list>`.

Definition in file [forward_list.h](#).

Functions

- `template<typename _Tp, typename _Alloc >`
`bool std::operator== (const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly)`

6.136.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<forward_list>`.

Definition in file [forward_list.tcc](#).

6.137 fstream File Reference

Classes

- class [std::basic_filebuf< _CharT, _Traits >](#)

The actual work of input and output (for files).

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

- class `std::basic_fstream<_CharT, _Traits>`

Controlling input and output for files.

This class supports reading from and writing to named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

- class `std::basic_ifstream<_CharT, _Traits>`

Controlling input for files.

This class supports reading from named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

- class `std::basic_ofstream<_CharT, _Traits>`

Controlling output for files.

This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Namespaces

- namespace `std`

6.137.1 Detailed Description

This is a Standard C++ Library header.

Definition in file `fstream`.

6.138 `fstream.tcc` File Reference

Namespaces

- namespace `std`

6.138.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<fstream>`.

6.139.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<fstream>`.

This header provides support for `-fno-exceptions`.

Definition in file [functexcept.h](#).

6.140 functional File Reference

Classes

- struct `std::__is_location_invariant< _Tp >`
- struct `std::_Derives_from_binary_function< _Tp >`
Determines if the type `_Tp` derives from `binary_function`.
- struct `std::_Derives_from_unary_function< _Tp >`
Determines if the type `_Tp` derives from `unary_function`.
- class `std::_Function_base`
Base class of all polymorphic function object wrappers.
- struct `std::_Function_to_function_pointer< _Tp, _IsFunctionType >`
Turns a function type into a function pointer type.
- struct `std::_Maybe_get_result_type< _Has_result_type, _Functor >`
If we have found a `result_type`, extract it.
- struct `std::_Maybe_unary_or_binary_function< _Res, _ArgTypes >`
- struct `std::_Maybe_unary_or_binary_function< _Res, _T1 >`
Derives from `unary_function`, as appropriate.
- struct `std::_Maybe_unary_or_binary_function< _Res, _T1, _T2 >`
Derives from `binary_function`, as appropriate.
- struct `std::_Maybe_wrap_member_pointer< _Tp >`
- struct `std::_Maybe_wrap_member_pointer< _Tp _Class::* >`
- class `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) const >`
Implementation of `mem_fn` for const member function pointers.
- class `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) const volatile >`
Implementation of `mem_fn` for const volatile member function pointers.
- class `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) volatile >`
Implementation of `mem_fn` for volatile member function pointers.
- class `std::_Mem_fn< _Res(_Class::*)(_ArgTypes...) >`
Implementation of `mem_fn` for member function pointers.
- class `std::_Mu< _Arg, false, false >`
- class `std::_Mu< _Arg, false, true >`

- class `std::_Mu<_Arg, true, false >`
- class `std::_Mu<reference_wrapper<_Tp >, false, false >`
- struct `std::_Placeholder<_Num >`

The type of placeholder objects defined by libstdc++.

- struct `std::_Reference_wrapper_base<_Tp >`
- struct `std::_Safe_tuple_element<__i, _Tuple >`
- struct `std::_Safe_tuple_element_impl<__i, _Tuple, _IsSafe >`
- struct `std::_Safe_tuple_element_impl<__i, _Tuple, false >`
- struct `std::_Weak_result_type<_Functor >`
- struct `std::_Weak_result_type_impl<_Functor >`
- struct `std::_Weak_result_type_impl<_Res(&)(_ArgTypes...)>`

Retrieve the result type for a function reference.

- struct `std::_Weak_result_type_impl<_Res(*)(_ArgTypes...)>`

Retrieve the result type for a function pointer.

- struct `std::_Weak_result_type_impl<_Res(_ArgTypes...)>`

Retrieve the result type for a function type.

- struct `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const >`

Retrieve result type for a const member function pointer.

- struct `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) const volatile >`

Retrieve result type for a const volatile member function pointer.

- struct `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...) volatile >`

Retrieve result type for a volatile member function pointer.

- struct `std::_Weak_result_type_impl<_Res(_Class::*)(_ArgTypes...)>`

Retrieve result type for a member function pointer.

- class `std::bad_function_call`

Exception class thrown when class template function's operator() is called with an empty target.

- class `std::function<_Res(_ArgTypes...)>`

*Primary class template for std::function.
Polymorphic function wrapper.*

- struct `std::is_bind_expression<_Tp >`

Determines if the given type `_Tp` is a function object should be treated as a subexpression when evaluating calls to function objects returned by `bind()`. [TR1 3.6.1].

- struct `std::is_bind_expression< _Bind< _Signature > >`
Class template `_Bind` is always a bind expression.
- struct `std::is_bind_expression< _Bind_result< _Result, _Signature > >`
Class template `_Bind` is always a bind expression.
- struct `std::is_placeholder< _Tp >`
Determines if the given type `_Tp` is a placeholder in a `bind()` expression and, if so, which placeholder it is. [TR1 3.6.2].
- struct `std::is_placeholder< _Placeholder< _Num > >`
- class `std::reference_wrapper< _Tp >`
Primary class template for `reference_wrapper`.

6.143.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

Definition in file [functions.h](#).

6.144 future File Reference

Classes

- class [std::__basic_future< _Res >](#)
Common implementation for future and [shared_future](#).
- struct [std::__future_base](#)
Base class and enclosing scope.
- struct [std::__future_base::Ptr< _Res >](#)
A [unique_ptr](#) based on the instantiating type.
- struct [std::__future_base::Result< _Res >](#)
Result.
- struct [std::__future_base::Result< _Res & >](#)
Partial specialization for reference types.
- struct [std::__future_base::Result< void >](#)
Explicit specialization for void.
- struct [std::__future_base::Result_alloc< _Res, _Alloc >](#)
Result_alloc.
- struct [std::__future_base::Result_base](#)
Base class for results.

- class `std::__future_base::_State_base`
Base class for state between a promise and one or more associated futures.
- class `std::future< _Res >`
Primary template for future.
- class `std::future< _Res & >`
Partial specialization for future<R&>
- class `std::future< void >`
Explicit specialization for future<void>
- class `std::future_error`
Exception type thrown by futures.
- struct `std::is_error_code_enum< future_errc >`
Specialization.
- class `std::packaged_task< _Res(_ArgTypes...)>`
packaged_task
- class `std::promise< _Res >`
Primary template for promise.
- class `std::promise< _Res & >`
Partial specialization for promise<R&>
- class `std::promise< void >`
Explicit specialization for promise<void>
- class `std::shared_future< _Res >`
Primary template for shared_future.
- class `std::shared_future< _Res & >`
Partial specialization for shared_future<R&>
- class `std::shared_future< void >`
Explicit specialization for shared_future<void>

Namespaces

- namespace `std`

Enumerations

- enum `std::future_errc` { `broken_promise`, `future_already_retrieved`, `promise_already_satisfied`, `no_state` }

`_Res(_ArgTypes...)> &__y`)

6.144.1 Detailed Description

This is a Standard C++ Library header.

Definition in file `future`.

6.145 `gslice.h` File Reference

Classes

- class `std::gslice`
Class defining multi-dimensional subset of an array.

Namespaces

- namespace [std](#)

6.145.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

Definition in file [gslice.h](#).

6.146 `gslice_array.h` File Reference

Classes

- class [std::gslice_array<_Tp>](#)
Reference to multi-dimensional subset of an array.

Namespaces

- namespace [std](#)

Defines

- `#define _DEFINE_VALARRAY_OPERATOR(_Op, _Name)`

6.146.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

Definition in file [gslice_array.h](#).

6.147 `hash_bytes.h` File Reference

Namespaces

6.158.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ios](#).

6.159 ios_base.h File Reference

Classes

- class [std::ios_base](#)

The base of the I/O class hierarchy.

This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see [ios_base](#) when they need to specify the full name of the various I/O flags (e.g., the openmodes).

- class [std::ios_base::failure](#)

These are thrown to indicate problems with io.

27.4.2.1.1 Class [ios_base::failure](#).

6.160.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [iosfwd](#).

6.161 iostream File Reference

Namespaces

- namespace [std](#)

Variables

- static ios_base::Init [std::__ioinit](#)

Standard Stream Objects

The `<istream>` header declares the eight standard stream objects. For other declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch24.html> and the *I/O forward declarations*

They are required by default to cooperate with the global C library's `FILE` streams, and to be available during program startup and termination. For more information, see the *HOWTO* linked to above.

- istream [std::cin](#)
- ostream [std::cout](#)
- ostream [std::cerr](#)
- ostream [std::clog](#)
- wistream [std::wcin](#)
- wostream [std::wcout](#)
- wostream [std::wcerr](#)
- wostream [std::wclog](#)

6.161.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [iostream](#).

6.162 istream File Reference

Classes

- class [std::basic_istream<_CharT, _Traits>](#)

Merging istream and ostream capabilities.

This class multiply inherits from the input and output stream classes simply to provide a single interface.

- class `std::basic_istream< _CharT, _Traits >`

Controlling input.

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from [basic_streambuf](#) to do the actual input.

- class `std::basic_istream< _CharT, _Traits >::sentry`

Performs setup work for input streams.

Namespaces

- namespace `std`

6.165.1 Detailed Description

This file is a GNU extension to the Standard C++ Library (possibly containing extensions from the HP/SGI STL subset).

Definition in file [ext/iterator](#).

6.166 iterator.h File Reference

Helper iterator classes for the `std::transform()` functions. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- class [__gnu_parallel::_IteratorPair< _Iterator1, _Iterator2, _IteratorCategory >](#)

A pair of iterators. The usual iterator operations are applied to both child iterators.

- class `__gnu_parallel::_IteratorTriple< _Iterator1, _Iterator2, _Iterator3, _IteratorCategory >`

A triple of iterators. The usual iterator operations are applied to all three child iterators.

Namespaces

- namespace `__gnu_parallel`

6.166.1 Detailed Description

Helper iterator classes for the `std::transform()` functions. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file `iterator.h`.

6.175.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [locale](#).

6.176 locale_classes.h File Reference

Classes

- class [std::collate<_CharT>](#)
Facet for localized string comparison.
- class [std::collate_byname<_CharT>](#)
class [collate_byname](#) [22.2.4.2].
- class [std::locale](#)
*Container class for localization functionality.
The locale class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A locale is a collection of facets that implement various localization features such as money, time, and number printing.*
- class [std::locale::facet](#)
*Localization functionality base class.
The facet class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management.*
- class [std::locale::id](#)

Facet ID class.

The ID class provides facets with an index used to identify them. Every facet class must define a public static member `locale::id`, or be derived from a facet that provides this member; otherwise the facet cannot be used in a locale. The `locale::id` ensures that each class type gets a unique identifier.

Namespaces

- namespace `std`

Functions

- `template<typename _Facet >`
`bool std::has_facet (const locale &__loc) throw ()`
- `template<typename _Facet >`

Classes

- class [std::__ctype_abstract_base<_CharT>](#)
Common base for ctype facet.
- class [std::ctype<_CharT>](#)
Primary class template ctype facet.
This template class defines classification and conversion functions for character sets.
It wraps cctype functionality. Ctype gets used by streams for many I/O operations.
- class [std::ctype<char>](#)
The ctype<char> specialization.
This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.
- class [std::ctype<wchar_t>](#)
The ctype<wchar_t> specialization.
This class defines classification and conversion functions for the wchar_t type. It gets used by wchar_t streams for many I/O operations. The wchar_t specialization provides a number of optimizations as well.
- class [std::ctype_byname<_CharT>](#)
class ctype_byname [22.2.1.2].
- class [std::ctype_byname<char>](#)
22.2.1.4 Class ctype_byname specializations.
- class [std::num_get<_CharT, _InIter>](#)
Primary class template num_get.
This facet encapsulates the code to parse and return a number from a string. It is used by the istream numeric extraction operators.
- class [std::num_put<_CharT, _OutIter>](#)
Primary class template num_put.
This facet encapsulates the code to convert a number to a string. It is used by the ostream numeric insertion operators.
- class [std::numpunct<_CharT>](#)
Primary class template numpunct.
This facet stores several pieces of information related to printing and scanning numbers, such as the decimal point character. It takes a template parameter specifying the char type. The numpunct facet is used by streams for many I/O operations involving numbers.

- class [std::numpunct_byname<_CharT>](#)
class [numpunct_byname](#) [22.2.3.2].

6.180 locale_facets_nonio.h File Reference

Classes

- class [std::messages<_CharT>](#)
Primary class template messages.
This facet encapsulates the code to retrieve messages from message catalogs. The only thing defined by the standard for this facet is the interface. All underlying functionality is implementation-defined.
- struct [std::messages_base](#)
Messages facet base class providing catalog typedef.
- class [std::messages_byname<_CharT>](#)
class [messages_byname](#) [22.2.7.2].
- class [std::money_base](#)
Money format ordering data.
This class contains an ordered array of 4 fields to represent the pattern for formatting a money amount. Each field may contain one entry from the part enum. symbol, sign, and value must be present and the remaining field must contain either none or space.
- class [std::money_get<_CharT, _InIter>](#)
Primary class template [money_get](#).
This facet encapsulates the code to parse and return a monetary amount from a string.
- class [std::money_put<_CharT, _OutIter>](#)
Primary class template [money_put](#).
This facet encapsulates the code to format and output a monetary amount.
- class [std::moneypunct<_CharT, _Intl>](#)
Primary class template moneypunct.
This facet encapsulates the punctuation, grouping and other formatting features of money amount string representations.
- class [std::moneypunct_byname<_CharT, _Intl>](#)
class [moneypunct_byname](#) [22.2.6.4].

- class [std::time_base](#)
Time format ordering data.
This class provides an enum representing different orderings of time: day, month, and year.
- class [std::time_get< _CharT, _InIter >](#)
Primary class template [time_get](#).
This facet encapsulates the code to parse and return a date or time from a string. It is used by the istream numeric extraction operators.
- class [std::time_get_byname< _CharT, _InIter >](#)
class [time_get_byname](#) [22.2.5.2].
- class [std::time_put< _CharT, _OutIter >](#)
Primary class template [time_put](#).
This facet encapsulates the code to format and output dates and times according to formats used by strftime().
- class [std::time_put_byname< _CharT, _OutIter >](#)
class [time_put_byname](#) [22.2.5.4].

`bool std::isxdigit (_CharT __c, const locale &__loc)`
- `template<typename _CharT >`
`_CharT std::tolower (_CharT __c, const locale &__loc)`
- `template<typename _CharT >`
`_CharT std::toupper (_CharT __c, const locale &__loc)`
- `template<typename _Facet >`
`const _Facet & std::use_facet (const locale &__loc)`

6.182.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

Definition in file [localefwd.h](#).

6.183 losertree.h File Reference

Many generic loser tree variants. This file is a GNU parallel extension to the Standard C++ Library.

Classes

- class [__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >](#)
Stable [_LoserTree](#) variant.
- class [__gnu_parallel::_LoserTree< false, _Tp, _Compare >](#)
Unstable [_LoserTree](#) variant.
- class [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >](#)
Guarded loser/tournament tree.
- struct [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser](#)
Internal representation of a [_LoserTree](#) element.
- class [__gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >](#)
Stable [_LoserTree](#) implementation.
- class [__gnu_parallel::_LoserTreePointer< false, _Tp, _Compare >](#)
Unstable [_LoserTree](#) implementation.
- class [__gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >](#)
Base class of [_LoserTree](#) implementation using pointers.
- struct [__gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser](#)
Internal representation of [_LoserTree](#) __elements.
- class [__gnu_parallel::_LoserTreePointerUnguarded< __stable, _Tp, _Compare >](#)
Stable unguarded [_LoserTree](#) variant storing pointers.
- class [__gnu_parallel::_LoserTreePointerUnguarded< false, _Tp, _Compare >](#)

Unstable unguarded [_LoserTree](#) variant storing pointers.

- class [__gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >](#)
Unguarded loser tree, keeping only pointers to the elements in the tree structure.
- class [__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >](#)
Stable implementation of unguarded [_LoserTree](#).
- class [__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >](#)
Non-Stable implementation of unguarded [_LoserTree](#).
- class [__gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >](#)
Base class for unguarded [_LoserTree](#) implementation.

6.184.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

Definition in file [macros.h](#).

6.184.2 Define Documentation

6.184.2.1 `#define __glibcxx_check_erase(_Position)`

Verify that we can erase the element referenced by the iterator `_Position`. We can erase the element if the `_Position` iterator is dereferenceable and references this sequence.

Definition at line 126 of file [macros.h](#).

6.184.2.2 `#define __glibcxx_check_erase_after(_Position)`

Verify that we can erase the element after the iterator `_Position`. We can erase the element if the `_Position` iterator is before a dereferenceable one and references this sequence.

Definition at line 140 of file [macros.h](#).

6.184.2.3 `#define __glibcxx_check_erase_range(_First, _Last)`

Verify that we can erase the elements in the iterator range `[_First, _Last)`. We can erase the elements if `[_First, _Last)` is a valid iterator range within this sequence.

Definition at line 154 of file [macros.h](#).

6.184.2.4 #define __glibcxx_check_erase_range_after(*_First*, *_Last*)

Verify that we can erase the elements in the iterator range (*_First*, *_Last*). We can erase the elements if (*_First*, *_Last*) is a valid iterator range within this sequence.

Definition at line 166 of file macros.h.

6.184.2.5 #define __glibcxx_check_heap_pred(*_First*, *_Last*, *_Pred*)

Verify that the iterator range [*_First*, *_Last*) is a heap w.r.t. the predicate *_Pred*.
Definition at line 296 of file macros.h.

6.184.2.6 #define __glibcxx_check_insert(*_Position*)

Verify that we can insert into **this* with the iterator *_Position*. Insertion into a container at a specific position requires that the iterator be nonsingular, either dereferenceable or past-the-end, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a *_Safe_sequence* and the iterator is a *_Safe_iterator*.

Definition at line 64 of file macros.h.

6.184.2.7 #define __glibcxx_check_insert_after(*_Position*)

Verify that we can insert into **this* after the iterator *_Position*. Insertion into a container after a specific position requires that the iterator be nonsingular, either dereferenceable or before-begin, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a *_Safe_sequence* and the iterator is a *_Safe_iterator*.

Definition at line 81 of file macros.h.

6.184.2.8 #define __glibcxx_check_insert_range(*_Position*, *_First*, *_Last*)

Verify that we can insert the values in the iterator range [*_First*, *_Last*) into **this* with the iterator *_Position*. Insertion into a container at a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range [*_First*, *_Last*) is a valid (possibly empty) range. Note that this macro is only valid when the container is a *_Safe_sequence* and the iterator is a *_Safe_iterator*.

Todo

We would like to be able to check for noninterference of *_Position* and the range [*_First*, *_Last*), but that can't (in general) be done.

Definition at line 101 of file macros.h.

6.184.2.9 `#define __glibcxx_check_insert_range_after(_Position, _First, _Last)`

Verify that we can insert the values in the iterator range [*_First*, *_Last*) into **this* after the iterator *_Position*. Insertion into a container after a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range [*_First*, *_Last*) is a valid (possibly empty) range. Note that this macro is only valid when the container is a *_Safe_sequence* and the iterator is a *_Safe_iterator*.

Todo

We would like to be able to check for noninterference of *_Position* and the range [*_First*, *_Last*), but that can't (in general) be done.

Definition at line 118 of file macros.h.

6.184.2.10 `#define __glibcxx_check_partitioned_lower(_First, _Last, _Value)`

Verify that the iterator range [*_First*, *_Last*) is partitioned w.r.t. the value *_Value*.

Definition at line 245 of file macros.h.

6.184.2.11 `#define __glibcxx_check_partitioned_lower_pred(_First, _Last, _Value, _Pred)`

Verify that the iterator range [*_First*, *_Last*) is partitioned w.r.t. the value *_Value* and predicate *_Pred*.

Definition at line 265 of file macros.h.

6.184.2.12 `#define __glibcxx_check_partitioned_upper_pred(_First, _Last, _Value, _Pred)`

Verify that the iterator range [*_First*, *_Last*) is partitioned w.r.t. the value *_Value* and predicate *_Pred*.

Definition at line 277 of file macros.h.

6.184.2.13 `#define __glibcxx_check_sorted_pred(_First, _Last, _Pred)`

Verify that the iterator range [*_First*, *_Last*) is sorted by the predicate *_Pred*.

Definition at line 216 of file macros.h.

6.184.2.14 #define _GLIBCXX_DEBUG_VERIFY(*_Condition*, *_ErrorMessage*)

Macros used by the implementation to verify certain properties. These macros may only be used directly by the debug wrappers. Note that these are macros (instead of the more obviously *correct* choice of making them functions) because we need line and file information at the call site, to minimize the distance between the user error and where the error is reported.

Definition at line 42 of file macros.h.

Referenced by `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_Safe_iterator()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::operator*()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::operator++()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::operator--()`, `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::operator->()`, and `__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::operator=()`.

6.185 malloc_allocator.h File Reference

Classes

- class [__gnu_cxx::malloc_allocator< _Tp >](#)
An allocator that uses malloc.
This is precisely the allocator defined in the C++ Standard.
 - all allocation calls `malloc`
 - all deallocation calls `free`.

Namespaces

- namespace [__gnu_cxx](#)

Functions

- `template<typename _Tp >`
`bool __gnu_cxx::operator!= (const malloc_allocator< _Tp > &, const malloc_allocator< _Tp > &)`
- `template<typename _Tp >`
`bool __gnu_cxx::operator== (const malloc_allocator< _Tp > &, const malloc_allocator< _Tp > &)`

6.185.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [move.h](#).

6.197 mt_allocator.h File Reference

Classes

- `struct __gnu_cxx::__common_pool_policy< _PoolTp, _Thread >`
Policy for shared __pool objects.
- `class __gnu_cxx::__mt_alloc< _Tp, _Poolp >`
This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a global one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the global list). Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch32.html>.
- `class __gnu_cxx::__mt_alloc_base< _Tp >`

Base class for _Tp dependent member functions.

- struct `__gnu_cxx::__per_type_pool_policy< _Tp, _PoolTp, _Thread >`
Policy for individual __pool objects.
- class `__gnu_cxx::__pool< false >`
Specialization for single thread.
- class `__gnu_cxx::__pool< true >`
Specialization for thread enabled, via gthreads.h.
- struct `__gnu_cxx::__pool_base`
Base class for pool object.

Namespaces

- namespace `__gnu_cxx`

Defines

- `#define __thread_default`

Typedefs

- `typedef void(* __gnu_cxx::__destroy_handler)(void *)`

Functions

- `template<typename _Tp , typename _Poolp >`
`bool __gnu_cxx::operator!= (const __mt_alloc< _Tp, _Poolp > &, const __-`
`mt_alloc< _Tp, _Poolp > &)`
- `template<typename _Tp , typename _Poolp >`
`bool __gnu_cxx::operator== (const __mt_alloc< _Tp, _Poolp > &, const __-`
`mt_alloc< _Tp, _Poolp > &)`

6.197.1 Detailed Description

This file is a GNU profile extension to the Standard C++ Library.

Definition in file [profile/multiset.h](#).

6.203 multiway_merge.h File Reference

Implementation of sequential and parallel multiway merge.

Classes

- `struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __-`
`sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`
Switch for 3-way merging with __sentinels turned off.
- `struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _-`
`RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`
Switch for 3-way merging with __sentinels turned on.
- `struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __-`
`sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`
Switch for 4-way merging with __sentinels turned off.
- `struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< true, _-`
`RAIterIterator, _RAIter3, _DifferenceTp, _Compare >`
Switch for 4-way merging with __sentinels turned on.

- struct [__gnu_parallel::__multiway_merge_k_variant_sentinel_switch](#)< [__sentinels](#), [__stable](#), [_RAIterIterator](#), [_RAIter3](#), [_DifferenceTp](#), [_Compare](#) >
Switch for k-way merging with [__sentinels](#) turned on.
- struct [__gnu_parallel::__multiway_merge_k_variant_sentinel_switch](#)< false, [__stable](#), [_RAIterIterator](#), [_RAIter3](#), [_DifferenceTp](#), [_Compare](#) >
Switch for k-way merging with [__sentinels](#) turned off.
- class [__gnu_parallel::_GuardedIterator](#)< [_RAIter](#), [_Compare](#) >
_Iterator wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.
- struct [__gnu_parallel::_LoserTreeTraits](#)< [_Tp](#) >
Traits for determining whether the loser tree should use pointers or copies.
- struct [__gnu_parallel::_SamplingSorter](#)< [__stable](#), [_RAIter](#), [_StrictWeakOrdering](#) >
Stable sorting functor.
- struct [__gnu_parallel::_SamplingSorter](#)< false, [_RAIter](#), [_StrictWeakOrdering](#) >
Non-[__stable](#) sorting functor.

**Variables**

- const nothrow\_t [std::nothrow](#)

**6.207.1 Detailed Description**

This is a Standard C++ Library header.

The header `new` defines several functions to manage dynamic memory and handling memory allocation errors; see [http://gcc.gnu.org/onlinedocs/libstdc++/18\\_support/howto.html#4](http://gcc.gnu.org/onlinedocs/libstdc++/18_support/howto.html#4) for more.

Definition in file [new](#).

**6.207.2 Function Documentation****6.207.2.1 void operator delete ( void \* ) throw ()**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)

- `nothrow` single new and delete (take a `nothrow` argument, return NULL on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

#### 6.207.2.2 void operator delete ( void \*, const std::nothrow\_t & ) throw ()

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return NULL on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

#### 6.207.2.3 void operator delete ( void \*, void \* ) throw () [inline]

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return NULL on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 107 of file new.

#### 6.207.2.4 void operator delete[] ( void \* ) throw ()

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

#### 6.207.2.5 void operator delete[] ( void \*, const std::nothrow\_t & ) throw ()

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

#### 6.207.2.6 void operator delete[] ( void \*, void \* ) throw () [inline]

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 108 of file new.

**6.207.2.7 void\* operator new ( std::size\_t, void \* \_\_p ) throw () [inline]**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 103 of file new.

**6.207.2.8 void\* operator new ( std::size\_t, const std::nothrow\_t & ) throw ()**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.207.2.9 void\* operator new ( std::size\_t ) throw (std::bad\_alloc)**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.207.2.10 void\* operator new[] ( std::size\_t, const std::nothrow\_t & ) throw ()**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.207.2.11 void\* operator new[] ( std::size\_t ) throw (std::bad\_alloc)**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.207.2.12 void\* operator new[] ( std::size\_t, void \* \_\_p ) throw ()  
[inline]**

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 104 of file `new`.

## 6.208 `new_allocator.h` File Reference

### Classes

- class `__gnu_cxx::new_allocator<_Tp>`  
*An allocator that uses global new, as per [20.4].  
This is precisely the allocator defined in the C++ Standard.*
  - all allocation calls operator new
  - all deallocation calls operator delete.

### Namespaces

- namespace `__gnu_cxx`

### Functions

- `template<typename _Tp>`  
`bool __gnu_cxx::operator!= (const new_allocator<_Tp> &, const new_allocator<_Tp> &)`
- `template<typename _Tp>`  
`bool __gnu_cxx::operator== (const new_allocator<_Tp> &, const new_allocator<_Tp> &)`

#### 6.208.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file `new_allocator.h`.

## 6.209 `numeric` File Reference

### 6.209.1 Detailed Description

This is a Standard C++ Library header.

Definition in file `numeric`.

### 6.215.1 Detailed Description

Parallelization of embarrassingly parallel execution by means of an OpenMP for loop with static scheduling. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [omp\\_loop\\_static.h](#).

## 6.216 os\_defines.h File Reference

### Defines

- `#define \_\_NO\_CTYPE`

### 6.216.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iosfwd>`.

Definition in file [os\\_defines.h](#).

## 6.217 ostream File Reference

### Classes

- class [std::basic\\_ostream< \\_CharT, \\_Traits >](#)

*Controlling output.*

*This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from [basic\\_streambuf](#) to do the actual output.*

- class `std::basic_ostream< _CharT, _Traits >::sentry`

*Performs setup work for output streams.*

## Namespaces

- namespace `std`

## Functions

- `template<typename _CharT, typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::endl (basic_ostream< _CharT, _Traits`  
`> &__os)`
- `template<typename _CharT, typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::ends (basic_ostream< _CharT, _-`  
`Traits > &__os)`
- `template<typename _CharT, typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::flush (basic_ostream< _CharT, _-`  
`Traits > &__os)`
- `template<typename _CharT, typename _Traits, typename _Tp >`

diagnostics for vector to list.

Definition in file [profiler\\_vector\\_to\\_list.h](#).

## 6.243 queue File Reference

### 6.243.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [queue](#).

## 6.244 queue.h File Reference

Lock-free double-ended queue. This file is a GNU parallel extension to the Standard C++ Library.

### Classes

- class [\\_\\_gnu\\_parallel::\\_RestrictedBoundedConcurrentQueue<\\_Tp>](#)  
*Double-ended queue of bounded size, allowing lock-free atomic access. [push\\_front\(\)](#) and [pop\\_front\(\)](#) must not be called concurrently to each other, while [pop\\_back\(\)](#) can be called concurrently at all times. [empty\(\)](#), [size\(\)](#), and [top\(\)](#) are intentionally not provided. Calling them would not make sense in a concurrent setting.*

### Namespaces

- namespace [\\_\\_gnu\\_parallel](#)

### Defines

- [#define \\_GLIBCXX\\_VOLATILE](#)

### 6.244.1 Detailed Description

Lock-free double-ended queue. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [queue.h](#).

### 6.244.2 Define Documentation

#### 6.244.2.1 [#define \\_GLIBCXX\\_VOLATILE](#)

Decide whether to declare certain variable volatile in this file.

Definition at line 40 of file queue.h.

## 6.245 quicksort.h File Reference

Implementation of a unbalanced parallel quicksort (in-place). This file is a GNU parallel extension to the Standard C++ Library.

### Namespaces

- namespace [\\_\\_gnu\\_parallel](#)

### Functions

- `template<typename _RAIter, typename _Compare >  
void \_\_gnu\_parallel::\_\_parallel\_sort\_qs (_RAIter __begin, _RAIter __end, _Compare __comp, _ThreadIndex __num_threads)`
- `template<typename _RAIter, typename _Compare >

### 6.247.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<random>`.

Definition in file [random.h](#).

### 6.248.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<random>`.

Definition in file `random.tcc`.

## 6.249 `random_number.h` File Reference

Random number generator based on the Mersenne twister. This file is a GNU parallel extension to the Standard C++ Library.

### Classes

- class `__gnu_parallel::_RandomNumber`  
*Random number generator, based on the Mersenne twister.*

### Namespaces

- namespace `__gnu_parallel`

### 6.249.1 Detailed Description

Random number generator based on the Mersenne twister. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file `random_number.h`.

## 6.250 `random_shuffle.h` File Reference

Parallel implementation of `std::random_shuffle()`. This file is a GNU parallel extension to the Standard C++ Library.

### Classes

- struct `__gnu_parallel::_DRandomShufflingGlobalData< _RAIter >`

Data known to every thread participating in [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\(\)](#).

- struct [\\_\\_gnu\\_parallel::\\_DRSSorterPU](#)< [\\_RAIter](#), [\\_RandomNumberGenerator](#) >  
Local data for a thread participating in [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\(\)](#).

## Namespaces

- namespace [\\_\\_gnu\\_parallel](#)

## Typedefs

- typedef unsigned short [\\_\\_gnu\\_parallel::\\_BinIndex](#)

## Functions

- template<typename [\\_RAIter](#), typename [\\_RandomNumberGenerator](#) >  
void [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle](#) ([\\_RAIter](#) \_\_begin, [\\_RAIter](#) \_\_end, [\\_RandomNumberGenerator](#) \_\_rng=[\\_RandomNumber\(\)](#))
- template<typename [\\_RAIter](#), typename [\\_RandomNumberGenerator](#) >  
void [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs](#) ([\\_RAIter](#) \_\_begin, [\\_RAIter](#) \_\_end, typename [std::iterator\\_traits](#)< [\\_RAIter](#) >::difference\_type \_\_n, [\\_ThreadIndex](#) \_\_num\_threads, [\\_RandomNumberGenerator](#) &\_\_rng)
- template<typename [\\_RAIter](#), typename [\\_RandomNumberGenerator](#) >  
void [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\\_pu](#) ([\\_DRSSorterPU](#)< [\\_RAIter](#), [\\_RandomNumberGenerator](#) > \*\_\_pus)
- template<typename [\\_RandomNumberGenerator](#) >  
int [\\_\\_gnu\\_parallel::\\_\\_random\\_number\\_pow2](#) (int \_\_logp, [\\_RandomNumberGenerator](#) &\_\_rng)
- template<typename [\\_Tp](#) >  
[\\_Tp](#) [\\_\\_gnu\\_parallel::\\_\\_round\\_up\\_to\\_pow2](#) ([\\_Tp](#) \_\_x)
- template<typename [\\_RAIter](#), typename [\\_RandomNumberGenerator](#) >  
void [\\_\\_gnu\\_parallel::\\_\\_sequential\\_random\\_shuffle](#) ([\\_RAIter](#) \_\_begin, [\\_RAIter](#) \_\_end, [\\_RandomNumberGenerator](#) &\_\_rng)

### 6.250.1 Detailed Description

Parallel implementation of [std::random\\_shuffle\(\)](#). This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [random\\_shuffle.h](#).

## 6.251 range\_access.h File Reference

### Namespaces

- namespace [std](#)

### Functions

- `template<class _Container >  
auto std::begin (_Container &__cont)-> decltype(__cont.begin())`
- `template<class _Container >  
auto std::begin (const _Container &__cont)-> decltype(__cont.begin())`
- `template<class _Tp, size_t _Nm>  
_Tp * std::begin (_Tp(&__arr)[_Nm])`
- `template<class _Container >  
auto std::end (const _Container &__cont)-> decltype(__cont.end())`
- `template<class _Container >  
auto std::end (_Container &__cont)-> decltype(__cont.end())`
- `template<class _Tp, size_t _Nm>  
_Tp * std::end (_Tp(&__arr)[_Nm])`

#### 6.251.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iterator>`.

Definition in file [range\\_access.h](#).

## 6.252 ratio File Reference

### Classes

- struct [std::ratio< \\_Num, \\_Den >](#)  
*Provides compile-time rational arithmetic.*
- struct [std::ratio\\_add< \\_R1, \\_R2 >](#)  
*ratio\_add*
- struct [std::ratio\\_divide< \\_R1, \\_R2 >](#)  
*ratio\_divide*
- struct [std::ratio\\_equal< \\_R1, \\_R2 >](#)  
*ratio\_equal*

- struct `std::ratio_multiply<_R1, _R2>`  
*ratio\_multiply*
- struct `std::ratio_not_equal<_R1, _R2>`  
*ratio\_not\_equal*
- struct `std::ratio_subtract<_R1, _R2>`  
*ratio\_subtract*

### Namespaces

- namespace `std`

#### 6.252.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ratio](#).

## 6.253 `rb_tree` File Reference

### Classes

- struct `__gnu_cxx::rb_tree<_Key, _Value, _KeyOfValue, _Compare, _Alloc>`

### Namespaces

- namespace `__gnu_cxx`

#### 6.253.1 Detailed Description

This file is a GNU extension to the Standard C++ Library (possibly containing extensions from the HP/SGI STL subset).

Definition in file [rb\\_tree](#).

## 6.254 `rc_string_base.h` File Reference

### Classes

- class `__gnu_cxx::__rc_string_base<_CharT, _Traits, _Alloc>`

## Namespaces

- namespace [\\_\\_gnu\\_cxx](#)

### 6.254.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include [<ext/vstring.h>](#).

Definition in file [rc\\_string\\_base.h](#).

## 6.255 regex File Reference

### 6.255.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [regex](#).

## 6.256 regex.h File Reference

### Classes

- class [std::basic\\_regex< \\_Ch\\_type, \\_Rx\\_traits >](#)
- class [std::match\\_results< \\_Bi\\_iter, \\_Allocator >](#)  
*The results of a match or search operation.*
- class [std::regex\\_iterator< \\_Bi\\_iter, \\_Ch\\_type, \\_Rx\\_traits >](#)
- class [std::regex\\_token\\_iterator< \\_Bi\\_iter, \\_Ch\\_type, \\_Rx\\_traits >](#)
- struct [std::regex\\_traits< \\_Ch\\_type >](#)  
*Describes aspects of a regular expression.*
- class [std::sub\\_match< \\_BiIter >](#)

### Namespaces

- namespace [std](#)

### Typedefs

- typedef [match\\_results< const char \\* >](#) **std::cmatch**
- typedef [regex\\_iterator< const char \\* >](#) **std::cregex\_iterator**

- typedef regex\_token\_iterator< const char \* > [std::cregex\\_token\\_iterator](#)
- typedef sub\_match< const char \* > [std::csub\\_match](#)
- typedef basic\_regex< char > [std::regex](#)

### 6.278.1 Detailed Description

Parallel implementations of set operations for random-access iterators. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file `set_operations.h`.

## 6.279 settings.h File Reference

Runtime settings and tuning parameters, heuristics to decide whether to use parallelized algorithms. This file is a GNU parallel extension to the Standard C++ Library.

### Classes

- struct [\\_\\_gnu\\_parallel::\\_Settings](#)  
*class [\\_Settings](#) /// Run-time settings for the parallel mode including all tunable parameters.*

### Namespaces

- namespace [\\_\\_gnu\\_parallel](#)

### Defines

- #define [\\_GLIBCXX\\_PARALLEL\\_CONDITION](#)(\_\_c)

#### 6.279.1 Detailed Description

Runtime settings and tuning parameters, heuristics to decide whether to use parallelized algorithms. This file is a GNU parallel extension to the Standard C++ Library.

#### 6.279.2 parallelization\_decision

The decision whether to run an algorithm in parallel.

There are several ways the user can switch on and `__off` the parallel execution of an algorithm, both at compile- and run-time.

Only sequential execution can be forced at compile-time. This reduces code size and protects code parts that have non-thread-safe side effects.

Ultimately, forcing parallel execution at compile-time makes sense. Often, the sequential algorithm implementation is used as a subroutine, so no reduction in code size can be achieved. Also, the machine the program is run on might have only one processor core, so to avoid overhead, the algorithm is executed sequentially.

To force sequential execution of an algorithm ultimately at compile-time, the user must add the tag `gnu_parallel::sequential_tag()` to the end of the parameter list, e. g.

```
std::sort(__v.begin(), __v.end(), __gnu_parallel::sequential_tag());
```

This is compatible with all overloaded algorithm variants. No additional code will be instantiated, at all. The same holds for most algorithm calls with iterators not providing random access.

If the algorithm call is not forced to be executed sequentially at compile-time, the decision is made at run-time. The global variable `__gnu_parallel::_Settings::algorithm_strategy` is checked. `_It` is a tristate variable corresponding to:

a. `force_sequential`, meaning the sequential algorithm is executed. b. `force_parallel`, meaning the parallel algorithm is executed. c. `heuristic`

For `heuristic`, the parallel algorithm implementation is called only if the input size is sufficiently large. For most algorithms, the input size is the (combined) length of the input sequence(`__s`). The threshold can be set by the user, individually for each algorithm. The according variables are called `gnu_parallel::_Settings::[algorithm]_minimal_n`.

For some of the algorithms, there are even more tuning options, e. g. the ability to choose from multiple algorithm variants. See below for details.

Definition in file [settings.h](#).

### 6.279.3 Define Documentation

#### 6.279.3.1 `#define _GLIBCXX_PARALLEL_CONDITION( __c )`

Determine at compile(?)-time if the parallel variant of an algorithm should be called.

#### Parameters

`__c` A condition that is convertible to `bool` that is overruled by `__gnu_parallel::_Settings::algorithm_strategy`. Usually a decision based on the input size.

Definition at line 95 of file `settings.h`.

#### 6.284.1 Detailed Description

Parallel sorting algorithm switch. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [sort.h](#).

### 6.285 sso\_string\_base.h File Reference

#### Namespaces

- namespace [\\_\\_gnu\\_cxx](#)

#### 6.285.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ext/vstring.h>`.

Definition in file [sso\\_string\\_base.h](#).

### 6.286 sstream File Reference

#### Classes

- class [std::basic\\_istream<\\_CharT, \\_Traits, \\_Alloc >](#)  
*Controlling input for std::string.*  
*This class supports reading from objects of type [std::basic\\_string](#), using the inherited functions from [std::basic\\_istream](#). To control the associated sequence, an instance of [std::basic\\_stringbuf](#) is used, which this page refers to as *sb*.*
- class [std::basic\\_ostringstream<\\_CharT, \\_Traits, \\_Alloc >](#)  
*Controlling output for std::string.*  
*This class supports writing to objects of type [std::basic\\_string](#), using the inherited functions from [std::basic\\_ostream](#). To control the associated sequence, an instance of [std::basic\\_stringbuf](#) is used, which this page refers to as *sb*.*
- class [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc >](#)  
*The actual work of input and output (for std::string).*

*This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a [std::basic\\_string](#). (Paraphrased from [27.7.1]/1.).*

- class [std::basic\\_stringstream](#)< [\\_CharT](#), [\\_Traits](#), [\\_Alloc](#) >

*Controlling input and output for [std::string](#).*

*This class supports reading from and writing to objects of type [std::basic\\_string](#), using the inherited functions from [std::basic\\_istream](#). To control the associated sequence, an instance of [std::basic\\_stringbuf](#) is used, which this page refers to as *sb*.*

## Namespaces

- namespace [std](#)

### 6.286.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [sstream](#).

## 6.287 sstream.tcc File Reference

### Namespaces

- namespace [std](#)

### 6.287.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<sstream>`.

Definition in file [sstream.tcc](#).

## 6.288 stack File Reference

### 6.288.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [stack](#).

## 6.289 `standard_policies.hpp` File Reference

### Namespaces

- namespace [\\_\\_gnu\\_pbds](#)

### Enumerations

- enum { `default_store_hash` }

#### 6.289.1 Detailed Description

Contains standard policies for containers.

Definition in file [standard\\_policies.hpp](#).

## 6.290 `stdc++.h` File Reference

#### 6.290.1 Detailed Description

This is an implementation file for a precompiled header.

Definition in file [stdc++.h](#).

## 6.291 `stdexcept` File Reference

### Classes

- class [std::domain\\_error](#)
- class [std::invalid\\_argument](#)
- class [std::length\\_error](#)
- class [std::logic\\_error](#)

*One of two subclasses of exception.*

- class [std::out\\_of\\_range](#)
- class [std::overflow\\_error](#)
- class [std::range\\_error](#)
- class [std::runtime\\_error](#)

*One of two subclasses of exception.*

- class [std::underflow\\_error](#)

## Namespaces

- namespace `std`

### 6.291.1 Detailed Description

This is a Standard C++ Library header.

Definition in file `stdexcept`.

## 6.292 `stdio_filebuf.h` File Reference

### Classes

- class `__gnu_cxx::stdio_filebuf<_CharT, _Traits>`  
*Provides a layer of compatibility for C/POSIX.  
This GNU extension provides extensions for working with standard C FILE\*'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.*

## Namespaces

- namespace `__gnu_cxx`

### 6.292.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file `stdio_filebuf.h`.

## 6.293 `stdio_sync_filebuf.h` File Reference

### Classes

- class `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`  
*Provides a layer of compatibility for C.  
This GNU extension provides extensions for working with standard C FILE\*'s. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.*

## Namespaces

- namespace [\\_\\_gnu\\_cxx](#)

### 6.293.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [stdio\\_sync\\_filebuf.h](#).

## 6.294 `stdtr1c++.h` File Reference

### 6.294.1 Detailed Description

This is an implementation file for a precompiled header.

Definition in file [stdtr1c++.h](#).

## 6.295 `stl_algo.h` File Reference

## Namespaces

- namespace [std](#)

## Enumerations

- enum { `_S_threshold` }

### 6.299.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<deque>`.

Definition in file [std\\_deque.h](#).

### 6.299.2 Define Documentation

#### 6.299.2.1 `#define _GLIBCXX_DEQUE_BUF_SIZE`

This function controls the size of memory nodes.

#### Parameters

*size* The size of an element.

#### Returns

The number (not byte size) of elements per node.

This function started off as a compiler kludge from SGI, but seems to be a useful wrapper around a repeated constant expression. The **512** is tunable (and no other code needs to change), but no investigation has been done since inheriting the SGI code. Touch `_GLIBCXX_DEQUE_BUF_SIZE` only if you know what you are doing, however: changing it breaks the binary compatibility!!

Definition at line 84 of file `std_deque.h`.

### 6.302.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iterator>`.

This file implements `reverse_iterator`, `back_insert_iterator`, `front_insert_iterator`, `insert_iterator`, `__normal_iterator`, and their supporting functions and overloaded operators.

Definition in file [std\\_iterator.h](#).

## 6.303 `std_iterator_base_funcs.h` File Reference

### Namespaces

- namespace [std](#)

### Functions

- `template<typename _InputIterator, typename _Distance >`  
`void std::__advance (_InputIterator &__i, _Distance __n, input_iterator_tag)`
- `template<typename _BidirectionalIterator, typename _Distance >`  
`void std::__advance (_BidirectionalIterator &__i, _Distance __n, bidirectional_iterator_tag)`
- `template<typename _RandomAccessIterator, typename _Distance >`  
`void std::__advance (_RandomAccessIterator &__i, _Distance __n, random_access_iterator_tag)`
- `template<typename _RandomAccessIterator >`

- `template<class _Tp >`  
`bool std::rel_ops::operator>= (const _Tp &__x, const _Tp &__y)`

#### 6.313.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<utility>`.

Inclusion of this file has been removed from all of the other STL headers for safety reasons, except `std_utility.h`. For more information, see the thread of about twenty messages starting with <http://gcc.gnu.org/ml/libstdc++/2001-01/msg00223.html>, or [http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous\\_overloads](http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous_overloads)

Short summary: the `rel_ops` operators should be avoided for the present.

Definition in file `std_relops.h`.

### 6.330.1 Detailed Description

Contains tags and traits, e.g., ones describing underlying data structures.

Definition in file [tag\\_and\\_trait.hpp](#).

## 6.331 tags.h File Reference

Tags for compile-time selection. This file is a GNU parallel extension to the Standard C++ Library.

## Classes

- struct [\\_\\_gnu\\_parallel::balanced\\_quicksort\\_tag](#)  
*Forces parallel sorting using balanced quicksort at compile time.*
- struct [\\_\\_gnu\\_parallel::balanced\\_tag](#)  
*Recommends parallel execution using dynamic load-balancing at compile time.*
- struct [\\_\\_gnu\\_parallel::constant\\_size\\_blocks\\_tag](#)  
*Selects the constant block size variant for `std::find()`.*

- struct [\\_\\_gnu\\_parallel::default\\_parallel\\_tag](#)  
*Recommends parallel execution using the default parallel algorithm.*
- struct [\\_\\_gnu\\_parallel::equal\\_split\\_tag](#)  
*Selects the equal splitting variant for `std::find()`.*
- struct [\\_\\_gnu\\_parallel::exact\\_tag](#)  
*Forces parallel merging with exact splitting, at compile time.*
- struct [\\_\\_gnu\\_parallel::find\\_tag](#)  
*Base class for `std::find()` variants.*
- struct [\\_\\_gnu\\_parallel::growing\\_blocks\\_tag](#)  
*Selects the growing block size variant for `std::find()`.*
- struct [\\_\\_gnu\\_parallel::multiway\\_mergesort\\_exact\\_tag](#)  
*Forces parallel sorting using multiway mergesort with exact splitting at compile time.*
- struct [\\_\\_gnu\\_parallel::multiway\\_mergesort\\_sampling\\_tag](#)  
*Forces parallel sorting using multiway mergesort with splitting by sampling at compile time.*
- struct [\\_\\_gnu\\_parallel::multiway\\_mergesort\\_tag](#)  
*Forces parallel sorting using multiway mergesort at compile time.*
- struct [\\_\\_gnu\\_parallel::omp\\_loop\\_static\\_tag](#)  
*Recommends parallel execution using OpenMP static load-balancing at compile time.*
- struct [\\_\\_gnu\\_parallel::omp\\_loop\\_tag](#)  
*Recommends parallel execution using OpenMP dynamic load-balancing at compile time.*
- struct [\\_\\_gnu\\_parallel::parallel\\_tag](#)  
*Recommends parallel execution at compile time, optionally using a user-specified number of threads.*
- struct [\\_\\_gnu\\_parallel::quicksort\\_tag](#)  
*Forces parallel sorting using unbalanced quicksort at compile time.*
- struct [\\_\\_gnu\\_parallel::sampling\\_tag](#)  
*Forces parallel merging with exact splitting, at compile time.*
- struct [\\_\\_gnu\\_parallel::sequential\\_tag](#)

*Forces sequential execution at compile time.*

- struct [\\_\\_gnu\\_parallel::unbalanced\\_tag](#)  
*Recommends parallel execution using static load-balancing at compile time.*

## 6.334 `throw_allocator.h` File Reference

### Classes

- `struct` [\\_\\_gnu\\_cxx::annotate\\_base](#)  
*Base class for checking address and label information about allocations. Create a [std::map](#) between the allocated address (void\*) and a datum for annotations, which are a pair of numbers corresponding to label and allocated size.*
- `struct` [\\_\\_gnu\\_cxx::condition\\_base](#)  
*Base struct for condition policy.*
- `struct` [\\_\\_gnu\\_cxx::forced\\_error](#)  
*Thrown by exception safety machinery.*
- `struct` [\\_\\_gnu\\_cxx::limit\\_condition](#)  
*Base class for incremental control and throw.*

- struct `__gnu_cxx::limit_condition::always_adjustor`  
*Always enter the condition.*
- struct `__gnu_cxx::limit_condition::limit_adjustor`  
*Enter the nth condition.*
- struct `__gnu_cxx::limit_condition::never_adjustor`  
*Never enter the condition.*
- struct `__gnu_cxx::random_condition`  
*Base class for random probability control and throw.*
- struct `__gnu_cxx::random_condition::always_adjustor`  
*Always enter the condition.*
- struct `__gnu_cxx::random_condition::group_adjustor`  
*Group condition.*
- struct `__gnu_cxx::random_condition::never_adjustor`  
*Never enter the condition.*
- class `__gnu_cxx::throw_allocator_base< _Tp, _Cond >`  
*Allocator class with logging and exception generation control. Intended to be used as an allocator\_type in templated code.  
Note: Deallocate not allowed to throw.*
- struct `__gnu_cxx::throw_allocator_limit< _Tp >`  
*Allocator throwing via limit condition.*
- struct `__gnu_cxx::throw_allocator_random< _Tp >`  
*Allocator throwing via random condition.*
- struct `__gnu_cxx::throw_value_base< _Cond >`  
*Class with exception generation control. Intended to be used as a value\_type in templated code.*
- struct `__gnu_cxx::throw_value_limit`  
*Type throwing via limit condition.*
- struct `__gnu_cxx::throw_value_random`  
*Type throwing via random condition.*
- struct `std::hash< __gnu_cxx::throw_value_limit >`

*Explicit specialization of `std::hash` for `__gnu_cxx::throw_value_limit`.*

- struct `std::hash< __gnu_cxx::throw_value_random >`  
*Explicit specialization of `std::hash` for `__gnu_cxx::throw_value_limit`.*

### 6.334.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Contains two exception-generating types (`throw_value`, `throw_allocator`) intended to be used as value and allocator types while testing exception safety in templated containers and algorithms. The allocator has additional log and debug features. The exception generated is of type `forced_exception_error`.

Definition in file [throw\\_allocator.h](#).

`bool __gnu_cxx::__is_null_pointer (_Type)`

#### 6.341.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [type\\_traits.h](#).

## 6.342 `type_utils.hpp` File Reference

### Namespaces

- namespace `__gnu_pbds`

### Defines

- `#define PB_DS_STATIC_ASSERT(UNIQUE, E)`

### Typedefs

- `typedef std::tr1::integral_constant< int, 0 > __gnu_pbds::detail::false_type`
- `typedef std::tr1::integral_constant< int, 1 > __gnu_pbds::detail::true_type`

#### 6.342.1 Detailed Description

Contains utilities for handling types. All of these classes are based on Modern C++ by Andrei Alexandrescu.

Definition in file [type\\_utils.hpp](#).

## 6.343 `typeindex` File Reference

### Classes

- struct `std::hash< type_index >`  
*`std::hash` specialization for `type_index`.*
- struct `std::type_index`  
*The class `type_index` provides a simple wrapper for `type_info` which can be used as an index type in associative containers (23.6) and in unordered associative containers (23.7).*

### Namespaces

- namespace `std`

#### 6.343.1 Detailed Description

This is a Standard C++ Library header.

Definition in file `typeindex`.

## 6.344 `typeinfo` File Reference

### Classes

- class `std::bad_cast`  
*Thrown during incorrect typecasting.  
If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.*
- class `std::bad_typeid`  
*Thrown when a `NULL` pointer in a `typeid` expression is used.*
- class `std::type_info`  
*Part of RTTI.*

### Namespaces

- namespace `std`

**Defines**

- `#define __GXX_MERGED_TYPEINFO_NAMES`
- `#define __GXX_TYPEINFO_EQUALITY_INLINE`

**6.344.1 Detailed Description**

This is a Standard C++ Library header.

Definition in file [typeinfo](#).

**6.345 `typelist.h` File Reference****Namespaces**

- namespace [\\_\\_gnu\\_cxx](#)

`void __gnu_cxx::typelist::apply_generator (Gn &, TypelistT, TypelistV)`
- `template<typename Gn , typename Typelist >`  
`void __gnu_cxx::typelist::apply_generator (Gn &, Typelist)`

### 6.345.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Contains `typelist_chain` definitions. Typelists are an idea by Andrei Alexandrescu.

Definition in file [typelist.h](#).

## 6.346 types.h File Reference

Basic types and typedefs. This file is a GNU parallel extension to the Standard C++ Library.

### Namespaces

- namespace [\\_\\_gnu\\_parallel](#)

### Typedefs

- `typedef int64_t __gnu_parallel::_CASable`
- `typedef uint64_t __gnu_parallel::_SequenceIndex`
- `typedef uint16_t __gnu_parallel::_ThreadIndex`

### Enumerations

- `enum __gnu_parallel::_AlgorithmStrategy { heuristic, force_sequential, force_parallel }`
- `enum __gnu_parallel::_FindAlgorithm { GROWING_BLOCKS, CONSTANT_SIZE_BLOCKS, EQUAL_SPLIT }`
- `enum __gnu_parallel::_MultiwayMergeAlgorithm { LOSER_TREE }`

- enum `__gnu_parallel::_Parallelism` {  
    `__gnu_parallel::sequential`, `__gnu_parallel::parallel_unbalanced`, `__gnu_parallel::parallel_balanced`, `__gnu_parallel::parallel_omp_loop`,  
    `__gnu_parallel::parallel_omp_loop_static`, `__gnu_parallel::parallel_taskqueue` }
- enum `__gnu_parallel::_PartialSumAlgorithm` { **RECURSIVE**, **LINEAR** }
- enum `__gnu_parallel::_SortAlgorithm` { **MWMS**, **QS**, **QS\_BALANCED** }
- enum `__gnu_parallel::_SplittingAlgorithm` { **SAMPLING**, **EXACT** }

### Variables

- static const int `__gnu_parallel::_CASable_bits`
- static const `_CASable` `__gnu_parallel::_CASable_mask`

#### 6.346.1 Detailed Description

Basic types and typedefs. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [types.h](#).

## 6.347 `types_traits.hpp` File Reference

### Namespaces

- namespace `__gnu_pbds`

#### 6.347.1 Detailed Description

Contains a traits class of types used by containers.

Definition in file [types\\_traits.hpp](#).

## 6.348 `unique_copy.h` File Reference

Parallel implementations of `std::unique_copy()`. This file is a GNU parallel extension to the Standard C++ Library.

### Namespaces

- namespace `__gnu_parallel`

## Functions

- `template<typename _Iter, class _OutputIterator, class _BinaryPredicate >`  
`_OutputIterator __gnu_parallel::__parallel_unique_copy (_Iter __first, _Iter __last, _OutputIterator __result, _BinaryPredicate __binary_pred)`
- `template<typename _Iter, class _OutputIterator >`  
`_OutputIterator __gnu_parallel::__parallel_unique_copy (_Iter __first, _Iter __last, _OutputIterator __result)`

### 6.348.1 Detailed Description

Parallel implementations of `std::unique_copy()`. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [unique\\_copy.h](#).

## 6.349 `unique_ptr.h` File Reference

### Classes

- struct [std::default\\_delete< \\_Tp >](#)  
*Primary template, [default\\_delete](#).*
- struct [std::default\\_delete< \\_Tp\[ \]>](#)  
*Specialization, [default\\_delete](#).*
- struct [std::hash< unique\\_ptr< \\_Tp, \\_Dp > >](#)  
*[std::hash](#) specialization for [unique\\_ptr](#).*
- class [std::unique\\_ptr< \\_Tp, \\_Dp >](#)

### 6.360.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

Definition in file [valarray\\_after.h](#).

## 6.361 valarray\_array.h File Reference

### 6.372.1 Detailed Description

Parallelization of embarrassingly parallel execution by means of work-stealing. Work stealing is described in

R. D. Blumofe and C. E. Leiserson. Scheduling multithreaded computations by work stealing. *Journal of the ACM*, 46(5):720–748, 1999.

This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [workstealing.h](#).
